functions, the error wouldn't be noticeable. When the object allocator is enabled, these functions aren't aliases of **malloc()** and **free()** any more, and calling the wrong function to free memory will get you a core dump. For example, if memory was allocated using **PyMem\_New**, it has to be freed using **PyMem\_Del()**, not **free()**. A few modules included with Python fell afoul of this and had to be fixed; doubtless there are more third-party modules that will have the same problem.

The object allocator was contributed by Vladimir Marangozov.

- The speed of line-oriented file I/O has been improved because people often complain about its lack of speed, and because it's often been used as a naïve benchmark. The **readline()** method of file objects has therefore been rewritten to be much faster. The exact amount of the speedup will vary from platform to platform depending on how slow the C library's **getc()** was, but is around 66%, and potentially much faster on some particular operating systems. Tim Peters did much of the benchmarking and coding for this change, motivated by a discussion in `comp.lang.python`.

A new module and method for file objects was also added, contributed by Jeff Epler. The new method, **xreadlines()**, is similar to the existing **xrange()** built-in.

**xreadlines()** returns an opaque sequence object that only supports being iterated over, reading a line on every iteration but not reading the entire file into memory as the existing **readlines()** method does. You'd use it like this:

```
for line in sys.stdin.xreadlines():
    # ... do something for each line ...
    ...
```

For a fuller discussion of the line I/O changes, see the python-dev summary for January 1–15, 2001 at <https://mail.python.org/pipermail/python-dev/2001-January/>.

- A new method, **popitem()**, was added to dictionaries to

enable destructively iterating through the contents of a dictionary; this can be faster for large dictionaries because there's no need to construct a list containing all the keys or values. `D.popitem()` removes a random (key, value) pair from the dictionary `D` and returns it as a 2-tuple. This was implemented mostly by Tim Peters and Guido van Rossum, after a suggestion and preliminary patch by Moshe Zadka.

- Modules can now control which names are imported when `from module import *` is used, by defining an `__all__` attribute containing a list of names that will be imported. One common complaint is that if the module imports other modules such as `sys` or `string`, `from module import *` will add them to the importing module's namespace. To fix this, simply list the public names in `__all__`:

```
# List public names
__all__ = ['Database', 'open']
```

A stricter version of this patch was first suggested and implemented by Ben Wolfson, but after some python-dev discussion, a weaker final version was checked in.

- Applying `repr()` to strings previously used octal escapes for non-printable characters; for example, a newline was `'\012'`. This was a vestigial trace of Python's C ancestry, but today octal is of very little practical use. Ka-Ping Yee suggested using hex escapes instead of octal ones, and using the `\n`, `\t`, `\r` escapes for the appropriate characters, and implemented this new formatting.
- Syntax errors detected at compile-time can now raise exceptions containing the filename and line number of the error, a pleasant side effect of the compiler reorganization done by Jeremy Hylton.
- C extensions which import other modules have been changed to use `PyImport_ImportModule()`, which means that they will use any import hooks that have been installed. This is also encouraged for third-party extensions that need to

import some other module from C code.

- The size of the Unicode character database was shrunk by another 340K thanks to Fredrik Lundh.
- Some new ports were contributed: MacOS X (by Steven Majewski), Cygwin (by Jason Tishler); RISCOS (by Dietmar Schwertberger); Unixware 7 (by Billy G. Allie).

And there's the usual list of minor bugfixes, minor memory leaks, docstring edits, and other tweaks, too lengthy to be worth itemizing; see the CVS logs for the full details if you want them.

# What's New in Python 2.0

**Author**

A.M. Kuchling and Moshe Zadka

## Introduction

A new release of Python, version 2.0, was released on October 16, 2000. This article covers the exciting new features in 2.0, highlights some other useful changes, and points out a few incompatible changes that may require rewriting code.

Python's development never completely stops between releases, and a steady flow of bug fixes and improvements are always being submitted. A host of minor fixes, a few optimizations, additional docstrings, and better error messages went into 2.0; to list them all would be impossible, but they're certainly significant. Consult the publicly available CVS logs if you want to see the full list. This progress is due to the five developers working for PythonLabs are now getting paid to spend their days fixing bugs, and also due to the improved communication resulting from moving to SourceForge.

## What About Python 1.6?

Python 1.6 can be thought of as the Contractual Obligations Python release. After the core development team left CNRI in May 2000, CNRI requested that a 1.6 release be created, containing all the work on Python that had been performed at CNRI. Python 1.6 therefore represents the state of the CVS tree as of May 2000, with the most significant new feature being Unicode support. Development continued after May, of course, so the 1.6 tree received a few fixes to ensure that it's forward-compatible with Python 2.0. 1.6 is therefore part of Python's evolution, and not a side branch.

So, should you take much interest in Python 1.6? Probably not. The 1.6final and 2.0beta1 releases were made on the same day (September 5, 2000), the plan being to finalize Python 2.0 within a month or so. If you have applications to maintain, there seems little point in breaking things by moving to 1.6, fixing them, and then having another round of breakage within a month by moving to 2.0; you're better off just going straight to 2.0. Most of the really interesting features described in this document are only in 2.0, because a lot of work was done between May and September.

## New Development Process

The most important change in Python 2.0 may not be to the code at all, but to how Python is developed: in May 2000 the Python developers began using the tools made available by SourceForge for storing source code, tracking bug reports, and managing the queue of patch submissions. To report bugs or submit patches for Python 2.0, use the bug tracking and patch manager tools available from Python's project page, located at <https://sourceforge.net/projects/python/>.

The most important of the services now hosted at SourceForge is the Python CVS tree, the version-controlled repository containing the source code for Python. Previously, there were roughly 7 or so people who had write access to the CVS tree, and all patches had to be inspected and checked in by one of the people on this short list. Obviously, this wasn't very scalable. By moving the CVS tree to SourceForge, it became possible to grant write access to more people; as of September 2000 there were 27 people able to check in changes, a fourfold increase. This makes possible large-scale changes that wouldn't be attempted if they'd have to be filtered through the small group of core developers. For example, one day Peter Schneider-Kamp took it into his head to drop K&R C compatibility and convert the C source for Python to ANSI C. After getting approval on the python-dev mailing list, he launched into a flurry of checkins that lasted about a week, other developers joined in to help, and the job was done. If there were only 5 people with write access, probably that task would have been viewed as "nice, but not worth the time and effort needed" and it would never have gotten done.

The shift to using SourceForge's services has resulted in a remarkable increase in the speed of development. Patches now get submitted, commented on, revised by people other than the original submitter, and bounced back and forth between people until the patch is deemed worth checking in. Bugs are tracked in one central location and can be assigned to a specific person for fixing, and we can count the number of open bugs to measure progress. This didn't come without a cost: developers now have more e-mail to deal with, more mailing lists to follow, and special tools had to be written for the new environment. For example, SourceForge sends default patch and bug notification e-mail messages that are completely unhelpful, so Ka-Ping Yee wrote an HTML screen-scraper that sends more useful messages.

The ease of adding code caused a few initial growing pains, such as code was checked in before it was ready or without getting clear agreement from the developer group. The approval process that has emerged is somewhat similar to that used by the Apache group. Developers can vote +1, +0, -0, or -1 on a patch; +1 and -1 denote acceptance or rejection, while +0 and -0 mean the developer is mostly indifferent to the change, though with a slight positive or negative slant. The most significant change from the Apache model is that the voting is essentially advisory, letting Guido van Rossum, who has Benevolent Dictator For Life status, know what the general opinion is. He can still ignore the result of a vote, and approve or reject a change even if the community disagrees with him.

Producing an actual patch is the last step in adding a new feature, and is usually easy compared to the earlier task of coming up with a good design. Discussions of new features can often explode into lengthy mailing list threads, making the discussion hard to follow, and no one can read every posting to python-dev. Therefore, a relatively formal process has been set up to write Python Enhancement Proposals (PEPs), modelled on the internet RFC process. PEPs are draft documents that describe a proposed new feature, and are continually revised until the community reaches a consensus, either accepting or rejecting the proposal. Quoting from the introduction to [PEP 1](https://peps.python.org/pep-0001/) [https://peps.python.org/pep-0001/], "PEP Purpose and Guidelines":

PEP stands for Python Enhancement Proposal. A PEP is a design document providing information to the Python community, or describing a new feature for Python. The PEP should provide a concise technical specification of the feature and a rationale for the feature.

We intend PEPs to be the primary mechanisms for proposing new features, for collecting community input on an issue, and for documenting the design decisions that have gone into Python. The PEP author is responsible for building consensus within the community and documenting dissenting opinions.

Read the rest of **PEP 1** [<https://peps.python.org/pep-0001/>] for the details of the PEP editorial process, style, and format. PEPs are kept in the Python CVS tree on SourceForge, though they're not part of the Python 2.0 distribution, and are also available in HTML form from <https://peps.python.org/>. As of September 2000, there are 25 PEPs, ranging from **PEP 201** [<https://peps.python.org/pep-0201/>], "Lockstep Iteration", to PEP 225, "Elementwise/Objectwise Operators".

## Unicode

The largest new feature in Python 2.0 is a new fundamental data type: Unicode strings. Unicode uses 16-bit numbers to represent characters instead of the 8-bit number used by ASCII, meaning that 65,536 distinct characters can be supported.

The final interface for Unicode support was arrived at through countless often-stormy discussions on the python-dev mailing list, and mostly implemented by Marc-André Lemburg, based on a Unicode string type implementation by Fredrik Lundh. A detailed explanation of the interface was written up as **PEP 100** [<https://peps.python.org/pep-0100/>], "Python Unicode Integration". This article will simply cover the most significant points about the Unicode interfaces.

In Python source code, Unicode strings are written as `u"string"`.

Arbitrary Unicode characters can be written using a new escape sequence, `\uHHHH`, where *HHHH* is a 4-digit hexadecimal number from 0000 to FFFF. The existing `\xHH` escape sequence can also be used, and octal escapes can be used for characters up to U+01FF, which is represented by `\777`.

Unicode strings, just like regular strings, are an immutable sequence type. They can be indexed and sliced, but not modified in place. Unicode strings have an `encode( [encoding] )` method that returns an 8-bit string in the desired encoding. Encodings are named by strings, such as `'ascii'`, `'utf-8'`, `'iso-8859-1'`, or whatever. A codec API is defined for implementing and registering new encodings that are then available throughout a Python program. If an encoding isn't specified, the default encoding is usually 7-bit ASCII, though it can be changed for your Python installation by calling the `sys.setdefaultencoding(encoding)` function in a customized version of `site.py`.

Combining 8-bit and Unicode strings always coerces to Unicode, using the default ASCII encoding; the result of `'a' + u'bc'` is `u'abc'`.

New built-in functions have been added, and existing built-ins modified to support Unicode:

- `unichr(ch)` returns a Unicode string 1 character long, containing the character *ch*.
- `ord(u)`, where *u* is a 1-character regular or Unicode string, returns the number of the character as an integer.
- `unicode(string [, encoding] [, errors] )` creates a Unicode string from an 8-bit string. *encoding* is a string naming the encoding to use. The *errors* parameter specifies the treatment of characters that are invalid for the current encoding; passing `'strict'` as the value causes an exception to be raised on any encoding error, while `'ignore'` causes errors to be silently ignored and `'replace'` uses U+FFFD, the official replacement character, in case of any problems.
- The `exec` statement, and various built-ins such as `eval()`, `getattr()`, and `setattr()` will also accept Unicode

strings as well as regular strings. (It's possible that the process of fixing this missed some built-ins; if you find a built-in function that accepts strings but doesn't accept Unicode strings at all, please report it as a bug.)

A new module, `unicodedata`, provides an interface to Unicode character properties. For example, `unicodedata.category(u'A')` returns the 2-character string 'Lu', the 'L' denoting it's a letter, and 'u' meaning that it's uppercase. `unicodedata.bidirectional(u'\u0660')` returns 'AN', meaning that U+0660 is an Arabic number.

The `codecs` module contains functions to look up existing encodings and register new ones. Unless you want to implement a new encoding, you'll most often use the `codecs.lookup(encoding)` function, which returns a 4-element tuple: `(encode_func, decode_func, stream_reader, stream_writer)`.

- *encode\_func* is a function that takes a Unicode string, and returns a 2-tuple `(string, length)`. *string* is an 8-bit string containing a portion (perhaps all) of the Unicode string converted into the given encoding, and *length* tells you how much of the Unicode string was converted.
- *decode\_func* is the opposite of *encode\_func*, taking an 8-bit string and returning a 2-tuple `(ustring, length)`, consisting of the resulting Unicode string *ustring* and the integer *length* telling how much of the 8-bit string was consumed.
- *stream\_reader* is a class that supports decoding input from a stream. `stream_reader(file_obj)` returns an object that supports the `read()`, `readline()`, and `readlines()` methods. These methods will all translate from the given encoding and return Unicode strings.
- *stream\_writer*, similarly, is a class that supports encoding output to a stream. `stream_writer(file_obj)` returns an object that supports the `write()` and `writelines()` methods. These methods expect Unicode strings, translating them to the given encoding on output.

For example, the following code writes a Unicode string into a file,

encoding it as UTF-8:

```
import codecs

unistr = u'\u0660\u2000ab ...'

(UTF8_encode, UTF8_decode,
 UTF8_streamreader, UTF8_streamwriter) = codecs.lookup('utf-8')

output = UTF8_streamwriter( open( '/tmp/output', 'wb' ) )
output.write( unistr )
output.close()
```

The following code would then read UTF-8 input from the file:

```
input = UTF8_streamreader( open( '/tmp/output', 'rb' ) )
print repr(input.read())
input.close()
```

Unicode-aware regular expressions are available through the [re](#) module, which has a new underlying implementation called SRE written by Fredrik Lundh of Secret Labs AB.

A `-U` command line option was added which causes the Python compiler to interpret all string literals as Unicode string literals. This is intended to be used in testing and future-proofing your Python code, since some future version of Python may drop support for 8-bit strings and provide only Unicode strings.

## List Comprehensions

Lists are a workhorse data type in Python, and many programs manipulate a list at some point. Two common operations on lists are to loop over them, and either pick out the elements that meet a certain criterion, or apply some function to each element. For example, given a list of strings, you might want to pull out all the strings containing a given substring, or strip off trailing whitespace from each line.

The existing [map\(\)](#) and [filter\(\)](#) functions can be used for this

purpose, but they require a function as one of their arguments. This is fine if there's an existing built-in function that can be passed directly, but if there isn't, you have to create a little function to do the required work, and Python's scoping rules make the result ugly if the little function needs additional information. Take the first example in the previous paragraph, finding all the strings in the list containing a given substring. You could write the following to do it:

```
# Given the list L, make a list of all strings
# containing the substring S.
sublist = filter( lambda s, substring=S:
                    string.find(s, substring) != -1,
                    L)
```

Because of Python's scoping rules, a default argument is used so that the anonymous function created by the `lambda` expression knows what substring is being searched for. List comprehensions make this cleaner:

```
sublist = [ s for s in L if string.find(s, S) != -1 ]
```

List comprehensions have the form:

```
[ expression for expr in sequence1
              for expr2 in sequence2 ...
              for exprN in sequenceN
              if condition ]
```

The **for...in** clauses contain the sequences to be iterated over. The sequences do not have to be the same length, because they are *not* iterated over in parallel, but from left to right; this is explained more clearly in the following paragraphs. The elements of the generated list will be the successive values of *expression*. The final **if** clause is optional; if present, *expression* is only evaluated and added to the result if *condition* is true.

To make the semantics very clear, a list comprehension is equivalent to the following Python code:

```
for expr1 in sequence1:
    for expr2 in sequence2:
```

```
...
    for exprN in sequenceN:
        if (condition):
            # Append the value of
            # the expression to the
            # resulting list.
```

This means that when there are multiple **for...in** clauses, the resulting list will be equal to the product of the lengths of all the sequences. If you have two lists of length 3, the output list is 9 elements long:

```
seq1 = 'abc'
seq2 = (1,2,3)
>>> [ (x,y) for x in seq1 for y in seq2]
[('a', 1), ('a', 2), ('a', 3), ('b', 1), ('b', 2), ('b', 3),
('c', 1), ('c', 2), ('c', 3)]
```

To avoid introducing an ambiguity into Python's grammar, if *expression* is creating a tuple, it must be surrounded with parentheses. The first list comprehension below is a syntax error, while the second one is correct:

```
# Syntax error
[ x,y for x in seq1 for y in seq2]
# Correct
[ (x,y) for x in seq1 for y in seq2]
```

The idea of list comprehensions originally comes from the functional programming language Haskell (<https://www.haskell.org>). Greg Ewing argued most effectively for adding them to Python and wrote the initial list comprehension patch, which was then discussed for a seemingly endless time on the python-dev mailing list and kept up-to-date by Skip Montanaro.

## Augmented Assignment

Augmented assignment operators, another long-requested feature, have been added to Python 2.0. Augmented assignment operators include `+=`, `-=`, `*=`, and so forth. For example, the statement `a`

`+= 2` increments the value of the variable `a` by 2, equivalent to the slightly lengthier `a = a + 2`.

The full list of supported assignment operators is `+=`, `-=`, `*=`, `/=`, `%=`, `**=`, `&=`, `|=`, `^=`, `>>=`, and `<<=`. Python classes can override the augmented assignment operators by defining methods named `__iadd__()`, `__isub__()`, etc. For example, the following **Number** class stores a number and supports using `+=` to create a new instance with an incremented value.

```
class Number:
    def __init__(self, value):
        self.value = value
    def __iadd__(self, increment):
        return Number( self.value + increment)

n = Number(5)
n += 3
print n.value
```

The `__iadd__()` special method is called with the value of the increment, and should return a new instance with an appropriately modified value; this return value is bound as the new value of the variable on the left-hand side.

Augmented assignment operators were first introduced in the C programming language, and most C-derived languages, such as **awk**, **C++**, **Java**, **Perl**, and **PHP** also support them. The augmented assignment patch was implemented by Thomas Wouters.

## String Methods

Until now string-manipulation functionality was in the **string** module, which was usually a front-end for the **strop** module written in C. The addition of Unicode posed a difficulty for the **strop** module, because the functions would all need to be rewritten in order to accept either 8-bit or Unicode strings. For functions such as **string.replace()**, which takes 3 string arguments, that means eight possible permutations, and correspondingly complicated code.

Instead, Python 2.0 pushes the problem onto the string type, making string manipulation functionality available through methods on both 8-bit strings and Unicode strings.

```
>>> 'andrew'.capitalize()
'Andrew'
>>> 'hostname'.replace('os', 'linux')
'hlinuxtname'
>>> 'moshe'.find('sh')
2
```

One thing that hasn't changed, a noteworthy April Fools' joke notwithstanding, is that Python strings are immutable. Thus, the string methods return new strings, and do not modify the string on which they operate.

The old **string** module is still around for backwards compatibility, but it mostly acts as a front-end to the new string methods.

Two methods which have no parallel in pre-2.0 versions, although they did exist in JPython for quite some time, are **startswith()** and **endswith()**. `s.startswith(t)` is equivalent to `s[:len(t)] == t`, while `s.endswith(t)` is equivalent to `s[-len(t):] == t`.

One other method which deserves special mention is **join()**. The **join()** method of a string receives one parameter, a sequence of strings, and is equivalent to the **string.join()** function from the old **string** module, with the arguments reversed. In other words, `s.join(seq)` is equivalent to the old `string.join(seq, s)`.

## Garbage Collection of Cycles

The C implementation of Python uses reference counting to implement garbage collection. Every Python object maintains a count of the number of references pointing to itself, and adjusts the count as references are created or destroyed. Once the reference count reaches zero, the object is no longer accessible, since you

need to have a reference to an object to access it, and if the count is zero, no references exist any longer.

Reference counting has some pleasant properties: it's easy to understand and implement, and the resulting implementation is portable, fairly fast, and reacts well with other libraries that implement their own memory handling schemes. The major problem with reference counting is that it sometimes doesn't realise that objects are no longer accessible, resulting in a memory leak. This happens when there are cycles of references.

Consider the simplest possible cycle, a class instance which has a reference to itself:

```
instance = SomeClass()  
instance.myself = instance
```

After the above two lines of code have been executed, the reference count of `instance` is 2; one reference is from the variable named `'instance'`, and the other is from the `myself` attribute of the instance.

If the next line of code is `del instance`, what happens? The reference count of `instance` is decreased by 1, so it has a reference count of 1; the reference in the `myself` attribute still exists. Yet the instance is no longer accessible through Python code, and it could be deleted. Several objects can participate in a cycle if they have references to each other, causing all of the objects to be leaked.

Python 2.0 fixes this problem by periodically executing a cycle detection algorithm which looks for inaccessible cycles and deletes the objects involved. A new **gc** module provides functions to perform a garbage collection, obtain debugging statistics, and tuning the collector's parameters.

Running the cycle detection algorithm takes some time, and therefore will result in some additional overhead. It is hoped that after we've gotten experience with the cycle collection from using 2.0, Python 2.1 will be able to minimize the overhead with careful tuning. It's not yet obvious how much performance is lost, because

benchmarking this is tricky and depends crucially on how often the program creates and destroys objects. The detection of cycles can be disabled when Python is compiled, if you can't afford even a tiny speed penalty or suspect that the cycle collection is buggy, by specifying the `--without-cycle-gc` switch when running the `configure` script.

Several people tackled this problem and contributed to a solution. An early implementation of the cycle detection approach was written by Toby Kelsey. The current algorithm was suggested by Eric Tiedemann during a visit to CNRI, and Guido van Rossum and Neil Schemenauer wrote two different implementations, which were later integrated by Neil. Lots of other people offered suggestions along the way; the March 2000 archives of the python-dev mailing list contain most of the relevant discussion, especially in the threads titled "Reference cycle collection for Python" and "Finalization again".

## Other Core Changes

Various minor changes have been made to Python's syntax and built-in functions. None of the changes are very far-reaching, but they're handy conveniences.

### Minor Language Changes

A new syntax makes it more convenient to call a given function with a tuple of arguments and/or a dictionary of keyword arguments. In Python 1.5 and earlier, you'd use the `apply()` built-in function: `apply(f, args, kw)` calls the function `f()` with the argument tuple `args` and the keyword arguments in the dictionary `kw`. `apply()` is the same in 2.0, but thanks to a patch from Greg Ewing, `f(*args, **kw)` is a shorter and clearer way to achieve the same effect. This syntax is symmetrical with the syntax for defining functions:

```
def f(*args, **kw):  
    # args is a tuple of positional args,  
    # kw is a dictionary of keyword args
```

...

The `print` statement can now have its output directed to a file-like object by following the `print` with `>> file`, similar to the redirection operator in Unix shells. Previously you'd either have to use the `write()` method of the file-like object, which lacks the convenience and simplicity of `print`, or you could assign a new value to `sys.stdout` and then restore the old value. For sending output to standard error, it's much easier to write this:

```
print >> sys.stderr, "Warning: action field not supplied"
```

Modules can now be renamed on importing them, using the syntax `import module as name` or `from module import name as othername`. The patch was submitted by Thomas Wouters.

A new format style is available when using the `%` operator; `'%r'` will insert the `repr()` of its argument. This was also added from symmetry considerations, this time for symmetry with the existing `'%s'` format style, which inserts the `str()` of its argument. For example, `'%r %s' % ('abc', 'abc')` returns a string containing `'abc' abc`.

Previously there was no way to implement a class that overrode Python's built-in `in` operator and implemented a custom version. `obj in seq` returns true if `obj` is present in the sequence `seq`; Python computes this by simply trying every index of the sequence until either `obj` is found or an `IndexError` is encountered. Moshe Zadka contributed a patch which adds a `__contains__()` magic method for providing a custom implementation for `in`. Additionally, new built-in objects written in C can define what `in` means for them via a new slot in the sequence protocol.

Earlier versions of Python used a recursive algorithm for deleting objects. Deeply nested data structures could cause the interpreter to fill up the C stack and crash; Christian Tismer rewrote the deletion logic to fix this problem. On a related note, comparing recursive objects recursed infinitely and crashed; Jeremy Hylton rewrote the code to no longer crash, producing a useful result instead. For example, after this code:

```
a = []
b = []
a.append(a)
b.append(b)
```

The comparison `a==b` returns true, because the two recursive data structures are isomorphic. See the thread “trashcan and PR#7” in the April 2000 archives of the python-dev mailing list for the discussion leading up to this implementation, and some useful relevant links. Note that comparisons can now also raise exceptions. In earlier versions of Python, a comparison operation such as `cmp(a,b)` would always produce an answer, even if a user-defined `__cmp__()` method encountered an error, since the resulting exception would simply be silently swallowed.

Work has been done on porting Python to 64-bit Windows on the Itanium processor, mostly by Trent Mick of ActiveState. (Confusingly, `sys.platform` is still 'win32' on Win64 because it seems that for ease of porting, MS Visual C++ treats code as 32 bit on Itanium.) PythonWin also supports Windows CE; see the Python CE page at <https://pythonce.sourceforge.net/> for more information.

Another new platform is Darwin/MacOS X; initial support for it is in Python 2.0. Dynamic loading works, if you specify “configure –with-dyld –with-suffix=.x”. Consult the README in the Python source distribution for more instructions.

An attempt has been made to alleviate one of Python’s warts, the often-confusing `NameError` exception when code refers to a local variable before the variable has been assigned a value. For example, the following code raises an exception on the `print` statement in both 1.5.2 and 2.0; in 1.5.2 a `NameError` exception is raised, while 2.0 raises a new `UnboundLocalError` exception. `UnboundLocalError` is a subclass of `NameError`, so any existing code that expects `NameError` to be raised should still work.

```
def f():
    print "i=",i
    i = i + 1
```

`f()`

Two new exceptions, `TabError` and `IndentationError`, have been introduced. They're both subclasses of `SyntaxError`, and are raised when Python code is found to be improperly indented.

## Changes to Built-in Functions

A new built-in, `zip(seq1, seq2, ...)`, has been added. `zip()` returns a list of tuples where each tuple contains the *i*-th element from each of the argument sequences. The difference between `zip()` and `map(None, seq1, seq2)` is that `map()` pads the sequences with `None` if the sequences aren't all of the same length, while `zip()` truncates the returned list to the length of the shortest argument sequence.

The `int()` and `long()` functions now accept an optional “base” parameter when the first argument is a string. `int('123', 10)` returns 123, while `int('123', 16)` returns 291. `int(123, 16)` raises a `TypeError` exception with the message “can't convert non-string with explicit base”.

A new variable holding more detailed version information has been added to the `sys` module. `sys.version_info` is a tuple (major, minor, micro, level, serial). For example, in a hypothetical 2.0.1beta1, `sys.version_info` would be (2, 0, 1, 'beta', 1). `level` is a string such as “alpha”, “beta”, or “final” for a final release.

Dictionaries have an odd new method, `setdefault(key, default)`, which behaves similarly to the existing `get()` method. However, if the key is missing, `setdefault()` both returns the value of `default` as `get()` would do, and also inserts it into the dictionary as the value for `key`. Thus, the following lines of code:

```
if dict.has_key( key ): return dict[key]
else:
    dict[key] = []
    return dict[key]
```

can be reduced to a single `return dict.setdefault(key,`

[ ]) statement.

The interpreter sets a maximum recursion depth in order to catch runaway recursion before filling the C stack and causing a core dump or GPF.. Previously this limit was fixed when you compiled Python, but in 2.0 the maximum recursion depth can be read and modified using `sys.getrecursionlimit()` and `sys.setrecursionlimit()`. The default value is 1000, and a rough maximum value for a given platform can be found by running a new script, `Misc/find_recursionlimit.py`.

## Porting to 2.0

New Python releases try hard to be compatible with previous releases, and the record has been pretty good. However, some changes are considered useful enough, usually because they fix initial design decisions that turned out to be actively mistaken, that breaking backward compatibility can't always be avoided. This section lists the changes in Python 2.0 that may cause old Python code to break.

The change which will probably break the most code is tightening up the arguments accepted by some methods. Some methods would take multiple arguments and treat them as a tuple, particularly various list methods such as `append()` and `insert()`. In earlier versions of Python, if `L` is a list, `L.append( 1,2 )` appends the tuple `(1,2)` to the list. In Python 2.0 this causes a `TypeError` exception to be raised, with the message: 'append requires exactly 1 argument; 2 given'. The fix is to simply add an extra set of parentheses to pass both values as a tuple: `L.append( (1,2) )`.

The earlier versions of these methods were more forgiving because they used an old function in Python's C interface to parse their arguments; 2.0 modernizes them to use `PyArg_ParseTuple()`, the current argument parsing function, which provides more helpful error messages and treats multi-argument calls as errors. If you absolutely must use 2.0 but can't fix your code, you can edit `Objects/listobject.c` and define the preprocessor symbol `NO_STRICT_LIST_APPEND` to preserve the old behaviour; this isn't recommended.

Some of the functions in the `socket` module are still forgiving in this way. For example, `socket.connect( ('hostname', 25) )()` is the correct form, passing a tuple representing an IP address, but `socket.connect( 'hostname', 25 )()` also works. `socket.connect_ex()` and `socket.bind()` are similarly easy-going. 2.0alpha1 tightened these functions up, but because the documentation actually used the erroneous multiple argument form, many people wrote code which would break with the stricter checking. GvR backed out the changes in the face of public reaction, so for the `socket` module, the documentation was fixed and the multiple argument form is simply marked as deprecated; it *will* be tightened up again in a future Python version.

The `\x` escape in string literals now takes exactly 2 hex digits. Previously it would consume all the hex digits following the 'x' and take the lowest 8 bits of the result, so `\x123456` was equivalent to `\x56`.

The `AttributeError` and `NameError` exceptions have a more friendly error message, whose text will be something like 'Spam' instance has no attribute 'eggs' or name 'eggs' is not defined. Previously the error message was just the missing attribute name `eggs`, and code written to take advantage of this fact will break in 2.0.

Some work has been done to make integers and long integers a bit more interchangeable. In 1.5.2, large-file support was added for Solaris, to allow reading files larger than 2 GiB; this made the `tell()` method of file objects return a long integer instead of a regular integer. Some code would subtract two file offsets and attempt to use the result to multiply a sequence or slice a string, but this raised a `TypeError`. In 2.0, long integers can be used to multiply or slice a sequence, and it'll behave as you'd intuitively expect it to; `3L * 'abc'` produces `'abcabcabc'`, and `(0, 1, 2, 3)[2L:4L]` produces `(2,3)`. Long integers can also be used in various contexts where previously only integers were accepted, such as in the `seek()` method of file objects, and in the formats supported by the `%` operator (`%d`, `%i`, `%x`, etc.). For example, `"%d" % 2L**64` will produce the string `18446744073709551616`.

The subtlest long integer change of all is that the `str()` of a long

integer no longer has a trailing 'L' character, though `repr()` still includes it. The 'L' annoyed many people who wanted to print long integers that looked just like regular integers, since they had to go out of their way to chop off the character. This is no longer a problem in 2.0, but code which does `str(longval)[-1]` and assumes the 'L' is there, will now lose the final digit.

Taking the `repr()` of a float now uses a different formatting precision than `str()`. `repr()` uses `%.17g` format string for C's `sprintf()`, while `str()` uses `%.12g` as before. The effect is that `repr()` may occasionally show more decimal places than `str()`, for certain numbers. For example, the number 8.1 can't be represented exactly in binary, so `repr(8.1)` is `'8.0999999999999996'`, while `str(8.1)` is `'8.1'`.

The `-X` command-line option, which turned all standard exceptions into strings instead of classes, has been removed; the standard exceptions will now always be classes. The `exceptions` module containing the standard exceptions was translated from Python to a built-in C module, written by Barry Warsaw and Fredrik Lundh.

## Extending/Embedding Changes

Some of the changes are under the covers, and will only be apparent to people writing C extension modules or embedding a Python interpreter in a larger application. If you aren't dealing with Python's C API, you can safely skip this section.

The version number of the Python C API was incremented, so C extensions compiled for 1.5.2 must be recompiled in order to work with 2.0. On Windows, it's not possible for Python 2.0 to import a third party extension built for Python 1.5.x due to how Windows DLLs work, so Python will raise an exception and the import will fail.

Users of Jim Fulton's `ExtensionClass` module will be pleased to find out that hooks have been added so that `ExtensionClasses` are now supported by `isinstance()` and `issubclass()`. This means you no longer have to remember to write code such as `if type(obj) == myExtensionClass`, but can use the more

```
natural if isinstance(obj, myExtensionClass).
```

The `Python/importdl.c` file, which was a mass of `#ifdefs` to support dynamic loading on many different platforms, was cleaned up and reorganised by Greg Stein. `importdl.c` is now quite small, and platform-specific code has been moved into a bunch of `Python/dynload_*.c` files. Another cleanup: there were also a number of `my*.h` files in the `Include/` directory that held various portability hacks; they've been merged into a single file, `Include/pyport.h`.

Vladimir Marangozov's long-awaited `malloc` restructuring was completed, to make it easy to have the Python interpreter use a custom allocator instead of C's standard `malloc()`. For documentation, read the comments in `Include/pymem.h` and `Include/objimpl.h`. For the lengthy discussions during which the interface was hammered out, see the web archives of the 'patches' and 'python-dev' lists at [python.org](http://python.org).

Recent versions of the GUSI development environment for MacOS support POSIX threads. Therefore, Python's POSIX threading support now works on the Macintosh. Threading support using the user-space GNU `pth` library was also contributed.

Threading support on Windows was enhanced, too. Windows supports thread locks that use kernel objects only in case of contention; in the common case when there's no contention, they use simpler functions which are an order of magnitude faster. A threaded version of Python 1.5.2 on NT is twice as slow as an unthreaded version; with the 2.0 changes, the difference is only 10%. These improvements were contributed by Yakov Markovitch.

Python 2.0's source now uses only ANSI C prototypes, so compiling Python now requires an ANSI C compiler, and can no longer be done using a compiler that only supports K&R C.

Previously the Python virtual machine used 16-bit numbers in its bytecode, limiting the size of source files. In particular, this affected the maximum size of literal lists and dictionaries in Python source; occasionally people who are generating Python code would run into this limit. A patch by Charles G. Waldman raises the limit from

`2**16` to `2**32`.

Three new convenience functions intended for adding constants to a module's dictionary at module initialization time were added:

`PyModule_AddObject()`, `PyModule_AddIntConstant()`, and `PyModule_AddStringConstant()`. Each of these functions takes a module object, a null-terminated C string containing the name to be added, and a third argument for the value to be assigned to the name. This third argument is, respectively, a Python object, a C long, or a C string.

A wrapper API was added for Unix-style signal handlers.

`PyOS_getsig()` gets a signal handler and `PyOS_setsig()` will set a new handler.

## Distutils: Making Modules Easy to Install

Before Python 2.0, installing modules was a tedious affair – there was no way to figure out automatically where Python is installed, or what compiler options to use for extension modules. Software authors had to go through an arduous ritual of editing Makefiles and configuration files, which only really work on Unix and leave Windows and MacOS unsupported. Python users faced wildly differing installation instructions which varied between different extension packages, which made administering a Python installation something of a chore.

The SIG for distribution utilities, shepherded by Greg Ward, has created the Distutils, a system to make package installation much easier. They form the `distutils` package, a new part of Python's standard library. In the best case, installing a Python module from source will require the same steps: first you simply mean unpack the tarball or zip archive, and then run “`python setup.py install`”. The platform will be automatically detected, the compiler will be recognized, C extension modules will be compiled, and the distribution installed into the proper directory. Optional command-line arguments provide more control over the installation process, the `distutils` package offers many places to override defaults – separating the build from the install, building or installing in non-default directories, and more.

In order to use the Distutils, you need to write a `setup.py` script. For the simple case, when the software contains only `.py` files, a minimal `setup.py` can be just a few lines long:

```
from distutils.core import setup
setup (name = "foo", version = "1.0",
      py_modules = ["module1", "module2"])
```

The `setup.py` file isn't much more complicated if the software consists of a few packages:

```
from distutils.core import setup
setup (name = "foo", version = "1.0",
      packages = ["package", "package.subpackage"])
```

A C extension can be the most complicated case; here's an example taken from the PyXML package:

```
from distutils.core import setup, Extension

expat_extension = Extension('xml.parsers.pyexpat',
    define_macros = [('XML_NS', None)],
    include_dirs = [ 'extensions/expat/xmltok',
                     'extensions/expat/xmlparse' ],
    sources = [ 'extensions/pyexpat.c',
                'extensions/expat/xmltok/xmltok.c',
                'extensions/expat/xmltok/xmlrole.c', ]
    )
setup (name = "PyXML", version = "0.5.4",
      ext_modules=[ expat_extension ] )
```

The Distutils can also take care of creating source and binary distributions. The “sdist” command, run by “python setup.py sdist”, builds a source distribution such as `foo-1.0.tar.gz`. Adding new commands isn't difficult, “bdist\_rpm” and “bdist\_wininst” commands have already been contributed to create an RPM distribution and a Windows installer for the software, respectively. Commands to create other distribution formats such as Debian packages and Solaris `.pkg` files are in various stages of development.

All this is documented in a new manual, *Distributing Python Modules*, that joins the basic set of Python documentation.

## XML Modules

Python 1.5.2 included a simple XML parser in the form of the **xml11ib** module, contributed by Sjoerd Mullender. Since 1.5.2's release, two different interfaces for processing XML have become common: SAX2 (version 2 of the Simple API for XML) provides an event-driven interface with some similarities to **xml11ib**, and the DOM (Document Object Model) provides a tree-based interface, transforming an XML document into a tree of nodes that can be traversed and modified. Python 2.0 includes a SAX2 interface and a stripped-down DOM interface as part of the **xml** package. Here we will give a brief overview of these new interfaces; consult the Python documentation or the source code for complete details. The Python XML SIG is also working on improved documentation.

### SAX2 Support

SAX defines an event-driven interface for parsing XML. To use SAX, you must write a SAX handler class. Handler classes inherit from various classes provided by SAX, and override various methods that will then be called by the XML parser. For example, the **startElement()** and **endElement()** methods are called for every starting and end tag encountered by the parser, the **characters()** method is called for every chunk of character data, and so forth.

The advantage of the event-driven approach is that the whole document doesn't have to be resident in memory at any one time, which matters if you are processing really huge documents. However, writing the SAX handler class can get very complicated if you're trying to modify the document structure in some elaborate way.

For example, this little example program defines a handler that prints a message for every starting and ending tag, and then parses the file `hamlet.xml` using it:

```

from xml import sax

class SimpleHandler(sax.ContentHandler):
    def startElement(self, name, attrs):
        print 'Start of element:', name, attrs.keys()

    def endElement(self, name):
        print 'End of element:', name

# Create a parser object
parser = sax.make_parser()

# Tell it what handler to use
handler = SimpleHandler()
parser.setContentHandler( handler )

# Parse a file!
parser.parse( 'hamlet.xml' )

```

For more information, consult the Python documentation, or the XML HOWTO at <https://pyxml.sourceforge.net/topics/howto/xml-howto.html>.

## DOM Support

The Document Object Model is a tree-based representation for an XML document. A top-level **Document** instance is the root of the tree, and has a single child which is the top-level **Element** instance. This **Element** has children nodes representing character data and any sub-elements, which may have further children of their own, and so forth. Using the DOM you can traverse the resulting tree any way you like, access element and attribute values, insert and delete nodes, and convert the tree back into XML.

The DOM is useful for modifying XML documents, because you can create a DOM tree, modify it by adding new nodes or rearranging subtrees, and then produce a new XML document as output. You can also construct a DOM tree manually and convert it to XML, which can be a more flexible way of producing XML output than

simply writing `<tag1>...</tag1>` to a file.

The DOM implementation included with Python lives in the `xml.dom.minidom` module. It's a lightweight implementation of the Level 1 DOM with support for XML namespaces. The `parse()` and `parseString()` convenience functions are provided for generating a DOM tree:

```
from xml.dom import minidom
doc = minidom.parse('hamlet.xml')
```

`doc` is a **Document** instance. **Document**, like all the other DOM classes such as **Element** and **Text**, is a subclass of the **Node** base class. All the nodes in a DOM tree therefore support certain common methods, such as `toxml()` which returns a string containing the XML representation of the node and its children. Each class also has special methods of its own; for example, **Element** and **Document** instances have a method to find all child elements with a given tag name. Continuing from the previous 2-line example:

```
perslist = doc.getElementsByTagName( 'PERSONA' )
print perslist[0].toxml()
print perslist[1].toxml()
```

For the *Hamlet* XML file, the above few lines output:

```
<PERSONA>CLAUDIUS, king of Denmark. </PERSONA>
<PERSONA>HAMLET, son to the late, and nephew to the pres
```

The root element of the document is available as `doc.documentElement`, and its children can be easily modified by deleting, adding, or removing nodes:

```
root = doc.documentElement

# Remove the first child
root.removeChild( root.childNodes[0] )

# Move the new first child to the end
root.appendChild( root.childNodes[0] )
```

```
# Insert the new first child (originally,  
# the third child) before the 20th child.  
root.insertBefore( root.childNodes[0], root.childNodes[20])
```

Again, I will refer you to the Python documentation for a complete listing of the different **Node** classes and their various methods.

## Relationship to PyXML

The XML Special Interest Group has been working on XML-related Python code for a while. Its code distribution, called PyXML, is available from the SIG's web pages at <https://www.python.org/community/sigs/current/xml-sig>. The PyXML distribution also used the package name `xml`. If you've written programs that used PyXML, you're probably wondering about its compatibility with the 2.0 `xml` package.

The answer is that Python 2.0's `xml` package isn't compatible with PyXML, but can be made compatible by installing a recent version PyXML. Many applications can get by with the XML support that is included with Python 2.0, but more complicated applications will require that the full PyXML package will be installed. When installed, PyXML versions 0.6.0 or greater will replace the `xml` package shipped with Python, and will be a strict superset of the standard package, adding a bunch of additional features. Some of the additional features in PyXML include:

- 4DOM, a full DOM implementation from FourThought, Inc.
- The `xmlproc` validating parser, written by Lars Marius Garshol.
- The `sgmlop` parser accelerator module, written by Fredrik Lundh.

## Module changes

Lots of improvements and bugfixes were made to Python's extensive standard library; some of the affected modules include `readline`, `ConfigParser`, `cgi`, `calendar`, `posix`, `readline`, `xmllib`, `aifc`, `chunk`, `wave`, `random`, `shelve`, and `nntplib`. Consult

the CVS logs for the exact patch-by-patch details.

Brian Gallew contributed OpenSSL support for the **socket** module. OpenSSL is an implementation of the Secure Socket Layer, which encrypts the data being sent over a socket. When compiling Python, you can edit `Modules/Setup` to include SSL support, which adds an additional function to the **socket** module: `socket.ssl(socket, keyfile, certfile)`, which takes a socket object and returns an SSL socket. The **httplib** and **urllib** modules were also changed to support `https://` URLs, though no one has implemented FTP or SMTP over SSL.

The **httplib** module has been rewritten by Greg Stein to support HTTP/1.1. Backward compatibility with the 1.5 version of **httplib** is provided, though using HTTP/1.1 features such as pipelining will require rewriting code to use a different set of interfaces.

The **Tkinter** module now supports Tcl/Tk version 8.1, 8.2, or 8.3, and support for the older 7.x versions has been dropped. The Tkinter module now supports displaying Unicode strings in Tk widgets. Also, Fredrik Lundh contributed an optimization which makes operations like `create_line` and `create_polygon` much faster, especially when using lots of coordinates.

The **curses** module has been greatly extended, starting from Oliver Andrich's enhanced version, to provide many additional functions from ncurses and SYSV curses, such as colour, alternative character set support, pads, and mouse support. This means the module is no longer compatible with operating systems that only have BSD curses, but there don't seem to be any currently maintained OSes that fall into this category.

As mentioned in the earlier discussion of 2.0's Unicode support, the underlying implementation of the regular expressions provided by the **re** module has been changed. SRE, a new regular expression engine written by Fredrik Lundh and partially funded by Hewlett Packard, supports matching against both 8-bit strings and Unicode strings.

# New modules

A number of new modules were added. We'll simply list them with brief descriptions; consult the 2.0 documentation for the details of a particular module.

- **atexit**: For registering functions to be called before the Python interpreter exits. Code that currently sets `sys.exitfunc` directly should be changed to use the **atexit** module instead, importing **atexit** and calling **atexit.register()** with the function to be called on exit. (Contributed by Skip Montanaro.)
- **codecs**, **encodings**, **unicodedata**: Added as part of the new Unicode support.
- **filecmp**: Supersedes the old **cmp**, **cmpcache** and **dircmp** modules, which have now become deprecated. (Contributed by Gordon MacMillan and Moshe Zadka.)
- **gettext**: This module provides internationalization (I18N) and localization (L10N) support for Python programs by providing an interface to the GNU gettext message catalog library. (Integrated by Barry Warsaw, from separate contributions by Martin von Löwis, Peter Funk, and James Henstridge.)
- **linuxaudiodev**: Support for the `/dev/audio` device on Linux, a twin to the existing **sunaudiodev** module. (Contributed by Peter Bosch, with fixes by Jeremy Hylton.)
- **mmap**: An interface to memory-mapped files on both Windows and Unix. A file's contents can be mapped directly into memory, at which point it behaves like a mutable string, so its contents can be read and modified. They can even be passed to functions that expect ordinary strings, such as the **re** module. (Contributed by Sam Rushing, with some extensions by A.M. Kuchling.)
- **pyexpat**: An interface to the Expat XML parser. (Contributed by Paul Prescod.)
- **robotparser**: Parse a `robots.txt` file, which is used for writing web spiders that politely avoid certain areas of a web site. The parser accepts the contents of a `robots.txt` file, builds a set of rules from it, and can then answer questions about the fetchability of a given URL. (Contributed by Skip

Montanaro.)

- **tabnanny**: A module/script to check Python source code for ambiguous indentation. (Contributed by Tim Peters.)
- **UserString**: A base class useful for deriving objects that behave like strings.
- **webbrowser**: A module that provides a platform independent way to launch a web browser on a specific URL. For each platform, various browsers are tried in a specific order. The user can alter which browser is launched by setting the *BROWSER* environment variable. (Originally inspired by Eric S. Raymond's patch to **urllib** which added similar functionality, but the final module comes from code originally implemented by Fred Drake as `Tools/idle/BrowserControl.py`, and adapted for the standard library by Fred.)
- **\_winreg**: An interface to the Windows registry. **\_winreg** is an adaptation of functions that have been part of PythonWin since 1995, but has now been added to the core distribution, and enhanced to support Unicode. **\_winreg** was written by Bill Tutt and Mark Hammond.
- **zipfile**: A module for reading and writing ZIP-format archives. These are archives produced by **PKZIP** on DOS/Windows or **zip** on Unix, not to be confused with **gzip**-format files (which are supported by the **gzip** module) (Contributed by James C. Ahlstrom.)
- **imputil**: A module that provides a simpler way for writing customized import hooks, in comparison to the existing **ihooks** module. (Implemented by Greg Stein, with much discussion on python-dev along the way.)

## IDLE Improvements

IDLE is the official Python cross-platform IDE, written using Tkinter. Python 2.0 includes IDLE 0.6, which adds a number of new features and improvements. A partial list:

- UI improvements and optimizations, especially in the area of syntax highlighting and auto-indentation.
- The class browser now shows more information, such as the top level functions in a module.

- Tab width is now a user settable option. When opening an existing Python file, IDLE automatically detects the indentation conventions, and adapts.
- There is now support for calling browsers on various platforms, used to open the Python documentation in a browser.
- IDLE now has a command line, which is largely similar to the vanilla Python interpreter.
- Call tips were added in many places.
- IDLE can now be installed as a package.
- In the editor window, there is now a line/column bar at the bottom.
- Three new keystroke commands: Check module (`Alt-F5`), Import module (`F5`) and Run script (`Ctrl-F5`).

## Deleted and Deprecated Modules

A few modules have been dropped because they're obsolete, or because there are now better ways to do the same thing. The **stdwin** module is gone; it was for a platform-independent windowing toolkit that's no longer developed.

A number of modules have been moved to the `lib-old` subdirectory: **cmp**, **cmpcache**, **dircmp**, **dump**, **find**, **grep**, **packmail**, **poly**, **util**, **whatsound**, **zmod**. If you have code which relies on a module that's been moved to `lib-old`, you can simply add that directory to `sys.path` to get them back, but you're encouraged to update any code that uses these modules.

## Acknowledgements

The authors would like to thank the following people for offering suggestions on various drafts of this article: David Bolen, Mark Hammond, Gregg Hauser, Jeremy Hylton, Fredrik Lundh, Detlef Lannert, Aahz Maruch, Skip Montanaro, Vladimir Marangozov, Tobias Polzin, Guido van Rossum, Neil Schemenauer, and Russ Schmidt.

# Changelog

## Python next

*Release date: XXXX-XX-XX*

### Core and Builtins

- [gh-110696](https://github.com/python/cpython/issues/110696) [https://github.com/python/cpython/issues/110696]: Fix incorrect error message for invalid argument unpacking. Patch by Pablo Galindo
- [gh-110514](https://github.com/python/cpython/issues/110514) [https://github.com/python/cpython/issues/110514]: Add `PY_THROW` to `sys.setprofile()` events
- [gh-110455](https://github.com/python/cpython/issues/110455) [https://github.com/python/cpython/issues/110455]: Guard `assert(tstate->thread_id > 0)` with `#ifndef HAVE_PTHREAD_STUBS`. This allows for pydebug builds to work under WASI which (currently) lacks thread support.
- [gh-110259](https://github.com/python/cpython/issues/110259) [https://github.com/python/cpython/issues/110259]: Correctly identify the format spec in f-strings (with single or triple quotes) that have multiple lines in the expression part and include a formatting spec. Patch by Pablo Galindo
- [gh-110237](https://github.com/python/cpython/issues/110237) [https://github.com/python/cpython/issues/110237]: Fix missing error checks for calls to `PyList_Append` in `_PyEval_MatchClass`.
- [gh-109889](https://github.com/python/cpython/issues/109889) [https://github.com/python/cpython/issues/109889]: Fix the compiler's redundant NOP detection algorithm to skip over NOPs with no line number when looking for the next instruction's lineno.
- [gh-109596](https://github.com/python/cpython/issues/109596) [https://github.com/python/cpython/issues/109596]: Fix some tokens in the grammar that were incorrectly marked as soft keywords. Also fix some repeated rule names and ensure that repeated rules are not allowed. Patch by Pablo Galindo
- [gh-109351](https://github.com/python/cpython/issues/109351) [https://github.com/python/cpython/issues/109351]: Fix crash when compiling an invalid AST involving a named (walrus) expression.

- [gh-109207](https://github.com/python/cpython/issues/109207) [https://github.com/python/cpython/issues/109207]: Fix a `SystemError` in `__repr__` of `symtable` entry object.
- [gh-109179](https://github.com/python/cpython/issues/109179) [https://github.com/python/cpython/issues/109179]: Fix bug where the C traceback display drops notes from `SyntaxError`.
- [gh-88943](https://github.com/python/cpython/issues/88943) [https://github.com/python/cpython/issues/88943]: Improve syntax error for non-ASCII character that follows a numerical literal. It now points on the invalid non-ASCII character, not on the valid numerical literal.

## Library

- [gh-110488](https://github.com/python/cpython/issues/110488) [https://github.com/python/cpython/issues/110488]: Fix a couple of issues in `pathlib.PurePath.with_name()`: a single dot was incorrectly considered a valid name, and in `PureWindowsPath`, a name with an NTFS alternate data stream, like `a:b`, was incorrectly considered invalid.
- [gh-110590](https://github.com/python/cpython/issues/110590) [https://github.com/python/cpython/issues/110590]: Fix a bug in `_sre.compile()` where `TypeError` would be overwritten by `OverflowError` when the `code` argument was a list of non-ints.
- [gh-65052](https://github.com/python/cpython/issues/65052) [https://github.com/python/cpython/issues/65052]: Prevent `pdb` from crashing when trying to display undisplayable objects
- [gh-110519](https://github.com/python/cpython/issues/110519) [https://github.com/python/cpython/issues/110519]: Deprecation warning about non-integer number in `gettext` now always refers to the line in the user code where `gettext` function or method is used. Previously it could refer to a line in `gettext` code.
- [gh-110378](https://github.com/python/cpython/issues/110378) [https://github.com/python/cpython/issues/110378]: `contextmanager()` and `asynccontextmanager()` context managers now close an invalid underlying generator object that yields more than one value.
- [gh-110365](https://github.com/python/cpython/issues/110365) [https://github.com/python/cpython/issues/110365]: Fix `termios.tcsetattr()` bug that was overwriting existing errors during parsing integers from `term` list.
- [gh-109653](https://github.com/python/cpython/issues/109653) [https://github.com/python/cpython/issues/109653]: Fix a Python 3.12 regression in the import time of `random`. Patch by Alex Waygood.
- [gh-110036](https://github.com/python/cpython/issues/110036) [https://github.com/python/cpython/issues/110036]: On

Windows, multiprocessing `Popen.terminate()` now catches `PermissionError` and get the process exit code. If the process is still running, raise again the `PermissionError`. Otherwise, the process terminated as expected: store its exit code. Patch by Victor Stinner.

- [gh-110038](https://github.com/python/cpython/issues/110038) [https://github.com/python/cpython/issues/110038]: Fixed an issue that caused `KqueueSelector.select()` to not return all the ready events in some cases when a file descriptor is registered for both read and write.
- [gh-109631](https://github.com/python/cpython/issues/109631) [https://github.com/python/cpython/issues/109631]: `re` functions such as `re.findall()`, `re.split()`, `re.search()` and `re.sub()` which perform short repeated matches can now be interrupted by user.
- [gh-109818](https://github.com/python/cpython/issues/109818) [https://github.com/python/cpython/issues/109818]: Fix `reprlib.recursive_repr()` not copying `__type_params__` from decorated function.
- [gh-109047](https://github.com/python/cpython/issues/109047) [https://github.com/python/cpython/issues/109047]: `concurrent.futures`: The *executor manager thread* now catches exceptions when adding an item to the *call queue*. During Python finalization, creating a new thread can now raise `RuntimeError`. Catch the exception and call `terminate_broken()` in this case. Patch by Victor Stinner.
- [gh-109782](https://github.com/python/cpython/issues/109782) [https://github.com/python/cpython/issues/109782]: Ensure the signature of `os.path.isdir()` is identical on all platforms. Patch by Amin Alaei.
- [gh-109590](https://github.com/python/cpython/issues/109590) [https://github.com/python/cpython/issues/109590]: `shutil.which()` will prefer files with an extension in `PATHEXT` if the given mode includes `os.X_OK` on win32. If no `PATHEXT` match is found, a file without an extension in `PATHEXT` can be returned. This change will have `shutil.which()` act more similarly to previous behavior in Python 3.11.
- [gh-109593](https://github.com/python/cpython/issues/109593) [https://github.com/python/cpython/issues/109593]: Avoid deadlocking on a reentrant call to the multiprocessing resource tracker. Such a reentrant call, though unlikely, can happen if a GC pass invokes the finalizer for a multiprocessing object such as `SemLock`.
- [gh-109613](https://github.com/python/cpython/issues/109613) [https://github.com/python/cpython/issues/109613]: Fix `os.stat()` and `os.DirEntry.stat()`: check for exceptions. Previously, on Python built in debug mode, these

functions could trigger a fatal Python error (and abort the process) when a function succeeded with an exception set. Patch by Victor Stinner.

- [gh-109375](https://github.com/python/cpython/issues/109375) [https://github.com/python/cpython/issues/109375]: The `pdb` alias command now prevents registering aliases without arguments.
- [gh-107219](https://github.com/python/cpython/issues/107219) [https://github.com/python/cpython/issues/107219]: Fix a race condition in `concurrent.futures`. When a process in the process pool was terminated abruptly (while the future was running or pending), close the connection write end. If the call queue is blocked on sending bytes to a worker process, closing the connection write end interrupts the send, so the queue can be closed. Patch by Victor Stinner.
- [gh-50644](https://github.com/python/cpython/issues/50644) [https://github.com/python/cpython/issues/50644]: Attempts to pickle or create a shallow or deep copy of `codecs` streams now raise a `TypeError`. Previously, copying failed with a `RecursionError`, while pickling produced wrong results that eventually caused unpickling to fail with a `RecursionError`.
- [gh-108987](https://github.com/python/cpython/issues/108987) [https://github.com/python/cpython/issues/108987]: Fix `_thread.start_new_thread()` race condition. If a thread is created during Python finalization, the newly spawned thread now exits immediately instead of trying to access freed memory and lead to a crash. Patch by Victor Stinner.
- [gh-105829](https://github.com/python/cpython/issues/105829) [https://github.com/python/cpython/issues/105829]: Fix `concurrent.futures.ProcessPoolExecutor` deadlock
- [gh-106584](https://github.com/python/cpython/issues/106584) [https://github.com/python/cpython/issues/106584]: Fix exit code for `unittest` if all tests are skipped. Patch by Egor Eliseev.
- [gh-84867](https://github.com/python/cpython/issues/84867) [https://github.com/python/cpython/issues/84867]: `unittest.TestLoader` no longer loads test cases from exact `unittest.TestCase` and `unittest.FunctionTestCase` classes.

## Documentation

- [gh-108826](https://github.com/python/cpython/issues/108826) [https://github.com/python/cpython/issues/108826]: `dis` module command-line interface is now mentioned in documentation.

## Tests

- [gh-110647](https://github.com/python/cpython/issues/110647) [https://github.com/python/cpython/issues/110647]: Fix `test_stress_modifying_handlers()` of `test_signal`. Patch by Victor Stinner.
- [gh-103053](https://github.com/python/cpython/issues/103053) [https://github.com/python/cpython/issues/103053]: Fix `test_tools.test_freeze` on FreeBSD: run “make distclean” instead of “make clean” in the copied source directory to remove also the “python” program. Patch by Victor Stinner.
- [gh-110167](https://github.com/python/cpython/issues/110167) [https://github.com/python/cpython/issues/110167]: Fix a deadlock in `test_socket` when server fails with a timeout but the client is still running in its thread. Don’t hold a lock to call cleanup functions in `doCleanups()`. One of the cleanup function waits until the client completes, whereas the client could deadlock if it called `addCleanup()` in such situation. Patch by Victor Stinner.
- [gh-110388](https://github.com/python/cpython/issues/110388) [https://github.com/python/cpython/issues/110388]: Add tests for `tty`.
- [gh-81002](https://github.com/python/cpython/issues/81002) [https://github.com/python/cpython/issues/81002]: Add tests for `termios`.
- [gh-110267](https://github.com/python/cpython/issues/110267) [https://github.com/python/cpython/issues/110267]: Add tests for pickling and copying `PyStructSequence` objects. Patched by Xuehai Pan.
- [gh-110031](https://github.com/python/cpython/issues/110031) [https://github.com/python/cpython/issues/110031]: Skip `test_threading` tests using `thread + fork` if Python is built with Address Sanitizer (ASAN). Patch by Victor Stinner.
- [gh-110088](https://github.com/python/cpython/issues/110088) [https://github.com/python/cpython/issues/110088]: Fix `test_asyncio` timeouts: don’t measure the maximum duration, a test should not measure a CI performance. Only measure the minimum duration when a task has a timeout or delay. Add `CLOCK_RES` to `test_asyncio.utils`. Patch by Victor Stinner.
- [gh-109974](https://github.com/python/cpython/issues/109974) [https://github.com/python/cpython/issues/109974]: Fix race conditions in `test_threading` lock tests. Wait until a condition is met rather than using `time.sleep()` with a hardcoded number of seconds. Patch by Victor Stinner.
- [gh-110033](https://github.com/python/cpython/issues/110033) [https://github.com/python/cpython/issues/110033]: Fix `test_interprocess_signal()` of `test_signal`. Make sure that the `subprocess.Popen` object is deleted before the test raising an exception in a signal handler. Otherwise,

`Popen.__del__()` can get the exception which is logged as `Exception ignored in: ...` and the test fails. Patch by Victor Stinner.

- [gh-109594](https://github.com/python/cpython/issues/109594) [https://github.com/python/cpython/issues/109594]: Fix `test_timeout()` of `test_concurrent_futures.test_wait`. Remove the future which may or may not complete depending if it takes longer than the timeout or not. Keep the second future which does not complete before `wait()` timeout. Patch by Victor Stinner.
- [gh-109972](https://github.com/python/cpython/issues/109972) [https://github.com/python/cpython/issues/109972]: Split `test_gdb.py` file into a `test_gdb` package made of multiple tests, so tests can now be run in parallel. Patch by Victor Stinner.
- [gh-103053](https://github.com/python/cpython/issues/103053) [https://github.com/python/cpython/issues/103053]: Skip `test_freeze_simple_script()` of `test_tools.test_freeze` if Python is built with `./configure --enable-optimizations`, which means with Profile Guided Optimization (PGO): it just makes the test too slow. The freeze tool is tested by many other CIs with other (faster) compiler flags. Patch by Victor Stinner.
- [gh-109580](https://github.com/python/cpython/issues/109580) [https://github.com/python/cpython/issues/109580]: Skip `test_perf_profiler` if Python is built with ASAN, MSAN or UBSAN sanitizer. Python does crash randomly in this test on such build. Patch by Victor Stinner.
- [gh-104736](https://github.com/python/cpython/issues/104736) [https://github.com/python/cpython/issues/104736]: Fix `test_gdb` on Python built with LLVM clang 16 on Linux ppc64le (ex: Fedora 38). Search patterns in `gdb "bt"` command output to detect when `gdb` fails to retrieve the traceback. For example, skip a test if `Backtrace stopped: frame did not save the PC is found`. Patch by Victor Stinner.

## Build

- [gh-103053](https://github.com/python/cpython/issues/103053) [https://github.com/python/cpython/issues/103053]: “make check-clean-src” now also checks if the “python” program is found in the source directory: fail with an error if it does exist. Patch by Victor Stinner.
- [gh-109191](https://github.com/python/cpython/issues/109191) [https://github.com/python/cpython/issues/109191]: Fix compile error when building with recent versions of libedit.

## Windows

- [gh-110437](https://github.com/python/cpython/issues/110437) [https://github.com/python/cpython/issues/110437]: Allows overriding the source of VC redistributables so that releases can be guaranteed to never downgrade between updates.
- [gh-109286](https://github.com/python/cpython/issues/109286) [https://github.com/python/cpython/issues/109286]: Update Windows installer to use SQLite 3.43.1.

## macOS

- [gh-109286](https://github.com/python/cpython/issues/109286) [https://github.com/python/cpython/issues/109286]: Update macOS installer to use SQLite 3.43.1.

## C API

- [gh-109521](https://github.com/python/cpython/issues/109521) [https://github.com/python/cpython/issues/109521]: `PyImport_GetImporter()` now sets `RuntimeError` if it fails to get `sys.path_hooks` or `sys.path_importer_cache` or they are not list and dict correspondingly. Previously it could return `NULL` without setting error in obscure cases, crash or raise `SystemError` if these attributes have wrong type.

## Python 3.12.0 final

*Release date: 2023-10-02*

## Core and Builtins

- [gh-109823](https://github.com/python/cpython/issues/109823) [https://github.com/python/cpython/issues/109823]: Fix bug where compiler does not adjust labels when removing an empty basic block which is a jump target.
- [gh-109719](https://github.com/python/cpython/issues/109719) [https://github.com/python/cpython/issues/109719]: Fix missing jump target labels when compiler reorders cold/warm blocks.
- [gh-109627](https://github.com/python/cpython/issues/109627) [https://github.com/python/cpython/issues/109627]: Fix bug where the compiler does not assign a new jump target label to a duplicated small exit block.

## Library

- [gh-110045](https://github.com/python/cpython/issues/110045) [https://github.com/python/cpython/issues/110045]: Update the **symtable** module to support the new scopes introduced by **PEP 695** [https://peps.python.org/pep-0695/].

## Documentation

- [gh-109209](https://github.com/python/cpython/issues/109209) [https://github.com/python/cpython/issues/109209]: The minimum Sphinx version required for the documentation is now 4.2.

## Windows

- [gh-109991](https://github.com/python/cpython/issues/109991) [https://github.com/python/cpython/issues/109991]: Update Windows build to use OpenSSL 3.0.11.

## macOS

- [gh-109991](https://github.com/python/cpython/issues/109991) [https://github.com/python/cpython/issues/109991]: Update macOS installer to use OpenSSL 3.0.11.

## Tools/Demos

- [gh-109991](https://github.com/python/cpython/issues/109991) [https://github.com/python/cpython/issues/109991]: Update GitHub CI workflows to use OpenSSL 3.0.11 and multissltests to use 1.1.1w, 3.0.11, and 3.1.3.

# Python 3.12.0 release candidate 3

*Release date: 2023-09-18*

## Core and Builtins

- [gh-109496](https://github.com/python/cpython/issues/109496) [https://github.com/python/cpython/issues/109496]: On a Python built in debug mode, **Py\_DECREF()** now calls `_Py_NegativeRefCount()` if the object is a dangling pointer to deallocated memory: memory filled with `0xDD` “dead byte” by the debug hook on memory allocators. The fix

is to check the reference count *before* checking for `_Py_IsImmortal()`. Patch by Victor Stinner.

- [gh-109371](https://github.com/python/cpython/issues/109371) [https://github.com/python/cpython/issues/109371]: Deopted instructions correctly for tool initialization and modified the incorrect assertion in instrumentation, when a previous tool already sets INSTRUCTION events
- [gh-105658](https://github.com/python/cpython/issues/105658) [https://github.com/python/cpython/issues/105658]: Fix bug where the line trace of an except block ending with a conditional includes an excess event with the line of the conditional expression.
- [gh-109219](https://github.com/python/cpython/issues/109219) [https://github.com/python/cpython/issues/109219]: Fix compiling type param scopes that use a name which is also free in an inner scope.
- [gh-109341](https://github.com/python/cpython/issues/109341) [https://github.com/python/cpython/issues/109341]: Fix crash when compiling an invalid AST involving a `ast.TypeAlias`.
- [gh-109195](https://github.com/python/cpython/issues/109195) [https://github.com/python/cpython/issues/109195]: Fix source location for the `LOAD_*` instruction preceding a `LOAD_SUPER_ATTR` to load the `super` global (or shadowing variable) so that it encompasses only the name `super` and not the following parentheses.
- [gh-109118](https://github.com/python/cpython/issues/109118) [https://github.com/python/cpython/issues/109118]: Disallow nested scopes (lambdas, generator expressions, and comprehensions) within PEP 695 annotation scopes that are nested within classes.
- [gh-109114](https://github.com/python/cpython/issues/109114) [https://github.com/python/cpython/issues/109114]: Relax the detection of the error message for invalid lambdas inside f-strings to not search for arbitrary replacement fields to avoid false positives. Patch by Pablo Galindo
- [gh-109118](https://github.com/python/cpython/issues/109118) [https://github.com/python/cpython/issues/109118]: Fix interpreter crash when a `NameError` is raised inside the type parameters of a generic class.
- [gh-108976](https://github.com/python/cpython/issues/108976) [https://github.com/python/cpython/issues/108976]: Fix crash that occurs after de-instrumenting a code object in a monitoring callback.
- [gh-108732](https://github.com/python/cpython/issues/108732) [https://github.com/python/cpython/issues/108732]: Make iteration variables of module- and class-scoped comprehensions visible to `pdb` and other tools that use `frame.f_locals` again.
- [gh-108959](https://github.com/python/cpython/issues/108959) [https://github.com/python/cpython/issues/108959]: Fix

caret placement for error locations for subscript and binary operations that involve non-semantic parentheses and spaces.  
Patch by Pablo Galindo

## Library

- [gh-108682](https://github.com/python/cpython/issues/108682) [https://github.com/python/cpython/issues/108682]: Enum: require `names=()` or `type=...` to create an empty enum using the functional syntax.
- [gh-108843](https://github.com/python/cpython/issues/108843) [https://github.com/python/cpython/issues/108843]: Fix an issue in `ast.unparse()` when unparsing f-strings containing many quote types.

## Documentation

- [gh-102823](https://github.com/python/cpython/issues/102823) [https://github.com/python/cpython/issues/102823]: Document the return type of `x // y` when `x` and `y` have type `float`.

## Tests

- [gh-109396](https://github.com/python/cpython/issues/109396) [https://github.com/python/cpython/issues/109396]: Fix `test_socket.test_hmac_shal()` in FIPS mode. Use a longer key: FIPS mode requires at least of at least 112 bits. The previous key was only 32 bits. Patch by Victor Stinner.
- [gh-104736](https://github.com/python/cpython/issues/104736) [https://github.com/python/cpython/issues/104736]: Fix `test_gdb` on Python built with LLVM clang 16 on Linux ppc64le (ex: Fedora 38). Search patterns in `gdb "bt"` command output to detect when `gdb` fails to retrieve the traceback. For example, skip a test if `Backtrace stopped: frame did not save the PC is found`. Patch by Victor Stinner.
- [gh-109237](https://github.com/python/cpython/issues/109237) [https://github.com/python/cpython/issues/109237]: Fix `test_site.test_underpth_basic()` when the working directory contains at least one non-ASCII character: encode the `._pth` file to UTF-8 and enable the UTF-8 Mode to use UTF-8 for the child process stdout. Patch by Victor Stinner.
- [gh-109230](https://github.com/python/cpython/issues/109230) [https://github.com/python/cpython/issues/109230]: Fix `test_pyexpat.test_exception()`: it can now be run from a directory different than Python source code directory.

Before, the test failed in this case. Skip the test if Modules/pyexpat.c source is not available. Skip also the test on Python implementations other than CPython. Patch by Victor Stinner.

- [gh-109015](https://github.com/python/cpython/issues/109015) [https://github.com/python/cpython/issues/109015]: Fix `test_asyncio`, `test_imaplib` and `test_socket` tests on FreeBSD if the TCP blackhole is enabled (`sysctl net.inet.tcp.blackhole`). Skip the few tests which failed with `ETIMEDOUT` with such non standard configuration. Currently, the [FreeBSD GCP image enables TCP and UDP blackhole](https://reviews.freebsd.org/D41751) [https://reviews.freebsd.org/D41751] (`sysctl net.inet.tcp.blackhole=2` and `sysctl net.inet.udp.blackhole=1`). Patch by Victor Stinner.
- [gh-91960](https://github.com/python/cpython/issues/91960) [https://github.com/python/cpython/issues/91960]: Skip `test_gdb` if `gdb` is unable to retrieve Python frame objects: if a frame is `<optimized out>`. When Python is built with “`clang -Og`”, `gdb` can fail to retrieve the *frame* parameter of `_PyEval_EvalFrameDefault()`. In this case, tests like `py_bt()` are likely to fail. Without getting access to Python frames, `python-gdb.py` is mostly clueless on retrieving the Python traceback. Moreover, `test_gdb` is no longer skipped on macOS if Python is built with Clang. Patch by Victor Stinner.
- [gh-108962](https://github.com/python/cpython/issues/108962) [https://github.com/python/cpython/issues/108962]: Skip `test_tempfile.test_flags()` if `chflags()` fails with “`OSError: [Errno 45] Operation not supported`” (ex: on FreeBSD 13). Patch by Victor Stinner.
- [gh-108851](https://github.com/python/cpython/issues/108851) [https://github.com/python/cpython/issues/108851]: Fix `test_tomllib` recursion tests for WASI buildbots: reduce the recursion limit and compute the maximum nested array/dict depending on the current available recursion limit. Patch by Victor Stinner.
- [gh-108851](https://github.com/python/cpython/issues/108851) [https://github.com/python/cpython/issues/108851]: Add `get_recursion_available()` and `get_recursion_depth()` functions to the [test.support](#) module. Patch by Victor Stinner.
- [gh-108834](https://github.com/python/cpython/issues/108834) [https://github.com/python/cpython/issues/108834]: Add `--fail-rerun` option to `regtest`: if a test failed when then passed when rerun in verbose mode, exit the process with exit code 2 (error), instead of exit code 0 (success). Patch by Victor Stinner.

- [gh-108834](https://github.com/python/cpython/issues/108834) [https://github.com/python/cpython/issues/108834]: Rename `regtest --verbose2` option (`-w`) to `--rerun`. Keep `--verbose2` as a deprecated alias. Patch by Victor Stinner.
- [gh-108834](https://github.com/python/cpython/issues/108834) [https://github.com/python/cpython/issues/108834]: When `regtest` reruns failed tests in verbose mode (`./python -m test --rerun`), tests are now rerun in fresh worker processes rather than being executed in the main process. If a test does crash or is killed by a timeout, the main process can detect and handle the killed worker process. Tests are rerun in parallel if the `-jN` option is used to run tests in parallel. Patch by Victor Stinner.
- [gh-103186](https://github.com/python/cpython/issues/103186) [https://github.com/python/cpython/issues/103186]: Suppress and assert expected `RuntimeWarnings` in `test_sys_settrace.py`

## Build

- [gh-108740](https://github.com/python/cpython/issues/108740) [https://github.com/python/cpython/issues/108740]: Fix a race condition in `make regen-all`. The `deepfreeze.c` source and files generated by Argument Clinic are now generated or updated before generating “global objects”. Previously, some identifiers may miss depending on the order in which these files were generated. Patch by Victor Stinner.

# Python 3.12.0 release candidate 2

*Release date: 2023-09-05*

## Security

- [gh-108310](https://github.com/python/cpython/issues/108310) [https://github.com/python/cpython/issues/108310]: Fixed an issue where instances of `ssl.SSLSocket` were vulnerable to a bypass of the TLS handshake and included protections (like certificate verification) and treating sent unencrypted data as if it were post-handshake TLS encrypted data. Security issue reported as [CVE-2023-40217](https://cve.mitre.org/cgi-bin/cvename.cgi?name=CVE-2023-40217) [https://cve.mitre.org/cgi-bin/cvename.cgi?name=CVE-2023-40217] by Aapo Oksman. Patch by Gregory P. Smith.

- [gh-107774](https://github.com/python/cpython/issues/107774) [https://github.com/python/cpython/issues/107774]: PEP 669 specifies that `sys.monitoring.register_callback` will generate an audit event. Pre-releases of Python 3.12 did not generate the audit event. This is now fixed.

## Core and Builtins

- [gh-108520](https://github.com/python/cpython/issues/108520) [https://github.com/python/cpython/issues/108520]: Fix `multiprocessing.synchronize.SemLock.__setstate__()` to properly initialize `multiprocessing.synchronize.SemLock._is_fork_ctx`. This fixes a regression when passing a `SemLock` accross nested processes.

Rename

`multiprocessing.synchronize.SemLock.is_fork_ctx`  
to

`multiprocessing.synchronize.SemLock._is_fork_ctx`  
to avoid exposing it as public API.

- [gh-108654](https://github.com/python/cpython/issues/108654) [https://github.com/python/cpython/issues/108654]: Restore locals shadowed by an inlined comprehension if the comprehension raises an exception.
- [gh-108487](https://github.com/python/cpython/issues/108487) [https://github.com/python/cpython/issues/108487]: Change an assert that would cause a spurious crash in a devious case that should only trigger deoptimization.
- [gh-106176](https://github.com/python/cpython/issues/106176) [https://github.com/python/cpython/issues/106176]: Use a `WeakValueDictionary` to track the lists containing the modules each thread is currently importing. This helps avoid a reference leak from keeping the list around longer than necessary. Weakrefs are used as GC can't interrupt the cleanup.
- [gh-107901](https://github.com/python/cpython/issues/107901) [https://github.com/python/cpython/issues/107901]: Fix missing line number on `JUMP_BACKWARD` at the end of a for loop.
- [gh-108390](https://github.com/python/cpython/issues/108390) [https://github.com/python/cpython/issues/108390]: Raise an exception when setting a non-local event (`RAISE`,

EXCEPTION\_HANDLED, etc.) in  
`sys.monitoring.set_local_events`.

Fixes crash when tracing in recursive calls to Python classes.

- [gh-91051](https://github.com/python/cpython/issues/91051) [https://github.com/python/cpython/issues/91051]: Fix abort / segfault when using all eight type watcher slots, on platforms where `char` is signed by default.
- [gh-107724](https://github.com/python/cpython/issues/107724) [https://github.com/python/cpython/issues/107724]: In pre-release versions of 3.12, up to rc1, the `sys.monitoring` callback function for the `PY_THROW` event was missing the third, exception argument. That is now fixed.
- [gh-107080](https://github.com/python/cpython/issues/107080) [https://github.com/python/cpython/issues/107080]: Trace refs builds (`--with-trace-refs`) were crashing when used with isolated subinterpreters. The problematic global state has been isolated to each interpreter. Other fixing the crashes, this change does not affect users.
- [gh-77377](https://github.com/python/cpython/issues/77377) [https://github.com/python/cpython/issues/77377]: Ensure that multiprocessing synchronization objects created in a fork context are not sent to a different process created in a spawn context. This changes a segfault into an actionable `RuntimeError` in the parent process.

## Library

- [gh-108469](https://github.com/python/cpython/issues/108469) [https://github.com/python/cpython/issues/108469]: `ast.unparse()` now supports new `f-string` syntax introduced in Python 3.12. Note that the `f-string` quotes are reselected for simplicity under the new syntax. (Patch by Steven Sun)
- [gh-108682](https://github.com/python/cpython/issues/108682) [https://github.com/python/cpython/issues/108682]: Enum: raise `TypeError` if `super().__new__()` is called from a custom `__new__`.
- [gh-108295](https://github.com/python/cpython/issues/108295) [https://github.com/python/cpython/issues/108295]: Fix crashes related to use of weakrefs on `typing.TypeVar`.
- [gh-64662](https://github.com/python/cpython/issues/64662) [https://github.com/python/cpython/issues/64662]: Fix support for virtual tables in `sqlite3.Connection.iterdump()`. Patch by Aviv

Palivoda.

- [gh-108111](https://github.com/python/cpython/issues/108111) [https://github.com/python/cpython/issues/108111]: Fix a regression introduced in [gh-101251](https://github.com/python/cpython/issues/101251) [https://github.com/python/cpython/issues/101251] for 3.12, resulting in an incorrect offset calculation in `gzip.GzipFile.seek()`.
- [gh-105736](https://github.com/python/cpython/issues/105736) [https://github.com/python/cpython/issues/105736]: Harmonized the pure Python version of `OrderedDict` with the C version. Now, both versions set up their internal state in `__new__`. Formerly, the pure Python version did the set up in `__init__`.
- [gh-108083](https://github.com/python/cpython/issues/108083) [https://github.com/python/cpython/issues/108083]: Fix bugs in the constructor of `sqlite3.Connection` and `sqlite3.Connection.close()` where exceptions could be leaked. Patch by Erlend E. Aasland.
- [gh-107963](https://github.com/python/cpython/issues/107963) [https://github.com/python/cpython/issues/107963]: Fix `multiprocessing.set_forkserver_preload()` to check the given list of modules names. Patch by Donghee Na.
- [gh-106242](https://github.com/python/cpython/issues/106242) [https://github.com/python/cpython/issues/106242]: Fixes `os.path.normpath()` to handle embedded null characters without truncating the path.
- [gh-107913](https://github.com/python/cpython/issues/107913) [https://github.com/python/cpython/issues/107913]: Fix possible losses of `errno` and `winerror` values in `OSError` exceptions if they were cleared or modified by the cleanup code before creating the exception object.
- [gh-107845](https://github.com/python/cpython/issues/107845) [https://github.com/python/cpython/issues/107845]: `tarfile.data_filter()` now takes the location of symlinks into account when determining their target, so it will no longer reject some valid tarballs with `LinkOutsideDestinationError`.
- [gh-107805](https://github.com/python/cpython/issues/107805) [https://github.com/python/cpython/issues/107805]: Fix signatures of module-level generated functions in `turtle`.
- [gh-107715](https://github.com/python/cpython/issues/107715) [https://github.com/python/cpython/issues/107715]: Fix `doctest.DocTestFinder.find()` in presence of class names with special characters. Patch by Gertjan van Zwieten.
- [gh-100814](https://github.com/python/cpython/issues/100814) [https://github.com/python/cpython/issues/100814]: Passing a callable object as an option value to a Tkinter image now raises the expected `TclError` instead of an `AttributeError`.
- [gh-106684](https://github.com/python/cpython/issues/106684) [https://github.com/python/cpython/issues/106684]: Close `asyncio.StreamWriter` when it is not closed by

application leading to memory leaks. Patch by Kumar Aditya.

- [gh-107396](https://github.com/python/cpython/issues/107396) [https://github.com/python/cpython/issues/107396]: tarfiles; Fixed use before assignment of `self.exception` for gzip decompression
- [gh-106052](https://github.com/python/cpython/issues/106052) [https://github.com/python/cpython/issues/106052]: **re** module: fix the matching of possessive quantifiers in the case of a subpattern containing backtracking.
- [gh-100061](https://github.com/python/cpython/issues/100061) [https://github.com/python/cpython/issues/100061]: Fix a bug that causes wrong matches for regular expressions with possessive qualifier.
- [gh-99203](https://github.com/python/cpython/issues/99203) [https://github.com/python/cpython/issues/99203]: Restore following CPython  $\leq 3.10.5$  behavior of **`shutil.make_archive()`**: do not create an empty archive if `root_dir` is not a directory, and, in that case, raise **`FileNotFoundError`** or **`NotADirectoryError`** regardless of `format` choice. Beyond the brought-back behavior, the function may now also raise these exceptions in `dry_run` mode.

## Documentation

- [gh-105052](https://github.com/python/cpython/issues/105052) [https://github.com/python/cpython/issues/105052]: Update `timeit` doc to specify that time in seconds is just the default.

## Tests

- [gh-89392](https://github.com/python/cpython/issues/89392) [https://github.com/python/cpython/issues/89392]: Removed support of `test_main()` function in tests. They now always use normal unittest test runner.
- [gh-108388](https://github.com/python/cpython/issues/108388) [https://github.com/python/cpython/issues/108388]: Convert `test_concurrent_futures` to a package of 7 sub-tests. Patch by Victor Stinner.
- [gh-108388](https://github.com/python/cpython/issues/108388) [https://github.com/python/cpython/issues/108388]: Split `test_multiprocessing_fork`, `test_multiprocessing_forkserver` and `test_multiprocessing_spawn` into test packages. Each package is made of 4 sub-tests: `processes`, `threads`, `manager` and `misc`. It allows running more tests in parallel and so reduce the total test duration. Patch by Victor Stinner.
- [gh-105776](https://github.com/python/cpython/issues/105776) [https://github.com/python/cpython/issues/105776]: Fix

test\_cpptext when the C compiler command `-std=c11` option: remove `-std=` options from the compiler command. Patch by Victor Stinner.

- [gh-107178](https://github.com/python/cpython/issues/107178) [https://github.com/python/cpython/issues/107178]: Add the C API test for functions in the Mapping Protocol, the Sequence Protocol and some functions in the Object Protocol.

## Build

- [gh-63760](https://github.com/python/cpython/issues/63760) [https://github.com/python/cpython/issues/63760]: Fix Solaris build: no longer redefine the `gethostname()` function. Solaris defines the function since 2005. Patch by Victor Stinner, original patch by Jakub Kulík.
- [gh-107814](https://github.com/python/cpython/issues/107814) [https://github.com/python/cpython/issues/107814]: When calling `find_python.bat` with `-q` it did not properly silence the output of nuget. That is now fixed.

## Windows

- [gh-107565](https://github.com/python/cpython/issues/107565) [https://github.com/python/cpython/issues/107565]: Update Windows build to use OpenSSL 3.0.10.
- [gh-106242](https://github.com/python/cpython/issues/106242) [https://github.com/python/cpython/issues/106242]: Fixes `realpath()` to behave consistently when passed a path containing an embedded null character on Windows. In strict mode, it now raises `OSError` instead of the unexpected `ValueError`, and in non-strict mode will make the path absolute.
- [gh-106844](https://github.com/python/cpython/issues/106844) [https://github.com/python/cpython/issues/106844]: Fix integer overflow and truncating by the null character in `_winapi.LCMapStringEx()` which affects `ntpath.normcase()`.

## macOS

- [gh-107565](https://github.com/python/cpython/issues/107565) [https://github.com/python/cpython/issues/107565]: Update macOS installer to use OpenSSL 3.0.10.

## Tools/Demos

- [gh-107565](https://github.com/python/cpython/issues/107565) [https://github.com/python/cpython/issues/107565]: Update multissltests and GitHub CI workflows to use OpenSSL 1.1.1v, 3.0.10, and 3.1.2.
- [gh-95065](https://github.com/python/cpython/issues/95065) [https://github.com/python/cpython/issues/95065]: Argument Clinic now supports overriding automatically generated signature by using directive `@text_signature`.

## C API

- [gh-107916](https://github.com/python/cpython/issues/107916) [https://github.com/python/cpython/issues/107916]: C API functions `PyErr_SetFromErrnoWithFilename()`, `PyErr_SetExcFromWindowsErrWithFilename()` and `PyErr_SetFromWindowsErrWithFilename()` save now the error code before calling `PyUnicode_DecodeFSDefault()`.
- [gh-107915](https://github.com/python/cpython/issues/107915) [https://github.com/python/cpython/issues/107915]: Such C API functions as `PyErr_SetString()`, `PyErr_Format()`, `PyErr_SetFromErrnoWithFilename()` and many others no longer crash or ignore errors if it failed to format the error message or decode the filename. Instead, they keep a corresponding error.
- [gh-107810](https://github.com/python/cpython/issues/107810) [https://github.com/python/cpython/issues/107810]: Improve `DeprecationWarning` for uses of `PyType_Spec` with metaclasses that have custom `tp_new`.

## Python 3.12.0 release candidate 1

*Release date: 2023-08-05*

## Security

- [gh-102988](https://github.com/python/cpython/issues/102988) [https://github.com/python/cpython/issues/102988]: Reverted the `email.utils` security improvement change released in 3.12beta4 that unintentionally caused `email.utils.getaddresses` to fail to parse email addresses with a comma in the quoted name field. See [gh-106669](https://github.com/python/cpython/issues/106669) [https://github.com/python/cpython/issues/106669].
- [gh-102509](https://github.com/python/cpython/issues/102509) [https://github.com/python/cpython/issues/102509]: Start

initializing `ob_digit` during creation of `PyLongObject` objects. Patch by Illia Volochii.

## Core and Builtins

- [gh-107263](https://github.com/python/cpython/issues/107263) [https://github.com/python/cpython/issues/107263]: Increase C recursion limit for functions other than the main interpreter from 800 to 1500. This should allow functions like `list.__repr__` and `json.dumps` to handle all the inputs that they could prior to 3.12
- [gh-104432](https://github.com/python/cpython/issues/104432) [https://github.com/python/cpython/issues/104432]: Fix potential unaligned memory access on C APIs involving returned sequences of `char *` pointers within the `grp` and `socket` modules. These were revealed using a `-fsanitize=alignment` build on ARM macOS. Patch by Christopher Chavez.
- [gh-106898](https://github.com/python/cpython/issues/106898) [https://github.com/python/cpython/issues/106898]: Add the exception as the third argument to `PY_UNIND` callbacks in `sys.monitoring`. This makes the `PY_UNWIND` callback consistent with the other exception handling callbacks.
- [gh-106895](https://github.com/python/cpython/issues/106895) [https://github.com/python/cpython/issues/106895]: Raise a `ValueError` when a monitoring callback function returns `DISABLE` for events that cannot be disabled locally.
- [gh-106897](https://github.com/python/cpython/issues/106897) [https://github.com/python/cpython/issues/106897]: Add a `RERAISE` event to `sys.monitoring`, which occurs when an exception is reraised, either explicitly by a plain `raise` statement, or implicitly in an `except` or `finally` block.
- [gh-104621](https://github.com/python/cpython/issues/104621) [https://github.com/python/cpython/issues/104621]: Unsupported modules now always fail to be imported.
- [gh-106917](https://github.com/python/cpython/issues/106917) [https://github.com/python/cpython/issues/106917]: Fix classmethod-style `super()` method calls (i.e., where the second argument to `super()`, or the implied second argument drawn from `self/cls` in the case of zero-arg `super`, is a type) when the target of the call is not a classmethod.
- [gh-105699](https://github.com/python/cpython/issues/105699) [https://github.com/python/cpython/issues/105699]: Python no longer crashes due an infrequent race when initializing per-interpreter interned strings. The crash would manifest when the interpreter was finalized.
- [gh-105699](https://github.com/python/cpython/issues/105699) [https://github.com/python/cpython/issues/105699]:

Python no longer crashes due to an infrequent race in setting `Py_FileSystemDefaultEncoding` and `Py_FileSystemDefaultEncodeErrors` (both deprecated), when simultaneously initializing two isolated subinterpreters. Now they are only set during runtime initialization.

- [gh-106092](https://github.com/python/cpython/issues/106092) [https://github.com/python/cpython/issues/106092]: Fix a segmentation fault caused by a use-after-free bug in `frame_dealloc` when the trashcan delays the deallocation of a `PyFrameObject`.
- [gh-106719](https://github.com/python/cpython/issues/106719) [https://github.com/python/cpython/issues/106719]: No longer suppress arbitrary errors in the `__annotations__` getter and setter in the type and module types.
- [gh-106723](https://github.com/python/cpython/issues/106723) [https://github.com/python/cpython/issues/106723]: Propagate `frozen_modules` to multiprocessing spawned process interpreters.
- [gh-105235](https://github.com/python/cpython/issues/105235) [https://github.com/python/cpython/issues/105235]: Prevent out-of-bounds memory access during `mmap.find()` calls.

## Library

- [gh-107077](https://github.com/python/cpython/issues/107077) [https://github.com/python/cpython/issues/107077]: Seems that in some conditions, OpenSSL will return `SSL_ERROR_SYSCALL` instead of `SSL_ERROR_SSL` when a certification verification has failed, but the error parameters will still contain `ERR_LIB_SSL` and `SSL_R_CERTIFICATE_VERIFY_FAILED`. We are now detecting this situation and raising the appropriate `ssl.SSLCertVerificationError`. Patch by Pablo Galindo
- [gh-107576](https://github.com/python/cpython/issues/107576) [https://github.com/python/cpython/issues/107576]: Fix `types.get_original_bases()` to only return `__orig_bases__` if it is present on `cls` directly. Patch by James Hilton-Balfe.
- [gh-46376](https://github.com/python/cpython/issues/46376) [https://github.com/python/cpython/issues/46376]: Prevent memory leak and use-after-free when using pointers to pointers with ctypes
- [gh-62519](https://github.com/python/cpython/issues/62519) [https://github.com/python/cpython/issues/62519]: Make `gettext.pgettext()` search plural definitions when

translation is not found.

- [gh-83006](https://github.com/python/cpython/issues/83006) [https://github.com/python/cpython/issues/83006]: Document behavior of `shutil.disk_usage()` for non-mounted filesystems on Unix.
- [gh-106186](https://github.com/python/cpython/issues/106186) [https://github.com/python/cpython/issues/106186]: Do not report `MultipartInvariantViolationDefect` defect when the `email.parser.Parser` class is used to parse emails with `headersonly=True`.
- [gh-105002](https://github.com/python/cpython/issues/105002) [https://github.com/python/cpython/issues/105002]: Fix invalid result from `PurePath.relative_to()` method when attempting to walk a “.” segment in *other* with *walk\_up* enabled. A `ValueError` exception is now raised in this case.
- [gh-106831](https://github.com/python/cpython/issues/106831) [https://github.com/python/cpython/issues/106831]: Fix potential missing `NULL` check of `d2i_SSL_SESSION` result in `_ssl.c`.
- [gh-106774](https://github.com/python/cpython/issues/106774) [https://github.com/python/cpython/issues/106774]: Update the bundled copy of `pip` to version 23.2.1.
- [gh-106752](https://github.com/python/cpython/issues/106752) [https://github.com/python/cpython/issues/106752]: Fixed several bugs in `zipfile.Path`, including: in `Path.match()`, Windows separators are no longer honored (and never were meant to be); Fixed `name/suffix/suffixes/stem` operations when no filename is present and the `Path` is not at the root of the zipfile; Reworked `glob` for performance and more correct matching behavior.
- [gh-106602](https://github.com/python/cpython/issues/106602) [https://github.com/python/cpython/issues/106602]: Add `_copy_` and `_deepcopy_` in `enum`
- [gh-106530](https://github.com/python/cpython/issues/106530) [https://github.com/python/cpython/issues/106530]: Revert a change to `colorsys.rgb_to_hls()` that caused division by zero for certain almost-white inputs. Patch by Terry Jan Reedy.
- [gh-106403](https://github.com/python/cpython/issues/106403) [https://github.com/python/cpython/issues/106403]: Instances of `typing.TypeVar`, `typing.ParamSpec`, `typing.ParamSpecArgs`, `typing.ParamSpecKwargs`, and `typing.TypeVarTuple` once again support weak references, fixing a regression introduced in Python 3.12.0 beta 1. Patch by Jelle Zijlstra.
- [gh-106350](https://github.com/python/cpython/issues/106350) [https://github.com/python/cpython/issues/106350]: Detect possible memory allocation failure in the `libtommath` function `mp_init()` used by the `_tkinter` module.

- [gh-106263](https://github.com/python/cpython/issues/106263) [https://github.com/python/cpython/issues/106263]: Fix crash when calling `repr` with a manually constructed `SignalDict` object. Patch by Charlie Zhao.
- [gh-105626](https://github.com/python/cpython/issues/105626) [https://github.com/python/cpython/issues/105626]: Change the default return value of `http.client.HTTPConnection.get_proxy_response_headers()` to be `None` and not `{}`.
- [bpo-18319](https://bugs.python.org/issue?@action=redirect&bpo=18319) [https://bugs.python.org/issue?@action=redirect&bpo=18319]: Ensure `gettext(msg)` retrieve translations even if a plural form exists. In other words: `gettext(msg) == ngettext(msg, '', 1)`.

## Documentation

- [gh-107305](https://github.com/python/cpython/issues/107305) [https://github.com/python/cpython/issues/107305]: Add documentation for `PyInterpreterConfig` and `Py_NewInterpreterFromConfig()`. Also clarify some of the nearby docs relative to per-interpreter GIL.
- [gh-107008](https://github.com/python/cpython/issues/107008) [https://github.com/python/cpython/issues/107008]: Document the `curses` module variables `LINES` and `COLS`.
- [gh-106948](https://github.com/python/cpython/issues/106948) [https://github.com/python/cpython/issues/106948]: Add a number of standard external names to `nitpick_ignore`.
- [gh-54738](https://github.com/python/cpython/issues/54738) [https://github.com/python/cpython/issues/54738]: Add documentation on how to localize the `argparse` module.

## Tests

- [gh-107237](https://github.com/python/cpython/issues/107237) [https://github.com/python/cpython/issues/107237]: `test_logging`: Fix `test_udp_reconnection()` by increasing the timeout from 100 ms to 5 minutes (`LONG_TIMEOUT`). Patch by Victor Stinner.
- [gh-106714](https://github.com/python/cpython/issues/106714) [https://github.com/python/cpython/issues/106714]: `test_capi`: Fix `test_no_FatalError_infinite_loop()` to no longer write a coredump, by using `test.support.SuppressCrashReport`. Patch by Victor Stinner.
- [gh-104090](https://github.com/python/cpython/issues/104090) [https://github.com/python/cpython/issues/104090]: Avoid creating a reference to the test object in `collectedDurations()`.
- [gh-106752](https://github.com/python/cpython/issues/106752) [https://github.com/python/cpython/issues/106752]: Moved tests for `zipfile.Path` into `Lib/test/`

`test_zipfile/_path`. Made `zipfile._path` a package.

## Build

- [gh-106881](https://github.com/python/cpython/issues/106881) [https://github.com/python/cpython/issues/106881]: Check for `linux/limits.h` before including it in `Modules/posixmodule.c`.
- [gh-106962](https://github.com/python/cpython/issues/106962) [https://github.com/python/cpython/issues/106962]: Detect MPI compilers in `configure`.
- [gh-101538](https://github.com/python/cpython/issues/101538) [https://github.com/python/cpython/issues/101538]: Add experimental wasi-threads support. Patch by Takashi Yamamoto.

## Windows

- [gh-99079](https://github.com/python/cpython/issues/99079) [https://github.com/python/cpython/issues/99079]: Update Windows build to use OpenSSL 3.0.9

## macOS

- [gh-99079](https://github.com/python/cpython/issues/99079) [https://github.com/python/cpython/issues/99079]: Update macOS installer to use OpenSSL 3.0.9.

## Tools/Demos

- [gh-106970](https://github.com/python/cpython/issues/106970) [https://github.com/python/cpython/issues/106970]: Fix bugs in the Argument Clinic `destination <name> clear` command; the destination buffers would never be cleared, and the `destination` directive parser would simply continue to the fault handler after processing the command. Patch by Erlend E. Aasland.
- [gh-103186](https://github.com/python/cpython/issues/103186) [https://github.com/python/cpython/issues/103186]: `freeze` now fetches `CONFIG_ARGS` from the original CPython instance the Makefile uses to call utility scripts. Patch by Ijtaba Hussain.

## C API

- [gh-107226](https://github.com/python/cpython/issues/107226) [https://github.com/python/cpython/issues/107226]:

`PyModule_AddObjectRef()` is now only available in the limited API version 3.10 or later.

## Python 3.12.0 beta 4

*Release date: 2023-07-11*

### Security

- [gh-102988](https://github.com/python/cpython/issues/102988) [https://github.com/python/cpython/issues/102988]: CVE-2023-27043: Prevent `email.utils.parseaddr()` and `email.utils.getaddresses()` from returning the realname portion of an invalid RFC2822 email header in the email address portion of the 2-tuple returned after being parsed by `email._parseaddr.AddressList`.

### Core and Builtins

- [gh-106396](https://github.com/python/cpython/issues/106396) [https://github.com/python/cpython/issues/106396]: When the format specification of an f-string expression is empty, the parser now generates an empty `ast.JoinedStr` node for it instead of an one-element `ast.JoinedStr` with an empty string `ast.Constant`.
- [gh-106145](https://github.com/python/cpython/issues/106145) [https://github.com/python/cpython/issues/106145]: Make `end_lineno` and `end_col_offset` required on `type_param` ast nodes.
- [gh-105979](https://github.com/python/cpython/issues/105979) [https://github.com/python/cpython/issues/105979]: Fix crash in `_imp.get_frozen_object()` due to improper exception handling.
- [gh-98931](https://github.com/python/cpython/issues/98931) [https://github.com/python/cpython/issues/98931]: Ensure custom `SyntaxError` error messages are raised for invalid imports with multiple targets. Patch by Pablo Galindo
- [gh-105908](https://github.com/python/cpython/issues/105908) [https://github.com/python/cpython/issues/105908]: Fixed bug where [gh-99111](https://github.com/python/cpython/issues/99111) [https://github.com/python/cpython/issues/99111] breaks future import `barry_as_FLUFL` in the Python REPL.
- [gh-105340](https://github.com/python/cpython/issues/105340) [https://github.com/python/cpython/issues/105340]: Include the comprehension iteration variable in `locals()` inside a module- or class-scope comprehension.

- [gh-105486](https://github.com/python/cpython/issues/105486) [https://github.com/python/cpython/issues/105486]: Change the repr of `ParamSpec` list of args in `types.GenericAlias`.
- [gh-101006](https://github.com/python/cpython/issues/101006) [https://github.com/python/cpython/issues/101006]: Improve error handling when read `marshal` data.

## Library

- [gh-106524](https://github.com/python/cpython/issues/106524) [https://github.com/python/cpython/issues/106524]: Fix crash in `_sre.template()` with templates containing invalid group indices.
- [gh-106510](https://github.com/python/cpython/issues/106510) [https://github.com/python/cpython/issues/106510]: Improve debug output for atomic groups in regular expressions.
- [gh-106503](https://github.com/python/cpython/issues/106503) [https://github.com/python/cpython/issues/106503]: Fix ref cycle in `asyncio._SelectorSocketTransport` by removing `_write_ready` in `close`.
- [gh-105497](https://github.com/python/cpython/issues/105497) [https://github.com/python/cpython/issues/105497]: Fix flag mask inversion when unnamed flags exist.
- [gh-90876](https://github.com/python/cpython/issues/90876) [https://github.com/python/cpython/issues/90876]: Prevent `multiprocessing.spawn` from failing to *import* in environments where `sys.executable` is `None`. This regressed in 3.11 with the addition of support for path-like objects in multiprocessing.
- [gh-106292](https://github.com/python/cpython/issues/106292) [https://github.com/python/cpython/issues/106292]: Check for an instance-dict cached value in the `__get__()` method of `functools.cached_property()`. This better matches the pre-3.12 behavior and improves compatibility for users subclassing `functools.cached_property()` and adding a `__set__()` method.
- [gh-106330](https://github.com/python/cpython/issues/106330) [https://github.com/python/cpython/issues/106330]: Fix incorrect matching of empty paths in `pathlib.PurePath.match()`. This bug was introduced in Python 3.12.0 beta 1.
- [gh-102541](https://github.com/python/cpython/issues/102541) [https://github.com/python/cpython/issues/102541]: Make `pydoc.doc` catch bad module `ImportError` when output stream is not `None`.
- [gh-106152](https://github.com/python/cpython/issues/106152) [https://github.com/python/cpython/issues/106152]: Added `PY_THROW` event hook for `cProfile` for generators
- [gh-106075](https://github.com/python/cpython/issues/106075) [https://github.com/python/cpython/issues/106075]: Added

`asyncio.taskgroups.__all__` to `asyncio.__all__` for export in star imports.

- [gh-105987](https://github.com/python/cpython/issues/105987) [https://github.com/python/cpython/issues/105987]: Fix crash due to improper reference counting in `asyncio` eager task factory internal routines.
- [gh-105974](https://github.com/python/cpython/issues/105974) [https://github.com/python/cpython/issues/105974]: Fix bug where a `typing.Protocol` class that had one or more non-callable members would raise `TypeError` when `issubclass()` was called against it, even if it defined a custom `__subclasshook__` method. The behaviour in Python 3.11 and lower – which has now been restored – was not to raise `TypeError` in these situations if a custom `__subclasshook__` method was defined. Patch by Alex Waygood.
- [gh-96145](https://github.com/python/cpython/issues/96145) [https://github.com/python/cpython/issues/96145]: Reverted addition of `json.AttrDict`.
- [gh-105497](https://github.com/python/cpython/issues/105497) [https://github.com/python/cpython/issues/105497]: Fix flag inversion when alias/mask members exist.
- [gh-104554](https://github.com/python/cpython/issues/104554) [https://github.com/python/cpython/issues/104554]: Add RTSPS scheme support in `urllib.parse`
- [gh-94777](https://github.com/python/cpython/issues/94777) [https://github.com/python/cpython/issues/94777]: Fix hanging `multiprocessing` `ProcessPoolExecutor` when a child process crashes while data is being written in the call queue.

## Documentation

- [gh-106232](https://github.com/python/cpython/issues/106232) [https://github.com/python/cpython/issues/106232]: Make `timeit` doc command lines compatible with Windows by using double quotes for arguments. This works on linux and macOS also.

## Tests

- [gh-101634](https://github.com/python/cpython/issues/101634) [https://github.com/python/cpython/issues/101634]: When running the Python test suite with `-jN` option, if a worker stdout cannot be decoded from the locale encoding report a failed testn so the exitcode is non-zero. Patch by Victor Stinner.

## Build

- [gh-106118](https://github.com/python/cpython/issues/106118) [https://github.com/python/cpython/issues/106118]: Fix compilation for platforms without `O_CLOEXEC`. The issue was introduced with Python 3.12b1 in [gh-103295](https://github.com/python/cpython/issues/103295) [https://github.com/python/cpython/issues/103295]. Patch by Erlend Aasland.
- [gh-104692](https://github.com/python/cpython/issues/104692) [https://github.com/python/cpython/issues/104692]: Include `commoninstall` as a prerequisite for `bininstall`

This ensures that `commoninstall` is completed before `bininstall` is started when parallel builds are used (`make -j install`), and so the `python3` symlink is only installed after all standard library modules are installed.

## Tools/Demos

- [gh-106359](https://github.com/python/cpython/issues/106359) [https://github.com/python/cpython/issues/106359]: Argument Clinic now explicitly forbids “kwarg splats” in function calls used as annotations.

## C API

- [gh-105227](https://github.com/python/cpython/issues/105227) [https://github.com/python/cpython/issues/105227]: The new `PyType_GetDict()` provides the dictionary for the given type object that is normally exposed by `cls.__dict__`. Normally it's sufficient to use `tp_dict`, but for the static builtin types `tp_dict` is now always `NULL`. `PyType_GetDict()` provides the correct dict object instead.

## Python 3.12.0 beta 3

*Release date: 2023-06-19*

## Core and Builtins

- [gh-105840](https://github.com/python/cpython/issues/105840) [https://github.com/python/cpython/issues/105840]: Fix

possible crashes when specializing function calls with too many `__defaults__`.

- [gh-105831](https://github.com/python/cpython/issues/105831) [https://github.com/python/cpython/issues/105831]: Fix an f-string bug, where using a debug expression (the `=` sign) that appears in the last line of a file results to the debug buffer that holds the expression text being one character too small.
- [gh-105800](https://github.com/python/cpython/issues/105800) [https://github.com/python/cpython/issues/105800]: Correctly issue `SyntaxWarning` in f-strings if invalid sequences are used. Patch by Pablo Galindo
- [gh-105587](https://github.com/python/cpython/issues/105587) [https://github.com/python/cpython/issues/105587]: The runtime can't guarantee that immortal objects will not be mutated by Extensions. Thus, this modifies `_PyStaticObject_CheckRefcnt` to warn instead of asserting.
- [gh-105564](https://github.com/python/cpython/issues/105564) [https://github.com/python/cpython/issues/105564]: Don't include artificial newlines in the `line` attribute of tokens in the APIs of the `tokenize` module. Patch by Pablo Galindo
- [gh-105549](https://github.com/python/cpython/issues/105549) [https://github.com/python/cpython/issues/105549]: Tokenize separately `NUMBER` and `NAME` tokens that are not ambiguous. Patch by Pablo Galindo.
- [gh-105588](https://github.com/python/cpython/issues/105588) [https://github.com/python/cpython/issues/105588]: Fix an issue that could result in crashes when compiling malformed `ast` nodes.
- [gh-105375](https://github.com/python/cpython/issues/105375) [https://github.com/python/cpython/issues/105375]: Fix bugs in the `builtins` module where exceptions could end up being overwritten.
- [gh-105375](https://github.com/python/cpython/issues/105375) [https://github.com/python/cpython/issues/105375]: Fix bug in the compiler where an exception could end up being overwritten.
- [gh-105375](https://github.com/python/cpython/issues/105375) [https://github.com/python/cpython/issues/105375]: Improve error handling in `PyUnicode_BuildEncodingMap()` where an exception could end up being overwritten.
- [gh-105435](https://github.com/python/cpython/issues/105435) [https://github.com/python/cpython/issues/105435]: Fix spurious newline character if file ends on a comment without a newline. Patch by Pablo Galindo
- [gh-105390](https://github.com/python/cpython/issues/105390) [https://github.com/python/cpython/issues/105390]: Correctly raise `tokenize.TokenError` exceptions instead of `SyntaxError` for tokenize errors such as incomplete input. Patch by Pablo Galindo
- [gh-104812](https://github.com/python/cpython/issues/104812) [https://github.com/python/cpython/issues/104812]: The

“pending call” machinery now works for all interpreters, not just the main interpreter, and runs in all threads, not just the main thread. Some calls are still only done in the main thread, ergo in the main interpreter. This change does not affect signal handling nor the existing public C-API (`Py_AddPendingCall()`), which both still only target the main thread. The new functionality is meant strictly for internal use for now, since consequences of its use are not well understood yet outside some very restricted cases. This change brings the capability in line with the intention when the state was made per-interpreter several years ago.

## Library

- [gh-105808](https://github.com/python/cpython/issues/105808) [https://github.com/python/cpython/issues/105808]: Fix a regression introduced in [gh-101251](https://github.com/python/cpython/issues/101251) [https://github.com/python/cpython/issues/101251] for 3.12, causing `gzip.GzipFile.flush()` to not flush the compressor (nor pass along the `zip_mode` argument).
- [gh-104799](https://github.com/python/cpython/issues/104799) [https://github.com/python/cpython/issues/104799]: Enable `ast.unparse()` to unparse function and class definitions created without the new `type_params` field from [PEP 695](https://peps.python.org/pep-0695/) [https://peps.python.org/pep-0695/]. Patch by Jelle Zijlstra.
- [gh-105745](https://github.com/python/cpython/issues/105745) [https://github.com/python/cpython/issues/105745]: Fix `webbrowser.Konqueror.open` method.
- [gh-105375](https://github.com/python/cpython/issues/105375) [https://github.com/python/cpython/issues/105375]: Fix a bug in `_Unpickler.SetInputStream()` where an exception could end up being overwritten in case of failure.
- [gh-105375](https://github.com/python/cpython/issues/105375) [https://github.com/python/cpython/issues/105375]: Fix bugs in `sys` where exceptions could end up being overwritten because of deferred error handling.
- [gh-105605](https://github.com/python/cpython/issues/105605) [https://github.com/python/cpython/issues/105605]: Harden `pyexpat` error handling during module initialisation to prevent exceptions from possibly being overwritten, and objects from being dereferenced twice.
- [gh-105375](https://github.com/python/cpython/issues/105375) [https://github.com/python/cpython/issues/105375]: Fix bug in `decimal` where an exception could end up being overwritten.
- [gh-105375](https://github.com/python/cpython/issues/105375) [https://github.com/python/cpython/issues/105375]: Fix

bugs in `_datetime` where exceptions could be overwritten in case of module initialisation failure.

- [gh-105375](https://github.com/python/cpython/issues/105375) [https://github.com/python/cpython/issues/105375]: Fix bugs in `_ssl` initialisation which could lead to leaked references and overwritten exceptions.
- [gh-105375](https://github.com/python/cpython/issues/105375) [https://github.com/python/cpython/issues/105375]: Fix a bug in `array.array` where an exception could end up being overwritten.
- [gh-105375](https://github.com/python/cpython/issues/105375) [https://github.com/python/cpython/issues/105375]: Fix bugs in `_ctypes` where exceptions could end up being overwritten.
- [gh-105375](https://github.com/python/cpython/issues/105375) [https://github.com/python/cpython/issues/105375]: Fix a bug in the `posix` module where an exception could be overwritten.
- [gh-105375](https://github.com/python/cpython/issues/105375) [https://github.com/python/cpython/issues/105375]: Fix bugs in `_elementtree` where exceptions could be overwritten.
- [gh-105375](https://github.com/python/cpython/issues/105375) [https://github.com/python/cpython/issues/105375]: Fix bugs in `zoneinfo` where exceptions could be overwritten.
- [gh-105375](https://github.com/python/cpython/issues/105375) [https://github.com/python/cpython/issues/105375]: Fix bugs in `errno` where exceptions could be overwritten.
- [gh-105375](https://github.com/python/cpython/issues/105375) [https://github.com/python/cpython/issues/105375]: Fix bugs in `pickle` where exceptions could be overwritten.
- [gh-105375](https://github.com/python/cpython/issues/105375) [https://github.com/python/cpython/issues/105375]: Fix a bug in `sqlite3` where an exception could be overwritten in the `collation` callback.
- [gh-105332](https://github.com/python/cpython/issues/105332) [https://github.com/python/cpython/issues/105332]: Revert pickling method from by-name back to by-value.
- [gh-104310](https://github.com/python/cpython/issues/104310) [https://github.com/python/cpython/issues/104310]: In the beta 1 release we added a utility function for extension module authors, to use when testing their module for support in multiple interpreters or under a per-interpreter GIL. The name of that function has changed from `allowing_all_extensions` to `_incompatible_extension_module_restrictions`. The default for the “`disable_check`” argument has change from `True` to `False`, to better match the new function name.
- [gh-104996](https://github.com/python/cpython/issues/104996) [https://github.com/python/cpython/issues/104996]: Improve performance of `pathlib.PurePath` initialisation by deferring joining of paths when multiple arguments are

given.

- [gh-102541](https://github.com/python/cpython/issues/102541) [https://github.com/python/cpython/issues/102541]: Hide traceback in `help()` prompt, when import failed.

## Tests

- [gh-105084](https://github.com/python/cpython/issues/105084) [https://github.com/python/cpython/issues/105084]: When the Python build is configured `--with-wheel-pkg-dir`, tests requiring the `setuptools` and `wheel` wheels will search for the wheels in `WHEEL_PKG_DIR`.

## Windows

- [gh-105436](https://github.com/python/cpython/issues/105436) [https://github.com/python/cpython/issues/105436]: Ensure that an empty environment block is terminated by two null characters, as is required by Windows.

## C API

- [gh-105375](https://github.com/python/cpython/issues/105375) [https://github.com/python/cpython/issues/105375]: Fix a bug in `PyErr_WarnExplicit()` where an exception could end up being overwritten if the API failed internally.
- [gh-105603](https://github.com/python/cpython/issues/105603) [https://github.com/python/cpython/issues/105603]: We've renamed the new (in 3.12) `PyInterpreterConfig.own_gil` to `PyInterpreterConfig.gil` and changed the meaning of the value from “bool” to an integer with supported values of `PyInterpreterConfig_DEFAULT_GIL`, `PyInterpreterConfig_SHARED_GIL`, and `PyInterpreterConfig_OWN_GIL`. The default is “shared”.
- [gh-105387](https://github.com/python/cpython/issues/105387) [https://github.com/python/cpython/issues/105387]: In the limited C API version 3.12, `Py_INCREF()` and `Py_DECREF()` functions are now implemented as opaque function calls to hide implementation details. Patch by Victor Stinner.
- [gh-103968](https://github.com/python/cpython/issues/103968) [https://github.com/python/cpython/issues/103968]: `PyType_FromMetaclass()` now allows metaclasses with `tp_new` set to `NULL`.

# Python 3.12.0 beta 2

*Release date: 2023-06-06*

## Security

- [gh-103142](https://github.com/python/cpython/issues/103142) [https://github.com/python/cpython/issues/103142]: The version of OpenSSL used in our binary builds has been upgraded to 1.1.1u to address several CVEs.
- [gh-99108](https://github.com/python/cpython/issues/99108) [https://github.com/python/cpython/issues/99108]: Refresh our new HACL\* built-in [hashlib](#) code from upstream. Built-in SHA2 should be faster and an issue with SHA3 on 32-bit platforms is fixed.

## Core and Builtins

- [gh-105259](https://github.com/python/cpython/issues/105259) [https://github.com/python/cpython/issues/105259]: Don't include newline character for trailing `NEWLINE` tokens emitted in the [tokenize](#) module. Patch by Pablo Galindo
- [gh-105324](https://github.com/python/cpython/issues/105324) [https://github.com/python/cpython/issues/105324]: Fix the main function of the [tokenize](#) module when reading from `sys.stdin`. Patch by Pablo Galindo
- [gh-98963](https://github.com/python/cpython/issues/98963) [https://github.com/python/cpython/issues/98963]: Restore the ability for a subclass of [property](#) to define `__slots__` or otherwise be dict-less by ignoring failures to set a docstring on such a class. This behavior had regressed in 3.12beta1. An [AttributeError](#) where there had not previously been one was disruptive to existing code.
- [gh-105194](https://github.com/python/cpython/issues/105194) [https://github.com/python/cpython/issues/105194]: Do not escape with backslashes f-string format specifiers. Patch by Pablo Galindo
- [gh-105162](https://github.com/python/cpython/issues/105162) [https://github.com/python/cpython/issues/105162]: Fixed bug in `generator.close()/throw()` where an inner iterator would be ignored when the outer iterator was instrumented.
- [gh-105164](https://github.com/python/cpython/issues/105164) [https://github.com/python/cpython/issues/105164]: Ensure annotations are set up correctly if the only annotation in a block is within a [match](#) block. Patch by Jelle Zijlstra.
- [gh-104799](https://github.com/python/cpython/issues/104799) [https://github.com/python/cpython/issues/104799]: Attributes of [ast](#) nodes that are lists now default to the

empty list if omitted. This means that some code that previously raised `TypeError` when the AST node was used will now proceed with the empty list instead. Patch by Jelle Zijlstra.

- [gh-105035](https://github.com/python/cpython/issues/105035) [https://github.com/python/cpython/issues/105035]: Fix `super()` calls on types with custom `tp_getattro` implementation (e.g. meta-types.)
- [gh-105017](https://github.com/python/cpython/issues/105017) [https://github.com/python/cpython/issues/105017]: Show CRLF lines in the tokenize string attribute in both NL and NEWLINE tokens. Patch by Marta Gómez.
- [gh-105013](https://github.com/python/cpython/issues/105013) [https://github.com/python/cpython/issues/105013]: Fix handling of multiline parenthesized lambdas in `inspect.getsource()`. Patch by Pablo Galindo
- [gh-105017](https://github.com/python/cpython/issues/105017) [https://github.com/python/cpython/issues/105017]: Do not include an additional final NL token when parsing files having CRLF lines. Patch by Marta Gómez.
- [gh-104976](https://github.com/python/cpython/issues/104976) [https://github.com/python/cpython/issues/104976]: Ensure that trailing DEDENT `tokenize.TokenInfo` objects emitted by the `tokenize` module are reported as in Python 3.11. Patch by Pablo Galindo
- [gh-104972](https://github.com/python/cpython/issues/104972) [https://github.com/python/cpython/issues/104972]: Ensure that the `line` attribute in `tokenize.TokenInfo` objects in the `tokenize` module are always correct. Patch by Pablo Galindo
- [gh-104955](https://github.com/python/cpython/issues/104955) [https://github.com/python/cpython/issues/104955]: Fix signature for the new `__release_buffer__()` slot. Patch by Jelle Zijlstra.
- [gh-104690](https://github.com/python/cpython/issues/104690) [https://github.com/python/cpython/issues/104690]: Starting new threads and process creation through `os.fork()` during interpreter shutdown (such as from `atexit` handlers) is no longer supported. It can lead to race condition between the main Python runtime thread freeing thread states while internal `threading` routines are trying to allocate and use the state of just created threads. Or forked children trying to use the mid-shutdown runtime and thread state in the child process.
- [gh-104879](https://github.com/python/cpython/issues/104879) [https://github.com/python/cpython/issues/104879]: Fix crash when accessing the `__module__` attribute of type aliases defined outside a module. Patch by Jelle Zijlstra.
- [gh-104825](https://github.com/python/cpython/issues/104825) [https://github.com/python/cpython/issues/104825]:

Tokens emitted by the `tokenize` module do not include an implicit `\n` character in the `line` attribute anymore. Patch by Pablo Galindo

## Library

- [gh-105280](https://github.com/python/cpython/issues/105280) [https://github.com/python/cpython/issues/105280]: Fix bug where `isinstance([], collections.abc.Mapping)` could evaluate to `True` if garbage collection happened at the wrong time. The bug was caused by changes to the implementation of `typing.Protocol` in Python 3.12.
- [gh-105239](https://github.com/python/cpython/issues/105239) [https://github.com/python/cpython/issues/105239]: Fix longstanding bug where `issubclass(object, typing.Protocol)` would evaluate to `True` in some edge cases. Patch by Alex Waygood.
- [gh-105080](https://github.com/python/cpython/issues/105080) [https://github.com/python/cpython/issues/105080]: Fixed inconsistent signature on derived classes for `inspect.signature()`
- [gh-105144](https://github.com/python/cpython/issues/105144) [https://github.com/python/cpython/issues/105144]: Fix a recent regression in the `typing` module. The regression meant that doing `class Foo(X, typing.Protocol)`, where `X` was a class that had `abc.ABCMeta` as its metaclass, would then cause subsequent `isinstance(1, X)` calls to erroneously raise `TypeError`. Patch by Alex Waygood.
- [gh-105113](https://github.com/python/cpython/issues/105113) [https://github.com/python/cpython/issues/105113]: Improve performance of `pathlib.PurePath.match()` by compiling an `re.Pattern` object for the entire pattern.
- [gh-101588](https://github.com/python/cpython/issues/101588) [https://github.com/python/cpython/issues/101588]: Deprecate undocumented copy/deepcopy/pickle support for `itertools`.
- [gh-103631](https://github.com/python/cpython/issues/103631) [https://github.com/python/cpython/issues/103631]: Fix `pathlib.PurePosixPath(pathlib.PureWindowsPath(...))` not converting path separators to restore 3.11 compatible behavior.
- [gh-104947](https://github.com/python/cpython/issues/104947) [https://github.com/python/cpython/issues/104947]: Make comparisons between `pathlib.PureWindowsPath` objects consistent across Windows and Posix to match 3.11 behavior.
- [gh-104935](https://github.com/python/cpython/issues/104935) [https://github.com/python/cpython/issues/104935]: Fix bugs with the interaction between

`typing.runtime_checkable()` and `typing.Generic` that were introduced by the [PEP 695](https://peps.python.org/pep-0695/) [https://peps.python.org/pep-0695/] implementation. Patch by Jelle Zijlstra.

- [gh-104874](https://github.com/python/cpython/issues/104874) [https://github.com/python/cpython/issues/104874]: Document the `__name__` and `__supertype__` attributes of `typing.NewType`. Patch by Jelle Zijlstra.
- [gh-104799](https://github.com/python/cpython/issues/104799) [https://github.com/python/cpython/issues/104799]: Adjust the location of the (see [PEP 695](https://peps.python.org/pep-0695/) [https://peps.python.org/pep-0695/]) `type_params` field on `ast.ClassDef`, `ast.AsyncFunctionDef`, and `ast.FunctionDef` to better preserve backward compatibility. Patch by Jelle Zijlstra
- [gh-104797](https://github.com/python/cpython/issues/104797) [https://github.com/python/cpython/issues/104797]: Allow `typing.Protocol` classes to inherit from `collections.abc.Buffer`. Patch by Jelle Zijlstra.
- [gh-104372](https://github.com/python/cpython/issues/104372) [https://github.com/python/cpython/issues/104372]: On Linux where `subprocess` can use the `vfork()` syscall for faster spawning, prevent the parent process from blocking other threads by dropping the GIL while it waits for the `vfork`'ed child process `exec()` outcome. This prevents spawning a binary from a slow filesystem from blocking the rest of the application.
- [gh-99108](https://github.com/python/cpython/issues/99108) [https://github.com/python/cpython/issues/99108]: We now release the GIL around built-in `hashlib` computations of reasonable size for the SHA families and MD5 hash functions, matching what our OpenSSL backed hash computations already does.
- [gh-104399](https://github.com/python/cpython/issues/104399) [https://github.com/python/cpython/issues/104399]: Prepare the `_tkinter` module for building with Tcl 9.0 and future libtommath by replacing usage of deprecated functions `mp_to_unsigned_bin_n()` and `mp_unsigned_bin_size()` when necessary.
- [gh-102024](https://github.com/python/cpython/issues/102024) [https://github.com/python/cpython/issues/102024]: Reduce calls of `_idle_semaphore.release()` in `concurrent.futures.thread._worker()`.

## Documentation

- [gh-89455](https://github.com/python/cpython/issues/89455) [https://github.com/python/cpython/issues/89455]: Add missing documentation for the `max_group_depth` and `max_group_width` parameters and the exceptions

attribute of the `traceback.TracebackException` class.

- [gh-89412](https://github.com/python/cpython/issues/89412) [https://github.com/python/cpython/issues/89412]: Add missing documentation for the `end_lineno` and `end_offset` attributes of the `traceback.TracebackException` class.
- [gh-104943](https://github.com/python/cpython/issues/104943) [https://github.com/python/cpython/issues/104943]: Remove mentions of old Python versions in `typing.NamedTuple`.

## Build

- [gh-90005](https://github.com/python/cpython/issues/90005) [https://github.com/python/cpython/issues/90005]: Fix a regression in `configure` where we could end up unintentionally linking with `libbsd`.
- [gh-89886](https://github.com/python/cpython/issues/89886) [https://github.com/python/cpython/issues/89886]: Autoconf 2.71 and `aclocal` 1.16.4 is now required to regenerate `!configure`.

## Windows

- [gh-105146](https://github.com/python/cpython/issues/105146) [https://github.com/python/cpython/issues/105146]: Updated the links at the end of the installer to point to Discourse rather than the mailing lists.
- [gh-103646](https://github.com/python/cpython/issues/103646) [https://github.com/python/cpython/issues/103646]: When installed from the Microsoft Store, `pip` no longer defaults to per-user installs. However, as the install directory is unwritable, it should automatically decide to do a per-user install anyway. This should resolve issues when `pip` is passed an option that conflicts with `--user`.
- [gh-88745](https://github.com/python/cpython/issues/88745) [https://github.com/python/cpython/issues/88745]: Improve performance of `shutil.copy2()` by using the operating system's `CopyFile2` function. This may result in subtle changes to metadata copied along with some files, bringing them in line with normal OS behavior.
- [gh-104820](https://github.com/python/cpython/issues/104820) [https://github.com/python/cpython/issues/104820]: Fixes `stat()` and related functions on file systems that do not support file ID requests. This includes FAT32 and exFAT.
- [gh-104803](https://github.com/python/cpython/issues/104803) [https://github.com/python/cpython/issues/104803]: Add `os.path.isdevdrive()` to detect whether a path is on a Windows Dev Drive. Returns `False` on platforms that do not

support Dev Drive, and is absent on non-Windows platforms.

## macOS

- [gh-103142](https://github.com/python/cpython/issues/103142) [https://github.com/python/cpython/issues/103142]: Update macOS installer to use OpenSSL 1.1.1u.

## IDLE

- [gh-104719](https://github.com/python/cpython/issues/104719) [https://github.com/python/cpython/issues/104719]: Remove IDLE's modification of `tokenize.tabsize` and test other uses of `tokenize` data and methods.

## C API

- [gh-105115](https://github.com/python/cpython/issues/105115) [https://github.com/python/cpython/issues/105115]: `PyTypeObject.tp_bases` (and `tp_mro`) for builtin static types are now shared by all interpreters, whereas in 3.12-beta1 they were stored on `PyInterpreterState`. Also note that now the tuples are immortal objects.
- [gh-105071](https://github.com/python/cpython/issues/105071) [https://github.com/python/cpython/issues/105071]: Add `PyUnstable_Exc_PrepReraiseStar` to the unstable C api to expose the implementation of `except*`.
- [gh-104668](https://github.com/python/cpython/issues/104668) [https://github.com/python/cpython/issues/104668]: Don't call `PyOS_InputHook` or `PyOS_ReadlineFunctionPointer` in subinterpreters, since it's generally difficult to avoid using global state in their registered callbacks. This also avoids situations where extensions may find themselves running in a subinterpreter they don't support (or haven't yet been loaded in).

## Python 3.12.0 beta 1

*Release date: 2023-05-22*

## Security

- [gh-99889](https://github.com/python/cpython/issues/99889) [https://github.com/python/cpython/issues/99889]: Fixed a security in flaw in `uu.decode()` that could allow for

directory traversal based on the input if no `out_file` was specified.

- [gh-104049](https://github.com/python/cpython/issues/104049) [https://github.com/python/cpython/issues/104049]: Do not expose the local on-disk location in directory indexes produced by `http.client.SimpleHTTPRequestHandler`.
- [gh-99108](https://github.com/python/cpython/issues/99108) [https://github.com/python/cpython/issues/99108]: Upgrade built-in `hashlib` SHA3 implementation to a verified implementation from the `HACL*` project. Used when OpenSSL is not present or lacks SHA3.
- [gh-102153](https://github.com/python/cpython/issues/102153) [https://github.com/python/cpython/issues/102153]: `urllib.parse.urlsplit()` now strips leading C0 control and space characters following the specification for URLs defined by WHATWG in response to CVE-2023-24329. Patch by Illia Volochii.

## Core and Builtins

- [gh-102856](https://github.com/python/cpython/issues/102856) [https://github.com/python/cpython/issues/102856]: Implement PEP 701 changes in the `tokenize` module. Patch by Marta Gómez Macías and Pablo Galindo Salgado
- [gh-104615](https://github.com/python/cpython/issues/104615) [https://github.com/python/cpython/issues/104615]: Fix wrong ordering of assignments in code like `a, a = x, y`. Contributed by Carl Meyer.
- [gh-104572](https://github.com/python/cpython/issues/104572) [https://github.com/python/cpython/issues/104572]: Improve syntax error message for invalid constructs in [PEP 695](https://peps.python.org/pep-0695/) [https://peps.python.org/pep-0695/] contexts and in annotations when `from __future__ import annotations` is active.
- [gh-104482](https://github.com/python/cpython/issues/104482) [https://github.com/python/cpython/issues/104482]: Fix three error handling bugs in `ast.c`'s validation of pattern matching statements.
- [gh-102818](https://github.com/python/cpython/issues/102818) [https://github.com/python/cpython/issues/102818]: Do not add a frame to the traceback in the `sys.setprofile` and `sys.settrace` trampoline functions. This ensures that frames are not duplicated if an exception is raised in the callback function, and ensures that frames are not omitted if a

C callback is used and that does not add the frame.

- [gh-104405](https://github.com/python/cpython/issues/104405) [https://github.com/python/cpython/issues/104405]: Fix an issue where some [bytecode](#) instructions could ignore [PEP 523](#) [https://peps.python.org/pep-0523/] when “inlining” calls.
- [gh-103082](https://github.com/python/cpython/issues/103082) [https://github.com/python/cpython/issues/103082]: Change behavior of `sys.monitoring.events.LINE` events in `sys.monitoring`: Line events now occur when a new line is reached dynamically, instead of using a static approximation, as before. This makes the behavior very similar to that of “line” events in `sys.settrace`. This should ease porting of tools from 3.11 to 3.12.
- [gh-104263](https://github.com/python/cpython/issues/104263) [https://github.com/python/cpython/issues/104263]: Fix `float("nan")` to produce a quiet NaN on platforms (like MIPS) where the meaning of the signalling / quiet bit is inverted from its usual meaning. Also introduce a new macro `Py_INFINITY` matching C99’s `INFINITY`, and refactor internals to rely on C99’s `NAN` and `INFINITY` macros instead of hard-coding bit patterns for infinities and NaNs. Thanks Sebastian Berg.
- [gh-99113](https://github.com/python/cpython/issues/99113) [https://github.com/python/cpython/issues/99113]: Multi-phase init extension modules may now indicate that they support running in subinterpreters that have their own GIL. This is done by using `Py_MOD_PER_INTERPRETER_GIL_SUPPORTED` as the value for the `Py_mod_multiple_interpreters` module def slot. Otherwise the module, by default, cannot be imported in such subinterpreters. (This does not affect the main interpreter or subinterpreters that do not have their own GIL.) In addition to the isolation that multi-phase init already normally requires, support for per-interpreter GIL involves one additional constraint: thread-safety. If the module has external (linked) dependencies and those libraries have any state that isn’t thread-safe then the module must do the additional work to add thread-safety. This should be an uncommon case.
- [gh-99113](https://github.com/python/cpython/issues/99113) [https://github.com/python/cpython/issues/99113]: The GIL

is now (optionally) per-interpreter. This is the fundamental change for PEP 684. This is all made possible by virtue of the isolated state of each interpreter in the process. The behavior of the main interpreter remains unchanged. Likewise, interpreters created using `Py_NewInterpreter()` are not affected. To get an interpreter with its own GIL, call `Py_NewInterpreterFromConfig()`.

- [gh-104108](https://github.com/python/cpython/issues/104108) [https://github.com/python/cpython/issues/104108]: Multi-phase init extension modules may now indicate whether or not they actually support multiple interpreters. By default such modules are expected to support use in multiple interpreters. In the uncommon case that one does not, it may use the new `Py_mod_multiple_interpreters` module def slot. A value of `0` means the module does not support them. `1` means it does. The default is `1`.
- [gh-104142](https://github.com/python/cpython/issues/104142) [https://github.com/python/cpython/issues/104142]: Fix an issue where `list` or `tuple` repetition could fail to respect [PEP 683](https://peps.python.org/pep-0683/) [https://peps.python.org/pep-0683/].
- [gh-104078](https://github.com/python/cpython/issues/104078) [https://github.com/python/cpython/issues/104078]: Improve the performance of `PyObject_HasAttrString()`
- [gh-104066](https://github.com/python/cpython/issues/104066) [https://github.com/python/cpython/issues/104066]: Improve the performance of `hasattr()` for module objects with a missing attribute.
- [gh-104028](https://github.com/python/cpython/issues/104028) [https://github.com/python/cpython/issues/104028]: Reduce object creation while calling callback function from gc. Patch by Donghee Na.
- [gh-104018](https://github.com/python/cpython/issues/104018) [https://github.com/python/cpython/issues/104018]: Disallow the “z” format specifier in %-format of bytes objects.
- [gh-102213](https://github.com/python/cpython/issues/102213) [https://github.com/python/cpython/issues/102213]: Fix performance loss when accessing an object’s attributes with `__getattr__` defined.
- [gh-103895](https://github.com/python/cpython/issues/103895) [https://github.com/python/cpython/issues/103895]: Improve handling of edge cases in showing

`Exception.__notes__`. Ensures that the messages always end with a newline and that string/bytes are not exploded over multiple lines. Patch by Carey Metcalfe.

- [gh-103907](https://github.com/python/cpython/issues/103907) [https://github.com/python/cpython/issues/103907]: Don't modify the refcounts of known immortal objects (`True`, `False`, and `None`) in the main interpreter loop.
- [gh-103899](https://github.com/python/cpython/issues/103899) [https://github.com/python/cpython/issues/103899]: Provide a helpful hint in the `TypeError` message when accidentally calling a `module` object that has a callable attribute of the same name (such as `dis.dis()` or `datetime.datetime`).
- [gh-103845](https://github.com/python/cpython/issues/103845) [https://github.com/python/cpython/issues/103845]: Remove both line and instruction instrumentation before adding new ones for monitoring, to avoid newly added instrumentation being removed immediately.
- [gh-103763](https://github.com/python/cpython/issues/103763) [https://github.com/python/cpython/issues/103763]: Implement [PEP 695](https://peps.python.org/pep-0695/) [https://peps.python.org/pep-0695/], adding syntactic support for generic classes, generic functions, and type aliases.

A new `type X = ...` syntax is added for type aliases, which resolves at runtime to an instance of the new class `typing.TypeAliasType`. The value is lazily evaluated and is accessible through the `__value__` attribute. This is implemented as a new AST node `ast.TypeAlias`.

New syntax `class X[T]: ..., def func[T](): ...` is added for defining generic functions and classes. This is implemented as a new `type_params` attribute on the AST nodes for classes and functions. This node holds instances of the new AST classes `ast.TypeVar`, `ast.ParamSpec`, and `ast.TypeVarTuple`.

`typing.TypeVar`, `typing.ParamSpec`, `typing.ParamSpecArgs`, `typing.ParamSpecKwargs`, `typing.TypeVarTuple`, and `typing.Generic` are now implemented in C rather than Python.

There are new bytecode instructions `LOAD_LOCALS`, `LOAD_CLASSDICTIONARY_OR_GLOBAL`, and `LOAD_CLASSDICTIONARY_OR_DEREF` to support correct resolution of names in class namespaces.

Patch by Eric Traut, Larry Hastings, and Jelle Zijlstra.

- [gh-103801](https://github.com/python/cpython/issues/103801) [https://github.com/python/cpython/issues/103801]: Adds three minor linting fixes to the `wasm` module caught that were caught by `ruff`.
- [gh-103793](https://github.com/python/cpython/issues/103793) [https://github.com/python/cpython/issues/103793]: Optimized `asyncio` Task creation by deferring expensive string formatting (task name generation) from Task creation to the first time `get_name` is called. This makes `asyncio` benchmarks up to 5% faster.
- [gh-102310](https://github.com/python/cpython/issues/102310) [https://github.com/python/cpython/issues/102310]: Change the error range for invalid bytes literals.
- [gh-103590](https://github.com/python/cpython/issues/103590) [https://github.com/python/cpython/issues/103590]: Do not wrap a single exception raised from a `try-except*` construct in an `ExceptionGroup`.
- [gh-103650](https://github.com/python/cpython/issues/103650) [https://github.com/python/cpython/issues/103650]: Change the perf map format to remove the ‘0x’ prefix from the addresses
- [gh-102856](https://github.com/python/cpython/issues/102856) [https://github.com/python/cpython/issues/102856]: Implement the required C tokenizer changes for PEP 701. Patch by Pablo Galindo Salgado, Lysandros Nikolaou, Batuhan Taskaya, Marta Gómez Macías and sunmy2019.
- [gh-100530](https://github.com/python/cpython/issues/100530) [https://github.com/python/cpython/issues/100530]: Clarify the error message raised when the called part of a class pattern isn’t actually a class.
- [gh-101517](https://github.com/python/cpython/issues/101517) [https://github.com/python/cpython/issues/101517]: Fix bug in line numbers of instructions emitted for `except*`.
- [gh-103492](https://github.com/python/cpython/issues/103492) [https://github.com/python/cpython/issues/103492]: Clarify `SyntaxWarning` with literal `is` comparison by

specifying which literal is problematic, since comparisons using `is` with e.g. `None` and `bool` literals are idiomatic.

- [gh-87729](https://github.com/python/cpython/issues/87729) [https://github.com/python/cpython/issues/87729]: Add **LOAD\_SUPER\_ATTR** (and a specialization for `super().method()`) to speed up `super().method()` and `super().attr`. This makes `super().method()` roughly 2.3x faster and brings it within 20% of the performance of a simple method call. Patch by Vladimir Matveev and Carl Meyer.
- [gh-103488](https://github.com/python/cpython/issues/103488) [https://github.com/python/cpython/issues/103488]: Change the internal offset distinguishing yield and return target addresses, so that the instruction pointer is correct for exception handling and other stack unwinding.
- [gh-82012](https://github.com/python/cpython/issues/82012) [https://github.com/python/cpython/issues/82012]: The bitwise inversion operator (`~`) on `bool` is deprecated. It returns the bitwise inversion of the underlying `int` representation such that `bool(~True) == True`, which can be confusing. Use `not` for logical negation of booleans. In the rare case that you really need the bitwise inversion of the underlying `int`, convert to `int` explicitly `~int(x)`.
- [gh-77757](https://github.com/python/cpython/issues/77757) [https://github.com/python/cpython/issues/77757]: Exceptions raised in a `typeobject`'s `__set_name__` method are no longer wrapped by a **RuntimeError**. Context information is added to the exception as a **PEP 678** [https://peps.python.org/pep-0678/] note.
- [gh-103333](https://github.com/python/cpython/issues/103333) [https://github.com/python/cpython/issues/103333]: **AttributeError** now retains the `name` attribute when pickled and unpickled.
- [gh-103242](https://github.com/python/cpython/issues/103242) [https://github.com/python/cpython/issues/103242]: Migrate **set\_ecdh\_curve()** method not to use deprecated OpenSSL APIs. Patch by Donghee Na.
- [gh-103323](https://github.com/python/cpython/issues/103323) [https://github.com/python/cpython/issues/103323]: We've replaced our use of `_PyRuntime.tstate_current` with a thread-local variable. This is a fairly low-level

implementation detail, and there should be no change in behavior.

- [gh-84436](https://github.com/python/cpython/issues/84436) [https://github.com/python/cpython/issues/84436]: The implementation of PEP-683 which adds Immortal Objects by using a fixed reference count that skips reference counting to make objects truly immutable.
- [gh-102700](https://github.com/python/cpython/issues/102700) [https://github.com/python/cpython/issues/102700]: Allow built-in modules to be submodules. This allows submodules to be statically linked into a CPython binary.
- [gh-103082](https://github.com/python/cpython/issues/103082) [https://github.com/python/cpython/issues/103082]: Implement [PEP 669](https://peps.python.org/pep-0669/) [https://peps.python.org/pep-0669/] Low Impact Monitoring for CPython.
- [gh-88691](https://github.com/python/cpython/issues/88691) [https://github.com/python/cpython/issues/88691]: Reduce the number of inline [CACHE](#) entries for [CALL](#).
- [gh-102500](https://github.com/python/cpython/issues/102500) [https://github.com/python/cpython/issues/102500]: Make the buffer protocol accessible in Python code using the new `__buffer__` and `__release_buffer__` magic methods. See [PEP 688](https://peps.python.org/pep-0688/) [https://peps.python.org/pep-0688/] for details. Patch by Jelle Zijlstra.
- [gh-97933](https://github.com/python/cpython/issues/97933) [https://github.com/python/cpython/issues/97933]: [PEP 709](https://peps.python.org/pep-0709/) [https://peps.python.org/pep-0709/]: inline list, dict and set comprehensions to improve performance and reduce bytecode size.
- [gh-99184](https://github.com/python/cpython/issues/99184) [https://github.com/python/cpython/issues/99184]: Bypass instance attribute access of `__name__` in `repr` of [weakref.ref](#).
- [gh-98003](https://github.com/python/cpython/issues/98003) [https://github.com/python/cpython/issues/98003]: Complex function calls are now faster and consume no C stack space.
- [bpo-39610](https://bugs.python.org/issue?@action=redirect&bpo=39610) [https://bugs.python.org/issue?@action=redirect&bpo=39610]: `len()` for 0-dimensional `memoryview` objects (such as `memoryview(ctypes.c_uint8(42))`) now raises a

**TypeError**. Previously this returned `1`, which was not consistent with `mem_0d[0]` raising an **IndexError**.

- [bpo-31821](https://bugs.python.org/issue?@action=redirect&bpo=31821) [https://bugs.python.org/issue?@action=redirect&bpo=31821]: Fix **`pause_reading()`** to work when called from **`connection_made()`** in **`asyncio`**.

## Library

- [gh-104600](https://github.com/python/cpython/issues/104600) [https://github.com/python/cpython/issues/104600]: **`functools.update_wrapper()`** now sets the `__type_params__` attribute (added by **PEP 695** [https://peps.python.org/pep-0695/]).
- [gh-104340](https://github.com/python/cpython/issues/104340) [https://github.com/python/cpython/issues/104340]: When an **`asyncio`** pipe protocol loses its connection due to an error, and the caller doesn't await **`wait_closed()`** on the corresponding **`StreamWriter`**, don't log a warning about an exception that was never retrieved. After all, according to the **`StreamWriter.close()`** docs, the **`wait_closed()`** call is optional ("not mandatory").
- [gh-104555](https://github.com/python/cpython/issues/104555) [https://github.com/python/cpython/issues/104555]: Fix issue where an **`issubclass()`** check comparing a class `X` against a **`runtime-checkable protocol`** `Y` with non-callable members would not cause **`TypeError`** to be raised if an **`isinstance()`** call had previously been made comparing an instance of `X` to `Y`. This issue was present in edge cases on Python 3.11, but became more prominent in 3.12 due to some unrelated changes that were made to runtime-checkable protocols. Patch by Alex Waygood.
- [gh-104372](https://github.com/python/cpython/issues/104372) [https://github.com/python/cpython/issues/104372]: Refactored the `_posixsubprocess` internals to avoid Python C API usage between fork and exec when marking `pass_fds=` file descriptors inheritable.
- [gh-104484](https://github.com/python/cpython/issues/104484) [https://github.com/python/cpython/issues/104484]: Added *`case_sensitive`* argument to **`pathlib.PurePath.match()`**
- [gh-75367](https://github.com/python/cpython/issues/75367) [https://github.com/python/cpython/issues/75367]: Fix data descriptor detection in **`inspect.getattr_static()`**.
- [gh-104536](https://github.com/python/cpython/issues/104536) [https://github.com/python/cpython/issues/104536]: Fix a race condition in the internal **`multiprocessing.process`** cleanup logic that could manifest as an unintended

`AttributeError` when calling `process.close()`.

- [gh-103857](https://github.com/python/cpython/issues/103857) [https://github.com/python/cpython/issues/103857]: Update datetime deprecations' stracktrace to point to the calling line
- [gh-101520](https://github.com/python/cpython/issues/101520) [https://github.com/python/cpython/issues/101520]: Move the core functionality of the `tracemalloc` module in the `Python/` folder, leaving just the module wrapper in `Modules/`.
- [gh-104392](https://github.com/python/cpython/issues/104392) [https://github.com/python/cpython/issues/104392]: Remove undocumented and unused `_paramspec_tvars` attribute from some classes in `typing`.
- [gh-102613](https://github.com/python/cpython/issues/102613) [https://github.com/python/cpython/issues/102613]: Fix issue where `pathlib.Path.glob()` raised `RecursionError` when walking deep directory trees.
- [gh-103000](https://github.com/python/cpython/issues/103000) [https://github.com/python/cpython/issues/103000]: Improve performance of `dataclasses.asdict()` for the common case where `dict_factory` is `dict`. Patch by David C Ellis.
- [gh-104301](https://github.com/python/cpython/issues/104301) [https://github.com/python/cpython/issues/104301]: Allow leading whitespace in disambiguated statements in `pdb`.
- [gh-104139](https://github.com/python/cpython/issues/104139) [https://github.com/python/cpython/issues/104139]: Teach `urllib.parse.unsplit()` to retain the `"/"` when assembling `itms-services://?action=generate-bugs` style [Apple Platform Deployment](https://support.apple.com/en-gb/guide/deployment/depce7cefc4d/web) [https://support.apple.com/en-gb/guide/deployment/depce7cefc4d/web] URLs.
- [gh-104307](https://github.com/python/cpython/issues/104307) [https://github.com/python/cpython/issues/104307]: `socket.getnameinfo()` now releases the GIL while contacting the DNS server
- [gh-104310](https://github.com/python/cpython/issues/104310) [https://github.com/python/cpython/issues/104310]: Users may now use `importlib.util.allowing_all_extensions()` (a context manager) to temporarily disable the strict compatibility checks for importing extension modules in subinterpreters.
- [gh-87695](https://github.com/python/cpython/issues/87695) [https://github.com/python/cpython/issues/87695]: Fix issue where `pathlib.Path.glob()` raised `OSError` when it encountered a symlink to an overly long path.
- [gh-104265](https://github.com/python/cpython/issues/104265) [https://github.com/python/cpython/issues/104265]: Prevent possible crash by disallowing instantiation of the `_csv.Reader` and `_csv.Writer` types. The regression was

introduced in 3.10.0a4 with PR 23224 ([bpo-14935](https://bugs.python.org/issue/?@action=redirect&bpo=14935) [https://bugs.python.org/issue/?@action=redirect&bpo=14935]). Patch by Radislav Chugunov.

- [gh-102613](https://github.com/python/cpython/issues/102613) [https://github.com/python/cpython/issues/102613]: Improve performance of `pathlib.Path.glob()` when expanding recursive wildcards ("\*\*") by merging adjacent wildcards and de-duplicating results only when necessary.
- [gh-65772](https://github.com/python/cpython/issues/65772) [https://github.com/python/cpython/issues/65772]: Remove unneeded comments and code in `turtle.py`.
- [gh-90208](https://github.com/python/cpython/issues/90208) [https://github.com/python/cpython/issues/90208]: Fixed issue where `pathlib.Path.glob()` returned incomplete results when it encountered a `PermissionError`. This method now suppresses all `OSError` exceptions, except those raised from calling `is_dir()` on the top-level path.
- [gh-104144](https://github.com/python/cpython/issues/104144) [https://github.com/python/cpython/issues/104144]: Optimize `asyncio.TaskGroup` when using `asyncio.eager_task_factory()`. Skip scheduling a done callback if a `TaskGroup` task completes eagerly.
- [gh-104144](https://github.com/python/cpython/issues/104144) [https://github.com/python/cpython/issues/104144]: Optimize `asyncio.gather()` when using `asyncio.eager_task_factory()` to complete eagerly if all futures completed eagerly. Avoid scheduling done callbacks for futures that complete eagerly.
- [gh-104114](https://github.com/python/cpython/issues/104114) [https://github.com/python/cpython/issues/104114]: Fix issue where `pathlib.Path.glob()` returns paths using the case of non-wildcard segments for corresponding path segments, rather than the real filesystem case.
- [gh-104104](https://github.com/python/cpython/issues/104104) [https://github.com/python/cpython/issues/104104]: Improve performance of `pathlib.Path.glob()` by using `re.IGNORECASE` to implement case-insensitive matching.
- [gh-104102](https://github.com/python/cpython/issues/104102) [https://github.com/python/cpython/issues/104102]: Improve performance of `pathlib.Path.glob()` when evaluating patterns that contain `'../'` segments.
- [gh-103822](https://github.com/python/cpython/issues/103822) [https://github.com/python/cpython/issues/103822]: Update the return type of `weekday` to the newly added `Day` attribute
- [gh-103629](https://github.com/python/cpython/issues/103629) [https://github.com/python/cpython/issues/103629]: Update the `repr` of `typing.Unpack` according to [PEP 692](https://peps.python.org/pep-0692/) [https://peps.python.org/pep-0692/].
- [gh-103963](https://github.com/python/cpython/issues/103963) [https://github.com/python/cpython/issues/103963]: Make

**dis** display the names of the args for **CALL\_INTRINSIC\_\***.

- [gh-104035](https://github.com/python/cpython/issues/104035) [https://github.com/python/cpython/issues/104035]: Do not ignore user-defined `__getstate__` and `__setstate__` methods for slotted frozen dataclasses.
- [gh-103987](https://github.com/python/cpython/issues/103987) [https://github.com/python/cpython/issues/103987]: In **mmap**, fix several bugs that could lead to access to memory-mapped files after they have been invalidated.
- [gh-103977](https://github.com/python/cpython/issues/103977) [https://github.com/python/cpython/issues/103977]: Improve import time of **platform** module.
- [gh-88773](https://github.com/python/cpython/issues/88773) [https://github.com/python/cpython/issues/88773]: Added **turtle.teleport()** to the **turtle** module to move a turtle to a new point without tracing a line, visible or invisible. Patch by Liam Gersten.
- [gh-103935](https://github.com/python/cpython/issues/103935) [https://github.com/python/cpython/issues/103935]: Use **io.open\_code()** for files to be executed instead of raw **open()**
- [gh-68968](https://github.com/python/cpython/issues/68968) [https://github.com/python/cpython/issues/68968]: Fixed garbled output of **assertEqual()** when an input lacks final newline.
- [gh-100370](https://github.com/python/cpython/issues/100370) [https://github.com/python/cpython/issues/100370]: Fix potential **OverflowError** in **sqlite3.Connection.blobopen()** for 32-bit builds. Patch by Erlend E. Aasland.
- [gh-102628](https://github.com/python/cpython/issues/102628) [https://github.com/python/cpython/issues/102628]: Substitute CTRL-D with CTRL-Z in **sqlite3** CLI banner when running on Windows.
- [gh-103636](https://github.com/python/cpython/issues/103636) [https://github.com/python/cpython/issues/103636]: Module-level attributes `January` and `February` are deprecated from **calendar**.
- [gh-103583](https://github.com/python/cpython/issues/103583) [https://github.com/python/cpython/issues/103583]: Isolate **\_multibytecodec** and codecs extension modules. Patches by Erlend E. Aasland.
- [gh-103848](https://github.com/python/cpython/issues/103848) [https://github.com/python/cpython/issues/103848]: Add checks to ensure that `[ bracketed ]` hosts found by **urllib.parse.urlsplit()** are of IPv6 or IPvFuture format.
- [gh-103872](https://github.com/python/cpython/issues/103872) [https://github.com/python/cpython/issues/103872]: Update the bundled copy of pip to version 23.1.2.
- [gh-99944](https://github.com/python/cpython/issues/99944) [https://github.com/python/cpython/issues/99944]: Make **dis** display the value of oparg of **KW\_NAMES**.

- [gh-74940](https://github.com/python/cpython/issues/74940) [https://github.com/python/cpython/issues/74940]: The C.UTF-8 locale is no longer converted to en\_US.UTF-8, enabling the use of UTF-8 encoding on systems which have no locales installed.
- [gh-103861](https://github.com/python/cpython/issues/103861) [https://github.com/python/cpython/issues/103861]: Fix `zipfile.Zipfile` creating invalid zip files when `force_zip64` was used to add files to them. Patch by Carey Metcalfe.
- [gh-103857](https://github.com/python/cpython/issues/103857) [https://github.com/python/cpython/issues/103857]: Deprecated `datetime.datetime.utcnow()` and `datetime.datetime.utcnowfromtimestamp()`. (Patch by Paul Ganssle)
- [gh-103839](https://github.com/python/cpython/issues/103839) [https://github.com/python/cpython/issues/103839]: Avoid compilation error due to `tommath.h` not being found when building Tkinter against Tcl 8.7 built with bundled `libtommath`.
- [gh-103791](https://github.com/python/cpython/issues/103791) [https://github.com/python/cpython/issues/103791]: `contextlib.suppress` now supports suppressing exceptions raised as part of an `ExceptionGroup`. If other exceptions exist on the group, they are re-raised in a group that does not contain the suppressed exceptions.
- [gh-90750](https://github.com/python/cpython/issues/90750) [https://github.com/python/cpython/issues/90750]: Use `datetime.datetime.fromisocalendar()` in the implementation of `datetime.datetime.strptime()`, which should now accept only valid ISO dates. (Patch by Paul Ganssle)
- [gh-103685](https://github.com/python/cpython/issues/103685) [https://github.com/python/cpython/issues/103685]: Prepare `tkinter.Menu.index()` for Tk 8.7 so that it does not raise `TclError: expected integer but got ""` when it should return `None`.
- [gh-81403](https://github.com/python/cpython/issues/81403) [https://github.com/python/cpython/issues/81403]: `urllib.request.CacheFTPHandler` no longer raises `URLError` if a cached FTP instance is reused. `ftplib`'s `endtransfer` method calls `voidresp` to drain the connection to handle FTP instance reuse properly.
- [gh-103699](https://github.com/python/cpython/issues/103699) [https://github.com/python/cpython/issues/103699]: Add `__orig_bases__` to non-generic TypedDicts, call-based TypedDicts, and call-based NamedTuples. Other TypedDicts and NamedTuples already had the attribute.
- [gh-103693](https://github.com/python/cpython/issues/103693) [https://github.com/python/cpython/issues/103693]: Add

convenience variable feature to `pdb`

- [gh-92248](https://github.com/python/cpython/issues/92248) [https://github.com/python/cpython/issues/92248]: Deprecate `type`, `choices`, and `metavar` parameters of `argparse.BooleanOptionalAction`.
- [gh-89415](https://github.com/python/cpython/issues/89415) [https://github.com/python/cpython/issues/89415]: Add `socket` constants for source-specific multicast. Patch by Reese Hyde.
- [gh-103673](https://github.com/python/cpython/issues/103673) [https://github.com/python/cpython/issues/103673]: `socketserver` gains `ForkingUnixStreamServer` and `ForkingUnixDatagramServer` classes. Patch by Jay Berry.
- [gh-103636](https://github.com/python/cpython/issues/103636) [https://github.com/python/cpython/issues/103636]: Added `Enum` for months and days in the calendar module.
- [gh-84976](https://github.com/python/cpython/issues/84976) [https://github.com/python/cpython/issues/84976]: Create a new `Lib/_pydatetime.py` file that defines the Python version of the `datetime` module, and make `datetime` import the contents of the new library only if the C implementation is missing. Currently, the full Python implementation is defined and then deleted if the C implementation is not available, slowing down `import datetime` unnecessarily.
- [gh-103596](https://github.com/python/cpython/issues/103596) [https://github.com/python/cpython/issues/103596]: Attributes/methods are no longer shadowed by same-named enum members, although they may be shadowed by `enum.property`'s.
- [gh-103584](https://github.com/python/cpython/issues/103584) [https://github.com/python/cpython/issues/103584]: Updated `importlib.metadata` with changes from `importlib_metadata` 5.2 through 6.5.0, including: Support `installed-files.txt` for `Distribution.files` when present. `PackageMetadata` now stipulates an additional `get` method allowing for easy querying of metadata keys that may not be present. `packages_distributions` now honors packages and modules with Python modules that not `.py` sources (e.g. `.pyc`, `.so`). Expand protocol for `PackageMetadata.get_all` to match the upstream implementation of `email.message.Message.get_all` in `python/typeshed#9620`. Deprecated use of `Distribution` without defining abstract methods. Deprecated expectation that `PackageMetadata.__getitem__` will return `None` for missing keys. In the future, it will raise a `KeyError`.

- [gh-103578](https://github.com/python/cpython/issues/103578) [https://github.com/python/cpython/issues/103578]: Fixed a bug where `pdb` crashes when reading source file with different encoding by replacing `io.open()` with `io.open_code()`. The new method would also call into the hook set by `PyFile_SetOpenCodeHook()`.
- [gh-103556](https://github.com/python/cpython/issues/103556) [https://github.com/python/cpython/issues/103556]: Now creating `inspect.Signature` objects with positional-only parameter with a default followed by a positional-or-keyword parameter without one is impossible.
- [gh-103559](https://github.com/python/cpython/issues/103559) [https://github.com/python/cpython/issues/103559]: Update the bundled copy of pip to version 23.1.1.
- [gh-103548](https://github.com/python/cpython/issues/103548) [https://github.com/python/cpython/issues/103548]: Improve performance of `pathlib.Path.absolute()` and `cwd()` by joining paths only when necessary. Also improve performance of `pathlib.PurePath.is_absolute()` on Posix by skipping path parsing and normalization.
- [gh-103538](https://github.com/python/cpython/issues/103538) [https://github.com/python/cpython/issues/103538]: Remove `_tkinter` module code guarded by definition of the `TK_AQUA` macro which was only needed for Tk 8.4.7 or earlier and was never actually defined by any build system or documented for manual use.
- [gh-103533](https://github.com/python/cpython/issues/103533) [https://github.com/python/cpython/issues/103533]: Update `cProfile` to use PEP 669 API
- [gh-103525](https://github.com/python/cpython/issues/103525) [https://github.com/python/cpython/issues/103525]: Fix misleading exception message when mixed `str` and `bytes` arguments are supplied to `pathlib.PurePath` and `Path`.
- [gh-103489](https://github.com/python/cpython/issues/103489) [https://github.com/python/cpython/issues/103489]: Add `getconfig()` and `setconfig()` to `Connection` to make configuration changes to a database connection. Patch by Erlend E. Aasland.
- [gh-103365](https://github.com/python/cpython/issues/103365) [https://github.com/python/cpython/issues/103365]: Set default Flag boundary to `STRICT` and fix bitwise operations.
- [gh-103472](https://github.com/python/cpython/issues/103472) [https://github.com/python/cpython/issues/103472]: Avoid a potential `ResourceWarning` in `http.client.HTTPConnection` by closing the proxy / tunnel's `CONNECT` response explicitly.
- [gh-103462](https://github.com/python/cpython/issues/103462) [https://github.com/python/cpython/issues/103462]: Fixed an issue with using `writelines()` in `asyncio` to send very large payloads that exceed the amount of data that can be written in one call to `socket.socket.send()` or

`socket.socket.sendmsg()`, resulting in the remaining buffer being left unwritten.

- [gh-103449](https://github.com/python/cpython/issues/103449) [https://github.com/python/cpython/issues/103449]: Fix a bug in doc string generation in `dataclasses.dataclass()`.
- [gh-103092](https://github.com/python/cpython/issues/103092) [https://github.com/python/cpython/issues/103092]: Isolate `_collections` (apply [PEP 687](https://peps.python.org/pep-0687/) [https://peps.python.org/pep-0687/]). Patch by Erlend E. Aasland.
- [gh-103357](https://github.com/python/cpython/issues/103357) [https://github.com/python/cpython/issues/103357]: Added support for `logging.Formatter` defaults parameter to `logging.config.dictConfig()` and `logging.config.fileConfig()`. Patch by Bar Harel.
- [gh-103092](https://github.com/python/cpython/issues/103092) [https://github.com/python/cpython/issues/103092]: Adapt the `winreg` extension module to [PEP 687](https://peps.python.org/pep-0687/) [https://peps.python.org/pep-0687/].
- [gh-74690](https://github.com/python/cpython/issues/74690) [https://github.com/python/cpython/issues/74690]: The performance of `isinstance()` checks against `runtime-checkable protocols` has been considerably improved for protocols that only have a few members. To achieve this improvement, several internal implementation details of the `typing` module have been refactored, including `typing._ProtocolMeta.__instancecheck__`, `typing._is_callable_members_only`, and `typing._get_protocol_attrs`. Patches by Alex Waygood.
- [gh-74690](https://github.com/python/cpython/issues/74690) [https://github.com/python/cpython/issues/74690]: The members of a runtime-checkable protocol are now considered “frozen” at runtime as soon as the class has been created. See “What’s new in Python 3.12” for more details.
- [gh-103256](https://github.com/python/cpython/issues/103256) [https://github.com/python/cpython/issues/103256]: Fixed a bug that caused `hmac` to raise an exception when the requested hash algorithm was not available in OpenSSL despite being available separately as part of `hashlib` itself. It now falls back properly to the built-in. This could happen when, for example, your OpenSSL does not include SHA3 support and you want to compute `hmac.digest(b'K', b'M', 'sha3_256')`.
- [gh-102778](https://github.com/python/cpython/issues/102778) [https://github.com/python/cpython/issues/102778]: Support `sys.last_exc` in `idlelib`.
- [gh-103285](https://github.com/python/cpython/issues/103285) [https://github.com/python/cpython/issues/103285]:

Improve performance of `ast.get_source_segment()`.

- [gh-103225](https://github.com/python/cpython/issues/103225) [https://github.com/python/cpython/issues/103225]: Fix a bug in `pdb` when displaying line numbers of module-level source code.
- [gh-103092](https://github.com/python/cpython/issues/103092) [https://github.com/python/cpython/issues/103092]: Adapt the `msvcrt` extension module to [PEP 687](https://peps.python.org/pep-0687/) [https://peps.python.org/pep-0687/].
- [gh-103092](https://github.com/python/cpython/issues/103092) [https://github.com/python/cpython/issues/103092]: Adapt the `winsound` extension module to [PEP 687](https://peps.python.org/pep-0687/) [https://peps.python.org/pep-0687/].
- [gh-93910](https://github.com/python/cpython/issues/93910) [https://github.com/python/cpython/issues/93910]: Remove deprecation of `enum member.member` access.
- [gh-102978](https://github.com/python/cpython/issues/102978) [https://github.com/python/cpython/issues/102978]: Fixes `unittest.mock.patch()` not enforcing function signatures for methods decorated with `@classmethod` or `@staticmethod` when patch is called with `autospec=True`.
- [gh-103092](https://github.com/python/cpython/issues/103092) [https://github.com/python/cpython/issues/103092]: Isolate `_socket` (apply [PEP 687](https://peps.python.org/pep-0687/) [https://peps.python.org/pep-0687/]). Patch by Erlend E. Aasland.
- [gh-100479](https://github.com/python/cpython/issues/100479) [https://github.com/python/cpython/issues/100479]: Add `pathlib.PurePath.with_segments()`, which creates a path object from arguments. This method is called whenever a derivative path is created, such as from `pathlib.PurePath.parent`. Subclasses may override this method to share information between path objects.
- [gh-103220](https://github.com/python/cpython/issues/103220) [https://github.com/python/cpython/issues/103220]: Fix issue where `os.path.join()` added a slash when joining onto an incomplete UNC drive with a trailing slash on Windows.
- [gh-103204](https://github.com/python/cpython/issues/103204) [https://github.com/python/cpython/issues/103204]: Fixes `http.server` accepting HTTP requests with HTTP version numbers preceded by '+', or '-', or with digit-separating '\_' characters. The length of the version numbers is also constrained.
- [gh-75586](https://github.com/python/cpython/issues/75586) [https://github.com/python/cpython/issues/75586]: Fix various Windows-specific issues with `shutil.which`.
- [gh-103193](https://github.com/python/cpython/issues/103193) [https://github.com/python/cpython/issues/103193]: Improve performance of `inspect.getattr_static()`. Patch by Alex Waygood.

- [gh-103176](https://github.com/python/cpython/issues/103176) [https://github.com/python/cpython/issues/103176]: `sys._current_exceptions()` now returns a mapping from thread-id to an exception instance, rather than to a (typ, exc, tb) tuple.
- [gh-103143](https://github.com/python/cpython/issues/103143) [https://github.com/python/cpython/issues/103143]: Polish the help messages and docstrings of `pdb`.
- [gh-103015](https://github.com/python/cpython/issues/103015) [https://github.com/python/cpython/issues/103015]: Add `entrypoint` keyword-only parameter to `sqlite3.Connection.load_extension()`, for overriding the SQLite extension entry point. Patch by Erlend E. Aasland.
- [gh-103000](https://github.com/python/cpython/issues/103000) [https://github.com/python/cpython/issues/103000]: Improve performance of `dataclasses.astuple()` and `dataclasses.asdict()` in cases where the contents are common Python types.
- [gh-102953](https://github.com/python/cpython/issues/102953) [https://github.com/python/cpython/issues/102953]: The extraction methods in `tarfile`, and `shutil.unpack_archive()`, have a new `filter` argument that allows limiting tar features that may be surprising or dangerous, such as creating files outside the destination directory. See [Extraction filters](#) for details.
- [gh-97696](https://github.com/python/cpython/issues/97696) [https://github.com/python/cpython/issues/97696]: Implemented an eager task factory in `asyncio`. When used as a task factory on an event loop, it performs eager execution of coroutines. Coroutines that are able to complete synchronously (e.g. return or raise without blocking) are returned immediately as a finished task, and the task is never scheduled to the event loop. If the coroutine blocks, the (pending) task is scheduled and returned.
- [gh-81079](https://github.com/python/cpython/issues/81079) [https://github.com/python/cpython/issues/81079]: Add `case_sensitive` keyword-only argument to `pathlib.Path.glob()` and `rglob()`.
- [gh-101819](https://github.com/python/cpython/issues/101819) [https://github.com/python/cpython/issues/101819]: Isolate the `io` extension module by applying [PEP 687](https://peps.python.org/pep-0687/) [https://peps.python.org/pep-0687/]. Patch by Kumar Aditya, Victor Stinner, and Erlend E. Aasland.
- [gh-91896](https://github.com/python/cpython/issues/91896) [https://github.com/python/cpython/issues/91896]: Deprecate `collections.abc.ByteString`
- [gh-101362](https://github.com/python/cpython/issues/101362) [https://github.com/python/cpython/issues/101362]: Speed up `pathlib.Path` construction by omitting the path anchor

from the internal list of path parts.

- [gh-102114](https://github.com/python/cpython/issues/102114) [https://github.com/python/cpython/issues/102114]: Functions in the `dis` module that accept a source code string as argument now print a more concise traceback when the string contains a syntax or indentation error.
- [gh-62432](https://github.com/python/cpython/issues/62432) [https://github.com/python/cpython/issues/62432]: The `unittest` runner will now exit with status code 5 if no tests were run. It is common for test runner misconfiguration to fail to find any tests, this should be an error.
- [gh-78079](https://github.com/python/cpython/issues/78079) [https://github.com/python/cpython/issues/78079]: Fix incorrect normalization of UNC device path roots, and partial UNC share path roots, in `pathlib.PurePath`. Pathlib no longer appends a trailing slash to such paths.
- [gh-85984](https://github.com/python/cpython/issues/85984) [https://github.com/python/cpython/issues/85984]: Add `tty.cfmakeraw()` and `tty.cfmakecbreak()` to `tty` and modernize the behavior of `tty.setraw()` and `tty.setcbreak()` to use POSIX.1-2017 Chapter 11 “General Terminal Interface” flag masks by default.
- [gh-101688](https://github.com/python/cpython/issues/101688) [https://github.com/python/cpython/issues/101688]: Implement `types.get_original_bases()` to provide further introspection for types.
- [gh-101640](https://github.com/python/cpython/issues/101640) [https://github.com/python/cpython/issues/101640]: `argparse.ArgumentParser` now catches errors when writing messages, such as when `sys.stderr` is `None`. Patch by Oleg Iarygin.
- [gh-83861](https://github.com/python/cpython/issues/83861) [https://github.com/python/cpython/issues/83861]: Fix `datetime.astimezone` method return value when invoked on a naive datetime instance that represents local time falling in a timezone transition gap. PEP 495 requires that instances with `fold = 1` produce earlier times than those with `fold = 0` in this case.
- [gh-89550](https://github.com/python/cpython/issues/89550) [https://github.com/python/cpython/issues/89550]: Decrease execution time of some `gzip` file writes by 15% by adding more appropriate buffering.
- [gh-95299](https://github.com/python/cpython/issues/95299) [https://github.com/python/cpython/issues/95299]: Remove the bundled `setuptools` wheel from `ensurepip`, and stop installing `setuptools` in environments created by `venv`.
- [gh-99353](https://github.com/python/cpython/issues/99353) [https://github.com/python/cpython/issues/99353]: Respect the `http.client.HTTPConnection.debuglevel` flag in `urllib.request.AbstractHTTPHandler` when its

constructor parameter `debuglevel` is not set. And do the same for `*HTTPS*`.

- [gh-98040](https://github.com/python/cpython/issues/98040) [https://github.com/python/cpython/issues/98040]: Remove the long-deprecated `imp` module.
- [gh-97850](https://github.com/python/cpython/issues/97850) [https://github.com/python/cpython/issues/97850]: Deprecate `pkgutil.find_loader()` and `pkgutil.get_loader()` in favor of `importlib.util.find_spec()`.
- [gh-94473](https://github.com/python/cpython/issues/94473) [https://github.com/python/cpython/issues/94473]: Flatten arguments in `tkinter.Canvas.coords()`. It now accepts not only `x1, y1, x2, y2, ...` and `[x1, y1, x2, y2, ...]`, but also `(x1, y1), (x2, y2), ...` and `[(x1, y1), (x2, y2), ...]`.
- [gh-98040](https://github.com/python/cpython/issues/98040) [https://github.com/python/cpython/issues/98040]: Remove more deprecated `importlib` APIs: `find_loader()`, `find_module()`, `importlib.abc.Finder`, `pkgutil.ImpImporter`, `pkgutil.ImpLoader`.
- [gh-96522](https://github.com/python/cpython/issues/96522) [https://github.com/python/cpython/issues/96522]: Fix potential deadlock in `pty.spawn()`
- [gh-96534](https://github.com/python/cpython/issues/96534) [https://github.com/python/cpython/issues/96534]: Support `divert(4)` added in FreeBSD 14.
- [gh-87474](https://github.com/python/cpython/issues/87474) [https://github.com/python/cpython/issues/87474]: Fix potential file descriptor leaks in `subprocess.Popen`.
- [gh-94906](https://github.com/python/cpython/issues/94906) [https://github.com/python/cpython/issues/94906]: Support multiple steps in `math.nextafter()`. Patch by Shantanu Jain and Matthias Gorgens.
- [gh-51574](https://github.com/python/cpython/issues/51574) [https://github.com/python/cpython/issues/51574]: Make `tempfile.mkdtemp()` return absolute paths when its `dir` parameter is relative.
- [gh-94518](https://github.com/python/cpython/issues/94518) [https://github.com/python/cpython/issues/94518]: Convert private `_posixsubprocess.fork_exec()` to use Argument Clinic.
- [gh-92184](https://github.com/python/cpython/issues/92184) [https://github.com/python/cpython/issues/92184]: When creating zip files using `zipfile`, `os.altsep`, if not `None`, will always be treated as a path separator even when it is not `/`. Patch by Carey Metcalfe.
- [bpo-46797](https://bugs.python.org/issue?@action=redirect&bpo=46797) [https://bugs.python.org/issue?@action=redirect&bpo=46797]: Deprecation warnings are now emitted for `ast.Num`, `ast.Bytes`, `ast.Str`, `ast.NameConstant` and `ast.Ellipsis`. These have been

documented as deprecated since Python 3.8, and will be removed in Python 3.14.

- [bpo-44844](https://bugs.python.org/issue?@action=redirect&bpo=44844) [https://bugs.python.org/issue?@action=redirect&bpo=44844]: Enables `webbrowser` to detect and launch Microsoft Edge browser.
- [bpo-45606](https://bugs.python.org/issue?@action=redirect&bpo=45606) [https://bugs.python.org/issue?@action=redirect&bpo=45606]: Fixed the bug in `pathlib.Path.glob()` – previously a dangling symlink would not be found by this method when the pattern is an exact match, but would be found when the pattern contains a wildcard or the recursive wildcard (`**`). With this change, a dangling symlink will be found in both cases.
- [bpo-23041](https://bugs.python.org/issue?@action=redirect&bpo=23041) [https://bugs.python.org/issue?@action=redirect&bpo=23041]: Add `QUOTE_STRINGS` and `QUOTE_NOTNULL` to the suite of `csv` module quoting styles.
- [bpo-24964](https://bugs.python.org/issue?@action=redirect&bpo=24964) [https://bugs.python.org/issue?@action=redirect&bpo=24964]: Added `http.client.HTTPConnection.get_proxy_response_headers()` that provides access to the HTTP headers on a proxy server response to the `CONNECT` request.
- [bpo-17258](https://bugs.python.org/issue?@action=redirect&bpo=17258) [https://bugs.python.org/issue?@action=redirect&bpo=17258]: `multiprocessing` now supports stronger HMAC algorithms for inter-process connection authentication rather than only HMAC-MD5.
- [bpo-39744](https://bugs.python.org/issue?@action=redirect&bpo=39744) [https://bugs.python.org/issue?@action=redirect&bpo=39744]: Make `asyncio.subprocess.Process.communicate()` close the subprocess's stdin even when called with `input=None`.
- [bpo-22708](https://bugs.python.org/issue?@action=redirect&bpo=22708) [https://bugs.python.org/issue?@action=redirect&bpo=22708]: `http.client` `CONNECT` method tunnel improvements: Use HTTP 1.1 protocol; send a matching `Host:` header with `CONNECT`, if one is not provided; convert IDN domain names to Punycode. Patch by Michael Handler.

## Documentation

- [gh-67056](https://github.com/python/cpython/issues/67056) [https://github.com/python/cpython/issues/67056]: Document that the effect of registering or unregistering an `atexit` cleanup function from within a registered cleanup

function is undefined.

- [gh-103629](https://github.com/python/cpython/issues/103629) [https://github.com/python/cpython/issues/103629]: Mention the new way of typing `**kwargs` with `Unpack` and `TypedDict` introduced in [PEP 692](https://peps.python.org/pep-0692/) [https://peps.python.org/pep-0692/].
- [gh-48241](https://github.com/python/cpython/issues/48241) [https://github.com/python/cpython/issues/48241]: Clarifying documentation about the `url` parameter to `urllib.request.urlopen` and `urllib.request.Request` needing to be encoded properly.
- [gh-86094](https://github.com/python/cpython/issues/86094) [https://github.com/python/cpython/issues/86094]: Add support for Unicode Path Extra Field in `ZipFile`. Patch by Yeojin Kim and Andrea Giudiceandrea
- [gh-99202](https://github.com/python/cpython/issues/99202) [https://github.com/python/cpython/issues/99202]: Fix extension type from documentation for compiling in C++20 mode

## Tests

- [gh-104494](https://github.com/python/cpython/issues/104494) [https://github.com/python/cpython/issues/104494]: Update `test_pack_configure_in` and `test_place_configure_in` for changes to error message formatting in Tk 8.7.
- [gh-104461](https://github.com/python/cpython/issues/104461) [https://github.com/python/cpython/issues/104461]: Run `test_configure_screen` on X11 only, since the `DISPLAY` environment variable and `-screen` option for toplevels are not useful on Tk for Win32 or Aqua.
- [gh-86275](https://github.com/python/cpython/issues/86275) [https://github.com/python/cpython/issues/86275]: Added property-based tests to the [zoneinfo](#) tests, along with stubs for the `hypothesis` interface. (Patch by Paul Ganssle)
- [gh-103329](https://github.com/python/cpython/issues/103329) [https://github.com/python/cpython/issues/103329]: Regression tests for the behaviour of `unittest.mock.PropertyMock` were added.
- [gh-102795](https://github.com/python/cpython/issues/102795) [https://github.com/python/cpython/issues/102795]: fix use of poll in `test_epoll`'s `test_control_and_wait`
- [gh-75729](https://github.com/python/cpython/issues/75729) [https://github.com/python/cpython/issues/75729]: Fix the `os.spawn*` tests failing on Windows when the working directory or interpreter path contains spaces.

## Build

- [gh-101282](https://github.com/python/cpython/issues/101282) [https://github.com/python/cpython/issues/101282]: BOLT optimization is now applied to the libpython shared library if building a shared library. BOLT instrumentation and application settings can now be influenced via the `BOLT_INSTRUMENT_FLAGS` and `BOLT_APPLY_FLAGS` configure variables.
- [gh-99017](https://github.com/python/cpython/issues/99017) [https://github.com/python/cpython/issues/99017]: `PYTHON_FOR_REGEN` now require Python 3.10 or newer.
- [gh-104490](https://github.com/python/cpython/issues/104490) [https://github.com/python/cpython/issues/104490]: Define `.PHONY` / virtual make targets consistently and properly.
- [gh-104106](https://github.com/python/cpython/issues/104106) [https://github.com/python/cpython/issues/104106]: Add gcc fallback of `mkfinfo`/`mknodat` for macOS. Patch by Donghee Na.
- [gh-103532](https://github.com/python/cpython/issues/103532) [https://github.com/python/cpython/issues/103532]: The `TKINTER_PROTECT_LOADTK` macro is no longer defined or used in the `_tkinter` module. It was previously only defined when building against Tk 8.4.13 and older, but Tk older than 8.5.12 has been unsupported since [gh-91152](https://github.com/python/cpython/issues/91152) [https://github.com/python/cpython/issues/91152].
- [gh-99069](https://github.com/python/cpython/issues/99069) [https://github.com/python/cpython/issues/99069]: Extended workaround defining `static_assert` when missing from the libc headers to all clang and gcc builds. In particular, this fixes building on macOS  $\leq 10.10$ .
- [gh-100220](https://github.com/python/cpython/issues/100220) [https://github.com/python/cpython/issues/100220]: Changed the default value of the `SHELL` Makefile variable from `/bin/sh` to `/bin/sh -e` to ensure that complex recipes correctly fail after an error. Previously, `make install` could fail to install some files and yet return a successful result.
- [gh-90656](https://github.com/python/cpython/issues/90656) [https://github.com/python/cpython/issues/90656]: Add platform triplets for 64-bit LoongArch:
  - `loongarch64-linux-gnuf`
  - `loongarch64-linux-gnuf32`

○ loongarch64-linux-gnu

Patch by Zhang Na.

## Windows

- [gh-104623](https://github.com/python/cpython/issues/104623) [https://github.com/python/cpython/issues/104623]: Update Windows installer to use SQLite 3.42.0.
- [gh-82814](https://github.com/python/cpython/issues/82814) [https://github.com/python/cpython/issues/82814]: Fix a potential [Errno 13] Permission denied when using `shutil.copystat()` within Windows Subsystem for Linux (WSL) on a mounted filesystem by adding `errno.EACCES` to the list of ignored errors within the internal implementation.
- [gh-103088](https://github.com/python/cpython/issues/103088) [https://github.com/python/cpython/issues/103088]: Fix virtual environment `activate` script having incorrect line endings for Cygwin.
- [gh-103088](https://github.com/python/cpython/issues/103088) [https://github.com/python/cpython/issues/103088]: Fixes venvs not working in bash on Windows across different disks
- [gh-102997](https://github.com/python/cpython/issues/102997) [https://github.com/python/cpython/issues/102997]: Update Windows installer to use SQLite 3.41.2.
- [gh-88013](https://github.com/python/cpython/issues/88013) [https://github.com/python/cpython/issues/88013]: Fixed a bug where `TypeError` was raised when calling `ntpath.realpath()` with a bytes parameter in some cases.

## macOS

- [gh-99834](https://github.com/python/cpython/issues/99834) [https://github.com/python/cpython/issues/99834]: Update macOS installer to Tcl/Tk 8.6.13.
- [gh-104623](https://github.com/python/cpython/issues/104623) [https://github.com/python/cpython/issues/104623]: Update macOS installer to SQLite 3.42.0.
- [gh-103545](https://github.com/python/cpython/issues/103545) [https://github.com/python/cpython/issues/103545]: Add `os.PRIO_DARWIN_THREAD`, `os.PRIO_DARWIN_PROCESS`, `os.PRIO_DARWIN_BG` and `os.PRIO_DARWIN_NONUI`. These can be used with `os.setpriority` to run the process at a lower priority and make use of the efficiency cores on Apple Silicon systems.
- [gh-104180](https://github.com/python/cpython/issues/104180) [https://github.com/python/cpython/issues/104180]: Support reading SOCKS proxy configuration from macOS System Configuration. Patch by Sam Schott.
- [gh-60436](https://github.com/python/cpython/issues/60436) [https://github.com/python/cpython/issues/60436]: update

curses textbox to additionally handle backspace using the `curses.ascii.DEL` key press.

- [gh-102997](https://github.com/python/cpython/issues/102997) [https://github.com/python/cpython/issues/102997]: Update macOS installer to SQLite 3.41.2.

## IDLE

- [gh-104499](https://github.com/python/cpython/issues/104499) [https://github.com/python/cpython/issues/104499]: Fix completions for Tk Aqua 8.7 (currently blank).
- [gh-104496](https://github.com/python/cpython/issues/104496) [https://github.com/python/cpython/issues/104496]: About prints both tcl and tk versions if different (expected someday).
- [gh-88496](https://github.com/python/cpython/issues/88496) [https://github.com/python/cpython/issues/88496]: Fix IDLE test hang on macOS.

## Tools/Demos

- [gh-104389](https://github.com/python/cpython/issues/104389) [https://github.com/python/cpython/issues/104389]: Argument Clinic C converters now accept the `unused` keyword, for wrapping a parameter with `Py_UNUSED`. Patch by Erlend E. Aasland.

## C API

- [gh-101291](https://github.com/python/cpython/issues/101291) [https://github.com/python/cpython/issues/101291]: Added unstable C API for extracting the value of “compact” integers: `PyUnstable_Long_IsCompact()` and `PyUnstable_Long_CompactValue()`.
- [gh-104109](https://github.com/python/cpython/issues/104109) [https://github.com/python/cpython/issues/104109]: We’ve added `Py_NewInterpreterFromConfig()` and `PyInterpreterConfig` to the public C-API (but not the stable ABI; not yet at least). The new function may be used to create a new interpreter with various features configured. The function was added to support PEP 684 (per-interpreter GIL).
- [gh-103968](https://github.com/python/cpython/issues/103968) [https://github.com/python/cpython/issues/103968]: `PyType_FromSpec()` and its variants now allow creating classes whose metaclass overrides `tp_new`. The `tp_new` is ignored. This behavior is deprecated and will be disallowed in 3.14+. The new `PyType_FromMetaclass()` already disallows it.

- [gh-103743](https://github.com/python/cpython/issues/103743) [https://github.com/python/cpython/issues/103743]: Add `PyUnstable_Object_GC_NewWithExtraData()` function that can be used to allocate additional memory after an object for data not managed by Python.
- [gh-103295](https://github.com/python/cpython/issues/103295) [https://github.com/python/cpython/issues/103295]: Introduced `PyUnstable_WritePerfMapEntry()`, `PyUnstable_PerfMapState_Init()` and `PyUnstable_PerfMapState_Fini()`. These allow extension modules (JIT compilers in particular) to write to perf-map files in a thread safe manner. The [Python support for the Linux perf profiler](#) also uses these APIs to write entries in the perf-map file.
- [gh-103509](https://github.com/python/cpython/issues/103509) [https://github.com/python/cpython/issues/103509]: Added C API for extending types whose instance memory layout is opaque: `PyType_Spec.basicsize` can now be zero or negative, `PyObject_GetTypeData()` can be used to get subclass-specific data, and `Py_TPFLAGS_ITEMS_AT_END` can be used to safely extend variable-size objects. See [PEP 697](https://peps.python.org/pep-0697/) [https://peps.python.org/pep-0697/] for details.
- [gh-103091](https://github.com/python/cpython/issues/103091) [https://github.com/python/cpython/issues/103091]: Add a new C-API function to eagerly assign a version tag to a `PyTypeObject`:  
`PyUnstable_Type_AssignVersionTag()`.
- [gh-101408](https://github.com/python/cpython/issues/101408) [https://github.com/python/cpython/issues/101408]: `PyObject_GC_Resize()` should calculate preheader size if needed. Patch by Donghee Na.
- [gh-98836](https://github.com/python/cpython/issues/98836) [https://github.com/python/cpython/issues/98836]: Add support of more formatting options (left aligning, octals, uppercase hexadecimals, `intmax_t`, `ptrdiff_t`, `wchar_t` C strings, variable width and precision) in `PyUnicode_FromFormat()` and `PyUnicode_FromFormatV()`.
- [gh-96803](https://github.com/python/cpython/issues/96803) [https://github.com/python/cpython/issues/96803]: Add unstable C-API functions to get the code object, lasti and line number from the internal `_PyInterpreterFrame` in the limited API. The functions are:
  - `PyCodeObject *`  
`PyUnstable_InterpreterFrame_GetCode(struct _PyInterpreterFrame *frame)`
  - `int`

```

PyUnstable_InterpreterFrame_GetLasti(struct
_PyInterpreterFrame *frame)
○ int
PyUnstable_InterpreterFrame_GetLine(struct
_PyInterpreterFrame *frame)

```

## Python 3.12.0 alpha 7

*Release date: 2023-04-04*

### Core and Builtins

- [gh-102192](https://github.com/python/cpython/issues/102192) [https://github.com/python/cpython/issues/102192]: Deprecated `_PyErr_ChainExceptions` in favour of `_PyErr_ChainExceptions1`.
- [gh-89987](https://github.com/python/cpython/issues/89987) [https://github.com/python/cpython/issues/89987]: Reduce the number of inline `CACHE` entries for `BINARY_SUBSCR`.
- [gh-102859](https://github.com/python/cpython/issues/102859) [https://github.com/python/cpython/issues/102859]: Removed `JUMP_IF_FALSE_OR_POP` and `JUMP_IF_TRUE_OR_POP` instructions.
- [gh-101975](https://github.com/python/cpython/issues/101975) [https://github.com/python/cpython/issues/101975]: Fixed `stacktop` value on tracing entries to avoid corruption on garbage collection.
- [gh-102778](https://github.com/python/cpython/issues/102778) [https://github.com/python/cpython/issues/102778]: Add `sys.last_exc` and deprecate `sys.last_type`, `sys.last_value` and `sys.last_traceback`, which hold the same information in its legacy form.
- [gh-100982](https://github.com/python/cpython/issues/100982) [https://github.com/python/cpython/issues/100982]: Replace all occurrences of `COMPARE_AND_BRANCH` with `COMPARE_OP`.
- [gh-102701](https://github.com/python/cpython/issues/102701) [https://github.com/python/cpython/issues/102701]: Fix overflow when creating very large dict.
- [gh-102755](https://github.com/python/cpython/issues/102755) [https://github.com/python/cpython/issues/102755]: Add

`PyErr_DisplayException()` which takes just an exception instance, to replace the legacy `PyErr_Display()` which takes the `(typ, exc, tb)` triplet.

- [gh-102594](https://github.com/python/cpython/issues/102594) [https://github.com/python/cpython/issues/102594]: Add note to exception raised in `PyErr_SetObject` when normalization fails.
- [gh-90997](https://github.com/python/cpython/issues/90997) [https://github.com/python/cpython/issues/90997]: Shrink the number of inline `CACHE` entries used by `LOAD_GLOBAL`.
- [gh-102491](https://github.com/python/cpython/issues/102491) [https://github.com/python/cpython/issues/102491]: Improve import time of `platform` by removing IronPython version parsing. The IronPython version parsing was not functional (see <https://github.com/IronLanguages/ironpython3/issues/1667>).
- [gh-101291](https://github.com/python/cpython/issues/101291) [https://github.com/python/cpython/issues/101291]: Rearrange bits in first field (after header) of `PyLongObject`. \* Bits 0 and 1: 1 - sign. I.e. 0 for positive numbers, 1 for zero and 2 for negative numbers. \* Bit 2 reserved (probably for the immortal bit) \* Bits 3+ the unsigned size.

This makes a few operations slightly more efficient, and will enable a more compact and faster 2s-complement representation of most ints in future.

- [gh-102397](https://github.com/python/cpython/issues/102397) [https://github.com/python/cpython/issues/102397]: Fix segfault from race condition in signal handling during garbage collection. Patch by Kumar Aditya.
- [gh-102406](https://github.com/python/cpython/issues/102406) [https://github.com/python/cpython/issues/102406]: `codecs` encoding/decoding errors now get the context information (which operation and which codecs) attached as [PEP 678](https://peps.python.org/pep-0678/) [https://peps.python.org/pep-0678/] notes instead of through chaining a new instance of the exception.
- [gh-102281](https://github.com/python/cpython/issues/102281) [https://github.com/python/cpython/issues/102281]: Fix potential nullptr dereference and use of uninitialized memory in `fileutils`. Patch by Max Bachmann.

- [gh-102300](https://github.com/python/cpython/issues/102300) [https://github.com/python/cpython/issues/102300]: Reuse operands with refcount of 1 in float specializations of `BINARY_OP`.
- [gh-102213](https://github.com/python/cpython/issues/102213) [https://github.com/python/cpython/issues/102213]: Fix performance loss when accessing an object's attributes with `__getattr__` defined.
- [gh-102255](https://github.com/python/cpython/issues/102255) [https://github.com/python/cpython/issues/102255]: Improve build support for the Xbox. Patch by Max Bachmann.
- [gh-102027](https://github.com/python/cpython/issues/102027) [https://github.com/python/cpython/issues/102027]: Fix SSE2 and SSE3 detection in `_blake2` internal module. Patch by Max Bachmann.
- [gh-101865](https://github.com/python/cpython/issues/101865) [https://github.com/python/cpython/issues/101865]: Deprecate `co_lnotab` in code objects, schedule it for removal in Python 3.14
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Adapt `_pickle` to [PEP 687](https://peps.python.org/pep-0687/) [https://peps.python.org/pep-0687/]. Patch by Mohamed Koubaa and Erlend Aasland.

## Library

- [gh-103085](https://github.com/python/cpython/issues/103085) [https://github.com/python/cpython/issues/103085]: Pure python `locale.getencoding()` will not warn deprecation.
- [gh-103068](https://github.com/python/cpython/issues/103068) [https://github.com/python/cpython/issues/103068]: It's no longer possible to register conditional breakpoints in `Pdb` that raise `SyntaxError`. Patch by Tian Gao.
- [gh-102549](https://github.com/python/cpython/issues/102549) [https://github.com/python/cpython/issues/102549]: Don't ignore exceptions in member type creation.
- [gh-103056](https://github.com/python/cpython/issues/103056) [https://github.com/python/cpython/issues/103056]: Ensure final `_generate_next_value_` is a `staticmethod`.

- [gh-103046](https://github.com/python/cpython/issues/103046) [https://github.com/python/cpython/issues/103046]: Display current line label correctly in `dis` when `show_caches` is False and `lasti` points to a CACHE entry.
- [gh-102433](https://github.com/python/cpython/issues/102433) [https://github.com/python/cpython/issues/102433]: `isinstance()` checks against `runtime-checkable protocols` now use `inspect.getattr_static()` rather than `hasattr()` to lookup whether attributes exist. This means that descriptors and `__getattr__()` methods are no longer unexpectedly evaluated during `isinstance()` checks against runtime-checkable protocols. However, it may also mean that some objects which used to be considered instances of a runtime-checkable protocol may no longer be considered instances of that protocol on Python 3.12+, and vice versa. Most users are unlikely to be affected by this change. Patch by Alex Waygood.
- [gh-103023](https://github.com/python/cpython/issues/103023) [https://github.com/python/cpython/issues/103023]: It's no longer possible to register expressions to display in `Pdb` that raise `SyntaxError`. Patch by Tian Gao.
- [gh-102947](https://github.com/python/cpython/issues/102947) [https://github.com/python/cpython/issues/102947]: Improve traceback when `dataclasses.fields()` is called on a non-dataclass. Patch by Alex Waygood
- [gh-102780](https://github.com/python/cpython/issues/102780) [https://github.com/python/cpython/issues/102780]: The `asyncio.Timeout` context manager now works reliably even when performing cleanup due to task cancellation. Previously it could raise a `CancelledError` instead of an `TimeoutError` in such cases.
- [gh-102871](https://github.com/python/cpython/issues/102871) [https://github.com/python/cpython/issues/102871]: Remove support for obsolete browsers from `webbrowser`. Removed browsers include Grail, Mosaic, Netscape, Galeon, Skipstone, Iceape, Firebird, and Firefox versions 35 and below.
- [gh-102839](https://github.com/python/cpython/issues/102839) [https://github.com/python/cpython/issues/102839]: Improve performance of `math.log()` arguments handling by removing the argument clinic.

- [gh-102828](https://github.com/python/cpython/issues/102828) [https://github.com/python/cpython/issues/102828]: Add the `onexc` arg to `shutil.rmtree()`, which is like `onerror` but expects an exception instance rather than an `exc_info` tuple. Deprecate `onerror`.
- [gh-88965](https://github.com/python/cpython/issues/88965) [https://github.com/python/cpython/issues/88965]: typing: Fix a bug relating to substitution in custom classes generic over a `ParamSpec`. Previously, if the `ParamSpec` was substituted with a parameters list that itself contained a `TypeVar`, the `TypeVar` in the parameters list could not be subsequently substituted. This is now fixed.

Patch by Nikita Sobolev.

- [gh-76846](https://github.com/python/cpython/issues/76846) [https://github.com/python/cpython/issues/76846]: Fix issue where `__new__()` and `__init__()` methods of `pathlib.PurePath` and `Path` subclasses were not called in some circumstances.
- [gh-78530](https://github.com/python/cpython/issues/78530) [https://github.com/python/cpython/issues/78530]: `asyncio.wait()` now accepts generators yielding tasks. Patch by Kumar Aditya.
- [gh-102748](https://github.com/python/cpython/issues/102748) [https://github.com/python/cpython/issues/102748]: `asyncio.iscoroutine()` now returns `False` for generators as `asyncio` does not support legacy generator-based coroutines. Patch by Kumar Aditya.
- [gh-102670](https://github.com/python/cpython/issues/102670) [https://github.com/python/cpython/issues/102670]: Optimized `fmean()`, `correlation()`, `covariance()`, and `linear_regression()` using the new `math.sumprod()` function.
- [gh-102615](https://github.com/python/cpython/issues/102615) [https://github.com/python/cpython/issues/102615]: Typing: Improve the `repr` of generic aliases for classes generic over a `ParamSpec`. (Use square brackets to represent a parameter list.)
- [gh-100112](https://github.com/python/cpython/issues/100112) [https://github.com/python/cpython/issues/100112]: `asyncio.Task.get_coro()` now always returns a coroutine when wrapping an awaitable object. Patch by Kumar Aditya.

- [gh-102578](https://github.com/python/cpython/issues/102578) [https://github.com/python/cpython/issues/102578]: Speed up setting or deleting mutable attributes on non-dataclass subclasses of frozen dataclasses. Due to the implementation of `__setattr__` and `__delattr__` for frozen dataclasses, this previously had a time complexity of  $O(n)$ . It now has a time complexity of  $O(1)$ .
- [gh-102519](https://github.com/python/cpython/issues/102519) [https://github.com/python/cpython/issues/102519]: Add `os.listdirs()`, `os.listvolumes()` and `os.listmounts()` functions on Windows for enumerating drives, volumes and mount points
- [gh-74468](https://github.com/python/cpython/issues/74468) [https://github.com/python/cpython/issues/74468]: Attribute name of the extracted `tarfile` file object now holds filename of itself rather than of the archive it is contained in. Patch by Oleg Iarygin.
- [gh-102378](https://github.com/python/cpython/issues/102378) [https://github.com/python/cpython/issues/102378]: Private helper method `inspect._signature_strip_non_python_syntax` will no longer strip `/` from the input string.
- [gh-79940](https://github.com/python/cpython/issues/79940) [https://github.com/python/cpython/issues/79940]: Add `inspect.getasynstate()` and `inspect.getasynlocals()`. Patch by Thomas Krennwallner.
- [gh-102103](https://github.com/python/cpython/issues/102103) [https://github.com/python/cpython/issues/102103]: Add module argument to `dataclasses.make_dataclass()` and make classes produced by it pickleable.
- [gh-102069](https://github.com/python/cpython/issues/102069) [https://github.com/python/cpython/issues/102069]: Fix `__weakref__` descriptor generation for custom dataclasses.
- [gh-102038](https://github.com/python/cpython/issues/102038) [https://github.com/python/cpython/issues/102038]: Skip a `stat` in `site` if we have already found a `pyenv.cfg`
- [gh-98886](https://github.com/python/cpython/issues/98886) [https://github.com/python/cpython/issues/98886]: Fix issues when defining dataclasses that have fields with specific underscore names that aren't clearly reserved by `dataclasses`.

- [gh-101673](https://github.com/python/cpython/issues/101673) [https://github.com/python/cpython/issues/101673]: Fix a `pdb` bug where `ll` clears the changes to local variables.
- [gh-101313](https://github.com/python/cpython/issues/101313) [https://github.com/python/cpython/issues/101313]: Added `-h` and `-help` arguments to the webbrowser CLI
- [gh-100372](https://github.com/python/cpython/issues/100372) [https://github.com/python/cpython/issues/100372]: `ssl.SSLContext.load_verify_locations()` no longer incorrectly accepts some cases of trailing data when parsing DER.
- [gh-89727](https://github.com/python/cpython/issues/89727) [https://github.com/python/cpython/issues/89727]: Fix `pathlib.Path.walk` `RecursionError` on deep directory trees by rewriting it using iteration instead of recursion.
- [gh-100131](https://github.com/python/cpython/issues/100131) [https://github.com/python/cpython/issues/100131]: Added an optional `delete` keyword argument to `tempfile.TemporaryDirectory`.
- [gh-48330](https://github.com/python/cpython/issues/48330) [https://github.com/python/cpython/issues/48330]: Added `--durations` command line option, showing the N slowest test cases. `unittest.TextTestRunner` and `unittest.TextTestResult` constructors accept a new `durations` keyword argument. Subclasses should take this into account or accept `**kwargs`. Added `unittest.TestResult.addDuration()` method and `unittest.TestResult.collectedDurations` attribute.

(Contributed by Giampaolo Rodola)

- [gh-98169](https://github.com/python/cpython/issues/98169) [https://github.com/python/cpython/issues/98169]: Fix `dataclasses.astuple()` crash when `collections.defaultdict` is present in the attributes.
- [gh-96931](https://github.com/python/cpython/issues/96931) [https://github.com/python/cpython/issues/96931]: Fix incorrect results from `ssl.SSLSocket.shared_ciphers()`
- [gh-95495](https://github.com/python/cpython/issues/95495) [https://github.com/python/cpython/issues/95495]: When built against OpenSSL 3.0, the `ssl` module had a bug where it reported unauthenticated EOFs (i.e. without `close_notify`) as

a clean TLS-level EOF. It now raises `SSLEOFError`, matching the behavior in previous versions of OpenSSL. The `options` attribute on `SSLContext` also no longer includes `OP_IGNORE_UNEXPECTED_EOF` by default. This option may be set to specify the previous OpenSSL 3.0 behavior.

- [gh-94684](https://github.com/python/cpython/issues/94684) [https://github.com/python/cpython/issues/94684]: Now `uuid.uuid3()` and `uuid.uuid5()` functions support `bytes` objects as their *name* argument.
- [gh-94440](https://github.com/python/cpython/issues/94440) [https://github.com/python/cpython/issues/94440]: Fix a `concurrent.futures.process` bug where `ProcessPoolExecutor` shutdown could hang after a future has been quickly submitted and canceled.
- [gh-72346](https://github.com/python/cpython/issues/72346) [https://github.com/python/cpython/issues/72346]: Added deprecation warning to `isdst` parameter of `email.utils.localtime()`.
- [bpo-36305](https://bugs.python.org/issue?@action=redirect&bpo=36305) [https://bugs.python.org/issue?@action=redirect&bpo=36305]: Fix handling of Windows filenames that resemble drives, such as `./a:b`, in `pathlib`.

## Documentation

- [gh-103112](https://github.com/python/cpython/issues/103112) [https://github.com/python/cpython/issues/103112]: Add docstring to `http.client.HTTPResponse.read()` to fix pydoc output.

## Tests

- [gh-102980](https://github.com/python/cpython/issues/102980) [https://github.com/python/cpython/issues/102980]: Improve test coverage on `pdb`.
- [gh-102537](https://github.com/python/cpython/issues/102537) [https://github.com/python/cpython/issues/102537]: Adjust the error handling strategy in `test_zoneinfo.TzPathTest.python_tzpath_context`. Patch by Paul Ganssle.
- [gh-101377](https://github.com/python/cpython/issues/101377) [https://github.com/python/cpython/issues/101377]: Improved `test_locale_calendar_formatweekday` of `calendar`.

## Build

- [gh-102973](https://github.com/python/cpython/issues/102973) [https://github.com/python/cpython/issues/102973]: Add a dev container (along with accompanying Dockerfile) for development purposes.
- [gh-102711](https://github.com/python/cpython/issues/102711) [https://github.com/python/cpython/issues/102711]: Fix `Wstrict-prototypes` compiler warnings.

## Windows

- [gh-102690](https://github.com/python/cpython/issues/102690) [https://github.com/python/cpython/issues/102690]: Update `webbrowser` to fall back to Microsoft Edge instead of Internet Explorer.
- [gh-99726](https://github.com/python/cpython/issues/99726) [https://github.com/python/cpython/issues/99726]: Improves correctness of stat results for Windows, and uses faster API when available

## Tools/Demos

- [gh-102809](https://github.com/python/cpython/issues/102809) [https://github.com/python/cpython/issues/102809]: `Misc/gdbinit` was removed.

## C API

- [gh-102013](https://github.com/python/cpython/issues/102013) [https://github.com/python/cpython/issues/102013]: Add a new (unstable) C-API function for iterating over GC'able objects using a callback: `PyUnstable_VisitObjects`.

# Python 3.12.0 alpha 6

*Release date: 2023-03-07*

## Security

- [gh-99108](https://github.com/python/cpython/issues/99108) [https://github.com/python/cpython/issues/99108]: Replace builtin hashlib implementations of MD5 and SHA1 with verified ones from the `HACL*` project.
- [gh-101727](https://github.com/python/cpython/issues/101727) [https://github.com/python/cpython/issues/101727]: Updated the OpenSSL version used in Windows and macOS

binary release builds to 1.1.1t to address CVE-2023-0286, CVE-2022-4303, and CVE-2022-4303 per [the OpenSSL 2023-02-07 security advisory](#) [<https://www.openssl.org/news/secadv/20230207.txt>].

- [gh-99108](#) [<https://github.com/python/cpython/issues/99108>]: Replace the builtin **hashlib** implementations of SHA2-384 and SHA2-512 originally from LibTomCrypt with formally verified, side-channel resistant code from the **HACL\*** [<https://github.com/hacl-star/hacl-star/>] project. The builtins remain a fallback only used when OpenSSL does not provide them.
- [gh-101283](#) [<https://github.com/python/cpython/issues/101283>]: **subprocess.Popen** now uses a safer approach to find `cmd.exe` when launching with `shell=True`. Patch by Eryk Sun, based on a patch by Oleg Iarygin.

## Core and Builtins

- [gh-102493](#) [<https://github.com/python/cpython/issues/102493>]: Fix regression in semantics of normalisation in `PyErr_SetObject`.
- [gh-102416](#) [<https://github.com/python/cpython/issues/102416>]: Do not memoize incorrectly automatically generated loop rules in the parser. Patch by Pablo Galindo.
- [gh-102356](#) [<https://github.com/python/cpython/issues/102356>]: Fix a bug that caused a crash when deallocating deeply nested filter objects. Patch by Marta Gómez Macías.
- [gh-102336](#) [<https://github.com/python/cpython/issues/102336>]: Cleanup Windows 7 specific special handling. Patch by Max Bachmann.
- [gh-102250](#) [<https://github.com/python/cpython/issues/102250>]: Fixed a segfault occurring when the interpreter calls a `__bool__` method that raises.
- [gh-102126](#) [<https://github.com/python/cpython/issues/102126>]: Fix deadlock at shutdown when clearing thread states if any finalizer tries to acquire the runtime head lock. Patch by Kumar Aditya.
- [gh-102027](#) [<https://github.com/python/cpython/issues/102027>]: Use `GetCurrentProcessId` on Windows when `getpid` is unavailable. Patch by Max Bachmann.
- [gh-102056](#) [<https://github.com/python/cpython/issues/102056>]: Fix

error handling bugs in interpreter's exception printing code, which could cause a crash on infinite recursion.

- [gh-100982](https://github.com/python/cpython/issues/100982) [https://github.com/python/cpython/issues/100982]: Restrict the scope of the **FOR\_ITER\_RANGE** instruction to the scope of the original **FOR\_ITER** instruction, to allow instrumentation.
- [gh-101967](https://github.com/python/cpython/issues/101967) [https://github.com/python/cpython/issues/101967]: Fix possible segfault in `positional_only_passed_as_keyword` function, when new list created.
- [gh-101952](https://github.com/python/cpython/issues/101952) [https://github.com/python/cpython/issues/101952]: Fix possible segfault in `BUILD_SET` opcode, when new set created.
- [gh-74895](https://github.com/python/cpython/issues/74895) [https://github.com/python/cpython/issues/74895]: `socket.getaddrinfo` no longer raises **OverflowError** for `int` port values outside of the C long range. Out of range values are left up to the underlying string based C library API to report. A `socket.gaierror` `SAI_SERVICE` may occur instead, or no error at all as not all platform C libraries generate an error.
- [gh-101799](https://github.com/python/cpython/issues/101799) [https://github.com/python/cpython/issues/101799]: Add **CALL\_INTRINSIC\_2** and use it instead of **PREP\_RERAISE\_STAR**.
- [gh-101857](https://github.com/python/cpython/issues/101857) [https://github.com/python/cpython/issues/101857]: Fix xattr support detection on Linux systems by widening the check to linux, not just glibc. This fixes support for musl.
- [gh-84783](https://github.com/python/cpython/issues/84783) [https://github.com/python/cpython/issues/84783]: Make the slice object hashable. Patch by Will Bradshaw and Furkan Onder.
- [gh-87849](https://github.com/python/cpython/issues/87849) [https://github.com/python/cpython/issues/87849]: Change the `SEND` instruction to leave the receiver on the stack. This allows the specialized form of `SEND` to skip the chain of C calls and jump directly to the `RESUME` in the generator or coroutine.
- [gh-101765](https://github.com/python/cpython/issues/101765) [https://github.com/python/cpython/issues/101765]: Fix `SystemError` / segmentation fault in iter `__reduce__` when internal access of `builtins.__dict__` keys mutates the iter object.
- [gh-101430](https://github.com/python/cpython/issues/101430) [https://github.com/python/cpython/issues/101430]: Update `tracemalloc` to handle presize of object properly.

Patch by Donghee Na.

- [gh-101696](https://github.com/python/cpython/issues/101696) [https://github.com/python/cpython/issues/101696]: Invalidate type version tag in `_PyStaticType_Dealloc` for static types, avoiding bug where a false cache hit could crash the interpreter. Patch by Kumar Aditya.
- [gh-101632](https://github.com/python/cpython/issues/101632) [https://github.com/python/cpython/issues/101632]: Adds a new `RETURN_CONST` instruction.
- [gh-100719](https://github.com/python/cpython/issues/100719) [https://github.com/python/cpython/issues/100719]: Remove `gi_code` field from generator (and coroutine and async generator) objects as it is redundant. The frame already includes a reference to the code object.
- [gh-98627](https://github.com/python/cpython/issues/98627) [https://github.com/python/cpython/issues/98627]: When an interpreter is configured to check (and only then), importing an extension module will now fail when the extension does not support multiple interpreters (i.e. doesn't implement PEP 489 multi-phase init). This does not apply to the main interpreter, nor to subinterpreters created with `Py_NewInterpreter()`.

## Library

- [gh-102302](https://github.com/python/cpython/issues/102302) [https://github.com/python/cpython/issues/102302]: Micro-optimize hashing of `inspect.Parameter`, reducing the time it takes to hash an instance by around 40%.
- [gh-101979](https://github.com/python/cpython/issues/101979) [https://github.com/python/cpython/issues/101979]: Fix a bug where parentheses in the `metavar` argument to `argparse.ArgumentParser.add_argument()` were dropped. Patch by Yeojin Kim.
- [gh-91038](https://github.com/python/cpython/issues/91038) [https://github.com/python/cpython/issues/91038]: `platform.platform()` now has boolean default arguments.
- [gh-81652](https://github.com/python/cpython/issues/81652) [https://github.com/python/cpython/issues/81652]: Add `mmap.MAP_ALIGNED_SUPER` FreeBSD and `mmap.MAP_CONCEAL` OpenBSD constants to `mmap`. Patch by Yeojin Kim.
- [gh-102179](https://github.com/python/cpython/issues/102179) [https://github.com/python/cpython/issues/102179]: Fix `os.dup2()` error message for negative fds.

- [gh-101961](https://github.com/python/cpython/issues/101961) [https://github.com/python/cpython/issues/101961]: For the binary mode, `fileinput.hookcompressed()` doesn't set the `encoding` value even if the value is `None`. Patch by Gihwan Kim.
- [gh-101936](https://github.com/python/cpython/issues/101936) [https://github.com/python/cpython/issues/101936]: The default value of `fp` becomes `io.BytesIO` if `HTTPError` is initialized without a designated `fp` parameter. Patch by Long Vo.
- [gh-101566](https://github.com/python/cpython/issues/101566) [https://github.com/python/cpython/issues/101566]: In zipfile, sync Path with [zipp 3.14](https://zipp.readthedocs.io/en/latest/history.html#v3-14-0) [https://zipp.readthedocs.io/en/latest/history.html#v3-14-0], including fix for `extractall` on the underlying zipfile after being wrapped in `Path`.
- [gh-97930](https://github.com/python/cpython/issues/97930) [https://github.com/python/cpython/issues/97930]: Apply changes from [importlib\\_resources 5.12](https://importlib-resources.readthedocs.io/en/latest/history.html#v5-12-0) [https://importlib-resources.readthedocs.io/en/latest/history.html#v5-12-0], including fix for `MultiplexedPath` to support directories in multiple namespaces ([python/importlib\\_resources#265](https://github.com/python/importlib_resources/issues/265)).
- [gh-101997](https://github.com/python/cpython/issues/101997) [https://github.com/python/cpython/issues/101997]: Upgrade pip wheel bundled with ensurepip (pip 23.0.1)
- [gh-99108](https://github.com/python/cpython/issues/99108) [https://github.com/python/cpython/issues/99108]: The built-in extension modules for `hashlib` SHA2 algorithms, used when OpenSSL does not provide them, now live in a single internal `_sha2` module instead of separate `_sha256` and `_sha512` modules.
- [gh-101892](https://github.com/python/cpython/issues/101892) [https://github.com/python/cpython/issues/101892]: Callable iterators no longer raise `SystemError` when the callable object exhausts the iterator but forgets to either return a sentinel value or raise `StopIteration`.
- [gh-87634](https://github.com/python/cpython/issues/87634) [https://github.com/python/cpython/issues/87634]: Remove locking behavior from `functools.cached_property()`.
- [gh-97786](https://github.com/python/cpython/issues/97786) [https://github.com/python/cpython/issues/97786]: Fix potential undefined behaviour in corner cases of floating-point-to-time conversions.

- [gh-101517](https://github.com/python/cpython/issues/101517) [https://github.com/python/cpython/issues/101517]: Fixed bug where `bdb` looks up the source line with `linecache` with a `lineno=None`, which causes it to fail with an unhandled exception.
- [gh-101773](https://github.com/python/cpython/issues/101773) [https://github.com/python/cpython/issues/101773]: Optimize `fractions.Fraction` for small components. The private argument `_normalize` of the `fractions.Fraction` constructor has been removed.
- [gh-101693](https://github.com/python/cpython/issues/101693) [https://github.com/python/cpython/issues/101693]: In `sqlite3.Cursor.execute()`, `DeprecationWarning` is now emitted when `named placeholders` are used together with parameters supplied as a `sequence` instead of as a `dict`. Starting from Python 3.14, using named placeholders with parameters supplied as a sequence will raise a `ProgrammingError`. Patch by Erlend E. Aasland.
- [gh-101446](https://github.com/python/cpython/issues/101446) [https://github.com/python/cpython/issues/101446]: Change repr of `collections.OrderedDict` to use regular dictionary formatting instead of pairs of keys and values.
- [gh-101362](https://github.com/python/cpython/issues/101362) [https://github.com/python/cpython/issues/101362]: Speed up `pathlib.PurePath` construction by handling arguments more uniformly. When a `pathlib.Path` argument is supplied, we use its string representation rather than joining its parts with `os.path.join()`.
- [gh-101362](https://github.com/python/cpython/issues/101362) [https://github.com/python/cpython/issues/101362]: Speed up `pathlib.PurePath` construction by calling `os.path.join()` only when two or more arguments are given.
- [gh-101362](https://github.com/python/cpython/issues/101362) [https://github.com/python/cpython/issues/101362]: Speed up `pathlib.Path` construction by running the path flavour compatibility check only when `pathlib` is imported.
- [gh-85984](https://github.com/python/cpython/issues/85984) [https://github.com/python/cpython/issues/85984]: Refactored the implementation of `pty.fork()` to use `os.login_tty()`.

A `DeprecationWarning` is now raised by `pty.master_open()` and `pty.slave_open()`. They were undocumented and deprecated long long ago in the docstring in favor of `pty.openpty()`.

- [gh-101561](https://github.com/python/cpython/issues/101561) [https://github.com/python/cpython/issues/101561]: Add a new decorator `typing.override()`. See [PEP 698](https://peps.python.org/pep-0698/) [https://peps.python.org/pep-0698/] for details. Patch by Steven Troxler.
- [gh-63301](https://github.com/python/cpython/issues/63301) [https://github.com/python/cpython/issues/63301]: Set exit code when `tabnanny` CLI exits on error.
- [gh-101360](https://github.com/python/cpython/issues/101360) [https://github.com/python/cpython/issues/101360]: Fix anchor matching in `pathlib.PureWindowsPath.match()`. Path and pattern anchors are now matched with `fnmatch`, just like other path parts. This allows patterns such as `"*/Users/*"` to be matched.
- [gh-101277](https://github.com/python/cpython/issues/101277) [https://github.com/python/cpython/issues/101277]: Remove global state from `itertools` module ([PEP 687](https://peps.python.org/pep-0687/) [https://peps.python.org/pep-0687/]). Patches by Erlend E. Aasland.
- [gh-100809](https://github.com/python/cpython/issues/100809) [https://github.com/python/cpython/issues/100809]: Fix handling of drive-relative paths (like `'C:.'` and `'C:foo'`) in `pathlib.Path.absolute()`. This method now uses the OS API to retrieve the correct current working directory for the drive.
- [gh-99138](https://github.com/python/cpython/issues/99138) [https://github.com/python/cpython/issues/99138]: Apply [PEP 687](https://peps.python.org/pep-0687/) [https://peps.python.org/pep-0687/] to `zoneinfo`. Patch by Erlend E. Aasland.
- [gh-96764](https://github.com/python/cpython/issues/96764) [https://github.com/python/cpython/issues/96764]: `asyncio.wait_for()` now uses `asyncio.timeout()` as its underlying implementation. Patch by Kumar Aditya.
- [gh-88233](https://github.com/python/cpython/issues/88233) [https://github.com/python/cpython/issues/88233]: Correctly preserve “extra” fields in `zipfile` regardless of their ordering relative to a zip64 “extra.”

- [bpo-23224](https://bugs.python.org/issue?@action=redirect&bpo=23224) [https://bugs.python.org/issue?@action=redirect&bpo=23224]: Fix segfaults when creating `lzma.LZMADecompressor` and `bz2.BZ2Decompressor` objects without calling `__init__()`, and fix leakage of locks and internal buffers when calling the `__init__()` methods of `lzma.LZMADecompressor`, `lzma.LZMACompressor`, `bz2.BZ2Compressor`, and `bz2.BZ2Decompressor` objects multiple times.

## Documentation

- [gh-85417](https://github.com/python/cpython/issues/85417) [https://github.com/python/cpython/issues/85417]: Update `cmath` documentation to clarify behaviour on branch cuts.
- [gh-97725](https://github.com/python/cpython/issues/97725) [https://github.com/python/cpython/issues/97725]: Fix `asyncio.Task.print_stack()` description for `file=None`. Patch by Oleg Iarygin.

## Tests

- [gh-102019](https://github.com/python/cpython/issues/102019) [https://github.com/python/cpython/issues/102019]: Fix deadlock on shutdown if `test_current_{exception, frames}` fails. Patch by Jacob Bower.
- [gh-85984](https://github.com/python/cpython/issues/85984) [https://github.com/python/cpython/issues/85984]: Utilize new “winsize” functions from `termios` in `pty` tests.
- [gh-89792](https://github.com/python/cpython/issues/89792) [https://github.com/python/cpython/issues/89792]: `test_tools` now copies up to 10x less source data to a temporary directory during the `freeze` test by ignoring git metadata and other artifacts. It also limits its python build parallelism based on `os.cpu_count` instead of hard coding it as 8 cores.

## Build

- [gh-99942](https://github.com/python/cpython/issues/99942) [https://github.com/python/cpython/issues/99942]: On Android, in a static build, `python-config` in embed mode no longer incorrectly reports a library to link to.
- [gh-99942](https://github.com/python/cpython/issues/99942) [https://github.com/python/cpython/issues/99942]: On Android, `python.pc` now correctly reports the library to link to, the same as `python-config.sh`.

- [gh-100221](https://github.com/python/cpython/issues/100221) [https://github.com/python/cpython/issues/100221]: Fix creating install directories in `make sharedinstall` if they exist outside `DESTDIR` already.
- [gh-96821](https://github.com/python/cpython/issues/96821) [https://github.com/python/cpython/issues/96821]: Explicitly mark C extension modules that need defined signed integer overflow, and add a configure option `--with-strict-overflow`. Patch by Matthias Görgens and Shantanu Jain.

## Windows

- [gh-102344](https://github.com/python/cpython/issues/102344) [https://github.com/python/cpython/issues/102344]: Implement `winreg.QueryValue` using `QueryValueEx` and `winreg.SetValue` using `SetValueEx`. Patch by Max Bachmann.
- [gh-101881](https://github.com/python/cpython/issues/101881) [https://github.com/python/cpython/issues/101881]: Handle read and write operations on non-blocking pipes properly on Windows.
- [gh-101881](https://github.com/python/cpython/issues/101881) [https://github.com/python/cpython/issues/101881]: Add support for the `os.get_blocking()` and `os.set_blocking()` functions on Windows.
- [gh-101849](https://github.com/python/cpython/issues/101849) [https://github.com/python/cpython/issues/101849]: Ensures installer will correctly upgrade existing `py.exe` launcher installs.
- [gh-101763](https://github.com/python/cpython/issues/101763) [https://github.com/python/cpython/issues/101763]: Updates copy of `libffi` bundled with Windows installs to 3.4.4.
- [gh-101759](https://github.com/python/cpython/issues/101759) [https://github.com/python/cpython/issues/101759]: Update Windows installer to SQLite 3.40.1.
- [gh-101614](https://github.com/python/cpython/issues/101614) [https://github.com/python/cpython/issues/101614]: Correctly handle extensions built against debug binaries that reference `python3_d.dll`.
- [gh-101196](https://github.com/python/cpython/issues/101196) [https://github.com/python/cpython/issues/101196]: The functions `os.path.isdir`, `os.path.isfile`, `os.path.islink` and `os.path.exists` are now 13% to 28% faster on Windows, by making fewer Win32 API calls.

## macOS

- [gh-101759](https://github.com/python/cpython/issues/101759) [https://github.com/python/cpython/issues/101759]: Update macOS installer to SQLite 3.40.1.

## C API

- [gh-101907](https://github.com/python/cpython/issues/101907) [https://github.com/python/cpython/issues/101907]: Removes use of non-standard C++ extension in public header files.
- [gh-99293](https://github.com/python/cpython/issues/99293) [https://github.com/python/cpython/issues/99293]: Document that the `Py_TPFLAGS_VALID_VERSION_TAG` is an internal feature, should not be used, and will be removed.
- [gh-101578](https://github.com/python/cpython/issues/101578) [https://github.com/python/cpython/issues/101578]: Add `PyErr_GetRaisedException()` and `PyErr_SetRaisedException()` for saving and restoring the current exception. These functions return and accept a single exception object, rather than the triple arguments of the now-deprecated `PyErr_Fetch()` and `PyErr_Restore()`. This is less error prone and a bit more efficient.

Add `PyException_GetArgs()` and `PyException_SetArgs()` as convenience functions for retrieving and modifying the `args` passed to the exception's constructor.

- [gh-91744](https://github.com/python/cpython/issues/91744) [https://github.com/python/cpython/issues/91744]: Introduced the *Unstable C API tier*, marking API that is allowed to change in minor releases without a deprecation period. See [PEP 689](https://peps.python.org/pep-0689/) [https://peps.python.org/pep-0689/] for details.

## Python 3.12.0 alpha 5

*Release date: 2023-02-07*

### Security

- [gh-99108](https://github.com/python/cpython/issues/99108) [https://github.com/python/cpython/issues/99108]: Replace the builtin `hashlib` implementations of SHA2-224 and SHA2-256 originally from LibTomCrypt with formally verified, side-channel resistant code from the [HACL\\*](https://github.com/HACL) [https://

github.com/hacl-star/hacl-star/] project. The builtins remain a fallback only used when OpenSSL does not provide them.

## Core and Builtins

- [gh-92173](https://github.com/python/cpython/issues/92173) [https://github.com/python/cpython/issues/92173]: Fix the `defs` and `kwdefs` arguments to `PyEval_EvalCodeEx()` and a reference leak in that function.
- [gh-59956](https://github.com/python/cpython/issues/59956) [https://github.com/python/cpython/issues/59956]: The `GILState` API is now partially compatible with subinterpreters. Previously, `PyThreadState_GET()` and `PyGILState_GetThisThreadState()` would get out of sync, causing inconsistent behavior and crashes.
- [gh-101400](https://github.com/python/cpython/issues/101400) [https://github.com/python/cpython/issues/101400]: Fix wrong `lineno` in exception message on `continue` or `break` which are not in a loop. Patch by Donghee Na.
- [gh-101372](https://github.com/python/cpython/issues/101372) [https://github.com/python/cpython/issues/101372]: Fix `is_normalized()` to properly handle the UCD 3.2.0 cases. Patch by Donghee Na.
- [gh-101266](https://github.com/python/cpython/issues/101266) [https://github.com/python/cpython/issues/101266]: Fix `sys.getsizeof()` reporting for `int` subclasses.
- [gh-101291](https://github.com/python/cpython/issues/101291) [https://github.com/python/cpython/issues/101291]: Refactor the `PyLongObject` struct into a normal Python object header and a `PyLongValue` struct.
- [gh-101046](https://github.com/python/cpython/issues/101046) [https://github.com/python/cpython/issues/101046]: Fix a possible memory leak in the parser when raising `MemoryError`. Patch by Pablo Galindo
- [gh-101037](https://github.com/python/cpython/issues/101037) [https://github.com/python/cpython/issues/101037]: Fix potential memory underallocation issue for instances of `int` subclasses with value zero.
- [gh-100762](https://github.com/python/cpython/issues/100762) [https://github.com/python/cpython/issues/100762]: Record the (virtual) exception block depth in the `oparg` of `YIELD_VALUE`. Use this to avoid the expensive `throw()` when closing generators (and coroutines) that can be closed trivially.
- [gh-100982](https://github.com/python/cpython/issues/100982) [https://github.com/python/cpython/issues/100982]: Adds a new `COMPARE_AND_BRANCH` instruction. This is a bit more efficient when performing a comparison immediately followed by a branch, and restores the design intent of PEP 659 that specializations are local to a single instruction.

- [gh-100942](https://github.com/python/cpython/issues/100942) [https://github.com/python/cpython/issues/100942]: Fixed segfault in `property.getter/setter/deleter` that occurred when a property subclass overrode the `__new__` method to return a non-property instance.
- [gh-100923](https://github.com/python/cpython/issues/100923) [https://github.com/python/cpython/issues/100923]: Remove the `mask` cache entry for the `COMPARE_OP` instruction and embed the mask into the `oparg`.
- [gh-100892](https://github.com/python/cpython/issues/100892) [https://github.com/python/cpython/issues/100892]: Fix race while iterating over thread states in clearing `threading.local`. Patch by Kumar Aditya.
- [gh-91351](https://github.com/python/cpython/issues/91351) [https://github.com/python/cpython/issues/91351]: Fix a case where re-entrant imports could corrupt the import deadlock detection code and cause a `KeyError` to be raised out of `importlib/_bootstrap`. In addition to the straightforward cases, this could also happen when garbage collection leads to a warning being emitted – as happens when it collects an open socket or file)
- [gh-100726](https://github.com/python/cpython/issues/100726) [https://github.com/python/cpython/issues/100726]: Optimize construction of `range` object for medium size integers.
- [gh-100712](https://github.com/python/cpython/issues/100712) [https://github.com/python/cpython/issues/100712]: Added option to build cpython with specialization disabled, by setting `ENABLE_SPECIALIZATION=False` in `opcode`, followed by `make regen-all`.
- [bpo-32780](https://bugs.python.org/issue?@action=redirect&bpo=32780) [https://bugs.python.org/issue?@action=redirect&bpo=32780]: Inter-field padding is now inserted into the PEP3118 format strings obtained from `ctypes.Structure` objects, reflecting their true representation in memory.

## Library

- [gh-101541](https://github.com/python/cpython/issues/101541) [https://github.com/python/cpython/issues/101541]: [Enum] - fix psuedo-flag creation
- [gh-101570](https://github.com/python/cpython/issues/101570) [https://github.com/python/cpython/issues/101570]: Upgrade pip wheel bundled with ensurepip (pip 23.0)
- [gh-101323](https://github.com/python/cpython/issues/101323) [https://github.com/python/cpython/issues/101323]: Fix a bug where errors where not thrown by `zlib._ZlibDecompressor` if encountered during decompressing.
- [gh-101317](https://github.com/python/cpython/issues/101317) [https://github.com/python/cpython/issues/101317]: Add

`ssl_shutdown_timeout` parameter for `asyncio.StreamWriter.start_tls()`.

- [gh-101326](https://github.com/python/cpython/issues/101326) [https://github.com/python/cpython/issues/101326]: Fix regression when passing `None` as second or third argument to `FutureIter.throw`.
- [gh-92123](https://github.com/python/cpython/issues/92123) [https://github.com/python/cpython/issues/92123]: Adapt the `_elementtree` extension module to multi-phase init ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]). Patches by Erlend E. Aasland.
- [gh-100795](https://github.com/python/cpython/issues/100795) [https://github.com/python/cpython/issues/100795]: Avoid potential unexpected `freeaddrinfo` call (double free) in `socket` when when a libc `getaddrinfo()` implementation leaves garbage in an output pointer when returning an error. Original patch by Sergey G. Brester.
- [gh-101143](https://github.com/python/cpython/issues/101143) [https://github.com/python/cpython/issues/101143]: Remove unused references to `TimerHandle` in `asyncio.base_events.BaseEventLoop._add_callback`.
- [gh-101144](https://github.com/python/cpython/issues/101144) [https://github.com/python/cpython/issues/101144]: Make `zipfile.Path.open()` and `zipfile.Path.read_text()` also accept `encoding` as a positional argument. This was the behavior in Python 3.9 and earlier. 3.10 introduced a regression where supplying it as a positional argument would lead to a `TypeError`.
- [gh-94518](https://github.com/python/cpython/issues/94518) [https://github.com/python/cpython/issues/94518]: Group-related variables of `_posixsubprocess` module are renamed to stress that supplementary group affinity is added to a fork, not replace the inherited ones. Patch by Oleg Iarygin.
- [gh-101015](https://github.com/python/cpython/issues/101015) [https://github.com/python/cpython/issues/101015]: Fix `typing.get_type_hints()` on `'*tuple[...]'` and `*tuple[...]`. It must not drop the `Unpack` part.
- [gh-101000](https://github.com/python/cpython/issues/101000) [https://github.com/python/cpython/issues/101000]: Add `os.path.splitroot()`, which splits a path into a 3-item tuple (drive, root, tail). This new function is used by `pathlib` to improve the performance of path construction by up to a third.
- [gh-100573](https://github.com/python/cpython/issues/100573) [https://github.com/python/cpython/issues/100573]: Fix a Windows `asyncio` bug with named pipes where a client doing `os.stat()` on the pipe would cause an error in the server that disabled serving future requests.

- [gh-39615](https://github.com/python/cpython/issues/39615) [https://github.com/python/cpython/issues/39615]: **warnings.warn()** now has the ability to skip stack frames based on code filename prefix rather than only a numeric stacklevel via the new `skip_file_prefixes` keyword argument.
- [gh-100750](https://github.com/python/cpython/issues/100750) [https://github.com/python/cpython/issues/100750]: pass encoding kwarg to subprocess in platform
- [gh-100160](https://github.com/python/cpython/issues/100160) [https://github.com/python/cpython/issues/100160]: Emit a deprecation warning in **asyncio.DefaultEventLoopPolicy.get\_event\_loop()** if there is no current event loop set and it decides to create one.
- [gh-96290](https://github.com/python/cpython/issues/96290) [https://github.com/python/cpython/issues/96290]: Fix handling of partial and invalid UNC drives in `ntpath.splitdrive()`, and in `ntpath.normpath()` on non-Windows systems. Paths such as `'\\server'` and `'\\'` are now considered by `splitdrive()` to contain only a drive, and consequently are not modified by `normpath()` on non-Windows systems. The behaviour of `normpath()` on Windows systems is unaffected, as native OS APIs are used. Patch by Eryk Sun, with contributions by Barney Gale.
- [gh-99952](https://github.com/python/cpython/issues/99952) [https://github.com/python/cpython/issues/99952]: Fix a reference undercounting issue in **ctypes.Structure** with `from_param()` results larger than a C pointer.
- [gh-67790](https://github.com/python/cpython/issues/67790) [https://github.com/python/cpython/issues/67790]: Add float-style formatting support for **fractions.Fraction** instances.
- [gh-99266](https://github.com/python/cpython/issues/99266) [https://github.com/python/cpython/issues/99266]: Preserve more detailed error messages in **ctypes**.
- [gh-86682](https://github.com/python/cpython/issues/86682) [https://github.com/python/cpython/issues/86682]: Ensure runtime-created collections have the correct module name using the newly added (internal) **sys.\_getframemodulename()**.
- [gh-88597](https://github.com/python/cpython/issues/88597) [https://github.com/python/cpython/issues/88597]: **uuid** now has a command line interface. Try `python -m uuid -h`.
- [gh-60580](https://github.com/python/cpython/issues/60580) [https://github.com/python/cpython/issues/60580]: **ctypes.wintypes.BYTE** definition changed from **c\_byte** to **c\_ubyte** to match Windows SDK. Patch by Anatoly Techtonik and Oleg Iarygin.

- [gh-94518](https://github.com/python/cpython/issues/94518) [https://github.com/python/cpython/issues/94518]: `_posixsubprocess` now initializes all UID and GID variables using a reserved `-1` value instead of a separate flag. Patch by Oleg Iarygin.
- [bpo-38941](https://bugs.python.org/issue?@action=redirect&bpo=38941) [https://bugs.python.org/issue?@action=redirect&bpo=38941]: The `xml.etree.ElementTree` module now emits `DeprecationWarning` when testing the truth value of an `xml.etree.ElementTree.Element`. Before, the Python implementation emitted `FutureWarning`, and the C implementation emitted nothing.
- [bpo-40077](https://bugs.python.org/issue?@action=redirect&bpo=40077) [https://bugs.python.org/issue?@action=redirect&bpo=40077]: Convert `elementtree` types to heap types. Patch by Erlend E. Aasland.
- [bpo-29847](https://bugs.python.org/issue?@action=redirect&bpo=29847) [https://bugs.python.org/issue?@action=redirect&bpo=29847]: Fix a bug where `pathlib.Path` accepted and ignored keyword arguments. Patch provided by Yurii Karabas.
- [gh-77772](https://github.com/python/cpython/issues/77772) [https://github.com/python/cpython/issues/77772]: `ctypes.CDLL`, `ctypes.OleDLL`, `ctypes.WinDLL`, and `ctypes.PyDLL` now accept `path-like objects` as their `name` argument. Patch by Robert Hoelzl.

## Documentation

- [gh-88324](https://github.com/python/cpython/issues/88324) [https://github.com/python/cpython/issues/88324]: Reword `subprocess` to emphasize default behavior of `stdin`, `stdout`, and `stderr` arguments. Remove inaccurate statement about child file handle inheritance.

## Tests

- [gh-101334](https://github.com/python/cpython/issues/101334) [https://github.com/python/cpython/issues/101334]: `test_tarfile` has been updated to pass when run as a high UID.

## Build

- [gh-101282](https://github.com/python/cpython/issues/101282) [https://github.com/python/cpython/issues/101282]: Update BOLT configuration not to use deprecated usage of `--split` functions. Patch by Donghee Na.

- [gh-101522](https://github.com/python/cpython/issues/101522) [https://github.com/python/cpython/issues/101522]: Allow overriding Windows dependencies versions and paths using MSBuild properties.
- [gh-77532](https://github.com/python/cpython/issues/77532) [https://github.com/python/cpython/issues/77532]: Minor fixes to allow building with PlatformToolset=ClangCL on Windows.
- [gh-101152](https://github.com/python/cpython/issues/101152) [https://github.com/python/cpython/issues/101152]: In accordance with [PEP 699](https://peps.python.org/pep-0699/) [https://peps.python.org/pep-0699/], the `ma_version_tag` field in `PyDictObject` is deprecated for extension modules. Accessing this field will generate a compiler warning at compile time. This field will be removed in Python 3.14.
- [gh-100340](https://github.com/python/cpython/issues/100340) [https://github.com/python/cpython/issues/100340]: Allows `-Wno-int-conversion` for `wasm-sdk` 17 and onwards, thus enables building WASI builds once against the latest sdk.
- [gh-101060](https://github.com/python/cpython/issues/101060) [https://github.com/python/cpython/issues/101060]: Conditionally add `-fno-reorder-blocks-and-partition` in `configure`. Effectively fixes `--enable-bolt` when using Clang, as this appears to be a GCC-only flag.
- [gh-98705](https://github.com/python/cpython/issues/98705) [https://github.com/python/cpython/issues/98705]: `__bool__` is defined in AIX system header files which breaks the build in AIX, so undefine it.
- [gh-98636](https://github.com/python/cpython/issues/98636) [https://github.com/python/cpython/issues/98636]: Fix a regression in detecting `gdbm_compat` library for the `_gdbm` module build.
- [gh-96305](https://github.com/python/cpython/issues/96305) [https://github.com/python/cpython/issues/96305]: `_aix_support` now uses a simple code to get platform details rather than the now non-existent `_bootsubprocess` during bootstrap.

## Windows

- [gh-101543](https://github.com/python/cpython/issues/101543) [https://github.com/python/cpython/issues/101543]: Ensure the install path in the registry is only used when the standard library hasn't been located in any other way.
- [gh-101467](https://github.com/python/cpython/issues/101467) [https://github.com/python/cpython/issues/101467]: The `py.exe` launcher now correctly filters when only a single runtime is installed. It also correctly handles prefix matches on tags so that `-3.1` does not match `3.11`, but would still match `3.1-32`.

- [gh-99834](https://github.com/python/cpython/issues/99834) [https://github.com/python/cpython/issues/99834]: Updates bundled copy of Tcl/Tk to 8.6.13.0
- [gh-101135](https://github.com/python/cpython/issues/101135) [https://github.com/python/cpython/issues/101135]: Restore ability to launch older 32-bit versions from the `py.exe` launcher when both 32-bit and 64-bit installs of the same version are available.
- [gh-82052](https://github.com/python/cpython/issues/82052) [https://github.com/python/cpython/issues/82052]: Fixed an issue where writing more than 32K of Unicode output to the console screen in one go can result in mojibake.
- [gh-100320](https://github.com/python/cpython/issues/100320) [https://github.com/python/cpython/issues/100320]: Ensures the `PythonPath` registry key from an install is used when launching from a different copy of Python that relies on an existing install to provide a copy of its modules and standard library.
- [gh-100247](https://github.com/python/cpython/issues/100247) [https://github.com/python/cpython/issues/100247]: Restores support for the `py.exe` launcher finding shebang commands in its configuration file using the full command name.

## Python 3.12.0 alpha 4

*Release date: 2023-01-10*

### Core and Builtins

- [gh-100776](https://github.com/python/cpython/issues/100776) [https://github.com/python/cpython/issues/100776]: Fix misleading default value in `input()`'s `__text_signature__`.
- [gh-99005](https://github.com/python/cpython/issues/99005) [https://github.com/python/cpython/issues/99005]: Remove **UNARY\_POSITIVE**, **ASYNC\_GEN\_WRAP** and **LIST\_TO\_TUPLE**, replacing them with intrinsics.
- [gh-99005](https://github.com/python/cpython/issues/99005) [https://github.com/python/cpython/issues/99005]: Add new **CALL\_INTRINSIC\_1** instruction. Remove **IMPORT\_STAR**, **PRINT\_EXPR** and **STOPITERATION\_ERROR**, replacing them with the **CALL\_INTRINSIC\_1** instruction.
- [gh-100288](https://github.com/python/cpython/issues/100288) [https://github.com/python/cpython/issues/100288]:

Remove the `LOAD_ATTR_METHOD_WITH_DICT` specialized instruction. Stats show it is not useful.

- [gh-100720](https://github.com/python/cpython/issues/100720) [https://github.com/python/cpython/issues/100720]: Added `_PyFrame_NumSlotsForCodeObject`, which returns the number of slots needed in a frame for a given code object.
- [gh-100719](https://github.com/python/cpython/issues/100719) [https://github.com/python/cpython/issues/100719]: Removed the `co_nplaincellvars` field from the code object, as it is redundant.
- [gh-100637](https://github.com/python/cpython/issues/100637) [https://github.com/python/cpython/issues/100637]: Fix `int.__sizeof__()` calculation to include the 1 element `ob_digit` array for 0 and False.
- [gh-100649](https://github.com/python/cpython/issues/100649) [https://github.com/python/cpython/issues/100649]: Update the `native_thread_id` field of `PyThreadState` after fork.
- [gh-100126](https://github.com/python/cpython/issues/100126) [https://github.com/python/cpython/issues/100126]: Fix an issue where “incomplete” frames could be briefly visible to C code while other frames are being torn down, possibly resulting in corruption or hard crashes of the interpreter while running finalizers.
- [gh-87447](https://github.com/python/cpython/issues/87447) [https://github.com/python/cpython/issues/87447]: Fix `SyntaxError` on comprehension rebinding checking with names that are not actually redefined.

Now reassigning `b` in `[(b := 1) for a, b.prop in some_iter]` is allowed. Reassigning `a` is still disallowed as per [PEP 572](https://peps.python.org/pep-0572/) [https://peps.python.org/pep-0572/].

- [gh-100268](https://github.com/python/cpython/issues/100268) [https://github.com/python/cpython/issues/100268]: Add `int.is_integer()` to improve duck type compatibility between `int` and `float`.
- [gh-100425](https://github.com/python/cpython/issues/100425) [https://github.com/python/cpython/issues/100425]: Improve the accuracy of `sum()` with compensated summation.
- [gh-100374](https://github.com/python/cpython/issues/100374) [https://github.com/python/cpython/issues/100374]: Fix incorrect result and delay in `socket.getfqdn()`. Patch by

Dominic Socular.

- [gh-100357](https://github.com/python/cpython/issues/100357) [https://github.com/python/cpython/issues/100357]: Convert `vars`, `dir`, `next`, `getattr`, and `iter` to argument clinic.
- [gh-100117](https://github.com/python/cpython/issues/100117) [https://github.com/python/cpython/issues/100117]: Improve the output of `co_lines` by emitting only one entry for each line range.
- [gh-90043](https://github.com/python/cpython/issues/90043) [https://github.com/python/cpython/issues/90043]: Handle NaNs when specializing `COMPARE_OP` for `float` values.
- [gh-100222](https://github.com/python/cpython/issues/100222) [https://github.com/python/cpython/issues/100222]: Redefine the `_Py_CODEUNIT` typedef as a union to describe its layout to the C compiler, avoiding type punning and improving clarity.
- [gh-99955](https://github.com/python/cpython/issues/99955) [https://github.com/python/cpython/issues/99955]: Internal compiler functions (in `compile.c`) now consistently return -1 on error and 0 on success.
- [gh-100188](https://github.com/python/cpython/issues/100188) [https://github.com/python/cpython/issues/100188]: The `BINARY_SUBSCR_LIST_INT` and `BINARY_SUBSCR_TUPLE_INT` instructions are no longer used for negative integers because those instructions always miss when encountering negative integers.
- [gh-99110](https://github.com/python/cpython/issues/99110) [https://github.com/python/cpython/issues/99110]: Initialize `frame->previous` in `frameobject.c` to fix a segmentation fault when accessing frames created by `PyFrame_New()`.
- [gh-94155](https://github.com/python/cpython/issues/94155) [https://github.com/python/cpython/issues/94155]: Improved the hashing algorithm for code objects, mitigating some hash collisions.
- [gh-99540](https://github.com/python/cpython/issues/99540) [https://github.com/python/cpython/issues/99540]: `None` now hashes to a constant value. This is not a requirements change.
- [gh-100143](https://github.com/python/cpython/issues/100143) [https://github.com/python/cpython/issues/100143]: When built with `--enable-pystats`, stats collection is now off

by default. To enable it early at startup, pass the `-Xpystats` flag. Stats are now always dumped, even if switched off.

- [gh-100146](https://github.com/python/cpython/issues/100146) [https://github.com/python/cpython/issues/100146]: Improve `BUILD_LIST` opcode so that it works similarly to the `BUILD_TUPLE` opcode, by stealing references from the stack rather than repeatedly using stack operations to set list elements. Implementation details are in a new private API `_PyList_FromArraySteal()`.
- [gh-100110](https://github.com/python/cpython/issues/100110) [https://github.com/python/cpython/issues/100110]: Specialize `FOR_ITER` for tuples.
- [gh-100050](https://github.com/python/cpython/issues/100050) [https://github.com/python/cpython/issues/100050]: Honor existing errors obtained when searching for mismatching parentheses in the tokenizer. Patch by Pablo Galindo
- [gh-92216](https://github.com/python/cpython/issues/92216) [https://github.com/python/cpython/issues/92216]: Improve the performance of `hasattr()` for type objects with a missing attribute.
- [gh-99582](https://github.com/python/cpython/issues/99582) [https://github.com/python/cpython/issues/99582]: Freeze `zipimport` module into `_bootstrap_python`.
- [gh-99554](https://github.com/python/cpython/issues/99554) [https://github.com/python/cpython/issues/99554]: Pack debugging location tables more efficiently during bytecode compilation.
- [gh-98522](https://github.com/python/cpython/issues/98522) [https://github.com/python/cpython/issues/98522]: Add an internal version number to code objects, to give better versioning of inner functions and comprehensions, and thus better specialization of those functions. This change is invisible to both Python and C extensions.
- [gh-94603](https://github.com/python/cpython/issues/94603) [https://github.com/python/cpython/issues/94603]: Improve performance of `list.pop` for small lists.
- [gh-89051](https://github.com/python/cpython/issues/89051) [https://github.com/python/cpython/issues/89051]: Add `ssl.OP_LEGACY_SERVER_CONNECT`
- [bpo-32782](https://bugs.python.org/issue?@action=redirect&bpo=32782) [https://bugs.python.org/issue?@action=redirect&bpo=32782]: `ctypes` arrays of length 0 now

report a correct itemsize when a `memoryview` is constructed from them, rather than always giving a value of 0.

## Library

- [gh-100833](https://github.com/python/cpython/issues/100833) [https://github.com/python/cpython/issues/100833]: Speed up `math.fsum()` by removing defensive `volatile` qualifiers.
- [gh-100805](https://github.com/python/cpython/issues/100805) [https://github.com/python/cpython/issues/100805]: Modify `random.choice()` implementation to once again work with NumPy arrays.
- [gh-100813](https://github.com/python/cpython/issues/100813) [https://github.com/python/cpython/issues/100813]: Add `socket.IP_PKTINFO` constant.
- [gh-100792](https://github.com/python/cpython/issues/100792) [https://github.com/python/cpython/issues/100792]: Make `email.message.Message.__contains__()` twice as fast.
- [gh-91851](https://github.com/python/cpython/issues/91851) [https://github.com/python/cpython/issues/91851]: Microoptimizations for `fractions.Fraction.__round__()`, `fractions.Fraction.__ceil__()` and `fractions.Fraction.__floor__()`.
- [gh-90104](https://github.com/python/cpython/issues/90104) [https://github.com/python/cpython/issues/90104]: Avoid `RecursionError` on `repr` if a dataclass field definition has a cyclic reference.
- [gh-100689](https://github.com/python/cpython/issues/100689) [https://github.com/python/cpython/issues/100689]: Fix crash in `pyexpat` by statically allocating `PyExpat_CAPI` capsule.
- [gh-100740](https://github.com/python/cpython/issues/100740) [https://github.com/python/cpython/issues/100740]: Fix `unittest.mock.Mock` not respecting the spec for attribute names prefixed with `assert`.
- [gh-91219](https://github.com/python/cpython/issues/91219) [https://github.com/python/cpython/issues/91219]: Change `SimpleHTTPRequestHandler` to support subclassing to provide a different set of index file names instead of using `__init__` parameters.
- [gh-100690](https://github.com/python/cpython/issues/100690) [https://github.com/python/cpython/issues/100690]: Mock objects which are not unsafe will now raise an `AttributeError` when accessing an attribute that matches the name of an assertion but without the prefix `assert_`, e.g. accessing `called_once` instead of `assert_called_once`. This is in addition to this already happening for accessing attributes with prefixes `assert`,

`assert`, `assert`, `assert`, and `assert`.

- [gh-89727](https://github.com/python/cpython/issues/89727) [https://github.com/python/cpython/issues/89727]: Simplify and optimize `os.walk()` by using `isinstance()` checks to check the top of the stack.
- [gh-100485](https://github.com/python/cpython/issues/100485) [https://github.com/python/cpython/issues/100485]: Add `math.sumprod()` to compute the sum of products.
- [gh-86508](https://github.com/python/cpython/issues/86508) [https://github.com/python/cpython/issues/86508]: Fix `asyncio.open_connection()` to skip binding to local addresses of different family. Patch by Kumar Aditya.
- [gh-97930](https://github.com/python/cpython/issues/97930) [https://github.com/python/cpython/issues/97930]: `importlib.resources.files` now accepts a module as an anchor instead of only accepting packages. If a module is passed, resources are resolved adjacent to that module (in the same package or at the package root). The parameter was renamed from `package` to `anchor` with a compatibility shim for those passing by keyword. Additionally, the new `anchor` parameter is now optional and will default to the caller's module.
- [gh-100585](https://github.com/python/cpython/issues/100585) [https://github.com/python/cpython/issues/100585]: Fixed a bug where `importlib.resources.as_file` was leaving file pointers open
- [gh-100562](https://github.com/python/cpython/issues/100562) [https://github.com/python/cpython/issues/100562]: Improve performance of `pathlib.Path.absolute()` by nearly 2x. This comes at the cost of a performance regression in `pathlib.Path.cwd()`, which is generally used less frequently in user code.
- [gh-100519](https://github.com/python/cpython/issues/100519) [https://github.com/python/cpython/issues/100519]: Small simplification of `http.cookiejar.eff_request_host()` that improves readability and better matches the RFC wording.
- [gh-100287](https://github.com/python/cpython/issues/100287) [https://github.com/python/cpython/issues/100287]: Fix the interaction of `unittest.mock.seal()` with `unittest.mock.AsyncMock`.
- [gh-100488](https://github.com/python/cpython/issues/100488) [https://github.com/python/cpython/issues/100488]: Add `Fraction.is_integer()` to check whether a `fractions.Fraction` is an integer. This improves duck type compatibility with `float` and `int`.
- [gh-100474](https://github.com/python/cpython/issues/100474) [https://github.com/python/cpython/issues/100474]: `http.server` now checks that an index page is actually a regular file before trying to serve it. This avoids issues with

directories named `index.html`.

- [gh-100363](https://github.com/python/cpython/issues/100363) [https://github.com/python/cpython/issues/100363]: Speed up `asyncio.get_running_loop()` by removing redundant `getpid` checks. Patch by Kumar Aditya.
- [gh-78878](https://github.com/python/cpython/issues/78878) [https://github.com/python/cpython/issues/78878]: Fix crash when creating an instance of `_ctypes.CField`.
- [gh-100348](https://github.com/python/cpython/issues/100348) [https://github.com/python/cpython/issues/100348]: Fix ref cycle in `asyncio._SelectorSocketTransport` by removing `_read_ready_cb` in `close`.
- [gh-100344](https://github.com/python/cpython/issues/100344) [https://github.com/python/cpython/issues/100344]: Provide C implementation for `asyncio.current_task()` for a 4x-6x speedup.
- [gh-100272](https://github.com/python/cpython/issues/100272) [https://github.com/python/cpython/issues/100272]: Fix JSON serialization of `OrderedDict`. It now preserves the order of keys.
- [gh-83076](https://github.com/python/cpython/issues/83076) [https://github.com/python/cpython/issues/83076]: Instantiation of `Mock()` and `AsyncMock()` is now 3.8x faster.
- [gh-100234](https://github.com/python/cpython/issues/100234) [https://github.com/python/cpython/issues/100234]: Set a default value of 1.0 for the `lamdb` parameter in `random.expovariate()`.
- [gh-100228](https://github.com/python/cpython/issues/100228) [https://github.com/python/cpython/issues/100228]: A **DeprecationWarning** may be raised when `os.fork()` or `os.forkpty()` is called from multi-threaded processes. Forking with threads is unsafe and can cause deadlocks, crashes and subtle problems. Lack of a warning does not indicate that the fork call was actually safe, as Python may not be aware of all threads.
- [gh-100039](https://github.com/python/cpython/issues/100039) [https://github.com/python/cpython/issues/100039]: Improve signatures for enums and flags.
- [gh-100133](https://github.com/python/cpython/issues/100133) [https://github.com/python/cpython/issues/100133]: Fix regression in `asyncio` where a subprocess would sometimes lose data received from pipe.
- [bpo-44592](https://bugs.python.org/issue?@action=redirect&bpo=44592) [https://bugs.python.org/issue?@action=redirect&bpo=44592]: Fixes inconsistent handling of case sensitivity of `extrasaction` arg in `csv.DictWriter`.
- [gh-100098](https://github.com/python/cpython/issues/100098) [https://github.com/python/cpython/issues/100098]: Fix tuple subclasses being cast to `tuple` when used as enum values.
- [gh-85432](https://github.com/python/cpython/issues/85432) [https://github.com/python/cpython/issues/85432]: Rename

the *fmt* parameter of the pure-Python implementation of `datetime.time.strftime()` to *format*. Rename the *t* parameter of `datetime.datetime.fromtimestamp()` to *timestamp*. These changes mean the parameter names in the pure-Python implementation now match the parameter names in the C implementation. Patch by Alex Waygood.

- [gh-98778](https://github.com/python/cpython/issues/98778) [https://github.com/python/cpython/issues/98778]: Update `HTTPError` to be initialized properly, even if the `fp` is `None`. Patch by Donghee Na.
- [gh-99925](https://github.com/python/cpython/issues/99925) [https://github.com/python/cpython/issues/99925]: Unify error messages in JSON serialization between `json.dumps(float('nan'), allow_nan=False)` and `json.dumps(float('nan'), allow_nan=False, indent= <SOMETHING> )`. Now both include the representation of the value that could not be serialized.
- [gh-89727](https://github.com/python/cpython/issues/89727) [https://github.com/python/cpython/issues/89727]: Fix issue with `os.walk()` where a `RecursionError` would occur on deep directory structures by adjusting the implementation of `os.walk()` to be iterative instead of recursive.
- [gh-94943](https://github.com/python/cpython/issues/94943) [https://github.com/python/cpython/issues/94943]: Add `Dataclass` support to the `Enum __repr__()`. When inheriting from a `dataclass`, only show the field names in the value section of the member `repr()`, and not the `dataclass`' class name.
- [gh-83035](https://github.com/python/cpython/issues/83035) [https://github.com/python/cpython/issues/83035]: Fix `inspect.getsource()` handling of decorator calls with nested parentheses.
- [gh-99576](https://github.com/python/cpython/issues/99576) [https://github.com/python/cpython/issues/99576]: Fix `.save()` method for `LWPCookieJar` and `MozillaCookieJar`: saved file was not truncated on repeated save.
- [gh-94912](https://github.com/python/cpython/issues/94912) [https://github.com/python/cpython/issues/94912]: Add `inspect.markcoroutinefunction()` decorator which manually marks a function as a coroutine for the benefit of `iscoroutinefunction()`.
- [gh-99509](https://github.com/python/cpython/issues/99509) [https://github.com/python/cpython/issues/99509]: Add [PEP 585](https://peps.python.org/pep-0585/) [https://peps.python.org/pep-0585/] support for `multiprocessing.queues.Queue`.
- [gh-99482](https://github.com/python/cpython/issues/99482) [https://github.com/python/cpython/issues/99482]: Remove Jython partial compatibility code from several stdlib

modules.

- [gh-99433](https://github.com/python/cpython/issues/99433) [https://github.com/python/cpython/issues/99433]: Fix `doctest` failure on `types.MethodWrapperType` in modules.
- [gh-85267](https://github.com/python/cpython/issues/85267) [https://github.com/python/cpython/issues/85267]: Several improvements to `inspect.signature()`'s handling of `__text_signature`. - Fixes a case where `inspect.signature()` dropped parameters - Fixes a case where `inspect.signature()` raised `tokenize.TokenError` - Allows `inspect.signature()` to understand defaults involving binary operations of constants - `inspect.signature()` is documented as only raising `TypeError` or `ValueError`, but sometimes raised `RuntimeError`. These cases now raise `ValueError` - Removed a dead code path
- [gh-91166](https://github.com/python/cpython/issues/91166) [https://github.com/python/cpython/issues/91166]: `asyncio` is optimized to avoid excessive copying when writing to socket and use `sendmsg()` if the platform supports it. Patch by Kumar Aditya.
- [gh-98030](https://github.com/python/cpython/issues/98030) [https://github.com/python/cpython/issues/98030]: Add missing TCP socket options from Linux: `TCP_MD5SIG`, `TCP_THIN_LINEAR_TIMEOUTS`, `TCP_THIN_DUPACK`, `TCP_REPAIR`, `TCP_REPAIR_QUEUE`, `TCP_QUEUE_SEQ`, `TCP_REPAIR_OPTIONS`, `TCP_TIMESTAMP`, `TCP_CC_INFO`, `TCP_SAVE_SYN`, `TCP_SAVED_SYN`, `TCP_REPAIR_WINDOW`, `TCP_FASTOPEN_CONNECT`, `TCP_ULP`, `TCP_MD5SIG_EXT`, `TCP_FASTOPEN_KEY`, `TCP_FASTOPEN_NO_COOKIE`, `TCP_ZEROCOPY_RECEIVE`, `TCP_INQ`, `TCP_TX_DELAY`.
- [gh-88500](https://github.com/python/cpython/issues/88500) [https://github.com/python/cpython/issues/88500]: Reduced the memory usage of `urllib.parse.unquote()` and `urllib.parse.unquote_to_bytes()` on large values.
- [gh-96127](https://github.com/python/cpython/issues/96127) [https://github.com/python/cpython/issues/96127]: `inspect.signature` was raising `TypeError` on call with mock objects. Now it correctly returns `(*args, **kwargs)` as inferred signature.
- [gh-95882](https://github.com/python/cpython/issues/95882) [https://github.com/python/cpython/issues/95882]: Fix a 3.11 regression in `asynccontextmanager()`, which caused it to propagate exceptions with incorrect tracebacks and fix a 3.11 regression in `contextmanager()`, which caused it to propagate exceptions with incorrect tracebacks

for `StopIteration`.

- [gh-78707](https://github.com/python/cpython/issues/78707) [https://github.com/python/cpython/issues/78707]: Deprecate passing more than one positional argument to `pathlib.PurePath.relative_to()` and `is_relative_to()`.
- [gh-92122](https://github.com/python/cpython/issues/92122) [https://github.com/python/cpython/issues/92122]: Fix reStructuredText syntax errors in docstrings in the `enum` module.
- [gh-91851](https://github.com/python/cpython/issues/91851) [https://github.com/python/cpython/issues/91851]: Optimize the `Fraction` arithmetics for small components.
- [bpo-24132](https://bugs.python.org/issue?@action=redirect&bpo=24132) [https://bugs.python.org/issue?@action=redirect&bpo=24132]: Make `pathlib.PurePath` and `Path` subclassable (private to start). Previously, attempting to instantiate a subclass resulted in an `AttributeError` being raised. Patch by Barney Gale.
- [bpo-40447](https://bugs.python.org/issue?@action=redirect&bpo=40447) [https://bugs.python.org/issue?@action=redirect&bpo=40447]: Accept `os.PathLike` (such as `pathlib.Path`) in the `stripdir` arguments of `compileall.compile_file()` and `compileall.compile_dir()`.
- [bpo-36880](https://bugs.python.org/issue?@action=redirect&bpo=36880) [https://bugs.python.org/issue?@action=redirect&bpo=36880]: Fix a reference counting issue when a `ctypes` callback with return type `py_object` returns `None`, which could cause crashes.

## Documentation

- [gh-100616](https://github.com/python/cpython/issues/100616) [https://github.com/python/cpython/issues/100616]: Document existing `attr` parameter to `curses.window.vline()` function in `curses`.
- [gh-100472](https://github.com/python/cpython/issues/100472) [https://github.com/python/cpython/issues/100472]: Remove claim in documentation that the `stripdir`, `prependdir` and `limit_sl_dest` parameters of `compileall.compile_dir()` and `compileall.compile_file()` could be `bytes`.
- [bpo-25377](https://bugs.python.org/issue?@action=redirect&bpo=25377) [https://bugs.python.org/issue?@action=redirect&bpo=25377]: Clarify use of octal format of mode argument in `help(os.chmod)` as well as `help(os.fchmod)`

## Tests

- [gh-100454](https://github.com/python/cpython/issues/100454) [https://github.com/python/cpython/issues/100454]: Start running SSL tests with OpenSSL 3.1.0-beta1.
- [gh-100086](https://github.com/python/cpython/issues/100086) [https://github.com/python/cpython/issues/100086]: The Python test runner (libregtest) now logs Python build information like “debug” vs “release” build, or LTO and PGO optimizations. Patch by Victor Stinner.
- [gh-93018](https://github.com/python/cpython/issues/93018) [https://github.com/python/cpython/issues/93018]: Make two tests forgiving towards host system libexpat with backported security fixes applied.

## Build

- [gh-100540](https://github.com/python/cpython/issues/100540) [https://github.com/python/cpython/issues/100540]: Removed the `--with-system-ffi` configure option; `libffi` must now always be supplied by the system on all non-Windows platforms. The option has had no effect on non-Darwin platforms for several releases, and in 3.11 only had the non-obvious effect of invoking `pkg-config` to find `libffi` and never setting `-DUSING_APPLE_OS_LIBFFI`. Now on Darwin platforms `configure` will first check for the OS `libffi` and then fall back to the same processing as other platforms if it is not found.
- [gh-88267](https://github.com/python/cpython/issues/88267) [https://github.com/python/cpython/issues/88267]: Avoid exporting Python symbols in linked Windows applications when the core is built as static.
- [bpo-41916](https://bugs.python.org/issue?@action=redirect&bpo=41916) [https://bugs.python.org/issue?@action=redirect&bpo=41916]: Allow override of `ac_cv_cxx_thread` so that cross compiled python can set `-pthread` for CXX.

## Windows

- [gh-100180](https://github.com/python/cpython/issues/100180) [https://github.com/python/cpython/issues/100180]: Update Windows installer to OpenSSL 1.1.1s
- [gh-99191](https://github.com/python/cpython/issues/99191) [https://github.com/python/cpython/issues/99191]: Use `_MSVC_LANG >= 202002L` instead of less-precise `_MSC_VER >= 1929` to more accurately test for C++ 20 support in `PC/_wmimodule.cpp`.
- [gh-79218](https://github.com/python/cpython/issues/79218) [https://github.com/python/cpython/issues/79218]: Define `MS_WIN64` for Mingw-w64 64bit, fix cython compilation

failure.

- [gh-99941](https://github.com/python/cpython/issues/99941) [https://github.com/python/cpython/issues/99941]: Ensure that `asyncio.Protocol.data_received()` receives an immutable `bytes` object (as documented), instead of `bytearray`.
- [bpo-43984](https://bugs.python.org/issue?@action=redirect&bpo=43984) [https://bugs.python.org/issue?@action=redirect&bpo=43984]: `winreg.SetValueEx()` now leaves the target value untouched in the case of conversion errors. Previously, `-1` would be written in case of such errors.
- [bpo-34816](https://bugs.python.org/issue?@action=redirect&bpo=34816) [https://bugs.python.org/issue?@action=redirect&bpo=34816]: `hasattr(ctypes.windll, 'nonexistent')` now returns `False` instead of raising `OSError`.

## macOS

- [gh-100180](https://github.com/python/cpython/issues/100180) [https://github.com/python/cpython/issues/100180]: Update macOS installer to OpenSSL 1.1.1s
- [gh-100540](https://github.com/python/cpython/issues/100540) [https://github.com/python/cpython/issues/100540]: Removed obsolete `dlfcn.h` shim from the `_ctypes` extension module, which has not been necessary since Mac OS X 10.2.

## Tools/Demos

- [bpo-45256](https://bugs.python.org/issue?@action=redirect&bpo=45256) [https://bugs.python.org/issue?@action=redirect&bpo=45256]: Fix a bug that caused an `AttributeError` to be raised in `python-gdb.py` when `py-locals` is used without a frame.
- [gh-100342](https://github.com/python/cpython/issues/100342) [https://github.com/python/cpython/issues/100342]: Add missing `NULL` check for possible allocation failure in `*args` parsing in Argument Clinic.

## C API

- [gh-99947](https://github.com/python/cpython/issues/99947) [https://github.com/python/cpython/issues/99947]: Raising `SystemError` on import will now have its cause be set to the original unexpected exception.
- [gh-99240](https://github.com/python/cpython/issues/99240) [https://github.com/python/cpython/issues/99240]: In

argument parsing, after deallocating newly allocated memory, reset its pointer to NULL.

- [gh-98724](https://github.com/python/cpython/issues/98724) [https://github.com/python/cpython/issues/98724]: The **Py\_CLEAR**, **Py\_SETREF** and **Py\_XSETREF** macros now only evaluate their arguments once. If an argument has side effects, these side effects are no longer duplicated. Patch by Victor Stinner.

## Python 3.12.0 alpha 3

*Release date: 2022-12-06*

### Security

- [gh-100001](https://github.com/python/cpython/issues/100001) [https://github.com/python/cpython/issues/100001]: `python -m http.server` no longer allows terminal control characters sent within a garbage request to be printed to the stderr server log.

This is done by changing the **`http.server.BaseHTTPRequestHandler.log_message`** method to replace control characters with a `\xHH` hex escape before printing.

- [gh-87604](https://github.com/python/cpython/issues/87604) [https://github.com/python/cpython/issues/87604]: Avoid publishing list of active per-interpreter audit hooks via the **`gc`** module

### Core and Builtins

- [gh-99891](https://github.com/python/cpython/issues/99891) [https://github.com/python/cpython/issues/99891]: Fix a bug in the tokenizer that could cause infinite recursion when showing syntax warnings that happen in the first line of the source. Patch by Pablo Galindo
- [gh-91054](https://github.com/python/cpython/issues/91054) [https://github.com/python/cpython/issues/91054]: Add **`PyCode_AddWatcher()`** and **`PyCode_ClearWatcher()`** APIs to register callbacks to receive notification on creation and destruction of code objects.
- [gh-99729](https://github.com/python/cpython/issues/99729) [https://github.com/python/cpython/issues/99729]: Fix an

issue that could cause frames to be visible to Python code as they are being torn down, possibly leading to memory corruption or hard crashes of the interpreter.

- [gh-99708](https://github.com/python/cpython/issues/99708) [https://github.com/python/cpython/issues/99708]: Fix bug where compiler crashes on an if expression with an empty body block.
- [gh-99578](https://github.com/python/cpython/issues/99578) [https://github.com/python/cpython/issues/99578]: Fix a reference bug in `_imp.create_builtin()` after the creation of the first sub-interpreter for modules `builtins` and `sys`. Patch by Victor Stinner.
- [gh-99581](https://github.com/python/cpython/issues/99581) [https://github.com/python/cpython/issues/99581]: Fixed a bug that was causing a buffer overflow if the tokenizer copies a line missing the newline character from a file that is as long as the available tokenizer buffer. Patch by Pablo galindo
- [gh-99553](https://github.com/python/cpython/issues/99553) [https://github.com/python/cpython/issues/99553]: Fix bug where an `ExceptionGroup` subclass can wrap a `BaseException`.
- [gh-99547](https://github.com/python/cpython/issues/99547) [https://github.com/python/cpython/issues/99547]: Add a function to `os.path` to check if a path is a junction: `isjunction`. Add similar functionality to `pathlib.Path` as `is_junction`.
- [gh-99370](https://github.com/python/cpython/issues/99370) [https://github.com/python/cpython/issues/99370]: Fix zip path for venv created from a non-installed python on POSIX platforms.
- [gh-99377](https://github.com/python/cpython/issues/99377) [https://github.com/python/cpython/issues/99377]: Add audit events for thread creation and clear operations.
- [gh-98686](https://github.com/python/cpython/issues/98686) [https://github.com/python/cpython/issues/98686]: Remove the `BINARY_OP_GENERIC` and `COMPARE_OP_GENERIC` “specializations”.
- [gh-99298](https://github.com/python/cpython/issues/99298) [https://github.com/python/cpython/issues/99298]: Remove the remaining error paths for attribute specializations, and refuse to specialize attribute accesses on types that haven’t had `PyType_Ready()` called on them yet.
- [gh-99127](https://github.com/python/cpython/issues/99127) [https://github.com/python/cpython/issues/99127]: Allow some features of `syslog` to the main interpreter only. Patch by Donghee Na.
- [gh-91053](https://github.com/python/cpython/issues/91053) [https://github.com/python/cpython/issues/91053]: Optimizing interpreters and JIT compilers may need to invalidate internal metadata when functions are modified. This change adds the ability to provide a callback that will be invoked each time a function is created, modified, or

destroyed.

- [gh-90994](https://github.com/python/cpython/issues/90994) [https://github.com/python/cpython/issues/90994]: Improve error messages when there's a syntax error with call arguments. The following three cases are covered: - No value is assigned to a named argument, eg `foo(a=)`. - A value is assigned to a star argument, eg `foo(*args=[0])`. - A value is assigned to a double-star keyword argument, eg `foo(**kwargs={'a': 0})`.
- [bpo-45026](https://bugs.python.org/issue?@action=redirect&bpo=45026) [https://bugs.python.org/issue?@action=redirect&bpo=45026]: Optimize the `range` object iterator. It is now smaller, faster iteration of ranges containing large numbers. Smaller pickles, faster unpickling.
- [bpo-31718](https://bugs.python.org/issue?@action=redirect&bpo=31718) [https://bugs.python.org/issue?@action=redirect&bpo=31718]: Raise `ValueError` instead of `SystemError` when methods of uninitialized `io.IncrementalNewlineDecoder` objects are called. Patch by Oren Milman.
- [bpo-38031](https://bugs.python.org/issue?@action=redirect&bpo=38031) [https://bugs.python.org/issue?@action=redirect&bpo=38031]: Fix a possible assertion failure in `io.FileIO` when the opener returns an invalid file descriptor.

## Library

- [gh-100001](https://github.com/python/cpython/issues/100001) [https://github.com/python/cpython/issues/100001]: Also escape `s` in the `http.server.BaseHTTPRequestHandler.log_message` so that it is technically possible to parse the line and reconstruct what the original data was. Without this a `xHH` is ambiguous as to if it is a hex replacement we put in or the characters `r"x` came through in the original request line.
- [gh-99957](https://github.com/python/cpython/issues/99957) [https://github.com/python/cpython/issues/99957]: Add `frozen_default` parameter to `typing.dataclass_transform()`.
- [gh-79033](https://github.com/python/cpython/issues/79033) [https://github.com/python/cpython/issues/79033]: Fix `asyncio.Server.wait_closed()` to actually do what the docs promise – wait for all existing connections to complete, after closing the server.

- [gh-51524](https://github.com/python/cpython/issues/51524) [https://github.com/python/cpython/issues/51524]: Fix bug when calling `trace.CoverageResults` with valid infile.
- [gh-99645](https://github.com/python/cpython/issues/99645) [https://github.com/python/cpython/issues/99645]: Fix a bug in handling class cleanups in `unittest.TestCase`. Now `addClassCleanup()` uses separate lists for different `TestCase` subclasses, and `doClassCleanups()` only cleans up the particular class.
- [gh-99508](https://github.com/python/cpython/issues/99508) [https://github.com/python/cpython/issues/99508]: Fix `TypeError` in `Lib/importlib/_bootstrap_external.py` while calling `_imp.source_hash()`.
- [gh-66285](https://github.com/python/cpython/issues/66285) [https://github.com/python/cpython/issues/66285]: Fix `asyncio` to not share event loop and signal wakeupfd in forked processes. Patch by Kumar Aditya.
- [gh-97001](https://github.com/python/cpython/issues/97001) [https://github.com/python/cpython/issues/97001]: Release the GIL when calling `termios` APIs to avoid blocking threads.
- [gh-92647](https://github.com/python/cpython/issues/92647) [https://github.com/python/cpython/issues/92647]: Use final status of an enum to determine lookup or creation branch of functional API.
- [gh-99388](https://github.com/python/cpython/issues/99388) [https://github.com/python/cpython/issues/99388]: Add `loop_factory` parameter to `asyncio.run()` to allow specifying a custom event loop factory. Patch by Kumar Aditya.
- [gh-99341](https://github.com/python/cpython/issues/99341) [https://github.com/python/cpython/issues/99341]: Fix `ast.increment_lineno()` to also cover `ast.TypeIgnore` when changing line numbers.
- [gh-99382](https://github.com/python/cpython/issues/99382) [https://github.com/python/cpython/issues/99382]: Check the number of arguments in substitution in user generics containing a `TypeVarTuple` and one or more `TypeVar`.
- [gh-99379](https://github.com/python/cpython/issues/99379) [https://github.com/python/cpython/issues/99379]: Fix substitution of `ParamSpec` followed by `TypeVarTuple` in generic aliases.

- [gh-99344](https://github.com/python/cpython/issues/99344) [https://github.com/python/cpython/issues/99344]: Fix substitution of `TypeVarTuple` and `ParamSpec` together in user generics.
- [gh-99284](https://github.com/python/cpython/issues/99284) [https://github.com/python/cpython/issues/99284]: Remove `_use_broken_old_ctypes_structure_semantics_old` untested and undocumented hack from `ctypes`.
- [gh-99201](https://github.com/python/cpython/issues/99201) [https://github.com/python/cpython/issues/99201]: Fix `IndexError` when initializing the config variables on Windows if `HAVE_DYNAMIC_LOADING` is not set.
- [gh-99240](https://github.com/python/cpython/issues/99240) [https://github.com/python/cpython/issues/99240]: Fix double-free bug in Argument Clinic `str_converter` by extracting memory clean up to a new `post_parsing` section.
- [gh-64490](https://github.com/python/cpython/issues/64490) [https://github.com/python/cpython/issues/64490]: Fix refcount error when arguments are packed to tuple in Argument Clinic.
- [gh-99029](https://github.com/python/cpython/issues/99029) [https://github.com/python/cpython/issues/99029]: `pathlib.PurePath.relative_to()` now treats naked Windows drive paths as relative. This brings its behaviour in line with other parts of `pathlib`.
- [gh-98253](https://github.com/python/cpython/issues/98253) [https://github.com/python/cpython/issues/98253]: The implementation of the typing module is now more resilient to reference leaks in binary extension modules.

Previously, a reference leak in a typed C API-based extension module could leak internals of the typing module, which could in turn introduce leaks in essentially any other package with typed function signatures. Although the typing package is not the original source of the problem, such non-local dependences exacerbate debugging of large-scale projects, and the implementation was therefore changed to reduce harm by providing better isolation.

- [gh-98458](https://github.com/python/cpython/issues/98458) [https://github.com/python/cpython/issues/98458]: Fix infinite loop in unittest when a self-referencing chained

exception is raised

- [gh-93453](https://github.com/python/cpython/issues/93453) [https://github.com/python/cpython/issues/93453]: `asyncio.get_event_loop()` and many other `asyncio` functions like `asyncio.ensure_future()`, `asyncio.shield()` or `asyncio.gather()`, and also the `get_event_loop()` method of `asyncio.BaseDefaultEventLoopPolicy` now raise a `RuntimeError` if called when there is no running event loop and the current event loop was not set. Previously they implicitly created and set a new current event loop. `DeprecationWarning` is no longer emitted if there is no running event loop but the current event loop was set.
- [gh-97966](https://github.com/python/cpython/issues/97966) [https://github.com/python/cpython/issues/97966]: On `uname_result`, restored expectation that `_fields` and `_asdict` would include all six properties including `processor`.
- [gh-98248](https://github.com/python/cpython/issues/98248) [https://github.com/python/cpython/issues/98248]: Provide informative error messages in `struct.pack()` when its integral arguments are not in range.
- [gh-98108](https://github.com/python/cpython/issues/98108) [https://github.com/python/cpython/issues/98108]: `zipfile.Path` is now pickleable if its initialization parameters were pickleable (e.g. for file system paths).
- [gh-98098](https://github.com/python/cpython/issues/98098) [https://github.com/python/cpython/issues/98098]: Created packages from `zipfile` and `test_zipfile` modules, separating `zipfile.Path` functionality.
- [gh-82836](https://github.com/python/cpython/issues/82836) [https://github.com/python/cpython/issues/82836]: Fix `is_private` properties in the `ipaddress` module. Previously non-private networks (0.0.0.0/0) would return `True` from this method; now they correctly return `False`.
- [gh-96828](https://github.com/python/cpython/issues/96828) [https://github.com/python/cpython/issues/96828]: Add an `OP_ENABLE_KTLS` option for enabling the use of the kernel TLS (kTLS). Patch by Illia Volochii.
- [gh-88863](https://github.com/python/cpython/issues/88863) [https://github.com/python/cpython/issues/88863]: To avoid

apparent memory leaks when

`asyncio.open_connection()` raises, break reference cycles generated by local exception and future instances (which has exception instance as its member var). Patch by Dong Uk, Kang.

- [gh-91078](https://github.com/python/cpython/issues/91078) [https://github.com/python/cpython/issues/91078]: `TarFile.next()` now returns `None` when called on an empty tarfile.
- [bpo-47220](https://bugs.python.org/issue?@action=redirect&bpo=47220) [https://bugs.python.org/issue?@action=redirect&bpo=47220]: Document the optional *callback* parameter of `WeakMethod`. Patch by Géry Ogam.
- [bpo-44817](https://bugs.python.org/issue?@action=redirect&bpo=44817) [https://bugs.python.org/issue?@action=redirect&bpo=44817]: Ignore `WinError 53` (`ERROR_BAD_NETPATH`), `65` (`ERROR_NETWORK_ACCESS_DENIED`) and `161` (`ERROR_BAD_PATHNAME`) when using `ntpath.realpath()`.
- [bpo-41260](https://bugs.python.org/issue?@action=redirect&bpo=41260) [https://bugs.python.org/issue?@action=redirect&bpo=41260]: Rename the *fmt* parameter of the pure Python implementation of `datetime.date.strftime()` to *format*.
- [bpo-15999](https://bugs.python.org/issue?@action=redirect&bpo=15999) [https://bugs.python.org/issue?@action=redirect&bpo=15999]: All built-in functions now accept arguments of any type instead of just `bool` and `int` for boolean parameters.

## Documentation

- [gh-99931](https://github.com/python/cpython/issues/99931) [https://github.com/python/cpython/issues/99931]: Use [sphinxext-opengraph](https://sphinxext-opengraph.readthedocs.io/) [https://sphinxext-opengraph.readthedocs.io/] to generate [OpenGraph metadata](https://ogp.me/) [https://ogp.me/].
- [gh-89682](https://github.com/python/cpython/issues/89682) [https://github.com/python/cpython/issues/89682]: Reworded docstring of the default `__contains__` to clarify that it returns a `bool`.
- [gh-88330](https://github.com/python/cpython/issues/88330) [https://github.com/python/cpython/issues/88330]: Improved the description of what a resource is in `importlib.resources` docs.

- [gh-92892](https://github.com/python/cpython/issues/92892) [https://github.com/python/cpython/issues/92892]: Document that calling variadic functions with ctypes requires special care on macOS/arm64 (and possibly other platforms).
- [bpo-41825](https://bugs.python.org/issue?@action=redirect&bpo=41825) [https://bugs.python.org/issue?@action=redirect&bpo=41825]: Restructured the documentation for the `os.wait*` family of functions, and improved the docs for `os.waitid()` with more explanation of the possible argument constants.

## Tests

- [gh-99892](https://github.com/python/cpython/issues/99892) [https://github.com/python/cpython/issues/99892]: Skip `test_normalization()` of `test_unicodedata` if it fails to download `NormalizationTest.txt` file from `pythontest.net`. Patch by Victor Stinner.
- [gh-99934](https://github.com/python/cpython/issues/99934) [https://github.com/python/cpython/issues/99934]: Correct `test_marsh` on (32 bit) x86: `test_deterministic_sets` was failing.
- [gh-99741](https://github.com/python/cpython/issues/99741) [https://github.com/python/cpython/issues/99741]: We've implemented multi-phase init (PEP 489/630/687) for the internal (for testing) `_xxsubinterpreters` module.
- [gh-99659](https://github.com/python/cpython/issues/99659) [https://github.com/python/cpython/issues/99659]: Optional big memory tests in `test_sqlite3` now catch the correct `sqlite.DataError` exception type in case of too large strings and/or blobs passed.
- [gh-99593](https://github.com/python/cpython/issues/99593) [https://github.com/python/cpython/issues/99593]: Cover the Unicode C API with tests.
- [gh-96002](https://github.com/python/cpython/issues/96002) [https://github.com/python/cpython/issues/96002]: Add functional test for Argument Clinic.

## Build

- [gh-99086](https://github.com/python/cpython/issues/99086) [https://github.com/python/cpython/issues/99086]: Fix `-Wimplicit-int`, `-Wstrict-prototypes`, and `-Wimplicit-function-declaration` compiler warnings in `configure` checks.
- [gh-99337](https://github.com/python/cpython/issues/99337) [https://github.com/python/cpython/issues/99337]: Fix a compilation issue with GCC 12 on macOS.
- [gh-99289](https://github.com/python/cpython/issues/99289) [https://github.com/python/cpython/issues/99289]: Add a `COMPILEALL_OPTS` variable in Makefile to override `compileall` options (default: `-j0`) in `make install`.

Also merged the `compileall` commands into a single command building `.pyc` files for the all optimization levels (0, 1, 2) at once. Patch by Victor Stinner.

- [gh-98872](https://github.com/python/cpython/issues/98872) [https://github.com/python/cpython/issues/98872]: Fix a possible fd leak in `Programs/_freeze_module.c` introduced in Python 3.11.
- [gh-88226](https://github.com/python/cpython/issues/88226) [https://github.com/python/cpython/issues/88226]: Always define `TARGET_*` labels in `Python/ceval.c`, even if `USE_COMPUTED_GOTOS` is disabled. This allows breakpoints to be set at those labels in (for instance) `gdb`.

## Windows

- [gh-99345](https://github.com/python/cpython/issues/99345) [https://github.com/python/cpython/issues/99345]: Use faster initialization functions to detect install location for Windows Store package
- [gh-98629](https://github.com/python/cpython/issues/98629) [https://github.com/python/cpython/issues/98629]: Fix initialization of `sys.version` and `sys._git` on Windows
- [gh-99442](https://github.com/python/cpython/issues/99442) [https://github.com/python/cpython/issues/99442]: Fix handling in [Python Launcher for Windows](#) when `argv[0]` does not include a file extension.
- [bpo-40882](https://bugs.python.org/issue?@action=redirect&bpo=40882) [https://bugs.python.org/issue?@action=redirect&bpo=40882]: Fix a memory leak in `multiprocessing.shared_memory.SharedMemory` on Windows.

## macOS

- [gh-87235](https://github.com/python/cpython/issues/87235) [https://github.com/python/cpython/issues/87235]: On macOS `python3 /dev/fd/9 9</path/to/script.py` failed for any script longer than a couple of bytes.
- [gh-98940](https://github.com/python/cpython/issues/98940) [https://github.com/python/cpython/issues/98940]: Fix `Mac/Extras.install.py` file filter bug.

## Tools/Demos

- [gh-64490](https://github.com/python/cpython/issues/64490) [https://github.com/python/cpython/issues/64490]: Argument Clinic varargs bugfixes
  - Fix out-of-bounds error in `_PyArg_UnpackKeywordsWithVararg()`.

- Fix incorrect check which allowed more than one varargs in `clinic.py`.
- Fix miscalculation of `noptargs` in generated code.
- Do not generate `noptargs` when there is a vararg argument and no optional argument.

## C API

- [gh-98680](https://github.com/python/cpython/issues/98680) [https://github.com/python/cpython/issues/98680]: `PyBUF_*` constants were marked as part of Limited API of Python 3.11+. These were available in 3.11.0 with `Py_LIMITED_API` defined for 3.11, and are necessary to use the buffer API.
- [gh-99612](https://github.com/python/cpython/issues/99612) [https://github.com/python/cpython/issues/99612]: Fix `PyUnicode_DecodeUTF8Stateful()` for ASCII-only data: `*consumed` was not set.
- [gh-47146](https://github.com/python/cpython/issues/47146) [https://github.com/python/cpython/issues/47146]: The `structmember.h` header is deprecated. Its non-deprecated contents are now available just by including `Python.h`, with a `Py_` prefix added if it was missing. (Deprecated contents are `T_OBJECT`, `T_NONE`, and no-op flags.) Patch by Petr Viktorin, based on earlier work by Alexander Belopolsky and Matthias Braun.

## Python 3.12.0 alpha 2

*Release date: 2022-11-14*

### Security

- [gh-98433](https://github.com/python/cpython/issues/98433) [https://github.com/python/cpython/issues/98433]: The IDNA codec decoder used on DNS hostnames by `socket` or `asyncio` related name resolution functions no longer involves a quadratic algorithm. This prevents a potential CPU denial of service if an out-of-spec excessive length hostname involving bidirectional characters were decoded. Some protocols such as `urllib` http 3xx redirects potentially allow for an attacker to supply such a name.

Individual labels within an IDNA encoded DNS name will now raise an error early during IDNA decoding if they are longer than 1024 unicode characters given that each decoded DNS label must be 63 or fewer characters and the entire decoded DNS name is limited to 255. Only an application presenting a hostname or label consisting primarily of [RFC 3454](https://datatracker.ietf.org/doc/html/rfc3454.html) [https://datatracker.ietf.org/doc/html/rfc3454.html] section 3.1 “Nothing” characters to be removed would run into of this new limit. See also [RFC 5894](https://datatracker.ietf.org/doc/html/rfc5894.html) [https://datatracker.ietf.org/doc/html/rfc5894.html] section 6 and [RFC 3491](https://datatracker.ietf.org/doc/html/rfc3491.html) [https://datatracker.ietf.org/doc/html/rfc3491.html].

- [gh-98739](https://github.com/python/cpython/issues/98739) [https://github.com/python/cpython/issues/98739]: Update bundled libexpat to 2.5.0

## Core and Builtins

- [gh-81057](https://github.com/python/cpython/issues/81057) [https://github.com/python/cpython/issues/81057]: The docs clearly say that `PyImport_Inittab`, `PyImport_AppendInittab()`, and `PyImport_ExtendInittab()` should not be used after `Py_Initialize()` has been called. We now enforce this for the two functions. Additionally, the runtime now uses an internal copy of `PyImport_Inittab`, to guard against modification.
- [gh-99298](https://github.com/python/cpython/issues/99298) [https://github.com/python/cpython/issues/99298]: Fix an issue that could potentially cause incorrect error handling for some bytecode instructions.
- [gh-99254](https://github.com/python/cpython/issues/99254) [https://github.com/python/cpython/issues/99254]: The compiler now removes all unused constants from code objects (except the first one, which may be a docstring).
- [gh-99205](https://github.com/python/cpython/issues/99205) [https://github.com/python/cpython/issues/99205]: Fix an issue that prevented `PyThreadState` and `PyInterpreterState` memory from being freed properly.
- [gh-81057](https://github.com/python/cpython/issues/81057) [https://github.com/python/cpython/issues/81057]: The 18 global C variables holding the state of the allocators have been moved to `_PyRuntimeState`. This is a strictly internal

change with no change in behavior.

- [gh-99181](https://github.com/python/cpython/issues/99181) [https://github.com/python/cpython/issues/99181]: Fix failure in `except*` with unhashable exceptions.
- [gh-99204](https://github.com/python/cpython/issues/99204) [https://github.com/python/cpython/issues/99204]: Fix calculation of `sys._base_executable` when inside a POSIX virtual environment using copies of the python binary when the base installation does not provide the executable name used by the venv. Calculation will fall back to alternative names (“python <MAJOR>”, “python <MAJOR>.<MINOR>”).
- [gh-96055](https://github.com/python/cpython/issues/96055) [https://github.com/python/cpython/issues/96055]: Update `faulthandler` to emit an error message with the proper unexpected signal number. Patch by Donghee Na.
- [gh-99153](https://github.com/python/cpython/issues/99153) [https://github.com/python/cpython/issues/99153]: Fix location of `SyntaxError` for a `try` block with both `except` and `except*`.
- [gh-98686](https://github.com/python/cpython/issues/98686) [https://github.com/python/cpython/issues/98686]: Merge the adaptive opcode logic into each instruction’s unquickened variant, and merge the logic in `EXTENDED_ARG_QUICK` into `EXTENDED_ARG`. With these changes, the quickening that happens at code object creation is now only responsible for initializing warmup counters and inserting superinstructions.
- [gh-99103](https://github.com/python/cpython/issues/99103) [https://github.com/python/cpython/issues/99103]: Fix the error reporting positions of specialized traceback anchors when the source line contains Unicode characters.
- [gh-99139](https://github.com/python/cpython/issues/99139) [https://github.com/python/cpython/issues/99139]: Improve the error suggestion for `NameError` exceptions for instances. Now if a `NameError` is raised in a method and the instance has an attribute that’s exactly equal to the name in the exception, the suggestion will include `self.<NAME>` instead of the closest match in the method scope. Patch by Pablo Galindo
- [gh-98401](https://github.com/python/cpython/issues/98401) [https://github.com/python/cpython/issues/98401]: Octal

escapes with value larger than `0o377` (ex: `"\477"`), deprecated in Python 3.11, now produce a **SyntaxWarning**, instead of **DeprecationWarning**. In a future Python version they will be eventually a **SyntaxError**. Patch by Victor Stinner.

- **gh-98401** [<https://github.com/python/cpython/issues/98401>]: A backslash-character pair that is not a valid escape sequence now generates a **SyntaxWarning**, instead of **DeprecationWarning**. For example, `re.compile("\d+ \. \d+")` now emits a **SyntaxWarning** ("`\d`" is an invalid escape sequence), use raw strings for regular expression: `re.compile(r"\d+ \. \d+")`. In a future Python version, **SyntaxError** will eventually be raised, instead of **SyntaxWarning**. Patch by Victor Stinner.
- **gh-96793** [<https://github.com/python/cpython/issues/96793>]: Handle `StopIteration` and `StopAsyncIteration` raised in generator or coroutines in the bytecode, rather than in wrapping C code.
- **gh-98931** [<https://github.com/python/cpython/issues/98931>]: Improve the **SyntaxError** error message when the user types `import x from y` instead of `from y import x`. Patch by Pablo Galindo
- **gh-98852** [<https://github.com/python/cpython/issues/98852>]: Fix subscription of type aliases containing bare generic types or types like **TypeVar**: for example `tuple[A, T][int]` and `tuple[TypeVar, T][int]`, where `A` is a generic type, and `T` is a type variable.
- **gh-98925** [<https://github.com/python/cpython/issues/98925>]: Lower the recursion depth for marshal on WASI to support (in-development) wasmtime 2.0.
- **gh-98783** [<https://github.com/python/cpython/issues/98783>]: Fix multiple crashes in debug mode when `str` subclasses are used instead of `str` itself.
- **gh-98811** [<https://github.com/python/cpython/issues/98811>]: Use complete source locations to simplify detection of

`__future__` imports which are not at the beginning of the file. Also corrects the offset in the exception raised in one case, which was off by one and impeded highlighting.

- [gh-96793](https://github.com/python/cpython/issues/96793) [https://github.com/python/cpython/issues/96793]: Add specialization of `FOR_ITER` for generators. Saves multiple layers of dispatch and checking to get from the `FOR_ITER` instruction in the caller to the `RESUME` in the generator.
- [gh-98762](https://github.com/python/cpython/issues/98762) [https://github.com/python/cpython/issues/98762]: Fix source locations of `match` sub-patterns.
- [gh-98586](https://github.com/python/cpython/issues/98586) [https://github.com/python/cpython/issues/98586]: Added the methods `PyObject_Vectorcall()` and `PyObject_VectorcallMethod()` to the `Limited API` along with the auxiliary macro constant `PY_VECTORCALL_ARGUMENTS_OFFSET`.

The availability of these functions enables more efficient [PEP 590](https://peps.python.org/pep-0590/) [https://peps.python.org/pep-0590/] vector calls from binary extension modules that avoid argument boxing/unboxing overheads.

- [gh-99257](https://github.com/python/cpython/issues/99257) [https://github.com/python/cpython/issues/99257]: Fix an issue where member descriptors (such as those for `__slots__`) could behave incorrectly or crash instead of raising a `TypeError` when accessed via an instance of an invalid type.
- [gh-93143](https://github.com/python/cpython/issues/93143) [https://github.com/python/cpython/issues/93143]: Rather than changing `co_code`, the interpreter will now display a `RuntimeWarning` and assign `None` to any fast locals that are left unbound after jumps or `del` statements executed while tracing.
- [gh-96421](https://github.com/python/cpython/issues/96421) [https://github.com/python/cpython/issues/96421]: When calling into Python code from C code, through `PyEval_EvalFrameEx()` or a related C-API function, a shim frame is inserted into the call stack. This occurs in the `_PyEval_EvalFrameDefault()` function. The extra frame should be invisible to all Python and most C extensions, but

out-of-process profilers and debuggers need to be aware of it. These shim frames can be detected by checking `frame->owner == FRAME_OWNED_BY_CSTACK`.

Extensions implementing their own interpreters using PEP 523 need to be aware of this shim frame and the changes to the semantics of `RETURN_VALUE`, `YIELD_VALUE`, and `RETURN_GENERATOR`, which now clear the frame.

- [gh-98415](https://github.com/python/cpython/issues/98415) [https://github.com/python/cpython/issues/98415]: Fix detection of MAC addresses for `uuid` on certain OSs. Patch by Chaim Sanders
- [gh-98686](https://github.com/python/cpython/issues/98686) [https://github.com/python/cpython/issues/98686]: Quicken all code objects, and specialize adaptive bytecode instructions more aggressively.
- [gh-92119](https://github.com/python/cpython/issues/92119) [https://github.com/python/cpython/issues/92119]: Print exception class name instead of its string representation when raising errors from `ctypes` calls.
- [gh-91058](https://github.com/python/cpython/issues/91058) [https://github.com/python/cpython/issues/91058]: `ImportError` raised from failed `from <module> import <name>` now include suggestions for the value of `<name>` based on the available names in `<module>`. Patch by Pablo Galindo
- [gh-96793](https://github.com/python/cpython/issues/96793) [https://github.com/python/cpython/issues/96793]: The `FOR_ITER` now leaves the iterator on the stack on termination of the loop. This is to assist specialization of loops for generators.
- [gh-90716](https://github.com/python/cpython/issues/90716) [https://github.com/python/cpython/issues/90716]: Add `_pylong.py` module. It includes asymptotically faster algorithms that can be used for operations on integers with many digits. It is used by `longobject.c` to speed up some operations.
- [gh-95389](https://github.com/python/cpython/issues/95389) [https://github.com/python/cpython/issues/95389]: Expose `ETH_P_ALL` and some of the `ETHERTYPE_*` constants in `socket`. Patch by Noam Cohen.

- [gh-93696](https://github.com/python/cpython/issues/93696) [https://github.com/python/cpython/issues/93696]: Allow `pdb` to locate source for frozen modules in the standard library.

## Library

- [gh-99418](https://github.com/python/cpython/issues/99418) [https://github.com/python/cpython/issues/99418]: Fix bug in `urllib.parse.urlparse()` that causes URL schemes that begin with a digit, a plus sign, or a minus sign to be parsed incorrectly.
- [gh-94597](https://github.com/python/cpython/issues/94597) [https://github.com/python/cpython/issues/94597]: Deprecate `asyncio.AbstractChildWatcher` to be removed in Python 3.14. Patch by Kumar Aditya.
- [gh-99305](https://github.com/python/cpython/issues/99305) [https://github.com/python/cpython/issues/99305]: Improve performance of `secrets.token_hex()`.
- [gh-74044](https://github.com/python/cpython/issues/74044) [https://github.com/python/cpython/issues/74044]: Fixed bug where `inspect.signature()` reported incorrect arguments for decorated methods.
- [gh-99275](https://github.com/python/cpython/issues/99275) [https://github.com/python/cpython/issues/99275]: Fix `SystemError` in `ctypes` when exception was not set during `__init_subclass__`.
- [gh-99277](https://github.com/python/cpython/issues/99277) [https://github.com/python/cpython/issues/99277]: Remove older version of `_SSLProtocolTransport.get_write_buffer_limits` in `asyncio.sslproto`
- [gh-99248](https://github.com/python/cpython/issues/99248) [https://github.com/python/cpython/issues/99248]: fix negative numbers failing in `verify()`
- [gh-99155](https://github.com/python/cpython/issues/99155) [https://github.com/python/cpython/issues/99155]: Fix `statistics.NormalDist` pickle with 0 and 1 protocols.
- [gh-93464](https://github.com/python/cpython/issues/93464) [https://github.com/python/cpython/issues/93464]: `enum.auto()` is now correctly activated when combined with other assignment values. E.g. `ONE = auto(), 'some text'` will now evaluate as `(1, 'some text')`.
- [gh-99134](https://github.com/python/cpython/issues/99134) [https://github.com/python/cpython/issues/99134]: Update the bundled copy of pip to version 22.3.1.
- [gh-92584](https://github.com/python/cpython/issues/92584) [https://github.com/python/cpython/issues/92584]: Remove the `distutils` package. It was deprecated in Python 3.10 by [PEP 632](https://peps.python.org/pep-0632/) [https://peps.python.org/pep-0632/] “Deprecate `distutils` module”. For projects still using `distutils` and cannot be updated to something else, the `setuptools`

project can be installed: it still provides `distutils`. Patch by Victor Stinner.

- [gh-98999](https://github.com/python/cpython/issues/98999) [https://github.com/python/cpython/issues/98999]: Now `_pyio` is consistent with `_io` in raising `ValueError` when executing methods over closed buffers.
- [gh-83004](https://github.com/python/cpython/issues/83004) [https://github.com/python/cpython/issues/83004]: Clean up reflink on failed module initialisation in `_zoneinfo`
- [gh-83004](https://github.com/python/cpython/issues/83004) [https://github.com/python/cpython/issues/83004]: Clean up reflinks on failed module initialisation in `_pickle`
- [gh-83004](https://github.com/python/cpython/issues/83004) [https://github.com/python/cpython/issues/83004]: Clean up reflink on failed module initialisation in `_io`.
- [gh-98897](https://github.com/python/cpython/issues/98897) [https://github.com/python/cpython/issues/98897]: Fix memory leak in `math.dist()` when both points don't have the same dimension. Patch by Kumar Aditya.
- [gh-98878](https://github.com/python/cpython/issues/98878) [https://github.com/python/cpython/issues/98878]: Use the frame bound builtins when offering a name suggestion in `traceback` to prevent crashing when `__builtins__` is not a dict.
- [gh-98139](https://github.com/python/cpython/issues/98139) [https://github.com/python/cpython/issues/98139]: In `importlib._bootstrap`, enhance namespace package repr to `<module 'x' (namespace) from ['path']>`.
- [gh-90352](https://github.com/python/cpython/issues/90352) [https://github.com/python/cpython/issues/90352]: Fix `_SelectorDatagramTransport` to inherit from `DatagramTransport` in `asyncio`. Patch by Kumar Aditya.
- [gh-98793](https://github.com/python/cpython/issues/98793) [https://github.com/python/cpython/issues/98793]: Fix argument typechecks in `_overlapped.WSACconnect()` and `_overlapped.Overlapped.WSASendTo()` functions.
- [gh-98744](https://github.com/python/cpython/issues/98744) [https://github.com/python/cpython/issues/98744]: Prevent crashing in `traceback` when retrieving the byte-offset for some source files that contain certain unicode characters.
- [gh-98740](https://github.com/python/cpython/issues/98740) [https://github.com/python/cpython/issues/98740]: Fix internal error in the `re` module which in very rare circumstances prevented compilation of a regular expression containing a `conditional expression` without the “else” branch.
- [gh-98703](https://github.com/python/cpython/issues/98703) [https://github.com/python/cpython/issues/98703]: Fix `asyncio.StreamWriter.drain()` to call `protocol.connection_lost` callback only once on Windows.
- [gh-98624](https://github.com/python/cpython/issues/98624) [https://github.com/python/cpython/issues/98624]: Add a

mutex to `unittest.mock.NonCallableMock` to protect concurrent access to mock attributes.

- [gh-98658](https://github.com/python/cpython/issues/98658) [https://github.com/python/cpython/issues/98658]: The `array.array` class now supports subscripting, making it a generic type.
- [gh-98284](https://github.com/python/cpython/issues/98284) [https://github.com/python/cpython/issues/98284]: Improved `TypeError` message for undefined abstract methods of a `abc.ABC` instance. The names of the missing methods are surrounded by single-quotes to highlight them.
- [gh-96151](https://github.com/python/cpython/issues/96151) [https://github.com/python/cpython/issues/96151]: Allow `BUILTINS` to be a valid field name for frozen dataclasses.
- [gh-98086](https://github.com/python/cpython/issues/98086) [https://github.com/python/cpython/issues/98086]: Make sure `patch.dict()` can be applied on async functions.
- [gh-72719](https://github.com/python/cpython/issues/72719) [https://github.com/python/cpython/issues/72719]: Remove modules `asyncore` and `asynchat`, which were deprecated by [PEP 594](https://peps.python.org/pep-0594/) [https://peps.python.org/pep-0594/].
- [gh-96192](https://github.com/python/cpython/issues/96192) [https://github.com/python/cpython/issues/96192]: Fix handling of bytes path-like objects in `os.ismount()`.
- [gh-94172](https://github.com/python/cpython/issues/94172) [https://github.com/python/cpython/issues/94172]: `ftplib`: Remove the `FTP_TLS.ssl_version` class attribute: use the `context` parameter instead. Patch by Victor Stinner
- [gh-94172](https://github.com/python/cpython/issues/94172) [https://github.com/python/cpython/issues/94172]: Remove the `keyfile` and `certfile` parameters from the `ftplib`, `imaplib`, `poplib` and `smtplib` modules, and the `key_file`, `cert_file` and `check_hostname` parameters from the `http.client` module, all deprecated since Python 3.6. Use the `context` parameter (`ssl_context` in `imaplib`) instead. Patch by Victor Stinner.
- [gh-83638](https://github.com/python/cpython/issues/83638) [https://github.com/python/cpython/issues/83638]: Add the `autocommit` attribute to `sqlite3.Connection` and the `autocommit` parameter to `sqlite3.connect()` to control [PEP 249](https://peps.python.org/pep-0249/) [https://peps.python.org/pep-0249/]-compliant transaction handling. Patch by Erlend E. Aasland.
- [gh-92452](https://github.com/python/cpython/issues/92452) [https://github.com/python/cpython/issues/92452]: Fixed a race condition that could cause `sysconfig.get_config_var()` to incorrectly return `None` in multi-threaded programs.
- [gh-91803](https://github.com/python/cpython/issues/91803) [https://github.com/python/cpython/issues/91803]: Fix an error when using a method of objects mocked with

`unittest.mock.create_autospec()` after it was sealed with `unittest.mock.seal()` function.

- [bpo-38523](https://bugs.python.org/issue?@action=redirect&bpo=38523) [https://bugs.python.org/issue?@action=redirect&bpo=38523]: `shutil.copytree()` now applies the *ignore\_dangling\_symlinks* argument recursively.
- [bpo-40358](https://bugs.python.org/issue?@action=redirect&bpo=40358) [https://bugs.python.org/issue?@action=redirect&bpo=40358]: Add `walk_up` argument in `pathlib.PurePath.relative_to()`.
- [bpo-36267](https://bugs.python.org/issue?@action=redirect&bpo=36267) [https://bugs.python.org/issue?@action=redirect&bpo=36267]: Fix `IndexError` in `argparse.ArgumentParser` when a `store_true` action is given an explicit argument.

## Documentation

- [gh-98832](https://github.com/python/cpython/issues/98832) [https://github.com/python/cpython/issues/98832]: Changes wording of docstring for `pathlib.Path.iterdir()`.
- [gh-97966](https://github.com/python/cpython/issues/97966) [https://github.com/python/cpython/issues/97966]: Update `uname` docs to clarify the special nature of the `platform` attribute and to indicate when it became late-bound.

## Tests

- [gh-98903](https://github.com/python/cpython/issues/98903) [https://github.com/python/cpython/issues/98903]: The Python test suite now fails with exit code 4 if no tests ran. It should help detecting typos in test names and test methods.
- [gh-98713](https://github.com/python/cpython/issues/98713) [https://github.com/python/cpython/issues/98713]: Fix a bug in the `typing` tests where a test relying on CPython-specific implementation details was not decorated with `@cpython_only` and was not skipped on other implementations.
- [gh-87390](https://github.com/python/cpython/issues/87390) [https://github.com/python/cpython/issues/87390]: Add tests for star-unpacking with PEP 646, and some other miscellaneous PEP 646 tests.
- [gh-96853](https://github.com/python/cpython/issues/96853) [https://github.com/python/cpython/issues/96853]: Added explicit coverage of `Py_Initialize` (and hence `Py_InitializeEx`) back to the embedding tests (all other embedding tests migrated to `Py_InitializeFromConfig` in Python 3.11)
- [bpo-34272](https://bugs.python.org/issue?@action=redirect&bpo=34272) [https://bugs.python.org/issue?@action=redirect&bpo=34272]

@action=redirect&bpo=34272]: Some C API tests were moved into the new Lib/test/test\_capi/ directory.

## Build

- [gh-99086](https://github.com/python/cpython/issues/99086) [https://github.com/python/cpython/issues/99086]: Fix `Wimplicit-int` compiler warning in **configure** check for `PTHREAD_SCOPE_SYSTEM`.
- [gh-99016](https://github.com/python/cpython/issues/99016) [https://github.com/python/cpython/issues/99016]: Fix build with `PYTHON_FOR_REGEN=python3.8`.
- [gh-97731](https://github.com/python/cpython/issues/97731) [https://github.com/python/cpython/issues/97731]: Specify the full path to the source location for `make docclean` (needed for cross-builds).
- [gh-98949](https://github.com/python/cpython/issues/98949) [https://github.com/python/cpython/issues/98949]: Drop unused build dependency on `readelf`.
- [gh-98989](https://github.com/python/cpython/issues/98989) [https://github.com/python/cpython/issues/98989]: Use `python3.11`, if available, for regeneration and freezing.
- [gh-98831](https://github.com/python/cpython/issues/98831) [https://github.com/python/cpython/issues/98831]: Add new tooling, in `Tools/cases_generator`, to generate the interpreter switch statement from a list of opcode definitions. This only affects adding, modifying or removing instruction definitions. The instruction definitions now live in `Python/bytecodes.c`, in the form of a [custom DSL \(under development\)](https://github.com/faster-cpython/ideas/blob/main/3.12/interpreter_definition.md) [https://github.com/faster-cpython/ideas/blob/main/3.12/interpreter\_definition.md]. The tooling reads this file and writes `Python/generated_cases.c.h`, which is then included by `Python/ceval.c` to provide most of the cases of the main interpreter switch.
- [gh-98817](https://github.com/python/cpython/issues/98817) [https://github.com/python/cpython/issues/98817]: Remove `PCbuild/lib.pyproj`: it's not used for anything, is only a minor convenience for Visual Studio users (who probably mostly don't even know about it), and it takes a lot of maintenance effort to keep updated.
- [gh-98776](https://github.com/python/cpython/issues/98776) [https://github.com/python/cpython/issues/98776]: Fix `make regen-test-levenshtein` for out-of-tree builds.
- [gh-98707](https://github.com/python/cpython/issues/98707) [https://github.com/python/cpython/issues/98707]: Don't use vendored `libmpdec` headers if **--with-system-libmpdec** is passed to **configure**. Don't use vendored `libexpat` headers if **--with-system-expat** is passed to **configure**.

## Windows

- [gh-98689](https://github.com/python/cpython/issues/98689) [https://github.com/python/cpython/issues/98689]: Update Windows builds to zlib v1.2.13. v1.2.12 has CVE-2022-37434, but the vulnerable `inflateGetHeader` API is not used by Python.
- [gh-98790](https://github.com/python/cpython/issues/98790) [https://github.com/python/cpython/issues/98790]: Assumes that a missing `DLLs` directory means that standard extension modules are in the executable's directory.
- [gh-98745](https://github.com/python/cpython/issues/98745) [https://github.com/python/cpython/issues/98745]: Update `py.exe` launcher to install 3.11 by default and 3.12 on request.
- [gh-98692](https://github.com/python/cpython/issues/98692) [https://github.com/python/cpython/issues/98692]: Fix the [Python Launcher for Windows](#) ignoring unrecognized shebang lines instead of treating them as local paths
- [gh-94328](https://github.com/python/cpython/issues/94328) [https://github.com/python/cpython/issues/94328]: Update Windows installer to use SQLite 3.39.4.

## macOS

- [gh-94328](https://github.com/python/cpython/issues/94328) [https://github.com/python/cpython/issues/94328]: Update macOS installer to SQLite 3.39.4.

## C API

- [gh-98724](https://github.com/python/cpython/issues/98724) [https://github.com/python/cpython/issues/98724]: The `Py_CLEAR`, `Py_SETREF` and `Py_XSETREF` macros now only evaluate their argument once. If the argument has side effects, these side effects are no longer duplicated. Patch by Victor Stinner.
- [gh-98978](https://github.com/python/cpython/issues/98978) [https://github.com/python/cpython/issues/98978]: Fix use-after-free in `Py_SetPythonHome(NULL)`, `Py_SetProgramName(NULL)` and `_Py_SetProgramFullPath(NULL)` function calls. Issue reported by Benedikt Reinartz. Patch by Victor Stinner.
- [gh-98410](https://github.com/python/cpython/issues/98410) [https://github.com/python/cpython/issues/98410]: Add `getbufferproc` and `releasebufferproc` to the stable API.
- [gh-98610](https://github.com/python/cpython/issues/98610) [https://github.com/python/cpython/issues/98610]: Some configurable capabilities of sub-interpreters have changed.

They always allow subprocesses ([subprocess](#)) now, whereas before subprocesses could be optionally disallowed for a sub-interpreter. Instead `os.exec()` can now be disallowed. Disallowing daemon threads is now supported. Disallowing all threads is still allowed, but is never done by default. Note that the optional restrictions are only available through `_Py_NewInterpreterFromConfig()`, which isn't a public API. They do not affect the main interpreter, nor [Py\\_NewInterpreter\(\)](#).

- [gh-98608](#) [<https://github.com/python/cpython/issues/98608>]: A `_PyInterpreterConfig` has been added and `_Py_NewInterpreter()` has been renamed to `_Py_NewInterpreterFromConfig()`. The “isolated\_subinterpreters” argument is now a granular config that captures the previous behavior. Note that this is all “private” API.
- [gh-96853](#) [<https://github.com/python/cpython/issues/96853>]: `Py_InitializeEx` now correctly calls `PyConfig_Clear` after initializing the interpreter (the omission didn't cause a memory leak only because none of the dynamically allocated config fields are populated by the wrapper function)
- [gh-91248](#) [<https://github.com/python/cpython/issues/91248>]: Add [PyFrame\\_GetVar\(\)](#) and [PyFrame\\_GetVarString\(\)](#) functions to get a frame variable by its name. Patch by Victor Stinner.

## Python 3.12.0 alpha 1

*Release date: 2022-10-25*

### Security

- [gh-97616](#) [<https://github.com/python/cpython/issues/97616>]: Fix multiplying a list by an integer (`list *= int`): detect the integer overflow when the new allocated length is close to the maximum size. Issue reported by Jordan Limor. Patch by Victor Stinner.
- [gh-97514](#) [<https://github.com/python/cpython/issues/97514>]: On

Linux the [multiprocessing](#) module returns to using filesystem backed unix domain sockets for communication with the *forkserver* process instead of the Linux abstract socket namespace. Only code that chooses to use the “*forkserver*” [start method](#) is affected.

Abstract sockets have no permissions and could allow any user on the system in the same [network namespace](#) [https://man7.org/linux/man-pages/man7/network\_namespaces.7.html] (often the whole system) to inject code into the multiprocessing *forkserver* process. This was a potential privilege escalation. Filesystem based socket permissions restrict this to the *forkserver* process user as was the default in Python 3.8 and earlier.

This prevents Linux [CVE-2022-42919](#) [https://cve.mitre.org/cgi-bin/cvename.cgi?name=CVE-2022-42919].

- [gh-87389](#) [https://github.com/python/cpython/issues/87389]: **http.server**: Fix an open redirection vulnerability in the HTTP server when an URI path starts with `//`. Vulnerability discovered, and initial fix proposed, by Hamza Avvan.
- [gh-79096](#) [https://github.com/python/cpython/issues/79096]: LWPCookieJar and MozillaCookieJar create files with file mode 600 instead of 644 (Microsoft Windows is not affected)
- [gh-92888](#) [https://github.com/python/cpython/issues/92888]: Fix `memoryview` use after free when accessing the backing buffer in certain cases.
- [gh-68966](#) [https://github.com/python/cpython/issues/68966]: The deprecated `mailcap` module now refuses to inject unsafe text (filenames, MIME types, parameters) into shell commands. Instead of using such text, it will warn and act as if a match was not found (or for test commands, as if the test failed).

## Core and Builtins

- [gh-98374](#) [https://github.com/python/cpython/issues/98374]: Suppress `ImportError` for invalid query for `help()` command. Patch by

Donghee Na.

- [gh-98461](https://github.com/python/cpython/issues/98461) [https://github.com/python/cpython/issues/98461]: Fix source location in bytecode for list, set and dict comprehensions as well as generator expressions.
- [gh-98354](https://github.com/python/cpython/issues/98354) [https://github.com/python/cpython/issues/98354]: Added unicode check for `name` attribute of `spec` argument passed in `_imp.create_builtin()` function.
- [gh-98398](https://github.com/python/cpython/issues/98398) [https://github.com/python/cpython/issues/98398]: Fix source location of ‘assert’ bytecodes.
- [gh-98390](https://github.com/python/cpython/issues/98390) [https://github.com/python/cpython/issues/98390]: Fix location of sub-expressions of boolean expressions, by reducing their scope to that of the sub-expression.
- [gh-98254](https://github.com/python/cpython/issues/98254) [https://github.com/python/cpython/issues/98254]: Modules from the standard library are now potentially suggested as part of the error messages displayed by the interpreter when an `NameError` is raised to the top level. Patch by Pablo Galindo
- [gh-97997](https://github.com/python/cpython/issues/97997) [https://github.com/python/cpython/issues/97997]: Add running column offset to the tokenizer state to avoid calculating AST column information with pointer arithmetic.
- [gh-97973](https://github.com/python/cpython/issues/97973) [https://github.com/python/cpython/issues/97973]: Modify the tokenizer to return all necessary information the parser needs to set location information in the AST nodes, so that the parser does not have to calculate those doing pointer arithmetic.
- [gh-96078](https://github.com/python/cpython/issues/96078) [https://github.com/python/cpython/issues/96078]: `os.sched_yield()` now release the GIL while calling `sched_yield(2)`. Patch by Donghee Na.
- [gh-97955](https://github.com/python/cpython/issues/97955) [https://github.com/python/cpython/issues/97955]: Migrate `zoneinfo` to Argument Clinic.
- [gh-97912](https://github.com/python/cpython/issues/97912) [https://github.com/python/cpython/issues/97912]: The compiler now avoids quadratic behavior when finding which

instructions should use the `LOAD_FAST_CHECK` opcode.

- [gh-97002](https://github.com/python/cpython/issues/97002) [https://github.com/python/cpython/issues/97002]: Fix an issue where several frame objects could be backed by the same interpreter frame, possibly leading to corrupted memory and hard crashes of the interpreter.
- [gh-97943](https://github.com/python/cpython/issues/97943) [https://github.com/python/cpython/issues/97943]: Bugfix: `PyFunction_GetAnnotations()` should return a borrowed reference. It was returning a new reference.
- [gh-97922](https://github.com/python/cpython/issues/97922) [https://github.com/python/cpython/issues/97922]: The Garbage Collector now runs only on the eval breaker mechanism of the Python bytecode evaluation loop instead on object allocations. The GC can also run when `PyErr_CheckSignals()` is called so C extensions that need to run for a long time without executing any Python code also have a chance to execute the GC periodically.
- [gh-65961](https://github.com/python/cpython/issues/65961) [https://github.com/python/cpython/issues/65961]: When `__package__` is different than `__spec__.parent`, raise a `DeprecationWarning` instead of `ImportWarning`.

Also remove `importlib.util.set_package()` which was scheduled for removal.

- [gh-97850](https://github.com/python/cpython/issues/97850) [https://github.com/python/cpython/issues/97850]: Long deprecated, `module_repr()` should now be completely eradicated.
- [gh-86298](https://github.com/python/cpython/issues/86298) [https://github.com/python/cpython/issues/86298]: In cases where `warnings.warn_explicit()` consults the module's loader, an `DeprecationWarning` is issued when `m.__loader__` differs from `m.__spec__.loader`.
- [gh-97779](https://github.com/python/cpython/issues/97779) [https://github.com/python/cpython/issues/97779]: Ensure that all Python frame objects are backed by “complete” frames.
- [gh-91052](https://github.com/python/cpython/issues/91052) [https://github.com/python/cpython/issues/91052]: Add API for subscribing to modification events on selected

dictionaries.

- [gh-97752](https://github.com/python/cpython/issues/97752) [https://github.com/python/cpython/issues/97752]: Fix possible data corruption or crashes when accessing the `f_back` member of newly-created generator or coroutine frames.
- [gh-97591](https://github.com/python/cpython/issues/97591) [https://github.com/python/cpython/issues/97591]: Fixed a missing `incref/decref` pair in `Exception.__setstate__()`. Patch by Ofey Chan.
- [gh-97670](https://github.com/python/cpython/issues/97670) [https://github.com/python/cpython/issues/97670]: Remove the `sys.getdxdp()` function and the `Tools/scripts/analyze_dxp.py` script. DXP stands for “dynamic execution pairs”. They were related to `DYNAMIC_EXECUTION_PROFILE` and `DXPAIRS` macros which have been removed in Python 3.11. Python can now be built with `./configure --enable-pystats` to gather statistics on Python opcodes. Patch by Victor Stinner.
- [gh-94526](https://github.com/python/cpython/issues/94526) [https://github.com/python/cpython/issues/94526]: Fix the Python path configuration used to initialize `sys.path` at Python startup. Paths are no longer encoded to UTF-8/strict to avoid encoding errors if it contains surrogate characters (bytes paths are decoded with the surrogateescape error handler). Patch by Victor Stinner.
- [gh-96670](https://github.com/python/cpython/issues/96670) [https://github.com/python/cpython/issues/96670]: The parser now raises `SyntaxError` when parsing source code containing null bytes. Patch by Pablo Galindo
- [gh-96975](https://github.com/python/cpython/issues/96975) [https://github.com/python/cpython/issues/96975]: Fix a crash occurring when `PyEval_GetFrame()` is called while the topmost Python frame is in a partially-initialized state.
- [gh-96848](https://github.com/python/cpython/issues/96848) [https://github.com/python/cpython/issues/96848]: Fix command line parsing: reject `-X int_max_str_digits` option with no value (invalid) when the `PYTHONINTMAXSTRDIGITS` environment variable is set to a valid limit. Patch by Victor Stinner.

- [gh-95921](https://github.com/python/cpython/issues/95921) [https://github.com/python/cpython/issues/95921]: Fix overly-broad source position information for chained comparisons used as branching conditions.
- [gh-96821](https://github.com/python/cpython/issues/96821) [https://github.com/python/cpython/issues/96821]: Fix undefined behaviour in `audioop.c`.
- [gh-96821](https://github.com/python/cpython/issues/96821) [https://github.com/python/cpython/issues/96821]: Fix undefined behaviour in `_testcapimodule.c`.
- [gh-95778](https://github.com/python/cpython/issues/95778) [https://github.com/python/cpython/issues/95778]: When `ValueError` is raised if an integer is larger than the limit, mention the `sys.set_int_max_str_digits()` function in the error message. Patch by Victor Stinner.
- [gh-96387](https://github.com/python/cpython/issues/96387) [https://github.com/python/cpython/issues/96387]: At Python exit, sometimes a thread holding the GIL can wait forever for a thread (usually a daemon thread) which requested to drop the GIL, whereas the thread already exited. To fix the race condition, the thread which requested the GIL drop now resets its request before exiting. Issue discovered and analyzed by Mingliang ZHAO. Patch by Victor Stinner.
- [gh-96864](https://github.com/python/cpython/issues/96864) [https://github.com/python/cpython/issues/96864]: Fix a possible assertion failure, fatal error, or `SystemError` if a line tracing event raises an exception while opcode tracing is enabled.
- [gh-95778](https://github.com/python/cpython/issues/95778) [https://github.com/python/cpython/issues/95778]: The `PyLong_FromString` function was refactored to make it more maintainable and extensible.
- [gh-96678](https://github.com/python/cpython/issues/96678) [https://github.com/python/cpython/issues/96678]: Fix undefined behaviour in C code of null pointer arithmetic.
- [gh-96754](https://github.com/python/cpython/issues/96754) [https://github.com/python/cpython/issues/96754]: Make sure that all frame objects created are created from valid interpreter frames. Prevents the possibility of invalid frames in backtraces and signal handlers.
- [gh-90997](https://github.com/python/cpython/issues/90997) [https://github.com/python/cpython/issues/90997]: Improve

the performance of reading and writing inline bytecode caches on some platforms.

- [gh-96751](https://github.com/python/cpython/issues/96751) [https://github.com/python/cpython/issues/96751]: Remove dead code from `CALL_FUNCTION_EX` opcode.
- [gh-90751](https://github.com/python/cpython/issues/90751) [https://github.com/python/cpython/issues/90751]: `memoryview` now supports half-floats. Patch by Donghee Na and Antoine Pitrou.
- [gh-96678](https://github.com/python/cpython/issues/96678) [https://github.com/python/cpython/issues/96678]: Fix case of undefined behavior in `ceval.c`
- [gh-64373](https://github.com/python/cpython/issues/64373) [https://github.com/python/cpython/issues/64373]: Convert `_functools` to argument clinic.
- [gh-96641](https://github.com/python/cpython/issues/96641) [https://github.com/python/cpython/issues/96641]: Do not expose `KeyWrapper` in `_functools`.
- [gh-96636](https://github.com/python/cpython/issues/96636) [https://github.com/python/cpython/issues/96636]: Ensure that tracing, `sys.settrace()`, is turned on immediately. In pre-release versions of 3.11, some tracing events might have been lost when turning on tracing in a `__del__` method or interrupt.
- [gh-96572](https://github.com/python/cpython/issues/96572) [https://github.com/python/cpython/issues/96572]: Fix use after free in trace refs build mode. Patch by Kumar Aditya.
- [gh-96611](https://github.com/python/cpython/issues/96611) [https://github.com/python/cpython/issues/96611]: When loading a file with invalid UTF-8 inside a multi-line string, a correct `SyntaxError` is emitted.
- [gh-96612](https://github.com/python/cpython/issues/96612) [https://github.com/python/cpython/issues/96612]: Make sure that incomplete frames do not show up in `tracemalloc` traces.
- [gh-90230](https://github.com/python/cpython/issues/90230) [https://github.com/python/cpython/issues/90230]: Fix compiler warnings and test failures when building with `--enable-pystats`.
- [gh-96587](https://github.com/python/cpython/issues/96587) [https://github.com/python/cpython/issues/96587]: Correctly raise `SyntaxError` on exception groups ([PEP 654](#))

[<https://peps.python.org/pep-0654/>] on python versions prior to 3.11

- [gh-96569](#) [<https://github.com/python/cpython/issues/96569>]: Remove two cases of undefined behaviour, by adding NULL checks.
- [gh-96582](#) [<https://github.com/python/cpython/issues/96582>]: Fix possible NULL pointer dereference in `_PyThread_CurrentFrames`. Patch by Kumar Aditya.
- [gh-91079](#) [<https://github.com/python/cpython/issues/91079>]: Separate Python recursion checking from C recursion checking which reduces the chance of C stack overflow and allows the recursion limit to be increased safely.
- [gh-93911](#) [<https://github.com/python/cpython/issues/93911>]: Fix an issue that could prevent `LOAD_ATTR` from specializing properly when accessing properties.
- [gh-96348](#) [<https://github.com/python/cpython/issues/96348>]: Emit a DeprecationWarning when `throw()`, `throw()` or `athrow()` are called with more than one argument.
- [gh-95196](#) [<https://github.com/python/cpython/issues/95196>]: Disable incorrect pickling of the C implemented classmethod descriptors.
- [gh-96364](#) [<https://github.com/python/cpython/issues/96364>]: Fix text signatures of `list.__getitem__` and `dict.__getitem__`.
- [gh-96352](#) [<https://github.com/python/cpython/issues/96352>]: Fix `AttributeError` missing `name` and `obj` attributes in `object.__getattr__()`. Patch by Philip Georgi.
- [gh-93554](#) [<https://github.com/python/cpython/issues/93554>]: Change the jump opcodes so that all conditional jumps are forward jumps. Backward jumps are converted by the assembler into a conditional forward jump whose target is the fallthrough block (and with a reversed condition), followed by an unconditional backward jump. For example:

POP\_JUMP\_IF\_TRUE BACKWARD\_TARGET becomes  
POP\_JUMP\_IF\_FALSE NEXT\_BLOCK; JUMP  
BACKWARD\_TARGET.

All the directed conditional jump opcodes were removed:

POP\_JUMP\_FORWARD\_IF\_TRUE,  
POP\_JUMP\_BACKWARD\_IF\_TRUE,  
POP\_JUMP\_FORWARD\_IF\_FALSE,  
POP\_JUMP\_BACKWARD\_IF\_FALSE,  
POP\_JUMP\_FORWARD\_IF\_NONE,  
POP\_JUMP\_BACKWARD\_IF\_NONE,  
POP\_JUMP\_FORWARD\_IF\_NOT\_NONE,  
POP\_JUMP\_BACKWARD\_IF\_NOT\_NONE.

The corresponding opcodes without direction are no longer pseudo-instructions, and they implement the forward conditional jumps.

- [gh-96268](https://github.com/python/cpython/issues/96268) [https://github.com/python/cpython/issues/96268]: Loading a file with invalid UTF-8 will now report the broken character at the correct location.
- [gh-96237](https://github.com/python/cpython/issues/96237) [https://github.com/python/cpython/issues/96237]: The internal field `_PyInterpreterFrame.f_func` is renamed to `_PyInterpreterFrame.f_funcobj` and may be any object. The `f_globals` and `f_builtin` fields may hold junk values.

It is safest to treat the `_PyInterpreterFrame` struct as opaque.

- [gh-96187](https://github.com/python/cpython/issues/96187) [https://github.com/python/cpython/issues/96187]: Fixed a bug that caused `_PyCode_GetExtra` to return garbage for negative indexes. Patch by Pablo Galindo
- [gh-96143](https://github.com/python/cpython/issues/96143) [https://github.com/python/cpython/issues/96143]: Add a new `-X perf Python` command line option as well as `sys.activate_stack_trampoline()` and `sys.deactivate_stack_trampoline()` function in the `sys` module that allows to set/unset the interpreter in a way that the Linux `perf` profiler can detect Python calls. The

new `sys.is_stack_trampoline_active()` function allows to query the state of the perf trampoline. Design by Pablo Galindo. Patch by Pablo Galindo and Christian Heimes with contributions from Gregory P. Smith [Google] and Mark Shannon.

- [gh-96071](https://github.com/python/cpython/issues/96071) [https://github.com/python/cpython/issues/96071]: Fix a deadlock in `PyGILState_Ensure()` when allocating new thread state. Patch by Kumar Aditya.
- [gh-96046](https://github.com/python/cpython/issues/96046) [https://github.com/python/cpython/issues/96046]: `PyType_Ready()` now initializes `ht_cached_keys` and performs additional checks to ensure that type objects are properly configured. This avoids crashes in 3rd party packages that don't use regular API to create new types.
- [gh-96005](https://github.com/python/cpython/issues/96005) [https://github.com/python/cpython/issues/96005]: On WASI `ENOTCAPABLE` is now mapped to `PermissionError`. The `errno` module exposes the new error number. `getpath.py` now ignores `PermissionError` when it cannot open landmark files `pybuilddir.txt` and `pyenv.cfg`.
- [gh-93678](https://github.com/python/cpython/issues/93678) [https://github.com/python/cpython/issues/93678]: Added test a harness for direct unit tests of the compiler's optimization stage. The `_testinternalcapi.optimize_cfg()` function runs the optimiser on a sequence of instructions. The `CfgOptimizationTestCase` class in `test.support` has utilities for invoking the optimizer and checking the output.
- [gh-95245](https://github.com/python/cpython/issues/95245) [https://github.com/python/cpython/issues/95245]: Reduces the size of a "simple" Python object from 8 to 6 words by moving the weakreflist pointer into the pre-header directly before the object's dict/values pointer.
- [gh-90997](https://github.com/python/cpython/issues/90997) [https://github.com/python/cpython/issues/90997]: Compile virtual `try/except` blocks to handle exceptions raised during `close()` or `throw()` calls through a suspended frame.

- [gh-95977](https://github.com/python/cpython/issues/95977) [https://github.com/python/cpython/issues/95977]: Optimized calling `__get__()` with vectorcall. Patch by Kumar Aditya.
- [gh-91210](https://github.com/python/cpython/issues/91210) [https://github.com/python/cpython/issues/91210]: Improve error message when a parameter without a default value follows one with a default value, and show the same message, even when the non-default/default sequence is preceded by positional-only parameters.
- [gh-95922](https://github.com/python/cpython/issues/95922) [https://github.com/python/cpython/issues/95922]: Fixed bug where the compiler's `eliminate_empty_basic_blocks` function ignores the last block of the code unit.
- [gh-95818](https://github.com/python/cpython/issues/95818) [https://github.com/python/cpython/issues/95818]: Skip over incomplete frames in `PyThreadState_GetFrame()`.
- [gh-95876](https://github.com/python/cpython/issues/95876) [https://github.com/python/cpython/issues/95876]: Fix format string in `_PyPegen_raise_error_known_location` that can lead to memory corruption on some 64bit systems. The function was building a tuple with `i` (int) instead of `n` (Py\_ssize\_t) for `Py_ssize_t` arguments.
- [gh-95605](https://github.com/python/cpython/issues/95605) [https://github.com/python/cpython/issues/95605]: Fix misleading contents of error message when converting an all-whitespace string to `float`.
- [gh-95150](https://github.com/python/cpython/issues/95150) [https://github.com/python/cpython/issues/95150]: Update code object hashing and equality to consider all debugging and exception handling tables. This fixes an issue where certain non-identical code objects could be “deduplicated” during compilation.
- [gh-91146](https://github.com/python/cpython/issues/91146) [https://github.com/python/cpython/issues/91146]: Reduce allocation size of `list` from `str.split()` and `str.rsplit()`. Patch by Donghee Na and Inada Naoki.
- [gh-87092](https://github.com/python/cpython/issues/87092) [https://github.com/python/cpython/issues/87092]: Create a ‘jump target label’ abstraction in the compiler so that the

compiler's codegen stage does not work directly with basic blocks. This prepares the code for changes to the underlying CFG generation mechanism.

- [gh-95355](https://github.com/python/cpython/issues/95355) [https://github.com/python/cpython/issues/95355]: `_PyPegen_Parser_New` now properly detects token memory allocation errors. Patch by Honglin Zhu.
- [gh-90081](https://github.com/python/cpython/issues/90081) [https://github.com/python/cpython/issues/90081]: Run Python code in tracer/profiler function at full speed. Fixes slowdown in earlier versions of 3.11.
- [gh-95324](https://github.com/python/cpython/issues/95324) [https://github.com/python/cpython/issues/95324]: Emit a warning in debug mode if an object does not call `PyObject_GC_UnTrack()` before deallocation. Patch by Pablo Galindo.
- [gh-95245](https://github.com/python/cpython/issues/95245) [https://github.com/python/cpython/issues/95245]: Merge managed dict and values pointer into a single tagged pointer to save one word in the pre-header.
- [gh-93678](https://github.com/python/cpython/issues/93678) [https://github.com/python/cpython/issues/93678]: Add `cfg_builder` struct and refactor the relevant code so that a `cfg` can be constructed without an instance of the compiler struct.
- [gh-95185](https://github.com/python/cpython/issues/95185) [https://github.com/python/cpython/issues/95185]: Prevented crashes in the AST constructor when compiling some absurdly long expressions like `" +0 " * 1000000`. `RecursionError` is now raised instead. Patch by Pablo Galindo
- [gh-93351](https://github.com/python/cpython/issues/93351) [https://github.com/python/cpython/issues/93351]: `ast.AST` node positions are now validated when provided to `compile()` and other related functions. If invalid positions are detected, a `ValueError` will be raised.
- [gh-94438](https://github.com/python/cpython/issues/94438) [https://github.com/python/cpython/issues/94438]: Fix an issue that caused extended opcode arguments and some conditional pops to be ignored when calculating valid jump targets for assignments to the `f_lineno` attribute of frame objects. In some cases, this could cause inconsistent internal

state, resulting in a hard crash of the interpreter.

- [gh-95060](https://github.com/python/cpython/issues/95060) [https://github.com/python/cpython/issues/95060]: Undocumented `PyCode_Addr2Location` function now properly returns when `addrq` argument is less than zero.
- [gh-95113](https://github.com/python/cpython/issues/95113) [https://github.com/python/cpython/issues/95113]: Replace all `EXTENDED_ARG_QUICK` instructions with basic `EXTENDED_ARG` instructions in unquickenened code. Consumers of non-adaptive bytecode should be able to handle extended arguments the same way they were handled in CPython 3.10 and older.
- [gh-91409](https://github.com/python/cpython/issues/91409) [https://github.com/python/cpython/issues/91409]: Fix incorrect source location info caused by certain optimizations in the bytecode compiler.
- [gh-95023](https://github.com/python/cpython/issues/95023) [https://github.com/python/cpython/issues/95023]: Implement `os.setns()` and `os.unshare()` for Linux. Patch by Noam Cohen.
- [gh-94036](https://github.com/python/cpython/issues/94036) [https://github.com/python/cpython/issues/94036]: Fix incorrect source location info for some multi-line attribute accesses and method calls.
- [gh-94938](https://github.com/python/cpython/issues/94938) [https://github.com/python/cpython/issues/94938]: Fix error detection in some builtin functions when keyword argument name is an instance of a str subclass with overloaded `__eq__` and `__hash__`. Previously it could cause `SystemError` or other undesired behavior.
- [gh-94996](https://github.com/python/cpython/issues/94996) [https://github.com/python/cpython/issues/94996]: `ast.parse()` will no longer parse function definitions with positional-only params when passed `feature_version` less than `(3, 8)`. Patch by Shantanu Jain.
- [gh-94739](https://github.com/python/cpython/issues/94739) [https://github.com/python/cpython/issues/94739]: Allow jumping within, out of, and across exception handlers in the debugger.
- [gh-94949](https://github.com/python/cpython/issues/94949) [https://github.com/python/cpython/issues/94949]:

`ast.parse()` will no longer parse parenthesized context managers when passed `feature_version` less than `(3, 9)`. Patch by Shantanu Jain.

- [gh-94947](https://github.com/python/cpython/issues/94947) [https://github.com/python/cpython/issues/94947]: `ast.parse()` will no longer parse assignment expressions when passed `feature_version` less than `(3, 8)`. Patch by Shantanu Jain.
- [gh-91256](https://github.com/python/cpython/issues/91256) [https://github.com/python/cpython/issues/91256]: Ensures the program name is known for help text during interpreter startup.
- [gh-94869](https://github.com/python/cpython/issues/94869) [https://github.com/python/cpython/issues/94869]: Fix the column offsets for some expressions in multi-line f-strings `ast` nodes. Patch by Pablo Galindo.
- [gh-94893](https://github.com/python/cpython/issues/94893) [https://github.com/python/cpython/issues/94893]: Fix an issue where frame object manipulations could corrupt inline bytecode caches.
- [gh-94822](https://github.com/python/cpython/issues/94822) [https://github.com/python/cpython/issues/94822]: Fix an issue where lookups of metaclass descriptors may be ignored when an identically-named attribute also exists on the class itself.
- [gh-91153](https://github.com/python/cpython/issues/91153) [https://github.com/python/cpython/issues/91153]: Fix an issue where a `bytearray` item assignment could crash if it's resized by the new value's `__index__()` method.
- [gh-90699](https://github.com/python/cpython/issues/90699) [https://github.com/python/cpython/issues/90699]: Fix reference counting bug in `bool.__repr__()`. Patch by Kumar Aditya.
- [gh-94694](https://github.com/python/cpython/issues/94694) [https://github.com/python/cpython/issues/94694]: Fix an issue that could cause code with multi-line method lookups to have misleading or incorrect column offset information. In some cases (when compiling a hand-built AST) this could have resulted in a hard crash of the interpreter.
- [gh-93252](https://github.com/python/cpython/issues/93252) [https://github.com/python/cpython/issues/93252]: Fix an

issue that caused internal frames to outlive failed Python function calls, possibly resulting in memory leaks or hard interpreter crashes.

- [gh-94215](https://github.com/python/cpython/issues/94215) [https://github.com/python/cpython/issues/94215]: Fix an issue where exceptions raised by line-tracing events would cause frames to be left in an invalid state, possibly resulting in a hard crash of the interpreter.
- [gh-92228](https://github.com/python/cpython/issues/92228) [https://github.com/python/cpython/issues/92228]: Disable the compiler's inline-small-exit-blocks optimization for exit blocks that are associated with source code lines. This fixes a bug where the debugger cannot tell where an exception handler ends and the following code block begins.
- [gh-94485](https://github.com/python/cpython/issues/94485) [https://github.com/python/cpython/issues/94485]: Line number of a module's `RESUME` instruction is set to 0 as specified in [PEP 626](https://peps.python.org/pep-0626/) [https://peps.python.org/pep-0626/].
- [gh-94438](https://github.com/python/cpython/issues/94438) [https://github.com/python/cpython/issues/94438]: Account for instructions that can push NULL to the stack when setting line number in a frame. Prevents some (unlikely) crashes.
- [gh-91719](https://github.com/python/cpython/issues/91719) [https://github.com/python/cpython/issues/91719]: Reload opcode when raising unknown opcode error in the interpreter main loop, for C compilers to generate dispatching code independently.
- [gh-94329](https://github.com/python/cpython/issues/94329) [https://github.com/python/cpython/issues/94329]: Compile and run code with unpacking of extremely large sequences (1000s of elements). Such code failed to compile. It now compiles and runs correctly.
- [gh-94360](https://github.com/python/cpython/issues/94360) [https://github.com/python/cpython/issues/94360]: Fixed a tokenizer crash when reading encoded files with syntax errors from `stdin` with non utf-8 encoded text. Patch by Pablo Galindo
- [gh-88116](https://github.com/python/cpython/issues/88116) [https://github.com/python/cpython/issues/88116]: Fix an issue when reading line numbers from code objects if the encoded line numbers are close to `INT_MIN`. Patch by Pablo

## Galindo

- [gh-94262](https://github.com/python/cpython/issues/94262) [https://github.com/python/cpython/issues/94262]: Don't create frame objects for incomplete frames. Prevents the creation of generators and closures from being observable to Python and C extensions, restoring the behavior of 3.10 and earlier.
- [gh-94192](https://github.com/python/cpython/issues/94192) [https://github.com/python/cpython/issues/94192]: Fix error for dictionary literals with invalid expression as value.
- [gh-87995](https://github.com/python/cpython/issues/87995) [https://github.com/python/cpython/issues/87995]: **types.MappingProxyType** instances are now hashable if the underlying mapping is hashable.
- [gh-93883](https://github.com/python/cpython/issues/93883) [https://github.com/python/cpython/issues/93883]: Revise the display strategy of traceback enhanced error locations. The indicators are only shown when the location doesn't span the whole line.
- [gh-94163](https://github.com/python/cpython/issues/94163) [https://github.com/python/cpython/issues/94163]: Add **BINARY\_SLICE** and **STORE\_SLICE** instructions for more efficient handling and better specialization of slicing operations, where the slice is explicit in the source code.
- [gh-94021](https://github.com/python/cpython/issues/94021) [https://github.com/python/cpython/issues/94021]: Fix unreachable code warning in `Python/specialize.c`.
- [gh-93911](https://github.com/python/cpython/issues/93911) [https://github.com/python/cpython/issues/93911]: Specialize `LOAD_ATTR` for objects with custom `__getattribute__`.
- [gh-93955](https://github.com/python/cpython/issues/93955) [https://github.com/python/cpython/issues/93955]: Improve performance of attribute lookups on objects with custom `__getattribute__` and `__getattr__`. Patch by Ken Jin.
- [gh-93911](https://github.com/python/cpython/issues/93911) [https://github.com/python/cpython/issues/93911]: Specialize `LOAD_ATTR` for `property()` attributes.
- [gh-93678](https://github.com/python/cpython/issues/93678) [https://github.com/python/cpython/issues/93678]: Refactor compiler optimisation code so that it no longer needs the `struct assembler` and `struct compiler` passed

around. Instead, each function takes the CFG and other data that it actually needs. This will make it possible to test this code directly.

- [gh-93841](https://github.com/python/cpython/issues/93841) [https://github.com/python/cpython/issues/93841]: When built with `-enable-pystats`, `sys._stats_on()`, `sys._stats_off()`, `sys._stats_clear()` and `sys._stats_dump()` functions have been added to enable gathering stats for parts of programs.
- [gh-93516](https://github.com/python/cpython/issues/93516) [https://github.com/python/cpython/issues/93516]: Store offset of first traceable instruction in code object to avoid having to recompute it for each instruction when tracing.
- [gh-93516](https://github.com/python/cpython/issues/93516) [https://github.com/python/cpython/issues/93516]: Lazily create a table mapping bytecode offsets to line numbers to speed up calculation of line numbers when tracing.
- [gh-89828](https://github.com/python/cpython/issues/89828) [https://github.com/python/cpython/issues/89828]: `types.GenericAlias` no longer relays the `__class__` attribute. For example, `isinstance(list[int], type)` no longer returns `True`.
- [gh-93678](https://github.com/python/cpython/issues/93678) [https://github.com/python/cpython/issues/93678]: Refactor the compiler to reduce boilerplate and repetition.
- [gh-93671](https://github.com/python/cpython/issues/93671) [https://github.com/python/cpython/issues/93671]: Fix some exponential backtrace case happening with deeply nested sequence patterns in match statements. Patch by Pablo Galindo
- [gh-93662](https://github.com/python/cpython/issues/93662) [https://github.com/python/cpython/issues/93662]: Make sure that the end column offsets are correct in multi-line method calls. Previously, the end column could precede the column offset.
- [gh-93461](https://github.com/python/cpython/issues/93461) [https://github.com/python/cpython/issues/93461]: `importlib.invalidate_caches()` now drops entries from `sys.path_importer_cache` with a relative path as name. This solves a caching issue when a process changes its current working directory.

FileFinder no longer inserts a dot in the path, e.g. `/egg/./spam` is now `/egg/spam`.

- [gh-93621](https://github.com/python/cpython/issues/93621) [https://github.com/python/cpython/issues/93621]: Change order of bytecode instructions emitted for **with** and **async with** to reduce the number of entries in the exception table.
- [gh-93533](https://github.com/python/cpython/issues/93533) [https://github.com/python/cpython/issues/93533]: Reduce the size of the inline cache for `LOAD_METHOD` by 2 bytes.
- [gh-93444](https://github.com/python/cpython/issues/93444) [https://github.com/python/cpython/issues/93444]: Removed redundant fields from the compiler's basicblock struct: `b_nofallthrough`, `b_exit`, `b_return`. They can be easily calculated from the opcode of the last instruction of the block.
- [gh-93429](https://github.com/python/cpython/issues/93429) [https://github.com/python/cpython/issues/93429]: `LOAD_METHOD` instruction has been removed. It was merged back into `LOAD_ATTR`.
- [gh-93418](https://github.com/python/cpython/issues/93418) [https://github.com/python/cpython/issues/93418]: Fixed an assert where an f-string has an equal sign `'='` following an expression, but there's no trailing brace. For example, `f"{i}="`.
- [gh-93382](https://github.com/python/cpython/issues/93382) [https://github.com/python/cpython/issues/93382]: Cache the result of `PyCode_GetCode()` function to restore the O(1) lookup of the `co_code` attribute.
- [gh-93359](https://github.com/python/cpython/issues/93359) [https://github.com/python/cpython/issues/93359]: Ensure that custom **ast** nodes without explicit end positions can be compiled. Patch by Pablo Galindo.
- [gh-93356](https://github.com/python/cpython/issues/93356) [https://github.com/python/cpython/issues/93356]: Code for exception handlers is emitted at the end of the code unit's bytecode. This avoids one jump when no exception is raised.
- [gh-93354](https://github.com/python/cpython/issues/93354) [https://github.com/python/cpython/issues/93354]: Use exponential backoff for specialization counters in the interpreter. Can reduce the number of failed specializations significantly and avoid slowdown for those parts of a program that are not suitable for specialization.

- [gh-93283](https://github.com/python/cpython/issues/93283) [https://github.com/python/cpython/issues/93283]: Improve error message for invalid syntax of conversion character in f-string expressions.
- [gh-93345](https://github.com/python/cpython/issues/93345) [https://github.com/python/cpython/issues/93345]: Fix a crash in substitution of a `TypeVar` in nested generic alias after `TypeVarTuple`.
- [gh-93223](https://github.com/python/cpython/issues/93223) [https://github.com/python/cpython/issues/93223]: When a bytecode instruction jumps to an unconditional jump instruction, the first instruction can often be optimized to target the unconditional jump's target directly. For tracing reasons, this would previously only occur if both instructions have the same line number. This also now occurs if the unconditional jump is artificial, i.e., if it has no associated line number.
- [gh-84694](https://github.com/python/cpython/issues/84694) [https://github.com/python/cpython/issues/84694]: The `--experimental-isolated-subinterpreters` `configure` option and `EXPERIMENTAL_ISOLATED_SUBINTERPRETERS` macro have been removed.
- [gh-91924](https://github.com/python/cpython/issues/91924) [https://github.com/python/cpython/issues/91924]: Fix `__lltrace__` debug feature if the stdout encoding is not UTF-8. Patch by Victor Stinner.
- [gh-93040](https://github.com/python/cpython/issues/93040) [https://github.com/python/cpython/issues/93040]: Wraps unused parameters in `Objects/obmalloc.c` with `Py_UNUSED`.
- [gh-93143](https://github.com/python/cpython/issues/93143) [https://github.com/python/cpython/issues/93143]: Avoid `NULL` checks for uninitialized local variables by determining at compile time which variables must be initialized.
- [gh-93061](https://github.com/python/cpython/issues/93061) [https://github.com/python/cpython/issues/93061]: Backward jumps after `async for` loops are no longer given dubious line numbers.
- [gh-93065](https://github.com/python/cpython/issues/93065) [https://github.com/python/cpython/issues/93065]: Fix contextvars HAMT implementation to handle iteration over deep trees.

The bug was discovered and fixed by Eli Libman. See [MagicStack/magicstack#84](https://github.com/MagicStack/magicstack/issues/84) [https://github.com/MagicStack/magicstack/issues/84] for more details.

- [gh-93012](https://github.com/python/cpython/issues/93012) [https://github.com/python/cpython/issues/93012]: Added the new function `PyType_FromMetaclass()`, which generalizes the existing `PyType_FromModuleAndSpec()` using an additional metaclass argument. This is useful for language binding tools, where it can be used to intercept type-related operations like subclassing or static attribute access by specifying a metaclass with custom slots.

Importantly, `PyType_FromMetaclass()` is available in the Limited API, which provides a path towards migrating more binding tools onto the Stable ABI.

- [gh-93021](https://github.com/python/cpython/issues/93021) [https://github.com/python/cpython/issues/93021]: Fix the `__text_signature__` for `__get__()` methods implemented in C. Patch by Jelle Zijlstra.
- [gh-89914](https://github.com/python/cpython/issues/89914) [https://github.com/python/cpython/issues/89914]: The operand of the `YIELD_VALUE` instruction is set to the stack depth. This is done to help frame handling on `yield` and may assist debuggers.
- [gh-92955](https://github.com/python/cpython/issues/92955) [https://github.com/python/cpython/issues/92955]: Fix memory leak in code object's lines and positions iterators as they were not finalized at exit. Patch by Kumar Aditya.
- [gh-92930](https://github.com/python/cpython/issues/92930) [https://github.com/python/cpython/issues/92930]: Fixed a crash in `_pickle.c` from mutating collections during `__reduce__` or `persistent_id`.
- [gh-90690](https://github.com/python/cpython/issues/90690) [https://github.com/python/cpython/issues/90690]: The `PRECALL` instruction has been removed. It offered only a small advantage for specialization and is not needed in the vast majority of cases.
- [gh-92914](https://github.com/python/cpython/issues/92914) [https://github.com/python/cpython/issues/92914]: Always round the allocated size for lists up to the nearest even number.

- [gh-92858](https://github.com/python/cpython/issues/92858) [https://github.com/python/cpython/issues/92858]: Improve error message for some suites with syntax error before ‘:’
- [gh-90473](https://github.com/python/cpython/issues/90473) [https://github.com/python/cpython/issues/90473]: Decrease default recursion limit on WASI to address limited call stack size.
- [gh-92804](https://github.com/python/cpython/issues/92804) [https://github.com/python/cpython/issues/92804]: Fix memory leak in `memoryview` iterator as it was not finalized at exit. Patch by Kumar Aditya.
- [gh-92777](https://github.com/python/cpython/issues/92777) [https://github.com/python/cpython/issues/92777]: Specialize `LOAD_METHOD` for objects with lazy dictionaries. Patch by Ken Jin.
- [gh-92658](https://github.com/python/cpython/issues/92658) [https://github.com/python/cpython/issues/92658]: Add support for connecting and binding to Hyper-V sockets on Windows Hyper-V hosts and guests.
- [gh-92236](https://github.com/python/cpython/issues/92236) [https://github.com/python/cpython/issues/92236]: Remove spurious “LINE” event when starting a generator or coroutine, visible tracing functions implemented in C.
- [gh-91102](https://github.com/python/cpython/issues/91102) [https://github.com/python/cpython/issues/91102]: `_warnings.warn_explicit()` is ported to Argument Clinic.
- [gh-92619](https://github.com/python/cpython/issues/92619) [https://github.com/python/cpython/issues/92619]: Make the compiler duplicate an exit block only if none of its instructions have a `lineno` (previously only the first instruction in the block was checked, leading to unnecessarily duplicated blocks).
- [gh-88750](https://github.com/python/cpython/issues/88750) [https://github.com/python/cpython/issues/88750]: The deprecated debug build only `PYTHONTHREADDEBUG` environment variable no longer does anything.
- [gh-92261](https://github.com/python/cpython/issues/92261) [https://github.com/python/cpython/issues/92261]: Fix hang when trying to iterate over a `typing.Union`.
- [gh-91432](https://github.com/python/cpython/issues/91432) [https://github.com/python/cpython/issues/91432]: Specialized the `FOR_ITER` opcode using the PEP 659

## machinery

- [gh-91399](https://github.com/python/cpython/issues/91399) [https://github.com/python/cpython/issues/91399]: Removed duplicate ‘{0, 0, 0, 0, 0, 0}’ entry in ‘Objects/unicodetype\_db.h’.
- [gh-91578](https://github.com/python/cpython/issues/91578) [https://github.com/python/cpython/issues/91578]: Updates the error message for abstract class.
- [bpo-47091](https://bugs.python.org/issue?@action=redirect&bpo=47091) [https://bugs.python.org/issue?@action=redirect&bpo=47091]: Improve performance of repetition of **list** and **tuple** by using `memcpy` to copy data and performing the reference increments in one step.
- [bpo-46142](https://bugs.python.org/issue?@action=redirect&bpo=46142) [https://bugs.python.org/issue?@action=redirect&bpo=46142]: Make `--help` output shorter by moving some info to the new `--help-env` and `--help-  
xoptions` command-line options. Also add `--help-all` option to print complete usage.
- [bpo-42316](https://bugs.python.org/issue?@action=redirect&bpo=42316) [https://bugs.python.org/issue?@action=redirect&bpo=42316]: Document some places where an assignment expression needs parentheses.

## Library

- [gh-89237](https://github.com/python/cpython/issues/89237) [https://github.com/python/cpython/issues/89237]: Fix hang on Windows in `subprocess.wait_closed()` in **asyncio** with **ProactorEventLoop**. Patch by Kumar Aditya.
- [gh-97928](https://github.com/python/cpython/issues/97928) [https://github.com/python/cpython/issues/97928]: **tkinter.Text.count()** raises now an exception for options starting with “-” instead of silently ignoring them.
- [gh-98393](https://github.com/python/cpython/issues/98393) [https://github.com/python/cpython/issues/98393]: The **os** module no longer accepts bytes-like paths, like **bytearray** and **memoryview** types: only the exact **bytes** type is accepted for bytes strings. Patch by Victor Stinner.
- [gh-98363](https://github.com/python/cpython/issues/98363) [https://github.com/python/cpython/issues/98363]: Added `itertools.batched()` to batch data into lists of a given length

with the last list possibly being shorter than the others.

- [gh-98331](https://github.com/python/cpython/issues/98331) [https://github.com/python/cpython/issues/98331]: Update the bundled copies of pip and setuptools to versions 22.3 and 65.5.0 respectively.
- [gh-98307](https://github.com/python/cpython/issues/98307) [https://github.com/python/cpython/issues/98307]: A `createSocket()` method was added to `SysLogHandler`.
- [gh-96035](https://github.com/python/cpython/issues/96035) [https://github.com/python/cpython/issues/96035]: Fix bug in `urllib.parse.urlparse()` that causes certain port numbers containing whitespace, underscores, plus and minus signs, or non-ASCII digits to be incorrectly accepted.
- [gh-98257](https://github.com/python/cpython/issues/98257) [https://github.com/python/cpython/issues/98257]: Make `sys.setprofile()` and `sys.settrace()` functions reentrant. They can no longer fail with: `RuntimeError("Cannot install a trace function while another trace function is being installed")`. Patch by Victor Stinner.
- [gh-98251](https://github.com/python/cpython/issues/98251) [https://github.com/python/cpython/issues/98251]: Allow `venv` to pass along `PYTHON*` variables to `ensurepip` and `pip` when they do not impact path resolution
- [gh-94597](https://github.com/python/cpython/issues/94597) [https://github.com/python/cpython/issues/94597]:  
Deprecated `asyncio.AbstractEventLoopPolicy.get_child_watcher()` and `asyncio.AbstractEventLoopPolicy.set_child_watcher()` methods to be removed in Python 3.14. Patch by Kumar Aditya.
- [gh-98178](https://github.com/python/cpython/issues/98178) [https://github.com/python/cpython/issues/98178]: On macOS, fix a crash in `syslog.syslog()` in multi-threaded applications. On macOS, the libc `syslog()` function is not thread-safe, so `syslog.syslog()` no longer releases the GIL to call it. Patch by Victor Stinner.
- [gh-44098](https://github.com/python/cpython/issues/44098) [https://github.com/python/cpython/issues/44098]: Release the GIL when creating `mmap.mmap` objects on Unix.

- [gh-87730](https://github.com/python/cpython/issues/87730) [https://github.com/python/cpython/issues/87730]: Wrap network errors consistently in urllib FTP support, so the test suite doesn't fail when a network is available but the public internet is not reachable.
- [gh-94597](https://github.com/python/cpython/issues/94597) [https://github.com/python/cpython/issues/94597]: The child watcher classes **MultiLoopChildWatcher**, **FastChildWatcher** and **SafeChildWatcher** are deprecated and will be removed in Python 3.14. Patch by Kumar Aditya.
- [gh-98023](https://github.com/python/cpython/issues/98023) [https://github.com/python/cpython/issues/98023]: Change default child watcher to **PidfdChildWatcher** on Linux systems which supports it. Patch by Kumar Aditya.
- [gh-90985](https://github.com/python/cpython/issues/90985) [https://github.com/python/cpython/issues/90985]: Earlier in 3.11 we deprecated `asyncio.Task.cancel("message")`. We realized we were too harsh, and have undepricated it.
- [gh-65961](https://github.com/python/cpython/issues/65961) [https://github.com/python/cpython/issues/65961]: Do not rely solely on `__cached__` on modules; code will also support `__spec__.cached`.
- [gh-97646](https://github.com/python/cpython/issues/97646) [https://github.com/python/cpython/issues/97646]: Replace deprecated `application/javascript` with `text/javascript` in **mimetypes**. See [RFC 9239](https://datatracker.ietf.org/doc/html/rfc9239) [https://datatracker.ietf.org/doc/html/rfc9239.html]. Patch by Noam Cohen.
- [gh-97930](https://github.com/python/cpython/issues/97930) [https://github.com/python/cpython/issues/97930]: Apply changes from `importlib_resources` 5.8 and 5.9: `Traversable.joinpath` provides a concrete implementation. `as_file` now supports directories of resources.
- [gh-97850](https://github.com/python/cpython/issues/97850) [https://github.com/python/cpython/issues/97850]: Remove deprecated `importlib.util.set_loader()` and `importlib.util.module_for_loader()` from **importlib.util**.
- [gh-97837](https://github.com/python/cpython/issues/97837) [https://github.com/python/cpython/issues/97837]: Change

deprecate warning message in `unittest` from

It is deprecated to return a value!=None

to

It is deprecated to return a value that is not None from a test case

- [gh-97825](https://github.com/python/cpython/issues/97825) [https://github.com/python/cpython/issues/97825]: Fixes `AttributeError` when `subprocess.check_output()` is used with argument `input=None` and either of the arguments `encoding` or `errors` are used.
- [gh-97008](https://github.com/python/cpython/issues/97008) [https://github.com/python/cpython/issues/97008]: `NameError` and `AttributeError` spelling suggestions provided since [gh-82711](https://github.com/python/cpython/issues/82711) [https://github.com/python/cpython/issues/82711] are now also emitted by the pure Python `traceback` module. Tests for those suggestions now exercise both implementations to ensure they are equivalent. Patch by Carl Friedrich Bolz-Tereick and Łukasz Langa.
- [gh-97799](https://github.com/python/cpython/issues/97799) [https://github.com/python/cpython/issues/97799]: `dataclass` now uses `inspect.get_annotations()` to examine the annotations on class objects.
- [gh-97781](https://github.com/python/cpython/issues/97781) [https://github.com/python/cpython/issues/97781]: Removed deprecated interfaces in `importlib.metadata` (entry points accessed as dictionary, implicit dictionary construction of sequence of `EntryPoint` objects, mutability of `EntryPoints` result, access of entry point by index). `entry_points` now has a simpler, more straightforward API (returning `EntryPoints`).
- [gh-96827](https://github.com/python/cpython/issues/96827) [https://github.com/python/cpython/issues/96827]: Avoid spurious tracebacks from `asyncio` when default executor cleanup is delayed until after the event loop is closed (e.g. as the result of a keyboard interrupt).
- [gh-95534](https://github.com/python/cpython/issues/95534) [https://github.com/python/cpython/issues/95534]: `gzip.GzipFile.read()` reads 10% faster.

- [gh-97592](https://github.com/python/cpython/issues/97592) [https://github.com/python/cpython/issues/97592]: Avoid a crash in the C version of `asyncio.Future.remove_done_callback()` when an evil argument is passed.
- [gh-97639](https://github.com/python/cpython/issues/97639) [https://github.com/python/cpython/issues/97639]: Remove `tokenize.NL` check from `tabnanny`.
- [gh-97545](https://github.com/python/cpython/issues/97545) [https://github.com/python/cpython/issues/97545]: Make Semaphore run faster.
- [gh-73588](https://github.com/python/cpython/issues/73588) [https://github.com/python/cpython/issues/73588]: Fix generation of the default name of `tkinter.Checkbutton`. Previously, checkbuttons in different parent widgets could have the same short name and share the same state if arguments “name” and “variable” are not specified. Now they are globally unique.
- [gh-96865](https://github.com/python/cpython/issues/96865) [https://github.com/python/cpython/issues/96865]: fix Flag to use boundary CONFORM

This restores previous Flag behavior of allowing flags with non-sequential values to be combined; e.g.

```
class Skip(Flag): TWO = 2 EIGHT = 8
```

```
Skip.TWO | Skip.EIGHT -> <Skip.TWO|EIGHT: 10>
```

- [gh-97005](https://github.com/python/cpython/issues/97005) [https://github.com/python/cpython/issues/97005]: Update bundled libexpat to 2.4.9
- [gh-85760](https://github.com/python/cpython/issues/85760) [https://github.com/python/cpython/issues/85760]: Fix race condition in `asyncio` where `process_exited()` called before the `pipe_data_received()` leading to inconsistent output. Patch by Kumar Aditya.
- [gh-96704](https://github.com/python/cpython/issues/96704) [https://github.com/python/cpython/issues/96704]: Pass the correct `contextvars.Context` when a `asyncio` exception handler is called on behalf of a task or callback handle. This adds a new `Task` method, `get_context`, and also a new `Handle` method with the same name. If this method is not found on a task object (perhaps because it is a

third-party library that does not yet provide this method), the context prevailing at the time the exception handler is called is used.

- [gh-96819](https://github.com/python/cpython/issues/96819) [https://github.com/python/cpython/issues/96819]: Fixed check in `multiprocessing.resource_tracker` that guarantees that the length of a write to a pipe is not greater than `PIPE_BUF`.
- [gh-95865](https://github.com/python/cpython/issues/95865) [https://github.com/python/cpython/issues/95865]: Reduce `urllib.parse.quote_from_bytes()` memory use on large values.

Contributed by Dennis Sweeney.

- [gh-96741](https://github.com/python/cpython/issues/96741) [https://github.com/python/cpython/issues/96741]: Corrected type annotation for dataclass attribute `pstats.FunctionProfile.ncalls` to be `str`.
- [gh-96734](https://github.com/python/cpython/issues/96734) [https://github.com/python/cpython/issues/96734]: Update `unicodedata` database to Unicode 15.0.0.
- [gh-96735](https://github.com/python/cpython/issues/96735) [https://github.com/python/cpython/issues/96735]: Fix undefined behaviour in `struct.unpack()`.
- [gh-46412](https://github.com/python/cpython/issues/46412) [https://github.com/python/cpython/issues/46412]: Improve performance of `bool(db)` for large `ndb/gdb` databases. Previously this would call `len(db)` which would iterate over all keys – the answer (empty or not) is known after the first key.
- [gh-96652](https://github.com/python/cpython/issues/96652) [https://github.com/python/cpython/issues/96652]: Fix the `faulthandler` implementation of `faulthandler.register(signal, chain=True)` if the `sigaction()` function is not available: don't call the previous signal handler if it's `NULL`. Patch by Victor Stinner.
- [gh-68163](https://github.com/python/cpython/issues/68163) [https://github.com/python/cpython/issues/68163]: Correct conversion of `numbers.Rational`'s to `float`.
- [gh-96538](https://github.com/python/cpython/issues/96538) [https://github.com/python/cpython/issues/96538]: Speed up `bisect.bisect()` functions by taking advantage of

type-stability.

- [gh-96465](https://github.com/python/cpython/issues/96465) [https://github.com/python/cpython/issues/96465]: Fraction hashes are now cached.
- [gh-96079](https://github.com/python/cpython/issues/96079) [https://github.com/python/cpython/issues/96079]: In **typing**, fix missing field `name` and incorrect `__module__` in `_AnnotatedAlias`.
- [gh-96415](https://github.com/python/cpython/issues/96415) [https://github.com/python/cpython/issues/96415]: Remove `types._cell_factory` from module namespace.
- [gh-95987](https://github.com/python/cpython/issues/95987) [https://github.com/python/cpython/issues/95987]: Fix repr of Any subclasses.
- [gh-96388](https://github.com/python/cpython/issues/96388) [https://github.com/python/cpython/issues/96388]: Work around missing socket functions in **socket**'s `__repr__`.
- [gh-96385](https://github.com/python/cpython/issues/96385) [https://github.com/python/cpython/issues/96385]: Fix `TypeVarTuple.__typing_prepare_subst__`. `TypeError` was not raised when using more than one `TypeVarTuple`, like `[*T, *V]` in type alias substitutions.
- [gh-96142](https://github.com/python/cpython/issues/96142) [https://github.com/python/cpython/issues/96142]: Add `match_args`, `kw_only`, `slots`, and `weakref_slot` to `_DataclassParams`.
- [gh-96073](https://github.com/python/cpython/issues/96073) [https://github.com/python/cpython/issues/96073]: In **inspect**, fix overeager replacement of “`typing.`” in formatting annotations.
- [gh-89258](https://github.com/python/cpython/issues/89258) [https://github.com/python/cpython/issues/89258]: Added a **`getChildren()`** method to **`logging.Logger`**, to get the immediate child loggers of a logger.
- [gh-96346](https://github.com/python/cpython/issues/96346) [https://github.com/python/cpython/issues/96346]: Use double caching for compiled RE patterns.
- [gh-96349](https://github.com/python/cpython/issues/96349) [https://github.com/python/cpython/issues/96349]: Fixed a minor performance regression in **`threading.Event.__init__()`**

- [gh-90467](https://github.com/python/cpython/issues/90467) [https://github.com/python/cpython/issues/90467]: Fix **`asyncio.StreamReaderProtocol`** to keep a strong reference to the created task, so that it's not garbage collected
- [gh-96172](https://github.com/python/cpython/issues/96172) [https://github.com/python/cpython/issues/96172]: Fix a bug in `unicodedata: east_asian_width` used to return the wrong value for unassigned characters; and for yet unassigned, but reserved characters.
- [gh-96159](https://github.com/python/cpython/issues/96159) [https://github.com/python/cpython/issues/96159]: Fix a performance regression in logging `TimedRotatingFileHandler`. Only check for special files when the rollover time has passed.
- [gh-96175](https://github.com/python/cpython/issues/96175) [https://github.com/python/cpython/issues/96175]: Fix unused `localName` parameter in the `Attr` class in **`xml.dom.minidom`**.
- [gh-96145](https://github.com/python/cpython/issues/96145) [https://github.com/python/cpython/issues/96145]: Add `AttrDict` to `JSON` module for use with `object_hook`.
- [gh-96052](https://github.com/python/cpython/issues/96052) [https://github.com/python/cpython/issues/96052]: Fix handling compiler warnings (`SyntaxWarning` and `DeprecationWarning`) in **`codeop.compile_command()`** when checking for incomplete input. Previously it emitted warnings and raised a `SyntaxError`. Now it always returns `None` for incomplete input without emitting any warnings.
- [gh-96125](https://github.com/python/cpython/issues/96125) [https://github.com/python/cpython/issues/96125]: Fix incorrect condition that causes `sys.thread_info.name` to be wrong on pthread platforms.
- [gh-96019](https://github.com/python/cpython/issues/96019) [https://github.com/python/cpython/issues/96019]: Fix a bug in the `makeunicodedata.py` script leading to about 13 KiB of space saving in the `unicodedata` module, specifically the character decomposition data.
- [gh-95463](https://github.com/python/cpython/issues/95463) [https://github.com/python/cpython/issues/95463]: Remove an incompatible change from [bpo-28080](https://bugs.python.org/issue?@action=redirect&bpo=28080) [https://bugs.python.org/issue?@action=redirect&bpo=28080] that caused a regression that

ignored the utf8 in `ZipInfo.flag_bits`. Patch by Pablo Galindo.

- [gh-69142](https://github.com/python/cpython/issues/69142) [https://github.com/python/cpython/issues/69142]: Add `%:z` strftime format code (generates tzoffset with colons as separator), see [strftime\(\) and strptime\(\) Behavior](#).
- [gh-95899](https://github.com/python/cpython/issues/95899) [https://github.com/python/cpython/issues/95899]: Fix `asyncio.Runner` to call `asyncio.set_event_loop()` only once to avoid calling `attach_loop()` multiple times on child watchers. Patch by Kumar Aditya.
- [gh-95736](https://github.com/python/cpython/issues/95736) [https://github.com/python/cpython/issues/95736]: Fix `unittest.IsolatedAsyncioTestCase` to set event loop before calling setup functions. Patch by Kumar Aditya.
- [gh-95865](https://github.com/python/cpython/issues/95865) [https://github.com/python/cpython/issues/95865]: Speed up `urllib.parse.quote_from_bytes()` by replacing a list comprehension with `map()`.
- [gh-95861](https://github.com/python/cpython/issues/95861) [https://github.com/python/cpython/issues/95861]: Add support for computing Spearman's correlation coefficient to the existing `statistics.correlation()` function.
- [gh-95804](https://github.com/python/cpython/issues/95804) [https://github.com/python/cpython/issues/95804]: Fix logging shutdown handler so it respects `MemoryHandler.flushOnClose`.
- [gh-95704](https://github.com/python/cpython/issues/95704) [https://github.com/python/cpython/issues/95704]: When a task catches `asyncio.CancelledError` and raises some other error, the other error should generally not silently be suppressed.
- [gh-95149](https://github.com/python/cpython/issues/95149) [https://github.com/python/cpython/issues/95149]: The `HTTPStatus` enum offers a couple of properties to indicate the HTTP status category e.g. `HTTPStatus.OK.is_success`.
- [gh-95609](https://github.com/python/cpython/issues/95609) [https://github.com/python/cpython/issues/95609]: Update bundled pip to 22.2.2.
- [gh-95289](https://github.com/python/cpython/issues/95289) [https://github.com/python/cpython/issues/95289]: Fix

`asyncio.TaskGroup` to propagate exception when `asyncio.CancelledError` was replaced with another exception by a context manger. Patch by Kumar Aditya and Guido van Rossum.

- [gh-94909](https://github.com/python/cpython/issues/94909) [https://github.com/python/cpython/issues/94909]: Fix incorrect joining of relative Windows paths with drives in `pathlib.PurePath` initializer.
- [gh-95385](https://github.com/python/cpython/issues/95385) [https://github.com/python/cpython/issues/95385]: Faster `json.dumps()` when sorting of keys is not requested (default).
- [gh-83901](https://github.com/python/cpython/issues/83901) [https://github.com/python/cpython/issues/83901]: Improve `Signature.bind` error message for missing keyword-only arguments.
- [gh-95339](https://github.com/python/cpython/issues/95339) [https://github.com/python/cpython/issues/95339]: Update bundled pip to 22.2.1.
- [gh-95045](https://github.com/python/cpython/issues/95045) [https://github.com/python/cpython/issues/95045]: Fix GC crash when deallocating `_lsprof.Profiler` by untracking it before calling any callbacks. Patch by Kumar Aditya.
- [gh-95231](https://github.com/python/cpython/issues/95231) [https://github.com/python/cpython/issues/95231]: Fail gracefully if `EPERM` or `ENOSYS` is raised when loading `crypt` methods. This may happen when trying to load MD5 on a Linux kernel with FIPS enabled.
- [gh-95097](https://github.com/python/cpython/issues/95097) [https://github.com/python/cpython/issues/95097]: Fix `asyncio.run()` for `asyncio.Task` implementations without `uncancel()` method. Patch by Kumar Aditya.
- [gh-95087](https://github.com/python/cpython/issues/95087) [https://github.com/python/cpython/issues/95087]: Fix `IndexError` in parsing invalid date in the `email` module.
- [gh-95199](https://github.com/python/cpython/issues/95199) [https://github.com/python/cpython/issues/95199]: Upgrade bundled setuptools to 63.2.0.
- [gh-95194](https://github.com/python/cpython/issues/95194) [https://github.com/python/cpython/issues/95194]: Upgrade bundled pip to 22.2.

- [gh-93899](https://github.com/python/cpython/issues/93899) [https://github.com/python/cpython/issues/93899]: Fix check for existence of `os.EFD_CLOEXEC`, `os.EFD_NONBLOCK` and `os.EFD_SEMAPHORE` flags on older kernel versions where these flags are not present. Patch by Kumar Aditya.
- [gh-95166](https://github.com/python/cpython/issues/95166) [https://github.com/python/cpython/issues/95166]: Fix `concurrent.futures.Executor.map()` to cancel the currently waiting on future on an error - e.g. `TimeoutError` or `KeyboardInterrupt`.
- [gh-95132](https://github.com/python/cpython/issues/95132) [https://github.com/python/cpython/issues/95132]: Fix a `sqlite3` regression where `*args` and `**kwargs` were incorrectly relayed from `connect()` to the `Connection` factory. The regression was introduced in 3.11a1 with PR 24421 ([gh-85128](https://github.com/python/cpython/issues/85128) [https://github.com/python/cpython/issues/85128]). Patch by Erlend E. Aasland.`
- [gh-93157](https://github.com/python/cpython/issues/93157) [https://github.com/python/cpython/issues/93157]: Fix `fileinput` module didn't support `errors` option when `inplace` is true.
- [gh-91212](https://github.com/python/cpython/issues/91212) [https://github.com/python/cpython/issues/91212]: Fixed flickering of the turtle window when the tracer is turned off. Patch by Shin-myoungh-serp.
- [gh-95077](https://github.com/python/cpython/issues/95077) [https://github.com/python/cpython/issues/95077]: Add deprecation warning for `enum member.member` access (e.g. `Color.RED.BLUE`). Remove `EnumMeta.__getattr__`.
- [gh-95109](https://github.com/python/cpython/issues/95109) [https://github.com/python/cpython/issues/95109]: Ensure that timeouts scheduled with `asyncio.Timeout` that have already expired are delivered promptly.
- [gh-95105](https://github.com/python/cpython/issues/95105) [https://github.com/python/cpython/issues/95105]: `wsgiref.types.InputStream.__iter__()` should return `Iterator[bytes]`, not `Iterable[bytes]`. Patch by Shantanu Jain.
- [gh-95066](https://github.com/python/cpython/issues/95066) [https://github.com/python/cpython/issues/95066]: Replaced `assert` with `exception` in `ast.parse()`, when

`feature_version` has an invalid major version. Patch by Shantanu Jain.

- [gh-77617](https://github.com/python/cpython/issues/77617) [https://github.com/python/cpython/issues/77617]: Add **sqlite3 command-line interface**. Patch by Erlend Aasland.
- [gh-95005](https://github.com/python/cpython/issues/95005) [https://github.com/python/cpython/issues/95005]: Replace `_PyAccu` with `_PyUnicodeWriter` in JSON encoder and `StringIO` and remove the `_PyAccu` implementation.
- [gh-90085](https://github.com/python/cpython/issues/90085) [https://github.com/python/cpython/issues/90085]: Remove `-c/--clock` and `-t/--time` CLI options of **timeit**. The options had been deprecated since Python 3.3 and the functionality was removed in Python 3.7. Patch by Shantanu Jain.
- [gh-94857](https://github.com/python/cpython/issues/94857) [https://github.com/python/cpython/issues/94857]: Fix reflink in `_io.TextIOWrapper.reconfigure`. Patch by Kumar Aditya.
- [gh-94821](https://github.com/python/cpython/issues/94821) [https://github.com/python/cpython/issues/94821]: Fix binding of unix socket to empty address on Linux to use an available address from the abstract namespace, instead of “0”.
- [gh-94736](https://github.com/python/cpython/issues/94736) [https://github.com/python/cpython/issues/94736]: Fix crash when deallocating an instance of a subclass of `_multiprocessing.SemLock`. Patch by Kumar Aditya.
- [gh-81620](https://github.com/python/cpython/issues/81620) [https://github.com/python/cpython/issues/81620]: Add `random.binomialvariate()`.
- [gh-74116](https://github.com/python/cpython/issues/74116) [https://github.com/python/cpython/issues/74116]: Allow **`asyncio.StreamWriter.drain()`** to be awaited concurrently by multiple tasks. Patch by Kumar Aditya.
- [gh-87822](https://github.com/python/cpython/issues/87822) [https://github.com/python/cpython/issues/87822]: When called with `capture_locals=True`, the **traceback** module functions swallow exceptions raised from calls to `repr()` on local variables of frames. This is in order to prioritize the original exception over rendering errors. An indication of the failure is printed in place of the missing

value. (Patch by Simon-Martin Schroeder).

- [gh-88050](https://github.com/python/cpython/issues/88050) [https://github.com/python/cpython/issues/88050]: Fix **asyncio** subprocess transport to kill process cleanly when process is blocked and avoid `RuntimeError` when loop is closed. Patch by Kumar Aditya.
- [gh-94637](https://github.com/python/cpython/issues/94637) [https://github.com/python/cpython/issues/94637]: **SSLContext.set\_default\_verify\_paths()** now releases the GIL around `SSL_CTX_set_default_verify_paths` call. The function call performs I/O and CPU intensive work.
- [gh-94309](https://github.com/python/cpython/issues/94309) [https://github.com/python/cpython/issues/94309]: Deprecate aliases **typing.Hashable** and **typing.Sized**
- [gh-92546](https://github.com/python/cpython/issues/92546) [https://github.com/python/cpython/issues/92546]: An undocumented `python -m pprint benchmark` is moved into `pprint` suite of pyperformance. Patch by Oleg Iarygin.
- [gh-94607](https://github.com/python/cpython/issues/94607) [https://github.com/python/cpython/issues/94607]: Fix subclassing complex generics with type variables in **typing**. Previously an error message saying Some type variables ... are not listed in Generic[...] was shown. **typing** no longer populates `__parameters__` with the `__parameters__` of a Python class.
- [gh-94619](https://github.com/python/cpython/issues/94619) [https://github.com/python/cpython/issues/94619]: Remove the long-deprecated `module_repr()` from **importlib**.
- [gh-93910](https://github.com/python/cpython/issues/93910) [https://github.com/python/cpython/issues/93910]: The ability to access the other values of an enum on an enum (e.g. `Color.RED.BLUE`) has been restored in order to fix a performance regression.
- [gh-93896](https://github.com/python/cpython/issues/93896) [https://github.com/python/cpython/issues/93896]: Fix **asyncio.run()** and **unittest.IsolatedAsyncioTestCase** to always the set event loop as it was done in Python 3.10 and earlier. Patch by Kumar Aditya.

- [gh-94343](https://github.com/python/cpython/issues/94343) [https://github.com/python/cpython/issues/94343]: Allow setting the attributes of `reprlib.Repr` during object initialization
- [gh-94382](https://github.com/python/cpython/issues/94382) [https://github.com/python/cpython/issues/94382]: Port static types of `_multiprocessing` module to heap types. Patch by Kumar Aditya.
- [gh-78724](https://github.com/python/cpython/issues/78724) [https://github.com/python/cpython/issues/78724]: Fix crash in `struct.Struct` when it was not completely initialized by initializing it in `__new__()`. Patch by Kumar Aditya.
- [gh-94510](https://github.com/python/cpython/issues/94510) [https://github.com/python/cpython/issues/94510]: Re-entrant calls to `sys.setprofile()` and `sys.settrace()` now raise `RuntimeError`. Patch by Pablo Galindo.
- [gh-92336](https://github.com/python/cpython/issues/92336) [https://github.com/python/cpython/issues/92336]: Fix bug where `linecache.getline()` fails on bad files with `UnicodeDecodeError` or `SyntaxError`. It now returns an empty string as per the documentation.
- [gh-94398](https://github.com/python/cpython/issues/94398) [https://github.com/python/cpython/issues/94398]: Once a `asyncio.TaskGroup` has started shutting down (i.e., at least one task has failed and the task group has started cancelling the remaining tasks), it should not be possible to add new tasks to the task group.
- [gh-94383](https://github.com/python/cpython/issues/94383) [https://github.com/python/cpython/issues/94383]: `xml.etree`: Remove the `ElementTree.Element.copy()` method of the pure Python implementation, deprecated in Python 3.10, use the `copy.copy()` function instead. The C implementation of `xml.etree` has no `copy()` method, only a `__copy__()` method. Patch by Victor Stinner.
- [gh-94379](https://github.com/python/cpython/issues/94379) [https://github.com/python/cpython/issues/94379]: `zipimport`: Remove `find_loader()` and `find_module()` methods, deprecated in Python 3.10: use the `find_spec()` method instead. See [PEP 451](https://peps.python.org/pep-0451/) [https://peps.python.org/pep-0451/] for the rationale. Patch by Victor

Stinner.

- [gh-94352](https://github.com/python/cpython/issues/94352) [https://github.com/python/cpython/issues/94352]: **shlex.split()**: Passing `None` for `s` argument now raises an exception, rather than reading **sys.stdin**. The feature was deprecated in Python 3.9. Patch by Victor Stinner.
- [gh-94318](https://github.com/python/cpython/issues/94318) [https://github.com/python/cpython/issues/94318]: Strip trailing spaces in **pydoc** text output.
- [gh-89988](https://github.com/python/cpython/issues/89988) [https://github.com/python/cpython/issues/89988]: Fix memory leak in **pickle.Pickler** when looking up **dispatch\_table**. Patch by Kumar Aditya.
- [gh-90016](https://github.com/python/cpython/issues/90016) [https://github.com/python/cpython/issues/90016]: Deprecate **sqlite3 default adapters and converters**. Patch by Erlend E. Aasland.
- [gh-94254](https://github.com/python/cpython/issues/94254) [https://github.com/python/cpython/issues/94254]: Fixed types of **struct** module to be immutable. Patch by Kumar Aditya.
- [gh-93259](https://github.com/python/cpython/issues/93259) [https://github.com/python/cpython/issues/93259]: Now raise `ValueError` when `None` or an empty string are passed to `Distribution.from_name` (and other callers).
- [gh-74696](https://github.com/python/cpython/issues/74696) [https://github.com/python/cpython/issues/74696]: **shutil.make\_archive()** now passes the `root_dir` argument to custom archivers which support it.
- [gh-94216](https://github.com/python/cpython/issues/94216) [https://github.com/python/cpython/issues/94216]: The **dis** module now has the opcodes for pseudo instructions (those which are used by the compiler during code generation but then removed or replaced by real opcodes before the final bytecode is emitted).
- [gh-93096](https://github.com/python/cpython/issues/93096) [https://github.com/python/cpython/issues/93096]: Removed undocumented `python -m codecs`. Use `python -m unittest test.test_codecs.EncodedFileTest` instead.
- [gh-94207](https://github.com/python/cpython/issues/94207) [https://github.com/python/cpython/issues/94207]: Made

**`_struct.Struct`** GC-tracked in order to fix a reference leak in the **`_struct`** module.

- [gh-93096](https://github.com/python/cpython/issues/93096) [https://github.com/python/cpython/issues/93096]: Removed undocumented `-t` argument of `python -m base64`. Use `python -m unittest test.test_base64.LegacyBase64TestCase.test_encodeby` instead.
- [gh-94226](https://github.com/python/cpython/issues/94226) [https://github.com/python/cpython/issues/94226]: Remove the **`locale.format()`** function, deprecated in Python 3.7: use **`locale.format_string()`** instead. Patch by Victor Stinner.
- [gh-94199](https://github.com/python/cpython/issues/94199) [https://github.com/python/cpython/issues/94199]: Remove the **`ssl.match_hostname()`** function. The **`ssl.match_hostname()`** was deprecated in Python 3.7. OpenSSL performs hostname matching since Python 3.7, Python no longer uses the **`ssl.match_hostname()`** function. Patch by Victor Stinner.
- [gh-94214](https://github.com/python/cpython/issues/94214) [https://github.com/python/cpython/issues/94214]: Document the `context` object used in the `venv.EnvBuilder` class, and add the new environment's library path to it.
- [gh-94199](https://github.com/python/cpython/issues/94199) [https://github.com/python/cpython/issues/94199]: Remove the **`ssl.wrap_socket()`** function, deprecated in Python 3.7: instead, create a **`ssl.SSLContext`** object and call its **`ssl.SSLContext.wrap_socket`** method. Any package that still uses **`ssl.wrap_socket()`** is broken and insecure. The function neither sends a SNI TLS extension nor validates server hostname. Code is subject to [CWE-295](https://cwe.mitre.org/data/definitions/295.html) [https://cwe.mitre.org/data/definitions/295.html]: Improper Certificate Validation. Patch by Victor Stinner.
- [gh-94199](https://github.com/python/cpython/issues/94199) [https://github.com/python/cpython/issues/94199]: Remove the **`ssl.RAND_pseudo_bytes()`** function, deprecated in Python 3.6: use **`os.urandom()`** or **`ssl.RAND_bytes()`** instead. Patch by Victor Stinner.

- [gh-94199](https://github.com/python/cpython/issues/94199) [https://github.com/python/cpython/issues/94199]: **hashlib**: Remove the pure Python implementation of **hashlib.pbkdf2\_hmac()**, deprecated in Python 3.10. Python 3.10 and newer requires OpenSSL 1.1.1 ([PEP 644](https://peps.python.org/pep-0644/) [https://peps.python.org/pep-0644/]): this OpenSSL version provides a C implementation of **pbkdf2\_hmac()** which is faster. Patch by Victor Stinner.
- [gh-94196](https://github.com/python/cpython/issues/94196) [https://github.com/python/cpython/issues/94196]: **gzip**: Remove the `filename` attribute of **gzip.GzipFile**, deprecated since Python 2.6, use the `name` attribute instead. In write mode, the `filename` attribute added `'.gz'` file extension if it was not present. Patch by Victor Stinner.
- [gh-94182](https://github.com/python/cpython/issues/94182) [https://github.com/python/cpython/issues/94182]: run the **asyncio.PidfdChildWatcher** on the running loop, this allows event loops to run subprocesses when there is no default event loop running on the main thread
- [gh-94169](https://github.com/python/cpython/issues/94169) [https://github.com/python/cpython/issues/94169]: Remove `io.OpenWrapper` and `_pyio.OpenWrapper`, deprecated in Python 3.10: just use **open()** instead. The **open()** (**io.open()**) function is a built-in function. Since Python 3.10, **\_pyio.open()** is also a static method. Patch by Victor Stinner.
- [gh-91742](https://github.com/python/cpython/issues/91742) [https://github.com/python/cpython/issues/91742]: Fix **pdb** crash after jump caused by a null pointer dereference. Patch by Kumar Aditya.
- [gh-94101](https://github.com/python/cpython/issues/94101) [https://github.com/python/cpython/issues/94101]: Manual instantiation of **ssl.SSLSession** objects is no longer allowed as it lead to misconfigured instances that crashed the interpreter when attributes were accessed on them.
- [gh-84753](https://github.com/python/cpython/issues/84753) [https://github.com/python/cpython/issues/84753]: **inspect.iscoroutinefunction()**, **inspect.isgeneratorfunction()**, and **inspect.isasyncgenfunction()** now properly return `True` for duck-typed function-like objects like instances of **unittest.mock.AsyncMock**.

This makes `inspect.iscoroutinefunction()` consistent with the behavior of `asyncio.iscoroutinefunction()`. Patch by Mehdi ABAAKOUK.

- [gh-94028](https://github.com/python/cpython/issues/94028) [https://github.com/python/cpython/issues/94028]: Fix a regression in the `sqlite3` where statement objects were not properly cleared and reset after use in cursor iterators. The regression was introduced by PR 27884 in Python 3.11a1. Patch by Erlend E. Aasland.
- [gh-93973](https://github.com/python/cpython/issues/93973) [https://github.com/python/cpython/issues/93973]: Add keyword argument `all_errors` to `asyncio.create_connection` so that multiple connection errors can be raised as an `ExceptionGroup`.
- [gh-93963](https://github.com/python/cpython/issues/93963) [https://github.com/python/cpython/issues/93963]: Officially deprecate from `importlib.abc` classes moved to `importlib.resources.abc`.
- [gh-93858](https://github.com/python/cpython/issues/93858) [https://github.com/python/cpython/issues/93858]: Prevent error when activating venv in nested fish instances.
- [gh-93820](https://github.com/python/cpython/issues/93820) [https://github.com/python/cpython/issues/93820]: Pickle `enum.Flag` by name.
- [gh-93847](https://github.com/python/cpython/issues/93847) [https://github.com/python/cpython/issues/93847]: Fix repr of enum of generic aliases.
- [gh-91404](https://github.com/python/cpython/issues/91404) [https://github.com/python/cpython/issues/91404]: Revert the `re` memory leak when a match is terminated by a signal or memory allocation failure as the implemented fix caused a major performance regression.
- [gh-83499](https://github.com/python/cpython/issues/83499) [https://github.com/python/cpython/issues/83499]: Fix double closing of file description in `tempfile`.
- [gh-93820](https://github.com/python/cpython/issues/93820) [https://github.com/python/cpython/issues/93820]: Fixed a regression when `copy.copy()`-ing `enum.Flag` with multiple flag members.
- [gh-79512](https://github.com/python/cpython/issues/79512) [https://github.com/python/cpython/issues/79512]: Fixed

names and `__module__` value of **`weakref`** classes **`ReferenceType`**, **`ProxyType`**, **`CallableProxyType`**. It makes them pickleable.

- [gh-91389](https://github.com/python/cpython/issues/91389) [https://github.com/python/cpython/issues/91389]: Fix an issue where **`dis`** utilities could report missing or incorrect position information in the presence of `CACHE` entries.
- [gh-93626](https://github.com/python/cpython/issues/93626) [https://github.com/python/cpython/issues/93626]: Set `__future__.annotations` to have a `None` mandatoryRelease to indicate that it is currently ‘TBD’.
- [gh-90473](https://github.com/python/cpython/issues/90473) [https://github.com/python/cpython/issues/90473]: Emscripten and WASI have no home directory and cannot provide **`PEP 370`** [https://peps.python.org/pep-0370/] user site directory.
- [gh-90494](https://github.com/python/cpython/issues/90494) [https://github.com/python/cpython/issues/90494]: **`copy.copy()`** and **`copy.deepcopy()`** now always raise a `TypeError` if `__reduce__()` returns a tuple with length 6 instead of silently ignore the 6th item or produce incorrect result.
- [gh-90549](https://github.com/python/cpython/issues/90549) [https://github.com/python/cpython/issues/90549]: Fix a multiprocessing bug where a global named resource (such as a semaphore) could leak when a child process is spawned (as opposed to forked).
- [gh-93521](https://github.com/python/cpython/issues/93521) [https://github.com/python/cpython/issues/93521]: Fixed a case where dataclasses would try to add `__weakref__` into the `__slots__` for a dataclass that specified `weakref_slot=True` when it was already defined in one of its bases. This resulted in a `TypeError` upon the new class being created.
- [gh-79579](https://github.com/python/cpython/issues/79579) [https://github.com/python/cpython/issues/79579]: **`sqlite3`** now correctly detects DML queries with leading comments. Patch by Erlend E. Aasland.
- [gh-93421](https://github.com/python/cpython/issues/93421) [https://github.com/python/cpython/issues/93421]: Update **`sqlite3.Cursor.rowcount`** when a DML statement has

run to completion. This fixes the row count for SQL queries like `UPDATE ... RETURNING`. Patch by Erlend E. Aasland.

- [gh-93475](https://github.com/python/cpython/issues/93475) [https://github.com/python/cpython/issues/93475]: Expose `FICLONE` and `FICLONERANGE` constants in `fcntl`. Patch by Illia Volochii.
- [gh-93370](https://github.com/python/cpython/issues/93370) [https://github.com/python/cpython/issues/93370]: Deprecate `sqlite3.version` and `sqlite3.version_info`.
- [gh-91810](https://github.com/python/cpython/issues/91810) [https://github.com/python/cpython/issues/91810]: Suppress writing an XML declaration in open files in `ElementTree.write()` with `encoding='unicode'` and `xml_declaration=None`.
- [gh-91162](https://github.com/python/cpython/issues/91162) [https://github.com/python/cpython/issues/91162]: Support splitting of unpacked arbitrary-length tuple over `TypeVar` and `TypeVarTuple` parameters. For example:
  - `A[T, *Ts][*tuple[int, ...]] -> A[int, *tuple[int, ...]]`
  - `A[*Ts, T][*tuple[int, ...]] -> A[*tuple[int, ...], int]`
- [gh-93353](https://github.com/python/cpython/issues/93353) [https://github.com/python/cpython/issues/93353]: Fix the `importlib.resources.as_file()` context manager to remove the temporary file if destroyed late during Python finalization: keep a local reference to the `os.remove()` function. Patch by Victor Stinner.
- [gh-83658](https://github.com/python/cpython/issues/83658) [https://github.com/python/cpython/issues/83658]: Make `multiprocessing.Pool` raise an exception if `maxtasksperchild` is not `None` or a positive int.
- [gh-93312](https://github.com/python/cpython/issues/93312) [https://github.com/python/cpython/issues/93312]: Add `os.PIDFD_NONBLOCK` flag to open a file descriptor for a process with `os.pidfd_open()` in non-blocking mode. Patch by Kumar Aditya.
- [gh-88123](https://github.com/python/cpython/issues/88123) [https://github.com/python/cpython/issues/88123]:

Implement `Enum _contains_` that returns `True` or `False` to replace the deprecated behaviour that would sometimes raise a `TypeError`.

- [gh-93297](https://github.com/python/cpython/issues/93297) [https://github.com/python/cpython/issues/93297]: Make `asyncio` task groups prevent child tasks from being GCed
- [gh-85308](https://github.com/python/cpython/issues/85308) [https://github.com/python/cpython/issues/85308]: Changed `argparse.ArgumentParser` to use `filesystem encoding and error handler` instead of default text encoding to read arguments from file (e.g. `fromfile_prefix_chars` option). This change affects Windows; argument file should be encoded with UTF-8 instead of ANSI Codepage.
- [gh-93156](https://github.com/python/cpython/issues/93156) [https://github.com/python/cpython/issues/93156]: Accessing the `pathlib.PurePath.parents` sequence of an absolute path using negative index values produced incorrect results.
- [gh-93162](https://github.com/python/cpython/issues/93162) [https://github.com/python/cpython/issues/93162]: Add the ability for `logging.config.dictConfig()` to usefully configure `QueueHandler` and `QueueListener` as a pair, and add `logging.getHandlerByName()` and `logging.getHandlerNames()` APIs to allow access to handlers by name.
- [gh-93243](https://github.com/python/cpython/issues/93243) [https://github.com/python/cpython/issues/93243]: The `smtplib` module was removed per the schedule in [PEP 594](https://peps.python.org/pep-0594/) [https://peps.python.org/pep-0594/].
- [gh-92886](https://github.com/python/cpython/issues/92886) [https://github.com/python/cpython/issues/92886]: Replace `assert` statements with `raise AssertionError()` in `BaseHandler` so that the tested behaviour is maintained running with optimizations `(-O)`.
- [gh-90155](https://github.com/python/cpython/issues/90155) [https://github.com/python/cpython/issues/90155]: Fix broken `asyncio.Semaphore` when `acquire` is cancelled.
- [gh-90817](https://github.com/python/cpython/issues/90817) [https://github.com/python/cpython/issues/90817]: The `locale.resetlocale()` function is deprecated and will be removed in Python 3.13. Use

`locale.setlocale(locale.LC_ALL, "")` instead. Patch by Victor Stinner.

- [gh-91513](https://github.com/python/cpython/issues/91513) [https://github.com/python/cpython/issues/91513]: Added `taskName` attribute to `logging` module for use with `asyncio` tasks.
- [gh-74696](https://github.com/python/cpython/issues/74696) [https://github.com/python/cpython/issues/74696]: `shutil.make_archive()` no longer temporarily changes the current working directory during creation of standard `.zip` or `tar` archives.
- [gh-92728](https://github.com/python/cpython/issues/92728) [https://github.com/python/cpython/issues/92728]: The `re.template()` function and the corresponding `re.TEMPLATE` and `re.T` flags are restored after they were removed in 3.11.0b1, but they are now deprecated, so they might be removed from Python 3.13.
- [gh-93033](https://github.com/python/cpython/issues/93033) [https://github.com/python/cpython/issues/93033]: Search in some strings (platform dependent i.e. [U + 0xFFFF, U + 0x0100] on Windows or [U + 0xFFFFFFFF, U + 0x00010000] on Linux 64-bit) are now up to 10 times faster.
- [gh-89973](https://github.com/python/cpython/issues/89973) [https://github.com/python/cpython/issues/89973]: Fix `re.error` raised in `fnmatch` if the pattern contains a character range with upper bound lower than lower bound (e.g. [c-a]). Now such ranges are interpreted as empty ranges.
- [gh-93044](https://github.com/python/cpython/issues/93044) [https://github.com/python/cpython/issues/93044]: No longer convert the database argument of `sqlite3.connect()` to bytes before passing it to the factory.
- [gh-93010](https://github.com/python/cpython/issues/93010) [https://github.com/python/cpython/issues/93010]: In a very special case, the email package tried to append the nonexistent `InvalidHeaderError` to the defect list. It should have been `InvalidHeaderDefect`.
- [gh-92986](https://github.com/python/cpython/issues/92986) [https://github.com/python/cpython/issues/92986]: Fix

`ast.unparse()` when `ImportFrom.level` is `None`

- [gh-92932](https://github.com/python/cpython/issues/92932) [https://github.com/python/cpython/issues/92932]: Now `dis()` and `get_instructions()` handle operand values for instructions prefixed by `EXTENDED_ARG_QUICK`. Patch by Sam Gross and Donghee Na.
- [gh-92675](https://github.com/python/cpython/issues/92675) [https://github.com/python/cpython/issues/92675]: Fix `venv.ensure_directories()` to accept `pathlib.Path` arguments in addition to `str` paths. Patch by David Foster.
- [gh-87901](https://github.com/python/cpython/issues/87901) [https://github.com/python/cpython/issues/87901]: Removed the `encoding` argument from `os.popen()` that was added in 3.11b1.
- [gh-91922](https://github.com/python/cpython/issues/91922) [https://github.com/python/cpython/issues/91922]: Fix function `sqlite.connect()` and the `sqlite.Connection` constructor on non-UTF-8 locales. Also, they now support bytes paths non-decodable with the current FS encoding.
- [gh-92869](https://github.com/python/cpython/issues/92869) [https://github.com/python/cpython/issues/92869]: Added `c_time_t` to `ctypes`, which has the same size as the `time_t` type in C.
- [gh-92839](https://github.com/python/cpython/issues/92839) [https://github.com/python/cpython/issues/92839]: Fixed crash resulting from calling `bisect.insort()` or `bisect.insort_left()` with the `key` argument not equal to `None`.
- [gh-90473](https://github.com/python/cpython/issues/90473) [https://github.com/python/cpython/issues/90473]: `subprocess` now fails early on Emscripten and WASI platforms to work around missing `os.pipe()` on WASI.
- [gh-89325](https://github.com/python/cpython/issues/89325) [https://github.com/python/cpython/issues/89325]: Removed many old deprecated `unittest` features: `TestCase` method aliases, undocumented and broken `TestCase` method `assertDictContainsSubset`, undocumented `TestLoader.loadTestsFromModule` parameter `use_load_tests`, and an underscored alias of the `TextTestResult` class.

- [gh-92734](https://github.com/python/cpython/issues/92734) [https://github.com/python/cpython/issues/92734]: Allow multi-element reprs emitted by `reprlib` to be pretty-printed using configurable indentation.
- [gh-92671](https://github.com/python/cpython/issues/92671) [https://github.com/python/cpython/issues/92671]: Fixed `ast.unparse()` for empty tuples in the assignment target context.
- [gh-91581](https://github.com/python/cpython/issues/91581) [https://github.com/python/cpython/issues/91581]: `utcfromtimestamp()` no longer attempts to resolve `fold` in the pure Python implementation, since the fold is never 1 in UTC. In addition to being slightly faster in the common case, this also prevents some errors when the timestamp is close to `datetime.min`. Patch by Paul Ganssle.
- [gh-86388](https://github.com/python/cpython/issues/86388) [https://github.com/python/cpython/issues/86388]: Removed `randrange()` functionality deprecated since Python 3.10. Formerly, `randrange(10.0)` losslessly converted to `randrange(10)`. Now, it raises a `TypeError`. Also, the exception raised for non-integral values such as `randrange(10.5)` or `randrange('10')` has been changed from `ValueError` to `TypeError`.
- [gh-90385](https://github.com/python/cpython/issues/90385) [https://github.com/python/cpython/issues/90385]: Add `pathlib.Path.walk()` as an alternative to `os.walk()`.
- [gh-92550](https://github.com/python/cpython/issues/92550) [https://github.com/python/cpython/issues/92550]: Fix `pathlib.Path.rglob()` for empty pattern.
- [gh-92591](https://github.com/python/cpython/issues/92591) [https://github.com/python/cpython/issues/92591]: Allow `logging` filters to return a `logging.LogRecord` instance so that filters attached to `logging.Handlers` can enrich records without side effects on other handlers.
- [gh-92445](https://github.com/python/cpython/issues/92445) [https://github.com/python/cpython/issues/92445]: Fix a bug in `argparse` where `nargs="*" would raise an error instead of returning an empty list when 0 arguments were supplied if choice was also defined in parser.add_argument.`
- [gh-92547](https://github.com/python/cpython/issues/92547) [https://github.com/python/cpython/issues/92547]: Remove

undocumented **sqlite3** features deprecated in Python 3.10:

- `sqlite3.enable_shared_cache()`
- `sqlite3.OptimizedUnicode`

Patch by Erlend E. Aasland.

- [gh-92530](https://github.com/python/cpython/issues/92530) [https://github.com/python/cpython/issues/92530]: Fix an issue that occurred after interrupting `threading.Condition.notify()`.
- [gh-92531](https://github.com/python/cpython/issues/92531) [https://github.com/python/cpython/issues/92531]: The `statistics.median_grouped()` function now always return a float. Formerly, it did not convert the input type when for sequences of length one.
- [gh-84131](https://github.com/python/cpython/issues/84131) [https://github.com/python/cpython/issues/84131]: The `pathlib.Path` deprecated method `link_to` has been removed. Use 3.10's `hardlink_to()` method instead as its semantics are consistent with that of `symlink_to()`.
- [gh-89336](https://github.com/python/cpython/issues/89336) [https://github.com/python/cpython/issues/89336]: Removed `configparser` module APIs: the `SafeConfigParser` class alias, the `ParsingError.filename` property and parameter, and the `ConfigParser.readfp` method, all of which were deprecated since Python 3.2.
- [gh-92391](https://github.com/python/cpython/issues/92391) [https://github.com/python/cpython/issues/92391]: Add `__class_getitem__()` to `csv.DictReader` and `csv.DictWriter`, allowing them to be parameterized at runtime. Patch by Marc Mueller.
- [gh-91968](https://github.com/python/cpython/issues/91968) [https://github.com/python/cpython/issues/91968]: Add `SO_RTABLE` and `SO_USER_COOKIE` constants to `socket`.
- [gh-91810](https://github.com/python/cpython/issues/91810) [https://github.com/python/cpython/issues/91810]: `ElementTree` method `write()` and function `tostring()` now use the text file's encoding ("UTF-8" if not available) instead of locale encoding in XML declaration when `encoding="unicode"` is specified.

- [gh-81790](https://github.com/python/cpython/issues/81790) [https://github.com/python/cpython/issues/81790]: `os.path.splitdrive()` now understands DOS device paths with UNC links (beginning `\\?\UNC\`). Contributed by Barney Gale.
- [gh-91760](https://github.com/python/cpython/issues/91760) [https://github.com/python/cpython/issues/91760]: Apply more strict rules for numerical group references and group names in regular expressions. Only sequence of ASCII digits is now accepted as a numerical reference. The group name in bytes patterns and replacement strings can now only contain ASCII letters and digits and underscore.
- [gh-90622](https://github.com/python/cpython/issues/90622) [https://github.com/python/cpython/issues/90622]: Worker processes for `concurrent.futures.ProcessPoolExecutor` are no longer spawned on demand (a feature added in 3.9) when the multiprocessing context start method is `"fork"` as that can lead to deadlocks in the child processes due to a fork happening while threads are running.
- [gh-91577](https://github.com/python/cpython/issues/91577) [https://github.com/python/cpython/issues/91577]: Move imports in `SharedMemory` methods to module level so that they can be executed late in python finalization.
- [gh-91581](https://github.com/python/cpython/issues/91581) [https://github.com/python/cpython/issues/91581]: Remove an unhandled error case in the C implementation of calls to `datetime.fromtimestamp` with no time zone (i.e. getting a local time from an epoch timestamp). This should have no user-facing effect other than giving a possibly more accurate error message when called with timestamps that fall on 10000-01-01 in the local time. Patch by Paul Ganssle.
- [gh-91539](https://github.com/python/cpython/issues/91539) [https://github.com/python/cpython/issues/91539]: Improve performance of `urllib.request.getproxies_environment` when there are many environment variables
- [gh-91524](https://github.com/python/cpython/issues/91524) [https://github.com/python/cpython/issues/91524]: Speed up the regular expression substitution (functions `re.sub()` and `re.subn()` and corresponding `re.Pattern` methods) for replacement strings containing group references by 2–3

times.

- [gh-91447](https://github.com/python/cpython/issues/91447) [https://github.com/python/cpython/issues/91447]: Fix `findtext` in the `xml` module to only give an empty string when the text attribute is set to `None`.
- [gh-91456](https://github.com/python/cpython/issues/91456) [https://github.com/python/cpython/issues/91456]: Deprecate current default `auto()` behavior: In 3.13 the default will be for `auto()` to always return the largest member value incremented by 1, and to raise if incompatible value types are used.
- [bpo-47231](https://bugs.python.org/issue?@action=redirect&bpo=47231) [https://bugs.python.org/issue?@action=redirect&bpo=47231]: Fixed an issue with inconsistent trailing slashes in `tarfile` longname directories.
- [bpo-39064](https://bugs.python.org/issue?@action=redirect&bpo=39064) [https://bugs.python.org/issue?@action=redirect&bpo=39064]: `zipfile.ZipFile` now raises `zipfile.BadZipFile` instead of `ValueError` when reading a corrupt zip file in which the central directory offset is negative.
- [bpo-41287](https://bugs.python.org/issue?@action=redirect&bpo=41287) [https://bugs.python.org/issue?@action=redirect&bpo=41287]: Fix handling of the `doc` argument in subclasses of `property()`.
- [gh-90005](https://github.com/python/cpython/issues/90005) [https://github.com/python/cpython/issues/90005]: `ctypes` dependency `libffi` is now detected with `pkg-config`.
- [bpo-32547](https://bugs.python.org/issue?@action=redirect&bpo=32547) [https://bugs.python.org/issue?@action=redirect&bpo=32547]: The constructors for `DictWriter` and `DictReader` now coerce the `fieldnames` argument to a `list` if it is an iterator.
- [bpo-35540](https://bugs.python.org/issue?@action=redirect&bpo=35540) [https://bugs.python.org/issue?@action=redirect&bpo=35540]: Fix `dataclasses.asdict()` crash when `collections.defaultdict` is present in the attributes.
- [bpo-47063](https://bugs.python.org/issue?@action=redirect&bpo=47063) [https://bugs.python.org/issue?@action=redirect&bpo=47063]: Add an `index_pages` parameter to

support using non-default index page names.

- [bpo-47025](https://bugs.python.org/issue?@action=redirect&bpo=47025) [https://bugs.python.org/issue?@action=redirect&bpo=47025]: Drop support for `bytes` on `sys.path`.
- [bpo-46951](https://bugs.python.org/issue?@action=redirect&bpo=46951) [https://bugs.python.org/issue?@action=redirect&bpo=46951]: Order the contents of zipapp archives, to make builds more reproducible.
- [bpo-42777](https://bugs.python.org/issue?@action=redirect&bpo=42777) [https://bugs.python.org/issue?@action=redirect&bpo=42777]: Implement `pathlib.Path.is_mount()` for Windows paths.
- [bpo-46755](https://bugs.python.org/issue?@action=redirect&bpo=46755) [https://bugs.python.org/issue?@action=redirect&bpo=46755]: In `QueueHandler`, clear `stack_info` from `LogRecord` to prevent stack trace from being written twice.
- [bpo-45393](https://bugs.python.org/issue?@action=redirect&bpo=45393) [https://bugs.python.org/issue?@action=redirect&bpo=45393]: Fix the formatting for `await x` and `not x` in the operator precedence table when using the `help()` system.
- [bpo-46642](https://bugs.python.org/issue?@action=redirect&bpo=46642) [https://bugs.python.org/issue?@action=redirect&bpo=46642]: Improve error message when trying to subclass an instance of `typing.TypeVar`, `typing.ParamSpec`, `typing.TypeVarTuple`, etc. Based on patch by Gregory Beauregard.
- [bpo-46364](https://bugs.python.org/issue?@action=redirect&bpo=46364) [https://bugs.python.org/issue?@action=redirect&bpo=46364]: Restrict use of sockets instead of pipes for stdin of subprocesses created by `asyncio` to AIX platform only.
- [bpo-28249](https://bugs.python.org/issue?@action=redirect&bpo=28249) [https://bugs.python.org/issue?@action=redirect&bpo=28249]: Set `doctest.DocTest.lineno` to `None` when object does not have `__doc__`.
- [bpo-46197](https://bugs.python.org/issue?@action=redirect&bpo=46197) [https://bugs.python.org/issue?@action=redirect&bpo=46197]: Fix `ensurepip` environment

isolation for subprocess running `pip`.

- [bpo-45924](https://bugs.python.org/issue?@action=redirect&bpo=45924) [https://bugs.python.org/issue?@action=redirect&bpo=45924]: Fix **asyncio** incorrect traceback when future's exception is raised multiple times. Patch by Kumar Aditya.
- [bpo-45046](https://bugs.python.org/issue?@action=redirect&bpo=45046) [https://bugs.python.org/issue?@action=redirect&bpo=45046]: Add support of context managers in **unittest**: methods **enterContext()** and **enterClassContext()** of class **TestCase**, method **enterAsyncContext()** of class **IsolatedAsyncioTestCase** and function **unittest.enterModuleContext()**.
- [bpo-44173](https://bugs.python.org/issue?@action=redirect&bpo=44173) [https://bugs.python.org/issue?@action=redirect&bpo=44173]: Enable fast seeking of uncompressed unencrypted **zipfile.ZipExtFile**
- [bpo-42627](https://bugs.python.org/issue?@action=redirect&bpo=42627) [https://bugs.python.org/issue?@action=redirect&bpo=42627]: Fix incorrect parsing of Windows registry proxy settings
- [bpo-42047](https://bugs.python.org/issue?@action=redirect&bpo=42047) [https://bugs.python.org/issue?@action=redirect&bpo=42047]: Add **threading.get\_native\_id()** support for DragonFly BSD. Patch by David Carlier.
- [bpo-14243](https://bugs.python.org/issue?@action=redirect&bpo=14243) [https://bugs.python.org/issue?@action=redirect&bpo=14243]: The **tempfile.NamedTemporaryFile** function has a new optional parameter *delete\_on\_close*
- [bpo-41246](https://bugs.python.org/issue?@action=redirect&bpo=41246) [https://bugs.python.org/issue?@action=redirect&bpo=41246]: Give the same callback function for when the overlapped operation is done to the functions `recv`, `recv_into`, `recvfrom`, `sendto`, `send` and `sendfile` inside `IocpProactor`.
- [bpo-39264](https://bugs.python.org/issue?@action=redirect&bpo=39264) [https://bugs.python.org/issue?@action=redirect&bpo=39264]: Fixed

`collections.UserDict.get()` to not call `__missing__()` when a value is not found. This matches the behavior of `dict`. Patch by Bar Harel.

- [bpo-38693](https://bugs.python.org/issue?@action=redirect&bpo=38693) [https://bugs.python.org/issue?@action=redirect&bpo=38693]: `importlib` now uses f-strings internally instead of `str.format`.
- [bpo-38267](https://bugs.python.org/issue?@action=redirect&bpo=38267) [https://bugs.python.org/issue?@action=redirect&bpo=38267]: Add `timeout` parameter to `asyncio.loop.shutdown_default_executor()`. The default value is `None`, which means the executor will be given an unlimited amount of time. When called from `asyncio.Runner` or `asyncio.run()`, the default timeout is 5 minutes.
- [bpo-34828](https://bugs.python.org/issue?@action=redirect&bpo=34828) [https://bugs.python.org/issue?@action=redirect&bpo=34828]: `sqlite3.Connection.iterdump()` now handles databases that use `AUTOINCREMENT` in one or more tables.
- [bpo-32990](https://bugs.python.org/issue?@action=redirect&bpo=32990) [https://bugs.python.org/issue?@action=redirect&bpo=32990]: Support reading wave files with the `WAVE_FORMAT_EXTENSIBLE` format in the `wave` module.
- [bpo-26253](https://bugs.python.org/issue?@action=redirect&bpo=26253) [https://bugs.python.org/issue?@action=redirect&bpo=26253]: Allow adjustable compression level for tarfile streams in `tarfile.open()`.

## Documentation

- [gh-85525](https://github.com/python/cpython/issues/85525) [https://github.com/python/cpython/issues/85525]: Remove extra row
- [gh-86404](https://github.com/python/cpython/issues/86404) [https://github.com/python/cpython/issues/86404]: Deprecated tools `make_suspicious` and `rstlint.py` are now removed. They have been replaced by `sphinx-lint` [https://pypi.org/project/sphinx-lint/].
- [gh-97741](https://github.com/python/cpython/issues/97741) [https://github.com/python/cpython/issues/97741]: Fix `! in c domain ref target` syntax via a `conf.py` patch, so it works as intended to disable ref target resolution.

- [gh-96432](https://github.com/python/cpython/issues/96432) [https://github.com/python/cpython/issues/96432]: Fraction literals now support whitespace around the forward slash, `Fraction('2 / 3')`.
- [gh-96098](https://github.com/python/cpython/issues/96098) [https://github.com/python/cpython/issues/96098]: Improve discoverability of the higher level concurrent.futures module by providing clearer links from the lower level threading and multiprocessing modules.
- [gh-95957](https://github.com/python/cpython/issues/95957) [https://github.com/python/cpython/issues/95957]: What's New 3.11 now has instructions for how to provide compiler and linker flags for Tcl/Tk and OpenSSL on RHEL 7 and CentOS 7.
- [gh-95588](https://github.com/python/cpython/issues/95588) [https://github.com/python/cpython/issues/95588]: Clarified the conflicting advice given in the `ast` documentation about `ast.literal_eval()` being “safe” for use on untrusted input while at the same time warning that it can crash the process. The latter statement is true and is deemed unfixable without a large amount of work unsuitable for a bugfix. So we keep the warning and no longer claim that `literal_eval` is safe.
- [gh-91207](https://github.com/python/cpython/issues/91207) [https://github.com/python/cpython/issues/91207]: Fix stylesheet not working in Windows CHM htmlhelp docs and add warning that they are deprecated. Contributed by C.A.M. Gerlach.
- [gh-95454](https://github.com/python/cpython/issues/95454) [https://github.com/python/cpython/issues/95454]: Replaced incorrectly written true/false values in documentation. Patch by Robert O'Shea
- [gh-95451](https://github.com/python/cpython/issues/95451) [https://github.com/python/cpython/issues/95451]: Update library documentation with [availability information](#) on WebAssembly platforms `wasm32-emscripten` and `wasm32-wasi`.
- [gh-95415](https://github.com/python/cpython/issues/95415) [https://github.com/python/cpython/issues/95415]: Use consistent syntax for platform availability. The directive now supports a content body and emits a warning when it encounters an unknown platform.
- [gh-94321](https://github.com/python/cpython/issues/94321) [https://github.com/python/cpython/issues/94321]: Document the [PEP 246](https://peps.python.org/pep-0246/) [https://peps.python.org/pep-0246/] style protocol type `sqlite3.PrepareProtocol`.
- [gh-86128](https://github.com/python/cpython/issues/86128) [https://github.com/python/cpython/issues/86128]: Document a limitation in `ThreadPoolExecutor` where its exit handler is executed before any handlers in `atexit`.

- [gh-61162](https://github.com/python/cpython/issues/61162) [https://github.com/python/cpython/issues/61162]: Clarify **sqlite3** behavior when [How to use the connection context manager](#).
- [gh-87260](https://github.com/python/cpython/issues/87260) [https://github.com/python/cpython/issues/87260]: Align **sqlite3** argument specs with the actual implementation.
- [gh-86986](https://github.com/python/cpython/issues/86986) [https://github.com/python/cpython/issues/86986]: The minimum Sphinx version required to build the documentation is now 3.2.
- [gh-88831](https://github.com/python/cpython/issues/88831) [https://github.com/python/cpython/issues/88831]: Augmented documentation of `asyncio.create_task()`. Clarified the need to keep strong references to tasks and added a code snippet detailing how to do this.
- [gh-86438](https://github.com/python/cpython/issues/86438) [https://github.com/python/cpython/issues/86438]: Clarify that **-W** and **PYTHONWARNINGS** are matched literally and case-insensitively, rather than as regular expressions, in **warnings**.
- [gh-93031](https://github.com/python/cpython/issues/93031) [https://github.com/python/cpython/issues/93031]: Update tutorial introduction output to use 3.10+ `SyntaxError` invalid range.
- [gh-92240](https://github.com/python/cpython/issues/92240) [https://github.com/python/cpython/issues/92240]: Added release dates for “What’s New in Python 3.X” for 3.0, 3.1, 3.2, 3.8 and 3.10
- [bpo-47161](https://bugs.python.org/issue?@action=redirect&bpo=47161) [https://bugs.python.org/issue?@action=redirect&bpo=47161]: Document that **pathlib.PurePath** does not collapse initial double slashes because they denote UNC paths.
- [bpo-40838](https://bugs.python.org/issue?@action=redirect&bpo=40838) [https://bugs.python.org/issue?@action=redirect&bpo=40838]: Document that **inspect.getdoc()**, **inspect.getmodule()**, and **inspect.getsourcefile()** might return `None`.
- [bpo-43689](https://bugs.python.org/issue?@action=redirect&bpo=43689) [https://bugs.python.org/issue?@action=redirect&bpo=43689]: The `Differ` documentation now also mentions other whitespace characters, which make it harder to understand the diff output.
- [bpo-38056](https://bugs.python.org/issue?@action=redirect&bpo=38056) [https://bugs.python.org/issue?@action=redirect&bpo=38056]: Overhaul the **Error Handlers** documentation in **codecs**.
- [bpo-13553](https://bugs.python.org/issue?@action=redirect&bpo=13553) [https://bugs.python.org/issue?@action=redirect&bpo=13553]: Document `tkinter.Tk` args.

## Tests

- [gh-95027](https://github.com/python/cpython/issues/95027) [https://github.com/python/cpython/issues/95027]: On Windows, when the Python test suite is run with the `-jN` option, the ANSI code page is now used as the encoding for the stdout temporary file, rather than using UTF-8 which can lead to decoding errors. Patch by Victor Stinner.
- [gh-96624](https://github.com/python/cpython/issues/96624) [https://github.com/python/cpython/issues/96624]: Fixed the failure of repeated runs of `test.test_unittest` caused by side effects in `test_dotted_but_module_not_loaded`.
- [gh-95243](https://github.com/python/cpython/issues/95243) [https://github.com/python/cpython/issues/95243]: Mitigate the inherent race condition from using `find_unused_port()` in `testSockName()` by trying to find an unused port a few times before failing. Patch by Ross Burton.
- [gh-95573](https://github.com/python/cpython/issues/95573) [https://github.com/python/cpython/issues/95573]: [Lib/test/test\\_asyncio/test\\_ssl.py](#) [https://github.com/python/cpython/tree/3.12/Lib/test/test\_asyncio/test\_ssl.py] exposed a bug in the macOS kernel where intense concurrent load on non-blocking sockets occasionally causes `errno.ENOBUFS` (“No buffer space available”) to be emitted. FB11063974 filed with Apple, in the mean time as a workaround buffer size used in tests on macOS is decreased to avoid intermittent failures. Patch by Fantix King.
- [gh-95280](https://github.com/python/cpython/issues/95280) [https://github.com/python/cpython/issues/95280]: Fix problem with `test_ssl test_get_ciphers` on systems that require perfect forward secrecy (PFS) ciphers.
- [gh-95212](https://github.com/python/cpython/issues/95212) [https://github.com/python/cpython/issues/95212]: Make multiprocessing test case `test_shared_memory_recreate` parallel-safe.
- [gh-95218](https://github.com/python/cpython/issues/95218) [https://github.com/python/cpython/issues/95218]: Move tests for `importlib.resources` into `test_importlib.resources`.
- [gh-93963](https://github.com/python/cpython/issues/93963) [https://github.com/python/cpython/issues/93963]: Updated tests to use preferred location for `importlib.resources` ABCs.
- [gh-94675](https://github.com/python/cpython/issues/94675) [https://github.com/python/cpython/issues/94675]: Add a regression test for `re` exponential slowdown when using `rjsmin`.
- [gh-91330](https://github.com/python/cpython/issues/91330) [https://github.com/python/cpython/issues/91330]: Added more tests for `dataclasses` to cover behavior with data

descriptor-based fields.

- [gh-94208](https://github.com/python/cpython/issues/94208) [https://github.com/python/cpython/issues/94208]: `test_ssl` is now checking for supported TLS version and protocols in more tests.
- [gh-94315](https://github.com/python/cpython/issues/94315) [https://github.com/python/cpython/issues/94315]: Tests now check for DAC override capability instead of relying on `os.geteuid()`.
- [gh-54781](https://github.com/python/cpython/issues/54781) [https://github.com/python/cpython/issues/54781]: Rename `test_tk` to `test_tkinter`, and rename `test_ttk_gui` to `test_ttk`. Patch by Victor Stinner.
- [gh-93839](https://github.com/python/cpython/issues/93839) [https://github.com/python/cpython/issues/93839]: Move `Lib/ctypes/test/` to `Lib/test/test_ctypes/`. Patch by Victor Stinner.
- [gh-93951](https://github.com/python/cpython/issues/93951) [https://github.com/python/cpython/issues/93951]: In `test_bdb.StateTestCase.test_skip`, avoid including auxiliary importers.
- [gh-93957](https://github.com/python/cpython/issues/93957) [https://github.com/python/cpython/issues/93957]: Provide nicer error reporting from subprocesses in `test_venv.EnsurePipTest.test_with_pip`.
- [gh-93884](https://github.com/python/cpython/issues/93884) [https://github.com/python/cpython/issues/93884]: Add test cases for `PyNumber_ToBase()` that take a large number or a non-int object as parameter.
- [gh-93852](https://github.com/python/cpython/issues/93852) [https://github.com/python/cpython/issues/93852]: `test_asyncio`, `test_logging`, `test_socket` and `test_socketserver` now create `AF_UNIX` domains in the current directory to no longer fail with `OSError("AF_UNIX path too long")` if the temporary directory (the `TMPDIR` environment variable) is too long. Patch by Victor Stinner.
- [gh-93353](https://github.com/python/cpython/issues/93353) [https://github.com/python/cpython/issues/93353]: `regtest` now checks if a test leaks temporary files or directories if run with `-jN` option. Patch by Victor Stinner.
- [gh-84461](https://github.com/python/cpython/issues/84461) [https://github.com/python/cpython/issues/84461]: `run_tests.py` now handles cross compiling env vars correctly and pass `HOSTRUNNER` to regression tests.
- [gh-93616](https://github.com/python/cpython/issues/93616) [https://github.com/python/cpython/issues/93616]: `test_modulefinder` now creates a temporary directory in `ModuleFinderTest.setUp()` instead of module scope.
- [gh-93575](https://github.com/python/cpython/issues/93575) [https://github.com/python/cpython/issues/93575]: Fix issue with `test_unicode` `test_raiseMemError`. The test case now use `test.support.calcobjsize` to calculate size of

PyUnicode structs. `sys.getsizeof()` may return different size when string has UTF-8 memory.

- [gh-90473](https://github.com/python/cpython/issues/90473) [https://github.com/python/cpython/issues/90473]: WASI does not have a `chmod(2)` syscall. `os.chmod()` is now a dummy function on WASI. Skip all tests that depend on working `os.chmod()`.
- [gh-90473](https://github.com/python/cpython/issues/90473) [https://github.com/python/cpython/issues/90473]: Skip tests on WASI that require symlinks with absolute paths.
- [gh-57539](https://github.com/python/cpython/issues/57539) [https://github.com/python/cpython/issues/57539]: Increase calendar test coverage for `calendar.LocaleTextCalendar.formatweekday()`.
- [gh-90473](https://github.com/python/cpython/issues/90473) [https://github.com/python/cpython/issues/90473]: Skip symlink tests on WASI. `wasmtime` uses `openat2(2)` with `RESOLVE_BENEATH` flag, which prevents symlinks with absolute paths.
- [gh-89858](https://github.com/python/cpython/issues/89858) [https://github.com/python/cpython/issues/89858]: Fix `test_embed` for out-of-tree builds. Patch by Kumar Aditya.
- [gh-92886](https://github.com/python/cpython/issues/92886) [https://github.com/python/cpython/issues/92886]: Fixing tests that fail when running with optimizations (`-O`) in `test_imaplib.py`.
- [gh-92886](https://github.com/python/cpython/issues/92886) [https://github.com/python/cpython/issues/92886]: Fixing tests that fail when running with optimizations (`-O`) in `test_zipimport.py`
- [gh-92886](https://github.com/python/cpython/issues/92886) [https://github.com/python/cpython/issues/92886]: Fixing tests that fail when running with optimizations (`-O`) in `test_py_compile.py`
- [gh-92886](https://github.com/python/cpython/issues/92886) [https://github.com/python/cpython/issues/92886]: Fixing tests that fail when running with optimizations (`-O`) in `test_sys_settrace.py`.
- [gh-92886](https://github.com/python/cpython/issues/92886) [https://github.com/python/cpython/issues/92886]: Fixing tests that fail when running with optimizations (`-O`) in `_test_multiprocessing.py`
- [gh-92670](https://github.com/python/cpython/issues/92670) [https://github.com/python/cpython/issues/92670]: Skip `test_shutil.TestCopy.test_copyfile_nonexistent_dir` test on AIX as the test uses a trailing slash to force the OS consider the path as a directory, but on AIX the trailing slash has no effect and is considered as a file.
- [gh-92514](https://github.com/python/cpython/issues/92514) [https://github.com/python/cpython/issues/92514]: Remove unused `test.support.BasicTestRunner`. Patch by Jelle Zijlstra.

- [bpo-47016](https://bugs.python.org/issue?@action=redirect&bpo=47016) [https://bugs.python.org/issue?@action=redirect&bpo=47016]: Create a GitHub Actions workflow for verifying bundled pip and setuptools. Patch by Illia Volochii and Adam Turner.

## Build

- [gh-96761](https://github.com/python/cpython/issues/96761) [https://github.com/python/cpython/issues/96761]: Fix the build process of clang compiler for `_bootstrap_python` if LTO optimization is applied. Patch by Matthias Görgens and Donghee Na.
- [gh-96883](https://github.com/python/cpython/issues/96883) [https://github.com/python/cpython/issues/96883]: wasm32-emscripten builds for browsers now include `concurrent.futures` for `asyncio` and `unittest.mock`.
- [gh-85936](https://github.com/python/cpython/issues/85936) [https://github.com/python/cpython/issues/85936]: CPython now uses the ThinLTO option as the default policy if the Clang compiler accepts the flag. Patch by Donghee Na.
- [gh-96729](https://github.com/python/cpython/issues/96729) [https://github.com/python/cpython/issues/96729]: Ensure that Windows releases built with `Tools\msi\buildrelease.bat` are upgradable to and from official Python releases.
- [gh-96269](https://github.com/python/cpython/issues/96269) [https://github.com/python/cpython/issues/96269]: Shared module targets now depend on new `MODULE_DEPS` variable, which includes `EXPORTSYMS`. This fixes a build order issue on unsupported AIX platform.
- [gh-84461](https://github.com/python/cpython/issues/84461) [https://github.com/python/cpython/issues/84461]: wasm32-emscripten platform no longer builds `resource` module, `getresuid()`, `getresgid()`, and their setters. The APIs are stubs and not functional.
- [gh-95973](https://github.com/python/cpython/issues/95973) [https://github.com/python/cpython/issues/95973]: Add a new `--with-dsymutil` configure option to link debug information in macOS. Patch by Pablo Galindo.
- [gh-90536](https://github.com/python/cpython/issues/90536) [https://github.com/python/cpython/issues/90536]: Use the BOLT post-link optimizer to improve performance, particularly on medium-to-large applications.
- [gh-93744](https://github.com/python/cpython/issues/93744) [https://github.com/python/cpython/issues/93744]: Remove the configure `--with-cxx-main` build option: it didn't work for many years. Remove the `MAINCC` variable from configure and Makefile. Patch by Victor Stinner.

- [gh-94801](https://github.com/python/cpython/issues/94801) [https://github.com/python/cpython/issues/94801]: Fix a regression in `configure` script that caused some header checks to ignore custom `CPPFLAGS`. The regression was introduced in [gh-94802](https://github.com/python/cpython/issues/94802) [https://github.com/python/cpython/issues/94802].
- [gh-95145](https://github.com/python/cpython/issues/95145) [https://github.com/python/cpython/issues/95145]: `wasm32-wasi` builds no longer depend on WASIX's `pthread` stubs. Python now has its own stubbed `pthread` API.
- [gh-95174](https://github.com/python/cpython/issues/95174) [https://github.com/python/cpython/issues/95174]: Python now detects missing `dup` function in WASI and works around some missing `errno`, `select`, and `socket` constants.
- [gh-95174](https://github.com/python/cpython/issues/95174) [https://github.com/python/cpython/issues/95174]: Python now skips missing `socket` functions and methods on WASI. WASI can only create sockets from existing `fd` / `accept` and has no `netdb`.
- [gh-95085](https://github.com/python/cpython/issues/95085) [https://github.com/python/cpython/issues/95085]: Platforms `wasm32-unknown-emsripten` and `wasm32-unknown-wasi` have been promoted to [PEP 11](https://peps.python.org/pep-0011/) [https://peps.python.org/pep-0011/] tier 3 platform support.
- [gh-94847](https://github.com/python/cpython/issues/94847) [https://github.com/python/cpython/issues/94847]: Fixed `_decimal` module build issue on GCC when compiling with LTO and `pydebug`. Debug builds no longer force inlining of functions.
- [gh-94841](https://github.com/python/cpython/issues/94841) [https://github.com/python/cpython/issues/94841]: Fix the possible performance regression of `PyObject_Free()` compiled with MSVC version 1932.
- [gh-94801](https://github.com/python/cpython/issues/94801) [https://github.com/python/cpython/issues/94801]: `configure` now uses custom flags like `ZLIB_CFLAGS` and `ZLIB_LIBS` when searching for headers and libraries.
- [gh-94773](https://github.com/python/cpython/issues/94773) [https://github.com/python/cpython/issues/94773]: `deepfreeze.py` now supports code object with frozensets that contain incompatible, unsortable types.
- [gh-94682](https://github.com/python/cpython/issues/94682) [https://github.com/python/cpython/issues/94682]: Build and test with OpenSSL 1.1.1q
- [gh-90005](https://github.com/python/cpython/issues/90005) [https://github.com/python/cpython/issues/90005]: Dependencies of `readline` and `curses` module are now detected in `configure` script with `pkg-config`. Only `ncurses` / `ncursesw` are detected automatically. The old `curses` library is not configured automatically. Workaround for missing `termcap` or `tinfo` library has been removed.

- [gh-90005](https://github.com/python/cpython/issues/90005) [https://github.com/python/cpython/issues/90005]: Fix building `_ctypes` extension without `pkg-config`.
- [gh-90005](https://github.com/python/cpython/issues/90005) [https://github.com/python/cpython/issues/90005]: `_dbm` module dependencies are now detected by `configure`.
- [gh-94404](https://github.com/python/cpython/issues/94404) [https://github.com/python/cpython/issues/94404]: `makesetup` now works around an issue with `sed` on macOS and uses correct `CFLAGS` for object files that end up in a shared extension. Module `CFLAGS` are used before `PY_STDMODULE_CFLAGS` to avoid clashes with system headers.
- [gh-93939](https://github.com/python/cpython/issues/93939) [https://github.com/python/cpython/issues/93939]: C extension modules are now built by `configure` and `make` instead of `distutils` and `setup.py`.
- [gh-93939](https://github.com/python/cpython/issues/93939) [https://github.com/python/cpython/issues/93939]: The `2to3`, `idle`, and `pydoc` scripts are now generated and installed by `Makefile` instead of `setup.py`.
- [gh-94280](https://github.com/python/cpython/issues/94280) [https://github.com/python/cpython/issues/94280]: Updated pegen regeneration script on Windows to find and use Python 3.9 or higher. Prior to this, pegen regeneration already required 3.9 or higher, but the script may have used lower versions of Python.
- [gh-93584](https://github.com/python/cpython/issues/93584) [https://github.com/python/cpython/issues/93584]: Address race condition in `Makefile` when installing a PGO build. All test and install targets now depend on `all` target.
- [gh-93491](https://github.com/python/cpython/issues/93491) [https://github.com/python/cpython/issues/93491]: `configure` now detects and reports [PEP 11](https://peps.python.org/pep-0011/) [https://peps.python.org/pep-0011/] support tiers.
- [gh-69093](https://github.com/python/cpython/issues/69093) [https://github.com/python/cpython/issues/69093]: Fix `Modules/Setup.stdlib.in` rule for `_sqlite3` extension.
- [gh-93207](https://github.com/python/cpython/issues/93207) [https://github.com/python/cpython/issues/93207]: `va_start()` with two parameters, like `va_start(args, format)`, is now required to build Python. `va_start()` is no longer called with a single parameter. Patch by Kumar Aditya.
- [gh-93202](https://github.com/python/cpython/issues/93202) [https://github.com/python/cpython/issues/93202]: Python now always use the `%zu` and `%zd` printf formats to format a `size_t` or `Py_ssize_t` number. Building Python 3.12 requires a C11 compiler, so these printf formats are now always supported. Patch by Victor Stinner.
- [gh-90473](https://github.com/python/cpython/issues/90473) [https://github.com/python/cpython/issues/90473]: Disable

pymalloc and increase stack size on `wasm32-wasi`.

- [bpo-34449](https://bugs.python.org/issue?@action=redirect&bpo=34449) [https://bugs.python.org/issue?@action=redirect&bpo=34449]: Drop invalid compiler switch `-fPIC` for HP aCC on HP-UX. Patch by Michael Osipov.

## Windows

- [gh-98360](https://github.com/python/cpython/issues/98360) [https://github.com/python/cpython/issues/98360]: Fixes **multiprocessing** spawning child processes on Windows from a virtual environment to ensure that child processes that also use **multiprocessing** to spawn more children will recognize that they are in a virtual environment.
- [gh-98414](https://github.com/python/cpython/issues/98414) [https://github.com/python/cpython/issues/98414]: Fix `py.exe` launcher handling of `-V:<company>/` option when default preferences have been set in environment variables or configuration files.
- [gh-97728](https://github.com/python/cpython/issues/97728) [https://github.com/python/cpython/issues/97728]: Fix possible crashes caused by the use of uninitialized variables when pass invalid arguments in `os.system()` on Windows and in Windows-specific modules (like `winreg`).
- [gh-90989](https://github.com/python/cpython/issues/90989) [https://github.com/python/cpython/issues/90989]: Made **Python Launcher for Windows** install per-user by default (unless an all users install already exists), and clarify some text in the installer.
- [gh-97649](https://github.com/python/cpython/issues/97649) [https://github.com/python/cpython/issues/97649]: The `Tools` directory is no longer installed on Windows
- [gh-96965](https://github.com/python/cpython/issues/96965) [https://github.com/python/cpython/issues/96965]: Update `libffi` to 3.4.3
- [gh-96577](https://github.com/python/cpython/issues/96577) [https://github.com/python/cpython/issues/96577]: Fixes a potential buffer overrun in **msilib**.
- [gh-96559](https://github.com/python/cpython/issues/96559) [https://github.com/python/cpython/issues/96559]: Fixes the Windows launcher not using the compatible interpretation of default tags found in configuration files when no tag was passed to the command.
- [gh-94781](https://github.com/python/cpython/issues/94781) [https://github.com/python/cpython/issues/94781]: Fix `pcbuild.proj` to clean previous instances of output files in `Python\deepfreeze` and `Python\frozen_modules` directories on Windows. Patch by Charlie Zhao.
- [gh-89545](https://github.com/python/cpython/issues/89545) [https://github.com/python/cpython/issues/89545]: Updates **platform** code getting the Windows version to use native

Windows Management Instrumentation (WMI) queries to determine OS version, type, and architecture.

- [gh-95733](https://github.com/python/cpython/issues/95733) [https://github.com/python/cpython/issues/95733]: Make certain requirements of the Windows Store package optional to allow installing on earlier updates of Windows.
- [gh-95656](https://github.com/python/cpython/issues/95656) [https://github.com/python/cpython/issues/95656]: Enable the `enable_load_extension()` `sqlite3` API.
- [gh-95587](https://github.com/python/cpython/issues/95587) [https://github.com/python/cpython/issues/95587]: Fixes some issues where the Windows installer would incorrectly detect certain features of an existing install when upgrading.
- [gh-94399](https://github.com/python/cpython/issues/94399) [https://github.com/python/cpython/issues/94399]: Restores the behaviour of `Python Launcher for Windows` for `/usr/bin/env` shebang lines, which will now search `PATH` for an executable matching the given command. If none is found, the usual search process is used.
- [gh-95445](https://github.com/python/cpython/issues/95445) [https://github.com/python/cpython/issues/95445]: Fixes the unsuccessful removal of the HTML document directory when uninstalling with Windows msi.
- [gh-95359](https://github.com/python/cpython/issues/95359) [https://github.com/python/cpython/issues/95359]: Fix `Python Launcher for Windows` handling of `py.ini` commands (it was incorrectly expecting a `py_` prefix on keys) and crashes when reading per-user configuration file.
- [gh-95285](https://github.com/python/cpython/issues/95285) [https://github.com/python/cpython/issues/95285]: Fix `Python Launcher for Windows` handling of command lines where it is only passed a short executable name.
- [gh-90844](https://github.com/python/cpython/issues/90844) [https://github.com/python/cpython/issues/90844]: Allow virtual environments to correctly launch when they have spaces in the path.
- [gh-94772](https://github.com/python/cpython/issues/94772) [https://github.com/python/cpython/issues/94772]: Fix incorrect handling of shebang lines in `py.exe` launcher
- [gh-94018](https://github.com/python/cpython/issues/94018) [https://github.com/python/cpython/issues/94018]: `zipfile` will now remove trailing spaces from path components when extracting files on Windows.
- [gh-93824](https://github.com/python/cpython/issues/93824) [https://github.com/python/cpython/issues/93824]: Drag and drop of files onto Python files in Windows Explorer has been enabled for Windows ARM64.
- [gh-43414](https://github.com/python/cpython/issues/43414) [https://github.com/python/cpython/issues/43414]: `os.get_terminal_size()` now attempts to read the size from any provided handle, rather than only supporting file descriptors 0, 1 and 2.

- [gh-92817](https://github.com/python/cpython/issues/92817) [https://github.com/python/cpython/issues/92817]: Ensures that `py.exe` will prefer an active virtual environment over default tags specified with environment variables or through a `py.ini` file.
- [gh-92984](https://github.com/python/cpython/issues/92984) [https://github.com/python/cpython/issues/92984]: Explicitly disable incremental linking for non-Debug builds
- [gh-92841](https://github.com/python/cpython/issues/92841) [https://github.com/python/cpython/issues/92841]: `asyncio` no longer throws `RuntimeError: Event loop is closed` on interpreter exit after asynchronous socket activity. Patch by Oleg Iarygin.
- [bpo-46907](https://bugs.python.org/issue?@action=redirect&bpo=46907) [https://bugs.python.org/issue?@action=redirect&bpo=46907]: Update Windows installer to use SQLite 3.38.4.
- [gh-91061](https://github.com/python/cpython/issues/91061) [https://github.com/python/cpython/issues/91061]: Accept `os.PathLike` for the argument to `winsound.PlaySound`
- [bpo-42658](https://bugs.python.org/issue?@action=redirect&bpo=42658) [https://bugs.python.org/issue?@action=redirect&bpo=42658]: Support native Windows case-insensitive path comparisons by using `LCMapStringEx` instead of `str.lower()` in `ntpath.normcase()`. Add `LCMapStringEx` to the `_winapi` module.
- [bpo-38704](https://bugs.python.org/issue?@action=redirect&bpo=38704) [https://bugs.python.org/issue?@action=redirect&bpo=38704]: Prevent installation on unsupported Windows versions.

## macOS

- [gh-97897](https://github.com/python/cpython/issues/97897) [https://github.com/python/cpython/issues/97897]: The macOS 13 SDK includes support for the `mkfifoat` and `mknodat` system calls. Using the `dir_fd` option with either `os.mkfifo()` or `os.mknod()` could result in a segfault if cpython is built with the macOS 13 SDK but run on an earlier version of macOS. Prevent this by adding runtime support for detection of these system calls (“weaklinking”) as is done for other newer syscalls on macOS.

## IDLE

- [gh-97527](https://github.com/python/cpython/issues/97527) [https://github.com/python/cpython/issues/97527]: Fix a bug in the previous bugfix that caused IDLE to not start when run with 3.10.8, 3.12.0a1, and at least Microsoft Python

3.10.2288.0 installed without the Lib/test package. 3.11.0 was never affected.

- [gh-65802](https://github.com/python/cpython/issues/65802) [https://github.com/python/cpython/issues/65802]: Document handling of extensions in Save As dialogs.
- [gh-95191](https://github.com/python/cpython/issues/95191) [https://github.com/python/cpython/issues/95191]: Include prompts when saving Shell (interactive input and output).
- [gh-95511](https://github.com/python/cpython/issues/95511) [https://github.com/python/cpython/issues/95511]: Fix the Shell context menu copy-with-prompts bug of copying an extra line when one selects whole lines.
- [gh-95471](https://github.com/python/cpython/issues/95471) [https://github.com/python/cpython/issues/95471]: In the Edit menu, move `Select All` and add a new separator.
- [gh-95411](https://github.com/python/cpython/issues/95411) [https://github.com/python/cpython/issues/95411]: Enable using IDLE's module browser with `.pyw` files.
- [gh-89610](https://github.com/python/cpython/issues/89610) [https://github.com/python/cpython/issues/89610]: Add `.pyi` as a recognized extension for IDLE on macOS. This allows opening stub files by double clicking on them in the Finder.

## Tools/Demos

- [gh-68686](https://github.com/python/cpython/issues/68686) [https://github.com/python/cpython/issues/68686]: Remove `ptags` and `eptags` scripts.
- [gh-97681](https://github.com/python/cpython/issues/97681) [https://github.com/python/cpython/issues/97681]: Remove the `Tools/demo/` directory which contained old demo scripts. A copy can be found in the [old-demos project](https://github.com/gvanrossum/old-demos) [https://github.com/gvanrossum/old-demos]. Patch by Victor Stinner.
- [gh-97669](https://github.com/python/cpython/issues/97669) [https://github.com/python/cpython/issues/97669]: Remove outdated example scripts of the `Tools/scripts/` directory. A copy can be found in the [old-demos project](https://github.com/gvanrossum/old-demos) [https://github.com/gvanrossum/old-demos]. Patch by Victor Stinner.
- [gh-95853](https://github.com/python/cpython/issues/95853) [https://github.com/python/cpython/issues/95853]: The `wasm_build.py` script now pre-builds Emscripten ports, checks for broken EMSDK versions, and warns about `pkg-config` env vars.
- [gh-95853](https://github.com/python/cpython/issues/95853) [https://github.com/python/cpython/issues/95853]: The new tool `Tools/wasm/wasm_builder.py` automates configure, compile, and test steps for building CPython on WebAssembly platforms.
- [gh-95731](https://github.com/python/cpython/issues/95731) [https://github.com/python/cpython/issues/95731]: Fix handling of module docstrings in `Tools/i18n/pygettext.py`.

- [gh-93939](https://github.com/python/cpython/issues/93939) [https://github.com/python/cpython/issues/93939]: Add script `Tools/scripts/check_modules.py` to check and validate builtin and shared extension modules. The script also handles `Modules/Setup` and will eventually replace `setup.py`.
- [gh-94538](https://github.com/python/cpython/issues/94538) [https://github.com/python/cpython/issues/94538]: Fix Argument Clinic output to custom file destinations. Patch by Erlend E. Aasland.
- [gh-94430](https://github.com/python/cpython/issues/94430) [https://github.com/python/cpython/issues/94430]: Allow parameters named `module` and `self` with custom C names in Argument Clinic. Patch by Erlend E. Aasland
- [gh-86087](https://github.com/python/cpython/issues/86087) [https://github.com/python/cpython/issues/86087]: The `Tools/scripts/parseentities.py` script used to parse HTML4 entities has been removed.

## C API

- [gh-98393](https://github.com/python/cpython/issues/98393) [https://github.com/python/cpython/issues/98393]: The `PyUnicode_FSDecoder()` function no longer accepts bytes-like paths, like `bytearray` and `memoryview` types: only the exact `bytes` type is accepted for bytes strings. Patch by Victor Stinner.
- [gh-91051](https://github.com/python/cpython/issues/91051) [https://github.com/python/cpython/issues/91051]: Add `PyType_Watch()` and related APIs to allow callbacks on `PyType_Modified()`.
- [gh-95756](https://github.com/python/cpython/issues/95756) [https://github.com/python/cpython/issues/95756]: Lazily create and cache `co_` attributes for better performance for code getters.
- [gh-96512](https://github.com/python/cpython/issues/96512) [https://github.com/python/cpython/issues/96512]: Configuration for the [integer string conversion length limitation](#) now lives in the `PyConfig` C API struct.
- [gh-95589](https://github.com/python/cpython/issues/95589) [https://github.com/python/cpython/issues/95589]: Extensions classes that set `tp_dictoffset` and `tp_weaklistoffset` lose the support for multiple inheritance, but are now safe. Extension classes should use `Py_TPFLAGS_MANAGED_DICT` and

`Py_TPFLAGS_MANAGED_WEAKREF` instead.

- [gh-95781](https://github.com/python/cpython/issues/95781) [https://github.com/python/cpython/issues/95781]: An unrecognized format character in `PyUnicode_FromFormat()` and `PyUnicode_FromFormatV()` now sets a `SystemError`. In previous versions it caused all the rest of the format string to be copied as-is to the result string, and any extra arguments discarded.
- [gh-92678](https://github.com/python/cpython/issues/92678) [https://github.com/python/cpython/issues/92678]: Restore the 3.10 behavior for multiple inheritance of C extension classes that store their dictionary at the end of the struct.
- [gh-92678](https://github.com/python/cpython/issues/92678) [https://github.com/python/cpython/issues/92678]: Support C extensions using managed dictionaries by setting the `Py_TPFLAGS_MANAGED_DICT` flag.
- [gh-93274](https://github.com/python/cpython/issues/93274) [https://github.com/python/cpython/issues/93274]: API for implementing vectorcall (`Py_TPFLAGS_HAVE_VECTORCALL`, `PyVectorcall_NARGS()` and `PyVectorcall_Call()`) was added to the limited API and stable ABI.
- [gh-95504](https://github.com/python/cpython/issues/95504) [https://github.com/python/cpython/issues/95504]: Fix sign placement when specifying width or precision in `PyUnicode_FromFormat()` and `PyUnicode_FromFormatV()`. Patch by Philip Georgi.
- [gh-93012](https://github.com/python/cpython/issues/93012) [https://github.com/python/cpython/issues/93012]: The `Py_TPFLAGS_HAVE_VECTORCALL` flag is now removed from a class when the class's `__call__()` method is reassigned. This makes vectorcall safe to use with mutable types (i.e. heap types without the `immutable` flag). Mutable types that do not override `tp_call` now inherit the `Py_TPFLAGS_HAVE_VECTORCALL` flag.
- [gh-95388](https://github.com/python/cpython/issues/95388) [https://github.com/python/cpython/issues/95388]: Creating `immutable types` with mutable bases is deprecated and is planned to be disabled in Python 3.14.
- [gh-92678](https://github.com/python/cpython/issues/92678) [https://github.com/python/cpython/issues/92678]: Adds

unstable C-API functions `_PyObject_VisitManagedDict` and `_PyObject_ClearManagedDict` to allow C extensions to allow the VM to manage their object's dictionaries.

- [gh-94936](https://github.com/python/cpython/issues/94936) [https://github.com/python/cpython/issues/94936]: Added `PyCode_GetVarnames()`, `PyCode_GetCellvars()` and `PyCode_GetFreevars()` for accessing `co_varnames`, `co_cellvars` and `co_freevars` respectively via the C API.
- [gh-94930](https://github.com/python/cpython/issues/94930) [https://github.com/python/cpython/issues/94930]: Fix `SystemError` raised when `PyArg_ParseTupleAndKeywords()` is used with `#` in `(...)` but without `PY_SSIZE_T_CLEAN` defined.
- [gh-94731](https://github.com/python/cpython/issues/94731) [https://github.com/python/cpython/issues/94731]: Python again uses C-style casts for most casting operations when compiled with C++. This may trigger compiler warnings, if they are enabled with e.g. `-Wold-style-cast` or `-Wzero-as-null-pointer-constant` options for g++.
- [gh-93937](https://github.com/python/cpython/issues/93937) [https://github.com/python/cpython/issues/93937]: The following frame functions and type are now directly available with `#include <Python.h>`, it's no longer needed to add `#include <frameobject.h>`:

- `PyFrame_Check()`
- `PyFrame_GetBack()`
- `PyFrame_GetBuiltins()`
- `PyFrame_GetGenerator()`
- `PyFrame_GetGlobals()`
- `PyFrame_GetLasti()`
- `PyFrame_GetLocals()`
- `PyFrame_Type`

Patch by Victor Stinner.

- [gh-91321](https://github.com/python/cpython/issues/91321) [https://github.com/python/cpython/issues/91321]: Fix the compatibility of the Python C API with C++ older than C++11. Patch by Victor Stinner.

- [gh-91731](https://github.com/python/cpython/issues/91731) [https://github.com/python/cpython/issues/91731]: Avoid defining the `static_assert` when compiling with C++ 11, where this is a keyword and redefining it can lead to undefined behavior. Patch by Pablo Galindo
- [gh-89546](https://github.com/python/cpython/issues/89546) [https://github.com/python/cpython/issues/89546]: `PyType_FromMetaclass()` (and other `PyType_From*` functions) now check that offsets and the base class's `tp_basicsize` fit in the new class's `tp_basicsize`.
- [gh-93503](https://github.com/python/cpython/issues/93503) [https://github.com/python/cpython/issues/93503]: Add two new public functions to the public C-API, `PyEval_SetProfileAllThreads()` and `PyEval_SetTraceAllThreads()`, that allow to set tracing and profiling functions in all running threads in addition to the calling one. Also, two analogous functions to the `threading` module (`threading.setprofile_all_threads()` and `threading.settrace_all_threads()`) that allow to do the same from Python. Patch by Pablo Galindo
- [gh-93442](https://github.com/python/cpython/issues/93442) [https://github.com/python/cpython/issues/93442]: Add C++ overloads for `_Py_CAST_impl()` to handle 0/NULL. This will allow C++ extensions that pass 0 or NULL to macros using `_Py_CAST()` to continue to compile.
- [gh-93466](https://github.com/python/cpython/issues/93466) [https://github.com/python/cpython/issues/93466]: Slot IDs in `PyType_Spec` may not be repeated. The documentation was updated to mention this. For some cases of repeated slots, `PyType_FromSpec` and related functions will now raise an exception.
- [gh-92898](https://github.com/python/cpython/issues/92898) [https://github.com/python/cpython/issues/92898]: Fix C++ compiler warnings when casting function arguments to `PyObject*`. Patch by Serge Guelton.
- [gh-93103](https://github.com/python/cpython/issues/93103) [https://github.com/python/cpython/issues/93103]: Deprecate global configuration variables, like `Py_IgnoreEnvironmentFlag`, in the documentation: the `Py_InitializeFromConfig()` API should be instead. Patch by Victor Stinner.

- [gh-77782](https://github.com/python/cpython/issues/77782) [https://github.com/python/cpython/issues/77782]: Deprecate global configuration variable like `Py_IgnoreEnvironmentFlag`: the `Py_InitializeFromConfig()` API should be instead. Patch by Victor Stinner.
- [gh-92913](https://github.com/python/cpython/issues/92913) [https://github.com/python/cpython/issues/92913]: Ensures changes to `PyConfig.module_search_paths` are ignored unless `PyConfig.module_search_paths_set` is set
- [gh-92781](https://github.com/python/cpython/issues/92781) [https://github.com/python/cpython/issues/92781]: Avoid mixing declarations and code in the C API to fix the compiler warning: “ISO C90 forbids mixed declarations and code” [-Werror=declaration-after-statement]. Patch by Victor Stinner.
- [gh-92651](https://github.com/python/cpython/issues/92651) [https://github.com/python/cpython/issues/92651]: Remove the `token.h` header file. There was never any public tokenizer C API. The `token.h` header file was only designed to be used by Python internals. Patch by Victor Stinner.
- [gh-92536](https://github.com/python/cpython/issues/92536) [https://github.com/python/cpython/issues/92536]: Remove legacy Unicode APIs based on `Py_UNICODE*`.
- [gh-85858](https://github.com/python/cpython/issues/85858) [https://github.com/python/cpython/issues/85858]: Remove the `PyUnicode_InternImmortal()` function and the `SSTATE_INTERNEDED_IMMORTAL` macro. Patch by Victor Stinner.
- [gh-92193](https://github.com/python/cpython/issues/92193) [https://github.com/python/cpython/issues/92193]: Add new function `PyFunction_SetVectorcall()` to the C API which sets the `vectorcall` field of a given `PyFunctionObject`.

Warning: extensions using this API must preserve the behavior of the unaltered function!

- [gh-59121](https://github.com/python/cpython/issues/59121) [https://github.com/python/cpython/issues/59121]: Fixed an assert that prevented `PyRun_InteractiveOne` from providing tracebacks when parsing from the provided FD.

- [bpo-45383](https://bugs.python.org/issue?@action=redirect&bpo=45383) [https://bugs.python.org/issue?@action=redirect&bpo=45383]: The `PyType_FromSpec()` API will now find and use a metaclass based on the provided bases. An error will be raised if there is a metaclass conflict.

## Python 3.11.0 beta 1

*Release date: 2022-05-06*

### Security

- [gh-57684](https://github.com/python/cpython/issues/57684) [https://github.com/python/cpython/issues/57684]: Add the `-P` command line option and the `PYTHONSAFEPATH` environment variable to not prepend a potentially unsafe path to `sys.path`. Patch by Victor Stinner.

### Core and Builtins

- [gh-89519](https://github.com/python/cpython/issues/89519) [https://github.com/python/cpython/issues/89519]: Chaining classmethod descriptors (introduced in [bpo-19072](https://bugs.python.org/issue?@action=redirect&bpo=19072) [https://bugs.python.org/issue?@action=redirect&bpo=19072]) is deprecated. It can no longer be used to wrap other descriptors such as `property()`. The core design of this feature was flawed, and it caused a number of downstream problems.
- [gh-92345](https://github.com/python/cpython/issues/92345) [https://github.com/python/cpython/issues/92345]: `pymain_run_python()` now imports `readline` and `rlcompleter` before `sys.path` is extended to include the current working directory of an interactive interpreter. Non-interactive interpreters are not affected.
- [bpo-43857](https://bugs.python.org/issue?@action=redirect&bpo=43857) [https://bugs.python.org/issue?@action=redirect&bpo=43857]: Improve the `AttributeError` message when deleting a missing attribute. Patch by G ry Ogam.
- [gh-92245](https://github.com/python/cpython/issues/92245) [https://github.com/python/cpython/issues/92245]: Make sure that PEP 523 is respected in all cases. In 3.11a7, specialization may have prevented Python-to-Python calls respecting PEP 523.

- [gh-92203](https://github.com/python/cpython/issues/92203) [https://github.com/python/cpython/issues/92203]: Add a closure keyword-only parameter to `exec()`. It can only be specified when `exec`-ing a code object that uses free variables. When specified, it must be a tuple, with exactly the number of cell variables referenced by the code object. `closure` has a default value of `None`, and it must be `None` if the code object doesn't refer to any free variables.
- [gh-91173](https://github.com/python/cpython/issues/91173) [https://github.com/python/cpython/issues/91173]: Disable frozen modules in debug builds. Patch by Kumar Aditya.
- [gh-92114](https://github.com/python/cpython/issues/92114) [https://github.com/python/cpython/issues/92114]: Improve error message when subscript a type with `__class_getitem__` set to `None`.
- [gh-92112](https://github.com/python/cpython/issues/92112) [https://github.com/python/cpython/issues/92112]: Fix crash triggered by an evil custom `mro()` on a metaclass.
- [gh-92063](https://github.com/python/cpython/issues/92063) [https://github.com/python/cpython/issues/92063]: The `PRECALL_METHOD_DESCRIPTOR_FAST_WITH_KEYWORDS` instruction now ensures methods are called only on objects of the correct type.
- [gh-92031](https://github.com/python/cpython/issues/92031) [https://github.com/python/cpython/issues/92031]: Deoptimize statically allocated code objects during `Py_FINALIZE()` so that future `_PyCode_Quicken` calls always start with unquicken code.
- [gh-92036](https://github.com/python/cpython/issues/92036) [https://github.com/python/cpython/issues/92036]: Fix a crash in subinterpreters related to the garbage collector. When a subinterpreter is deleted, untrack all objects tracked by its GC. To prevent a crash in deallocator functions expecting objects to be tracked by the GC, leak a strong reference to these objects on purpose, so they are never deleted and their deallocator functions are not called. Patch by Victor Stinner.
- [gh-92032](https://github.com/python/cpython/issues/92032) [https://github.com/python/cpython/issues/92032]: The interpreter can now autocomplete soft keywords, as of now `match`, `case`, and `_` (wildcard pattern) from [PEP 634](https://peps.python.org/pep-0634/) [https://peps.python.org/pep-0634/].

- [gh-87999](https://github.com/python/cpython/issues/87999) [https://github.com/python/cpython/issues/87999]: The warning emitted by the Python parser for a numeric literal immediately followed by keyword has been changed from deprecation warning to syntax warning.
- [gh-91869](https://github.com/python/cpython/issues/91869) [https://github.com/python/cpython/issues/91869]: Fix an issue where specialized opcodes with extended arguments could produce incorrect tracing output or lead to assertion failures.
- [gh-91603](https://github.com/python/cpython/issues/91603) [https://github.com/python/cpython/issues/91603]: Speed up `types.UnionType` instantiation. Based on patch provided by Yurii Karabas.
- [gh-89373](https://github.com/python/cpython/issues/89373) [https://github.com/python/cpython/issues/89373]: If Python is built in debug mode, Python now ensures that deallocator functions leave the current exception unchanged. Patch by Victor Stinner.
- [gh-91632](https://github.com/python/cpython/issues/91632) [https://github.com/python/cpython/issues/91632]: Fix a minor memory leak at exit: release the memory of the `generic_alias_iterator` type. Patch by Donghee Na.
- [gh-81548](https://github.com/python/cpython/issues/81548) [https://github.com/python/cpython/issues/81548]: Octal escapes with value larger than `0o377` now produce a `DeprecationWarning`. In a future Python version they will be a `SyntaxWarning` and eventually a `SyntaxError`.
- [bpo-43950](https://bugs.python.org/issue?@action=redirect&bpo=43950) [https://bugs.python.org/issue?@action=redirect&bpo=43950]: Use a single compact table for line starts, ends and column offsets. Reduces memory consumption for location info by half
- [gh-91102](https://github.com/python/cpython/issues/91102) [https://github.com/python/cpython/issues/91102]: Use Argument Clinic for `EncodingMap`. Patch by Oleg Iarygin.
- [gh-91636](https://github.com/python/cpython/issues/91636) [https://github.com/python/cpython/issues/91636]: Fixed a crash in a garbage-collection edge-case, in which a `PyFunction_Type.tp_clear` function could leave a python function object in an inconsistent state.

- [gh-91603](https://github.com/python/cpython/issues/91603) [https://github.com/python/cpython/issues/91603]: Speed up `isinstance()` and `issubclass()` checks for `types.UnionType`. Patch by Yurii Karabas.
- [gh-91625](https://github.com/python/cpython/issues/91625) [https://github.com/python/cpython/issues/91625]: Fixed a bug in which adaptive opcodes ignored any preceding `EXTENDED_ARGS` on specialization failure.
- [gh-78607](https://github.com/python/cpython/issues/78607) [https://github.com/python/cpython/issues/78607]: The LLTRACE special build now looks for the name `__lltrace__` defined in module globals, rather than the name `__ltrace__`, which had been introduced as a typo.
- [gh-91576](https://github.com/python/cpython/issues/91576) [https://github.com/python/cpython/issues/91576]: Speed up iteration of ascii strings by 50%. Patch by Kumar Aditya.
- [gh-89279](https://github.com/python/cpython/issues/89279) [https://github.com/python/cpython/issues/89279]: Improve interpreter performance on Windows by inlining a few specific macros.
- [gh-91502](https://github.com/python/cpython/issues/91502) [https://github.com/python/cpython/issues/91502]: Add a new `__PyFrame_IsEntryFrame()` API function, to check if a `PyFrameObject` is an entry frame. Patch by Pablo Galindo.
- [gh-91266](https://github.com/python/cpython/issues/91266) [https://github.com/python/cpython/issues/91266]: Refactor the bytearray strip methods `strip`, `lstrip` and `rstrip` to use a common implementation.
- [gh-91479](https://github.com/python/cpython/issues/91479) [https://github.com/python/cpython/issues/91479]: Replaced the `__note__` field of `BaseException` (added in an earlier version of 3.11) with the final design of [PEP 678](https://peps.python.org/pep-0678/) [https://peps.python.org/pep-0678/]. Namely, `BaseException` gets an `add_note()` method, and its `__notes__` field is created when necessary.
- [gh-46055](https://github.com/python/cpython/issues/46055) [https://github.com/python/cpython/issues/46055]: Speed up right shift of negative integers, by removing unnecessary creation of temporaries. Original patch by Xinhang Xu, reworked by Mark Dickinson.

- [gh-91462](https://github.com/python/cpython/issues/91462) [https://github.com/python/cpython/issues/91462]: Make the interpreter's low-level tracing (lltrace) feature output more readable by displaying opcode names (rather than just numbers), and by displaying stack contents before each opcode.
- [gh-89455](https://github.com/python/cpython/issues/89455) [https://github.com/python/cpython/issues/89455]: Fixed an uninitialized bool value in the traceback printing code path that was introduced by the initial [bpo-45292](https://bugs.python.org/issue?@action=redirect&bpo=45292) [https://bugs.python.org/issue?@action=redirect&bpo=45292] exception groups work.
- [gh-91421](https://github.com/python/cpython/issues/91421) [https://github.com/python/cpython/issues/91421]: Fix a potential integer overflow in `_Py_DecodeUTF8Ex`.
- [gh-91428](https://github.com/python/cpython/issues/91428) [https://github.com/python/cpython/issues/91428]: Add `static const char *const _PyOpcode_OpName[256] = {...};` to `opcode.h` for debug builds to assist in debugging the Python interpreter. It is now more convenient to make various forms of debugging output more human-readable by including opcode names rather than just the corresponding decimal digits.
- [bpo-47120](https://bugs.python.org/issue?@action=redirect&bpo=47120) [https://bugs.python.org/issue?@action=redirect&bpo=47120]: Make `POP_JUMP_IF_TRUE`, `POP_JUMP_IF_FALSE`, `POP_JUMP_IF_NONE` and `POP_JUMP_IF_NOT_NONE` virtual, mapping to new relative jump opcodes.
- [bpo-45317](https://bugs.python.org/issue?@action=redirect&bpo=45317) [https://bugs.python.org/issue?@action=redirect&bpo=45317]: Add internal documentation explaining design of new (for 3.11) frame stack.
- [bpo-47197](https://bugs.python.org/issue?@action=redirect&bpo=47197) [https://bugs.python.org/issue?@action=redirect&bpo=47197]: `ctypes` used to mishandle `void` return types, so that for instance a function declared like `ctypes.CFUNCTYPE(None, ctypes.c_int)` would be called with signature `int f(int)` instead of `void f(int)`. Wasm targets require function pointers to be called with the correct signatures so this led to crashes. The problem is now fixed.

- [bpo-47120](https://bugs.python.org/issue?@action=redirect&bpo=47120) [https://bugs.python.org/issue?@action=redirect&bpo=47120]: Make opcodes **JUMP\_IF\_TRUE\_OR\_POP** and **JUMP\_IF\_FALSE\_OR\_POP** relative rather than absolute.
- [bpo-47177](https://bugs.python.org/issue?@action=redirect&bpo=47177) [https://bugs.python.org/issue?@action=redirect&bpo=47177]: Replace the `f_lasti` member of the internal `_PyInterpreterFrame` structure with a `prev_instr` pointer, which reduces overhead in the main interpreter loop. The `f_lasti` attribute of Python-layer frame objects is preserved for backward-compatibility.
- [bpo-46961](https://bugs.python.org/issue?@action=redirect&bpo=46961) [https://bugs.python.org/issue?@action=redirect&bpo=46961]: Integer mod/remainder operations, including the three-argument form of `pow()`, now consistently return ints from the global small integer cache when applicable.
- [bpo-46962](https://bugs.python.org/issue?@action=redirect&bpo=46962) [https://bugs.python.org/issue?@action=redirect&bpo=46962]: Classes and functions that unconditionally declared their docstrings ignoring the `--without-doc-strings` compilation flag no longer do so.

The classes affected are `ctypes.UnionType`, `pickle.PickleBuffer`, `testcapi.RecursingInfinitelyError`, and `types.GenericAlias`.

The functions affected are 24 methods in `ctypes`.

Patch by Oleg Iarygin.

- [bpo-46942](https://bugs.python.org/issue?@action=redirect&bpo=46942) [https://bugs.python.org/issue?@action=redirect&bpo=46942]: Use Argument Clinic for the `types.MethodType` constructor. Patch by Oleg Iarygin.
- [bpo-46764](https://bugs.python.org/issue?@action=redirect&bpo=46764) [https://bugs.python.org/issue?@action=redirect&bpo=46764]: Fix wrapping bound methods with `@classmethod`
- [bpo-43464](https://bugs.python.org/issue?@action=redirect&bpo=43464) [https://bugs.python.org/issue?@action=redirect&bpo=43464]

@action=redirect&bpo=43464]: Optimize **set.intersection()** for non-set arguments.

- [bpo-46721](https://bugs.python.org/issue?@action=redirect&bpo=46721) [https://bugs.python.org/issue?@action=redirect&bpo=46721]: Optimize **set.issuperset()** for non-set argument.
- [bpo-46509](https://bugs.python.org/issue?@action=redirect&bpo=46509) [https://bugs.python.org/issue?@action=redirect&bpo=46509]: Add type-specialized versions of the `Py_DECREF()`, and use them for `float`, `int`, `str`, `bool`, and `None` to avoid pointer-chasing at runtime where types are known at C compile time.
- [bpo-46045](https://bugs.python.org/issue?@action=redirect&bpo=46045) [https://bugs.python.org/issue?@action=redirect&bpo=46045]: Do not use POSIX semaphores on NetBSD
- [bpo-36819](https://bugs.python.org/issue?@action=redirect&bpo=36819) [https://bugs.python.org/issue?@action=redirect&bpo=36819]: Fix crashes in built-in encoders with error handlers that return position less or equal than the starting position of non-encodable characters.
- [bpo-34093](https://bugs.python.org/issue?@action=redirect&bpo=34093) [https://bugs.python.org/issue?@action=redirect&bpo=34093]: `marshal.dumps()` uses `FLAG_REF` for all interned strings. This makes output more deterministic and helps reproducible build.
- [bpo-26579](https://bugs.python.org/issue?@action=redirect&bpo=26579) [https://bugs.python.org/issue?@action=redirect&bpo=26579]: Added `object.__getstate__` which provides the default implementation of the `__getstate__()` method.

Copying and pickling instances of subclasses of builtin types `bytearray`, `set`, `frozenset`, `collections.OrderedDict`, `collections.deque`, `weakref.WeakSet`, and `datetime.tzinfo` now copies and pickles instance attributes implemented as slots.

## Library

- [gh-87901](https://github.com/python/cpython/issues/87901) [https://github.com/python/cpython/issues/87901]: Add the *encoding* parameter to **`os.popen()`**.

- [gh-90997](https://github.com/python/cpython/issues/90997) [https://github.com/python/cpython/issues/90997]: Fix an issue where **dis** utilities may interpret populated inline cache entries as valid instructions.
- [gh-92332](https://github.com/python/cpython/issues/92332) [https://github.com/python/cpython/issues/92332]: Deprecate **typing.Text** (removal of the class is currently not planned). Patch by Alex Waygood.
- Deprecate nested classes in enum definitions becoming members – in 3.13 they will be normal classes; add **member** and **nonmember** functions to allow control over results now.
- [gh-92356](https://github.com/python/cpython/issues/92356) [https://github.com/python/cpython/issues/92356]: Fixed a performance regression in ctypes function calls.
- [gh-90997](https://github.com/python/cpython/issues/90997) [https://github.com/python/cpython/issues/90997]: Show the actual named values stored in inline caches when `show_caches=True` is passed to **dis** utilities.
- [gh-92301](https://github.com/python/cpython/issues/92301) [https://github.com/python/cpython/issues/92301]: Prefer `close_range()` to iterating over procs for file descriptor closing in **subprocess** for better performance.
- [gh-67248](https://github.com/python/cpython/issues/67248) [https://github.com/python/cpython/issues/67248]: Sort the miscellaneous topics in `Cmd.do_help()`
- [gh-92210](https://github.com/python/cpython/issues/92210) [https://github.com/python/cpython/issues/92210]: Port `socket.__init__` to Argument Clinic. Patch by Cinder.
- [gh-80010](https://github.com/python/cpython/issues/80010) [https://github.com/python/cpython/issues/80010]: Add support for generalized ISO 8601 parsing to **datetime.datetime.fromisoformat()**, **datetime.date.fromisoformat()** and **datetime.time.fromisoformat()**. Patch by Paul Ganssle.
- [gh-92118](https://github.com/python/cpython/issues/92118) [https://github.com/python/cpython/issues/92118]: Fix a 3.11 regression in **contextmanager()**, which caused it to propagate exceptions with incorrect tracebacks.
- [gh-90887](https://github.com/python/cpython/issues/90887) [https://github.com/python/cpython/issues/90887]: Adding `COPYFILE_STAT`, `COPYFILE_ACL` and `COPYFILE_XATTR`

constants for `os.fcopyfile()` available in macOS.

- [gh-91215](https://github.com/python/cpython/issues/91215) [https://github.com/python/cpython/issues/91215]: For `@dataclass`, add `weakref_slot`. Default is `False`. If `True`, and if `slots=True`, add a slot named `"_weakref_"`, which will allow instances to be weakref'd. Contributed by Eric V. Smith
- [gh-85984](https://github.com/python/cpython/issues/85984) [https://github.com/python/cpython/issues/85984]: New function `os.login_tty()` for Unix.
- [gh-92128](https://github.com/python/cpython/issues/92128) [https://github.com/python/cpython/issues/92128]: Add `__class_getitem__()` to `logging.LoggerAdapter` and `logging.StreamHandler`, allowing them to be parameterized at runtime. Patch by Alex Waygood.
- [gh-92049](https://github.com/python/cpython/issues/92049) [https://github.com/python/cpython/issues/92049]: Forbid pickling constants `re._constants.SUCCESS` etc. Previously, pickling did not fail, but the result could not be unpickled.
- [gh-92062](https://github.com/python/cpython/issues/92062) [https://github.com/python/cpython/issues/92062]: `inspect.Parameter` now raises `ValueError` if `name` is a keyword, in addition to the existing check that it is an identifier.
- [gh-87390](https://github.com/python/cpython/issues/87390) [https://github.com/python/cpython/issues/87390]: Add an `__unpacked__` attribute to `types.GenericAlias`. Patch by Jelle Zijlstra.
- [gh-88089](https://github.com/python/cpython/issues/88089) [https://github.com/python/cpython/issues/88089]: Add support for generic `typing.NamedTuple`.
- [gh-91996](https://github.com/python/cpython/issues/91996) [https://github.com/python/cpython/issues/91996]: New `http.HTTPMethod` enum to represent all the available HTTP request methods in a convenient way
- [gh-91984](https://github.com/python/cpython/issues/91984) [https://github.com/python/cpython/issues/91984]: Modified test strings in `test_argparse.py` to not contain trailing spaces before end of line.
- [gh-91952](https://github.com/python/cpython/issues/91952) [https://github.com/python/cpython/issues/91952]: Add `encoding="locale"` support to

## `TextIOWrapper.reconfigure()`.

- [gh-91954](https://github.com/python/cpython/issues/91954) [https://github.com/python/cpython/issues/91954]: Add *encoding* and *errors* arguments to `subprocess.getoutput()` and `subprocess.getstatusoutput()`.
- [bpo-47029](https://bugs.python.org/issue?@action=redirect&bpo=47029) [https://bugs.python.org/issue?@action=redirect&bpo=47029]: Always close the read end of the pipe used by `multiprocessing.Queue` after the last write of buffered data to the write end of the pipe to avoid `BrokenPipeError` at garbage collection and at `multiprocessing.Queue.close()` calls. Patch by G ry Ogam.
- [gh-91928](https://github.com/python/cpython/issues/91928) [https://github.com/python/cpython/issues/91928]: Add `datetime.UTC` alias for `datetime.timezone.utc`.

Patch by Kabir Kwatra.

- [gh-68966](https://github.com/python/cpython/issues/68966) [https://github.com/python/cpython/issues/68966]: The `mailcap` module is now deprecated and will be removed in Python 3.13. See [PEP 594](https://peps.python.org/pep-0594/) [https://peps.python.org/pep-0594/] for the rationale and the `mimetypes` module for an alternative. Patch by Victor Stinner.
- [gh-91401](https://github.com/python/cpython/issues/91401) [https://github.com/python/cpython/issues/91401]: Provide a way to disable `subprocess` use of `vfork()` just in case it is ever needed and document the existing mechanism for `posix_spawn()`.
- [gh-64783](https://github.com/python/cpython/issues/64783) [https://github.com/python/cpython/issues/64783]: Fix `signal.NSIG` value on FreeBSD to accept signal numbers greater than 32, like `signal.SIGRTMIN` and `signal.SIGRTMAX`. Patch by Victor Stinner.
- [gh-91910](https://github.com/python/cpython/issues/91910) [https://github.com/python/cpython/issues/91910]: Add missing `f` prefix to f-strings in error messages from the `multiprocessing` and `asyncio` modules.
- [gh-91860](https://github.com/python/cpython/issues/91860) [https://github.com/python/cpython/issues/91860]: Add

`typing.dataclass_transform()`, implementing [PEP 681](#) [<https://peps.python.org/pep-0681/>]. Patch by Jelle Zijlstra.

- [gh-91832](#) [<https://github.com/python/cpython/issues/91832>]: Add required attribute to `argparse.Action` repr output.
- [gh-91827](#) [<https://github.com/python/cpython/issues/91827>]: In the `tkinter` module add method `info_patchlevel()` which returns the exact version of the Tcl library as a named tuple similar to `sys.version_info`.
- [gh-84461](#) [<https://github.com/python/cpython/issues/84461>]: Add `--enable-wasm-threads` to enable pthreads support for WASM builds. Emscripten/node no longer has threading enabled by default. Include additional file systems.
- [gh-91821](#) [<https://github.com/python/cpython/issues/91821>]: Fix unstable `test_from_tuple` test in `test_decimal.py`.
- [gh-91217](#) [<https://github.com/python/cpython/issues/91217>]: Deprecate the `xdrlib` module.
- [gh-91217](#) [<https://github.com/python/cpython/issues/91217>]: Deprecate the `uu` module.
- [gh-91760](#) [<https://github.com/python/cpython/issues/91760>]: More strict rules will be applied for numerical group references and group names in regular expressions. For now, a deprecation warning is emitted for group references and group names which will be errors in future Python versions.
- [gh-84461](#) [<https://github.com/python/cpython/issues/84461>]: Add provisional `sys._emscripten_info` named tuple with build-time and run-time information about Emscripten platform.
- [gh-90623](#) [<https://github.com/python/cpython/issues/90623>]: `signal.raise_signal()` and `os.kill()` now check immediately for pending signals. Patch by Victor Stinner.
- [gh-91734](#) [<https://github.com/python/cpython/issues/91734>]: Fix OSS audio support on Solaris.

- [gh-90633](https://github.com/python/cpython/issues/90633) [https://github.com/python/cpython/issues/90633]: Include the passed value in the exception thrown by `typing.assert_never()`. Patch by Jelle Zijlstra.
- [gh-91700](https://github.com/python/cpython/issues/91700) [https://github.com/python/cpython/issues/91700]: Compilation of regular expression containing a conditional expression `(?(group) ...)` now raises an appropriate `re.error` if the group number refers to not defined group. Previously an internal `RuntimeError` was raised.
- [gh-91231](https://github.com/python/cpython/issues/91231) [https://github.com/python/cpython/issues/91231]: Add an optional keyword `shutdown_timeout` parameter to the `multiprocessing.BaseManager` constructor. Kill the process if `terminate()` takes longer than the timeout. Patch by Victor Stinner.
- [gh-91621](https://github.com/python/cpython/issues/91621) [https://github.com/python/cpython/issues/91621]: Fix `typing.get_type_hints()` for `collections.abc.Callable`. Patch by Shantanu Jain.
- [gh-90568](https://github.com/python/cpython/issues/90568) [https://github.com/python/cpython/issues/90568]: Parsing `\N` escapes of Unicode Named Character Sequences in a `regular expression` raises now `re.error` instead of `TypeError`.
- [gh-91670](https://github.com/python/cpython/issues/91670) [https://github.com/python/cpython/issues/91670]: Remove deprecated `SO` config variable in `sysconfig`.
- [gh-91217](https://github.com/python/cpython/issues/91217) [https://github.com/python/cpython/issues/91217]: Deprecate the `telnetlib` module.
- [gh-91217](https://github.com/python/cpython/issues/91217) [https://github.com/python/cpython/issues/91217]: Deprecate the `sunau` module.
- [gh-91217](https://github.com/python/cpython/issues/91217) [https://github.com/python/cpython/issues/91217]: Deprecate the `pwd` module.
- [gh-91217](https://github.com/python/cpython/issues/91217) [https://github.com/python/cpython/issues/91217]: Deprecate the `sndhdr` module, as well as inline needed functionality for `email.mime.MIMEAudio`.
- [gh-91616](https://github.com/python/cpython/issues/91616) [https://github.com/python/cpython/issues/91616]: `re`

module, fix `fullmatch()` mismatch when using Atomic Grouping or Possessive Quantifiers.

- [gh-91217](https://github.com/python/cpython/issues/91217) [https://github.com/python/cpython/issues/91217]: Deprecate the ‘pipes’ module.
- [gh-91217](https://github.com/python/cpython/issues/91217) [https://github.com/python/cpython/issues/91217]: Deprecate the ossaudiodev module.
- [bpo-47256](https://bugs.python.org/issue?@action=redirect&bpo=47256) [https://bugs.python.org/issue?@action=redirect&bpo=47256]: `re` module, limit the maximum capturing group to 1,073,741,823 in 64-bit build, this increases the depth of backtracking.
- [gh-91217](https://github.com/python/cpython/issues/91217) [https://github.com/python/cpython/issues/91217]: Deprecate the nis module.
- [gh-91595](https://github.com/python/cpython/issues/91595) [https://github.com/python/cpython/issues/91595]: Fix the comparison of character and integer inside `Tools.gdb.libpython.write_repr()`. Patch by Yu Liu.
- [gh-74166](https://github.com/python/cpython/issues/74166) [https://github.com/python/cpython/issues/74166]: Add option to raise all errors from `create_connection()` in an `ExceptionGroup` when it fails to create a connection. The default remains to raise only the last error that had occurred when multiple addresses were tried.
- [gh-91487](https://github.com/python/cpython/issues/91487) [https://github.com/python/cpython/issues/91487]: Optimize asyncio UDP speed, over 100 times faster when transferring a large file.
- [gh-91575](https://github.com/python/cpython/issues/91575) [https://github.com/python/cpython/issues/91575]: Update case-insensitive matching in the `re` module to the latest Unicode version.
- [gh-90622](https://github.com/python/cpython/issues/90622) [https://github.com/python/cpython/issues/90622]: In `concurrent.futures.process.ProcessPoolExecutor` disallow the “fork” multiprocessing start method when the new `max_tasks_per_child` feature is used as the mix of threads + fork can hang the child processes. Default to using the safe “spawn” start method in that circumstance if no

`mp_context` was supplied.

- [gh-89022](https://github.com/python/cpython/issues/89022) [https://github.com/python/cpython/issues/89022]: In `sqlite3`, `SQLITE_MISUSE` result codes are now mapped to `InterfaceError` instead of `ProgrammingError`. Also, more accurate exceptions are raised when binding parameters fail. Patch by Erlend E. Aasland.
- [gh-91526](https://github.com/python/cpython/issues/91526) [https://github.com/python/cpython/issues/91526]: Stop calling `os.device_encoding(file.fileno())` in `TextIOWrapper`. It was complex, never documented, and didn't work for most cases. (Patch by Inada Naoki.)
- [gh-88116](https://github.com/python/cpython/issues/88116) [https://github.com/python/cpython/issues/88116]: Change the frame-related functions in the `inspect` module to return a regular object (that is backwards compatible with the old tuple-like interface) that include the extended [PEP 657](https://peps.python.org/pep-0657/) [https://peps.python.org/pep-0657/] position information (end line number, column and end column). The affected functions are: `inspect.getframeinfo()`, `inspect.getouterframes()`, `inspect.getinnerframes()`, `inspect.stack()` and `inspect.trace()`. Patch by Pablo Galindo.
- [gh-69093](https://github.com/python/cpython/issues/69093) [https://github.com/python/cpython/issues/69093]: Add indexing and slicing support to `sqlite3.Blob`. Patch by Aviv Palivoda and Erlend E. Aasland.
- [gh-69093](https://github.com/python/cpython/issues/69093) [https://github.com/python/cpython/issues/69093]: Add `context manager` support to `sqlite3.Blob`. Patch by Aviv Palivoda and Erlend E. Aasland.
- [gh-91217](https://github.com/python/cpython/issues/91217) [https://github.com/python/cpython/issues/91217]: Deprecate `nntplib`.
- [gh-91217](https://github.com/python/cpython/issues/91217) [https://github.com/python/cpython/issues/91217]: Deprecate `msilib`.
- [gh-91404](https://github.com/python/cpython/issues/91404) [https://github.com/python/cpython/issues/91404]: Improve the performance of `re` matching by using computed `gotos` (or “threaded code”) on supported platforms and removing

expensive pointer indirections.

- [gh-91217](https://github.com/python/cpython/issues/91217) [https://github.com/python/cpython/issues/91217]: Deprecate the `imghdr` module.
- [gh-91217](https://github.com/python/cpython/issues/91217) [https://github.com/python/cpython/issues/91217]: Deprecate the `crypt` module.
- [gh-91276](https://github.com/python/cpython/issues/91276) [https://github.com/python/cpython/issues/91276]: Make space for longer opcodes in `dis` output.
- [bpo-47000](https://bugs.python.org/issue?@action=redirect&bpo=47000) [https://bugs.python.org/issue?@action=redirect&bpo=47000]: Make `TextIOWrapper` uses locale encoding when `encoding="locale"` is specified even in UTF-8 mode.
- [gh-91230](https://github.com/python/cpython/issues/91230) [https://github.com/python/cpython/issues/91230]: `warnings.catch_warnings()` now accepts arguments for `warnings.simplefilter()`, providing a more concise way to locally ignore warnings or convert them to errors.
- [gh-91217](https://github.com/python/cpython/issues/91217) [https://github.com/python/cpython/issues/91217]: Deprecate the `chunk` module.
- Add the `TCP_CONNECTION_INFO` option (available on macOS) to `socket`.
- [bpo-47260](https://bugs.python.org/issue?@action=redirect&bpo=47260) [https://bugs.python.org/issue?@action=redirect&bpo=47260]: Fix `os.closerange()` potentially being a no-op in a Linux seccomp sandbox.
- [bpo-47087](https://bugs.python.org/issue?@action=redirect&bpo=47087) [https://bugs.python.org/issue?@action=redirect&bpo=47087]: Implement `typing.Required` and `typing.NotRequired` ([PEP 655](https://peps.python.org/pep-0655/) [https://peps.python.org/pep-0655/]). Patch by David Foster and Jelle Zijlstra.
- [bpo-47061](https://bugs.python.org/issue?@action=redirect&bpo=47061) [https://bugs.python.org/issue?@action=redirect&bpo=47061]: Deprecate `cgi` and `cgitb`.
- [bpo-47061](https://bugs.python.org/issue?@action=redirect&bpo=47061) [https://bugs.python.org/issue?@action=redirect&bpo=47061]: Deprecate `audioop`.

- [bpo-47000](https://bugs.python.org/issue?@action=redirect&bpo=47000) [https://bugs.python.org/issue?@action=redirect&bpo=47000]: Add `locale.getencoding()` to get the current locale encoding. It is similar to `locale.getpreferredencoding(False)` but ignores the Python UTF-8 Mode.
- [bpo-42012](https://bugs.python.org/issue?@action=redirect&bpo=42012) [https://bugs.python.org/issue?@action=redirect&bpo=42012]: Add `wsgiref.types`, containing WSGI-specific types for static type checking.
- [bpo-47227](https://bugs.python.org/issue?@action=redirect&bpo=47227) [https://bugs.python.org/issue?@action=redirect&bpo=47227]: Suppress expression chaining for more `re` parsing errors.
- [bpo-47211](https://bugs.python.org/issue?@action=redirect&bpo=47211) [https://bugs.python.org/issue?@action=redirect&bpo=47211]: Remove undocumented and never working function `re.template()` and flag `re.TEMPLATE`. This was later reverted in 3.11.0b2 and deprecated instead.
- [bpo-47135](https://bugs.python.org/issue?@action=redirect&bpo=47135) [https://bugs.python.org/issue?@action=redirect&bpo=47135]: `decimal.localcontext()` now accepts context attributes via keyword arguments
- [bpo-43323](https://bugs.python.org/issue?@action=redirect&bpo=43323) [https://bugs.python.org/issue?@action=redirect&bpo=43323]: Fix errors in the `email` module if the charset itself contains undecodable/unencodable characters.
- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]: Disassembly of quickened code.
- [bpo-46681](https://bugs.python.org/issue?@action=redirect&bpo=46681) [https://bugs.python.org/issue?@action=redirect&bpo=46681]: Forward `gzip.compress()` `compresslevel` to `zlib`.
- [bpo-45100](https://bugs.python.org/issue?@action=redirect&bpo=45100) [https://bugs.python.org/issue?@action=redirect&bpo=45100]: Add `typing.get_overloads()` and `typing.clear_overloads()`. Patch by Jelle Zijlstra.
- [bpo-44807](https://bugs.python.org/issue?@action=redirect&bpo=44807) [https://bugs.python.org/issue?@action=redirect&bpo=44807]

@action=redirect&bpo=44807]: `typing.Protocol` no longer silently replaces `__init__()` methods defined on subclasses. Patch by Adrian Garcia Badaracco.

- [bpo-46787](https://bugs.python.org/issue?@action=redirect&bpo=46787) [https://bugs.python.org/issue?@action=redirect&bpo=46787]: Fix `concurrent.futures.ProcessPoolExecutor` exception memory leak
- [bpo-46720](https://bugs.python.org/issue?@action=redirect&bpo=46720) [https://bugs.python.org/issue?@action=redirect&bpo=46720]: Add support for path-like objects to `multiprocessing.set_executable()` for Windows to be on a par with Unix-like systems. Patch by G ry Ogam.
- [bpo-46696](https://bugs.python.org/issue?@action=redirect&bpo=46696) [https://bugs.python.org/issue?@action=redirect&bpo=46696]: Add `SO_INCOMING_CPU` constant to `socket`.
- [bpo-46053](https://bugs.python.org/issue?@action=redirect&bpo=46053) [https://bugs.python.org/issue?@action=redirect&bpo=46053]: Fix OSS audio support on NetBSD.
- [bpo-45639](https://bugs.python.org/issue?@action=redirect&bpo=45639) [https://bugs.python.org/issue?@action=redirect&bpo=45639]: `image/avif` and `image/webp` were added to `mimetypes`.
- [bpo-46285](https://bugs.python.org/issue?@action=redirect&bpo=46285) [https://bugs.python.org/issue?@action=redirect&bpo=46285]: Add command-line option `-p/--protocol` to module `http.server` which specifies the HTTP version to which the server is conformant (HTTP/1.1 conformant servers can now be run from the command-line interface of module `http.server`). Patch by G ry Ogam.
- [bpo-44791](https://bugs.python.org/issue?@action=redirect&bpo=44791) [https://bugs.python.org/issue?@action=redirect&bpo=44791]: Accept ellipsis as the last argument of `typing.Concatenate`.
- [bpo-46547](https://bugs.python.org/issue?@action=redirect&bpo=46547) [https://bugs.python.org/issue?@action=redirect&bpo=46547]: Remove variables leaking into `pydoc.Helper` class namespace.
- [bpo-46415](https://bugs.python.org/issue?@action=redirect&bpo=46415) [https://bugs.python.org/issue?@action=redirect&bpo=46415]

@action=redirect&bpo=46415]: Fix

ipaddress.ip\_{address,interface,network} raising TypeError instead of ValueError if given invalid tuple as address parameter.

- [bpo-46075](https://bugs.python.org/issue?@action=redirect&bpo=46075) [https://bugs.python.org/issue?@action=redirect&bpo=46075]: CookieJar with DefaultCookiePolicy now can process cookies from localhost with domain=localhost explicitly specified in Set-Cookie header.
- [bpo-45995](https://bugs.python.org/issue?@action=redirect&bpo=45995) [https://bugs.python.org/issue?@action=redirect&bpo=45995]: Add a “z” option to the string formatting specification that coerces negative zero floating-point values to positive zero after rounding to the format precision. Contributed by John Belmonte.
- [bpo-26175](https://bugs.python.org/issue?@action=redirect&bpo=26175) [https://bugs.python.org/issue?@action=redirect&bpo=26175]: Fully implement the [io.BufferedIOBase](#) or [io.TextIOBase](#) interface for [tempfile.SpooledTemporaryFile](#) objects. This lets them work correctly with higher-level layers (like compression modules). Patch by Carey Metcalfe.
- [bpo-45138](https://bugs.python.org/issue?@action=redirect&bpo=45138) [https://bugs.python.org/issue?@action=redirect&bpo=45138]: Fix a regression in the [sqlite3](#) trace callback where bound parameters were not expanded in the passed statement string. The regression was introduced in Python 3.10 by [bpo-40318](https://bugs.python.org/issue?@action=redirect&bpo=40318) [https://bugs.python.org/issue?@action=redirect&bpo=40318]. Patch by Erlend E. Aasland.
- [bpo-44863](https://bugs.python.org/issue?@action=redirect&bpo=44863) [https://bugs.python.org/issue?@action=redirect&bpo=44863]: Allow [TypedDict](#) subclasses to also include [Generic](#) as a base class in class based syntax. Thereby allowing the user to define a generic TypedDict, just like a user-defined generic but with TypedDict semantics.
- [bpo-44587](https://bugs.python.org/issue?@action=redirect&bpo=44587) [https://bugs.python.org/issue?@action=redirect&bpo=44587]: Fix BooleanOptionalAction to not automatically add a default string. If a default string is

desired, use a formatter to add it.

- [bpo-43827](https://bugs.python.org/issue?@action=redirect&bpo=43827) [https://bugs.python.org/issue?@action=redirect&bpo=43827]: All positional-or-keyword parameters to `ABCMeta.__new__` are now positional-only to avoid conflicts with keyword arguments to be passed to `__init_subclass__()`.
- [bpo-43218](https://bugs.python.org/issue?@action=redirect&bpo=43218) [https://bugs.python.org/issue?@action=redirect&bpo=43218]: Prevent creation of a venv whose path contains the PATH separator. This could affect the usage of the activate script. Patch by Dustin Rodrigues.
- [bpo-38435](https://bugs.python.org/issue?@action=redirect&bpo=38435) [https://bugs.python.org/issue?@action=redirect&bpo=38435]: Add a `process_group` parameter to `subprocess.Popen` to help move more things off of the unsafe `preexec_fn` parameter.
- [bpo-42066](https://bugs.python.org/issue?@action=redirect&bpo=42066) [https://bugs.python.org/issue?@action=redirect&bpo=42066]: Fix cookies getting sorted in `CookieJar.__iter__()` which is an extra behavior and not mentioned in RFC 2965 or Netscape cookie protocol. Now the cookies in `CookieJar` follows the order of the `Set-Cookie` header. Patch by Iman Kermani.
- [bpo-40617](https://bugs.python.org/issue?@action=redirect&bpo=40617) [https://bugs.python.org/issue?@action=redirect&bpo=40617]: Add `create_window_function()` to `sqlite3.Connection` for creating aggregate window functions. Patch by Erlend E. Aasland.
- [bpo-40676](https://bugs.python.org/issue?@action=redirect&bpo=40676) [https://bugs.python.org/issue?@action=redirect&bpo=40676]: Convert `csv` to use Argument Clinic for `csv.field_size_limit()`, `csv.get_dialect()`, `csv.unregister_dialect()` and `csv.list_dialects()`.
- [bpo-39716](https://bugs.python.org/issue?@action=redirect&bpo=39716) [https://bugs.python.org/issue?@action=redirect&bpo=39716]: Raise an `ArgumentError` when the same subparser name is added twice to an `argparse.ArgumentParser`. This is consistent with the

(default) behavior when the same option string is added twice to an `ArgumentParser`.

- [bpo-36073](https://bugs.python.org/issue?@action=redirect&bpo=36073) [https://bugs.python.org/issue?@action=redirect&bpo=36073]: Raise **`ProgrammingError`** instead of segfaulting on recursive usage of cursors in **`sqlite3`** converters. Patch by Sergey Fedoseev.
- [bpo-34975](https://bugs.python.org/issue?@action=redirect&bpo=34975) [https://bugs.python.org/issue?@action=redirect&bpo=34975]: Adds a `start_tls()` method to **`StreamWriter`**, which upgrades the connection with TLS using the given **`SSLContext`**.
- [bpo-22276](https://bugs.python.org/issue?@action=redirect&bpo=22276) [https://bugs.python.org/issue?@action=redirect&bpo=22276]: **`Path`** methods **`glob()`** and **`rglob()`** return only directories if *pattern* ends with a pathname components separator (`/` or **`sep`**). Patch by Eisuke Kawashima.
- [bpo-24905](https://bugs.python.org/issue?@action=redirect&bpo=24905) [https://bugs.python.org/issue?@action=redirect&bpo=24905]: Add **`blobopen()`** to **`sqlite3.Connection`**. **`sqlite3.Blob`** allows incremental I/O operations on blobs. Patch by Aviv Palivoda and Erlend E. Aasland.

## Documentation

- [gh-91888](https://github.com/python/cpython/issues/91888) [https://github.com/python/cpython/issues/91888]: Add a new **`gh`** role to the documentation to link to GitHub issues.
- [gh-91783](https://github.com/python/cpython/issues/91783) [https://github.com/python/cpython/issues/91783]: Document security issues concerning the use of the function **`shutil.unpack_archive()`**
- [gh-91547](https://github.com/python/cpython/issues/91547) [https://github.com/python/cpython/issues/91547]: Remove “Undocumented modules” page.
- [gh-91298](https://github.com/python/cpython/issues/91298) [https://github.com/python/cpython/issues/91298]: In `importlib.resources.abc`, refined the documentation of the Traversable Protocol, applying changes from `importlib_resources` 5.7.1.
- [bpo-44347](https://bugs.python.org/issue?@action=redirect&bpo=44347) [https://bugs.python.org/issue?@action=redirect&bpo=44347]: Clarify the meaning of

`dirs_exist_ok`, a kwarg of `shutil.copytree()`.

- [bpo-36329](https://bugs.python.org/issue?@action=redirect&bpo=36329) [https://bugs.python.org/issue?@action=redirect&bpo=36329]: Remove ‘make -C Doc serve’ in favour of ‘make -C Doc htmlview’
- [bpo-47189](https://bugs.python.org/issue?@action=redirect&bpo=47189) [https://bugs.python.org/issue?@action=redirect&bpo=47189]: Add a What’s New in Python 3.11 entry for the Faster CPython project. Documentation by Ken Jin and Kumar Aditya.
- [bpo-38668](https://bugs.python.org/issue?@action=redirect&bpo=38668) [https://bugs.python.org/issue?@action=redirect&bpo=38668]: Update the introduction to documentation for `os.path` to remove warnings that became irrelevant after the implementations of [PEP 383](https://peps.python.org/pep-0383/) [https://peps.python.org/pep-0383/] and [PEP 529](https://peps.python.org/pep-0529/) [https://peps.python.org/pep-0529/].
- [bpo-47115](https://bugs.python.org/issue?@action=redirect&bpo=47115) [https://bugs.python.org/issue?@action=redirect&bpo=47115]: The documentation now lists which members of C structs are part of the [Limited API/Stable ABI](#).
- [bpo-46962](https://bugs.python.org/issue?@action=redirect&bpo=46962) [https://bugs.python.org/issue?@action=redirect&bpo=46962]: All docstrings in code snippets are now wrapped into `PyDoc_STR` to follow the guideline of [PEP 7’s Documentation Strings paragraph](https://www.python.org/dev/peps/pep-0007/#documentation-strings) [https://www.python.org/dev/peps/pep-0007/#documentation-strings]. Patch by Oleg Iarygin.
- [bpo-26792](https://bugs.python.org/issue?@action=redirect&bpo=26792) [https://bugs.python.org/issue?@action=redirect&bpo=26792]: Improve the docstrings of `runpy.run_module()` and `runpy.run_path()`. Original patch by Andrew Brezovsky.

## Tests

- [gh-92169](https://github.com/python/cpython/issues/92169) [https://github.com/python/cpython/issues/92169]: Use `warnings_helper.import_deprecated()` to import deprecated modules uniformly in tests. Patch by Hugo van Kemenade.
- [gh-84461](https://github.com/python/cpython/issues/84461) [https://github.com/python/cpython/issues/84461]: When multiprocessing is enabled, `libregrtest` can now use a Python executable other than `sys.executable` via the `--python` flag.
- [gh-91904](https://github.com/python/cpython/issues/91904) [https://github.com/python/cpython/issues/91904]: Fix

initialization of `PYTHONREGRTEST_UNICODE_GUARD` which prevented running regression tests on non-UTF-8 locale.

- [gh-91752](https://github.com/python/cpython/issues/91752) [https://github.com/python/cpython/issues/91752]: Added `@requires_zlib` to `test.test_tools.test_freeze.TestFreeze`.
- [gh-91607](https://github.com/python/cpython/issues/91607) [https://github.com/python/cpython/issues/91607]: Fix `test_concurrent_futures` to test the correct multiprocessing start method context in several cases where the test logic mixed this up.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: Threading tests are now skipped on WASM targets without pthread support.
- [bpo-47109](https://bugs.python.org/issue?@action=redirect&bpo=47109) [https://bugs.python.org/issue?@action=redirect&bpo=47109]: Test for `ctypes.macholib.dyld`, `ctypes.macholib.dylib`, and `ctypes.macholib.framework` are brought from manual pre-`unittest` times to `ctypes.test` location and structure. Patch by Oleg Iarygin.
- [bpo-29890](https://bugs.python.org/issue?@action=redirect&bpo=29890) [https://bugs.python.org/issue?@action=redirect&bpo=29890]: Add tests for `ipaddress.IPv4Interface` and `ipaddress.IPv6Interface` construction with tuple arguments. Original patch and tests by louisom.

## Build

- [gh-89452](https://github.com/python/cpython/issues/89452) [https://github.com/python/cpython/issues/89452]: `gdbm-compat` is now preferred over `ndbm` if both are available on the system. This allows avoiding the problematic `ndbm.h` on macOS.
- [gh-91731](https://github.com/python/cpython/issues/91731) [https://github.com/python/cpython/issues/91731]: Python is now built with `-std=c11` compiler option, rather than `-std=c99`. Patch by Victor Stinner.
- [bpo-47152](https://bugs.python.org/issue?@action=redirect&bpo=47152) [https://bugs.python.org/issue?@action=redirect&bpo=47152]: Add script and make target for generating `sre_constants.h`.
- [bpo-47103](https://bugs.python.org/issue?@action=redirect&bpo=47103) [https://bugs.python.org/issue?@action=redirect&bpo=47103]: Windows `PGInstrument` builds now copy a required DLL into the output directory, making it easier to run the profile stage of a PGO build.

## Windows

- [bpo-46907](https://bugs.python.org/issue?@action=redirect&bpo=46907) [https://bugs.python.org/issue?@action=redirect&bpo=46907]: Update Windows installer to use SQLite 3.38.3.
- [bpo-47239](https://bugs.python.org/issue?@action=redirect&bpo=47239) [https://bugs.python.org/issue?@action=redirect&bpo=47239]: Fixed `-list` and `-list-paths` output for [Python Launcher for Windows](#) when used in an active virtual environment.
- [bpo-46907](https://bugs.python.org/issue?@action=redirect&bpo=46907) [https://bugs.python.org/issue?@action=redirect&bpo=46907]: Update Windows installer to use SQLite 3.38.2.
- [bpo-46785](https://bugs.python.org/issue?@action=redirect&bpo=46785) [https://bugs.python.org/issue?@action=redirect&bpo=46785]: Fix race condition between `os.stat()` and unlinking a file on Windows, by using errors codes returned by `FindFirstFileW()` when appropriate in `win32_xstat_impl`.
- [bpo-40859](https://bugs.python.org/issue?@action=redirect&bpo=40859) [https://bugs.python.org/issue?@action=redirect&bpo=40859]: Update Windows build to use xz-5.2.5

## macOS

- [bpo-46907](https://bugs.python.org/issue?@action=redirect&bpo=46907) [https://bugs.python.org/issue?@action=redirect&bpo=46907]: Update macOS installer to SQLite 3.38.4.

## Tools/Demos

- [gh-91583](https://github.com/python/cpython/issues/91583) [https://github.com/python/cpython/issues/91583]: Fix regression in the code generated by Argument Clinic for functions with the `defining_class` parameter.
- [gh-91575](https://github.com/python/cpython/issues/91575) [https://github.com/python/cpython/issues/91575]: Add script `Tools/scripts/generate_re_casefix.py` and the make target `regen-re` for generating additional data for case-insensitive matching according to the current Unicode version.
- [gh-91551](https://github.com/python/cpython/issues/91551) [https://github.com/python/cpython/issues/91551]: Remove the ancient Pynche color editor. It has moved to <https://gitlab.com/warsaw/pynche>

## C API

- [gh-88279](https://github.com/python/cpython/issues/88279) [https://github.com/python/cpython/issues/88279]: Deprecate the C functions: `PySys_SetArgv()`, `PySys_SetArgvEx()`, `PySys_SetPath()`. Patch by Victor Stinner.
- [gh-92154](https://github.com/python/cpython/issues/92154) [https://github.com/python/cpython/issues/92154]: Added the `PyCode_GetCode()` function. This function does the equivalent of the Python code `getattr(code_object, 'co_code')`.
- [gh-92173](https://github.com/python/cpython/issues/92173) [https://github.com/python/cpython/issues/92173]: Fix the closure argument to `PyEval_EvalCodeEx()`.
- [gh-91320](https://github.com/python/cpython/issues/91320) [https://github.com/python/cpython/issues/91320]: Fix C++ compiler warnings about “old-style cast” (`g++ -Wold-style-cast`) in the Python C API. Use `C++ reinterpret_cast<>` and `static_cast<>` casts when the Python C API is used in C++. Patch by Victor Stinner.
- [gh-80527](https://github.com/python/cpython/issues/80527) [https://github.com/python/cpython/issues/80527]: Mark functions as deprecated by [PEP 623](https://peps.python.org/pep-0623/) [https://peps.python.org/pep-0623/]: `PyUnicode_AS_DATA()`, `PyUnicode_AS_UNICODE()`, `PyUnicode_GET_DATA_SIZE()`, `PyUnicode_GET_SIZE()`. Patch by Victor Stinner.
- [gh-91768](https://github.com/python/cpython/issues/91768) [https://github.com/python/cpython/issues/91768]: `Py_REFCNT()`, `Py_TYPE()`, `Py_SIZE()` and `Py_IS_TYPE()` functions argument type is now `PyObject*`, rather than `const PyObject*`. Patch by Victor Stinner.
- [gh-91020](https://github.com/python/cpython/issues/91020) [https://github.com/python/cpython/issues/91020]: Add `PyBytes_Type.tp_alloc` to initialize `PyBytesObject.ob_shash` for bytes subclasses.
- [bpo-40421](https://bugs.python.org/issue?@action=redirect&bpo=40421) [https://bugs.python.org/issue?@action=redirect&bpo=40421]: Add `PyFrame_GetLasti` C-API function to access frame object’s `f_lasti` attribute safely

from C code.

- [bpo-35134](https://bugs.python.org/issue?@action=redirect&bpo=35134) [https://bugs.python.org/issue?@action=redirect&bpo=35134]: Remove the `Include/code.h` header file. C extensions should only include the main `<Python.h>` header file. Patch by Victor Stinner.
- [bpo-47169](https://bugs.python.org/issue?@action=redirect&bpo=47169) [https://bugs.python.org/issue?@action=redirect&bpo=47169]: `PyOS_CheckStack()` is now exported in the Stable ABI on Windows.
- [bpo-47169](https://bugs.python.org/issue?@action=redirect&bpo=47169) [https://bugs.python.org/issue?@action=redirect&bpo=47169]: `PyThread_get_thread_native_id()` is excluded from the stable ABI on platforms where it doesn't exist (like Solaris).
- [bpo-46343](https://bugs.python.org/issue?@action=redirect&bpo=46343) [https://bugs.python.org/issue?@action=redirect&bpo=46343]: Added `PyErr_GetHandledException()` and `PyErr_SetHandledException()` as simpler alternatives to `PyErr_GetExcInfo()` and `PyErr_SetExcInfo()`.

They are included in the stable ABI.

## Python 3.11.0 alpha 7

*Release date: 2022-04-05*

### Core and Builtins

- [bpo-47212](https://bugs.python.org/issue?@action=redirect&bpo=47212) [https://bugs.python.org/issue?@action=redirect&bpo=47212]: Raise `IndentationError` instead of `SyntaxError` for a bare `except` with no following indent. Improve `SyntaxError` locations for an un-parenthesized generator used as arguments. Patch by Matthieu Dartiailh.
- [bpo-47186](https://bugs.python.org/issue?@action=redirect&bpo=47186) [https://bugs.python.org/issue?@action=redirect&bpo=47186]: Replace `JUMP_IF_NOT_EG_MATCH` by `CHECK_EG_MATCH` + `jump`.

- [bpo-47176](https://bugs.python.org/issue?@action=redirect&bpo=47176) [https://bugs.python.org/issue?@action=redirect&bpo=47176]: Emscripten builds cannot handle signals in the usual way due to platform limitations. Python can now handle signals. To use, set `Module.Py_EmscriptenSignalBuffer` to be a single byte `SharedArrayBuffer` and set `Py_EMSCRIPTEN_SIGNAL_HANDLING` to 1. Writing a number into the `SharedArrayBuffer` will cause the corresponding signal to be raised into the Python thread.
- [bpo-47186](https://bugs.python.org/issue?@action=redirect&bpo=47186) [https://bugs.python.org/issue?@action=redirect&bpo=47186]: Replace **JUMP\_IF\_NOT\_EXC\_MATCH** by **CHECK\_EXC\_MATCH** + `jump`.
- [bpo-47120](https://bugs.python.org/issue?@action=redirect&bpo=47120) [https://bugs.python.org/issue?@action=redirect&bpo=47120]: Replace the absolute jump opcode **JUMP\_NO\_INTERRUPT** by the relative **JUMP\_BACKWARD\_NO\_INTERRUPT**.
- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]: Avoid unnecessary allocations when comparing code objects.
- [bpo-47182](https://bugs.python.org/issue?@action=redirect&bpo=47182) [https://bugs.python.org/issue?@action=redirect&bpo=47182]: Fix a crash when using a named unicode character like `"\N{digit nine}"` after the main interpreter has been initialized a second time.
- [bpo-47162](https://bugs.python.org/issue?@action=redirect&bpo=47162) [https://bugs.python.org/issue?@action=redirect&bpo=47162]: WebAssembly cannot deal with bad function pointer casts (different count or types of arguments). Python can now use call trampolines to mitigate the problem. Define **PY\_CALL\_TRAMPOLINE** to enable call trampolines.
- [bpo-46775](https://bugs.python.org/issue?@action=redirect&bpo=46775) [https://bugs.python.org/issue?@action=redirect&bpo=46775]: Some Windows system error codes (`>= 10000`) are now mapped into the correct `errno` and may now raise a subclass of **OSError**. Patch by Donghee Na.
- [bpo-47129](https://bugs.python.org/issue?@action=redirect&bpo=47129) [https://bugs.python.org/issue?@action=redirect&bpo=47129]: Improve error messages in f-string syntax errors concerning empty expressions.
- [bpo-47117](https://bugs.python.org/issue?@action=redirect&bpo=47117) [https://bugs.python.org/issue?@action=redirect&bpo=47117]: Fix a crash if we fail to decode

characters in interactive mode if the tokenizer buffers are uninitialized. Patch by Pablo Galindo.

- [bpo-47127](https://bugs.python.org/issue?@action=redirect&bpo=47127) [https://bugs.python.org/issue?@action=redirect&bpo=47127]: Speed up calls to c functions with keyword arguments by 25% with specialization. Patch by Kumar Aditya.
- [bpo-47120](https://bugs.python.org/issue?@action=redirect&bpo=47120) [https://bugs.python.org/issue?@action=redirect&bpo=47120]: Replaced **JUMP\_ABSOLUTE** by the relative jump **JUMP\_BACKWARD**.
- [bpo-42197](https://bugs.python.org/issue?@action=redirect&bpo=42197) [https://bugs.python.org/issue?@action=redirect&bpo=42197]:  
**PyFrame\_FastToLocalsWithError()** and **PyFrame\_LocalsToFast()** are no longer called during profiling nor tracing. C code can access the `f_locals` attribute of **PyFrameObject** by calling **PyFrame\_GetLocals()**.
- [bpo-47070](https://bugs.python.org/issue?@action=redirect&bpo=47070) [https://bugs.python.org/issue?@action=redirect&bpo=47070]: Improve performance of `array_inplace_repeat` by reducing the number of invocations of `memcpy`. Refactor the `repeat` and `inplace_repeat` methods of `array`, `bytes`, `bytearray` and `unicodeobject` to use the common `_PyBytes_Repeat`.
- [bpo-47053](https://bugs.python.org/issue?@action=redirect&bpo=47053) [https://bugs.python.org/issue?@action=redirect&bpo=47053]: Reduce de-optimization in the specialized `BINARY_OP_INPLACE_ADD_UNICODE` opcode.
- [bpo-47045](https://bugs.python.org/issue?@action=redirect&bpo=47045) [https://bugs.python.org/issue?@action=redirect&bpo=47045]: Remove the `f_state` field from the `_PyInterpreterFrame` struct. Add the `owner` field to the `_PyInterpreterFrame` struct to make ownership explicit to simplify clearing and deallocating frames and generators.
- [bpo-46968](https://bugs.python.org/issue?@action=redirect&bpo=46968) [https://bugs.python.org/issue?@action=redirect&bpo=46968]: Check for the existence of the “sys/auxv.h” header in **faulthandler** to avoid compilation problems in systems where this header doesn’t exist. Patch by Pablo Galindo
- [bpo-46329](https://bugs.python.org/issue?@action=redirect&bpo=46329) [https://bugs.python.org/issue?@action=redirect&bpo=46329]: Use low bit of `LOAD_GLOBAL` to indicate whether to push a `NULL` before the global. Helps streamline the call sequence a bit.
- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]

@action=redirect&bpo=46841]: Quicken bytecode in-place by storing it as part of the corresponding `PyCodeObject`.

- [bpo-47012](https://bugs.python.org/issue?@action=redirect&bpo=47012) [https://bugs.python.org/issue?@action=redirect&bpo=47012]: Speed up iteration of `bytes` and `bytearray` by 30%. Patch by Kumar Aditya.
- [bpo-47009](https://bugs.python.org/issue?@action=redirect&bpo=47009) [https://bugs.python.org/issue?@action=redirect&bpo=47009]: Improved the performance of `list.append()` and list comprehensions by optimizing for the common case, where no resize is needed. Patch by Dennis Sweeney.
- [bpo-47005](https://bugs.python.org/issue?@action=redirect&bpo=47005) [https://bugs.python.org/issue?@action=redirect&bpo=47005]: Improve performance of `bytearray_repeat` and `bytearray_irepeat` by reducing the number of invocations of `memcpy`.
- [bpo-46829](https://bugs.python.org/issue?@action=redirect&bpo=46829) [https://bugs.python.org/issue?@action=redirect&bpo=46829]: Deprecate passing a message into `asyncio.Future.cancel()` and `asyncio.Task.cancel()`
- [bpo-46993](https://bugs.python.org/issue?@action=redirect&bpo=46993) [https://bugs.python.org/issue?@action=redirect&bpo=46993]: Speed up `bytearray` creation from `list` and `tuple` by 40%. Patch by Kumar Aditya.
- [bpo-39829](https://bugs.python.org/issue?@action=redirect&bpo=39829) [https://bugs.python.org/issue?@action=redirect&bpo=39829]: Removed the `__len__()` call when initializing a list and moved initializing to `list_extend`. Patch by Jeremiah Pascual.
- [bpo-46944](https://bugs.python.org/issue?@action=redirect&bpo=46944) [https://bugs.python.org/issue?@action=redirect&bpo=46944]: Speed up throwing exception in generator with `METH_FASTCALL` calling convention. Patch by Kumar Aditya.
- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]: Modify `STORE_SUBSCR` to use an inline cache entry (rather than its oparg) as an adaptive counter.
- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]: Use inline caching for `PRECALL` and `CALL`, and remove the internal machinery for managing the (now unused) non-inline caches.
- [bpo-46881](https://bugs.python.org/issue?@action=redirect&bpo=46881) [https://bugs.python.org/issue?@action=redirect&bpo=46881]: Statically allocate and initialize the latin1 characters.

- [bpo-46838](https://bugs.python.org/issue?@action=redirect&bpo=46838) [https://bugs.python.org/issue?@action=redirect&bpo=46838]: Improve syntax errors for incorrect function definitions. Patch by Pablo Galindo
- [bpo-43721](https://bugs.python.org/issue?@action=redirect&bpo=43721) [https://bugs.python.org/issue?@action=redirect&bpo=43721]: Fix docstrings of **getter**, **setter**, and **deleter** to clarify that they create a new copy of the property.
- [bpo-43224](https://bugs.python.org/issue?@action=redirect&bpo=43224) [https://bugs.python.org/issue?@action=redirect&bpo=43224]: Make grammar changes required for PEP 646.

## Library

- [bpo-47208](https://bugs.python.org/issue?@action=redirect&bpo=47208) [https://bugs.python.org/issue?@action=redirect&bpo=47208]: Allow vendors to override **CTYPES\_MAX\_ARGCOUNT**.
- [bpo-23689](https://bugs.python.org/issue?@action=redirect&bpo=23689) [https://bugs.python.org/issue?@action=redirect&bpo=23689]: **re** module: fix memory leak when a match is terminated by a signal or memory allocation failure. Patch by Ma Lin.
- [bpo-47167](https://bugs.python.org/issue?@action=redirect&bpo=47167) [https://bugs.python.org/issue?@action=redirect&bpo=47167]: Allow overriding a future compliance check in **asyncio.Task**.
- [bpo-47151](https://bugs.python.org/issue?@action=redirect&bpo=47151) [https://bugs.python.org/issue?@action=redirect&bpo=47151]: When subprocess tries to use vfork, it now falls back to fork if vfork returns an error. This allows use in situations where vfork isn't allowed by the OS kernel.
- [bpo-47152](https://bugs.python.org/issue?@action=redirect&bpo=47152) [https://bugs.python.org/issue?@action=redirect&bpo=47152]: Convert the **re** module into a package. Deprecate modules **sre\_compile**, **sre\_constants** and **sre\_parse**.
- [bpo-4833](https://bugs.python.org/issue?@action=redirect&bpo=4833) [https://bugs.python.org/issue?@action=redirect&bpo=4833]: Add **ZipFile.mkdir()**
- [bpo-27929](https://bugs.python.org/issue?@action=redirect&bpo=27929) [https://bugs.python.org/issue?@action=redirect&bpo=27929]

@action=redirect&bpo=27929]: Fix

**asyncio.loop.sock\_connect()** to only resolve names for **socket.AF\_INET** or **socket.AF\_INET6** families. Resolution may not make sense for other families, like **socket.AF\_BLUETOOTH** and **socket.AF\_UNIX**.

- **bpo-14265** [<https://bugs.python.org/issue?@action=redirect&bpo=14265>]: Adds the fully qualified test name to unittest output
- **bpo-47061** [<https://bugs.python.org/issue?@action=redirect&bpo=47061>]: Deprecate the aifc module.
- **bpo-39622** [<https://bugs.python.org/issue?@action=redirect&bpo=39622>]: Handle Ctrl + C in asyncio programs to interrupt the main task.
- **bpo-47101** [<https://bugs.python.org/issue?@action=redirect&bpo=47101>]: **hashlib.algorithms\_available** now lists only algorithms that are provided by activated crypto providers on OpenSSL 3.0. Legacy algorithms are not listed unless the legacy provider has been loaded into the default OSSL context.
- **bpo-47099** [<https://bugs.python.org/issue?@action=redirect&bpo=47099>]: All **URLError** exception messages raised in **urllib.request.URLopener** now contain a colon between **ftp error** and the rest of the message. Previously, **open\_ftp()** missed the colon. Patch by Oleg Iarygin.
- **bpo-47099** [<https://bugs.python.org/issue?@action=redirect&bpo=47099>]: Exception chaining is changed from **Exception.with\_traceback()**/**sys.exc\_info()** to **PEP 3134** [<https://peps.python.org/pep-3134/>]. Patch by Oleg Iarygin.
- **bpo-47095** [<https://bugs.python.org/issue?@action=redirect&bpo=47095>]: **hashlib**'s internal **\_blake2** module now prefers **libb2** from <https://www.blake2.net/>

over Python's vendored copy of blake2.

- [bpo-47098](https://bugs.python.org/issue?@action=redirect&bpo=47098) [https://bugs.python.org/issue?@action=redirect&bpo=47098]: The Keccak Code Package for **hashlib**'s internal `__sha3` module has been replaced with `tiny_sha3`. The module is used as fallback when Python is built without OpenSSL.
- [bpo-47088](https://bugs.python.org/issue?@action=redirect&bpo=47088) [https://bugs.python.org/issue?@action=redirect&bpo=47088]: Implement **`typing.LiteralString`**, part of **PEP 675** [https://peps.python.org/pep-0675/]. Patch by Jelle Zijlstra.
- [bpo-42885](https://bugs.python.org/issue?@action=redirect&bpo=42885) [https://bugs.python.org/issue?@action=redirect&bpo=42885]: Optimize **`re.search()`**, **`re.split()`**, **`re.findall()`**, **`re.finditer()`** and **`re.sub()`** for regular expressions starting with `\A` or `^`.
- [bpo-23691](https://bugs.python.org/issue?@action=redirect&bpo=23691) [https://bugs.python.org/issue?@action=redirect&bpo=23691]: Protect the **`re.finditer()`** iterator from re-entering.
- [bpo-47067](https://bugs.python.org/issue?@action=redirect&bpo=47067) [https://bugs.python.org/issue?@action=redirect&bpo=47067]: Optimize calling `GenericAlias` objects by using **PEP 590** [https://peps.python.org/pep-0590/] `vectorcall` and by replacing `PyObject_SetAttrString` with `PyObject_SetAttr`.
- [bpo-28080](https://bugs.python.org/issue?@action=redirect&bpo=28080) [https://bugs.python.org/issue?@action=redirect&bpo=28080]: Add the *metadata\_encoding* parameter in the **`zipfile.ZipFile`** constructor and the `--metadata-encoding` option in the **`zipfile`** CLI to allow reading zipfiles using non-standard codecs to encode the filenames within the archive.
- [bpo-47000](https://bugs.python.org/issue?@action=redirect&bpo=47000) [https://bugs.python.org/issue?@action=redirect&bpo=47000]: Make **`io.text_encoding()`** returns “utf-8” when UTF-8 mode is enabled.
- [bpo-42369](https://bugs.python.org/issue?@action=redirect&bpo=42369) [https://bugs.python.org/issue?@action=redirect&bpo=42369]: Fix thread safety of

`zipfile._SharedFile.tell()` to avoid a “`zipfile.BadZipFile: Bad CRC-32 for file`” exception when reading a `ZipFile` from multiple threads.

- [bpo-38256](https://bugs.python.org/issue?@action=redirect&bpo=38256) [https://bugs.python.org/issue?@action=redirect&bpo=38256]: Fix `binascii.crc32()` when it is compiled to use zlib’s `crc32` to work properly on inputs 4 + GiB in length instead of returning the wrong result. The workaround prior to this was to always feed the function data in increments smaller than 4GiB or to just call the `zlib` module function.

We also have `binascii.crc32()` release the GIL when computing on larger inputs as `zlib.crc32()` and `hashlib` do.

This also boosts performance on Windows as it now uses the `zlib` `crc32` implementation for `binascii.crc32()` for a 2-3x speedup.

That the `stdlib` has a `crc32` API in two modules is a known historical oddity. This moves us closer to a single implementation behind them.

- [bpo-47066](https://bugs.python.org/issue?@action=redirect&bpo=47066) [https://bugs.python.org/issue?@action=redirect&bpo=47066]: Global inline flags (e.g. `(?i)`) can now only be used at the start of the regular expressions. Using them not at the start of expression was deprecated since Python 3.6.
- [bpo-39394](https://bugs.python.org/issue?@action=redirect&bpo=39394) [https://bugs.python.org/issue?@action=redirect&bpo=39394]: A warning about inline flags not at the start of the regular expression now contains the position of the flag.
- [bpo-433030](https://bugs.python.org/issue?@action=redirect&bpo=433030) [https://bugs.python.org/issue?@action=redirect&bpo=433030]: Add support of atomic grouping `((?>...))` and possessive quantifiers `(*+, ++, ?+, {m,n}+)` in **regular expressions**.
- [bpo-47062](https://bugs.python.org/issue?@action=redirect&bpo=47062) [https://bugs.python.org/issue?@action=redirect&bpo=47062]

@action=redirect&bpo=47062]: Implement `asyncio.Runner` context manager.

- [bpo-46382](https://bugs.python.org/issue?@action=redirect&bpo=46382) [https://bugs.python.org/issue?@action=redirect&bpo=46382]: `dataclass()` `slots=True` now correctly omits slots already defined in base classes. Patch by Arie Bovenberg.

- [bpo-47057](https://bugs.python.org/issue?@action=redirect&bpo=47057) [https://bugs.python.org/issue?@action=redirect&bpo=47057]: Use FASTCALL convention for `FutureIter.throw()`

- [bpo-47061](https://bugs.python.org/issue?@action=redirect&bpo=47061) [https://bugs.python.org/issue?@action=redirect&bpo=47061]: Deprecate the various modules listed by [PEP 594](https://peps.python.org/pep-0594/) [https://peps.python.org/pep-0594/]:

aifc, asynchat, asyncore, audioop, cgi, cgitb, chunk, crypt, imghdr, msilib, nntplib, nis, ossaudiodev, pipes, smtpd, sndhdr, spwd, sunau, telnetlib, uu, xdrlib

- [bpo-34790](https://bugs.python.org/issue?@action=redirect&bpo=34790) [https://bugs.python.org/issue?@action=redirect&bpo=34790]: Remove passing coroutine objects to `asyncio.wait()`.

- [bpo-47039](https://bugs.python.org/issue?@action=redirect&bpo=47039) [https://bugs.python.org/issue?@action=redirect&bpo=47039]: Normalize `repr()` of asyncio future and task objects.

- [bpo-2604](https://bugs.python.org/issue?@action=redirect&bpo=2604) [https://bugs.python.org/issue?@action=redirect&bpo=2604]: Fix bug where doctests using globals would fail when run multiple times.

- [bpo-45150](https://bugs.python.org/issue?@action=redirect&bpo=45150) [https://bugs.python.org/issue?@action=redirect&bpo=45150]: Add `hashlib.file_digest()` helper for efficient hashing of file object.

- [bpo-34861](https://bugs.python.org/issue?@action=redirect&bpo=34861) [https://bugs.python.org/issue?@action=redirect&bpo=34861]: Made `cumtime` the default sorting key for `cProfile`

- [bpo-45997](https://bugs.python.org/issue?@action=redirect&bpo=45997) [https://bugs.python.org/issue?@action=redirect&bpo=45997]: Fix `asyncio.Semaphore` re-

acquiring FIFO order.

- [bpo-47022](https://bugs.python.org/issue?@action=redirect&bpo=47022) [https://bugs.python.org/issue?@action=redirect&bpo=47022]: The **asynchat**, **asyncore** and **smtpd** modules have been deprecated since at least Python 3.6. Their documentation and deprecation warnings and have now been updated to note they will be removed in Python 3.12 ([PEP 594](https://peps.python.org/pep-0594/) [https://peps.python.org/pep-0594/]).
- [bpo-43253](https://bugs.python.org/issue?@action=redirect&bpo=43253) [https://bugs.python.org/issue?@action=redirect&bpo=43253]: Fix a crash when closing transports where the underlying socket handle is already invalid on the Proactor event loop.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: **select.select()** now passes NULL to **select** for each empty fdset.
- [bpo-47004](https://bugs.python.org/issue?@action=redirect&bpo=47004) [https://bugs.python.org/issue?@action=redirect&bpo=47004]: Apply bugfixes from **importlib\_metadata** 4.11.3, including bugfix for **EntryPoint.extras**, which was returning match objects and not the extras strings.
- [bpo-46998](https://bugs.python.org/issue?@action=redirect&bpo=46998) [https://bugs.python.org/issue?@action=redirect&bpo=46998]: Allow subclassing of **typing.Any**. Patch by Shantanu Jain.
- [bpo-46995](https://bugs.python.org/issue?@action=redirect&bpo=46995) [https://bugs.python.org/issue?@action=redirect&bpo=46995]: Deprecate missing **asyncio.Task.set\_name()** for third-party task implementations, schedule making it mandatory in Python 3.13.
- [bpo-46994](https://bugs.python.org/issue?@action=redirect&bpo=46994) [https://bugs.python.org/issue?@action=redirect&bpo=46994]: Accept explicit contextvars.Context in **asyncio.create\_task()** and **asyncio.loop.create\_task()**.
- [bpo-46981](https://bugs.python.org/issue?@action=redirect&bpo=46981) [https://bugs.python.org/issue?@action=redirect&bpo=46981]:

`typing.get_args(typing.Tuple[()])` now returns `()` instead of `((),)`.

- [bpo-46968](https://bugs.python.org/issue?@action=redirect&bpo=46968) [https://bugs.python.org/issue?@action=redirect&bpo=46968]: Add `os.sysconf_names['SC_MINSIGSTKSZ']`.
- [bpo-46985](https://bugs.python.org/issue?@action=redirect&bpo=46985) [https://bugs.python.org/issue?@action=redirect&bpo=46985]: Upgrade pip wheel bundled with ensurepip (pip 22.0.4)
- [bpo-46968](https://bugs.python.org/issue?@action=redirect&bpo=46968) [https://bugs.python.org/issue?@action=redirect&bpo=46968]: **faulthandler**: On Linux 5.14 and newer, dynamically determine size of signal handler stack size CPython allocates using `getauxval(AT_MINSIGSTKSZ)`. This change allows for Python extension's request to Linux kernel to use AMX\_TILE instruction set on Sapphire Rapids Xeon processor to succeed, unblocking use of the ISA in frameworks.
- [bpo-46917](https://bugs.python.org/issue?@action=redirect&bpo=46917) [https://bugs.python.org/issue?@action=redirect&bpo=46917]: The **math.nan** value is now always available. Patch by Victor Stinner.
- [bpo-46955](https://bugs.python.org/issue?@action=redirect&bpo=46955) [https://bugs.python.org/issue?@action=redirect&bpo=46955]: Expose **asyncio.base\_events.Server** as **asyncio.Server**. Patch by Stefan Zbarka.
- [bpo-23325](https://bugs.python.org/issue?@action=redirect&bpo=23325) [https://bugs.python.org/issue?@action=redirect&bpo=23325]: The **signal** module no longer assumes that **SIG\_IGN** and **SIG\_DFL** are small int singletons.
- [bpo-46932](https://bugs.python.org/issue?@action=redirect&bpo=46932) [https://bugs.python.org/issue?@action=redirect&bpo=46932]: Update bundled libexpat to 2.4.7
- [bpo-46933](https://bugs.python.org/issue?@action=redirect&bpo=46933) [https://bugs.python.org/issue?@action=redirect&bpo=46933]: The **pwd** module is now optional. **os.path.expanduser()** returns the path when the **pwd** module is not available.

- [bpo-40059](https://bugs.python.org/issue?@action=redirect&bpo=40059) [https://bugs.python.org/issue?@action=redirect&bpo=40059]: [PEP 680](https://peps.python.org/pep-0680/) [https://peps.python.org/pep-0680/], the [tomllib](#) module. Adds support for parsing TOML.
- [bpo-464471](https://bugs.python.org/issue?@action=redirect&bpo=464471) [https://bugs.python.org/issue?@action=redirect&bpo=464471]: [asyncio.timeout\(\)](#) and [asyncio.timeout\\_at\(\)](#) context managers added. Patch by Tin Tvrtković and Andrew Svetlov.
- [bpo-46805](https://bugs.python.org/issue?@action=redirect&bpo=46805) [https://bugs.python.org/issue?@action=redirect&bpo=46805]: Added raw datagram socket functions for asyncio: [sock\\_sendto\(\)](#), [sock\\_recvfrom\(\)](#) and [sock\\_recvfrom\\_into\(\)](#).
- [bpo-46644](https://bugs.python.org/issue?@action=redirect&bpo=46644) [https://bugs.python.org/issue?@action=redirect&bpo=46644]: No longer require valid typeforms to be callable. This allows [typing.Annotated](#) to wrap [typing.ParamSpecArgs](#) and [dataclasses.InitVar](#). Patch by Gregory Beauregard.
- [bpo-46581](https://bugs.python.org/issue?@action=redirect&bpo=46581) [https://bugs.python.org/issue?@action=redirect&bpo=46581]: Brings [ParamSpec](#) propagation for [GenericAlias](#) in line with [Concatenate](#) (and others).
- [bpo-45413](https://bugs.python.org/issue?@action=redirect&bpo=45413) [https://bugs.python.org/issue?@action=redirect&bpo=45413]: Define *posix\_venv* and *nt\_venv* [sysconfig installation schemes](#) to be used for bootstrapping new virtual environments. Add *venv* [sysconfig](#) installation scheme to get the appropriate one of the above. The schemes are identical to the pre-existing *posix\_prefix* and *nt* install schemes. The [venv](#) module now uses the *venv* scheme to create new virtual environments instead of hardcoding the paths depending only on the platform. Downstream Python distributors customizing the *posix\_prefix* or *nt* install scheme in a way that is not compatible with the install scheme used in virtual environments are encouraged not to customize the *venv* schemes. When Python itself runs in a virtual environment, [sysconfig.get\\_default\\_scheme\(\)](#) and [sysconfig.get\\_preferred\\_scheme\(\)](#) with

`key="prefix"` returns *venv*.

- [bpo-43224](https://bugs.python.org/issue?@action=redirect&bpo=43224) [https://bugs.python.org/issue?@action=redirect&bpo=43224]: Implement support for PEP 646 in `typing.py`.
- [bpo-43224](https://bugs.python.org/issue?@action=redirect&bpo=43224) [https://bugs.python.org/issue?@action=redirect&bpo=43224]: Allow unpacking `types.GenericAlias` objects, e.g. `*tuple[int, str]`.
- [bpo-46557](https://bugs.python.org/issue?@action=redirect&bpo=46557) [https://bugs.python.org/issue?@action=redirect&bpo=46557]: Warnings captured by the logging module are now logged without a format string to prevent systems that group logs by the `msg` argument from grouping captured warnings together.
- [bpo-41370](https://bugs.python.org/issue?@action=redirect&bpo=41370) [https://bugs.python.org/issue?@action=redirect&bpo=41370]: `typing.get_type_hints()` now supports evaluating strings as forward references in [PEP 585 generic aliases](#).
- [bpo-46607](https://bugs.python.org/issue?@action=redirect&bpo=46607) [https://bugs.python.org/issue?@action=redirect&bpo=46607]: Add **`DeprecationWarning`** to **`LegacyInterpolation`**, deprecated in the docstring since Python 3.2. Will be removed in Python 3.13. Use **`BasicInterpolation`** or **`ExtendedInterpolation`** instead.
- [bpo-26120](https://bugs.python.org/issue?@action=redirect&bpo=26120) [https://bugs.python.org/issue?@action=redirect&bpo=26120]: **`pydoc`** now excludes `__future__` imports from the module's data items.
- [bpo-46480](https://bugs.python.org/issue?@action=redirect&bpo=46480) [https://bugs.python.org/issue?@action=redirect&bpo=46480]: Add `typing.assert_type()`. Patch by Jelle Zijlstra.
- [bpo-46421](https://bugs.python.org/issue?@action=redirect&bpo=46421) [https://bugs.python.org/issue?@action=redirect&bpo=46421]: Fix a unittest issue where if the command was invoked as `python -m unittest` and the filename(s) began with a dot (`.`), a `ValueError` is returned.

- [bpo-46245](https://bugs.python.org/issue?@action=redirect&bpo=46245) [https://bugs.python.org/issue?@action=redirect&bpo=46245]: Add optional parameter `dir_fd` in `shutil.rmtree()`.
- [bpo-22859](https://bugs.python.org/issue?@action=redirect&bpo=22859) [https://bugs.python.org/issue?@action=redirect&bpo=22859]: `usageExit()` is marked deprecated, to be removed in 3.13.
- [bpo-46170](https://bugs.python.org/issue?@action=redirect&bpo=46170) [https://bugs.python.org/issue?@action=redirect&bpo=46170]: Improve the error message when you try to subclass an instance of `typing.NewType`.
- [bpo-40296](https://bugs.python.org/issue?@action=redirect&bpo=40296) [https://bugs.python.org/issue?@action=redirect&bpo=40296]: Fix supporting generic aliases in `pydoc`.
- [bpo-20392](https://bugs.python.org/issue?@action=redirect&bpo=20392) [https://bugs.python.org/issue?@action=redirect&bpo=20392]: Fix inconsistency with uppercase file extensions in `MimeTypes.guess_type()`. Patch by Kumar Aditya.
- [bpo-46030](https://bugs.python.org/issue?@action=redirect&bpo=46030) [https://bugs.python.org/issue?@action=redirect&bpo=46030]: Add `LOCAL_CREDS`, `LOCAL_CREDS_PERSISTENT` and `SCM_CREDS2` FreeBSD constants to the `socket` module.
- [bpo-44439](https://bugs.python.org/issue?@action=redirect&bpo=44439) [https://bugs.python.org/issue?@action=redirect&bpo=44439]: Fix `.write()` method of a member `file` in `ZipFile`, when the input data is an object that supports the buffer protocol, the file length may be wrong.
- [bpo-45171](https://bugs.python.org/issue?@action=redirect&bpo=45171) [https://bugs.python.org/issue?@action=redirect&bpo=45171]: Fix handling of the `stacklevel` argument to logging functions in the `logging` module so that it is consistent across all logging functions and, as advertised, similar to the `stacklevel` argument used in `warn()`.
- [bpo-24959](https://bugs.python.org/issue?@action=redirect&bpo=24959) [https://bugs.python.org/issue?@action=redirect&bpo=24959]: Fix bug where `unittest`

sometimes drops frames from tracebacks of exceptions raised in tests.

- [bpo-44859](https://bugs.python.org/issue?@action=redirect&bpo=44859) [https://bugs.python.org/issue?@action=redirect&bpo=44859]: Raise more accurate and [PEP 249](https://peps.python.org/pep-0249/) [https://peps.python.org/pep-0249/] compatible exceptions in [sqlite3](#).
  - Raise [InterfaceError](#) instead of [ProgrammingError](#) for `SQLITE_MISUSE` errors.
  - Don't overwrite [BufferError](#) with [ValueError](#) when conversion to BLOB fails.
  - Raise [ProgrammingError](#) instead of [Warning](#) if user tries to [execute\(\)](#) more than one SQL statement.
  - Raise [ProgrammingError](#) instead of [ValueError](#) if an SQL query contains null characters.

- [bpo-44493](https://bugs.python.org/issue?@action=redirect&bpo=44493) [https://bugs.python.org/issue?@action=redirect&bpo=44493]: Add missing terminated NUL in `sockaddr_un`'s length

This was potentially observable when using non-abstract `AF_UNIX` datagram sockets to processes written in another programming language.

- [bpo-41930](https://bugs.python.org/issue?@action=redirect&bpo=41930) [https://bugs.python.org/issue?@action=redirect&bpo=41930]: Add [serialize\(\)](#) and [deserialize\(\)](#) support to [sqlite3](#). Patch by Erlend E. Aasland.
- [bpo-33178](https://bugs.python.org/issue?@action=redirect&bpo=33178) [https://bugs.python.org/issue?@action=redirect&bpo=33178]: Added [ctypes.BigEndianUnion](#) and [ctypes.LittleEndianUnion](#) classes, as originally documented in the library docs but not yet implemented.
- [bpo-43352](https://bugs.python.org/issue?@action=redirect&bpo=43352) [https://bugs.python.org/issue?@action=redirect&bpo=43352]: Add an Barrier object in synchronization primitives of *asyncio* Lib in order to be consistant with Barrier from *threading* and *multiprocessing* libs\*

- [bpo-35859](https://bugs.python.org/issue?@action=redirect&bpo=35859) [https://bugs.python.org/issue?@action=redirect&bpo=35859]: **re** module, fix a few bugs about capturing group. In rare cases, capturing group gets an incorrect string. Patch by Ma Lin.

## Documentation

- [bpo-45099](https://bugs.python.org/issue?@action=redirect&bpo=45099) [https://bugs.python.org/issue?@action=redirect&bpo=45099]: Document internal **asyncio** API.
- [bpo-47126](https://bugs.python.org/issue?@action=redirect&bpo=47126) [https://bugs.python.org/issue?@action=redirect&bpo=47126]: Update PEP URLs to **PEP 676** [https://peps.python.org/pep-0676/]’s new canonical form.
- [bpo-47040](https://bugs.python.org/issue?@action=redirect&bpo=47040) [https://bugs.python.org/issue?@action=redirect&bpo=47040]: Clarified the old Python versions compatibility note of **binascii.crc32()** / **zlib.adler32()** / **zlib.crc32()** functions.
- [bpo-46033](https://bugs.python.org/issue?@action=redirect&bpo=46033) [https://bugs.python.org/issue?@action=redirect&bpo=46033]: Clarify **for** statement execution in its doc.
- [bpo-45790](https://bugs.python.org/issue?@action=redirect&bpo=45790) [https://bugs.python.org/issue?@action=redirect&bpo=45790]: Adjust inaccurate phrasing in **Defining Extension Types: Tutorial** about the **ob\_base** field and the macros used to access its contents.
- [bpo-42340](https://bugs.python.org/issue?@action=redirect&bpo=42340) [https://bugs.python.org/issue?@action=redirect&bpo=42340]: Document that in some circumstances **KeyboardInterrupt** may cause the code to enter an inconsistent state. Provided a sample workaround to avoid it if needed.
- [bpo-41233](https://bugs.python.org/issue?@action=redirect&bpo=41233) [https://bugs.python.org/issue?@action=redirect&bpo=41233]: Link the **errno**s referenced in **Doc/library/exceptions.rst** to their respective section in **Doc/library/errno.rst**, and vice versa. Previously this was only done for **EINTR** and **InterruptedError**. Patch by Yan “yyyyyyan” Orestes.

## Tests

- [bpo-47205](https://bugs.python.org/issue?@action=redirect&bpo=47205) [https://bugs.python.org/issue?@action=redirect&bpo=47205]: Skip test for **sched\_getaffinity()** and **sched\_setaffinity()**

error case on FreeBSD.

- [bpo-46126](https://bugs.python.org/issue?@action=redirect&bpo=46126) [https://bugs.python.org/issue?@action=redirect&bpo=46126]: Restore ‘descriptions’ when running tests internally.
- [bpo-47104](https://bugs.python.org/issue?@action=redirect&bpo=47104) [https://bugs.python.org/issue?@action=redirect&bpo=47104]: Rewrite `asyncio.to_thread()` tests to use `unittest.IsolatedAsyncioTestCase`.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: The test suite is now passing on the Emscripten platform. All fork, socket, and subprocess-based tests are skipped.
- [bpo-47037](https://bugs.python.org/issue?@action=redirect&bpo=47037) [https://bugs.python.org/issue?@action=redirect&bpo=47037]: Skip `strftime("%4Y")` feature test on Windows. It can cause an assertion error in debug builds.
- [bpo-46587](https://bugs.python.org/issue?@action=redirect&bpo=46587) [https://bugs.python.org/issue?@action=redirect&bpo=46587]: Skip tests if platform’s `strftime` does not support non-portable glibc extensions.
- [bpo-47015](https://bugs.python.org/issue?@action=redirect&bpo=47015) [https://bugs.python.org/issue?@action=redirect&bpo=47015]: A test case for `os.sendfile()` is converted from deprecated `asyncore` (see [PEP 594](https://peps.python.org/pep-0594/) [https://peps.python.org/pep-0594/]) to `asyncio`. Patch by Oleg Iarygin.

## Build

- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: Add configure option `--enable-wasm-dynamic-linking` to enable `dlopen` and `MAIN_MODULE / SIDE_MODULE` on `wasm32-emscripten`.
- [bpo-46023](https://bugs.python.org/issue?@action=redirect&bpo=46023) [https://bugs.python.org/issue?@action=redirect&bpo=46023]: `makesetup` now detects and skips all duplicated module definitions. The first entry wins.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: Add `SOABI` `wasm32-emscripten` for Emscripten and `wasm32-wasi` for WASI on 32bit WASM as well as `wasm64` counter parts.
- [bpo-47032](https://bugs.python.org/issue?@action=redirect&bpo=47032) [https://bugs.python.org/issue?@action=redirect&bpo=47032]: Ensure Windows install builds fail

correctly with a non-zero exit code when part of the build fails.

- [bpo-47024](https://bugs.python.org/issue?@action=redirect&bpo=47024) [https://bugs.python.org/issue?@action=redirect&bpo=47024]: Update OpenSSL to 1.1.1n for macOS installers and all Windows builds.
- [bpo-46996](https://bugs.python.org/issue?@action=redirect&bpo=46996) [https://bugs.python.org/issue?@action=redirect&bpo=46996]: The **tkinter** package now requires Tcl/Tk version 8.5.12 or newer.
- [bpo-46973](https://bugs.python.org/issue?@action=redirect&bpo=46973) [https://bugs.python.org/issue?@action=redirect&bpo=46973]: Add `regen-configure` make target to regenerate configure script with Christian's container image `quay.io/tiran/cpython_autoconf:269`.
- [bpo-46917](https://bugs.python.org/issue?@action=redirect&bpo=46917) [https://bugs.python.org/issue?@action=redirect&bpo=46917]: Building Python now requires support of IEEE 754 floating point numbers. Patch by Victor Stinner.
- [bpo-45774](https://bugs.python.org/issue?@action=redirect&bpo=45774) [https://bugs.python.org/issue?@action=redirect&bpo=45774]: `configure` now verifies that all SQLite C APIs needed for the **sqlite3** extension module are found.

## Windows

- [bpo-47194](https://bugs.python.org/issue?@action=redirect&bpo=47194) [https://bugs.python.org/issue?@action=redirect&bpo=47194]: Update `zlib` to v1.2.12 to resolve CVE-2018-25032.
- [bpo-47171](https://bugs.python.org/issue?@action=redirect&bpo=47171) [https://bugs.python.org/issue?@action=redirect&bpo=47171]: Enables installing the `py.exe` launcher on Windows ARM64.
- [bpo-46566](https://bugs.python.org/issue?@action=redirect&bpo=46566) [https://bugs.python.org/issue?@action=redirect&bpo=46566]: Upgraded **Python Launcher for Windows** to support a new `-V:company/tag` argument for full **PEP 514** [https://peps.python.org/pep-0514/] support and to detect ARM64 installs. The `-64` suffix on arguments is deprecated, but still selects any non-32-bit install. Setting **PYLAUNCHER\_ALLOW\_INSTALL** and specifying a version that is not installed will attempt to install the requested version from the Microsoft Store.
- [bpo-47086](https://bugs.python.org/issue?@action=redirect&bpo=47086) [https://bugs.python.org/issue?@action=redirect&bpo=47086]

@action=redirect&bpo=47086]: The installer for Windows now includes documentation as loose HTML files rather than a single compiled .chm file.

- [bpo-46907](https://bugs.python.org/issue?@action=redirect&bpo=46907) [https://bugs.python.org/issue?@action=redirect&bpo=46907]: Update Windows installer to use SQLite 3.38.1.
- [bpo-44549](https://bugs.python.org/issue?@action=redirect&bpo=44549) [https://bugs.python.org/issue?@action=redirect&bpo=44549]: Update bzip2 to 1.0.8 in Windows builds to mitigate CVE-2016-3189 and CVE-2019-12900
- [bpo-46948](https://bugs.python.org/issue?@action=redirect&bpo=46948) [https://bugs.python.org/issue?@action=redirect&bpo=46948]: Prevent CVE-2022-26488 by ensuring the Add to PATH option in the Windows installer uses the correct path when being repaired.

## macOS

- [bpo-46890](https://bugs.python.org/issue?@action=redirect&bpo=46890) [https://bugs.python.org/issue?@action=redirect&bpo=46890]: Fix a regression in the setting of sys.\_base\_executable in framework builds, and thereby fix a regression in **venv** virtual environments with such builds.
- [bpo-46907](https://bugs.python.org/issue?@action=redirect&bpo=46907) [https://bugs.python.org/issue?@action=redirect&bpo=46907]: Update macOS installer to SQLite 3.38.1.

## Tools/Demos

- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: Replace Emscripten's limited shell with Katie Bell's browser-ui REPL from python-wasm project.

## C API

- [bpo-40421](https://bugs.python.org/issue?@action=redirect&bpo=40421) [https://bugs.python.org/issue?@action=redirect&bpo=40421]: Add PyFrame\_GetBuiltins, PyFrame\_GetGenerator and PyFrame\_GetGlobals C-API functions to access frame object attributes safely from C code.
- [bpo-46850](https://bugs.python.org/issue?@action=redirect&bpo=46850) [https://bugs.python.org/issue?@action=redirect&bpo=46850]

@action=redirect&bpo=46850]: Move the private `_PyFrameEvalFunction` type, and private `_PyInterpreterState_GetEvalFrameFunc()` and `_PyInterpreterState_SetEvalFrameFunc()` functions to the internal C API. The `_PyFrameEvalFunction` callback function type now uses the `_PyInterpreterFrame` type which is part of the internal C API. Patch by Victor Stinner.

- [bpo-46850](https://bugs.python.org/issue?@action=redirect&bpo=46850) [https://bugs.python.org/issue?@action=redirect&bpo=46850]: Move the private undocumented `_PyEval_EvalFrameDefault()` function to the internal C API. The function now uses the `_PyInterpreterFrame` type which is part of the internal C API. Patch by Victor Stinner.
- [bpo-46850](https://bugs.python.org/issue?@action=redirect&bpo=46850) [https://bugs.python.org/issue?@action=redirect&bpo=46850]: Remove the private undocumented function `_PyEval_CallTracing()` from the C API. Call the public [sys.call\\_tracing\(\)](#) function instead. Patch by Victor Stinner.
- [bpo-46850](https://bugs.python.org/issue?@action=redirect&bpo=46850) [https://bugs.python.org/issue?@action=redirect&bpo=46850]: Remove the private undocumented function `_PyEval_GetCoroutineOriginTrackingDepth()` from the C API. Call the public [sys.get\\_coroutine\\_origin\\_tracking\\_depth\(\)](#) function instead. Patch by Victor Stinner.
- [bpo-46850](https://bugs.python.org/issue?@action=redirect&bpo=46850) [https://bugs.python.org/issue?@action=redirect&bpo=46850]: Remove the following private undocumented functions from the C API:

- `_PyEval_GetAsyncGenFirstiter()`
- `_PyEval_GetAsyncGenFinalizer()`
- `_PyEval_SetAsyncGenFirstiter()`
- `_PyEval_SetAsyncGenFinalizer()`

Call the public [sys.get\\_asyncgen\\_hooks\(\)](#) and [sys.set\\_asyncgen\\_hooks\(\)](#) functions instead. Patch by

Victor Stinner.

- [bpo-46987](https://bugs.python.org/issue?@action=redirect&bpo=46987) [https://bugs.python.org/issue?@action=redirect&bpo=46987]: Remove private functions `_PySys_GetObjectId()` and `_PySys_SetObjectId()`. Patch by Donghee Na.
- [bpo-46906](https://bugs.python.org/issue?@action=redirect&bpo=46906) [https://bugs.python.org/issue?@action=redirect&bpo=46906]: Add new functions to pack and unpack C double (serialize and deserialize): `PyFloat_Pack2()`, `PyFloat_Pack4()`, `PyFloat_Pack8()`, `PyFloat_Unpack2()`, `PyFloat_Unpack4()` and `PyFloat_Unpack8()`. Patch by Victor Stinner.

## Python 3.11.0 alpha 6

*Release date: 2022-03-07*

### Core and Builtins

- [bpo-46940](https://bugs.python.org/issue?@action=redirect&bpo=46940) [https://bugs.python.org/issue?@action=redirect&bpo=46940]: Avoid overriding `AttributeError` metadata information for nested attribute access calls. Patch by Pablo Galindo.
- [bpo-46927](https://bugs.python.org/issue?@action=redirect&bpo=46927) [https://bugs.python.org/issue?@action=redirect&bpo=46927]: Include the type's name in the error message for subscripting non-generic types.
- [bpo-46921](https://bugs.python.org/issue?@action=redirect&bpo=46921) [https://bugs.python.org/issue?@action=redirect&bpo=46921]: Support vectorcall for `super()`. Patch by Ken Jin.
- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]: Fix incorrect handling of inline cache entries when specializing `BINARY_OP`.
- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]: Use an oparg to simplify the

construction of helpful error messages in `GET_AVAILABLE`.

- [bpo-46903](https://bugs.python.org/issue?@action=redirect&bpo=46903) [https://bugs.python.org/issue?@action=redirect&bpo=46903]: Make sure that str subclasses can be used as attribute names for instances with virtual dictionaries. Fixes regression in 3.11alpha
- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]: Add more detailed specialization failure stats for `COMPARE_OP` followed by `EXTENDED_ARG`.
- [bpo-46891](https://bugs.python.org/issue?@action=redirect&bpo=46891) [https://bugs.python.org/issue?@action=redirect&bpo=46891]: Fix bug introduced during 3.11alpha where subclasses of `types.ModuleType` with `__slots__` were not initialized correctly, resulting in an interpreter crash.
- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]: Use inline caching for `LOAD_ATTR`, `LOAD_METHOD`, and `STORE_ATTR`.
- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]: Use inline cache for `BINARY_SUBSCR`.
- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]: Use inline caching for `COMPARE_OP`.
- [bpo-46864](https://bugs.python.org/issue?@action=redirect&bpo=46864) [https://bugs.python.org/issue?@action=redirect&bpo=46864]: Deprecate `PyBytesObject.ob_shash`. It will be removed in Python 3.13.
- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]: Use inline caching for `UNPACK_SEQUENCE`.
- [bpo-46845](https://bugs.python.org/issue?@action=redirect&bpo=46845) [https://bugs.python.org/issue?@action=redirect&bpo=46845]: Reduces dict size by removing hash value from hash table when all inserted keys are

Unicode. For example,

`sys.getsizeof(dict.fromkeys("abcdefg"))` becomes 272 bytes from 352 bytes on 64bit platform.

- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]: Use inline cache for **LOAD\_GLOBAL**.
- [bpo-46852](https://bugs.python.org/issue?@action=redirect&bpo=46852) [https://bugs.python.org/issue?@action=redirect&bpo=46852]: Rename the private undocumented `float.__set_format__()` method to `float.__setformat__()` to fix a typo introduced in Python 3.7. The method is only used by `test_float`. Patch by Victor Stinner.
- [bpo-46852](https://bugs.python.org/issue?@action=redirect&bpo=46852) [https://bugs.python.org/issue?@action=redirect&bpo=46852]: Remove the undocumented private `float.__set_format__()` method, previously known as `float.__setformat__()` in Python 3.7. Its docstring said: “You probably don’t want to use this function. It exists mainly to be used in Python’s test suite.” Patch by Victor Stinner.
- [bpo-40116](https://bugs.python.org/issue?@action=redirect&bpo=40116) [https://bugs.python.org/issue?@action=redirect&bpo=40116]: Fix regression that `dict.update(other)` may don’t respect iterate order of other when other is key sharing dict.
- [bpo-46712](https://bugs.python.org/issue?@action=redirect&bpo=46712) [https://bugs.python.org/issue?@action=redirect&bpo=46712]: Share global string identifiers in deep-frozen modules.
- [bpo-46430](https://bugs.python.org/issue?@action=redirect&bpo=46430) [https://bugs.python.org/issue?@action=redirect&bpo=46430]: Fix memory leak in interned strings of deep-frozen modules.
- [bpo-46841](https://bugs.python.org/issue?@action=redirect&bpo=46841) [https://bugs.python.org/issue?@action=redirect&bpo=46841]: Store **BINARY\_OP** caches inline using a new **CACHE** instruction.
- [bpo-45107](https://bugs.python.org/issue?@action=redirect&bpo=45107) [https://bugs.python.org/issue?@action=redirect&bpo=45107]

@action=redirect&bpo=45107]: Specialize `LOAD_METHOD` for instances with a dict.

- [bpo-44337](https://bugs.python.org/issue?@action=redirect&bpo=44337) [https://bugs.python.org/issue?@action=redirect&bpo=44337]: Reduce the memory usage of specialized `LOAD_ATTR` and `STORE_ATTR` instructions.
- [bpo-46729](https://bugs.python.org/issue?@action=redirect&bpo=46729) [https://bugs.python.org/issue?@action=redirect&bpo=46729]: Add number of sub-exceptions to `BaseException.__str__()`.
- [bpo-45885](https://bugs.python.org/issue?@action=redirect&bpo=45885) [https://bugs.python.org/issue?@action=redirect&bpo=45885]: Don't un-adapt `COMPARE_OP` when collecting specialization stats.
- [bpo-46329](https://bugs.python.org/issue?@action=redirect&bpo=46329) [https://bugs.python.org/issue?@action=redirect&bpo=46329]: Fix specialization stats gathering for `PRECALL` instructions.
- [bpo-46794](https://bugs.python.org/issue?@action=redirect&bpo=46794) [https://bugs.python.org/issue?@action=redirect&bpo=46794]: Bump up the libexpat version into 2.4.6
- [bpo-46823](https://bugs.python.org/issue?@action=redirect&bpo=46823) [https://bugs.python.org/issue?@action=redirect&bpo=46823]: Implement a specialized combined opcode `LOAD_FAST__LOAD_ATTR_INSTANCE_VALUE`. Patch by Dennis Sweeney.
- [bpo-46820](https://bugs.python.org/issue?@action=redirect&bpo=46820) [https://bugs.python.org/issue?@action=redirect&bpo=46820]: Fix parsing a numeric literal immediately (without spaces) followed by “not in” keywords, like in `1not in x`. Now the parser only emits a warning, not a syntax error.
- [bpo-46329](https://bugs.python.org/issue?@action=redirect&bpo=46329) [https://bugs.python.org/issue?@action=redirect&bpo=46329]: Move `KW_NAMES` before `PRECALL` instruction in call sequence. Change `operand` of `CALL` to match `PRECALL` for easier specialization.
- [bpo-46808](https://bugs.python.org/issue?@action=redirect&bpo=46808) [https://bugs.python.org/issue?@action=redirect&bpo=46808]

@action=redirect&bpo=46808]: Remove the `NEXT_BLOCK` macro from `compile.c`, and make the compiler automatically generate implicit blocks when they are needed.

- [bpo-46329](https://bugs.python.org/issue?@action=redirect&bpo=46329) [https://bugs.python.org/issue?@action=redirect&bpo=46329]: Add `PUSH_NULL` instruction. This is used as a prefix when evaluating a callable, so that the stack has the same shape for methods and other calls. `PRECALL_FUNCTION` and `PRECALL_METHOD` are merged into a single `PRECALL` instruction.

There is no change in semantics.

- [bpo-46762](https://bugs.python.org/issue?@action=redirect&bpo=46762) [https://bugs.python.org/issue?@action=redirect&bpo=46762]: Fix an assert failure in debug builds when a '<', '>', or '=' is the last character in an f-string that's missing a closing right brace.
- [bpo-46730](https://bugs.python.org/issue?@action=redirect&bpo=46730) [https://bugs.python.org/issue?@action=redirect&bpo=46730]: Message of `AttributeError` caused by getting, setting or deleting a property without the corresponding function now mentions that the attribute is in fact a property and also specifies type of the class that it belongs to.
- [bpo-46724](https://bugs.python.org/issue?@action=redirect&bpo=46724) [https://bugs.python.org/issue?@action=redirect&bpo=46724]: Make sure that all backwards jumps use the `JUMP_ABSOLUTE` instruction, rather than `JUMP_FORWARD` with an argument of `(2**32)+offset`.
- [bpo-46732](https://bugs.python.org/issue?@action=redirect&bpo=46732) [https://bugs.python.org/issue?@action=redirect&bpo=46732]: Correct the docstring for the `__bool__()` method. Patch by Jelle Zijlstra.
- [bpo-46072](https://bugs.python.org/issue?@action=redirect&bpo=46072) [https://bugs.python.org/issue?@action=redirect&bpo=46072]: Add more detailed specialization failure statistics for `BINARY_OP`.
- [bpo-46707](https://bugs.python.org/issue?@action=redirect&bpo=46707) [https://bugs.python.org/issue?@action=redirect&bpo=46707]: Avoid potential exponential backtracking when producing some syntax errors involving

lots of brackets. Patch by Pablo Galindo.

- [bpo-46323](https://bugs.python.org/issue?@action=redirect&bpo=46323) [https://bugs.python.org/issue?@action=redirect&bpo=46323]: **ctypes** now allocates memory on the stack instead of on the heap to pass arguments while calling a Python callback function. Patch by Donghee Na.
- [bpo-45923](https://bugs.python.org/issue?@action=redirect&bpo=45923) [https://bugs.python.org/issue?@action=redirect&bpo=45923]: Add a quickened form of **RESUME** that skips quickening checks.
- [bpo-46702](https://bugs.python.org/issue?@action=redirect&bpo=46702) [https://bugs.python.org/issue?@action=redirect&bpo=46702]: Specialize **UNPACK\_SEQUENCE** for **tuple** and **list** unpackings.
- [bpo-46072](https://bugs.python.org/issue?@action=redirect&bpo=46072) [https://bugs.python.org/issue?@action=redirect&bpo=46072]: Opcode pair stats are now gathered with `--enable-pystats`. Defining `DYNAMIC_EXECUTION_PROFILE` or `DXPAIRS` no longer has any effect.
- [bpo-46675](https://bugs.python.org/issue?@action=redirect&bpo=46675) [https://bugs.python.org/issue?@action=redirect&bpo=46675]: Allow more than 16 items in a split dict before it is combined. The limit is now 254.
- [bpo-40479](https://bugs.python.org/issue?@action=redirect&bpo=40479) [https://bugs.python.org/issue?@action=redirect&bpo=40479]: Add a missing call to `va_end()` in `Modules/_hashopenssl.c`.
- [bpo-46323](https://bugs.python.org/issue?@action=redirect&bpo=46323) [https://bugs.python.org/issue?@action=redirect&bpo=46323]: Use **PyObject\_Vectorcall()** while calling ctypes callback function. Patch by Donghee Na.
- [bpo-46615](https://bugs.python.org/issue?@action=redirect&bpo=46615) [https://bugs.python.org/issue?@action=redirect&bpo=46615]: When iterating over sets internally in `setobject.c`, acquire strong references to the resulting items from the set. This prevents crashes in corner-cases of various set operations where the set gets mutated.
- [bpo-45828](https://bugs.python.org/issue?@action=redirect&bpo=45828) [https://bugs.python.org/issue?@action=redirect&bpo=45828]: The bytecode compiler now

attempts to apply runtime stack manipulations at compile-time (whenever it is feasible to do so).

- [bpo-30496](https://bugs.python.org/issue?@action=redirect&bpo=30496) [https://bugs.python.org/issue?@action=redirect&bpo=30496]: Fixed a minor portability issue in the implementation of `PyLong_FromLong()`, and added a fast path for single-digit integers to `PyLong_FromLongLong()`.

## Library

- [bpo-25707](https://bugs.python.org/issue?@action=redirect&bpo=25707) [https://bugs.python.org/issue?@action=redirect&bpo=25707]: Fixed a file leak in `xml.etree.ElementTree.iterparse()` when the iterator is not exhausted. Patch by Jacob Walls.
- [bpo-46877](https://bugs.python.org/issue?@action=redirect&bpo=46877) [https://bugs.python.org/issue?@action=redirect&bpo=46877]: Export `unittest.doModuleCleanups()` in `unittest`. Patch by Kumar Aditya.
- [bpo-46848](https://bugs.python.org/issue?@action=redirect&bpo=46848) [https://bugs.python.org/issue?@action=redirect&bpo=46848]: For performance, use the optimized string-searching implementations from `find()` and `rfind()` for `find()` and `rfind()`.
- [bpo-46736](https://bugs.python.org/issue?@action=redirect&bpo=46736) [https://bugs.python.org/issue?@action=redirect&bpo=46736]: `SimpleHTTPRequestHandler` now uses HTML5 grammar. Patch by Donghee Na.
- [bpo-44886](https://bugs.python.org/issue?@action=redirect&bpo=44886) [https://bugs.python.org/issue?@action=redirect&bpo=44886]: Inherit asyncio proactor datagram transport from `asyncio.DatagramTransport`.
- [bpo-46827](https://bugs.python.org/issue?@action=redirect&bpo=46827) [https://bugs.python.org/issue?@action=redirect&bpo=46827]: Support UDP sockets in `asyncio.loop.sock_connect()` for selector-based event loops. Patch by Thomas Grainger.
- [bpo-46811](https://bugs.python.org/issue?@action=redirect&bpo=46811) [https://bugs.python.org/issue?@action=redirect&bpo=46811]: Make test suite support Expat

> = 2.4.5

- [bpo-46252](https://bugs.python.org/issue?@action=redirect&bpo=46252) [https://bugs.python.org/issue?@action=redirect&bpo=46252]: Raise `TypeError` if `ssl.SSLSocket` is passed to transport-based APIs.
- [bpo-46784](https://bugs.python.org/issue?@action=redirect&bpo=46784) [https://bugs.python.org/issue?@action=redirect&bpo=46784]: Fix libexpat symbols collisions with user dynamically loaded or statically linked libexpat in embedded Python.
- [bpo-46786](https://bugs.python.org/issue?@action=redirect&bpo=46786) [https://bugs.python.org/issue?@action=redirect&bpo=46786]: The HTML serialisation in `xml.etree.ElementTree` now writes `embed`, `source`, `track` and `wbr` as empty tags, as defined in HTML 5.
- [bpo-39327](https://bugs.python.org/issue?@action=redirect&bpo=39327) [https://bugs.python.org/issue?@action=redirect&bpo=39327]: `shutil.rmtree()` can now work with VirtualBox shared folders when running from the guest operating-system.
- [bpo-45390](https://bugs.python.org/issue?@action=redirect&bpo=45390) [https://bugs.python.org/issue?@action=redirect&bpo=45390]: Propagate `asyncio.CancelledError` message from inner task to outer awaiter.
- [bpo-46756](https://bugs.python.org/issue?@action=redirect&bpo=46756) [https://bugs.python.org/issue?@action=redirect&bpo=46756]: Fix a bug in `urllib.request.HTTPPasswordMgr.find_user_password()` and `urllib.request.HTTPPasswordMgrWithPriorAuth.is_auth` which allowed to bypass authorization. For example, access to URI `example.org/foobar` was allowed if the user was authorized for URI `example.org/foo`.
- [bpo-46737](https://bugs.python.org/issue?@action=redirect&bpo=46737) [https://bugs.python.org/issue?@action=redirect&bpo=46737]: `random.gauss()` and `random.normalvariate()` now have default arguments.
- [bpo-46752](https://bugs.python.org/issue?@action=redirect&bpo=46752) [https://bugs.python.org/issue?@action=redirect&bpo=46752]: Add task groups to `asyncio`

(structured concurrency, inspired by Trio's nurseries). This also introduces a change to task cancellation, where a cancelled task can't be cancelled again until it calls `.uncancel()`.

- [bpo-46724](https://bugs.python.org/issue?@action=redirect&bpo=46724) [https://bugs.python.org/issue?@action=redirect&bpo=46724]: Fix `dis` behavior on negative jump offsets.
- [bpo-46333](https://bugs.python.org/issue?@action=redirect&bpo=46333) [https://bugs.python.org/issue?@action=redirect&bpo=46333]: The `__repr__()` method of `typing.ForwardRef` now includes the `module` parameter of `typing.ForwardRef` when it is set.
- [bpo-46643](https://bugs.python.org/issue?@action=redirect&bpo=46643) [https://bugs.python.org/issue?@action=redirect&bpo=46643]: In `typing.get_type_hints()`, support evaluating stringified `ParamSpecArgs` and `ParamSpecKwargs` annotations. Patch by Gregory Beauregard.
- [bpo-45863](https://bugs.python.org/issue?@action=redirect&bpo=45863) [https://bugs.python.org/issue?@action=redirect&bpo=45863]: When the `tarfile` module creates a pax format archive, it will put an integer representation of timestamps in the ustar header (if possible) for the benefit of older unarchivers, in addition to the existing full-precision timestamps in the pax extended header.
- [bpo-46066](https://bugs.python.org/issue?@action=redirect&bpo=46066) [https://bugs.python.org/issue?@action=redirect&bpo=46066]: Deprecate kwargs-based syntax for `typing.TypedDict` definitions. It had confusing semantics when specifying totality, and was largely unused. Patch by Jingchen Ye.
- [bpo-46676](https://bugs.python.org/issue?@action=redirect&bpo=46676) [https://bugs.python.org/issue?@action=redirect&bpo=46676]: Make `typing.ParamSpec` args and kwargs equal to themselves. Patch by Gregory Beauregard.
- [bpo-46323](https://bugs.python.org/issue?@action=redirect&bpo=46323) [https://bugs.python.org/issue?@action=redirect&bpo=46323]: `ctypes.CFUNCTYPE()` and `ctypes.WINFUNCTYPE()` now fail to create the type if its

`_argtypes_` member contains too many arguments. Previously, the error was only raised when calling a function. Patch by Victor Stinner.

- [bpo-46672](https://bugs.python.org/issue?@action=redirect&bpo=46672) [https://bugs.python.org/issue?@action=redirect&bpo=46672]: Fix `NameError` in `asyncio.gather()` when initial type check fails.
- [bpo-46659](https://bugs.python.org/issue?@action=redirect&bpo=46659) [https://bugs.python.org/issue?@action=redirect&bpo=46659]: The `calendar.LocaleTextCalendar` and `calendar.LocaleHTMLCalendar` classes now use `locale.getlocale()`, instead of using `locale.getdefaultlocale()`, if no locale is specified. Patch by Victor Stinner.
- [bpo-46659](https://bugs.python.org/issue?@action=redirect&bpo=46659) [https://bugs.python.org/issue?@action=redirect&bpo=46659]: The `locale.getdefaultlocale()` function is deprecated and will be removed in Python 3.13. Use `locale.setlocale()`, `locale.getpreferredencoding(False)` and `locale.getlocale()` functions instead. Patch by Victor Stinner.
- [bpo-46655](https://bugs.python.org/issue?@action=redirect&bpo=46655) [https://bugs.python.org/issue?@action=redirect&bpo=46655]: In `typing.get_type_hints()`, support evaluating bare stringified `TypeAlias` annotations. Patch by Gregory Beauregard.
- [bpo-45948](https://bugs.python.org/issue?@action=redirect&bpo=45948) [https://bugs.python.org/issue?@action=redirect&bpo=45948]: Fixed a discrepancy in the C implementation of the `xml.etree.ElementTree` module. Now, instantiating an `xml.etree.ElementTree.XMLParser` with a `target=None` keyword provides a default `xml.etree.ElementTree.TreeBuilder` target as the Python implementation does.
- [bpo-46626](https://bugs.python.org/issue?@action=redirect&bpo=46626) [https://bugs.python.org/issue?@action=redirect&bpo=46626]

@action=redirect&bpo=46626]: Expose Linux's  
IP\_BIND\_ADDRESS\_NO\_PORT option in `socket`.

- [bpo-46521](https://bugs.python.org/issue?@action=redirect&bpo=46521) [https://bugs.python.org/issue?@action=redirect&bpo=46521]: Fix a bug in the `codeop` module that was incorrectly identifying invalid code involving string quotes as valid code.

- [bpo-46571](https://bugs.python.org/issue?@action=redirect&bpo=46571) [https://bugs.python.org/issue?@action=redirect&bpo=46571]: Improve `typing.no_type_check()`.

Now it does not modify external classes and functions. We also now correctly mark classmethods as not to be type checked.

- [bpo-46400](https://bugs.python.org/issue?@action=redirect&bpo=46400) [https://bugs.python.org/issue?@action=redirect&bpo=46400]: `expat`: Update libexpat from 2.4.1 to 2.4.4
- [bpo-46556](https://bugs.python.org/issue?@action=redirect&bpo=46556) [https://bugs.python.org/issue?@action=redirect&bpo=46556]: Deprecate undocumented support for using a `pathlib.Path` object as a context manager.
- [bpo-46534](https://bugs.python.org/issue?@action=redirect&bpo=46534) [https://bugs.python.org/issue?@action=redirect&bpo=46534]: Implement [PEP 673](https://peps.python.org/pep-0673/) [https://peps.python.org/pep-0673/] `typing.Self`. Patch by James Hilton-Balfe.
- [bpo-46522](https://bugs.python.org/issue?@action=redirect&bpo=46522) [https://bugs.python.org/issue?@action=redirect&bpo=46522]: Make various module `__getattr__` `AttributeErrors` more closely match a typical `AttributeError`
- [bpo-46475](https://bugs.python.org/issue?@action=redirect&bpo=46475) [https://bugs.python.org/issue?@action=redirect&bpo=46475]: Add `typing.Never` and `typing.assert_never()`. Patch by Jelle Zijlstra.
- [bpo-46333](https://bugs.python.org/issue?@action=redirect&bpo=46333) [https://bugs.python.org/issue?@action=redirect&bpo=46333]: The `__eq__()` and `__hash__()` methods of `typing.ForwardRef` now honor

the `module` parameter of `typing.ForwardRef`. Forward references from different modules are now differentiated.

- [bpo-46246](https://bugs.python.org/issue?@action=redirect&bpo=46246) [https://bugs.python.org/issue?@action=redirect&bpo=46246]: Add missing `__slots__` to `importlib.metadata.DeprecatedList`. Patch by Arie Bovenberg.
- [bpo-46232](https://bugs.python.org/issue?@action=redirect&bpo=46232) [https://bugs.python.org/issue?@action=redirect&bpo=46232]: The `ssl` module now handles certificates with bit strings in DN correctly.
- [bpo-46195](https://bugs.python.org/issue?@action=redirect&bpo=46195) [https://bugs.python.org/issue?@action=redirect&bpo=46195]: `typing.get_type_hints()` no longer adds `Optional` to parameters with `None` as a default. This aligns to changes to PEP 484 in <https://github.com/python/peps/pull/689>
- [bpo-31369](https://bugs.python.org/issue?@action=redirect&bpo=31369) [https://bugs.python.org/issue?@action=redirect&bpo=31369]: Add `RegexFlag` to `re.__all__` and documented it. Add `NOFLAG` to indicate no flags being set.
- [bpo-45898](https://bugs.python.org/issue?@action=redirect&bpo=45898) [https://bugs.python.org/issue?@action=redirect&bpo=45898]: `ctypes` no longer defines `ffi_type_*` symbols in `cfield.c`. The symbols have been provided by `libffi` for over a decade.
- [bpo-44953](https://bugs.python.org/issue?@action=redirect&bpo=44953) [https://bugs.python.org/issue?@action=redirect&bpo=44953]: Calling `operator.itemgetter` objects and `operator.attrgetter` objects is now faster due to use of the vectorcall calling convention.
- [bpo-44289](https://bugs.python.org/issue?@action=redirect&bpo=44289) [https://bugs.python.org/issue?@action=redirect&bpo=44289]: Fix an issue with `is_tarfile()` method when using `fileobj` argument: position in the `fileobj` was advanced forward which made it unreadable with `tarfile.TarFile.open()`.
- [bpo-44011](https://bugs.python.org/issue?@action=redirect&bpo=44011) [https://bugs.python.org/issue?@action=redirect&bpo=44011]: Reimplement SSL/TLS support in

asyncio, borrow the implementation from uvloop library.

- [bpo-41086](https://bugs.python.org/issue?@action=redirect&bpo=41086) [https://bugs.python.org/issue?@action=redirect&bpo=41086]: Make the `configparser.ConfigParser` constructor raise `TypeError` if the `interpolation` parameter is not of type `configparser.Interpolation`
- [bpo-29418](https://bugs.python.org/issue?@action=redirect&bpo=29418) [https://bugs.python.org/issue?@action=redirect&bpo=29418]: Implement `inspect.ismethodwrapper()` and fix `inspect.isroutine()` for cases where methodwrapper is given. Patch by Hakan Çelik.
- [bpo-14156](https://bugs.python.org/issue?@action=redirect&bpo=14156) [https://bugs.python.org/issue?@action=redirect&bpo=14156]: `argparse.FileType` now supports an argument of '-' in binary mode, returning the `.buffer` attribute of `sys.stdin/sys.stdout` as appropriate. Modes including 'x' and 'a' are treated equivalently to 'w' when argument is '-'. Patch contributed by Josh Rosenberg

## Documentation

- [bpo-42238](https://bugs.python.org/issue?@action=redirect&bpo=42238) [https://bugs.python.org/issue?@action=redirect&bpo=42238]: `Doc/tools/rstlint.py` has moved to its own repository and is now packaged on PyPI as `sphinx-lint`.

## Tests

- [bpo-46913](https://bugs.python.org/issue?@action=redirect&bpo=46913) [https://bugs.python.org/issue?@action=redirect&bpo=46913]: Fix `test_faulthandler.test_sigfpe()` if Python is built with undefined behavior sanitizer (UBSAN): disable UBSAN on the `faulthandler_sigfpe()` function. Patch by Victor Stinner.
- [bpo-46760](https://bugs.python.org/issue?@action=redirect&bpo=46760) [https://bugs.python.org/issue?@action=redirect&bpo=46760]: Remove bytecode offsets from expected values in `test.test_dis` module. Reduces the obstacles to modifying the VM or compiler.
- [bpo-46708](https://bugs.python.org/issue?@action=redirect&bpo=46708) [https://bugs.python.org/issue?@action=redirect&bpo=46708]

@action=redirect&bpo=46708]: Prevent default asyncio event loop policy modification warning after `test_asyncio` execution.

- [bpo-46678](https://bugs.python.org/issue?@action=redirect&bpo=46678) [https://bugs.python.org/issue?@action=redirect&bpo=46678]: The function `make_legacy_pyc` in `Lib/test/support/import_helper.py` no longer fails when `PYTHONPYCACHEPREFIX` is set to a directory on a different device from where tempfiles are stored.
- [bpo-46623](https://bugs.python.org/issue?@action=redirect&bpo=46623) [https://bugs.python.org/issue?@action=redirect&bpo=46623]: Skip `test_pair()` and `test_speech128()` of `test_zlib` on s390x since they fail if `zlib` uses the s390x hardware accelerator. Patch by Victor Stinner.

## Build

- [bpo-46860](https://bugs.python.org/issue?@action=redirect&bpo=46860) [https://bugs.python.org/issue?@action=redirect&bpo=46860]: Respect `--with-suffix` when building on case-insensitive file systems.
- [bpo-46656](https://bugs.python.org/issue?@action=redirect&bpo=46656) [https://bugs.python.org/issue?@action=redirect&bpo=46656]: Building Python now requires a C11 compiler. Optional C11 features are not required. Patch by Victor Stinner.
- [bpo-46656](https://bugs.python.org/issue?@action=redirect&bpo=46656) [https://bugs.python.org/issue?@action=redirect&bpo=46656]: Building Python now requires support for floating point Not-a-Number (NaN): remove the `Py_NO_NAN` macro. Patch by Victor Stinner.
- [bpo-46640](https://bugs.python.org/issue?@action=redirect&bpo=46640) [https://bugs.python.org/issue?@action=redirect&bpo=46640]: Building Python now requires a C99 `<math.h>` header file providing a `NAN` constant, or the `__builtin_nan()` built-in function. Patch by Victor Stinner.
- [bpo-46608](https://bugs.python.org/issue?@action=redirect&bpo=46608) [https://bugs.python.org/issue?@action=redirect&bpo=46608]: Exclude marshalled-frozen data if deep-freezing to save 300 KB disk space. This includes adding a new `is_package` field to `__frozen`. Patch by Kumar Aditya.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: Fix `wasm32-emscripten` test failures and platform issues. - Disable syscalls that are not supported or don't work, e.g. `wait`, `getrusage`, `prlimit`, `mkfifo`,

mknod, setres[gu]id, setgroups. - Use fd\_count to count open fds. - Add more checks for subprocess and fork. - Add workarounds for missing \_multiprocessing and failing socket.accept(). - Enable bzip2. - Disable large file support. - Disable signal.alarm.

- [bpo-46430](https://bugs.python.org/issue?@action=redirect&bpo=46430) [https://bugs.python.org/issue?@action=redirect&bpo=46430]: Intern strings in deep-frozen modules. Patch by Kumar Aditya.

## Windows

- [bpo-46744](https://bugs.python.org/issue?@action=redirect&bpo=46744) [https://bugs.python.org/issue?@action=redirect&bpo=46744]: The default all users install directory for ARM64 is now under the native Program Files folder, rather than Program Files (Arm) which is intended for ARM (32-bit) files.
- [bpo-46567](https://bugs.python.org/issue?@action=redirect&bpo=46567) [https://bugs.python.org/issue?@action=redirect&bpo=46567]: Adds Tcl and Tk support for Windows ARM64. This also adds IDLE to the installation.
- [bpo-46638](https://bugs.python.org/issue?@action=redirect&bpo=46638) [https://bugs.python.org/issue?@action=redirect&bpo=46638]: Ensures registry virtualization is consistently disabled. For 3.10 and earlier, it remains enabled (some registry writes are protected), while for 3.11 and later it is disabled (registry modifications affect all applications).

## IDLE

- [bpo-46630](https://bugs.python.org/issue?@action=redirect&bpo=46630) [https://bugs.python.org/issue?@action=redirect&bpo=46630]: Make query dialogs on Windows start with a cursor in the entry box.
- [bpo-45447](https://bugs.python.org/issue?@action=redirect&bpo=45447) [https://bugs.python.org/issue?@action=redirect&bpo=45447]: Apply IDLE syntax highlighting to **pyi** files. Patch by Alex Waygood and Terry Jan Reedy.

## C API

- [bpo-46748](https://bugs.python.org/issue?@action=redirect&bpo=46748) [https://bugs.python.org/issue?@action=redirect&bpo=46748]: Python's public headers no longer import `<stdbool.h>`, leaving code that embedd/extends Python free to define `bool`, `true` and `false`.

- [bpo-46836](https://bugs.python.org/issue?@action=redirect&bpo=46836) [https://bugs.python.org/issue?@action=redirect&bpo=46836]: Move the `PyFrameObject` type definition (`struct _frame`) to the internal C API `pycore_frame.h` header file. Patch by Victor Stinner.
- [bpo-45459](https://bugs.python.org/issue?@action=redirect&bpo=45459) [https://bugs.python.org/issue?@action=redirect&bpo=45459]: Rename `Include/buffer.h` header file to `Include/pybuffer.h` to avoid conflicts with projects having an existing `buffer.h` header file. Patch by Victor Stinner.
- [bpo-45412](https://bugs.python.org/issue?@action=redirect&bpo=45412) [https://bugs.python.org/issue?@action=redirect&bpo=45412]: Remove the `HAVE_PY_SET_53BIT_PRECISION` macro (moved to the internal C API). Patch by Victor Stinner.
- [bpo-46613](https://bugs.python.org/issue?@action=redirect&bpo=46613) [https://bugs.python.org/issue?@action=redirect&bpo=46613]: Added function `PyType_GetModuleByDef()`, which allows access to module state when a method's defining class is not available.

## Python 3.11.0 alpha 5

*Release date: 2022-02-03*

### Core and Builtins

- [bpo-45773](https://bugs.python.org/issue?@action=redirect&bpo=45773) [https://bugs.python.org/issue?@action=redirect&bpo=45773]: Remove two invalid “peephole” optimizations from the bytecode compiler.
- [bpo-46564](https://bugs.python.org/issue?@action=redirect&bpo=46564) [https://bugs.python.org/issue?@action=redirect&bpo=46564]: Do not create frame objects when creating `super` object. Patch by Kumar Aditya.
- [bpo-45885](https://bugs.python.org/issue?@action=redirect&bpo=45885) [https://bugs.python.org/issue?@action=redirect&bpo=45885]: Added more fine-grained specialization failure stats regarding the `COMPARE_OP` bytecode.
- [bpo-44977](https://bugs.python.org/issue?@action=redirect&bpo=44977) [https://bugs.python.org/issue?@action=redirect&bpo=44977]: The delegation of `int()` to `__trunc__()` is now deprecated. Calling `int(a)` when

`type(a)` implements `__trunc__()` but not `__int__()` or `__index__()` now raises a [DeprecationWarning](#).

- [bpo-46458](#) [<https://bugs.python.org/issue?@action=redirect&bpo=46458>]: Reorder code emitted by the compiler for a `try-except` block so that the `else` block's code immediately follows the `try` body (without a jump). This is more optimal for the happy path.
- [bpo-46527](#) [<https://bugs.python.org/issue?@action=redirect&bpo=46527>]: Allow passing `iterable` as a keyword argument to `enumerate()` again. Patch by Jelle Zijlstra.
- [bpo-46528](#) [<https://bugs.python.org/issue?@action=redirect&bpo=46528>]: Replace several stack manipulation instructions (`DUP_TOP`, `DUP_TOP_TWO`, `ROT_TWO`, `ROT_THREE`, `ROT_FOUR`, and `ROT_N`) with new `COPY` and `SWAP` instructions.
- [bpo-46329](#) [<https://bugs.python.org/issue?@action=redirect&bpo=46329>]: Use two or three bytecodes to implement most calls.

Calls without named arguments are implemented as a sequence of two instructions: `PRECALL`; `CALL`. Calls with named arguments are implemented as a sequence of three instructions: `PRECALL`; `KW_NAMES`; `CALL`. There are two different `PRECALL` instructions: `PRECALL_FUNTION` and `PRECALL_METHOD`. The latter pairs with `LOAD_METHOD`.

This partition into pre-call and call allows better specialization, and thus better performance ultimately.

There is no change in semantics.

- [bpo-46503](#) [<https://bugs.python.org/issue?@action=redirect&bpo=46503>]: Fix an assert when parsing some invalid N escape sequences in f-strings.
- [bpo-46431](#) [<https://bugs.python.org/issue?@action=redirect&bpo=46431>]

@action=redirect&bpo=46431]: Improve error message on invalid calls to **BaseExceptionGroup.\_\_new\_\_()**.

- [bpo-46476](https://bugs.python.org/issue?@action=redirect&bpo=46476) [https://bugs.python.org/issue?@action=redirect&bpo=46476]: Fix memory leak in code objects generated by deepfreeze. Patch by Kumar Aditya.
- [bpo-46481](https://bugs.python.org/issue?@action=redirect&bpo=46481) [https://bugs.python.org/issue?@action=redirect&bpo=46481]: Speed up calls to **weakref.ref.\_\_call\_\_()** by using the [PEP 590](https://peps.python.org/pep-0590/) [https://peps.python.org/pep-0590/] **vectorcall** calling convention. Patch by Donghee Na.
- [bpo-46417](https://bugs.python.org/issue?@action=redirect&bpo=46417) [https://bugs.python.org/issue?@action=redirect&bpo=46417]: Fix a race condition on setting a type **\_\_bases\_\_** attribute: the internal function **add\_subclass()** now gets the **PyTypeObject.tp\_subclasses** member after calling **PyWeakref\_NewRef()** which can trigger a garbage collection which can indirectly modify **PyTypeObject.tp\_subclasses**. Patch by Victor Stinner.
- [bpo-46417](https://bugs.python.org/issue?@action=redirect&bpo=46417) [https://bugs.python.org/issue?@action=redirect&bpo=46417]: **python -X showrefcount** now shows the total reference count after clearing and destroyed the main Python interpreter. Previously, it was shown before. Patch by Victor Stinner.
- [bpo-43683](https://bugs.python.org/issue?@action=redirect&bpo=43683) [https://bugs.python.org/issue?@action=redirect&bpo=43683]: Add **ASYNC\_GEN\_WRAP** opcode to wrap the value to be yielded in async generators. Removes the need to special case async generators in the **YIELD\_VALUE** instruction.
- [bpo-46407](https://bugs.python.org/issue?@action=redirect&bpo=46407) [https://bugs.python.org/issue?@action=redirect&bpo=46407]: Optimize some modulo operations in **Objects/longobject.c**. Patch by Jeremiah Vivian.
- [bpo-46409](https://bugs.python.org/issue?@action=redirect&bpo=46409) [https://bugs.python.org/issue?@action=redirect&bpo=46409]: Add new **RETURN\_GENERATOR** bytecode to make generators. Simplifies calling Python

functions in the VM, as they no longer any need to special case generator functions.

Also add `JUMP_NO_INTERRUPT` bytecode that acts like `JUMP_ABSOLUTE`, but does not check for interrupts.

- [bpo-46406](https://bugs.python.org/issue?@action=redirect&bpo=46406) [https://bugs.python.org/issue?@action=redirect&bpo=46406]: The integer division `//` implementation has been optimized to better let the compiler understand its constraints. It can be 20% faster on the amd64 platform when dividing an int by a value smaller than `2**30`.
- [bpo-46383](https://bugs.python.org/issue?@action=redirect&bpo=46383) [https://bugs.python.org/issue?@action=redirect&bpo=46383]: Fix invalid signature of `_zoneinfo's module_free` function to resolve a crash on wasm32-emscripten platform.
- [bpo-46361](https://bugs.python.org/issue?@action=redirect&bpo=46361) [https://bugs.python.org/issue?@action=redirect&bpo=46361]: Ensure that “small” integers created by `int.from_bytes()` and `decimal.Decimal` are properly cached.
- [bpo-46161](https://bugs.python.org/issue?@action=redirect&bpo=46161) [https://bugs.python.org/issue?@action=redirect&bpo=46161]: Fix the class building error when the arguments are constants and `CALL_FUNCTION_EX` is used.
- [bpo-46028](https://bugs.python.org/issue?@action=redirect&bpo=46028) [https://bugs.python.org/issue?@action=redirect&bpo=46028]: Fixes calculation of `sys._base_executable` when inside a virtual environment that uses symlinks with different binary names than the base environment provides.
- [bpo-46091](https://bugs.python.org/issue?@action=redirect&bpo=46091) [https://bugs.python.org/issue?@action=redirect&bpo=46091]: Correctly calculate indentation levels for lines with whitespace character that are ended by line continuation characters. Patch by Pablo Galindo
- [bpo-30512](https://bugs.python.org/issue?@action=redirect&bpo=30512) [https://bugs.python.org/issue?@action=redirect&bpo=30512]: Add CAN Socket support for NetBSD.

- [bpo-46045](https://bugs.python.org/issue?@action=redirect&bpo=46045) [https://bugs.python.org/issue?@action=redirect&bpo=46045]: Do not use POSIX semaphores on NetBSD
- [bpo-44024](https://bugs.python.org/issue?@action=redirect&bpo=44024) [https://bugs.python.org/issue?@action=redirect&bpo=44024]: Improve the exc:**TypeError** message for non-string second arguments passed to the built-in functions **getattr()** and **hasattr()**. Patch by Géry Ogam.

## Library

- [bpo-46624](https://bugs.python.org/issue?@action=redirect&bpo=46624) [https://bugs.python.org/issue?@action=redirect&bpo=46624]: Restore support for non-integer arguments of **random.randrange()** and **random.randint()**.
- [bpo-46591](https://bugs.python.org/issue?@action=redirect&bpo=46591) [https://bugs.python.org/issue?@action=redirect&bpo=46591]: Make the IDLE doc URL on the About IDLE dialog clickable.
- [bpo-46565](https://bugs.python.org/issue?@action=redirect&bpo=46565) [https://bugs.python.org/issue?@action=redirect&bpo=46565]: Remove loop variables that are leaking into modules' namespaces.
- [bpo-46553](https://bugs.python.org/issue?@action=redirect&bpo=46553) [https://bugs.python.org/issue?@action=redirect&bpo=46553]: In **typing.get\_type\_hints()**, support evaluating bare stringified `ClassVar` annotations. Patch by Gregory Beauregard.
- [bpo-46544](https://bugs.python.org/issue?@action=redirect&bpo=46544) [https://bugs.python.org/issue?@action=redirect&bpo=46544]: Don't leak `x & uspace` intermediate vars in **textwrap.TextWrapper**.
- [bpo-46487](https://bugs.python.org/issue?@action=redirect&bpo=46487) [https://bugs.python.org/issue?@action=redirect&bpo=46487]: Add the `get_write_buffer_limits` method to **asyncio.transports.WriteTransport** and to the SSL transport.
- [bpo-45173](https://bugs.python.org/issue?@action=redirect&bpo=45173) [https://bugs.python.org/issue?@action=redirect&bpo=45173]: Note the configparser deprecations will be removed in Python 3.12.
- [bpo-45162](https://bugs.python.org/issue?@action=redirect&bpo=45162) [https://bugs.python.org/issue?@action=redirect&bpo=45162]: The deprecated **unittest** APIs

removed in 3.11a1 have been temporarily restored to be removed in 3.12 while cleanups in external projects go in.

- [bpo-46539](https://bugs.python.org/issue?@action=redirect&bpo=46539) [https://bugs.python.org/issue?@action=redirect&bpo=46539]: In `typing.get_type_hints()`, support evaluating stringified `ClassVar` and `Final` annotations inside `Annotated`. Patch by Gregory Beauregard.
- [bpo-46510](https://bugs.python.org/issue?@action=redirect&bpo=46510) [https://bugs.python.org/issue?@action=redirect&bpo=46510]: Add missing test for `types.TracebackType` and `types.FrameType`. Calculate them directly from the caught exception without calling `sys.exc_info()`.
- [bpo-46491](https://bugs.python.org/issue?@action=redirect&bpo=46491) [https://bugs.python.org/issue?@action=redirect&bpo=46491]: Allow `typing.Annotated` to wrap `typing.Final` and `typing.ClassVar`. Patch by Gregory Beauregard.
- [bpo-46483](https://bugs.python.org/issue?@action=redirect&bpo=46483) [https://bugs.python.org/issue?@action=redirect&bpo=46483]: Remove `__class_getitem__()` from `pathlib.PurePath` as this class was not supposed to be generic.
- [bpo-46436](https://bugs.python.org/issue?@action=redirect&bpo=46436) [https://bugs.python.org/issue?@action=redirect&bpo=46436]: Fix command-line option `-d/--directory` in module `http.server` which is ignored when combined with command-line option `--cgi`. Patch by Géry Ogam.
- [bpo-41403](https://bugs.python.org/issue?@action=redirect&bpo=41403) [https://bugs.python.org/issue?@action=redirect&bpo=41403]: Make `mock.patch()` raise a `TypeError` with a relevant error message on invalid arg. Previously it allowed a cryptic `AttributeError` to escape.
- [bpo-46474](https://bugs.python.org/issue?@action=redirect&bpo=46474) [https://bugs.python.org/issue?@action=redirect&bpo=46474]: In `importlib.metadata.EntryPoint.pattern`, avoid potential REDoS by limiting ambiguity in consecutive whitespace.
- [bpo-46474](https://bugs.python.org/issue?@action=redirect&bpo=46474) [https://bugs.python.org/issue?@action=redirect&bpo=46474]: Removed private method from `importlib.metadata.Path`. Sync with `importlib_metadata 4.10.0`.
- [bpo-46470](https://bugs.python.org/issue?@action=redirect&bpo=46470) [https://bugs.python.org/issue?@action=redirect&bpo=46470]: Remove unused branch from

`typing._remove_dups_flatten`

- [bpo-46469](https://bugs.python.org/issue?@action=redirect&bpo=46469) [https://bugs.python.org/issue?@action=redirect&bpo=46469]: `asyncio` generic classes now return `types.GenericAlias` in `__class_getitem__` instead of the same class.
- [bpo-41906](https://bugs.python.org/issue?@action=redirect&bpo=41906) [https://bugs.python.org/issue?@action=redirect&bpo=41906]: Support passing filter instances in the `filters` values of handlers and loggers in the dictionary passed to `logging.config.DictConfig()`.
- [bpo-46422](https://bugs.python.org/issue?@action=redirect&bpo=46422) [https://bugs.python.org/issue?@action=redirect&bpo=46422]: Use `dis.Positions` in `dis.Instruction` instead of a regular tuple.
- [bpo-46434](https://bugs.python.org/issue?@action=redirect&bpo=46434) [https://bugs.python.org/issue?@action=redirect&bpo=46434]: `pdb` now gracefully handles help when `__doc__` is missing, for example when run with pregenerated optimized `.pyc` files.
- [bpo-43869](https://bugs.python.org/issue?@action=redirect&bpo=43869) [https://bugs.python.org/issue?@action=redirect&bpo=43869]: Python uses the same time Epoch on all platforms. Add an explicit unit test to ensure that it's the case. Patch by Victor Stinner.
- [bpo-46414](https://bugs.python.org/issue?@action=redirect&bpo=46414) [https://bugs.python.org/issue?@action=redirect&bpo=46414]: Add `typing.reveal_type()`. Patch by Jelle Zijlstra.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: `subprocess` now imports Windows-specific imports when `msvcrt` module is available, and POSIX-specific imports on all other platforms. This gives a clean exception when `_posixsubprocess` is not available (e.g. Emscripten browser target).
- [bpo-40066](https://bugs.python.org/issue?@action=redirect&bpo=40066) [https://bugs.python.org/issue?@action=redirect&bpo=40066]: `IntEnum`, `IntFlag`, and `StrEnum` use the mixed-in type for their `str()` and `format()` output.
- [bpo-46316](https://bugs.python.org/issue?@action=redirect&bpo=46316) [https://bugs.python.org/issue?@action=redirect&bpo=46316]: Optimize `pathlib.Path.iterdir()` by removing an unnecessary check for special entries.
- [bpo-29688](https://bugs.python.org/issue?@action=redirect&bpo=29688) [https://bugs.python.org/issue?@action=redirect&bpo=29688]: Document `pathlib.Path.absolute()` (which has always existed).

- [bpo-43012](https://bugs.python.org/issue?@action=redirect&bpo=43012) [https://bugs.python.org/issue?@action=redirect&bpo=43012]: The `pathlib` module's obsolete and internal `_Accessor` class has been removed to prepare the terrain for upcoming enhancements to the module.
- [bpo-46258](https://bugs.python.org/issue?@action=redirect&bpo=46258) [https://bugs.python.org/issue?@action=redirect&bpo=46258]: Speed up `math.isqrt()` for small positive integers by replacing two division steps with a lookup table.
- [bpo-46242](https://bugs.python.org/issue?@action=redirect&bpo=46242) [https://bugs.python.org/issue?@action=redirect&bpo=46242]: Improve error message when creating a new `enum.Enum` type subclassing an existing `Enum` with `_member_names_` using `enum.Enum.__call__()`.
- [bpo-43118](https://bugs.python.org/issue?@action=redirect&bpo=43118) [https://bugs.python.org/issue?@action=redirect&bpo=43118]: Fix a bug in `inspect.signature()` that was causing it to fail on some subclasses of classes with a `__text_signature__` referencing module globals. Patch by Weipeng Hong.
- [bpo-26552](https://bugs.python.org/issue?@action=redirect&bpo=26552) [https://bugs.python.org/issue?@action=redirect&bpo=26552]: Fixed case where failing `asyncio.ensure_future()` did not close the coroutine. Patch by Kumar Aditya.
- [bpo-21987](https://bugs.python.org/issue?@action=redirect&bpo=21987) [https://bugs.python.org/issue?@action=redirect&bpo=21987]: Fix an issue with `tarfile.TarFile.getmember()` getting a directory name with a trailing slash.
- [bpo-46124](https://bugs.python.org/issue?@action=redirect&bpo=46124) [https://bugs.python.org/issue?@action=redirect&bpo=46124]: Update `zoneinfo` to rely on `importlib.resources` traversable API.
- [bpo-46103](https://bugs.python.org/issue?@action=redirect&bpo=46103) [https://bugs.python.org/issue?@action=redirect&bpo=46103]: Now `inspect.getmembers()` only gets `__bases__` attribute from class type. Patch by Weipeng Hong.
- [bpo-46080](https://bugs.python.org/issue?@action=redirect&bpo=46080) [https://bugs.python.org/issue?@action=redirect&bpo=46080]: Fix exception in `argparse` help text generation if a `argparse.BooleanOptionalAction` argument's default is `argparse.SUPPRESS` and it has help specified. Patch by Felix Fontein.
- [bpo-44791](https://bugs.python.org/issue?@action=redirect&bpo=44791) [https://bugs.python.org/issue?@action=redirect&bpo=44791]: Fix substitution of `ParamSpec` in

**Concatenate** with different parameter expressions.  
Substitution with a list of types returns now a tuple of types.  
Substitution with `Concatenate` returns now a  
`Concatenate` with concatenated lists of arguments.

## Documentation

- [bpo-46463](https://bugs.python.org/issue?@action=redirect&bpo=46463) [https://bugs.python.org/issue?@action=redirect&bpo=46463]: Fixes `escape4chm.py` script used when building the CHM documentation file

## Tests

- [bpo-43478](https://bugs.python.org/issue?@action=redirect&bpo=43478) [https://bugs.python.org/issue?@action=redirect&bpo=43478]: Mocks can no longer be provided as the specs for other Mocks. As a result, an already-mocked object cannot be passed to `mock.Mock()`. This can uncover bugs in tests since these Mock-derived Mocks will always pass certain tests (e.g. `isinstance`) and builtin assert functions (e.g. `assert_called_once_with`) will unconditionally pass.
- [bpo-46616](https://bugs.python.org/issue?@action=redirect&bpo=46616) [https://bugs.python.org/issue?@action=redirect&bpo=46616]: Ensures `test_importlib.test_windows` cleans up registry keys after completion.
- [bpo-44359](https://bugs.python.org/issue?@action=redirect&bpo=44359) [https://bugs.python.org/issue?@action=redirect&bpo=44359]: `test_ftplib` now silently ignores socket errors to prevent logging unhandled threading exceptions. Patch by Victor Stinner.
- [bpo-46600](https://bugs.python.org/issue?@action=redirect&bpo=46600) [https://bugs.python.org/issue?@action=redirect&bpo=46600]: Fix `test_gdb.test_pycfunction()` for Python built with `clang -Og`. Tolerate inlined functions in the gdb traceback. Patch by Victor Stinner.
- [bpo-46542](https://bugs.python.org/issue?@action=redirect&bpo=46542) [https://bugs.python.org/issue?@action=redirect&bpo=46542]: Fix a Python crash in `test_lib2to3` when using Python built in debug mode: limit the recursion limit. Patch by Victor Stinner.
- [bpo-46576](https://bugs.python.org/issue?@action=redirect&bpo=46576) [https://bugs.python.org/issue?@action=redirect&bpo=46576]: `test_peg_generator` now disables compiler optimization when testing compilation of its own C extensions to significantly speed up the testing on non-debug

builds of CPython.

- [bpo-46542](https://bugs.python.org/issue?@action=redirect&bpo=46542) [https://bugs.python.org/issue?@action=redirect&bpo=46542]: Fix `test_json` tests checking for **RecursionError**: modify these tests to use `support.infinite_recursion()`. Patch by Victor Stinner.
- [bpo-13886](https://bugs.python.org/issue?@action=redirect&bpo=13886) [https://bugs.python.org/issue?@action=redirect&bpo=13886]: Skip `test_builtin` PTY tests on non-ASCII characters if the `readline` module is loaded. The `readline` module changes `input()` behavior, but `test_builtin` is not intended to test the `readline` module. Patch by Victor Stinner.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: Add **`test.support.requires_fork()`** decorators to mark tests that require a working **`os.fork()`**.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: Add **`test.support.requires_subprocess()`** decorator to mark tests which require working **`subprocess`** module or `os.spawn*`. The wasm32-emscripten platform has no support for processes.
- [bpo-46126](https://bugs.python.org/issue?@action=redirect&bpo=46126) [https://bugs.python.org/issue?@action=redirect&bpo=46126]: Disable ‘descriptions’ when running tests internally.

## Build

- [bpo-46602](https://bugs.python.org/issue?@action=redirect&bpo=46602) [https://bugs.python.org/issue?@action=redirect&bpo=46602]: Tidied up `configure.ac` so that `conftest.c` is truncated rather than appended. This assists in the case where the ‘rm’ of `conftest.c` fails to happen between tests. Downstream issues such as a clobbered SOABI can result.
- [bpo-46600](https://bugs.python.org/issue?@action=redirect&bpo=46600) [https://bugs.python.org/issue?@action=redirect&bpo=46600]: Fix the test checking if the C compiler supports `-Og` option in the `./configure` script to also use `-Og` on clang which supports it. Patch by Victor Stinner.
- [bpo-38472](https://bugs.python.org/issue?@action=redirect&bpo=38472) [https://bugs.python.org/issue?@action=redirect&bpo=38472]

@action=redirect&bpo=38472]: Fix GCC detection in setup.py when cross-compiling. The C compiler is now run with LC\_ALL=C. Previously, the detection failed with a German locale.

- [bpo-46513](https://bugs.python.org/issue?@action=redirect&bpo=46513) [https://bugs.python.org/issue?@action=redirect&bpo=46513]: **configure** no longer uses AC\_C\_CHAR\_UNSIGNED macro and pyconfig.h no longer defines reserved symbol \_\_CHAR\_UNSIGNED\_\_.
- [bpo-46471](https://bugs.python.org/issue?@action=redirect&bpo=46471) [https://bugs.python.org/issue?@action=redirect&bpo=46471]: Use global singletons for single byte bytes objects in deepfreeze.
- [bpo-46443](https://bugs.python.org/issue?@action=redirect&bpo=46443) [https://bugs.python.org/issue?@action=redirect&bpo=46443]: Deepfreeze now uses cached small integers as it saves some space for common small integers.
- [bpo-46429](https://bugs.python.org/issue?@action=redirect&bpo=46429) [https://bugs.python.org/issue?@action=redirect&bpo=46429]: Merge all deep-frozen files into one for space savings. Patch by Kumar Aditya.
- [bpo-45569](https://bugs.python.org/issue?@action=redirect&bpo=45569) [https://bugs.python.org/issue?@action=redirect&bpo=45569]: The build now defaults to using 30-bit digits for Python integers. Previously either 15-bit or 30-bit digits would be selected, depending on the platform. 15-bit digits may still be selected using the --enable-big-digits=15 option to the configure script, or by defining PYLONG\_BITS\_IN\_DIGIT in pyconfig.h.
- [bpo-45925](https://bugs.python.org/issue?@action=redirect&bpo=45925) [https://bugs.python.org/issue?@action=redirect&bpo=45925]: Update Windows installer to use SQLite 3.37.2.
- [bpo-43112](https://bugs.python.org/issue?@action=redirect&bpo=43112) [https://bugs.python.org/issue?@action=redirect&bpo=43112]: Detect musl libc as a separate SOABI (tagged as linux-musl).

## Windows

- [bpo-33125](https://bugs.python.org/issue?@action=redirect&bpo=33125) [https://bugs.python.org/issue?@action=redirect&bpo=33125]: The traditional EXE/MSI based installer for Windows is now available for ARM64
- [bpo-46362](https://bugs.python.org/issue?@action=redirect&bpo=46362) [https://bugs.python.org/issue?@action=redirect&bpo=46362]: os.path.abspath("C:CON") is now fixed to return "\.CON", not the same path. The regression was true of all legacy DOS devices such as COM1, LPT1, or

NUL.

- [bpo-44934](https://bugs.python.org/issue?@action=redirect&bpo=44934) [https://bugs.python.org/issue?@action=redirect&bpo=44934]: The installer now offers a command-line only option to add the installation directory to the end of **PATH** instead of at the start.

## macOS

- [bpo-45925](https://bugs.python.org/issue?@action=redirect&bpo=45925) [https://bugs.python.org/issue?@action=redirect&bpo=45925]: Update macOS installer to SQLite 3.37.2.

## IDLE

- [bpo-45296](https://bugs.python.org/issue?@action=redirect&bpo=45296) [https://bugs.python.org/issue?@action=redirect&bpo=45296]: Clarify close, quit, and exit in IDLE. In the File menu, ‘Close’ and ‘Exit’ are now ‘Close Window’ (the current one) and ‘Exit’ is now ‘Exit IDLE’ (by closing all windows). In Shell, ‘quit()’ and ‘exit()’ mean ‘close Shell’. If there are no other windows, this also exits IDLE.

## C API

- [bpo-40170](https://bugs.python.org/issue?@action=redirect&bpo=40170) [https://bugs.python.org/issue?@action=redirect&bpo=40170]: Remove the `PyHeapType_GET_MEMBERS()` macro. It was exposed in the public C API by mistake, it must only be used by Python internally. Use the `PyObject.tp_members` member instead. Patch by Victor Stinner.
- [bpo-40170](https://bugs.python.org/issue?@action=redirect&bpo=40170) [https://bugs.python.org/issue?@action=redirect&bpo=40170]: Move `_Py_GetAllocatedBlocks()` and `_PyObject_DebugMallocStats()` private functions to the internal C API. Patch by Victor Stinner.
- [bpo-46433](https://bugs.python.org/issue?@action=redirect&bpo=46433) [https://bugs.python.org/issue?@action=redirect&bpo=46433]: The internal function `_PyType_GetModuleByDef` now correctly handles inheritance patterns involving static types.
- [bpo-45459](https://bugs.python.org/issue?@action=redirect&bpo=45459) [https://bugs.python.org/issue?@action=redirect&bpo=45459]: **Py\_buffer** and various `Py_buffer` related functions are now part of the limited API

and stable ABI.

- [bpo-14916](https://bugs.python.org/issue?@action=redirect&bpo=14916) [https://bugs.python.org/issue?@action=redirect&bpo=14916]: Fixed bug in the tokenizer that prevented `PyRun_InteractiveOne` from parsing from the provided FD.

## Python 3.11.0 alpha 4

*Release date: 2022-01-13*

### Core and Builtins

- [bpo-46070](https://bugs.python.org/issue?@action=redirect&bpo=46070) [https://bugs.python.org/issue?@action=redirect&bpo=46070]: `Py_EndInterpreter()` now explicitly untracks all objects currently tracked by the GC. Previously, if an object was used later by another interpreter, calling `PyObject_GC_UnTrack()` on the object crashed if the previous or the next object of the `PyGC_Head` structure became a dangling pointer. Patch by Victor Stinner.
- [bpo-46347](https://bugs.python.org/issue?@action=redirect&bpo=46347) [https://bugs.python.org/issue?@action=redirect&bpo=46347]: Fix memory leak in `PyEval_EvalCodeEx`.
- [bpo-46339](https://bugs.python.org/issue?@action=redirect&bpo=46339) [https://bugs.python.org/issue?@action=redirect&bpo=46339]: Fix a crash in the parser when retrieving the error text for multi-line f-strings expressions that do not start in the first line of the string. Patch by Pablo Galindo
- [bpo-46331](https://bugs.python.org/issue?@action=redirect&bpo=46331) [https://bugs.python.org/issue?@action=redirect&bpo=46331]: Do not set line number of instruction storing doc-string. Fixes regression introduced in 3.11 alpha.
- [bpo-46314](https://bugs.python.org/issue?@action=redirect&bpo=46314) [https://bugs.python.org/issue?@action=redirect&bpo=46314]: Remove spurious “call” event when creating a lambda function that was accidentally introduced in 3.11a4.

- [bpo-46289](https://bugs.python.org/issue?@action=redirect&bpo=46289) [https://bugs.python.org/issue?@action=redirect&bpo=46289]: ASDL declaration of `FormattedValue` has changed to reflect `conversion` field is not optional.
- [bpo-46297](https://bugs.python.org/issue?@action=redirect&bpo=46297) [https://bugs.python.org/issue?@action=redirect&bpo=46297]: Fixed an interpreter crash on bootup with multiple `PythonPaths` set in the Windows registry. Patch by Derzsi Dániel.
- [bpo-46237](https://bugs.python.org/issue?@action=redirect&bpo=46237) [https://bugs.python.org/issue?@action=redirect&bpo=46237]: Fix the line number of tokenizer errors inside f-strings. Patch by Pablo Galindo.
- [bpo-46263](https://bugs.python.org/issue?@action=redirect&bpo=46263) [https://bugs.python.org/issue?@action=redirect&bpo=46263]: We always expect the “`use_frozen_modules`” config to be set, now that `getpath.c` was rewritten in pure Python and the logic improved.
- [bpo-46006](https://bugs.python.org/issue?@action=redirect&bpo=46006) [https://bugs.python.org/issue?@action=redirect&bpo=46006]: Fix a regression when a type method like `__init__()` is modified in a subinterpreter. Fix a regression in `_PyUnicode_EqualToASCIIId()` and type `update_slot()`. Revert the change which made the Unicode dictionary of interned strings compatible with subinterpreters: the internal interned dictionary is shared again by all interpreters. Patch by Victor Stinner.
- [bpo-45923](https://bugs.python.org/issue?@action=redirect&bpo=45923) [https://bugs.python.org/issue?@action=redirect&bpo=45923]: Add `RESUME` opcode. This is a logical no-op. It is emitted by the compiler anywhere a Python function can be entered. It is used by the interpreter to perform tracing and optimizer checks.
- [bpo-46208](https://bugs.python.org/issue?@action=redirect&bpo=46208) [https://bugs.python.org/issue?@action=redirect&bpo=46208]: Fix the regression of `os.path.normpath("A/../../B")` not returning expected `../B` but `B`.
- [bpo-46240](https://bugs.python.org/issue?@action=redirect&bpo=46240) [https://bugs.python.org/issue?@action=redirect&bpo=46240]: Correct the error message for

unclosed parentheses when the tokenizer doesn't reach the end of the source when the error is reported. Patch by Pablo Galindo

- [bpo-46009](https://bugs.python.org/issue?@action=redirect&bpo=46009) [https://bugs.python.org/issue?@action=redirect&bpo=46009]: Remove the `GEN_START` opcode.
- [bpo-46235](https://bugs.python.org/issue?@action=redirect&bpo=46235) [https://bugs.python.org/issue?@action=redirect&bpo=46235]: Certain sequence multiplication operations like `[0] * 1_000` are now faster due to reference-counting optimizations. Patch by Dennis Sweeney.
- [bpo-46221](https://bugs.python.org/issue?@action=redirect&bpo=46221) [https://bugs.python.org/issue?@action=redirect&bpo=46221]: **PREP\_RERAISE\_STAR** no longer pushes `lasti` to the stack.
- [bpo-46202](https://bugs.python.org/issue?@action=redirect&bpo=46202) [https://bugs.python.org/issue?@action=redirect&bpo=46202]: Remove **POP\_EXCEPT\_AND\_RERAISE** and replace it by an equivalent sequence of other opcodes.
- [bpo-46085](https://bugs.python.org/issue?@action=redirect&bpo=46085) [https://bugs.python.org/issue?@action=redirect&bpo=46085]: Fix iterator cache mechanism of **OrderedDict**.
- [bpo-46055](https://bugs.python.org/issue?@action=redirect&bpo=46055) [https://bugs.python.org/issue?@action=redirect&bpo=46055]: Speed up shifting operation involving integers less than **PyLong\_BASE**. Patch by Xinhang Xu.
- [bpo-46110](https://bugs.python.org/issue?@action=redirect&bpo=46110) [https://bugs.python.org/issue?@action=redirect&bpo=46110]: Add a maximum recursion check to the PEG parser to avoid stack overflow. Patch by Pablo Galindo
- [bpo-46107](https://bugs.python.org/issue?@action=redirect&bpo=46107) [https://bugs.python.org/issue?@action=redirect&bpo=46107]: Fix bug where **ExceptionGroup.split()** and **ExceptionGroup.subgroup()** did not copy the exception group's `__note__` field to the parts.

- [bpo-45711](https://bugs.python.org/issue?@action=redirect&bpo=45711) [https://bugs.python.org/issue?@action=redirect&bpo=45711]: The interpreter state's representation of handled exceptions (a.k.a `exc_info`, or `_PyErr_StackItem`) now has only the `exc_value` field, `exc_type` and `exc_traceback` have been removed as their values can be derived from `exc_value`.
- [bpo-44525](https://bugs.python.org/issue?@action=redirect&bpo=44525) [https://bugs.python.org/issue?@action=redirect&bpo=44525]: Replace the four call bytecode instructions which one pre-call instruction and two call instructions.

Removes `CALL_FUNCTION`, `CALL_FUNCTION_KW`, `CALL_METHOD` and `CALL_METHOD_KW`.

Adds `CALL_NO_KW` and `CALL_KW` call instructions, and `PRECALL_METHOD` prefix for pairing with `LOAD_METHOD`.

- [bpo-46039](https://bugs.python.org/issue?@action=redirect&bpo=46039) [https://bugs.python.org/issue?@action=redirect&bpo=46039]: Remove the `YIELD_FROM` instruction and replace it with the `SEND` instruction which performs the same operation, but without the loop.
- [bpo-45635](https://bugs.python.org/issue?@action=redirect&bpo=45635) [https://bugs.python.org/issue?@action=redirect&bpo=45635]: The code called from `_PyErr_Display()` was refactored to improve error handling. It now exits immediately upon an unrecoverable error.
- [bpo-46054](https://bugs.python.org/issue?@action=redirect&bpo=46054) [https://bugs.python.org/issue?@action=redirect&bpo=46054]: Fix parser error when parsing non-utf8 characters in source files. Patch by Pablo Galindo.
- [bpo-46042](https://bugs.python.org/issue?@action=redirect&bpo=46042) [https://bugs.python.org/issue?@action=redirect&bpo=46042]: Improve the location of the caret in `SyntaxError` exceptions emitted by the symbol table. Patch by Pablo Galindo.
- [bpo-46049](https://bugs.python.org/issue?@action=redirect&bpo=46049) [https://bugs.python.org/issue?@action=redirect&bpo=46049]: Ensure `._pth` files work as intended on platforms other than Windows.

- [bpo-46048](https://bugs.python.org/issue?@action=redirect&bpo=46048) [https://bugs.python.org/issue?@action=redirect&bpo=46048]: Fixes parsing of `._pth` files on startup so that single-character paths are correctly read.
- [bpo-37971](https://bugs.python.org/issue?@action=redirect&bpo=37971) [https://bugs.python.org/issue?@action=redirect&bpo=37971]: Fix a bug where the line numbers given in a traceback when a decorator application raised an exception were wrong.
- [bpo-46031](https://bugs.python.org/issue?@action=redirect&bpo=46031) [https://bugs.python.org/issue?@action=redirect&bpo=46031]: Add `POP_JUMP_IF_NOT_NONE` and `POP_JUMP_IF_NONE` opcodes to speed up conditional jumps.
- [bpo-45654](https://bugs.python.org/issue?@action=redirect&bpo=45654) [https://bugs.python.org/issue?@action=redirect&bpo=45654]: Deepfreeze `runpy`, patch by Kumar Aditya.
- [bpo-46025](https://bugs.python.org/issue?@action=redirect&bpo=46025) [https://bugs.python.org/issue?@action=redirect&bpo=46025]: Fix a crash in the `atexit` module involving functions that unregister themselves before raising exceptions. Patch by Pablo Galindo.
- [bpo-46000](https://bugs.python.org/issue?@action=redirect&bpo=46000) [https://bugs.python.org/issue?@action=redirect&bpo=46000]: Improve compatibility of the `curses` module with NetBSD curses.
- [bpo-44525](https://bugs.python.org/issue?@action=redirect&bpo=44525) [https://bugs.python.org/issue?@action=redirect&bpo=44525]: Specialize the `CALL_FUNCTION` instruction for calls to builtin types with a single argument. Speeds up `range(x)`, `list(x)`, and specifically `type(obj)`.
- [bpo-42918](https://bugs.python.org/issue?@action=redirect&bpo=42918) [https://bugs.python.org/issue?@action=redirect&bpo=42918]: Fix bug where the built-in `compile()` function did not always raise a `SyntaxError` when passed multiple statements in ‘single’ mode. Patch by Weipeng Hong.
- [bpo-45953](https://bugs.python.org/issue?@action=redirect&bpo=45953) [https://bugs.python.org/issue?@action=redirect&bpo=45953]: The main interpreter in

`_PyRuntimeState.interpreters` is now statically allocated (as part of `_PyRuntime`). Likewise for the initial thread state of each interpreter. This means less allocation during runtime init, as well as better memory locality for these key state objects.

- [bpo-45292](https://bugs.python.org/issue?@action=redirect&bpo=45292) [https://bugs.python.org/issue?@action=redirect&bpo=45292]: Complete the [PEP 654](https://peps.python.org/pep-0654/) [https://peps.python.org/pep-0654/] implementation: add `except*`.
- [bpo-43413](https://bugs.python.org/issue?@action=redirect&bpo=43413) [https://bugs.python.org/issue?@action=redirect&bpo=43413]: Revert changes in `set.__init__`. Subclass of `set` needs to define a `__init__()` method if it defines a `__new__()` method with additional keyword parameters.
- [bpo-43931](https://bugs.python.org/issue?@action=redirect&bpo=43931) [https://bugs.python.org/issue?@action=redirect&bpo=43931]: Added the `Py_Version` constant which bears the same value as `PY_VERSION_HEX`. Patch by Gabriele N. Tornetta.

## Library

- [bpo-46342](https://bugs.python.org/issue?@action=redirect&bpo=46342) [https://bugs.python.org/issue?@action=redirect&bpo=46342]: The `@typing.final` decorator now sets the `__final__` attribute on the decorated object to allow runtime introspection. Patch by Jelle Zijlstra.
- [bpo-46328](https://bugs.python.org/issue?@action=redirect&bpo=46328) [https://bugs.python.org/issue?@action=redirect&bpo=46328]: Added the `sys.exception()` method which returns the active exception instance.
- [bpo-46307](https://bugs.python.org/issue?@action=redirect&bpo=46307) [https://bugs.python.org/issue?@action=redirect&bpo=46307]: Add `string.Template.is_valid()` and `string.Template.get_identifiers()` methods.
- [bpo-46306](https://bugs.python.org/issue?@action=redirect&bpo=46306) [https://bugs.python.org/issue?@action=redirect&bpo=46306]: Assume that `types.CodeType` always has `types.CodeType.co_firstlineno` in `doctest`.

- [bpo-40479](https://bugs.python.org/issue?@action=redirect&bpo=40479) [https://bugs.python.org/issue?@action=redirect&bpo=40479]: Fix **hashlib** *usedforsecurity* option to work correctly with OpenSSL 3.0.0 in FIPS mode.
- [bpo-46070](https://bugs.python.org/issue?@action=redirect&bpo=46070) [https://bugs.python.org/issue?@action=redirect&bpo=46070]: Fix possible segfault when importing the **asyncio** module from different sub-interpreters in parallel. Patch by Erlend E. Aasland.
- [bpo-46244](https://bugs.python.org/issue?@action=redirect&bpo=46244) [https://bugs.python.org/issue?@action=redirect&bpo=46244]: Removed `__slots__` from **typing.ParamSpec** and **typing.TypeVar**. They served no purpose. Patch by Arie Bovenberg.
- [bpo-46278](https://bugs.python.org/issue?@action=redirect&bpo=46278) [https://bugs.python.org/issue?@action=redirect&bpo=46278]: Reflect `context` argument in `AbstractEventLoop.call_*()` methods. Loop implementations already support it.
- [bpo-46269](https://bugs.python.org/issue?@action=redirect&bpo=46269) [https://bugs.python.org/issue?@action=redirect&bpo=46269]: Remove special-casing of `__new__` in **enum.Enum.\_\_dir\_\_()**.
- [bpo-46266](https://bugs.python.org/issue?@action=redirect&bpo=46266) [https://bugs.python.org/issue?@action=redirect&bpo=46266]: Improve day constants in **calendar**.

Now all constants (**MONDAY** ... **SUNDAY**) are documented, tested, and added to `__all__`.

- [bpo-46257](https://bugs.python.org/issue?@action=redirect&bpo=46257) [https://bugs.python.org/issue?@action=redirect&bpo=46257]: Optimized the mean, variance, and stdev functions in the statistics module. If the input is an iterator, it is consumed in a single pass rather than eating memory by conversion to a list. The single pass algorithm is about twice as fast as the previous two pass code.
- [bpo-41011](https://bugs.python.org/issue?@action=redirect&bpo=41011) [https://bugs.python.org/issue?@action=redirect&bpo=41011]: Added two new variables to *pyvenv.cfg* which is generated by **venv** module: *executable* for the executable and *command* for the command line used to

create the environment.

- [bpo-46239](https://bugs.python.org/issue?@action=redirect&bpo=46239) [https://bugs.python.org/issue?@action=redirect&bpo=46239]: Improve error message when importing **asyncio.windows\_events** on non-Windows.
- [bpo-46238](https://bugs.python.org/issue?@action=redirect&bpo=46238) [https://bugs.python.org/issue?@action=redirect&bpo=46238]: Reuse `_winapi` constants in `asyncio.windows_events`.
- [bpo-46222](https://bugs.python.org/issue?@action=redirect&bpo=46222) [https://bugs.python.org/issue?@action=redirect&bpo=46222]: Adding `SF_NOCACHE` sendfile constant for FreeBSD for the `posixmodule`.
- [bpo-37295](https://bugs.python.org/issue?@action=redirect&bpo=37295) [https://bugs.python.org/issue?@action=redirect&bpo=37295]: Add fast path for `0 <= k <= n <= 67` for **`math.comb()`**.
- [bpo-46176](https://bugs.python.org/issue?@action=redirect&bpo=46176) [https://bugs.python.org/issue?@action=redirect&bpo=46176]: Adding the `MAP_STACK` constant for the `mmap` module.
- [bpo-43424](https://bugs.python.org/issue?@action=redirect&bpo=43424) [https://bugs.python.org/issue?@action=redirect&bpo=43424]: Deprecate **`webbrowser.MacOSXOSAScript._name`** and use `name` instead.
- [bpo-45321](https://bugs.python.org/issue?@action=redirect&bpo=45321) [https://bugs.python.org/issue?@action=redirect&bpo=45321]: Added missing error codes to module `xml.parsers.expat.errors`.
- [bpo-46125](https://bugs.python.org/issue?@action=redirect&bpo=46125) [https://bugs.python.org/issue?@action=redirect&bpo=46125]: Refactor tests to test traversable API directly. Includes changes from `importlib` 5.4.0.
- [bpo-46118](https://bugs.python.org/issue?@action=redirect&bpo=46118) [https://bugs.python.org/issue?@action=redirect&bpo=46118]: Moved `importlib.resources` and its related functionality to a package.
- [bpo-37578](https://bugs.python.org/issue?@action=redirect&bpo=37578) [https://bugs.python.org/issue?@action=redirect&bpo=37578]: Add *`include_hidden`* parameter to **`glob()`** and **`iglob()`** to match hidden files and directories

when using special characters like `*`, `**`, `?` and `[]`.

- [bpo-20369](https://bugs.python.org/issue?@action=redirect&bpo=20369) [https://bugs.python.org/issue?@action=redirect&bpo=20369]: `concurrent.futures.wait()` no longer blocks forever when given duplicate Futures. Patch by Kumar Aditya.
- [bpo-46105](https://bugs.python.org/issue?@action=redirect&bpo=46105) [https://bugs.python.org/issue?@action=redirect&bpo=46105]: Honor spec when generating requirement specs with urls and extras (importlib\_metadata 4.8.3).
- [bpo-44893](https://bugs.python.org/issue?@action=redirect&bpo=44893) [https://bugs.python.org/issue?@action=redirect&bpo=44893]: EntryPoint objects are no longer tuples. Recommended means to access is by attribute (`‘.name’`, `‘.group’`) or accessor (`‘.load()’`). Access by index is deprecated and will raise deprecation warning.
- [bpo-22815](https://bugs.python.org/issue?@action=redirect&bpo=22815) [https://bugs.python.org/issue?@action=redirect&bpo=22815]: Print unexpected successes together with failures and errors in summary in `unittest.TextTestResult`.
- [bpo-22047](https://bugs.python.org/issue?@action=redirect&bpo=22047) [https://bugs.python.org/issue?@action=redirect&bpo=22047]: Calling `add_argument_group()` on an argument group is deprecated. Calling `add_argument_group()` or `add_mutually_exclusive_group()` on a mutually exclusive group is deprecated.

These features were never supported and do not always work correctly. The functions exist on the API by accident through inheritance and will be removed in the future.

- [bpo-26952](https://bugs.python.org/issue?@action=redirect&bpo=26952) [https://bugs.python.org/issue?@action=redirect&bpo=26952]: `argparse` raises `ValueError` with clear message when trying to render usage for an empty mutually exclusive group. Previously it raised a cryptic `IndexError`.
- [bpo-45615](https://bugs.python.org/issue?@action=redirect&bpo=45615) [https://bugs.python.org/issue?@action=redirect&bpo=45615]

@action=redirect&bpo=45615]: Functions in the `traceback` module raise `TypeError` rather than `AttributeError` when an exception argument is not of type `BaseException`.

- [bpo-16594](https://bugs.python.org/issue?@action=redirect&bpo=16594) [https://bugs.python.org/issue?@action=redirect&bpo=16594]: Add `allow_reuse_port` flag in `socketserver`.
- [bpo-27718](https://bugs.python.org/issue?@action=redirect&bpo=27718) [https://bugs.python.org/issue?@action=redirect&bpo=27718]: Fix help for the `signal` module. Some functions (e.g. `signal()` and `getsignal()`) were omitted.
- [bpo-46032](https://bugs.python.org/issue?@action=redirect&bpo=46032) [https://bugs.python.org/issue?@action=redirect&bpo=46032]: The `registry()` method of `functools.singledispatch()` functions checks now the first argument or the first parameter annotation and raises a `TypeError` if it is not supported. Previously unsupported “types” were ignored (e.g. `typing.List[int]`) or caused an error at calling time (e.g. `list[int]`).
- [bpo-46014](https://bugs.python.org/issue?@action=redirect&bpo=46014) [https://bugs.python.org/issue?@action=redirect&bpo=46014]: Add ability to use `typing.Union` and `types.UnionType` as dispatch argument to `functools.singledispatch`. Patch provided by Yurii Karabas.
- [bpo-27062](https://bugs.python.org/issue?@action=redirect&bpo=27062) [https://bugs.python.org/issue?@action=redirect&bpo=27062]: Add `__all__` to `inspect`, patch by Kumar Aditya.
- [bpo-46018](https://bugs.python.org/issue?@action=redirect&bpo=46018) [https://bugs.python.org/issue?@action=redirect&bpo=46018]: Ensure that `math.expml()` does not raise on underflow.
- [bpo-46016](https://bugs.python.org/issue?@action=redirect&bpo=46016) [https://bugs.python.org/issue?@action=redirect&bpo=46016]: Adding `F_DUP2FD` and `F_DUP2FD_CLOEXEC` constants from FreeBSD into the `fcntl` module.

- [bpo-45755](https://bugs.python.org/issue?@action=redirect&bpo=45755) [https://bugs.python.org/issue?@action=redirect&bpo=45755]: **typing** generic aliases now reveal the class attributes of the original generic class when passed to `dir()`. This was the behavior up to Python 3.6, but was changed in 3.7-3.9.
- [bpo-45874](https://bugs.python.org/issue?@action=redirect&bpo=45874) [https://bugs.python.org/issue?@action=redirect&bpo=45874]: The empty query string, consisting of no query arguments, is now handled correctly in `urllib.parse.parse_qs`. This caused problems before when strict parsing was enabled.
- [bpo-44674](https://bugs.python.org/issue?@action=redirect&bpo=44674) [https://bugs.python.org/issue?@action=redirect&bpo=44674]: Change how dataclasses disallows mutable default values. It used to use a list of known types (list, dict, set). Now it disallows unhashable objects to be defaults. It's using unhashability as a proxy for mutability. Patch by Eric V. Smith, idea by Raymond Hettinger.
- [bpo-23882](https://bugs.python.org/issue?@action=redirect&bpo=23882) [https://bugs.python.org/issue?@action=redirect&bpo=23882]: Remove namespace package (PEP 420) support from unittest discovery. It was introduced in Python 3.4 but has been broken since Python 3.7.
- [bpo-25066](https://bugs.python.org/issue?@action=redirect&bpo=25066) [https://bugs.python.org/issue?@action=redirect&bpo=25066]: Added a `__repr__()` method to **multiprocessing.Event** objects, patch by Kumar Aditya.
- [bpo-45643](https://bugs.python.org/issue?@action=redirect&bpo=45643) [https://bugs.python.org/issue?@action=redirect&bpo=45643]: Added **signal.SIGSTKFLT** on platforms where this signal is defined.
- [bpo-44092](https://bugs.python.org/issue?@action=redirect&bpo=44092) [https://bugs.python.org/issue?@action=redirect&bpo=44092]: Fetch across rollback no longer raises **InterfaceError**. Instead we leave it to the SQLite library to handle these cases. Patch by Erlend E. Aasland.
- [bpo-42413](https://bugs.python.org/issue?@action=redirect&bpo=42413) [https://bugs.python.org/issue?@action=redirect&bpo=42413]: Replace `concurrent.futures.TimeoutError` and `asyncio.TimeoutError` with builtin **TimeoutError**,

keep these names as deprecated aliases.

## Documentation

- [bpo-46196](https://bugs.python.org/issue?@action=redirect&bpo=46196) [https://bugs.python.org/issue?@action=redirect&bpo=46196]: Document method `cmd.Cmd.columnize()`.
- [bpo-46120](https://bugs.python.org/issue?@action=redirect&bpo=46120) [https://bugs.python.org/issue?@action=redirect&bpo=46120]: State that `|` is preferred for readability over `Union` in the `typing` docs.
- [bpo-46109](https://bugs.python.org/issue?@action=redirect&bpo=46109) [https://bugs.python.org/issue?@action=redirect&bpo=46109]: Extracted `importlib.resources` and `importlib.resources.abc` documentation into separate files.
- [bpo-19737](https://bugs.python.org/issue?@action=redirect&bpo=19737) [https://bugs.python.org/issue?@action=redirect&bpo=19737]: Update the documentation for the `globals()` function.

## Tests

- [bpo-46296](https://bugs.python.org/issue?@action=redirect&bpo=46296) [https://bugs.python.org/issue?@action=redirect&bpo=46296]: Add a test case for `enum` with `_use_args_ == True` and `_member_type_ == object`.
- [bpo-46205](https://bugs.python.org/issue?@action=redirect&bpo=46205) [https://bugs.python.org/issue?@action=redirect&bpo=46205]: Fix hang in `runtest_mp` due to race condition
- [bpo-46263](https://bugs.python.org/issue?@action=redirect&bpo=46263) [https://bugs.python.org/issue?@action=redirect&bpo=46263]: Fix `test_capi` on FreeBSD 14-dev: instruct `jemalloc` to not fill freed memory with junk byte.
- [bpo-46262](https://bugs.python.org/issue?@action=redirect&bpo=46262) [https://bugs.python.org/issue?@action=redirect&bpo=46262]: Cover `ValueError` path in tests for `enum.Flag._missing_()`.
- [bpo-46150](https://bugs.python.org/issue?@action=redirect&bpo=46150) [https://bugs.python.org/issue?@action=redirect&bpo=46150]: Now `fakename` in `test_pathlib.PosixPathTest.test_expanduser` is checked to be non-existent.
- [bpo-46129](https://bugs.python.org/issue?@action=redirect&bpo=46129) [https://bugs.python.org/issue?@action=redirect&bpo=46129]: Rewrite `asyncio.locks` tests with `unittest.IsolatedAsyncioTestCase` usage.

- [bpo-23819](https://bugs.python.org/issue?@action=redirect&bpo=23819) [https://bugs.python.org/issue?@action=redirect&bpo=23819]: Fixed `asyncio` tests in python optimized mode. Patch by Kumar Aditya.
- [bpo-46114](https://bugs.python.org/issue?@action=redirect&bpo=46114) [https://bugs.python.org/issue?@action=redirect&bpo=46114]: Fix test case for OpenSSL 3.0.1 version. OpenSSL 3.0 uses `0xMNN00PP0L`.

## Build

- [bpo-44133](https://bugs.python.org/issue?@action=redirect&bpo=44133) [https://bugs.python.org/issue?@action=redirect&bpo=44133]: When Python is configured with `--without-static-libpython`, the Python static library (libpython.a) is no longer built. Patch by Victor Stinner.
- [bpo-44133](https://bugs.python.org/issue?@action=redirect&bpo=44133) [https://bugs.python.org/issue?@action=redirect&bpo=44133]: When Python is built without `--enable-shared`, the `python` program is now linked to object files, rather than being linked to the Python static library (libpython.a), to make sure that all symbols are exported. Previously, the linker omitted some symbols like the `Py_FrozenMain()` function. Patch by Victor Stinner.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: The `configure` script has a new option `--with-emscripten-target` to select browser or node as Emscripten build target.
- [bpo-46315](https://bugs.python.org/issue?@action=redirect&bpo=46315) [https://bugs.python.org/issue?@action=redirect&bpo=46315]: Added and fixed `#ifdef HAVE_FEATURE` checks for functionality that is not available on WASI platform.
- [bpo-45723](https://bugs.python.org/issue?@action=redirect&bpo=45723) [https://bugs.python.org/issue?@action=redirect&bpo=45723]: Fixed a regression in `configure` check for `select.epoll()`.
- [bpo-46263](https://bugs.python.org/issue?@action=redirect&bpo=46263) [https://bugs.python.org/issue?@action=redirect&bpo=46263]: `configure` no longer sets `MULTIARCH` on FreeBSD platforms.
- [bpo-46106](https://bugs.python.org/issue?@action=redirect&bpo=46106) [https://bugs.python.org/issue?@action=redirect&bpo=46106]: Updated OpenSSL to 1.1.1m in Windows builds, macOS installer builds, and CI. Patch by Kumar Aditya.
- [bpo-46088](https://bugs.python.org/issue?@action=redirect&bpo=46088) [https://bugs.python.org/issue?@action=redirect&bpo=46088]: Automatically detect or install

bootstrap Python runtime when building from Visual Studio.

- [bpo-46072](https://bugs.python.org/issue?@action=redirect&bpo=46072) [https://bugs.python.org/issue?@action=redirect&bpo=46072]: Add a `-with-pystats` configure option to turn on internal statistics gathering.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: A new directory `Tools/wasm` contains WebAssembly-related helpers like `config.site` override for `wasm32-emscripen`, `wasm` assets generator to bundle the `stdlib`, and a `README`.
- [bpo-46023](https://bugs.python.org/issue?@action=redirect&bpo=46023) [https://bugs.python.org/issue?@action=redirect&bpo=46023]: **makesetup** no longer builds extensions that have been marked as *disabled*. This allows users to disable modules in `Modules/Setup.local`.
- [bpo-45949](https://bugs.python.org/issue?@action=redirect&bpo=45949) [https://bugs.python.org/issue?@action=redirect&bpo=45949]: Use pure Python `freeze_module` for all but `importlib` bootstrap files. `--with-freeze-module` **configure** option is no longer needed for cross builds.

## Windows

- [bpo-46217](https://bugs.python.org/issue?@action=redirect&bpo=46217) [https://bugs.python.org/issue?@action=redirect&bpo=46217]: Removed parameter that is unsupported on Windows 8.1 and early Windows 10 and may have caused build or runtime failures.

## macOS

- [bpo-40477](https://bugs.python.org/issue?@action=redirect&bpo=40477) [https://bugs.python.org/issue?@action=redirect&bpo=40477]: The Python Launcher app for macOS now properly launches scripts and, if necessary, the Terminal app when running on recent macOS releases.

## C API

- [bpo-46236](https://bugs.python.org/issue?@action=redirect&bpo=46236) [https://bugs.python.org/issue?@action=redirect&bpo=46236]: Fix a bug in **`PyFunction_GetAnnotations()`** that caused it to return a tuple instead of a dict.
- [bpo-46140](https://bugs.python.org/issue?@action=redirect&bpo=46140) [https://bugs.python.org/issue?@action=redirect&bpo=46140]

@action=redirect&bpo=46140]: **PyBuffer\_GetPointer()**, **PyBuffer\_FromContiguous()**, **PyBuffer\_ToContiguous()** and **PyMemoryView\_FromBuffer()** now take buffer info by `const Py_buffer *` instead of `Py_buffer *`, as they do not need mutability. **PyBuffer\_FromContiguous()** also now takes the source buffer as `const void *`, and similarly **PyBuffer\_GetPointer()** takes the strides as `const Py_ssize_t *`.

- **bpo-45855** [<https://bugs.python.org/issue/>]  
@action=redirect&bpo=45855]: Document that the *no\_block* argument to **PyCapsule\_Import()** is a no-op now.
- **bpo-45855** [<https://bugs.python.org/issue/>]  
@action=redirect&bpo=45855]: Replaced deprecated usage of **PyImport\_ImportModuleNoBlock()** with **PyImport\_ImportModule()** in stdlib modules. Patch by Kumar Aditya.
- **bpo-46007** [<https://bugs.python.org/issue/>]  
@action=redirect&bpo=46007]: The **PyUnicode\_CHECK\_INTERNEDED()** macro has been excluded from the limited C API. It was never usable there, because it used internal structures which are not available in the limited C API. Patch by Victor Stinner.

## Python 3.11.0 alpha 3

*Release date: 2021-12-08*

### Core and Builtins

- **bpo-46009** [<https://bugs.python.org/issue/>]  
@action=redirect&bpo=46009]: Restore behavior from 3.9 and earlier when sending non-None to newly started generator. In 3.9 this did not affect the state of the generator. In 3.10.0 and 3.10.1 `gen_func().send(0)` is equivalent to `gen_func().throw(TypeError(...))` which exhausts the generator. In 3.10.2 onward, the behavior has been reverted to that of 3.9.

- [bpo-46004](https://bugs.python.org/issue?@action=redirect&bpo=46004) [https://bugs.python.org/issue?@action=redirect&bpo=46004]: Fix the `SyntaxError` location for errors involving for loops with invalid targets. Patch by Pablo Galindo
- [bpo-45711](https://bugs.python.org/issue?@action=redirect&bpo=45711) [https://bugs.python.org/issue?@action=redirect&bpo=45711]: `_PyErr_ChainStackItem()` no longer normalizes `exc_info` (including setting the traceback on the exception instance) because `exc_info` is always normalized.
- [bpo-45607](https://bugs.python.org/issue?@action=redirect&bpo=45607) [https://bugs.python.org/issue?@action=redirect&bpo=45607]: The `__note__` field was added to `BaseException`. It is `None` by default but can be set to a string which is added to the exception's traceback.
- [bpo-45947](https://bugs.python.org/issue?@action=redirect&bpo=45947) [https://bugs.python.org/issue?@action=redirect&bpo=45947]: Place pointers to dict and values immediately before GC header. This reduces number of dependent memory loads to access either dict or values from 3 to 1.
- [bpo-45915](https://bugs.python.org/issue?@action=redirect&bpo=45915) [https://bugs.python.org/issue?@action=redirect&bpo=45915]: `is_valid_fd` now uses faster `fcntl(fd, F_GETFD)` on Linux, macOS, and Windows.
- [bpo-44530](https://bugs.python.org/issue?@action=redirect&bpo=44530) [https://bugs.python.org/issue?@action=redirect&bpo=44530]: Reverts a change to the code `code.__new__` `audit event` from an earlier prerelease.
- [bpo-42268](https://bugs.python.org/issue?@action=redirect&bpo=42268) [https://bugs.python.org/issue?@action=redirect&bpo=42268]: Fail the configure step if the selected compiler doesn't support memory sanitizer. Patch by Pablo Galindo
- [bpo-45711](https://bugs.python.org/issue?@action=redirect&bpo=45711) [https://bugs.python.org/issue?@action=redirect&bpo=45711]: The three values of `exc_info` are now always consistent with each other. In particular, the `type` and `traceback` fields are now derived from the exception instance. This impacts the return values of `sys.exc_info()` and `PyErr_GetExcInfo()` if the

exception instance is modified while the exception is handled, as well as `PyErr_SetExcInfo()`, which now ignores the type and `traceback` arguments provided to it.

- [bpo-45727](https://bugs.python.org/issue?@action=redirect&bpo=45727) [https://bugs.python.org/issue?@action=redirect&bpo=45727]: Refine the custom syntax error that suggests that a comma may be missing to trigger only when the expressions are detected between parentheses or brackets. Patch by Pablo Galindo
- [bpo-45885](https://bugs.python.org/issue?@action=redirect&bpo=45885) [https://bugs.python.org/issue?@action=redirect&bpo=45885]: Specialized the `COMPARE_OP` opcode using the PEP 659 machinery.
- [bpo-45786](https://bugs.python.org/issue?@action=redirect&bpo=45786) [https://bugs.python.org/issue?@action=redirect&bpo=45786]: Allocate space for the interpreter frame in the frame object, to avoid an additional allocation when the frame object outlives the frame activation.
- [bpo-45614](https://bugs.python.org/issue?@action=redirect&bpo=45614) [https://bugs.python.org/issue?@action=redirect&bpo=45614]: Fix `traceback` display for exceptions with invalid module name.
- [bpo-45813](https://bugs.python.org/issue?@action=redirect&bpo=45813) [https://bugs.python.org/issue?@action=redirect&bpo=45813]: Fix crash when calling `coro.cr_frame.clear()` after coroutine has been freed.
- [bpo-45811](https://bugs.python.org/issue?@action=redirect&bpo=45811) [https://bugs.python.org/issue?@action=redirect&bpo=45811]: Improve the tokenizer errors when encountering invisible control characters in the parser. Patch by Pablo Galindo
- [bpo-45848](https://bugs.python.org/issue?@action=redirect&bpo=45848) [https://bugs.python.org/issue?@action=redirect&bpo=45848]: Allow the parser to obtain error lines directly from encoded files. Patch by Pablo Galindo
- [bpo-45709](https://bugs.python.org/issue?@action=redirect&bpo=45709) [https://bugs.python.org/issue?@action=redirect&bpo=45709]: Restore behavior from 3.10 when tracing an exception raised within a `with` statement.
- [bpo-44525](https://bugs.python.org/issue?@action=redirect&bpo=44525) [https://bugs.python.org/issue?@action=redirect&bpo=44525]

@action=redirect&bpo=44525]: Adds new **COPY\_FREE\_VARS** opcode, to make copying of free variables from function to frame explicit. Helps optimization of calls to Python function.

- **bpo-45829** [<https://bugs.python.org/issue?@action=redirect&bpo=45829>]: Specialize **BINARY\_SUBSCR** for classes with a `__getitem__` method implemented in Python
- **bpo-45826** [<https://bugs.python.org/issue?@action=redirect&bpo=45826>]: Fixed a crash when calling `.with_traceback(None)` on `NameError`. This occurs internally in `unittest.TestCase.assertRaises()`.
- **bpo-45822** [<https://bugs.python.org/issue?@action=redirect&bpo=45822>]: Fixed a bug in the parser that was causing it to not respect **PEP 263** [<https://peps.python.org/pep-0263/>] coding cookies when no flags are provided. Patch by Pablo Galindo
- **bpo-45820** [<https://bugs.python.org/issue?@action=redirect&bpo=45820>]: Fix a segfault when the parser fails without reading any input. Patch by Pablo Galindo
- **bpo-45636** [<https://bugs.python.org/issue?@action=redirect&bpo=45636>]: Simplify the implementation of **BINARY\_OP** by indexing into an array of function pointers (rather than switching on the oparg).
- **bpo-42540** [<https://bugs.python.org/issue?@action=redirect&bpo=42540>]: Fix crash when `os.fork()` is called with an active non-default memory allocator.
- **bpo-45738** [<https://bugs.python.org/issue?@action=redirect&bpo=45738>]: Fix computation of error location for invalid continuation characters in the parser. Patch by Pablo Galindo.
- **bpo-45636** [<https://bugs.python.org/issue?@action=redirect&bpo=45636>]: Remove an existing “fast path” for old-style string formatting, since it no longer appears to have any measurable impact.

- [bpo-45753](https://bugs.python.org/issue?@action=redirect&bpo=45753) [https://bugs.python.org/issue?@action=redirect&bpo=45753]: Make recursion checks a bit more efficient by tracking amount of calls left before overflow.
- [bpo-45773](https://bugs.python.org/issue?@action=redirect&bpo=45773) [https://bugs.python.org/issue?@action=redirect&bpo=45773]: Fix a compiler hang when attempting to optimize certain jump patterns.
- [bpo-45764](https://bugs.python.org/issue?@action=redirect&bpo=45764) [https://bugs.python.org/issue?@action=redirect&bpo=45764]: The parser now gives a better error message when leaving out the opening parenthesis ( after a `def`-statement:

```
>>> def f:
      File "<stdin>", line 1
        def f:
            ^
SyntaxError: expected '('
```

- [bpo-45609](https://bugs.python.org/issue?@action=redirect&bpo=45609) [https://bugs.python.org/issue?@action=redirect&bpo=45609]: Specialized the `STORE_SUBSCR` opcode using the PEP 659 machinery.
- [bpo-45636](https://bugs.python.org/issue?@action=redirect&bpo=45636) [https://bugs.python.org/issue?@action=redirect&bpo=45636]: Replace all numeric `BINARY_*` and `INPLACE_*` instructions with a single [BINARY\\_OP](#) implementation.
- [bpo-45582](https://bugs.python.org/issue?@action=redirect&bpo=45582) [https://bugs.python.org/issue?@action=redirect&bpo=45582]: Path calculation (known as `getpath`) has been reimplemented as a frozen Python module. This should have no visible impact, but may affect calculation of all paths referenced in `sys` and `sysconfig`.
- [bpo-45450](https://bugs.python.org/issue?@action=redirect&bpo=45450) [https://bugs.python.org/issue?@action=redirect&bpo=45450]: Improve the syntax error message for parenthesized arguments. Patch by Pablo Galindo.

## Library

- [bpo-27946](https://bugs.python.org/issue?@action=redirect&bpo=27946) [https://bugs.python.org/issue?@action=redirect&bpo=27946]

@action=redirect&bpo=27946]: Fix possible crash when getting an attribute of class: `xml.etree.ElementTree.Element` simultaneously with replacing the `attrib` dict.

- [bpo-45711](https://bugs.python.org/issue?@action=redirect&bpo=45711) [https://bugs.python.org/issue?@action=redirect&bpo=45711]: Make `asyncio` normalize exceptions as soon as they are captured with `PyErr_Fetch()`, and before they are stored as an `exc_info` triplet. This brings `asyncio` in line with the rest of the codebase, where an `exc_info` triplet is always normalized.
- [bpo-23819](https://bugs.python.org/issue?@action=redirect&bpo=23819) [https://bugs.python.org/issue?@action=redirect&bpo=23819]: Replaced asserts with exceptions in `asyncio`, patch by Kumar Aditya.
- [bpo-13236](https://bugs.python.org/issue?@action=redirect&bpo=13236) [https://bugs.python.org/issue?@action=redirect&bpo=13236]: `unittest.TextTestResult` and `unittest.TextTestRunner` flush now the output stream more often.
- [bpo-45917](https://bugs.python.org/issue?@action=redirect&bpo=45917) [https://bugs.python.org/issue?@action=redirect&bpo=45917]: Added `math.exp2()`;, which returns 2 raised to the power of x.
- [bpo-37658](https://bugs.python.org/issue?@action=redirect&bpo=37658) [https://bugs.python.org/issue?@action=redirect&bpo=37658]: Fix issue when on certain conditions `asyncio.wait_for()` may allow a coroutine to complete successfully, but fail to return the result, potentially causing memory leaks or other issues.
- [bpo-45876](https://bugs.python.org/issue?@action=redirect&bpo=45876) [https://bugs.python.org/issue?@action=redirect&bpo=45876]: Improve the accuracy of `stdev()` and `pstdev()` in the statistics module. When the inputs are floats or fractions, the output is a correctly rounded float
- [bpo-44649](https://bugs.python.org/issue?@action=redirect&bpo=44649) [https://bugs.python.org/issue?@action=redirect&bpo=44649]: Handle `dataclass(slots=True)` with a field that has default a default value, but for which `init=False`.
- [bpo-45803](https://bugs.python.org/issue?@action=redirect&bpo=45803) [https://bugs.python.org/issue?@action=redirect&bpo=45803]

@action=redirect&bpo=45803]: Added missing kw\_only parameter to `dataclasses.make_dataclass()`.

- [bpo-45837](https://bugs.python.org/issue?@action=redirect&bpo=45837) [https://bugs.python.org/issue?@action=redirect&bpo=45837]: The `turtle.RawTurtle.settiltangle()` is deprecated since Python 3.1, it now emits a deprecation warning and will be removed in Python 3.13.

Use `turtle.RawTurtle.tiltangle()` instead.

`turtle.RawTurtle.tiltangle()` was earlier incorrectly marked as deprecated, its docstring has been corrected.

Patch by Hugo van Kemenade.

- [bpo-45831](https://bugs.python.org/issue?@action=redirect&bpo=45831) [https://bugs.python.org/issue?@action=redirect&bpo=45831]: `faulthandler` can now write ASCII-only strings (like filenames and function names) with a single `write()` syscall when dumping a traceback. It reduces the risk of getting an unreadable dump when two threads or two processes dump a traceback to the same file (like `stderr`) at the same time. Patch by Victor Stinner.
- [bpo-45828](https://bugs.python.org/issue?@action=redirect&bpo=45828) [https://bugs.python.org/issue?@action=redirect&bpo=45828]: `sqlite` C callbacks now use unraisable exceptions if callback tracebacks are enabled. Patch by Erlend E. Aasland.
- [bpo-41735](https://bugs.python.org/issue?@action=redirect&bpo=41735) [https://bugs.python.org/issue?@action=redirect&bpo=41735]: Fix thread lock in `zlib.Decompress.flush()` method before `PyObject_GetBuffer`.
- [bpo-45235](https://bugs.python.org/issue?@action=redirect&bpo=45235) [https://bugs.python.org/issue?@action=redirect&bpo=45235]: Reverted an `argparse` bugfix that caused regression in the handling of default arguments for subparsers. This prevented leaf level arguments from taking precedence over root level arguments.

- [bpo-45754](https://bugs.python.org/issue?@action=redirect&bpo=45754) [https://bugs.python.org/issue?@action=redirect&bpo=45754]

@action=redirect&bpo=45754]: Fix a regression in Python 3.11a1 and 3.11a2 where `sqlite3` incorrectly would use `SQLITE_LIMIT_LENGTH` when checking SQL statement lengths. Now, `SQLITE_LIMIT_SQL_LENGTH` is used. Patch by Erlend E. Aasland.

- [bpo-45766](https://bugs.python.org/issue?@action=redirect&bpo=45766) [https://bugs.python.org/issue?@action=redirect&bpo=45766]: Added *proportional* option to `statistics.linear_regression()`.
- [bpo-45765](https://bugs.python.org/issue?@action=redirect&bpo=45765) [https://bugs.python.org/issue?@action=redirect&bpo=45765]: In `importlib.metadata`, fix distribution discovery for an empty path.
- [bpo-45757](https://bugs.python.org/issue?@action=redirect&bpo=45757) [https://bugs.python.org/issue?@action=redirect&bpo=45757]: Fix bug where `dis` produced an incorrect oparg when `EXTENDED_ARG` is followed by an opcode that does not use its argument.
- [bpo-45644](https://bugs.python.org/issue?@action=redirect&bpo=45644) [https://bugs.python.org/issue?@action=redirect&bpo=45644]: In-place JSON file formatting using `python3 -m json.tool infile infile` now works correctly, previously it left the file empty. Patch by Chris Wesseling.
- [bpo-45703](https://bugs.python.org/issue?@action=redirect&bpo=45703) [https://bugs.python.org/issue?@action=redirect&bpo=45703]: When a namespace package is imported before another module from the same namespace is created/installed in a different `sys.path` location while the program is running, calling the `importlib.invalidate_caches()` function will now also guarantee the new module is noticed.
- [bpo-45535](https://bugs.python.org/issue?@action=redirect&bpo=45535) [https://bugs.python.org/issue?@action=redirect&bpo=45535]: Improve output of `dir()` with Enums.
- [bpo-45664](https://bugs.python.org/issue?@action=redirect&bpo=45664) [https://bugs.python.org/issue?@action=redirect&bpo=45664]: Fix `types.resolve_bases()` and `types.new_class()` for `types.GenericAlias` instance as a base.

- [bpo-45663](https://bugs.python.org/issue?@action=redirect&bpo=45663) [https://bugs.python.org/issue?@action=redirect&bpo=45663]: Fix **`dataclasses.is_dataclass()`** for dataclasses which are subclasses of **`types.GenericAlias`**.
- [bpo-45662](https://bugs.python.org/issue?@action=redirect&bpo=45662) [https://bugs.python.org/issue?@action=redirect&bpo=45662]: Fix the repr of **`dataclasses.InitVar`** with a type alias to the built-in class, e.g. `InitVar[list[int]]`.
- [bpo-43137](https://bugs.python.org/issue?@action=redirect&bpo=43137) [https://bugs.python.org/issue?@action=redirect&bpo=43137]: Launch GNOME web browsers via gio tool instead of obsolete gvfs-open
- [bpo-45429](https://bugs.python.org/issue?@action=redirect&bpo=45429) [https://bugs.python.org/issue?@action=redirect&bpo=45429]: On Windows, **`time.sleep()`** now uses a waitable timer which supports high-resolution timers. Patch by Donghee Na and Eryk Sun.
- [bpo-37295](https://bugs.python.org/issue?@action=redirect&bpo=37295) [https://bugs.python.org/issue?@action=redirect&bpo=37295]: Optimize **`math.comb()`** and **`math.perm()`**.
- [bpo-45514](https://bugs.python.org/issue?@action=redirect&bpo=45514) [https://bugs.python.org/issue?@action=redirect&bpo=45514]: Deprecated legacy functions in **`importlib.resources`**.
- [bpo-45507](https://bugs.python.org/issue?@action=redirect&bpo=45507) [https://bugs.python.org/issue?@action=redirect&bpo=45507]: Add tests for truncated/missing trailers in `gzip.decompress` implementation.
- [bpo-45359](https://bugs.python.org/issue?@action=redirect&bpo=45359) [https://bugs.python.org/issue?@action=redirect&bpo=45359]: Implement **PEP 585** [https://peps.python.org/pep-0585/] for **`graphlib.TopologicalSorter`**.
- [bpo-44733](https://bugs.python.org/issue?@action=redirect&bpo=44733) [https://bugs.python.org/issue?@action=redirect&bpo=44733]: Add `max_tasks_per_child` to **`concurrent.futures.ProcessPoolExecutor`**. This allows users to specify the maximum number of tasks a single process should execute before the process needs to be

restarted.

- [bpo-28806](https://bugs.python.org/issue?@action=redirect&bpo=28806) [https://bugs.python.org/issue?@action=redirect&bpo=28806]: Improve netrc library. netrc file no longer needs to contain all tokens. And if the login name is anonymous, security check is no longer need.
- [bpo-43498](https://bugs.python.org/issue?@action=redirect&bpo=43498) [https://bugs.python.org/issue?@action=redirect&bpo=43498]: Avoid a possible “*RuntimeError: dictionary changed size during iteration*” when adjusting the process count of **ProcessPoolExecutor**.
- [bpo-42158](https://bugs.python.org/issue?@action=redirect&bpo=42158) [https://bugs.python.org/issue?@action=redirect&bpo=42158]: Add MIME types for N-quads, N-triples, Notation3 and TriG to `mimetypes`.
- [bpo-30533](https://bugs.python.org/issue?@action=redirect&bpo=30533) [https://bugs.python.org/issue?@action=redirect&bpo=30533]: Add `inspect.getmembers_static()`, it return all members without triggering dynamic lookup via the descriptor protocol. Patch by Weipeng Hong.

## Documentation

- [bpo-42238](https://bugs.python.org/issue?@action=redirect&bpo=42238) [https://bugs.python.org/issue?@action=redirect&bpo=42238]: make `-C Doc suspicious` will be removed soon in favor of `make -C Doc check`, mark it as deprecated.
- [bpo-45840](https://bugs.python.org/issue?@action=redirect&bpo=45840) [https://bugs.python.org/issue?@action=redirect&bpo=45840]: Improve cross-references in the documentation for the data model.
- [bpo-45640](https://bugs.python.org/issue?@action=redirect&bpo=45640) [https://bugs.python.org/issue?@action=redirect&bpo=45640]: Properly marked-up grammar tokens in the documentation are now clickable and take you to the definition of a given piece of grammar. Patch by Arthur Milchior.
- [bpo-45788](https://bugs.python.org/issue?@action=redirect&bpo=45788) [https://bugs.python.org/issue?@action=redirect&bpo=45788]: Link doc for `sys.prefix` to `sysconfig` doc on installation paths.
- [bpo-45772](https://bugs.python.org/issue?@action=redirect&bpo=45772) [https://bugs.python.org/issue?@action=redirect&bpo=45772]

@action=redirect&bpo=45772]: `socket.socket` documentation is corrected to a class from a function.

- [bpo-45392](https://bugs.python.org/issue?@action=redirect&bpo=45392) [https://bugs.python.org/issue?@action=redirect&bpo=45392]: Update the docstring of the `type` built-in to remove a redundant line and to mention keyword arguments for the constructor.
- [bpo-45250](https://bugs.python.org/issue?@action=redirect&bpo=45250) [https://bugs.python.org/issue?@action=redirect&bpo=45250]: Update the documentation to note that CPython does not consistently require iterators to define `__iter__`.
- [bpo-25381](https://bugs.python.org/issue?@action=redirect&bpo=25381) [https://bugs.python.org/issue?@action=redirect&bpo=25381]: In the extending chapter of the extending doc, update a paragraph about the global variables containing exception information.
- [bpo-43905](https://bugs.python.org/issue?@action=redirect&bpo=43905) [https://bugs.python.org/issue?@action=redirect&bpo=43905]: Expanded `astuple()` and `asdict()` docs, warning about deepcopy being applied and providing a workaround.

## Tests

- [bpo-45695](https://bugs.python.org/issue?@action=redirect&bpo=45695) [https://bugs.python.org/issue?@action=redirect&bpo=45695]: Out-of-tree builds with a read-only source directory are now tested by CI.
- [bpo-19460](https://bugs.python.org/issue?@action=redirect&bpo=19460) [https://bugs.python.org/issue?@action=redirect&bpo=19460]: Add new Test for `Lib/email/mime/nonmultipart.py:MIMENonMultipart`.
- [bpo-45835](https://bugs.python.org/issue?@action=redirect&bpo=45835) [https://bugs.python.org/issue?@action=redirect&bpo=45835]: Fix race condition in `test_queue` tests with multiple “feeder” threads.
- [bpo-45783](https://bugs.python.org/issue?@action=redirect&bpo=45783) [https://bugs.python.org/issue?@action=redirect&bpo=45783]: The test for the freeze tool now handles file moves and deletions.
- [bpo-45745](https://bugs.python.org/issue?@action=redirect&bpo=45745) [https://bugs.python.org/issue?@action=redirect&bpo=45745]: Remove the `--findleaks` command line option of `regtest`: use the `--fail-env-changed` option instead. Since Python 3.7, it was a deprecated alias to the `--fail-env-changed` option.
- [bpo-45701](https://bugs.python.org/issue?@action=redirect&bpo=45701) [https://bugs.python.org/issue?@action=redirect&bpo=45701]: Add tests with `tuple` type with

`functools.lru_cache()` to `test_functools`.

## Build

- [bpo-44035](https://bugs.python.org/issue?@action=redirect&bpo=44035) [https://bugs.python.org/issue?@action=redirect&bpo=44035]: CI now verifies that autoconf files have been regenerated with a current and unpatched autoconf package.
- [bpo-45950](https://bugs.python.org/issue?@action=redirect&bpo=45950) [https://bugs.python.org/issue?@action=redirect&bpo=45950]: The build system now uses a **\_bootstrap\_python** interpreter for freezing and deepfreezing again. To speed up build process the build tools **\_bootstrap\_python** and **\_freeze\_module** are no longer build with LTO.
- [bpo-45881](https://bugs.python.org/issue?@action=redirect&bpo=45881) [https://bugs.python.org/issue?@action=redirect&bpo=45881]: The **configure** script now accepts `--with-build-python` and `--with-freeze-module` options to make cross compiling easier.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: Emscripten platform now uses `.wasm` suffix by default.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: Disable unusable core extension modules on WASM/Emscripten targets.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: `configure` now checks for `socket shutdown` function. The check makes it possible to disable `SYS_shutdown` with `ac_cv_func_shutdown=no` in `CONFIG_SITE`.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: `configure` now checks for functions `fork1`, `getegid`, `geteuid`, `getgid`, `getppid`, `getuid`, `opendir`, `pipe`, `system`, `wait`, `ttyname`.

- [bpo-33393](https://bugs.python.org/issue?@action=redirect&bpo=33393) [https://bugs.python.org/issue?@action=redirect&bpo=33393]: `Update config.guess` to 2021-06-03 and `config.sub` to 2021-08-14. `Makefile` now has an `update-config` target to make updating more convenient.
- [bpo-45866](https://bugs.python.org/issue?@action=redirect&bpo=45866) [https://bugs.python.org/issue?@action=redirect&bpo=45866]: `make regen-all` now produces the same output when run from a directory other than the source tree: when building Python out of the source tree. `pygen` now strips directory of the “generated by pygen from <FILENAME>” header Patch by Victor Stinner.
- [bpo-40280](https://bugs.python.org/issue?@action=redirect&bpo=40280) [https://bugs.python.org/issue?@action=redirect&bpo=40280]: `configure` now accepts `machine wasm32` or `wasm64` and `OS wasi` or `emscripten` for cross building, e.g. `wasm32-unknown-emscripten`, `wasm32-wasi`, or `wasm32-unknown-wasi`.
- [bpo-41498](https://bugs.python.org/issue?@action=redirect&bpo=41498) [https://bugs.python.org/issue?@action=redirect&bpo=41498]: Python now compiles on platforms without `sigset_t`. Several functions in `signal` are not available when `sigset_t` is missing.

Based on patch by Roman Yurchak for pyodide.

- [bpo-45881](https://bugs.python.org/issue?@action=redirect&bpo=45881) [https://bugs.python.org/issue?@action=redirect&bpo=45881]: `setup.py` now uses `CC` from environment first to discover multiarch and cross compile paths.
- [bpo-45886](https://bugs.python.org/issue?@action=redirect&bpo=45886) [https://bugs.python.org/issue?@action=redirect&bpo=45886]: The `__freeze_module` program path can now be overridden on the command line, e.g. `make FREEZE_MODULE=./x86_64/Program/_freeze_module`.
- [bpo-45873](https://bugs.python.org/issue?@action=redirect&bpo=45873) [https://bugs.python.org/issue?@action=redirect&bpo=45873]: Get rid of the `_bootstrap_python` build step. The `deepfreeze.py` script is now run using `$(PYTHON_FOR_REGEN)` which can be

Python 3.7 or newer (on Windows, 3.8 or newer).

- [bpo-45847](https://bugs.python.org/issue?@action=redirect&bpo=45847) [https://bugs.python.org/issue?@action=redirect&bpo=45847]: Port builtin hashlib extensions to `PY_STDLIB_MOD` macro and `addext()`.
- [bpo-45723](https://bugs.python.org/issue?@action=redirect&bpo=45723) [https://bugs.python.org/issue?@action=redirect&bpo=45723]: Add `autoconf` helpers for saving and restoring environment variables:
  - `SAVE_ENV`: Save `$CFLAGS`, `$LDFLAGS`, `$LIBS`, and `$CPPFLAGS`.
  - `RESTORE_ENV`: Restore `$CFLAGS`, `$LDFLAGS`, `$LIBS`, and `$CPPFLAGS`.
  - `WITH_SAVE_ENV([SCRIPT])`: Run `SCRIPT` wrapped with `SAVE_ENV` and `RESTORE_ENV`.

Patch by Erlend E. Aasland.

- [bpo-45573](https://bugs.python.org/issue?@action=redirect&bpo=45573) [https://bugs.python.org/issue?@action=redirect&bpo=45573]: Mandatory core modules, that are required to bootstrap Python, are now in `Modules/Setup.bootstrap`.
- [bpo-45573](https://bugs.python.org/issue?@action=redirect&bpo=45573) [https://bugs.python.org/issue?@action=redirect&bpo=45573]: `configure` now creates `Modules/Setup.stdlib` with conditionally enabled/disabled extension module lines. The file is not used, yet.
- [bpo-45573](https://bugs.python.org/issue?@action=redirect&bpo=45573) [https://bugs.python.org/issue?@action=redirect&bpo=45573]: `configure` now uses a unified format to set state, compiler flags, and linker flags in `Makefile`. The new macro `PY_STDLIB_MOD` sets three variables that are consumed by `Modules/Setup` and `setup.py`.
- [bpo-45816](https://bugs.python.org/issue?@action=redirect&bpo=45816) [https://bugs.python.org/issue?@action=redirect&bpo=45816]: Python now supports building with Visual Studio 2022 (MSVC v143, VS Version 17.0). Patch by Jeremiah Vivian.

- [bpo-45800](https://bugs.python.org/issue?@action=redirect&bpo=45800) [https://bugs.python.org/issue?@action=redirect&bpo=45800]: Settings for **pyexpat** C extension are now detected by `configure`. The bundled `expat` library is built in `Makefile`.
- [bpo-45798](https://bugs.python.org/issue?@action=redirect&bpo=45798) [https://bugs.python.org/issue?@action=redirect&bpo=45798]: Settings for **decimal** internal C extension are now detected by `configure`. The bundled `libmpdec` library is built in `Makefile`.
- [bpo-45723](https://bugs.python.org/issue?@action=redirect&bpo=45723) [https://bugs.python.org/issue?@action=redirect&bpo=45723]: **configure** has a new option `--with-pkg-config` to disable or require `pkg-config`.
- [bpo-45774](https://bugs.python.org/issue?@action=redirect&bpo=45774) [https://bugs.python.org/issue?@action=redirect&bpo=45774]: The build dependencies for **sqlite3** are now detected by `configure` and `pkg-config`. Patch by Erlend E. Aasland.
- [bpo-45763](https://bugs.python.org/issue?@action=redirect&bpo=45763) [https://bugs.python.org/issue?@action=redirect&bpo=45763]: The build dependencies for **zlib**, **bz2**, and **lzma** are now detected by `configure`.
- [bpo-45747](https://bugs.python.org/issue?@action=redirect&bpo=45747) [https://bugs.python.org/issue?@action=redirect&bpo=45747]: `gdbm` and `dbm` build dependencies are now detected by `configure`.
- [bpo-45743](https://bugs.python.org/issue?@action=redirect&bpo=45743) [https://bugs.python.org/issue?@action=redirect&bpo=45743]: On macOS, the build system no longer passes `search_paths_first` to the linker. The flag has been the default since Xcode 4 / macOS 10.6.
- [bpo-45723](https://bugs.python.org/issue?@action=redirect&bpo=45723) [https://bugs.python.org/issue?@action=redirect&bpo=45723]: `configure.ac` is now compatible with `autoconf 2.71`. Deprecated checks `STDC_HEADERS` and `AC_HEADER_TIME` have been removed.
- [bpo-45723](https://bugs.python.org/issue?@action=redirect&bpo=45723) [https://bugs.python.org/issue?@action=redirect&bpo=45723]: `configure` now prints a warning when `pkg-config` is missing.

- [bpo-45731](https://bugs.python.org/issue?@action=redirect&bpo=45731) [https://bugs.python.org/issue?@action=redirect&bpo=45731]: `configure --enable-loadable-sqlite-extensions` is now handled by new `PY_SQLITE_ENABLE_LOAD_EXTENSION` macro instead of logic in `setup.py`.
- [bpo-45723](https://bugs.python.org/issue?@action=redirect&bpo=45723) [https://bugs.python.org/issue?@action=redirect&bpo=45723]: `configure.ac` now uses custom helper macros and `AC_CACHE_CHECK` to simplify and speed up configure runs.
- [bpo-45696](https://bugs.python.org/issue?@action=redirect&bpo=45696) [https://bugs.python.org/issue?@action=redirect&bpo=45696]: Skip the marshal step for frozen modules by generating C code that produces a set of ready-to-use code objects. This speeds up startup time by another 10% or more.
- [bpo-45561](https://bugs.python.org/issue?@action=redirect&bpo=45561) [https://bugs.python.org/issue?@action=redirect&bpo=45561]: Run `smelly.py` tool from `$(srcdir)`.

## Windows

- [bpo-46105](https://bugs.python.org/issue?@action=redirect&bpo=46105) [https://bugs.python.org/issue?@action=redirect&bpo=46105]: Fixed calculation of `sys.path` in a venv on Windows.
- [bpo-45901](https://bugs.python.org/issue?@action=redirect&bpo=45901) [https://bugs.python.org/issue?@action=redirect&bpo=45901]: When installed through the Microsoft Store and set as the default app for `*.py` files, command line arguments will now be passed to Python when invoking a script without explicitly launching Python (that is, `script.py args` rather than `python script.py args`).
- [bpo-45616](https://bugs.python.org/issue?@action=redirect&bpo=45616) [https://bugs.python.org/issue?@action=redirect&bpo=45616]: Fix Python Launcher's ability to distinguish between versions 3.1 and 3.10 when either one is explicitly requested. Previously, 3.1 would be used if 3.10 was requested but not installed, and 3.10 would be used if 3.1 was requested but 3.10 was installed.
- [bpo-45850](https://bugs.python.org/issue?@action=redirect&bpo=45850) [https://bugs.python.org/issue?@action=redirect&bpo=45850]: Implement changes to build with deep-frozen modules on Windows. Note that we now require

Python 3.10 as the “bootstrap” or “host” Python.

- [bpo-45732](https://bugs.python.org/issue?@action=redirect&bpo=45732) [https://bugs.python.org/issue?@action=redirect&bpo=45732]: Updates bundled Tcl/Tk to 8.6.12.
- [bpo-45720](https://bugs.python.org/issue?@action=redirect&bpo=45720) [https://bugs.python.org/issue?@action=redirect&bpo=45720]: Internal reference to `shlwapi.dll` was dropped to help improve startup time. This DLL will no longer be loaded at the start of every Python process.

## macOS

- [bpo-45732](https://bugs.python.org/issue?@action=redirect&bpo=45732) [https://bugs.python.org/issue?@action=redirect&bpo=45732]: Update python.org macOS installer to use Tcl/Tk 8.6.12.

## C API

- [bpo-39026](https://bugs.python.org/issue?@action=redirect&bpo=39026) [https://bugs.python.org/issue?@action=redirect&bpo=39026]: Fix `Python.h` to build C extensions with Xcode: remove a relative include from `Include/cpython/pystate.h`.

# Python 3.11.0 alpha 2

*Release date: 2021-11-05*

## Core and Builtins

- [bpo-45716](https://bugs.python.org/issue?@action=redirect&bpo=45716) [https://bugs.python.org/issue?@action=redirect&bpo=45716]: Improve the **`SyntaxError`** message when using `True`, `None` or `False` as keywords in a function call. Patch by Pablo Galindo.
- [bpo-45688](https://bugs.python.org/issue?@action=redirect&bpo=45688) [https://bugs.python.org/issue?@action=redirect&bpo=45688]: **`sys.stdlib_module_names`** now contains the macOS-specific module **`_scproxy`**.
- [bpo-45379](https://bugs.python.org/issue?@action=redirect&bpo=45379) [https://bugs.python.org/issue?@action=redirect&bpo=45379]

@action=redirect&bpo=45379]: Clarify `ImportError` message when we try to explicitly import a frozen module but frozen modules are disabled.

- [bpo-44525](https://bugs.python.org/issue?@action=redirect&bpo=44525) [https://bugs.python.org/issue?@action=redirect&bpo=44525]: Specialize simple calls to Python functions (no starargs, keyword dict, or closure)

- [bpo-45530](https://bugs.python.org/issue?@action=redirect&bpo=45530) [https://bugs.python.org/issue?@action=redirect&bpo=45530]: Cases of sorting using tuples as keys may now be significantly faster in some cases. Patch by Tim Peters.

The order of the result may differ from earlier releases if the tuple elements don't define a total ordering (see [Value comparisons](#) for information on total ordering). It's generally true that the result of sorting simply isn't well-defined in the absence of a total ordering on list elements.

- [bpo-45526](https://bugs.python.org/issue?@action=redirect&bpo=45526) [https://bugs.python.org/issue?@action=redirect&bpo=45526]: In `obmalloc`, set `ADDRESS_BITS` to not ignore any bits (ignored 16 before). That is safer in the case that the kernel gives user-space virtual addresses that span a range greater than 48 bits.
- [bpo-30570](https://bugs.python.org/issue?@action=redirect&bpo=30570) [https://bugs.python.org/issue?@action=redirect&bpo=30570]: Fixed a crash in `issubclass()` from infinite recursion when searching pathological `__bases__` tuples.
- [bpo-45521](https://bugs.python.org/issue?@action=redirect&bpo=45521) [https://bugs.python.org/issue?@action=redirect&bpo=45521]: Fix a bug in the `obmalloc` radix tree code. On 64-bit machines, the bug causes the tree to hold 46-bits of virtual addresses, rather than the intended 48-bits.
- [bpo-45494](https://bugs.python.org/issue?@action=redirect&bpo=45494) [https://bugs.python.org/issue?@action=redirect&bpo=45494]: Fix parser crash when reporting errors involving invalid continuation characters. Patch by Pablo Galindo.
- [bpo-45445](https://bugs.python.org/issue?@action=redirect&bpo=45445) [https://bugs.python.org/issue?@action=redirect&bpo=45445]

@action=redirect&bpo=45445]: Python now fails to initialize if it finds an invalid **-x** option in the command line. Patch by Pablo Galindo.

- [bpo-45340](https://bugs.python.org/issue?@action=redirect&bpo=45340) [https://bugs.python.org/issue?@action=redirect&bpo=45340]: Object attributes are held in an array instead of a dictionary. An object's dictionary are created lazily, only when needed. Reduces the memory consumption of a typical Python object by about 30%. Patch by Mark Shannon.
- [bpo-45408](https://bugs.python.org/issue?@action=redirect&bpo=45408) [https://bugs.python.org/issue?@action=redirect&bpo=45408]: Fix a crash in the parser when reporting tokenizer errors that occur at the same time unclosed parentheses are detected. Patch by Pablo Galindo.
- [bpo-29410](https://bugs.python.org/issue?@action=redirect&bpo=29410) [https://bugs.python.org/issue?@action=redirect&bpo=29410]: Add SipHash13 for string hash algorithm and use it by default.
- [bpo-45385](https://bugs.python.org/issue?@action=redirect&bpo=45385) [https://bugs.python.org/issue?@action=redirect&bpo=45385]: Fix reference leak from descr\_check. Patch by Donghee Na.
- [bpo-45367](https://bugs.python.org/issue?@action=redirect&bpo=45367) [https://bugs.python.org/issue?@action=redirect&bpo=45367]: Specialized the BINARY\_MULTIPLY opcode to BINARY\_MULTIPLY\_INT and BINARY\_MULTIPLY\_FLOAT using the PEP 659 machinery.
- [bpo-21736](https://bugs.python.org/issue?@action=redirect&bpo=21736) [https://bugs.python.org/issue?@action=redirect&bpo=21736]: Frozen stdlib modules now have `__file__` to the .py file they would otherwise be loaded from, if possible. For packages, `__path__` now has the correct entry instead of being an empty list, which allows unfrozen submodules to be imported. These are set only if the stdlib directory is known when the runtime is initialized. Note that the file at `__file__` is not guaranteed to exist. None of this affects non-stdlib frozen modules nor, for now, frozen modules imported using `PyImport_ImportFrozenModule()`. Also, at the moment `co_filename` is not updated for the module.

- [bpo-45020](https://bugs.python.org/issue?@action=redirect&bpo=45020) [https://bugs.python.org/issue?@action=redirect&bpo=45020]: For frozen stdlib modules, record the original module name as `module.__spec__.loader_state.origname`. If the value is different than `module.__spec__.name` then the module was defined as an alias in Tools/scripts/freeze\_modules.py. If it is `None` then the module comes from a source file outside the stdlib.
- [bpo-45324](https://bugs.python.org/issue?@action=redirect&bpo=45324) [https://bugs.python.org/issue?@action=redirect&bpo=45324]: In `FrozenImporter.find_spec()`, we now preserve the information needed in `exec_module()` to load the module. This change mostly impacts internal details, rather than changing the importer's behavior.
- [bpo-45292](https://bugs.python.org/issue?@action=redirect&bpo=45292) [https://bugs.python.org/issue?@action=redirect&bpo=45292]: Implement [PEP 654](https://peps.python.org/pep-0654/) [https://peps.python.org/pep-0654/]. Add [ExceptionGroup](#) and [BaseExceptionGroup](#). Update traceback display code.
- [bpo-40116](https://bugs.python.org/issue?@action=redirect&bpo=40116) [https://bugs.python.org/issue?@action=redirect&bpo=40116]: Change to the implementation of split dictionaries. Classes where the instances differ either in the exact set of attributes, or in the order in which those attributes are set, can still share keys. This should have no observable effect on users of Python or the C-API. Patch by Mark Shannon.
- [bpo-44050](https://bugs.python.org/issue?@action=redirect&bpo=44050) [https://bugs.python.org/issue?@action=redirect&bpo=44050]: Extensions that indicate they use global state (by setting `m_size` to -1) can again be used in multiple interpreters. This reverts to behavior of Python 3.8.
- [bpo-44525](https://bugs.python.org/issue?@action=redirect&bpo=44525) [https://bugs.python.org/issue?@action=redirect&bpo=44525]: Setup initial specialization infrastructure for the `CALL_FUNCTION` opcode. Implemented initial specializations for C function calls:
  - `CALL_FUNCTION_BUILTIN_O` for `METH_O` flag.
  - `CALL_FUNCTION_BUILTIN_FAST` for `METH_FASTCALL` flag without keywords.

- `CALL_FUNCTION_LEN` for `len(o)`.
- `CALL_FUNCTION_ISINSTANCE` for `isinstance(o, t)`.
- [bpo-44511](https://bugs.python.org/issue?@action=redirect&bpo=44511) [https://bugs.python.org/issue?@action=redirect&bpo=44511]: Improve the generated bytecode for class and mapping patterns.
- [bpo-43706](https://bugs.python.org/issue?@action=redirect&bpo=43706) [https://bugs.python.org/issue?@action=redirect&bpo=43706]: Speed up calls to `enumerate()` by using the [PEP 590](https://peps.python.org/pep-0590/) [https://peps.python.org/pep-0590/] `vectorcall` calling convention. Patch by Donghee Na.

## Library

- [bpo-45679](https://bugs.python.org/issue?@action=redirect&bpo=45679) [https://bugs.python.org/issue?@action=redirect&bpo=45679]: Fix caching of multi-value [typing.Literal](#). `Literal[True, 2]` is no longer equal to `Literal[1, 2]`.
- [bpo-42064](https://bugs.python.org/issue?@action=redirect&bpo=42064) [https://bugs.python.org/issue?@action=redirect&bpo=42064]: Convert [sqlite3](#) to multi-phase initialisation (PEP 489). Patches by Erlend E. Aasland.
- [bpo-45438](https://bugs.python.org/issue?@action=redirect&bpo=45438) [https://bugs.python.org/issue?@action=redirect&bpo=45438]: Fix typing.Signature string representation for generic builtin types.
- [bpo-45613](https://bugs.python.org/issue?@action=redirect&bpo=45613) [https://bugs.python.org/issue?@action=redirect&bpo=45613]: [sqlite3](#) now sets [sqlite3.threadafety](#) based on the default threading mode the underlying SQLite library has been compiled with. Patch by Erlend E. Aasland.
- [bpo-45574](https://bugs.python.org/issue?@action=redirect&bpo=45574) [https://bugs.python.org/issue?@action=redirect&bpo=45574]: Fix warning about `print_escape` being unused.
- [bpo-45581](https://bugs.python.org/issue?@action=redirect&bpo=45581) [https://bugs.python.org/issue?@action=redirect&bpo=45581]: [sqlite3.connect\(\)](#) now correctly raises [MemoryError](#) if the underlying SQLite API

signals memory error. Patch by Erlend E. Aasland.

- [bpo-45557](https://bugs.python.org/issue?@action=redirect&bpo=45557) [https://bugs.python.org/issue?@action=redirect&bpo=45557]: `pprint.pprint()` now handles `underscore_numbers` correctly. Previously it was always setting it to `False`.
- [bpo-44019](https://bugs.python.org/issue?@action=redirect&bpo=44019) [https://bugs.python.org/issue?@action=redirect&bpo=44019]: Add `operator.call()` to `operator.__all__`. Patch by Kreuzada.
- [bpo-42174](https://bugs.python.org/issue?@action=redirect&bpo=42174) [https://bugs.python.org/issue?@action=redirect&bpo=42174]: `shutil.get_terminal_size()` now falls back to sane values if the column or line count are 0.
- [bpo-35673](https://bugs.python.org/issue?@action=redirect&bpo=35673) [https://bugs.python.org/issue?@action=redirect&bpo=35673]: Improve the introspectability of the `__loader__` attribute for namespace packages. `importlib.machinery.NamespaceLoader` is now public, and implements the `importlib.abc.InspectLoader` interface. `_NamespaceLoader` is kept for backward compatibility.
- [bpo-45515](https://bugs.python.org/issue?@action=redirect&bpo=45515) [https://bugs.python.org/issue?@action=redirect&bpo=45515]: Add references to `zoneinfo` in the `datetime` documentation, mostly replacing outdated references to `dateutil.tz`. Change by Paul Ganssle.
- [bpo-45475](https://bugs.python.org/issue?@action=redirect&bpo=45475) [https://bugs.python.org/issue?@action=redirect&bpo=45475]: Reverted optimization of iterating `gzip.GzipFile`, `bz2.BZ2File`, and `lzma.LZMAFile` (see [bpo-43787](https://bugs.python.org/issue?@action=redirect&bpo=43787) [https://bugs.python.org/issue?@action=redirect&bpo=43787]) because it caused regression when user iterate them without having reference of them. Patch by Inada Naoki.
- [bpo-45489](https://bugs.python.org/issue?@action=redirect&bpo=45489) [https://bugs.python.org/issue?@action=redirect&bpo=45489]: Update `ForwardRef` to support `|` operator. Patch by Donghee Na.

- [bpo-42222](https://bugs.python.org/issue?@action=redirect&bpo=42222) [https://bugs.python.org/issue?@action=redirect&bpo=42222]: Removed deprecated support for float arguments in *randrange()*.
- [bpo-45428](https://bugs.python.org/issue?@action=redirect&bpo=45428) [https://bugs.python.org/issue?@action=redirect&bpo=45428]: Fix a regression in `py_compile` when reading filenames from standard input.
- [bpo-45467](https://bugs.python.org/issue?@action=redirect&bpo=45467) [https://bugs.python.org/issue?@action=redirect&bpo=45467]: Fix incremental decoder and stream reader in the “raw-unicode-escape” codec. Previously they failed if the escape sequence was split.
- [bpo-45461](https://bugs.python.org/issue?@action=redirect&bpo=45461) [https://bugs.python.org/issue?@action=redirect&bpo=45461]: Fix incremental decoder and stream reader in the “unicode-escape” codec. Previously they failed if the escape sequence was split.
- [bpo-45239](https://bugs.python.org/issue?@action=redirect&bpo=45239) [https://bugs.python.org/issue?@action=redirect&bpo=45239]: Fixed `email.utils.parsedate_tz()` crashing with `UnboundLocalError` on certain invalid input instead of returning `None`. Patch by Ben Hoyt.
- [bpo-45417](https://bugs.python.org/issue?@action=redirect&bpo=45417) [https://bugs.python.org/issue?@action=redirect&bpo=45417]: Fix quadratic behaviour in the `enum` module: Creation of `enum` classes with a lot of entries was quadratic.
- [bpo-45249](https://bugs.python.org/issue?@action=redirect&bpo=45249) [https://bugs.python.org/issue?@action=redirect&bpo=45249]: Fix the behaviour of `traceback.print_exc()` when displaying the caret when the `end_offset` in the exception is set to 0. Patch by Pablo Galindo
- [bpo-45416](https://bugs.python.org/issue?@action=redirect&bpo=45416) [https://bugs.python.org/issue?@action=redirect&bpo=45416]: Fix use of `asyncio.Condition` with explicit `asyncio.Lock` objects, which was a regression due to removal of explicit loop arguments. Patch by Joongi Kim.

- [bpo-20028](https://bugs.python.org/issue?@action=redirect&bpo=20028) [https://bugs.python.org/issue?@action=redirect&bpo=20028]: Empty escapechar/quotechar is not allowed when initializing `csv.Dialect`. Patch by Vajrasky Kok and Donghee Na.
- [bpo-44904](https://bugs.python.org/issue?@action=redirect&bpo=44904) [https://bugs.python.org/issue?@action=redirect&bpo=44904]: Fix bug in the `doctest` module that caused it to fail if a docstring included an example with a classmethod property. Patch by Alex Waygood.
- [bpo-45406](https://bugs.python.org/issue?@action=redirect&bpo=45406) [https://bugs.python.org/issue?@action=redirect&bpo=45406]: Make `inspect.getmodule()` catch `FileNotFoundError` raised by `:func:inspect.getabsfile`, and return `None` to indicate that the module could not be determined.
- [bpo-45411](https://bugs.python.org/issue?@action=redirect&bpo=45411) [https://bugs.python.org/issue?@action=redirect&bpo=45411]: Add extensions for files containing subtitles - `.srt` & `.vtt` - to the `mimetypes.py` module.
- [bpo-10716](https://bugs.python.org/issue?@action=redirect&bpo=10716) [https://bugs.python.org/issue?@action=redirect&bpo=10716]: Migrated pydoc to HTML5 (without changing the look of it). Side effect is to update `xmlrpc's ServerHTMLDoc` which now uses the CSS too. `cgitb` now relies less on pydoc (as it can't use the CSS file).
- [bpo-27580](https://bugs.python.org/issue?@action=redirect&bpo=27580) [https://bugs.python.org/issue?@action=redirect&bpo=27580]: Add support of null characters in `csv`.
- [bpo-45262](https://bugs.python.org/issue?@action=redirect&bpo=45262) [https://bugs.python.org/issue?@action=redirect&bpo=45262]: Prevent use-after-free in `asyncio`. Make sure the cached running loop holder gets cleared on dealloc to prevent use-after-free in `get_running_loop`
- [bpo-45386](https://bugs.python.org/issue?@action=redirect&bpo=45386) [https://bugs.python.org/issue?@action=redirect&bpo=45386]: Make `xmlrpc.client` more robust to C runtimes where the underlying C `strftime` function results in a `ValueError` when testing for year formatting options.

- [bpo-20028](https://bugs.python.org/issue?@action=redirect&bpo=20028) [https://bugs.python.org/issue?@action=redirect&bpo=20028]: Improve error message of `csv.Dialect` when initializing. Patch by Vajrasky Kok and Donghee Na.
- [bpo-45343](https://bugs.python.org/issue?@action=redirect&bpo=45343) [https://bugs.python.org/issue?@action=redirect&bpo=45343]: Update bundled pip to 21.2.4 and setuptools to 58.1.0
- [bpo-45328](https://bugs.python.org/issue?@action=redirect&bpo=45328) [https://bugs.python.org/issue?@action=redirect&bpo=45328]: Fixed `http.client.HTTPConnection` to work properly in OSs that don't support the `TCP_NODELAY` socket option.
- [bpo-45243](https://bugs.python.org/issue?@action=redirect&bpo=45243) [https://bugs.python.org/issue?@action=redirect&bpo=45243]: Add `setlimit()` and `getlimit()` to `sqlite3.Connection` for setting and getting SQLite limits by connection basis. Patch by Erlend E. Aasland.
- [bpo-45320](https://bugs.python.org/issue?@action=redirect&bpo=45320) [https://bugs.python.org/issue?@action=redirect&bpo=45320]: Removed from the `inspect` module:
  - the `getargspec` function, deprecated since Python 3.0; use `inspect.signature()` or `inspect.getfullargspec()` instead.
  - the `formatargspec` function, deprecated since Python 3.5; use the `inspect.signature()` function and `Signature` object directly.
  - the undocumented `Signature.from_builtin` and `Signature.from_function` functions, deprecated since Python 3.5; use the `Signature.from_callable()` method instead.

Patch by Hugo van Kemenade.

- [bpo-45192](https://bugs.python.org/issue?@action=redirect&bpo=45192) [https://bugs.python.org/issue?@action=redirect&bpo=45192]: Fix the

`tempfile._infer_return_type` function so that the `dir` argument of the `tempfile` functions accepts an object implementing the `os.PathLike` protocol.

Patch by Kyungmin Lee.

- [bpo-45160](https://bugs.python.org/issue?@action=redirect&bpo=45160) [https://bugs.python.org/issue?@action=redirect&bpo=45160]: When tracing a tkinter variable used by a ttk OptionMenu, callbacks are no longer made twice.
- [bpo-25625](https://bugs.python.org/issue?@action=redirect&bpo=25625) [https://bugs.python.org/issue?@action=redirect&bpo=25625]: Added non parallel-safe `chdir()` context manager to change the current working directory and then restore it on exit. Simple wrapper around `chdir()`.
- [bpo-24139](https://bugs.python.org/issue?@action=redirect&bpo=24139) [https://bugs.python.org/issue?@action=redirect&bpo=24139]: Add support for SQLite extended result codes in `sqlite3.Error`. Patch by Erlend E. Aasland.
- [bpo-24444](https://bugs.python.org/issue?@action=redirect&bpo=24444) [https://bugs.python.org/issue?@action=redirect&bpo=24444]: Fixed an error raised in `argparse` help display when help for an option is set to 1 + blank spaces or when `choices` arg is an empty container.
- [bpo-44547](https://bugs.python.org/issue?@action=redirect&bpo=44547) [https://bugs.python.org/issue?@action=redirect&bpo=44547]: Implement `Fraction.__int__`, so that a `fractions.Fraction` instance `f` passes an `isinstance(f, typing.SupportsInt)` check.
- [bpo-40321](https://bugs.python.org/issue?@action=redirect&bpo=40321) [https://bugs.python.org/issue?@action=redirect&bpo=40321]: Adds support for HTTP 308 redirects to `urllib`. See [RFC 7538](https://datatracker.ietf.org/doc/html/rfc7538.html) [https://datatracker.ietf.org/doc/html/rfc7538.html] for details. Patch by Jochem Schuilenklopper.
- [bpo-41374](https://bugs.python.org/issue?@action=redirect&bpo=41374) [https://bugs.python.org/issue?@action=redirect&bpo=41374]: Ensure that `socket.TCP_*` constants are exposed on Cygwin 3.1.6 and greater.

- [bpo-35970](https://bugs.python.org/issue?@action=redirect&bpo=35970) [https://bugs.python.org/issue?@action=redirect&bpo=35970]: Add help flag to the base64 module's command line interface. Patch contributed by Robert Kuskas.

## Documentation

- [bpo-45726](https://bugs.python.org/issue?@action=redirect&bpo=45726) [https://bugs.python.org/issue?@action=redirect&bpo=45726]: Improve documentation for `functools.singledispatch()` and `functools.singledispatchmethod`.
- [bpo-45680](https://bugs.python.org/issue?@action=redirect&bpo=45680) [https://bugs.python.org/issue?@action=redirect&bpo=45680]: Amend the docs on `GenericAlias` objects to clarify that non-container classes can also implement `__class_getitem__`. Patch contributed by Alex Waygood.
- [bpo-45618](https://bugs.python.org/issue?@action=redirect&bpo=45618) [https://bugs.python.org/issue?@action=redirect&bpo=45618]: Update Sphinx version used to build the documentation to 4.2.0. Patch by Maciej Olko.
- [bpo-45655](https://bugs.python.org/issue?@action=redirect&bpo=45655) [https://bugs.python.org/issue?@action=redirect&bpo=45655]: Add a new “relevant PEPs” section to the top of the documentation for the `typing` module. Patch by Alex Waygood.
- [bpo-45604](https://bugs.python.org/issue?@action=redirect&bpo=45604) [https://bugs.python.org/issue?@action=redirect&bpo=45604]: Add `level` argument to `multiprocessing.log_to_stderr` function docs.
- [bpo-45516](https://bugs.python.org/issue?@action=redirect&bpo=45516) [https://bugs.python.org/issue?@action=redirect&bpo=45516]: Add protocol description to the `importlib.abc.TraversableResources` documentation.
- [bpo-45464](https://bugs.python.org/issue?@action=redirect&bpo=45464) [https://bugs.python.org/issue?@action=redirect&bpo=45464]: Mention in the documentation of `Built-in Exceptions` that inheriting from multiple exception types in a single subclass is not recommended due to possible memory layout incompatibility.
- [bpo-45449](https://bugs.python.org/issue?@action=redirect&bpo=45449) [https://bugs.python.org/issue?@action=redirect&bpo=45449]: Add note about [PEP 585](https://peps.python.org/pep-0585/) [https://peps.python.org/pep-0585/] in `collections.abc`.
- [bpo-45516](https://bugs.python.org/issue?@action=redirect&bpo=45516) [https://bugs.python.org/issue?@action=redirect&bpo=45516]: Add protocol description to the `importlib.abc.Traversable` documentation.

- [bpo-20692](https://bugs.python.org/issue?@action=redirect&bpo=20692) [https://bugs.python.org/issue?@action=redirect&bpo=20692]: Add Programming FAQ entry explaining that int literal attribute access requires either a space after or parentheses around the literal.

## Tests

- [bpo-45678](https://bugs.python.org/issue?@action=redirect&bpo=45678) [https://bugs.python.org/issue?@action=redirect&bpo=45678]: Add tests for scenarios in which `functools.singledispatchmethod` is stacked on top of a method that has already been wrapped by two other decorators. Patch by Alex Waygood.
- [bpo-45578](https://bugs.python.org/issue?@action=redirect&bpo=45578) [https://bugs.python.org/issue?@action=redirect&bpo=45578]: Add tests for `dis.distb()`
- [bpo-45678](https://bugs.python.org/issue?@action=redirect&bpo=45678) [https://bugs.python.org/issue?@action=redirect&bpo=45678]: Add tests to ensure that `functools.singledispatchmethod` correctly wraps the attributes of the target function.
- [bpo-45668](https://bugs.python.org/issue?@action=redirect&bpo=45668) [https://bugs.python.org/issue?@action=redirect&bpo=45668]: PGO tests now pass when Python is built without test extension modules.
- [bpo-45577](https://bugs.python.org/issue?@action=redirect&bpo=45577) [https://bugs.python.org/issue?@action=redirect&bpo=45577]: Add subtests for all `pickle` protocols in `test_zoneinfo`.
- [bpo-45566](https://bugs.python.org/issue?@action=redirect&bpo=45566) [https://bugs.python.org/issue?@action=redirect&bpo=45566]: Fix `test_frozen_pickle` in `test_dataclasses` to check all `pickle` versions.
- [bpo-43592](https://bugs.python.org/issue?@action=redirect&bpo=43592) [https://bugs.python.org/issue?@action=redirect&bpo=43592]: `test.libregtest` now raises the soft resource limit for the maximum number of file descriptors when the default is too low for our test suite as was often the case on macOS.
- [bpo-39679](https://bugs.python.org/issue?@action=redirect&bpo=39679) [https://bugs.python.org/issue?@action=redirect&bpo=39679]: Add more test cases for `@functools.singledispatchmethod` when combined with `@classmethod` or `@staticmethod`.
- [bpo-45410](https://bugs.python.org/issue?@action=redirect&bpo=45410) [https://bugs.python.org/issue?@action=redirect&bpo=45410]: When `libregtest` spawns a worker process, `stderr` is now written into `stdout` to keep messages order. Use a single pipe for `stdout` and `stderr`, rather than two

pipes. Previously, messages were out of order which made analysis of buildbot logs harder Patch by Victor Stinner.

- [bpo-45402](https://bugs.python.org/issue?@action=redirect&bpo=45402) [https://bugs.python.org/issue?@action=redirect&bpo=45402]: Fix `test_tools.test_sundry()` when Python is built out of tree: fix how the `freeze_modules.py` tool locates the `_freeze_module` program. Patch by Victor Stinner.
- [bpo-45403](https://bugs.python.org/issue?@action=redirect&bpo=45403) [https://bugs.python.org/issue?@action=redirect&bpo=45403]: Fix `test_sys.test_stdlib_dir()` when Python is built outside the source tree: compare normalized paths. Patch by Victor Stinner.
- [bpo-45400](https://bugs.python.org/issue?@action=redirect&bpo=45400) [https://bugs.python.org/issue?@action=redirect&bpo=45400]: Fix `test_name_error_suggestions_do_not_trigger_for_too_many_locals()` of `test_exceptions` if a directory name contains “a1” (like “Python-3.11.0a1”): use a stricter regular expression. Patch by Victor Stinner.
- [bpo-10572](https://bugs.python.org/issue?@action=redirect&bpo=10572) [https://bugs.python.org/issue?@action=redirect&bpo=10572]: Rename `sqlite3` tests from `test_sqlite` to `test_sqlite3`, and relocate them to `Lib/test/test_sqlite3`. Patch by Erlend E. Aasland.

## Build

- [bpo-43158](https://bugs.python.org/issue?@action=redirect&bpo=43158) [https://bugs.python.org/issue?@action=redirect&bpo=43158]: `setup.py` now uses values from configure script to build the `_uuid` extension module. Configure now detects util-linux’s `libuuid`, too.
- [bpo-45666](https://bugs.python.org/issue?@action=redirect&bpo=45666) [https://bugs.python.org/issue?@action=redirect&bpo=45666]: Fix warning of `swprintf` and `%s` usage in `_testembed.c`
- [bpo-45548](https://bugs.python.org/issue?@action=redirect&bpo=45548) [https://bugs.python.org/issue?@action=redirect&bpo=45548]: `Modules/Setup` and `Modules/makesetup` have been improved. The `Setup` file now contains working rules for all extensions. Outdated comments have been removed. Rules defined by `makesetup` track dependencies correctly.
- [bpo-45548](https://bugs.python.org/issue?@action=redirect&bpo=45548) [https://bugs.python.org/issue?@action=redirect&bpo=45548]: The `math` and `cmath` implementation now require a C99 compatible `libm` and no longer ship with workarounds for missing `acosh`, `asinh`, `atanh`,

expm1, and log1p functions.

- [bpo-45595](https://bugs.python.org/issue?@action=redirect&bpo=45595) [https://bugs.python.org/issue?@action=redirect&bpo=45595]: `setup.py` and `makesetup` now track build dependencies on all Python header files and module specific header files.
- [bpo-45571](https://bugs.python.org/issue?@action=redirect&bpo=45571) [https://bugs.python.org/issue?@action=redirect&bpo=45571]: `Modules/Setup` now use `PY_CFLAGS_NODIST` instead of `PY_CFLAGS` to compile shared modules.
- [bpo-45570](https://bugs.python.org/issue?@action=redirect&bpo=45570) [https://bugs.python.org/issue?@action=redirect&bpo=45570]: `pyexpat` and `_elementtree` no longer define obsolete macros `HAVE_EXPAT_CONFIG_H` and `USE_PYEXPAT_CAPI`. `XML_POOR_ENTROPY` is now defined in `expat_config.h`.
- [bpo-43974](https://bugs.python.org/issue?@action=redirect&bpo=43974) [https://bugs.python.org/issue?@action=redirect&bpo=43974]: `setup.py` no longer defines `Py_BUILD_CORE_MODULE`. Instead every module, that uses the internal API, defines the macro.
- [bpo-45548](https://bugs.python.org/issue?@action=redirect&bpo=45548) [https://bugs.python.org/issue?@action=redirect&bpo=45548]: Fill in missing entries in `Modules/Setup`.
- [bpo-45532](https://bugs.python.org/issue?@action=redirect&bpo=45532) [https://bugs.python.org/issue?@action=redirect&bpo=45532]: Update `sys.version` to use `main` as fallback information. Patch by Jeong YunWon.
- [bpo-45536](https://bugs.python.org/issue?@action=redirect&bpo=45536) [https://bugs.python.org/issue?@action=redirect&bpo=45536]: The `configure` script now checks whether OpenSSL headers and libraries provide required APIs. Most common APIs are verified. The check detects outdated or missing OpenSSL. Failures do not stop configure.
- [bpo-45221](https://bugs.python.org/issue?@action=redirect&bpo=45221) [https://bugs.python.org/issue?@action=redirect&bpo=45221]: Fixed regression in handling of `LDFLAGS` and `CPPFLAGS` options where `argparse.parse_known_args()` could interpret an option as one of the built-in command line argument, for example `-h` for help.
- [bpo-45440](https://bugs.python.org/issue?@action=redirect&bpo=45440) [https://bugs.python.org/issue?@action=redirect&bpo=45440]: Building Python now requires a `C99` `<math.h>` header file providing the following functions: `copysign()`, `hypot()`, `isfinite()`, `isinf()`,

`isnan()`, `round()`. Patch by Victor Stinner.

- [bpo-45405](https://bugs.python.org/issue?@action=redirect&bpo=45405) [https://bugs.python.org/issue?@action=redirect&bpo=45405]: Prevent internal configure error when running configure with recent versions of non-Apple clang. Patch by David Bohman.
- [bpo-45433](https://bugs.python.org/issue?@action=redirect&bpo=45433) [https://bugs.python.org/issue?@action=redirect&bpo=45433]: Avoid linking libpython with libcrypt.

## Windows

- [bpo-43652](https://bugs.python.org/issue?@action=redirect&bpo=43652) [https://bugs.python.org/issue?@action=redirect&bpo=43652]: Update Tcl/Tk to 8.6.11, actually this time. The previous update incorrectly included 8.6.10.
- [bpo-45337](https://bugs.python.org/issue?@action=redirect&bpo=45337) [https://bugs.python.org/issue?@action=redirect&bpo=45337]: venv now warns when the created environment may need to be accessed at a different path, due to redirections, links or junctions. It also now correctly installs or upgrades components when the alternate path is required.
- [bpo-43851](https://bugs.python.org/issue?@action=redirect&bpo=43851) [https://bugs.python.org/issue?@action=redirect&bpo=43851]: Build SQLite SQLITE\_OMIT\_AUTOINIT on Windows. Patch by Erlend E. Aasland.

## macOS

- [bpo-44828](https://bugs.python.org/issue?@action=redirect&bpo=44828) [https://bugs.python.org/issue?@action=redirect&bpo=44828]: Avoid tkinter file dialog failure on macOS 12 Monterey when using the Tk 8.6.11 provided by python.org macOS installers. Patch by Marc Culler of the Tk project.

## IDLE

- [bpo-45495](https://bugs.python.org/issue?@action=redirect&bpo=45495) [https://bugs.python.org/issue?@action=redirect&bpo=45495]: Add context keywords 'case' and 'match' to completions list.

## C API

- [bpo-29103](https://bugs.python.org/issue?@action=redirect&bpo=29103) [https://bugs.python.org/issue?@action=redirect&bpo=29103]: `PyType_FromSpec*` now copies the class name from the spec to a buffer owned by the class, so the original can be safely deallocated. Patch by Petr Viktorin.
- [bpo-45522](https://bugs.python.org/issue?@action=redirect&bpo=45522) [https://bugs.python.org/issue?@action=redirect&bpo=45522]: The internal freelists for frame, float, list, dict, async generators, and context objects can now be disabled.
- [bpo-35134](https://bugs.python.org/issue?@action=redirect&bpo=35134) [https://bugs.python.org/issue?@action=redirect&bpo=35134]: Exclude `PyWeakref_GET_OBJECT()` from the limited C API. It never worked since the `PyWeakReference` structure is opaque in the limited C API.
- [bpo-35081](https://bugs.python.org/issue?@action=redirect&bpo=35081) [https://bugs.python.org/issue?@action=redirect&bpo=35081]: Move the `interpreteridobject.h` header file from `Include/` to `Include/internal/`. It only provides private functions. Patch by Victor Stinner.
- [bpo-35134](https://bugs.python.org/issue?@action=redirect&bpo=35134) [https://bugs.python.org/issue?@action=redirect&bpo=35134]: The non-limited API files `cellobject.h`, `classobject.h`, `context.h`, `funcobject.h`, `genobject.h` and `longintrepr.h` have been moved to the `Include/cpython` directory. Moreover, the `eval.h` header file was removed. These files must not be included directly, as they are already included in `Python.h`: [Include Files](#). If they have been included directly, consider including `Python.h` instead. Patch by Victor Stinner.
- [bpo-45474](https://bugs.python.org/issue?@action=redirect&bpo=45474) [https://bugs.python.org/issue?@action=redirect&bpo=45474]: The following items are no longer available when `Py_LIMITED_API` is defined:
  - `PyMarshal_WriteLongToFile()`
  - `PyMarshal_WriteObjectToFile()`

- `PyMarshal_ReadObjectFromString()`
- `PyMarshal_WriteObjectToString()`
- the `Py_MARSHAL_VERSION` macro

These are not part of the [limited API](#).

Patch by Victor Stinner.

- [bpo-45434](#) [<https://bugs.python.org/issue?@action=redirect&bpo=45434>]: Remove the `pystrex.h` header file. It only contains private functions. C extensions should only include the main `<Python.h>` header file. Patch by Victor Stinner.
- [bpo-45440](#) [<https://bugs.python.org/issue?@action=redirect&bpo=45440>]: Remove the `Py_FORCE_DOUBLE()` macro. It was used by the `Py_IS_INFINITY()` macro. Patch by Victor Stinner.
- [bpo-45434](#) [<https://bugs.python.org/issue?@action=redirect&bpo=45434>]: `<Python.h>` no longer includes the header files `<stdlib.h>`, `<stdio.h>`, `<errno.h>` and `<string.h>` when the `Py_LIMITED_API` macro is set to `0x030b0000` (Python 3.11) or higher. C extensions should explicitly include the header files after `#include <Python.h>`. Patch by Victor Stinner.
- [bpo-41123](#) [<https://bugs.python.org/issue?@action=redirect&bpo=41123>]: Remove `Py_UNICODE_COPY()` and `Py_UNICODE_FILL()` macros, deprecated since Python 3.3. Use `PyUnicode_CopyCharacters()` or `memcpy()` (`wchar_t* string`), and `PyUnicode_Fill()` functions instead. Patch by Victor Stinner.
- [bpo-45412](#) [<https://bugs.python.org/issue?@action=redirect&bpo=45412>]: Remove the following math macros using the `errno` variable:
  - `Py_ADJUST_ERANGE1()`
  - `Py_ADJUST_ERANGE2()`
  - `Py_OVERFLOWED()`

- `Py_SET_ERANGE_IF_OVERFLOW()`
- `Py_SET_ERRNO_ON_MATH_ERROR()`

Patch by Victor Stinner.

- [bpo-45395](https://bugs.python.org/issue?@action=redirect&bpo=45395) [https://bugs.python.org/issue?@action=redirect&bpo=45395]: Custom frozen modules (the array set to `PyImport_FrozenModules`) are now treated as additions, rather than replacing all the default frozen modules. Frozen stdlib modules can still be disabled by setting the “code” field of the custom array entry to `NULL`.
- [bpo-43760](https://bugs.python.org/issue?@action=redirect&bpo=43760) [https://bugs.python.org/issue?@action=redirect&bpo=43760]: Add new `PyThreadState_EnterTracing()`, and `PyThreadState_LeaveTracing()` functions to the limited C API to suspend and resume tracing and profiling. Patch by Victor Stinner.
- [bpo-44220](https://bugs.python.org/issue?@action=redirect&bpo=44220) [https://bugs.python.org/issue?@action=redirect&bpo=44220]: `PyStructSequence_UnnamedField` is added to the Stable ABI.

## Python 3.11.0 alpha 1

*Release date: 2021-10-05*

### Security

- [bpo-42278](https://bugs.python.org/issue?@action=redirect&bpo=42278) [https://bugs.python.org/issue?@action=redirect&bpo=42278]: Replaced usage of `tempfile.mktemp()` with `TemporaryDirectory` to avoid a potential race condition.
- [bpo-44600](https://bugs.python.org/issue?@action=redirect&bpo=44600) [https://bugs.python.org/issue?@action=redirect&bpo=44600]: Fix incorrect line numbers while tracing some failed patterns in `match` statements. Patch by Charles Burkland.
- [bpo-41180](https://bugs.python.org/issue?@action=redirect&bpo=41180) [https://bugs.python.org/issue?@action=redirect&bpo=41180]: Add auditing events to the

**marshal** module, and stop raising `code.__init__` events for every unmarshalled code object. Directly instantiated code objects will continue to raise an event, and audit event handlers should inspect or collect the raw marshal data. This reduces a significant performance overhead when loading from `.pyc` files.

- [bpo-44394](https://bugs.python.org/issue?@action=redirect&bpo=44394) [https://bugs.python.org/issue?@action=redirect&bpo=44394]: Update the vendored copy of libexpat to 2.4.1 (from 2.2.8) to get the fix for the CVE-2013-0340 “Billion Laughs” vulnerability. This copy is most used on Windows and macOS.
- [bpo-43124](https://bugs.python.org/issue?@action=redirect&bpo=43124) [https://bugs.python.org/issue?@action=redirect&bpo=43124]: Made the internal `putcmd` function in **smtpplib** sanitize input for presence of `\r` and `\n` characters to avoid (unlikely) command injection.
- [bpo-44022](https://bugs.python.org/issue?@action=redirect&bpo=44022) [https://bugs.python.org/issue?@action=redirect&bpo=44022]: **http.client** now avoids infinitely reading potential HTTP headers after a 100 Continue status response from the server.

## Core and Builtins

- [bpo-43760](https://bugs.python.org/issue?@action=redirect&bpo=43760) [https://bugs.python.org/issue?@action=redirect&bpo=43760]: The number of hardware branches per instruction dispatch is reduced from two to one by adding a special instruction for tracing. Patch by Mark Shannon.
- [bpo-45061](https://bugs.python.org/issue?@action=redirect&bpo=45061) [https://bugs.python.org/issue?@action=redirect&bpo=45061]: Add a deallocator to the bool type to detect refcount bugs in C extensions which call `Py_DECREF(Py_True)` or `Py_DECREF(Py_False)` by mistake. Detect also refcount bugs when the empty tuple singleton or the Unicode empty string singleton is destroyed by mistake. Patch by Victor Stinner.
- [bpo-24076](https://bugs.python.org/issue?@action=redirect&bpo=24076) [https://bugs.python.org/issue?@action=redirect&bpo=24076]: `sum()` was further optimised for summing up single digit integers.
- [bpo-45190](https://bugs.python.org/issue?@action=redirect&bpo=45190) [https://bugs.python.org/issue?@action=redirect&bpo=45190]

@action=redirect&bpo=45190]: Update Unicode databases to Unicode 14.0.0.

- [bpo-45167](https://bugs.python.org/issue?@action=redirect&bpo=45167) [https://bugs.python.org/issue?@action=redirect&bpo=45167]: Fix deepcopying of `types.GenericAlias` objects.
- [bpo-45155](https://bugs.python.org/issue?@action=redirect&bpo=45155) [https://bugs.python.org/issue?@action=redirect&bpo=45155]: `int.to_bytes()` and `int.from_bytes()` now take a default value of "big" for the `byteorder` argument. `int.to_bytes()` also takes a default value of 1 for the `length` argument.
- [bpo-44219](https://bugs.python.org/issue?@action=redirect&bpo=44219) [https://bugs.python.org/issue?@action=redirect&bpo=44219]: Release the GIL while performing `isatty` system calls on arbitrary file descriptors. In particular, this affects `os.isatty()`, `os.device_encoding()` and `io.TextIOWrapper`. By extension, `io.open()` in text mode is also affected. This change solves a deadlock in `os.isatty()`. Patch by Vincent Michel in [bpo-44219](https://bugs.python.org/issue?@action=redirect&bpo=44219) [https://bugs.python.org/issue?@action=redirect&bpo=44219].
- [bpo-44959](https://bugs.python.org/issue?@action=redirect&bpo=44959) [https://bugs.python.org/issue?@action=redirect&bpo=44959]: Added fallback to extension modules with '.sl' suffix on HP-UX
- [bpo-45121](https://bugs.python.org/issue?@action=redirect&bpo=45121) [https://bugs.python.org/issue?@action=redirect&bpo=45121]: Fix issue where `Protocol.__init__` raises `RecursionError` when it's called directly or via `super()`. Patch provided by Yurii Karabas.
- [bpo-44348](https://bugs.python.org/issue?@action=redirect&bpo=44348) [https://bugs.python.org/issue?@action=redirect&bpo=44348]: The deallocator function of the `BaseException` type now uses the trashcan mechanism to prevent stack overflow. For example, when a `RecursionError` instance is raised, it can be linked to another `RecursionError` through the `__context__` attribute or the `__traceback__` attribute, and then a chain of exceptions is created. When the chain is destroyed, nested

deallocators function calls can crash with a stack overflow if the chain is too long compared to the available stack memory. Patch by Victor Stinner.

- [bpo-45123](https://bugs.python.org/issue?@action=redirect&bpo=45123) [https://bugs.python.org/issue?@action=redirect&bpo=45123]: Fix `PyAiter_Check` to only check for the `__anext__` presence (not for `__aiter__`). Rename `PyAiter_Check` to `PyAlter_Check`, `PyObject_GetAiter` -> `PyObject_GetAlter`.
- [bpo-1514420](https://bugs.python.org/issue?@action=redirect&bpo=1514420) [https://bugs.python.org/issue?@action=redirect&bpo=1514420]: Interpreter no longer attempts to open files with names in angle brackets (like “<string>” or “<stdin>”) when formatting an exception.
- [bpo-41031](https://bugs.python.org/issue?@action=redirect&bpo=41031) [https://bugs.python.org/issue?@action=redirect&bpo=41031]: Match C and Python code formatting of unprintable exceptions and exceptions in the `__main__` module.
- [bpo-37330](https://bugs.python.org/issue?@action=redirect&bpo=37330) [https://bugs.python.org/issue?@action=redirect&bpo=37330]: `open()`, `io.open()`, `codecs.open()` and `fileinput.FileInput` no longer accept ‘U’ (“universal newline”) in the file mode. This flag was deprecated since Python 3.3. Patch by Victor Stinner.
- [bpo-45083](https://bugs.python.org/issue?@action=redirect&bpo=45083) [https://bugs.python.org/issue?@action=redirect&bpo=45083]: When the interpreter renders an exception, its name now has a complete qualname. Previously only the class name was concatenated to the module name, which sometimes resulted in an incorrect full name being displayed.

(This issue impacted only the C code exception rendering, the `traceback` module was using qualname already).

- [bpo-34561](https://bugs.python.org/issue?@action=redirect&bpo=34561) [https://bugs.python.org/issue?@action=redirect&bpo=34561]: List sorting now uses the merge-ordering strategy from Munro and Wild’s `powersort()`. Unlike the former strategy, this is provably near-optimal in the entropy of the distribution of run lengths. Most uses of

`list.sort()` probably won't see a significant time difference, but may see significant improvements in cases where the former strategy was exceptionally poor. However, as these are all fast linear-time approximations to a problem that's inherently at best quadratic-time to solve truly optimally, it's also possible to contrive cases where the former strategy did better.

- [bpo-45056](https://bugs.python.org/issue?@action=redirect&bpo=45056) [https://bugs.python.org/issue?@action=redirect&bpo=45056]: Compiler now removes trailing unused constants from `co_consts`.
- [bpo-45020](https://bugs.python.org/issue?@action=redirect&bpo=45020) [https://bugs.python.org/issue?@action=redirect&bpo=45020]: Add a new command line option, “-X frozen\_modules=[on|off]” to opt out of (or into) using optional frozen modules. This defaults to “on” (or “off” if it's running out of the source tree).
- [bpo-45012](https://bugs.python.org/issue?@action=redirect&bpo=45012) [https://bugs.python.org/issue?@action=redirect&bpo=45012]: In **posix**, release GIL during `stat()`, `lstat()`, and `fstatat()` syscalls made by **os.DirEntry.stat()**. Patch by Stanisław Skonieczny.
- [bpo-45018](https://bugs.python.org/issue?@action=redirect&bpo=45018) [https://bugs.python.org/issue?@action=redirect&bpo=45018]: Fixed pickling of range iterators that iterated for over  $2^{32}$  times.
- [bpo-45000](https://bugs.python.org/issue?@action=redirect&bpo=45000) [https://bugs.python.org/issue?@action=redirect&bpo=45000]: A **SyntaxError** is now raised when trying to delete `__debug__`. Patch by Donghee Na.
- [bpo-44963](https://bugs.python.org/issue?@action=redirect&bpo=44963) [https://bugs.python.org/issue?@action=redirect&bpo=44963]: Implement `send()` and `throw()` methods for `anext_awaitable` objects. Patch by Pablo Galindo.
- [bpo-44962](https://bugs.python.org/issue?@action=redirect&bpo=44962) [https://bugs.python.org/issue?@action=redirect&bpo=44962]: Fix a race in `WeakKeyDictionary`, `WeakValueDictionary` and `WeakSet` when two threads attempt to commit the last pending removal. This fixes `asyncio.create_task` and fixes a data loss in `asyncio.run` where

shutdown\_asyncgens is not run

- [bpo-24234](https://bugs.python.org/issue?@action=redirect&bpo=24234) [https://bugs.python.org/issue?@action=redirect&bpo=24234]: Implement the `__bytes__()` special method on the `bytes` type, so a bytes object `b` passes an `isinstance(b, typing.SupportsBytes)` check.
- [bpo-24234](https://bugs.python.org/issue?@action=redirect&bpo=24234) [https://bugs.python.org/issue?@action=redirect&bpo=24234]: Implement the `__complex__()` special method on the `complex` type, so a complex number `z` passes an `isinstance(z, typing.SupportsComplex)` check.
- [bpo-44954](https://bugs.python.org/issue?@action=redirect&bpo=44954) [https://bugs.python.org/issue?@action=redirect&bpo=44954]: Fixed a corner case bug where the result of `float.fromhex('0x.8p-1074')` was rounded the wrong way.
- [bpo-44947](https://bugs.python.org/issue?@action=redirect&bpo=44947) [https://bugs.python.org/issue?@action=redirect&bpo=44947]: Refine the syntax error for trailing commas in import statements. Patch by Pablo Galindo.
- [bpo-44945](https://bugs.python.org/issue?@action=redirect&bpo=44945) [https://bugs.python.org/issue?@action=redirect&bpo=44945]: Specialize the `BINARY_ADD` instruction using the PEP 659 machinery. Adds five new instructions:
  - `BINARY_ADD_ADAPTIVE`
  - `BINARY_ADD_FLOAT`
  - `BINARY_ADD_INT`
  - `BINARY_ADD_UNICODE`
  - `BINARY_ADD_UNICODE_INPLACE_FAST`
- [bpo-44929](https://bugs.python.org/issue?@action=redirect&bpo=44929) [https://bugs.python.org/issue?@action=redirect&bpo=44929]: Fix some edge cases of `enum.Flag` string representation in the REPL. Patch by Pablo Galindo.
- [bpo-44914](https://bugs.python.org/issue?@action=redirect&bpo=44914) [https://bugs.python.org/issue?@action=redirect&bpo=44914]: Class version tags are no longer

recycled.

This means that a version tag serves as a unique identifier for the state of a class. We rely on this for effective specialization of the `LOAD_ATTR` and other instructions.

- [bpo-44698](https://bugs.python.org/issue?@action=redirect&bpo=44698) [https://bugs.python.org/issue?@action=redirect&bpo=44698]: Restore behaviour of complex exponentiation with integer-valued exponent of type `float` or `complex`.
- [bpo-44895](https://bugs.python.org/issue?@action=redirect&bpo=44895) [https://bugs.python.org/issue?@action=redirect&bpo=44895]: A debug variable **PYTHONDUMPREFSFILE** is added for creating a dump file which is generated by `--with-trace-refs`. Patch by Donghee Na.
- [bpo-44900](https://bugs.python.org/issue?@action=redirect&bpo=44900) [https://bugs.python.org/issue?@action=redirect&bpo=44900]: Add five superinstructions for PEP 659 quickening:
  - `LOAD_FAST LOAD_FAST`
  - `STORE_FAST LOAD_FAST`
  - `LOAD_FAST LOAD_CONST`
  - `LOAD_CONST LOAD_FAST`
  - `STORE_FAST STORE_FAST`
- [bpo-44889](https://bugs.python.org/issue?@action=redirect&bpo=44889) [https://bugs.python.org/issue?@action=redirect&bpo=44889]: Initial implementation of adaptive specialization of `LOAD_METHOD`. The following specialized forms were added:
  - `LOAD_METHOD_CACHED`
  - `LOAD_METHOD_MODULE`
  - `LOAD_METHOD_CLASS`
- [bpo-44890](https://bugs.python.org/issue?@action=redirect&bpo=44890) [https://bugs.python.org/issue?@action=redirect&bpo=44890]: Specialization stats are always collected in debug builds.
- [bpo-44885](https://bugs.python.org/issue?@action=redirect&bpo=44885) [https://bugs.python.org/issue?@action=redirect&bpo=44885]

@action=redirect&bpo=44885]: Correct the ast locations of f-strings with format specs and repeated expressions. Patch by Pablo Galindo

- [bpo-44878](https://bugs.python.org/issue?@action=redirect&bpo=44878) [https://bugs.python.org/issue?@action=redirect&bpo=44878]: Remove the loop from the bytecode interpreter. All instructions end with a DISPATCH macro, so the loop is now redundant.
- [bpo-44878](https://bugs.python.org/issue?@action=redirect&bpo=44878) [https://bugs.python.org/issue?@action=redirect&bpo=44878]: Remove switch statement for interpreter loop when using computed gotos. This makes sure that we only have one dispatch table in the interpreter.
- [bpo-44874](https://bugs.python.org/issue?@action=redirect&bpo=44874) [https://bugs.python.org/issue?@action=redirect&bpo=44874]: Deprecate the old trashcan macros (Py\_TRASHCAN\_SAFE\_BEGIN/Py\_TRASHCAN\_SAFE\_END). They should be replaced by the new macros Py\_TRASHCAN\_BEGIN and Py\_TRASHCAN\_END.
- [bpo-44872](https://bugs.python.org/issue?@action=redirect&bpo=44872) [https://bugs.python.org/issue?@action=redirect&bpo=44872]: Use new trashcan macros (Py\_TRASHCAN\_BEGIN/END) in frameobject.c instead of the old ones (Py\_TRASHCAN\_SAFE\_BEGIN/END).
- [bpo-33930](https://bugs.python.org/issue?@action=redirect&bpo=33930) [https://bugs.python.org/issue?@action=redirect&bpo=33930]: Fix segmentation fault with deep recursion when cleaning method objects. Patch by Augusto Goulart and Pablo Galindo.
- [bpo-25782](https://bugs.python.org/issue?@action=redirect&bpo=25782) [https://bugs.python.org/issue?@action=redirect&bpo=25782]: Fix bug where PyErr\_SetObject hangs when the current exception has a cycle in its context chain.
- [bpo-44856](https://bugs.python.org/issue?@action=redirect&bpo=44856) [https://bugs.python.org/issue?@action=redirect&bpo=44856]: Fix reference leaks in the error paths of update\_bases() and \_\_build\_class\_\_. Patch by Pablo Galindo.

- [bpo-44826](https://bugs.python.org/issue?@action=redirect&bpo=44826) [https://bugs.python.org/issue?@action=redirect&bpo=44826]: Initial implementation of adaptive specialization of `STORE_ATTR`

Three specialized forms of `STORE_ATTR` are added:

- `STORE_ATTR_SLOT`
- `STORE_ATTR_SPLIT_KEYS`
- `STORE_ATTR_WITH_HINT`

- [bpo-44838](https://bugs.python.org/issue?@action=redirect&bpo=44838) [https://bugs.python.org/issue?@action=redirect&bpo=44838]: Fixed a bug that was causing the parser to raise an incorrect custom `SyntaxError` for invalid ‘if’ expressions. Patch by Pablo Galindo.
- [bpo-44821](https://bugs.python.org/issue?@action=redirect&bpo=44821) [https://bugs.python.org/issue?@action=redirect&bpo=44821]: Create instance dictionaries (`_dict_`) eagerly, to improve regularity of object layout and assist specialization.
- [bpo-44792](https://bugs.python.org/issue?@action=redirect&bpo=44792) [https://bugs.python.org/issue?@action=redirect&bpo=44792]: Improve syntax errors for if expressions. Patch by Miguel Brito
- [bpo-34013](https://bugs.python.org/issue?@action=redirect&bpo=34013) [https://bugs.python.org/issue?@action=redirect&bpo=34013]: Generalize the invalid legacy statement custom error message (like the one generated when “print” is called without parentheses) to include more generic expressions. Patch by Pablo Galindo
- [bpo-44732](https://bugs.python.org/issue?@action=redirect&bpo=44732) [https://bugs.python.org/issue?@action=redirect&bpo=44732]: Rename `types.Union` to `types.UnionType`.
- [bpo-44725](https://bugs.python.org/issue?@action=redirect&bpo=44725) [https://bugs.python.org/issue?@action=redirect&bpo=44725]: Expose specialization stats in python via `_opcode.get_specialization_stats()`.
- [bpo-44717](https://bugs.python.org/issue?@action=redirect&bpo=44717) [https://bugs.python.org/issue?@action=redirect&bpo=44717]: Improve `AttributeError` on circular imports of submodules.

- [bpo-44698](https://bugs.python.org/issue?@action=redirect&bpo=44698) [https://bugs.python.org/issue?@action=redirect&bpo=44698]: Fix undefined behaviour in complex object exponentiation.
- [bpo-44653](https://bugs.python.org/issue?@action=redirect&bpo=44653) [https://bugs.python.org/issue?@action=redirect&bpo=44653]: Support **typing** types in parameter substitution in the union type.
- [bpo-44676](https://bugs.python.org/issue?@action=redirect&bpo=44676) [https://bugs.python.org/issue?@action=redirect&bpo=44676]: Add ability to serialise `types.Union` objects. Patch provided by Yurii Karabas.
- [bpo-44633](https://bugs.python.org/issue?@action=redirect&bpo=44633) [https://bugs.python.org/issue?@action=redirect&bpo=44633]: Parameter substitution of the union type with wrong types now raises `TypeError` instead of returning `NotImplemented`.
- [bpo-44661](https://bugs.python.org/issue?@action=redirect&bpo=44661) [https://bugs.python.org/issue?@action=redirect&bpo=44661]: Update `property_descr_set` to use vectorcall if possible. Patch by Donghee Na.
- [bpo-44662](https://bugs.python.org/issue?@action=redirect&bpo=44662) [https://bugs.python.org/issue?@action=redirect&bpo=44662]: Add `__module__` to `types.Union`. This also fixes `types.Union` issues with `typing.Annotated`. Patch provided by Yurii Karabas.
- [bpo-44655](https://bugs.python.org/issue?@action=redirect&bpo=44655) [https://bugs.python.org/issue?@action=redirect&bpo=44655]: Include the name of the type in unset `__slots__` attribute errors. Patch by Pablo Galindo
- [bpo-44655](https://bugs.python.org/issue?@action=redirect&bpo=44655) [https://bugs.python.org/issue?@action=redirect&bpo=44655]: Don't include a missing attribute with the same name as the failing one when offering suggestions for missing attributes. Patch by Pablo Galindo
- [bpo-44646](https://bugs.python.org/issue?@action=redirect&bpo=44646) [https://bugs.python.org/issue?@action=redirect&bpo=44646]: Fix the hash of the union type: it no longer depends on the order of arguments.
- [bpo-44636](https://bugs.python.org/issue?@action=redirect&bpo=44636) [https://bugs.python.org/issue?@action=redirect&bpo=44636]: Collapse union of equal types. E.g.

the result of `int | int` is now `int`. Fix comparison of the union type with non-hashable objects. E.g. `int | str == {}` no longer raises a `TypeError`.

- [bpo-44611](https://bugs.python.org/issue?@action=redirect&bpo=44611) [https://bugs.python.org/issue?@action=redirect&bpo=44611]: On Windows, `os.urandom()` uses `BCryptGenRandom` API instead of `CryptGenRandom` API which is deprecated from Microsoft Windows API. Patch by Donghee Na.
- [bpo-44635](https://bugs.python.org/issue?@action=redirect&bpo=44635) [https://bugs.python.org/issue?@action=redirect&bpo=44635]: Convert `None` to `type(None)` in the union type constructor.
- [bpo-26280](https://bugs.python.org/issue?@action=redirect&bpo=26280) [https://bugs.python.org/issue?@action=redirect&bpo=26280]: Implement adaptive specialization for `BINARY_SUBSCR`

Three specialized forms of `BINARY_SUBSCR` are added:

- `BINARY_SUBSCR_LIST_INT`
- `BINARY_SUBSCR_TUPLE_INT`
- `BINARY_SUBSCR_DICT`

- [bpo-44589](https://bugs.python.org/issue?@action=redirect&bpo=44589) [https://bugs.python.org/issue?@action=redirect&bpo=44589]: Mapping patterns in `match` statements with two or more equal literal keys will now raise a `SyntaxError` at compile-time.
- [bpo-44606](https://bugs.python.org/issue?@action=redirect&bpo=44606) [https://bugs.python.org/issue?@action=redirect&bpo=44606]: Fix `__instancecheck__` and `__subclasscheck__` for the union type.
- [bpo-42073](https://bugs.python.org/issue?@action=redirect&bpo=42073) [https://bugs.python.org/issue?@action=redirect&bpo=42073]: The `@classmethod` decorator can now wrap other classmethod-like descriptors.
- [bpo-41972](https://bugs.python.org/issue?@action=redirect&bpo=41972) [https://bugs.python.org/issue?@action=redirect&bpo=41972]: Tuned the string-searching algorithm of `fastsearch.h` to have a shorter inner loop for most cases.

- [bpo-44590](https://bugs.python.org/issue?@action=redirect&bpo=44590) [https://bugs.python.org/issue?@action=redirect&bpo=44590]: All necessary data for executing a Python function (local variables, stack, etc) is now kept in a per-thread stack. Frame objects are lazily allocated on demand. This increases performance by about 7% on the standard benchmark suite. Introspection and debugging are unaffected as frame objects are always available when needed. Patch by Mark Shannon.
- [bpo-44584](https://bugs.python.org/issue?@action=redirect&bpo=44584) [https://bugs.python.org/issue?@action=redirect&bpo=44584]: The threading debug (**PYTHONTHREADDEBUG** environment variable) is deprecated in Python 3.10 and will be removed in Python 3.12. This feature requires a debug build of Python. Patch by Victor Stinner.
- [bpo-43895](https://bugs.python.org/issue?@action=redirect&bpo=43895) [https://bugs.python.org/issue?@action=redirect&bpo=43895]: An obsolete internal cache of shared object file handles added in 1995 that attempted, but did not guarantee, that a .so would not be dlopen'ed twice to work around flaws in mid-1990s posix-ish operating systems has been removed from dynload\_shlib.c.
- [bpo-44490](https://bugs.python.org/issue?@action=redirect&bpo=44490) [https://bugs.python.org/issue?@action=redirect&bpo=44490]: **typing** now searches for type parameters in `types.Union` objects. `get_type_hints` will also properly resolve annotations with nested `types.Union` objects. Patch provided by Yurii Karabas.
- [bpo-43950](https://bugs.python.org/issue?@action=redirect&bpo=43950) [https://bugs.python.org/issue?@action=redirect&bpo=43950]: Code objects can now provide the column information for instructions when available. This is leveraged during traceback printing to show the expressions responsible for errors.

Contributed by Pablo Galindo, Batuhan Taskaya and Ammar Askar as part of [PEP 657](https://peps.python.org/pep-0657/) [https://peps.python.org/pep-0657/].

- [bpo-44562](https://bugs.python.org/issue?@action=redirect&bpo=44562) [https://bugs.python.org/issue?@action=redirect&bpo=44562]: Remove uses of **PyObject\_GC\_Del()** in error path when initializing

## `types.GenericAlias`.

- [bpo-41486](https://bugs.python.org/issue?@action=redirect&bpo=41486) [https://bugs.python.org/issue?@action=redirect&bpo=41486]: Fix a memory consumption and copying performance regression in earlier 3.10 beta releases if someone used an output buffer larger than 4GiB with `zlib.decompress` on input data that expands that large.
- [bpo-43908](https://bugs.python.org/issue?@action=redirect&bpo=43908) [https://bugs.python.org/issue?@action=redirect&bpo=43908]: Heap types with the `Py_TPFLAGS_IMMUTABLETYPE` flag can now inherit the [PEP 590](https://peps.python.org/pep-0590/) [https://peps.python.org/pep-0590/] `vectorcall` protocol. Previously, this was only possible for `static types`. Patch by Erlend E. Aasland.
- [bpo-44553](https://bugs.python.org/issue?@action=redirect&bpo=44553) [https://bugs.python.org/issue?@action=redirect&bpo=44553]: Implement GC methods for `types.Union` to break reference cycles and prevent memory leaks.
- [bpo-44490](https://bugs.python.org/issue?@action=redirect&bpo=44490) [https://bugs.python.org/issue?@action=redirect&bpo=44490]: Add `__parameters__` attribute and `__getitem__` operator to `types.Union`. Patch provided by Yurii Karabas.
- [bpo-44523](https://bugs.python.org/issue?@action=redirect&bpo=44523) [https://bugs.python.org/issue?@action=redirect&bpo=44523]: Remove the pass-through for `hash()` of `weakref.proxy` objects to prevent unintended consequences when the original referred object dies while the proxy is part of a hashable object. Patch by Pablo Galindo.
- [bpo-44483](https://bugs.python.org/issue?@action=redirect&bpo=44483) [https://bugs.python.org/issue?@action=redirect&bpo=44483]: Fix a crash in `types.Union` objects when creating a union of an object with bad `__module__` field.
- [bpo-44486](https://bugs.python.org/issue?@action=redirect&bpo=44486) [https://bugs.python.org/issue?@action=redirect&bpo=44486]: Modules will always have a dictionary, even when created by `types.ModuleType.__new__()`

- [bpo-44472](https://bugs.python.org/issue?@action=redirect&bpo=44472) [https://bugs.python.org/issue?@action=redirect&bpo=44472]: Fix ltrace functionality when exceptions are raised. Patch by Pablo Galindo
- [bpo-12022](https://bugs.python.org/issue?@action=redirect&bpo=12022) [https://bugs.python.org/issue?@action=redirect&bpo=12022]: A **TypeError** is now raised instead of an **AttributeError** in **with** and **async with** statements for objects which do not support the **context manager** or **asynchronous context manager** protocols correspondingly.
- [bpo-44297](https://bugs.python.org/issue?@action=redirect&bpo=44297) [https://bugs.python.org/issue?@action=redirect&bpo=44297]: Make sure that the line number is set when entering a comprehension scope. Ensures that backtraces including generator expressions show the correct line number.
- [bpo-44456](https://bugs.python.org/issue?@action=redirect&bpo=44456) [https://bugs.python.org/issue?@action=redirect&bpo=44456]: Improve the syntax error when mixing positional and keyword patterns. Patch by Pablo Galindo.
- [bpo-44409](https://bugs.python.org/issue?@action=redirect&bpo=44409) [https://bugs.python.org/issue?@action=redirect&bpo=44409]: Fix error location information for tokenizer errors raised on initialization of the tokenizer. Patch by Pablo Galindo.
- [bpo-44396](https://bugs.python.org/issue?@action=redirect&bpo=44396) [https://bugs.python.org/issue?@action=redirect&bpo=44396]: Fix a possible crash in the tokenizer when raising syntax errors for unclosed strings. Patch by Pablo Galindo.
- [bpo-44376](https://bugs.python.org/issue?@action=redirect&bpo=44376) [https://bugs.python.org/issue?@action=redirect&bpo=44376]: Exact integer exponentiation (like `i**2` or `pow(i, 2)`) with a small exponent is much faster, due to reducing overhead in such cases.
- [bpo-44313](https://bugs.python.org/issue?@action=redirect&bpo=44313) [https://bugs.python.org/issue?@action=redirect&bpo=44313]: Directly imported objects and modules (through `import` and `from import` statements) don't generate `LOAD_METHOD/CALL_METHOD` for directly accessed

objects on their namespace. They now use the regular `LOAD_ATTR/CALL_FUNCTION`.

- [bpo-44338](https://bugs.python.org/issue?@action=redirect&bpo=44338) [https://bugs.python.org/issue?@action=redirect&bpo=44338]: Implement adaptive specialization for `LOAD_GLOBAL`

Two specialized forms of `LOAD_GLOBAL` are added:

- `LOAD_GLOBAL_MODULE`
- `LOAD_GLOBAL_BUILTIN`

- [bpo-44368](https://bugs.python.org/issue?@action=redirect&bpo=44368) [https://bugs.python.org/issue?@action=redirect&bpo=44368]: Improve syntax errors for invalid “as” targets. Patch by Pablo Galindo
- [bpo-44349](https://bugs.python.org/issue?@action=redirect&bpo=44349) [https://bugs.python.org/issue?@action=redirect&bpo=44349]: Fix an edge case when displaying text from files with encoding in syntax errors. Patch by Pablo Galindo.
- [bpo-44337](https://bugs.python.org/issue?@action=redirect&bpo=44337) [https://bugs.python.org/issue?@action=redirect&bpo=44337]: Initial implementation of adaptive specialization of `LOAD_ATTR`

Four specialized forms of `LOAD_ATTR` are added:

- `LOAD_ATTR_SLOT`
- `LOAD_ATTR_SPLIT_KEYS`
- `LOAD_ATTR_WITH_HINT`
- `LOAD_ATTR_MODULE`

- [bpo-44335](https://bugs.python.org/issue?@action=redirect&bpo=44335) [https://bugs.python.org/issue?@action=redirect&bpo=44335]: Fix a regression when identifying incorrect characters in syntax errors. Patch by Pablo Galindo
- [bpo-43693](https://bugs.python.org/issue?@action=redirect&bpo=43693) [https://bugs.python.org/issue?@action=redirect&bpo=43693]: Computation of the offsets of cell variables is done in the compiler instead of at runtime. This reduces the overhead of handling cell and free variables, especially in the case where a variable is both an argument and cell variable.

- [bpo-44317](https://bugs.python.org/issue?@action=redirect&bpo=44317) [https://bugs.python.org/issue?@action=redirect&bpo=44317]: Improve tokenizer error with improved locations. Patch by Pablo Galindo.
- [bpo-44304](https://bugs.python.org/issue?@action=redirect&bpo=44304) [https://bugs.python.org/issue?@action=redirect&bpo=44304]: Fix a crash in the `sqlite3` module that happened when the garbage collector clears `sqlite.Statement` objects. Patch by Pablo Galindo
- [bpo-44305](https://bugs.python.org/issue?@action=redirect&bpo=44305) [https://bugs.python.org/issue?@action=redirect&bpo=44305]: Improve error message for `try` blocks without `except` or `finally` blocks. Patch by Pablo Galindo.
- [bpo-43413](https://bugs.python.org/issue?@action=redirect&bpo=43413) [https://bugs.python.org/issue?@action=redirect&bpo=43413]: Constructors of subclasses of some builtin classes (e.g. `tuple`, `list`, `frozenset`) no longer accept arbitrary keyword arguments. [reverted in 3.11a4] Subclass of `set` can now define a `__new__()` method with additional keyword parameters without overriding also `__init__()`.
- [bpo-43667](https://bugs.python.org/issue?@action=redirect&bpo=43667) [https://bugs.python.org/issue?@action=redirect&bpo=43667]: Improve Unicode support in non-UTF locales on Oracle Solaris. This issue does not affect other Solaris systems.
- [bpo-43693](https://bugs.python.org/issue?@action=redirect&bpo=43693) [https://bugs.python.org/issue?@action=redirect&bpo=43693]: A new opcode `MAKE_CELL` has been added that effectively moves some of the work done on function entry into the compiler and into the eval loop. In addition to creating the required cell objects, the new opcode converts relevant arguments (and other locals) to cell variables on function entry.
- [bpo-44232](https://bugs.python.org/issue?@action=redirect&bpo=44232) [https://bugs.python.org/issue?@action=redirect&bpo=44232]: Fix a regression in `type()` when a metaclass raises an exception. The C function `type_new()` must properly report the exception when a metaclass constructor raises an exception and the winner class is not the metaclass. Patch by Victor Stinner.

- [bpo-44201](https://bugs.python.org/issue?@action=redirect&bpo=44201) [https://bugs.python.org/issue?@action=redirect&bpo=44201]: Avoid side effects of checking for specialized syntax errors in the REPL that was causing it to ask for extra tokens after a syntax error had been detected. Patch by Pablo Galindo
- [bpo-43693](https://bugs.python.org/issue?@action=redirect&bpo=43693) [https://bugs.python.org/issue?@action=redirect&bpo=43693]: PyCodeObject gained co\_fastlocalnames and co\_fastlocalkinds as the authoritative source of fast locals info. Marshaled code objects have changed accordingly.
- [bpo-44184](https://bugs.python.org/issue?@action=redirect&bpo=44184) [https://bugs.python.org/issue?@action=redirect&bpo=44184]: Fix a crash at Python exit when a deallocator function removes the last strong reference to a heap type. Patch by Victor Stinner.
- [bpo-44187](https://bugs.python.org/issue?@action=redirect&bpo=44187) [https://bugs.python.org/issue?@action=redirect&bpo=44187]: Implement quickening in the interpreter. This offers no advantages as yet, but is an enabler of future optimizations. See PEP 659 for full explanation.
- [bpo-44180](https://bugs.python.org/issue?@action=redirect&bpo=44180) [https://bugs.python.org/issue?@action=redirect&bpo=44180]: The parser doesn't report generic syntax errors that happen in a position further away than the one it reached in the first pass. Patch by Pablo Galindo
- [bpo-44168](https://bugs.python.org/issue?@action=redirect&bpo=44168) [https://bugs.python.org/issue?@action=redirect&bpo=44168]: Fix error message in the parser involving keyword arguments with invalid expressions. Patch by Pablo Galindo
- [bpo-44156](https://bugs.python.org/issue?@action=redirect&bpo=44156) [https://bugs.python.org/issue?@action=redirect&bpo=44156]: String caches in compile.c are now subinterpreter compatible.
- [bpo-44143](https://bugs.python.org/issue?@action=redirect&bpo=44143) [https://bugs.python.org/issue?@action=redirect&bpo=44143]: Fixed a crash in the parser that manifest when raising tokenizer errors when an existing exception was present. Patch by Pablo Galindo.

- [bpo-44032](https://bugs.python.org/issue?@action=redirect&bpo=44032) [https://bugs.python.org/issue?@action=redirect&bpo=44032]: Move ‘fast’ locals and other variables from the frame object to a per-thread datastack.
- [bpo-44114](https://bugs.python.org/issue?@action=redirect&bpo=44114) [https://bugs.python.org/issue?@action=redirect&bpo=44114]: Fix incorrect dictkeys\_reversed and dictitems\_reversed function signatures in C code, which broke webassembly builds.
- [bpo-44110](https://bugs.python.org/issue?@action=redirect&bpo=44110) [https://bugs.python.org/issue?@action=redirect&bpo=44110]: Improve `str.__getitem__()` error message
- [bpo-26110](https://bugs.python.org/issue?@action=redirect&bpo=26110) [https://bugs.python.org/issue?@action=redirect&bpo=26110]: Add `CALL_METHOD_KW` opcode to speed up method calls with keyword arguments. Idea originated from PyPy. A side effect is executing `CALL_METHOD` is now branchless in the evaluation loop.
- [bpo-28307](https://bugs.python.org/issue?@action=redirect&bpo=28307) [https://bugs.python.org/issue?@action=redirect&bpo=28307]: Compiler now optimizes simple C-style formatting with literal format containing only format codes `%s`, `%r` and `%a` by converting them to f-string expressions.
- [bpo-43149](https://bugs.python.org/issue?@action=redirect&bpo=43149) [https://bugs.python.org/issue?@action=redirect&bpo=43149]: Correct the syntax error message regarding multiple exception types to not refer to “exception groups”. Patch by Pablo Galindo
- [bpo-43822](https://bugs.python.org/issue?@action=redirect&bpo=43822) [https://bugs.python.org/issue?@action=redirect&bpo=43822]: The parser will prioritize tokenizer errors over custom syntax errors when raising exceptions. Patch by Pablo Galindo.
- [bpo-40222](https://bugs.python.org/issue?@action=redirect&bpo=40222) [https://bugs.python.org/issue?@action=redirect&bpo=40222]: “Zero cost” exception handling.
  - Uses a lookup table to determine how to handle exceptions.
  - Removes `SETUP_FINALLY` and `POP_TOP` block

instructions, eliminating the runtime overhead of try statements.

- Reduces the size of the frame object by about 60%.

### Patch by Mark Shannon

- [bpo-43918](https://bugs.python.org/issue?@action=redirect&bpo=43918) [https://bugs.python.org/issue?@action=redirect&bpo=43918]: Document the signature and default argument in the docstring of the new `anext` builtin.
- [bpo-43833](https://bugs.python.org/issue?@action=redirect&bpo=43833) [https://bugs.python.org/issue?@action=redirect&bpo=43833]: Emit a deprecation warning if the numeric literal is immediately followed by one of keywords: and, else, for, if, in, is, or. Raise a syntax error with more informative message if it is immediately followed by other keyword or identifier.
- [bpo-43879](https://bugs.python.org/issue?@action=redirect&bpo=43879) [https://bugs.python.org/issue?@action=redirect&bpo=43879]: Add `native_thread_id` to `PyThreadState`. Patch by Gabriele N. Tornetta.
- [bpo-43693](https://bugs.python.org/issue?@action=redirect&bpo=43693) [https://bugs.python.org/issue?@action=redirect&bpo=43693]: Compute cell offsets relative to locals in compiler. Allows the interpreter to treat locals and cells as a single array, which is slightly more efficient. Also make the `LOAD_CLOSURE` opcode an alias for `LOAD_FAST`. Preserving `LOAD_CLOSURE` helps keep bytecode a bit more readable.
- [bpo-17792](https://bugs.python.org/issue?@action=redirect&bpo=17792) [https://bugs.python.org/issue?@action=redirect&bpo=17792]: More accurate error messages for access of unbound locals or free vars.
- [bpo-28146](https://bugs.python.org/issue?@action=redirect&bpo=28146) [https://bugs.python.org/issue?@action=redirect&bpo=28146]: Fix a confusing error message in `str.format()`.
- [bpo-11105](https://bugs.python.org/issue?@action=redirect&bpo=11105) [https://bugs.python.org/issue?@action=redirect&bpo=11105]: When compiling `ast.AST` objects with recursive references through `compile()`, the

interpreter doesn't crash anymore instead it raises a **`RecursionError`**.

- **[bpo-39091](https://bugs.python.org/issue?@action=redirect&bpo=39091)** [<https://bugs.python.org/issue?@action=redirect&bpo=39091>]: Fix crash when using passing a non-exception to a generator's `throw()` method. Patch by Noah Olex
- **[bpo-33346](https://bugs.python.org/issue?@action=redirect&bpo=33346)** [<https://bugs.python.org/issue?@action=redirect&bpo=33346>]: Asynchronous comprehensions are now allowed inside comprehensions in asynchronous functions. Outer comprehensions implicitly become asynchronous.

## Library

- **[bpo-45371](https://bugs.python.org/issue?@action=redirect&bpo=45371)** [<https://bugs.python.org/issue?@action=redirect&bpo=45371>]: Fix clang rpath issue in `distutils`. The `UnixCCompiler` now uses correct clang option to add a runtime library directory (rpath) to a shared library.
- **[bpo-45329](https://bugs.python.org/issue?@action=redirect&bpo=45329)** [<https://bugs.python.org/issue?@action=redirect&bpo=45329>]: Fix freed memory access in **`pyexpat.xmlparser`** when building it with an installed expat library `<= 2.2.0`.
- **[bpo-41710](https://bugs.python.org/issue?@action=redirect&bpo=41710)** [<https://bugs.python.org/issue?@action=redirect&bpo=41710>]: On Unix, if the `sem_clockwait()` function is available in the C library (glibc 2.30 and newer), the **`threading.Lock.acquire()`** method now uses the monotonic clock (**`time.CLOCK_MONOTONIC`**) for the timeout, rather than using the system clock (**`time.CLOCK_REALTIME`**), to not be affected by system clock changes. Patch by Victor Stinner.
- **[bpo-1596321](https://bugs.python.org/issue?@action=redirect&bpo=1596321)** [<https://bugs.python.org/issue?@action=redirect&bpo=1596321>]: Fix the **`threading._shutdown()`** function when the **`threading`** module was imported first from a thread different than the main thread: no longer log an error at Python exit.

- [bpo-45274](https://bugs.python.org/issue?@action=redirect&bpo=45274) [https://bugs.python.org/issue?@action=redirect&bpo=45274]: Fix a race condition in the **Thread.join()** method of the **threading** module. If the function is interrupted by a signal and the signal handler raises an exception, make sure that the thread remains in a consistent state to prevent a deadlock. Patch by Victor Stinner.
- [bpo-21302](https://bugs.python.org/issue?@action=redirect&bpo=21302) [https://bugs.python.org/issue?@action=redirect&bpo=21302]: In Unix operating systems, **time.sleep()** now uses the **nanosleep()** function, if **clock\_nanosleep()** is not available but **nanosleep()** is available. **nanosleep()** allows to sleep with nanosecond precision.
- [bpo-21302](https://bugs.python.org/issue?@action=redirect&bpo=21302) [https://bugs.python.org/issue?@action=redirect&bpo=21302]: On Windows, **time.sleep()** now uses a waitable timer which has a resolution of 100 nanoseconds ( $10^{-7}$  seconds). Previously, it had a resolution of 1 millisecond ( $10^{-3}$  seconds). Patch by Benjamin Szőke and Victor Stinner.
- [bpo-45238](https://bugs.python.org/issue?@action=redirect&bpo=45238) [https://bugs.python.org/issue?@action=redirect&bpo=45238]: Fix **unittest.IsolatedAsyncioTestCase.debug()**: it runs now asynchronous methods and callbacks.
- [bpo-36674](https://bugs.python.org/issue?@action=redirect&bpo=36674) [https://bugs.python.org/issue?@action=redirect&bpo=36674]: **unittest.TestCase.debug()** raises now a **unittest.SkipTest** if the class or the test method are decorated with the skipping decorator.
- [bpo-45235](https://bugs.python.org/issue?@action=redirect&bpo=45235) [https://bugs.python.org/issue?@action=redirect&bpo=45235]: Fix an issue where **argparse** would not preserve values in a provided namespace when using a subparser with defaults.
- [bpo-45183](https://bugs.python.org/issue?@action=redirect&bpo=45183) [https://bugs.python.org/issue?@action=redirect&bpo=45183]: Have **zipimport.zipimporter.find\_spec()** not raise an exception when the underlying zip file has been deleted and the internal

cache has been reset via `invalidate_cache()`.

- [bpo-45234](https://bugs.python.org/issue?@action=redirect&bpo=45234) [https://bugs.python.org/issue?@action=redirect&bpo=45234]: Fixed a regression in `copyfile()`, `copy()`, `copy2()` raising `FileNotFoundError` when source is a directory, which should raise `IsADirectoryError`
- [bpo-45228](https://bugs.python.org/issue?@action=redirect&bpo=45228) [https://bugs.python.org/issue?@action=redirect&bpo=45228]: Fix stack buffer overflow in parsing J1939 network address.
- [bpo-45225](https://bugs.python.org/issue?@action=redirect&bpo=45225) [https://bugs.python.org/issue?@action=redirect&bpo=45225]: use map function instead of `genexpr` in `capwords`.
- [bpo-42135](https://bugs.python.org/issue?@action=redirect&bpo=42135) [https://bugs.python.org/issue?@action=redirect&bpo=42135]: Fix typo: `importlib.find_loader` is really slated for removal in Python 3.12 not 3.10, like the others in PR 25169.

Patch by Hugo van Kemenade.

- [bpo-20524](https://bugs.python.org/issue?@action=redirect&bpo=20524) [https://bugs.python.org/issue?@action=redirect&bpo=20524]: Improves error messages on `.format()` operation for `str`, `float`, `int`, and `complex`. New format now shows the problematic pattern and the object type.
- [bpo-45168](https://bugs.python.org/issue?@action=redirect&bpo=45168) [https://bugs.python.org/issue?@action=redirect&bpo=45168]: Change `dis.dis()` output to omit op arg values that cannot be resolved due to `co_consts`, `co_names` etc not being provided. Previously the oparg itself was repeated in the value field, which is not useful and can be confusing.
- [bpo-21302](https://bugs.python.org/issue?@action=redirect&bpo=21302) [https://bugs.python.org/issue?@action=redirect&bpo=21302]: In Unix operating systems, `time.sleep()` now uses the `clock_nanosleep()` function, if available, which allows to sleep for an interval specified with nanosecond precision.

- [bpo-45173](https://bugs.python.org/issue?@action=redirect&bpo=45173) [https://bugs.python.org/issue?@action=redirect&bpo=45173]: Remove from the **configparser** module: the **SafeConfigParser** class, the **filename** property of the **ParsingError** class, the **readfp()** method of the **ConfigParser** class, deprecated since Python 3.2.

Patch by Hugo van Kemenade.

- [bpo-44987](https://bugs.python.org/issue?@action=redirect&bpo=44987) [https://bugs.python.org/issue?@action=redirect&bpo=44987]: Pure ASCII strings are now normalized in constant time by **unicodedata.normalize()**. Patch by Donghee Na.
- [bpo-35474](https://bugs.python.org/issue?@action=redirect&bpo=35474) [https://bugs.python.org/issue?@action=redirect&bpo=35474]: Calling **mimetypes.guess\_all\_extensions()** with **strict=False** no longer affects the result of the following call with **strict=True**. Also, mutating the returned list no longer affects the global state.
- [bpo-45166](https://bugs.python.org/issue?@action=redirect&bpo=45166) [https://bugs.python.org/issue?@action=redirect&bpo=45166]: **typing.get\_type\_hints()** now works with **Final** wrapped in **ForwardRef**.
- [bpo-45162](https://bugs.python.org/issue?@action=redirect&bpo=45162) [https://bugs.python.org/issue?@action=redirect&bpo=45162]: Remove many old deprecated **unittest** features:
  - “fail\*” and “assert\*” aliases of **TestCase** methods.
  - Broken from start **TestCase** method **assertDictContainsSubset()**.
  - Ignored **<unittest.TestLoader.loadTestsFromModule>** **TestLoader.loadTestsFromModule()** parameter **use\_load\_tests**.
  - Old alias **\_TextTestResult** of **TextTestResult**.
- [bpo-38371](https://bugs.python.org/issue?@action=redirect&bpo=38371) [https://bugs.python.org/issue?@action=redirect&bpo=38371]: Remove the deprecated **split()**

method of `_tkinter.TkappType`. Patch by Erlend E. Aasland.

- [bpo-20499](https://bugs.python.org/issue?@action=redirect&bpo=20499) [https://bugs.python.org/issue?@action=redirect&bpo=20499]: Improve the speed and accuracy of `statistics.pvariance()`.
- [bpo-45132](https://bugs.python.org/issue?@action=redirect&bpo=45132) [https://bugs.python.org/issue?@action=redirect&bpo=45132]: Remove `__getitem__()` methods of `xml.dom.pulldom.DOMEvntStream`, `wsgiref.util.FileWrapper` and `fileinput.FileInput`, deprecated since Python 3.9.

Patch by Hugo van Kemenade.

- [bpo-45129](https://bugs.python.org/issue?@action=redirect&bpo=45129) [https://bugs.python.org/issue?@action=redirect&bpo=45129]: Due to significant security concerns, the `reuse_address` parameter of `asyncio.loop.create_datagram_endpoint()`, disabled in Python 3.9, is now entirely removed. This is because of the behavior of the socket option `SO_REUSEADDR` in UDP.

Patch by Hugo van Kemenade.

- [bpo-45124](https://bugs.python.org/issue?@action=redirect&bpo=45124) [https://bugs.python.org/issue?@action=redirect&bpo=45124]: The `bdist_msi` command, deprecated in Python 3.9, is now removed.

Use `bdist_wheel` (wheel packages) instead.

Patch by Hugo van Kemenade.

- [bpo-30856](https://bugs.python.org/issue?@action=redirect&bpo=30856) [https://bugs.python.org/issue?@action=redirect&bpo=30856]: `unittest.TestResult` methods `addFailure()`, `addError()`, `addSkip()` and `addSubTest()` are now called immediately after raising an exception in test or finishing a subtest. Previously they were called only after finishing the test clean up.
- [bpo-45034](https://bugs.python.org/issue?@action=redirect&bpo=45034) [https://bugs.python.org/issue?@action=redirect&bpo=45034]: Changes how error is formatted

for `struct.pack` with `'H'` and `'h'` modes and too large / small numbers. Now it shows the actual numeric limits, while previously it was showing arithmetic expressions.

- [bpo-25894](https://bugs.python.org/issue?@action=redirect&bpo=25894) [https://bugs.python.org/issue?@action=redirect&bpo=25894]: **unittest** now always reports skipped and failed subtests separately: separate characters in default mode and separate lines in verbose mode. Also the test description is now output for errors in test method, class and module cleanups.
- [bpo-45081](https://bugs.python.org/issue?@action=redirect&bpo=45081) [https://bugs.python.org/issue?@action=redirect&bpo=45081]: Fix issue when dataclasses that inherit from `typing.Protocol` subclasses have wrong `__init__`. Patch provided by Yurii Karabas.
- [bpo-45085](https://bugs.python.org/issue?@action=redirect&bpo=45085) [https://bugs.python.org/issue?@action=redirect&bpo=45085]: The `binhex` module, deprecated in Python 3.9, is now removed. The following **binascii** functions, deprecated in Python 3.9, are now also removed:

- `a2b_hqx()`, `b2a_hqx()`;
- `rlecode_hqx()`, `rledecode_hqx()`.

The **`binascii.crc_hqx()`** function remains available.

Patch by Victor Stinner.

- [bpo-40360](https://bugs.python.org/issue?@action=redirect&bpo=40360) [https://bugs.python.org/issue?@action=redirect&bpo=40360]: The **`lib2to3`** package is now deprecated and may not be able to parse Python 3.10 or newer. See the [PEP 617](https://peps.python.org/pep-0617/) [https://peps.python.org/pep-0617/] (New PEG parser for CPython). Patch by Victor Stinner.
- [bpo-45075](https://bugs.python.org/issue?@action=redirect&bpo=45075) [https://bugs.python.org/issue?@action=redirect&bpo=45075]: Rename **`traceback.StackSummary.format_frame()`** to **`traceback.StackSummary.format_frame_summary()`**. This method was added for 3.11 so it was not released yet.

Updated code and docs to better distinguish frame and

## FrameSummary.

- [bpo-31299](https://bugs.python.org/issue?@action=redirect&bpo=31299) [https://bugs.python.org/issue?@action=redirect&bpo=31299]: Add option to completely drop frames from a traceback by returning `None` from a `format_frame()` override.
- [bpo-41620](https://bugs.python.org/issue?@action=redirect&bpo=41620) [https://bugs.python.org/issue?@action=redirect&bpo=41620]: `run()` now always return a `TestResult` instance. Previously it returned `None` if the test class or method was decorated with a skipping decorator.
- [bpo-45021](https://bugs.python.org/issue?@action=redirect&bpo=45021) [https://bugs.python.org/issue?@action=redirect&bpo=45021]: Fix a potential deadlock at shutdown of forked children when using `concurrent.futures` module
- [bpo-43913](https://bugs.python.org/issue?@action=redirect&bpo=43913) [https://bugs.python.org/issue?@action=redirect&bpo=43913]: Fix bugs in cleaning up classes and modules in `unittest`:
  - Functions registered with `addModuleCleanup()` were not called unless the user defines `tearDownModule()` in their test module.
  - Functions registered with `addClassCleanup()` were not called if `tearDownClass` is set to `None`.
  - Buffering in `TestResult` did not work with functions registered with `addClassCleanup()` and `addModuleCleanup()`.
  - Errors in functions registered with `addClassCleanup()` and `addModuleCleanup()` were not handled correctly in buffered and debug modes.
  - Errors in `setUpModule()` and functions registered with `addModuleCleanup()` were reported in wrong order.
  - And several lesser bugs.
- [bpo-45030](https://bugs.python.org/issue?@action=redirect&bpo=45030) [https://bugs.python.org/issue?@action=redirect&bpo=45030]: Fix integer overflow in pickling and copying the range iterator.

- [bpo-45001](https://bugs.python.org/issue?@action=redirect&bpo=45001) [https://bugs.python.org/issue?@action=redirect&bpo=45001]: Made email date parsing more robust against malformed input, namely a whitespace-only `Date:` header. Patch by Wouter Bolsterlee.
- [bpo-45010](https://bugs.python.org/issue?@action=redirect&bpo=45010) [https://bugs.python.org/issue?@action=redirect&bpo=45010]: Remove support of special method `__div__` in `unittest.mock`. It is not used in Python 3.
- [bpo-39218](https://bugs.python.org/issue?@action=redirect&bpo=39218) [https://bugs.python.org/issue?@action=redirect&bpo=39218]: Improve accuracy of variance calculations by using `x*x` instead of `x**2`.
- [bpo-43613](https://bugs.python.org/issue?@action=redirect&bpo=43613) [https://bugs.python.org/issue?@action=redirect&bpo=43613]: Improve the speed of `gzip.compress()` and `gzip.decompress()` by compressing and decompressing at once in memory instead of in a streamed fashion.
- [bpo-37596](https://bugs.python.org/issue?@action=redirect&bpo=37596) [https://bugs.python.org/issue?@action=redirect&bpo=37596]: Ensure that `set` and `frozenset` objects are always `marshalled` reproducibly.
- [bpo-44019](https://bugs.python.org/issue?@action=redirect&bpo=44019) [https://bugs.python.org/issue?@action=redirect&bpo=44019]: A new function `operator.call` has been added, such that `operator.call(obj, *args, **kwargs) == obj(*args, **kwargs)`.
- [bpo-42255](https://bugs.python.org/issue?@action=redirect&bpo=42255) [https://bugs.python.org/issue?@action=redirect&bpo=42255]: `webbrowser.MacOSX` is deprecated and will be removed in Python 3.13. It is untested and undocumented and also not used by `webbrowser` itself. Patch by Donghee Na.
- [bpo-44955](https://bugs.python.org/issue?@action=redirect&bpo=44955) [https://bugs.python.org/issue?@action=redirect&bpo=44955]: Method `stopTestRun()` is now always called in pair with method `startTestRun()` for `TestResult` objects implicitly created in `run()`. Previously it was not called for test methods and classes decorated with a skipping decorator.

- [bpo-39039](https://bugs.python.org/issue?@action=redirect&bpo=39039) [https://bugs.python.org/issue?@action=redirect&bpo=39039]: `tarfile.open` raises **ReadError** when a `zlib` error occurs during file extraction.
- [bpo-44935](https://bugs.python.org/issue?@action=redirect&bpo=44935) [https://bugs.python.org/issue?@action=redirect&bpo=44935]: **subprocess** on Solaris now also uses **os.posix\_spawn()** for better performance.
- [bpo-44911](https://bugs.python.org/issue?@action=redirect&bpo=44911) [https://bugs.python.org/issue?@action=redirect&bpo=44911]: **IsolatedAsyncioTestCase** will no longer throw an exception while cancelling leaked tasks. Patch by Bar Harel.
- [bpo-41322](https://bugs.python.org/issue?@action=redirect&bpo=41322) [https://bugs.python.org/issue?@action=redirect&bpo=41322]: Added **DeprecationWarning** for tests and async tests that return a value! = None (as this may indicate an improperly written test, for example a test written as a generator function).
- [bpo-44524](https://bugs.python.org/issue?@action=redirect&bpo=44524) [https://bugs.python.org/issue?@action=redirect&bpo=44524]: Make exception message more useful when subclass from typing special form alias. Patch provided by Yurii Karabas.
- [bpo-38956](https://bugs.python.org/issue?@action=redirect&bpo=38956) [https://bugs.python.org/issue?@action=redirect&bpo=38956]: **argparse.BooleanOptionalAction**'s default value is no longer printed twice when used with **argparse.ArgumentDefaultsHelpFormatter**.
- [bpo-44860](https://bugs.python.org/issue?@action=redirect&bpo=44860) [https://bugs.python.org/issue?@action=redirect&bpo=44860]: Fix the `posix_user` scheme in **sysconfig** to not depend on **sys.platlibdir**.
- [bpo-44859](https://bugs.python.org/issue?@action=redirect&bpo=44859) [https://bugs.python.org/issue?@action=redirect&bpo=44859]: Improve error handling in **sqlite3** and raise more accurate exceptions.
  - **MemoryError** is now raised instead of **sqlite3.Warning** when memory is not enough for encoding a statement to UTF-8 in

`Connection.__call__()` and

`Cursor.execute()`.

- **UnicodeEncodeError** is now raised instead of **sqlite3.Warning** when the statement contains surrogate characters in `Connection.__call__()` and `Cursor.execute()`.
  - **TypeError** is now raised instead of **ValueError** for non-string script argument in `Cursor.executescript()`.
  - **ValueError** is now raised for script containing the null character instead of truncating it in `Cursor.executescript()`.
  - Correctly handle exceptions raised when getting boolean value of the result of the progress handler.
  - Add many tests covering different corner cases.
- **bpo-44581** [<https://bugs.python.org/issue?@action=redirect&bpo=44581>]: Upgrade bundled pip to 21.2.3 and setuptools to 57.4.0
  - **bpo-44849** [<https://bugs.python.org/issue?@action=redirect&bpo=44849>]: Fix the **os.set\_inheritable()** function on FreeBSD 14 for file descriptor opened with the **O\_PATH** flag: ignore the **EBADF** error on `ioctl()`, fallback on the `fcntl()` implementation. Patch by Victor Stinner.
  - **bpo-44605** [<https://bugs.python.org/issue?@action=redirect&bpo=44605>]: The `@functools.total_ordering()` decorator now works with metaclasses.
  - **bpo-44524** [<https://bugs.python.org/issue?@action=redirect&bpo=44524>]: Fixed an issue wherein the `__name__` and `__qualname__` attributes of subscribed specialforms could be `None`.
  - **bpo-44839** [<https://bugs.python.org/issue?@action=redirect&bpo=44839>]: **MemoryError** raised in user-defined functions will now produce a `MemoryError` in **sqlite3**. **OverflowError** will now be converted to **DataError**. Previously **OperationalError** was produced

in these cases.

- [bpo-44822](https://bugs.python.org/issue?@action=redirect&bpo=44822) [https://bugs.python.org/issue?@action=redirect&bpo=44822]: **sqlite3** user-defined functions and aggregators returning **strings** with embedded NUL characters are no longer truncated. Patch by Erlend E. Aasland.
- [bpo-44801](https://bugs.python.org/issue?@action=redirect&bpo=44801) [https://bugs.python.org/issue?@action=redirect&bpo=44801]: Ensure that the **ParamSpec** variable in Callable can only be substituted with a parameters expression (a list of types, an ellipsis, ParamSpec or Concatenate).
- [bpo-44806](https://bugs.python.org/issue?@action=redirect&bpo=44806) [https://bugs.python.org/issue?@action=redirect&bpo=44806]: Non-protocol subclasses of **typing.Protocol** ignore now the `__init__` method inherited from protocol base classes.
- [bpo-27275](https://bugs.python.org/issue?@action=redirect&bpo=27275) [https://bugs.python.org/issue?@action=redirect&bpo=27275]: **collections.OrderedDict.popitem()** and **collections.OrderedDict.pop()** no longer call `__getitem__` and `__delitem__` methods of the OrderedDict subclasses.
- [bpo-44793](https://bugs.python.org/issue?@action=redirect&bpo=44793) [https://bugs.python.org/issue?@action=redirect&bpo=44793]: Fix checking the number of arguments when subscribe a generic type with **ParamSpec** parameter.
- [bpo-44784](https://bugs.python.org/issue?@action=redirect&bpo=44784) [https://bugs.python.org/issue?@action=redirect&bpo=44784]: In **importlib.metadata** tests, override warnings behavior under expected **DeprecationWarnings** (**importlib.metadata** 4.6.3).
- [bpo-44667](https://bugs.python.org/issue?@action=redirect&bpo=44667) [https://bugs.python.org/issue?@action=redirect&bpo=44667]: The **tokenize.tokenize()** doesn't incorrectly generate a **NEWLINE** token if the source doesn't end with a new line character but the last line is a comment, as the function is already generating a **NL** token.

## Patch by Pablo Galindo

- [bpo-44771](https://bugs.python.org/issue?@action=redirect&bpo=44771) [https://bugs.python.org/issue?@action=redirect&bpo=44771]: Added `importlib.simple` module implementing adapters from a low-level resources reader interface to a `TraversableResources` interface. Legacy API (`path`, `contents`, ...) is now supported entirely by the `.files()` API with a compatibility shim supplied for resource loaders without that functionality. Feature parity with `importlib_resources 5.2`.
- [bpo-44752](https://bugs.python.org/issue?@action=redirect&bpo=44752) [https://bugs.python.org/issue?@action=redirect&bpo=44752]: `rcompleter` does not call `getattr()` on `property` objects to avoid the side-effect of evaluating the corresponding method.
- [bpo-44747](https://bugs.python.org/issue?@action=redirect&bpo=44747) [https://bugs.python.org/issue?@action=redirect&bpo=44747]: Refactor usage of `sys._getframe` in `typing` module. Patch provided by Yurii Karabas.
- [bpo-42378](https://bugs.python.org/issue?@action=redirect&bpo=42378) [https://bugs.python.org/issue?@action=redirect&bpo=42378]: Fixes the issue with log file being overwritten when `logging.FileHandler` is used in `atexit` with `filemode` set to `'w'`. Note this will cause the message in `atexit` not being logged if the log stream is already closed due to shutdown of logging.
- [bpo-44720](https://bugs.python.org/issue?@action=redirect&bpo=44720) [https://bugs.python.org/issue?@action=redirect&bpo=44720]: `weakref.proxy` objects referencing non-iterators now raise `TypeError` rather than dereferencing the null `tp_iternext` slot and crashing.
- [bpo-44704](https://bugs.python.org/issue?@action=redirect&bpo=44704) [https://bugs.python.org/issue?@action=redirect&bpo=44704]: The implementation of `collections.abc.Set.__hash__()` now matches that of `frozenset.__hash__()`.
- [bpo-44666](https://bugs.python.org/issue?@action=redirect&bpo=44666) [https://bugs.python.org/issue?@action=redirect&bpo=44666]: Fixed issue in `compileall.compile_file()` when `sys.stdout` is

redirected. Patch by Stefan Hölzl.

- [bpo-44688](https://bugs.python.org/issue?@action=redirect&bpo=44688) [https://bugs.python.org/issue?@action=redirect&bpo=44688]: `sqlite3.Connection.create_collation()` now accepts non-ASCII collation names. Patch by Erlend E. Aasland.
- [bpo-44690](https://bugs.python.org/issue?@action=redirect&bpo=44690) [https://bugs.python.org/issue?@action=redirect&bpo=44690]: Adopt *binascii.a2b\_base64*'s strict mode in *base64.b64decode*.
- [bpo-42854](https://bugs.python.org/issue?@action=redirect&bpo=42854) [https://bugs.python.org/issue?@action=redirect&bpo=42854]: Fixed a bug in the `_ssl` module that was throwing `OverflowError` when using `_ssl._SSLSocket.write()` and `_ssl._SSLSocket.read()` for a big value of the `len` parameter. Patch by Pablo Galindo
- [bpo-44686](https://bugs.python.org/issue?@action=redirect&bpo=44686) [https://bugs.python.org/issue?@action=redirect&bpo=44686]: Replace `unittest.mock._importer` with `pkgutil.resolve_name`.
- [bpo-44353](https://bugs.python.org/issue?@action=redirect&bpo=44353) [https://bugs.python.org/issue?@action=redirect&bpo=44353]: Make `NewType.__call__` faster by implementing it in C. Patch provided by Yurii Karabas.
- [bpo-44682](https://bugs.python.org/issue?@action=redirect&bpo=44682) [https://bugs.python.org/issue?@action=redirect&bpo=44682]: Change the `pdb` *commands* directive to disallow setting commands for an invalid breakpoint and to display an appropriate error.
- [bpo-44353](https://bugs.python.org/issue?@action=redirect&bpo=44353) [https://bugs.python.org/issue?@action=redirect&bpo=44353]: Refactor `typing.NewType` from function into callable class. Patch provided by Yurii Karabas.
- [bpo-44678](https://bugs.python.org/issue?@action=redirect&bpo=44678) [https://bugs.python.org/issue?@action=redirect&bpo=44678]: Added a separate error message for discontinuous padding in *binascii.a2b\_base64* strict mode.

- [bpo-44524](https://bugs.python.org/issue?@action=redirect&bpo=44524) [https://bugs.python.org/issue?@action=redirect&bpo=44524]: Add missing `__name__` and `__qualname__` attributes to `typing` module classes. Patch provided by Yurii Karabas.
- [bpo-40897](https://bugs.python.org/issue?@action=redirect&bpo=40897) [https://bugs.python.org/issue?@action=redirect&bpo=40897]: Give priority to using the current class constructor in `inspect.signature()`. Patch by Weipeng Hong.
- [bpo-44638](https://bugs.python.org/issue?@action=redirect&bpo=44638) [https://bugs.python.org/issue?@action=redirect&bpo=44638]: Add a reference to the zipp project and hint as to how to use it.
- [bpo-44648](https://bugs.python.org/issue?@action=redirect&bpo=44648) [https://bugs.python.org/issue?@action=redirect&bpo=44648]: Fixed wrong error being thrown by `inspect.getsource()` when examining a class in the interactive session. Instead of `TypeError`, it should be `OSError` with appropriate error message.
- [bpo-44608](https://bugs.python.org/issue?@action=redirect&bpo=44608) [https://bugs.python.org/issue?@action=redirect&bpo=44608]: Fix memory leak in `_tkinter._flatten()` if it is called with a sequence or set, but not list or tuple.
- [bpo-44594](https://bugs.python.org/issue?@action=redirect&bpo=44594) [https://bugs.python.org/issue?@action=redirect&bpo=44594]: Fix an edge case of `ExitStack` and `AsyncExitStack` exception chaining. They will now match with block behavior when `__context__` is explicitly set to `None` when the exception is in flight.
- [bpo-42799](https://bugs.python.org/issue?@action=redirect&bpo=42799) [https://bugs.python.org/issue?@action=redirect&bpo=42799]: In `fnmatch`, the cache size for compiled regex patterns (`functools.lru_cache()`) was bumped up from 256 to 32768, affecting functions: `fnmatch.fnmatch()`, `fnmatch.fnmatchcase()`, `fnmatch.filter()`.
- [bpo-41928](https://bugs.python.org/issue?@action=redirect&bpo=41928) [https://bugs.python.org/issue?@action=redirect&bpo=41928]: Update `shutil.copyfile()` to raise `FileNotFoundError` instead of confusing

**IsADirectoryError** when a path ending with a **os.path.sep** does not exist; **shutil.copy()** and **shutil.copy2()** are also affected.

- [bpo-44569](https://bugs.python.org/issue?@action=redirect&bpo=44569) [https://bugs.python.org/issue?@action=redirect&bpo=44569]: Added the **StackSummary.format\_frame()** function in **traceback**. This allows users to customize the way individual lines are formatted in tracebacks without re-implementing logic to handle recursive tracebacks.
- [bpo-44566](https://bugs.python.org/issue?@action=redirect&bpo=44566) [https://bugs.python.org/issue?@action=redirect&bpo=44566]: handle StopIteration subclass raised from **@contextlib.contextmanager** generator
- [bpo-44558](https://bugs.python.org/issue?@action=redirect&bpo=44558) [https://bugs.python.org/issue?@action=redirect&bpo=44558]: Make the implementation consistency of **indexOf()** between C and Python versions. Patch by Donghee Na.
- [bpo-41249](https://bugs.python.org/issue?@action=redirect&bpo=41249) [https://bugs.python.org/issue?@action=redirect&bpo=41249]: Fixes **TypedDict** to work with **typing.get\_type\_hints()** and postponed evaluation of annotations across modules.
- [bpo-44554](https://bugs.python.org/issue?@action=redirect&bpo=44554) [https://bugs.python.org/issue?@action=redirect&bpo=44554]: Refactor argument processing in **pdb.main()** to simplify detection of errors in input loading and clarify behavior around module or script invocation.
- [bpo-34798](https://bugs.python.org/issue?@action=redirect&bpo=34798) [https://bugs.python.org/issue?@action=redirect&bpo=34798]: Break up paragraph about **pprint.PrettyPrinter** construction parameters to make it easier to read.
- [bpo-44539](https://bugs.python.org/issue?@action=redirect&bpo=44539) [https://bugs.python.org/issue?@action=redirect&bpo=44539]: Added support for recognizing JPEG files without JFIF or Exif markers.
- [bpo-44461](https://bugs.python.org/issue?@action=redirect&bpo=44461) [https://bugs.python.org/issue?@action=redirect&bpo=44461]: Fix bug with **pdb**'s handling of

import error due to a package which does not have a `__main__` module

- [bpo-43625](https://bugs.python.org/issue?@action=redirect&bpo=43625) [https://bugs.python.org/issue?@action=redirect&bpo=43625]: Fix a bug in the detection of CSV file headers by `csv.Sniffer.has_header()` and improve documentation of same.
- [bpo-44516](https://bugs.python.org/issue?@action=redirect&bpo=44516) [https://bugs.python.org/issue?@action=redirect&bpo=44516]: Update vendored pip to 21.1.3
- [bpo-42892](https://bugs.python.org/issue?@action=redirect&bpo=42892) [https://bugs.python.org/issue?@action=redirect&bpo=42892]: Fixed an exception thrown while parsing a malformed multipart email by `email.message.EmailMessage`.
- [bpo-44468](https://bugs.python.org/issue?@action=redirect&bpo=44468) [https://bugs.python.org/issue?@action=redirect&bpo=44468]: `typing.get_type_hints()` now finds annotations in classes and base classes with unexpected `__module__`. Previously, it skipped those MRO elements.
- [bpo-44491](https://bugs.python.org/issue?@action=redirect&bpo=44491) [https://bugs.python.org/issue?@action=redirect&bpo=44491]: Allow clearing the `sqlite3` authorizer callback by passing `None` to `set_authorizer()`. Patch by Erlend E. Aasland.
- [bpo-43977](https://bugs.python.org/issue?@action=redirect&bpo=43977) [https://bugs.python.org/issue?@action=redirect&bpo=43977]: Set the proper `Py_TPFLAGS_MAPPING` and `Py_TPFLAGS_SEQUENCE` flags for subclasses created before a parent has been registered as a `collections.abc.Mapping` or `collections.abc.Sequence`.
- [bpo-44482](https://bugs.python.org/issue?@action=redirect&bpo=44482) [https://bugs.python.org/issue?@action=redirect&bpo=44482]: Fix very unlikely resource leak in `glob` in alternate Python implementations.
- [bpo-44466](https://bugs.python.org/issue?@action=redirect&bpo=44466) [https://bugs.python.org/issue?@action=redirect&bpo=44466]: The `faulthandler` module now detects if a fatal error occurs during a garbage collector

collection. Patch by Victor Stinner.

- [bpo-44471](https://bugs.python.org/issue?@action=redirect&bpo=44471) [https://bugs.python.org/issue?@action=redirect&bpo=44471]: A **TypeError** is now raised instead of an **AttributeError** in **contextlib.ExitStack.enter\_context()** and **contextlib.AsyncExitStack.enter\_async\_context()** for objects which do not support the **context manager** or **asynchronous context manager** protocols correspondingly.
- [bpo-44404](https://bugs.python.org/issue?@action=redirect&bpo=44404) [https://bugs.python.org/issue?@action=redirect&bpo=44404]: **tkinter**'s **after()** method now supports callables without the **\_\_name\_\_** attribute.
- [bpo-41546](https://bugs.python.org/issue?@action=redirect&bpo=41546) [https://bugs.python.org/issue?@action=redirect&bpo=41546]: Make **pprint** (like the builtin **print**) not attempt to write to **stdout** when it is **None**.
- [bpo-44458](https://bugs.python.org/issue?@action=redirect&bpo=44458) [https://bugs.python.org/issue?@action=redirect&bpo=44458]: **BUFFER\_BLOCK\_SIZE** is now declared static, to avoid linking collisions when **bz2**, **lzma** or **zlib** are statically linked.
- [bpo-44464](https://bugs.python.org/issue?@action=redirect&bpo=44464) [https://bugs.python.org/issue?@action=redirect&bpo=44464]: Remove exception for **flake8** in deprecated **importlib.metadata** interfaces. Sync with **importlib\_metadata 4.6**.
- [bpo-44446](https://bugs.python.org/issue?@action=redirect&bpo=44446) [https://bugs.python.org/issue?@action=redirect&bpo=44446]: Take into account that **lineno** might be **None** in **traceback.FrameSummary**.
- [bpo-44439](https://bugs.python.org/issue?@action=redirect&bpo=44439) [https://bugs.python.org/issue?@action=redirect&bpo=44439]: Fix in **bz2.BZ2File.write()** / **lzma.LZMAFile.write()** methods, when the input data is an object that supports the buffer protocol, the file length may be wrong.
- [bpo-44434](https://bugs.python.org/issue?@action=redirect&bpo=44434) [https://bugs.python.org/issue?@action=redirect&bpo=44434]: **\_thread.start\_new\_thread()** no longer calls **PyThread\_exit\_thread()** explicitly at the thread

exit, the call was redundant. On Linux with the glibc, `pthread_exit()` aborts the whole process if `dlopen()` fails to open `libgcc_s.so` file (ex: EMFILE error). Patch by Victor Stinner.

- [bpo-42972](https://bugs.python.org/issue?@action=redirect&bpo=42972) [https://bugs.python.org/issue?@action=redirect&bpo=42972]: The `_thread.RLock` type now fully implement the GC protocol: add a traverse function and the `Py_TPFLAGS_HAVE_GC` flag. Patch by Victor Stinner.
- [bpo-44422](https://bugs.python.org/issue?@action=redirect&bpo=44422) [https://bugs.python.org/issue?@action=redirect&bpo=44422]: The `threading.enumerate()` function now uses a reentrant lock to prevent a hang on reentrant call. Patch by Victor Stinner.
- [bpo-38291](https://bugs.python.org/issue?@action=redirect&bpo=38291) [https://bugs.python.org/issue?@action=redirect&bpo=38291]: Importing `typing.io` or `typing.re` now prints a `DeprecationWarning`.
- [bpo-37880](https://bugs.python.org/issue?@action=redirect&bpo=37880) [https://bugs.python.org/issue?@action=redirect&bpo=37880]: `argparse` actions `store_const` and `append_const` each receive a default value of `None` when the `const` kwarg is not provided. Previously, this raised a `TypeError`.
- [bpo-44389](https://bugs.python.org/issue?@action=redirect&bpo=44389) [https://bugs.python.org/issue?@action=redirect&bpo=44389]: Fix deprecation of `ssl.OP_NO_TLSv1_3`
- [bpo-27827](https://bugs.python.org/issue?@action=redirect&bpo=27827) [https://bugs.python.org/issue?@action=redirect&bpo=27827]: `pathlib.PureWindowsPath.is_reserved()` now identifies a greater range of reserved filenames, including those with trailing spaces or colons.
- [bpo-44395](https://bugs.python.org/issue?@action=redirect&bpo=44395) [https://bugs.python.org/issue?@action=redirect&bpo=44395]: Fix `as_string()` to pass `unixfrom` properly. Patch by Donghee Na.
- [bpo-34266](https://bugs.python.org/issue?@action=redirect&bpo=34266) [https://bugs.python.org/issue?@action=redirect&bpo=34266]: Handle exceptions from parsing

the arg of `pdb`'s run/restart command.

- [bpo-44362](https://bugs.python.org/issue?@action=redirect&bpo=44362) [https://bugs.python.org/issue?@action=redirect&bpo=44362]: Improve `ssl` module's deprecation messages, error reporting, and documentation for deprecations.
- [bpo-44342](https://bugs.python.org/issue?@action=redirect&bpo=44342) [https://bugs.python.org/issue?@action=redirect&bpo=44342]: [Enum] Change pickling from by-value to by-name.
- [bpo-44356](https://bugs.python.org/issue?@action=redirect&bpo=44356) [https://bugs.python.org/issue?@action=redirect&bpo=44356]: [Enum] Allow multiple data-type mixins if they are all the same.
- [bpo-44351](https://bugs.python.org/issue?@action=redirect&bpo=44351) [https://bugs.python.org/issue?@action=redirect&bpo=44351]: Restore back `parse_makefile()` in `distutils.sysconfig` because it behaves differently than the similar implementation in `sysconfig`.
- [bpo-35800](https://bugs.python.org/issue?@action=redirect&bpo=35800) [https://bugs.python.org/issue?@action=redirect&bpo=35800]: `smtplib.MailmanProxy` is now removed as it is unusable without an external module, `mailman`. Patch by Donghee Na.
- [bpo-44357](https://bugs.python.org/issue?@action=redirect&bpo=44357) [https://bugs.python.org/issue?@action=redirect&bpo=44357]: Added a function that returns cube root of the given number `math.cbrt()`
- [bpo-44339](https://bugs.python.org/issue?@action=redirect&bpo=44339) [https://bugs.python.org/issue?@action=redirect&bpo=44339]: Change `math.pow(±0.0, -math.inf)` to return `inf` instead of raising `ValueError`. This brings the special-case handling of `math.pow` into compliance with the IEEE 754 standard.
- [bpo-44242](https://bugs.python.org/issue?@action=redirect&bpo=44242) [https://bugs.python.org/issue?@action=redirect&bpo=44242]: Remove missing flag check from Enum creation and move into a `verify` decorator.
- [bpo-44246](https://bugs.python.org/issue?@action=redirect&bpo=44246) [https://bugs.python.org/issue?@action=redirect&bpo=44246]

@action=redirect&bpo=44246]: In `importlib.metadata`, restore compatibility in the result from `Distribution.entry_points` (`EntryPoint`s) to honor expectations in older implementations and issuing deprecation warnings for these cases: A. `EntryPoint`s objects are once again mutable, allowing for `sort()` and other list-based mutation operations. Avoid deprecation warnings by casting to a mutable sequence (e.g. `list(dist.entry_points).sort()`). B. `EntryPoint`s results once again allow for access by index. To avoid deprecation warnings, cast the result to a `Sequence` first (e.g. `tuple(dist.entry_points)[0]`).

- [bpo-44246](https://bugs.python.org/issue?@action=redirect&bpo=44246) [https://bugs.python.org/issue?@action=redirect&bpo=44246]: In `importlib.metadata.entry_points`, de-duplication of distributions no longer requires loading the full metadata for `PathDistribution` objects, improving entry point loading performance by  $\sim 10\times$ .
- [bpo-43858](https://bugs.python.org/issue?@action=redirect&bpo=43858) [https://bugs.python.org/issue?@action=redirect&bpo=43858]: Added a function that returns a copy of a dict of logging levels:  
[`logging.getLevelNamesMapping\(\)`](#)
- [bpo-44260](https://bugs.python.org/issue?@action=redirect&bpo=44260) [https://bugs.python.org/issue?@action=redirect&bpo=44260]: The [`random.Random`](#) constructor no longer reads system entropy without need.
- [bpo-44254](https://bugs.python.org/issue?@action=redirect&bpo=44254) [https://bugs.python.org/issue?@action=redirect&bpo=44254]: On Mac, give `turtledemo` button text a color that works on both light or dark background. Programmers cannot control the latter.
- [bpo-44258](https://bugs.python.org/issue?@action=redirect&bpo=44258) [https://bugs.python.org/issue?@action=redirect&bpo=44258]: Support PEP 515 for `Fraction`'s initialization from string.
- [bpo-44235](https://bugs.python.org/issue?@action=redirect&bpo=44235) [https://bugs.python.org/issue?@action=redirect&bpo=44235]: Remove deprecated functions in the [`gettext`](#). Patch by Donghee Na.

- [bpo-38693](https://bugs.python.org/issue?@action=redirect&bpo=38693) [https://bugs.python.org/issue?@action=redirect&bpo=38693]: Prefer f-strings to `.format` in `importlib.resources`.
- [bpo-33693](https://bugs.python.org/issue?@action=redirect&bpo=33693) [https://bugs.python.org/issue?@action=redirect&bpo=33693]: `Importlib.metadata` now prefers f-strings to `.format`.
- [bpo-44241](https://bugs.python.org/issue?@action=redirect&bpo=44241) [https://bugs.python.org/issue?@action=redirect&bpo=44241]: Incorporate minor tweaks from `importlib_metadata` 4.1: SimplePath protocol, support for Metadata 2.2.
- [bpo-43216](https://bugs.python.org/issue?@action=redirect&bpo=43216) [https://bugs.python.org/issue?@action=redirect&bpo=43216]: Remove the `@asyncio.coroutine decorator` enabling legacy generator-based coroutines to be compatible with `async/await` code; remove `asyncio.coroutines.CoroWrapper` used for wrapping legacy coroutine objects in the debug mode. The decorator has been deprecated since Python 3.8 and the removal was initially scheduled for Python 3.10. Patch by Illia Volochii.
- [bpo-44210](https://bugs.python.org/issue?@action=redirect&bpo=44210) [https://bugs.python.org/issue?@action=redirect&bpo=44210]: Make `importlib.metadata._meta.PackageMetadata` public.
- [bpo-43643](https://bugs.python.org/issue?@action=redirect&bpo=43643) [https://bugs.python.org/issue?@action=redirect&bpo=43643]: Declare `readers.MultiplexedPath.name` as a property per the spec.
- [bpo-27334](https://bugs.python.org/issue?@action=redirect&bpo=27334) [https://bugs.python.org/issue?@action=redirect&bpo=27334]: The `sqlite3` context manager now performs a rollback (thus releasing the database lock) if commit failed. Patch by Luca Citi and Erlend E. Aasland.
- [bpo-4928](https://bugs.python.org/issue?@action=redirect&bpo=4928) [https://bugs.python.org/issue?@action=redirect&bpo=4928]: Documented existing behavior on POSIX: `NamedTemporaryFiles` are not deleted when creating process is killed with `SIGKILL`

- [bpo-44154](https://bugs.python.org/issue?@action=redirect&bpo=44154) [https://bugs.python.org/issue?@action=redirect&bpo=44154]: Optimize `fractions.Fraction` pickling for large components.
- [bpo-33433](https://bugs.python.org/issue?@action=redirect&bpo=33433) [https://bugs.python.org/issue?@action=redirect&bpo=33433]: For IPv4 mapped IPv6 addresses ([RFC 4291](https://datatracker.ietf.org/doc/html/rfc4291.html) [https://datatracker.ietf.org/doc/html/rfc4291.html] Section 2.5.5.2), the `ipaddress.IPv6Address.is_private` check is deferred to the mapped IPv4 address. This solves a bug where public mapped IPv4 addresses were considered private by the IPv6 check.
- [bpo-44150](https://bugs.python.org/issue?@action=redirect&bpo=44150) [https://bugs.python.org/issue?@action=redirect&bpo=44150]: Add optional *weights* argument to `statistics.fmean()`.
- [bpo-44142](https://bugs.python.org/issue?@action=redirect&bpo=44142) [https://bugs.python.org/issue?@action=redirect&bpo=44142]: `ast.unparse()` will now drop the redundant parentheses when tuples used as assignment targets (e.g in for loops).
- [bpo-44145](https://bugs.python.org/issue?@action=redirect&bpo=44145) [https://bugs.python.org/issue?@action=redirect&bpo=44145]: `hmac` computations were not releasing the GIL while calling the OpenSSL `HMAC_Update` C API (a new feature in 3.9). This unintentionally prevented parallel computation as other `hashlib` algorithms support.
- [bpo-44095](https://bugs.python.org/issue?@action=redirect&bpo=44095) [https://bugs.python.org/issue?@action=redirect&bpo=44095]: `zipfile.Path` now supports `zipfile.Path.stem`, `zipfile.Path.suffixes`, and `zipfile.Path.suffix` attributes.
- [bpo-44077](https://bugs.python.org/issue?@action=redirect&bpo=44077) [https://bugs.python.org/issue?@action=redirect&bpo=44077]: It's now possible to receive the type of service (ToS), a.k.a. differentiated services (DS), a.k.a. differentiated services code point (DSCP) and explicit congestion notification (ECN) IP header fields with `socket.IP_RECVTOS`.
- [bpo-37788](https://bugs.python.org/issue?@action=redirect&bpo=37788) [https://bugs.python.org/issue?@action=redirect&bpo=37788]

@action=redirect&bpo=37788]: Fix a reference leak when a Thread object is never joined.

- [bpo-38908](https://bugs.python.org/issue?@action=redirect&bpo=38908) [https://bugs.python.org/issue?@action=redirect&bpo=38908]: Subclasses of `typing.Protocol` which only have data variables declared will now raise a `TypeError` when checked with `isinstance` unless they are decorated with `runtime_checkable()`. Previously, these checks passed silently. Patch provided by Yurii Karabas.
- [bpo-44098](https://bugs.python.org/issue?@action=redirect&bpo=44098) [https://bugs.python.org/issue?@action=redirect&bpo=44098]: `typing.ParamSpec` will no longer be found in the `__parameters__` of most `typing` generics except in valid use locations specified by [PEP 612](https://peps.python.org/pep-0612/) [https://peps.python.org/pep-0612/]. This prevents incorrect usage like `typing.List[P][int]`. This change means incorrect usage which may have passed silently in 3.10 beta 1 and earlier will now error.
- [bpo-44089](https://bugs.python.org/issue?@action=redirect&bpo=44089) [https://bugs.python.org/issue?@action=redirect&bpo=44089]: Allow subclassing `csv.Error` in 3.10 (it was allowed in 3.9 and earlier but was disallowed in early versions of 3.10).
- [bpo-44081](https://bugs.python.org/issue?@action=redirect&bpo=44081) [https://bugs.python.org/issue?@action=redirect&bpo=44081]: `ast.unparse()` now doesn't use redundant spaces to separate `lambda` and the `:` if there are no parameters.
- [bpo-44061](https://bugs.python.org/issue?@action=redirect&bpo=44061) [https://bugs.python.org/issue?@action=redirect&bpo=44061]: Fix regression in previous release when calling `pkgutil.iter_modules()` with a list of `pathlib.Path` objects
- [bpo-44059](https://bugs.python.org/issue?@action=redirect&bpo=44059) [https://bugs.python.org/issue?@action=redirect&bpo=44059]: Register the SerenityOS Browser in the `webbrowser` module.
- [bpo-36515](https://bugs.python.org/issue?@action=redirect&bpo=36515) [https://bugs.python.org/issue?@action=redirect&bpo=36515]: The `hashlib` module no longer

does unaligned memory accesses when compiled for ARM platforms.

- [bpo-40465](https://bugs.python.org/issue?@action=redirect&bpo=40465) [https://bugs.python.org/issue?@action=redirect&bpo=40465]: Remove random module features deprecated in Python 3.9.
- [bpo-44018](https://bugs.python.org/issue?@action=redirect&bpo=44018) [https://bugs.python.org/issue?@action=redirect&bpo=44018]: random.seed() no longer mutates bytearray inputs.
- [bpo-38352](https://bugs.python.org/issue?@action=redirect&bpo=38352) [https://bugs.python.org/issue?@action=redirect&bpo=38352]: Add IO, BinaryIO, TextIO, Match, and Pattern to typing.\_\_all\_\_. Patch by Jelle Zijlstra.
- [bpo-44002](https://bugs.python.org/issue?@action=redirect&bpo=44002) [https://bugs.python.org/issue?@action=redirect&bpo=44002]: `urllib.parse` now uses `functool.lru_cache()` for its internal URL splitting and quoting caches instead of rolling its own like its the '90s.

The undocumented internal `urllib.parse` Quoted class API is now deprecated, for removal in 3.14.

- [bpo-43972](https://bugs.python.org/issue?@action=redirect&bpo=43972) [https://bugs.python.org/issue?@action=redirect&bpo=43972]: When `http.server.SimpleHTTPRequestHandler` sends a 301 (Moved Permanently) for a directory path not ending with `/`, add a `Content-Length: 0` header. This improves the behavior for certain clients.
- [bpo-28528](https://bugs.python.org/issue?@action=redirect&bpo=28528) [https://bugs.python.org/issue?@action=redirect&bpo=28528]: Fix a bug in `pdb` where `checkline()` raises `AttributeError` if it is called after `reset()`.
- [bpo-43853](https://bugs.python.org/issue?@action=redirect&bpo=43853) [https://bugs.python.org/issue?@action=redirect&bpo=43853]: Improved string handling for `sqlite3` user-defined functions and aggregates:

- It is now possible to pass strings with embedded null

characters to UDFs

- Conversion failures now correctly raise `MemoryError`

Patch by Erlend E. Aasland.

- [bpo-43666](https://bugs.python.org/issue?@action=redirect&bpo=43666) [https://bugs.python.org/issue?@action=redirect&bpo=43666]: AIX: `Lib/_aix_support.get_platform()` may fail in an AIX WPAR. The fileset bos.rte appears to have a builddate in both LPAR and WPAR so this fileset is queried rather than bos.mp64. To prevent a similar situation (no builddate in ODM) a value (9988) sufficient for completing a build is provided. Patch by M Felt.
- [bpo-43650](https://bugs.python.org/issue?@action=redirect&bpo=43650) [https://bugs.python.org/issue?@action=redirect&bpo=43650]: Fix `MemoryError` in `shutil.unpack_archive()` which fails inside `shutil._unpack_zipfile()` on large files. Patch by Igor Bolshakov.
- [bpo-43612](https://bugs.python.org/issue?@action=redirect&bpo=43612) [https://bugs.python.org/issue?@action=redirect&bpo=43612]: `zlib.compress()` now accepts a `wbits` parameter which allows users to compress data as a raw deflate block without zlib headers and trailers in one go. Previously this required instantiating a `zlib.compressobj`. It also provides a faster alternative to `gzip.compress` when `wbits=31` is used.
- [bpo-43392](https://bugs.python.org/issue?@action=redirect&bpo=43392) [https://bugs.python.org/issue?@action=redirect&bpo=43392]: `importlib._bootstrap._find_and_load()` now implements a two-step check to avoid locking when modules have been already imported and are ready. This improves performance of repeated calls to `importlib.import_module()` and `importlib.__import__()`.
- [bpo-43318](https://bugs.python.org/issue?@action=redirect&bpo=43318) [https://bugs.python.org/issue?@action=redirect&bpo=43318]: Fix a bug where `pdb` does not always echo cleared breakpoints.

- [bpo-43234](https://bugs.python.org/issue?@action=redirect&bpo=43234) [https://bugs.python.org/issue?@action=redirect&bpo=43234]: Prohibit passing non-`concurrent.futures.ThreadPoolExecutor` executors to `loop.set_default_executor()` following a deprecation in Python 3.8. Patch by Illia Volochii.
- [bpo-43232](https://bugs.python.org/issue?@action=redirect&bpo=43232) [https://bugs.python.org/issue?@action=redirect&bpo=43232]: Prohibit previously deprecated potentially disruptive operations on `asyncio.trsock.TransportSocket`. Patch by Illia Volochii.
- [bpo-30077](https://bugs.python.org/issue?@action=redirect&bpo=30077) [https://bugs.python.org/issue?@action=redirect&bpo=30077]: Added support for Apple's aifc/sowt pseudo-compression
- [bpo-42971](https://bugs.python.org/issue?@action=redirect&bpo=42971) [https://bugs.python.org/issue?@action=redirect&bpo=42971]: Add definition of `errno.EQFULL` for platforms that define this constant (such as macOS).
- [bpo-43086](https://bugs.python.org/issue?@action=redirect&bpo=43086) [https://bugs.python.org/issue?@action=redirect&bpo=43086]: Added a new optional `strict_mode` parameter to `binascii.a2b_base64`. When `strict_mode` is set to `True`, the `a2b_base64` function will accept only valid base64 content. More details about what “valid base64 content” is, can be found in the function's documentation.
- [bpo-43024](https://bugs.python.org/issue?@action=redirect&bpo=43024) [https://bugs.python.org/issue?@action=redirect&bpo=43024]: Improve the help signature of `traceback.print_exception()`, `traceback.format_exception()` and `traceback.format_exception_only()`.
- [bpo-33809](https://bugs.python.org/issue?@action=redirect&bpo=33809) [https://bugs.python.org/issue?@action=redirect&bpo=33809]: Add the `traceback.TracebackException.print()` method which prints the formatted exception information.
- [bpo-42862](https://bugs.python.org/issue?@action=redirect&bpo=42862) [https://bugs.python.org/issue?@action=redirect&bpo=42862]

@action=redirect&bpo=42862]: **sqlite3** now utilizes **functools.lru\_cache()** to implement the connection statement cache. As a small optimisation, the default statement cache size has been increased from 100 to 128. Patch by Erlend E. Aasland.

- **bpo-41818** [<https://bugs.python.org/issue?@action=redirect&bpo=41818>]: Soumendra Ganguly: add `termios.tcgetwinsize()`, `termios.tcsetwinsize()`.
- **bpo-40497** [<https://bugs.python.org/issue?@action=redirect&bpo=40497>]: **subprocess.check\_output()** now raises **ValueError** when the invalid keyword argument *check* is passed by user code. Previously such use would fail later with a **TypeError**. Patch by Rémi Lapeyre.
- **bpo-37449** [<https://bugs.python.org/issue?@action=redirect&bpo=37449>]: `ensurepip` now uses `importlib.resources.files()` traversable APIs
- **bpo-40956** [<https://bugs.python.org/issue?@action=redirect&bpo=40956>]: Use Argument Clinic in **sqlite3**. Patches by Erlend E. Aasland.
- **bpo-41730** [<https://bugs.python.org/issue?@action=redirect&bpo=41730>]: `DeprecationWarning` is now raised when importing **tkinter.tix**, which has been deprecated in documentation since Python 3.6.
- **bpo-20684** [<https://bugs.python.org/issue?@action=redirect&bpo=20684>]: Remove unused `_signature_get_bound_param` function from **inspect** - by Anthony Sottile.
- **bpo-41402** [<https://bugs.python.org/issue?@action=redirect&bpo=41402>]: Fix **email.message.EmailMessage.set\_content()** when called with binary data and 7bit content transfer encoding.
- **bpo-32695** [<https://bugs.python.org/issue?@action=redirect&bpo=32695>]: The *compresslevel* and *preset*

keyword arguments of `tarfile.open()` are now both documented and tested.

- [bpo-41137](https://bugs.python.org/issue?@action=redirect&bpo=41137) [https://bugs.python.org/issue?@action=redirect&bpo=41137]: Use utf-8 encoding while reading .pdbrc files. Patch by Srinivas Reddy Thatiparthi
- [bpo-24391](https://bugs.python.org/issue?@action=redirect&bpo=24391) [https://bugs.python.org/issue?@action=redirect&bpo=24391]: Improved reprs of `threading` synchronization objects: `Semaphore`, `BoundedSemaphore`, `Event` and `Barrier`.
- [bpo-5846](https://bugs.python.org/issue?@action=redirect&bpo=5846) [https://bugs.python.org/issue?@action=redirect&bpo=5846]: Deprecated the following `unittest` functions, scheduled for removal in Python 3.13:
  - `findTestCases()`
  - `makeSuite()`
  - `getTestCaseNames()`

Use `TestLoader` methods instead:

- `unittest.TestLoader.loadTestsFromModule()`
- `unittest.TestLoader.loadTestsFromTestCase()`
- `unittest.TestLoader.getTestCaseNames()`

Patch by Erlend E. Aasland.

- [bpo-40563](https://bugs.python.org/issue?@action=redirect&bpo=40563) [https://bugs.python.org/issue?@action=redirect&bpo=40563]: Support pathlike objects on dbm/shelve. Patch by Hakan Çelik and Henry-Joseph Audéoud.
- [bpo-34990](https://bugs.python.org/issue?@action=redirect&bpo=34990) [https://bugs.python.org/issue?@action=redirect&bpo=34990]: Fixed a Y2k38 bug in the compileall module where it would fail to compile files with a modification time after the year 2038.
- [bpo-39549](https://bugs.python.org/issue?@action=redirect&bpo=39549) [https://bugs.python.org/issue?@action=redirect&bpo=39549]: Whereas the code for `reprlib.Repr` had previously used a hardcoded string value of `'...'`, this PR updates it to use of a `"fillvalue"` attribute, whose value defaults to `'...'` and can be reset in either individual

reprlib.Repr instances or in subclasses thereof.

- [bpo-37022](https://bugs.python.org/issue?@action=redirect&bpo=37022) [https://bugs.python.org/issue?@action=redirect&bpo=37022]: **pdb** now displays exceptions from `repr()` with its `p` and `pp` commands.
- [bpo-38840](https://bugs.python.org/issue?@action=redirect&bpo=38840) [https://bugs.python.org/issue?@action=redirect&bpo=38840]: Fix `test___all__` on platforms lacking a shared memory implementation.
- [bpo-39359](https://bugs.python.org/issue?@action=redirect&bpo=39359) [https://bugs.python.org/issue?@action=redirect&bpo=39359]: Add one missing check that the password is a bytes object for an encrypted zipfile.
- [bpo-38741](https://bugs.python.org/issue?@action=redirect&bpo=38741) [https://bugs.python.org/issue?@action=redirect&bpo=38741]: **configparser**: using `']` inside a section header will no longer cut the section name short at the `']`
- [bpo-38415](https://bugs.python.org/issue?@action=redirect&bpo=38415) [https://bugs.python.org/issue?@action=redirect&bpo=38415]: Added missing behavior to **contextlib.asynccontextmanager()** to match **contextlib.contextmanager()** so decorated functions can themselves be decorators.
- [bpo-30256](https://bugs.python.org/issue?@action=redirect&bpo=30256) [https://bugs.python.org/issue?@action=redirect&bpo=30256]: Pass multiprocessing BaseProxy argument `manager_owned` through AutoProxy.
- [bpo-27513](https://bugs.python.org/issue?@action=redirect&bpo=27513) [https://bugs.python.org/issue?@action=redirect&bpo=27513]: **email.utils.getaddresses()** now accepts **email.header.Header** objects along with string values. Patch by Zackery Spytz.
- [bpo-16379](https://bugs.python.org/issue?@action=redirect&bpo=16379) [https://bugs.python.org/issue?@action=redirect&bpo=16379]: Add SQLite error code and name to **sqlite3** exceptions. Patch by Aviv Palivoda, Daniel Shahaf, and Erlend E. Aasland.
- [bpo-26228](https://bugs.python.org/issue?@action=redirect&bpo=26228) [https://bugs.python.org/issue?@action=redirect&bpo=26228]

@action=redirect&bpo=26228]: `pty.spawn` no longer hangs on FreeBSD, macOS, and Solaris.

- [bpo-33349](https://bugs.python.org/issue?@action=redirect&bpo=33349) [https://bugs.python.org/issue?@action=redirect&bpo=33349]: `lib2to3` now recognizes async generators everywhere.
- [bpo-29298](https://bugs.python.org/issue?@action=redirect&bpo=29298) [https://bugs.python.org/issue?@action=redirect&bpo=29298]: Fix `TypeError` when required subparsers without `dest` do not receive arguments. Patch by Anthony Sottile.

## Documentation

- [bpo-45216](https://bugs.python.org/issue?@action=redirect&bpo=45216) [https://bugs.python.org/issue?@action=redirect&bpo=45216]: Remove extra documentation listing methods in `difflib`. It was rendering twice in `pydoc` and was outdated in some places.
- [bpo-45024](https://bugs.python.org/issue?@action=redirect&bpo=45024) [https://bugs.python.org/issue?@action=redirect&bpo=45024]: `collections.abc` documentation has been expanded to explicitly cover how instance and subclass checks work, with additional doctest examples and an exhaustive list of ABCs which test membership purely by presence of the right `special methods`. Patch by Raymond Hettinger.
- [bpo-44957](https://bugs.python.org/issue?@action=redirect&bpo=44957) [https://bugs.python.org/issue?@action=redirect&bpo=44957]: Promote PEP 604 union syntax by using it where possible. Also, mention `X | Y` more prominently in section about `Union` and mention `X | None` at all in section about `Optional`.
- [bpo-16580](https://bugs.python.org/issue?@action=redirect&bpo=16580) [https://bugs.python.org/issue?@action=redirect&bpo=16580]: Added code equivalents for the `int.to_bytes()` and `int.from_bytes()` methods, as well as tests ensuring that these code equivalents are valid.
- [bpo-44903](https://bugs.python.org/issue?@action=redirect&bpo=44903) [https://bugs.python.org/issue?@action=redirect&bpo=44903]: Removed the `othergui.rst` file, any references to it, and the list of GUI frameworks in the FAQ. In their place I've added links to the Python Wiki **page on GUI frameworks**.
- [bpo-33479](https://bugs.python.org/issue?@action=redirect&bpo=33479) [https://bugs.python.org/issue?@action=redirect&bpo=33479]

@action=redirect&bpo=33479]: Tkinter documentation has been greatly expanded with new “Architecture” and “Threading model” sections.

- [bpo-36700](https://bugs.python.org/issue?@action=redirect&bpo=36700) [https://bugs.python.org/issue?@action=redirect&bpo=36700]: [base64 RFC](https://datatracker.ietf.org/doc/html/rfc4648.html) references were updated to point to [RFC 4648](https://datatracker.ietf.org/doc/html/rfc4648.html) [https://datatracker.ietf.org/doc/html/rfc4648.html]; a section was added to point users to the new “security considerations” section of the RFC.
- [bpo-44740](https://bugs.python.org/issue?@action=redirect&bpo=44740) [https://bugs.python.org/issue?@action=redirect&bpo=44740]: Replaced occurrences of uppercase “Web” and “Internet” with lowercase versions per the 2016 revised Associated Press Style Book.
- [bpo-44693](https://bugs.python.org/issue?@action=redirect&bpo=44693) [https://bugs.python.org/issue?@action=redirect&bpo=44693]: Update the definition of `_future_` in the glossary by replacing the confusing word “pseudo-module” with a more accurate description.
- [bpo-35183](https://bugs.python.org/issue?@action=redirect&bpo=35183) [https://bugs.python.org/issue?@action=redirect&bpo=35183]: Add typical examples to `os.path.splitext` docs
- [bpo-30511](https://bugs.python.org/issue?@action=redirect&bpo=30511) [https://bugs.python.org/issue?@action=redirect&bpo=30511]: Clarify that `shutil.make_archive()` is not thread-safe due to reliance on changing the current working directory.
- [bpo-44561](https://bugs.python.org/issue?@action=redirect&bpo=44561) [https://bugs.python.org/issue?@action=redirect&bpo=44561]: Update of three expired hyperlinks in `Doc/distributing/index.rst`: “Project structure”, “Building and packaging the project”, and “Uploading the project to the Python Packaging Index”.
- [bpo-44651](https://bugs.python.org/issue?@action=redirect&bpo=44651) [https://bugs.python.org/issue?@action=redirect&bpo=44651]: Delete entry “coercion” in `Doc/glossary.rst` for its outdated definition.
- [bpo-42958](https://bugs.python.org/issue?@action=redirect&bpo=42958) [https://bugs.python.org/issue?@action=redirect&bpo=42958]: Updated the docstring and docs of `filecmp.cmp()` to be more accurate and less confusing especially in respect to *shallow* arg.
- [bpo-44631](https://bugs.python.org/issue?@action=redirect&bpo=44631) [https://bugs.python.org/issue?@action=redirect&bpo=44631]: Refactored the `repr()` code of the `_Environ` (os module).
- [bpo-44613](https://bugs.python.org/issue?@action=redirect&bpo=44613) [https://bugs.python.org/issue?@action=redirect&bpo=44613]: `importlib.metadata` is no longer

provisional.

- [bpo-44558](https://bugs.python.org/issue?@action=redirect&bpo=44558) [https://bugs.python.org/issue?@action=redirect&bpo=44558]: Match the docstring and python implementation of `countOf()` to the behavior of its c implementation.
- [bpo-44544](https://bugs.python.org/issue?@action=redirect&bpo=44544) [https://bugs.python.org/issue?@action=redirect&bpo=44544]: List all kwargs for `textwrap.wrap()`, `textwrap.fill()`, and `textwrap.shorten()`. Now, there are nav links to attributes of `TextWrap`, which makes navigation much easier while minimizing duplication in the documentation.
- [bpo-38062](https://bugs.python.org/issue?@action=redirect&bpo=38062) [https://bugs.python.org/issue?@action=redirect&bpo=38062]: Clarify that `atexit` uses equality comparisons internally.
- [bpo-40620](https://bugs.python.org/issue?@action=redirect&bpo=40620) [https://bugs.python.org/issue?@action=redirect&bpo=40620]: Convert examples in tutorial `controlflow.rst` section 4.3 to be interpreter-demo style.
- [bpo-43066](https://bugs.python.org/issue?@action=redirect&bpo=43066) [https://bugs.python.org/issue?@action=redirect&bpo=43066]: Added a warning to `zipfile` docs: `filename` arg with a leading slash may cause archive to be un-openable on Windows systems.
- [bpo-39452](https://bugs.python.org/issue?@action=redirect&bpo=39452) [https://bugs.python.org/issue?@action=redirect&bpo=39452]: Rewrote `Doc/library/__main__.rst`. Broadened scope of the document to explicitly discuss and differentiate between `__main__.py` in packages versus the `__name__ == '__main__'` expression (and the idioms that surround it).
- [bpo-13814](https://bugs.python.org/issue?@action=redirect&bpo=13814) [https://bugs.python.org/issue?@action=redirect&bpo=13814]: In the Design FAQ, answer “Why don’t generators support the `with` statement?”
- [bpo-27752](https://bugs.python.org/issue?@action=redirect&bpo=27752) [https://bugs.python.org/issue?@action=redirect&bpo=27752]: Documentation of `csv.Dialect` is more descriptive.
- [bpo-44453](https://bugs.python.org/issue?@action=redirect&bpo=44453) [https://bugs.python.org/issue?@action=redirect&bpo=44453]: Fix documentation for the return type of `sysconfig.get_path()`.
- [bpo-44392](https://bugs.python.org/issue?@action=redirect&bpo=44392) [https://bugs.python.org/issue?@action=redirect&bpo=44392]: Added a new section in the C API documentation for types used in type hinting. Documented `Py_GenericAlias` and `Py_GenericAliasType`.

- [bpo-38291](https://bugs.python.org/issue?@action=redirect&bpo=38291) [https://bugs.python.org/issue?@action=redirect&bpo=38291]: Mark `typing.io` and `typing.re` as deprecated since Python 3.8 in the documentation. They were never properly supported by type checkers.
- [bpo-44322](https://bugs.python.org/issue?@action=redirect&bpo=44322) [https://bugs.python.org/issue?@action=redirect&bpo=44322]: Document that `SyntaxError` args have a details tuple and that details are adjusted for errors in f-string field replacement expressions.
- [bpo-42392](https://bugs.python.org/issue?@action=redirect&bpo=42392) [https://bugs.python.org/issue?@action=redirect&bpo=42392]: Document the deprecation and removal of the `loop` parameter for many functions and classes in **`asyncio`**.
- [bpo-44195](https://bugs.python.org/issue?@action=redirect&bpo=44195) [https://bugs.python.org/issue?@action=redirect&bpo=44195]: Corrected references to `TraversableResources` in docs. There is no `TraversableReader`.
- [bpo-41963](https://bugs.python.org/issue?@action=redirect&bpo=41963) [https://bugs.python.org/issue?@action=redirect&bpo=41963]: Document that `ConfigParser` strips off comments when reading configuration files.
- [bpo-44072](https://bugs.python.org/issue?@action=redirect&bpo=44072) [https://bugs.python.org/issue?@action=redirect&bpo=44072]: Correct where in the numeric ABC hierarchy `**` support is added, i.e., in `numbers.Complex`, not `numbers.Integral`.
- [bpo-43558](https://bugs.python.org/issue?@action=redirect&bpo=43558) [https://bugs.python.org/issue?@action=redirect&bpo=43558]: Add the remark to **`dataclasses`** documentation that the `__init__()` of any base class has to be called in `__post_init__()`, along with a code example.
- [bpo-44025](https://bugs.python.org/issue?@action=redirect&bpo=44025) [https://bugs.python.org/issue?@action=redirect&bpo=44025]: Clarify when `'_'` in match statements is a keyword, and when not.
- [bpo-41706](https://bugs.python.org/issue?@action=redirect&bpo=41706) [https://bugs.python.org/issue?@action=redirect&bpo=41706]: Fix docs about how methods like `__add__` are invoked when evaluating operator expressions.
- [bpo-41621](https://bugs.python.org/issue?@action=redirect&bpo=41621) [https://bugs.python.org/issue?@action=redirect&bpo=41621]: Document that **`collections.defaultdict`** parameter `default_factory` defaults to `None` and is positional-only.
- [bpo-41576](https://bugs.python.org/issue?@action=redirect&bpo=41576) [https://bugs.python.org/issue?@action=redirect&bpo=41576]

@action=redirect&bpo=41576]: document BaseException in favor of bare except

- [bpo-21760](https://bugs.python.org/issue?@action=redirect&bpo=21760) [https://bugs.python.org/issue?@action=redirect&bpo=21760]: The description for `_file_` fixed. Patch by Furkan Onder
- [bpo-39498](https://bugs.python.org/issue?@action=redirect&bpo=39498) [https://bugs.python.org/issue?@action=redirect&bpo=39498]: Add a “Security Considerations” index which links to standard library modules that have explicitly documented security considerations.
- [bpo-33479](https://bugs.python.org/issue?@action=redirect&bpo=33479) [https://bugs.python.org/issue?@action=redirect&bpo=33479]: Remove the unqualified claim that tkinter is threadsafe. It has not been true for several years and likely never was. An explanation of what is true may be added later, after more discussion, and possibly after patching `_tkinter.c`,

## Tests

- [bpo-40173](https://bugs.python.org/issue?@action=redirect&bpo=40173) [https://bugs.python.org/issue?@action=redirect&bpo=40173]: Fix `test.support.import_helper.import_fresh_module()`.
- [bpo-45280](https://bugs.python.org/issue?@action=redirect&bpo=45280) [https://bugs.python.org/issue?@action=redirect&bpo=45280]: Add a test case for empty `typing.NamedTuple`.
- [bpo-45269](https://bugs.python.org/issue?@action=redirect&bpo=45269) [https://bugs.python.org/issue?@action=redirect&bpo=45269]: Cover case when invalid markers type is supplied to `c_make_encoder`.
- [bpo-45128](https://bugs.python.org/issue?@action=redirect&bpo=45128) [https://bugs.python.org/issue?@action=redirect&bpo=45128]: Fix `test_multiprocessing_fork` failure due to `test_logging` and `sys.modules` manipulation.
- [bpo-45209](https://bugs.python.org/issue?@action=redirect&bpo=45209) [https://bugs.python.org/issue?@action=redirect&bpo=45209]: Fix `UserWarning: resource_tracker warning in _test_multiprocessing._TestSharedMemory.test_shared`
- [bpo-45185](https://bugs.python.org/issue?@action=redirect&bpo=45185) [https://bugs.python.org/issue?@action=redirect&bpo=45185]

@action=redirect&bpo=45185]: Enables TestEnumerations test cases in test\_ssl suite.

- [bpo-45195](https://bugs.python.org/issue?@action=redirect&bpo=45195) [https://bugs.python.org/issue?@action=redirect&bpo=45195]: Fix test\_readline.test\_nonascii(): sometimes, the newline character is not written at the end, so don't expect it in the output. Patch by Victor Stinner.
- [bpo-45156](https://bugs.python.org/issue?@action=redirect&bpo=45156) [https://bugs.python.org/issue?@action=redirect&bpo=45156]: Fixes infinite loop on `unittest.mock.seal()` of mocks created by `create_autospec()`.
- [bpo-45125](https://bugs.python.org/issue?@action=redirect&bpo=45125) [https://bugs.python.org/issue?@action=redirect&bpo=45125]: Improves pickling tests and docs of SharedMemory and SharableList objects.
- [bpo-44860](https://bugs.python.org/issue?@action=redirect&bpo=44860) [https://bugs.python.org/issue?@action=redirect&bpo=44860]: Update test\_sysconfig.test\_user\_similar() for the posix\_user scheme: platlib doesn't use `sys.platlibdir`. Patch by Victor Stinner.
- [bpo-45052](https://bugs.python.org/issue?@action=redirect&bpo=45052) [https://bugs.python.org/issue?@action=redirect&bpo=45052]: WithProcessesTestSharedMemory.test\_shared\_memory\_ba test was ignored, because `self.assertEqual(sms.size, sms2.size)` line was failing. It is now removed and test is unskipped.

The main motivation for this line to be removed from the test is that the size of SharedMemory is not ever guaranteed to be the same. It is decided by the platform.

- [bpo-44895](https://bugs.python.org/issue?@action=redirect&bpo=44895) [https://bugs.python.org/issue?@action=redirect&bpo=44895]: libregtest now clears the type cache later to reduce the risk of false alarm when checking for reference leaks. Previously, the type cache was cleared too early and libregtest raised a false alarm about reference leaks under very specific conditions. Patch by Irit Katriel and Victor Stinner.

- [bpo-45042](https://bugs.python.org/issue?@action=redirect&bpo=45042) [https://bugs.python.org/issue?@action=redirect&bpo=45042]: Fixes that test classes decorated with `@hashlib_helper.requires_hashdigest` were skipped all the time.
- [bpo-25130](https://bugs.python.org/issue?@action=redirect&bpo=25130) [https://bugs.python.org/issue?@action=redirect&bpo=25130]: Add calls of `gc.collect()` in tests to support PyPy.
- [bpo-45011](https://bugs.python.org/issue?@action=redirect&bpo=45011) [https://bugs.python.org/issue?@action=redirect&bpo=45011]: Made tests relying on the `_asyncio` C extension module optional to allow running on alternative Python implementations. Patch by Serhiy Storchaka.
- [bpo-44949](https://bugs.python.org/issue?@action=redirect&bpo=44949) [https://bugs.python.org/issue?@action=redirect&bpo=44949]: Fix auto history tests of `test_readline`: sometimes, the newline character is not written at the end, so don't expect it in the output.
- [bpo-44891](https://bugs.python.org/issue?@action=redirect&bpo=44891) [https://bugs.python.org/issue?@action=redirect&bpo=44891]: Tests were added to clarify `id()` is preserved when `obj * 1` is used on `str` and `bytes` objects. Patch by Nikita Sobolev.
- [bpo-44852](https://bugs.python.org/issue?@action=redirect&bpo=44852) [https://bugs.python.org/issue?@action=redirect&bpo=44852]: Add ability to wholesale silence `DeprecationWarnings` while running the regression test suite.
- [bpo-40928](https://bugs.python.org/issue?@action=redirect&bpo=40928) [https://bugs.python.org/issue?@action=redirect&bpo=40928]: Notify users running `test_decimal` regression tests on macOS of potential harmless “malloc can't allocate region” messages spewed by `test_decimal`.
- [bpo-44734](https://bugs.python.org/issue?@action=redirect&bpo=44734) [https://bugs.python.org/issue?@action=redirect&bpo=44734]: Fixed floating point precision issue in turtle tests.
- [bpo-44708](https://bugs.python.org/issue?@action=redirect&bpo=44708) [https://bugs.python.org/issue?@action=redirect&bpo=44708]: Regression tests, when run with `-w`, are now re-running only the affected test methods instead

of re-running the entire test file.

- [bpo-42095](https://bugs.python.org/issue?@action=redirect&bpo=42095) [https://bugs.python.org/issue?@action=redirect&bpo=42095]: Added interop tests for Apple plists: generate plist files with Python plistlib and parse with Apple plutil; and the other way round.
- [bpo-44647](https://bugs.python.org/issue?@action=redirect&bpo=44647) [https://bugs.python.org/issue?@action=redirect&bpo=44647]: Added a permanent Unicode-valued environment variable to regression tests to ensure they handle this use case in the future. If your test environment breaks because of that, report a bug to us, and temporarily set PYTHONREGTEST\_UNICODE\_GUARD=0 in your test environment.
- [bpo-44515](https://bugs.python.org/issue?@action=redirect&bpo=44515) [https://bugs.python.org/issue?@action=redirect&bpo=44515]: Adjust recently added contextlib tests to avoid assuming the use of a refcounted GC
- [bpo-44287](https://bugs.python.org/issue?@action=redirect&bpo=44287) [https://bugs.python.org/issue?@action=redirect&bpo=44287]: Fix asyncio test\_popen() of test\_windows\_utils by using a longer timeout. Use military grade battle-tested `test.support.SHORT_TIMEOUT` timeout rather than a hardcoded timeout of 10 seconds: it's 30 seconds by default, but it is made longer on slow buildbots. Patch by Victor Stinner.
- [bpo-44451](https://bugs.python.org/issue?@action=redirect&bpo=44451) [https://bugs.python.org/issue?@action=redirect&bpo=44451]: Reset DeprecationWarning filters in `test.test_importlib.test_metadata_api.APITests.test_` to avoid StopIteration error if DeprecationWarnings are ignored.
- [bpo-44363](https://bugs.python.org/issue?@action=redirect&bpo=44363) [https://bugs.python.org/issue?@action=redirect&bpo=44363]: Account for address sanitizer in `test_capi`. `test_capi` now passes when run GCC address sanitizer.
- [bpo-44364](https://bugs.python.org/issue?@action=redirect&bpo=44364) [https://bugs.python.org/issue?@action=redirect&bpo=44364]: Add non integral tests for

`math.sqrt()` function.

- [bpo-43921](https://bugs.python.org/issue?@action=redirect&bpo=43921) [https://bugs.python.org/issue?@action=redirect&bpo=43921]: Fix `test_ssl.test_wrong_cert_tls13()`: use `suppress_ragged_eofs=False`, since `read()` can raise `ssl.SSLEOFError` on Windows. Patch by Victor Stinner.
- [bpo-43921](https://bugs.python.org/issue?@action=redirect&bpo=43921) [https://bugs.python.org/issue?@action=redirect&bpo=43921]: Fix `test_pha_required_nocert()` of `test_ssl`: catch two more EOF cases (when the `recv()` method returns an empty string). Patch by Victor Stinner.
- [bpo-44131](https://bugs.python.org/issue?@action=redirect&bpo=44131) [https://bugs.python.org/issue?@action=redirect&bpo=44131]: Add `test_frozenmain` to `test_embed` to test the `Py_FrozenMain()` C function. Patch by Victor Stinner.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Ignore error string case in `test_file_not_exists()`.
- [bpo-42083](https://bugs.python.org/issue?@action=redirect&bpo=42083) [https://bugs.python.org/issue?@action=redirect&bpo=42083]: Add test to check that `PyStructSequence_NewType` accepts a `PyStructSequence_Desc` with `doc` field set to `NULL`.
- [bpo-35753](https://bugs.python.org/issue?@action=redirect&bpo=35753) [https://bugs.python.org/issue?@action=redirect&bpo=35753]: Fix crash in doctest when doctest parses modules that include unwrappable functions by skipping those functions.
- [bpo-30256](https://bugs.python.org/issue?@action=redirect&bpo=30256) [https://bugs.python.org/issue?@action=redirect&bpo=30256]: Add test for nested queues when using multiprocessing shared objects `AutoProxy[Queue]` inside `ListProxy` and `DictProxy`

## Build

- [bpo-45220](https://bugs.python.org/issue?@action=redirect&bpo=45220) [https://bugs.python.org/issue?@action=redirect&bpo=45220]: Avoid building with the Windows

11 SDK previews automatically. This may be overridden by setting the `DefaultWindowsSDKVersion` environment variable before building.

- [bpo-45020](https://bugs.python.org/issue?@action=redirect&bpo=45020) [https://bugs.python.org/issue?@action=redirect&bpo=45020]: Freeze stdlib modules that are imported during startup. This provides significant performance improvements to startup. If necessary, use the previously added “-X frozen\_modules=off” commandline option to force importing the source modules.
- [bpo-45188](https://bugs.python.org/issue?@action=redirect&bpo=45188) [https://bugs.python.org/issue?@action=redirect&bpo=45188]: Windows builds now regenerate frozen modules as the first part of the build. Previously the regeneration was later in the build, which would require it to be restarted if any modules had changed.
- [bpo-45163](https://bugs.python.org/issue?@action=redirect&bpo=45163) [https://bugs.python.org/issue?@action=redirect&bpo=45163]: Fixes Haiku platform build.
- [bpo-45067](https://bugs.python.org/issue?@action=redirect&bpo=45067) [https://bugs.python.org/issue?@action=redirect&bpo=45067]: The `ncurses` function `extended_color_content` was introduced in 2017

(<https://invisible-island.net/ncurses/NEWS.html#index-t20170401>). The

`ncurses-devel` package in CentOS 7 had a older version `ncurses` resulted in compilation error. For compiling `ncurses` with extended color support, we verify the version of the `ncurses` library `>= 20170401`.

- [bpo-45019](https://bugs.python.org/issue?@action=redirect&bpo=45019) [https://bugs.python.org/issue?@action=redirect&bpo=45019]: Generate lines in relevant files for frozen modules. Up until now each of the files had to be edited manually. This change makes it easier to add to and modify the frozen modules.
- [bpo-44340](https://bugs.python.org/issue?@action=redirect&bpo=44340) [https://bugs.python.org/issue?@action=redirect&bpo=44340]: Add support for building with clang thin lto via `-with-lto=thin/full`. Patch by Donghee Na

and Brett Holman.

- [bpo-44535](https://bugs.python.org/issue?@action=redirect&bpo=44535) [https://bugs.python.org/issue?@action=redirect&bpo=44535]: Enable building using a Visual Studio 2022 install on Windows.
- [bpo-43298](https://bugs.python.org/issue?@action=redirect&bpo=43298) [https://bugs.python.org/issue?@action=redirect&bpo=43298]: Improved error message when building without a Windows SDK installed.
- [bpo-44381](https://bugs.python.org/issue?@action=redirect&bpo=44381) [https://bugs.python.org/issue?@action=redirect&bpo=44381]: The Windows build now accepts **EnableControlFlowGuard** set to `guard` to enable CFG.
- [bpo-41282](https://bugs.python.org/issue?@action=redirect&bpo=41282) [https://bugs.python.org/issue?@action=redirect&bpo=41282]: Fix broken `make install` that caused standard library extension modules to be unnecessarily and incorrectly rebuilt during the install phase of cpython.

## Windows

- [bpo-45375](https://bugs.python.org/issue?@action=redirect&bpo=45375) [https://bugs.python.org/issue?@action=redirect&bpo=45375]: Fixes an assertion failure due to searching for the standard library in unnormalised paths.
- [bpo-45022](https://bugs.python.org/issue?@action=redirect&bpo=45022) [https://bugs.python.org/issue?@action=redirect&bpo=45022]: Update Windows release to include libffi 3.4.2
- [bpo-45007](https://bugs.python.org/issue?@action=redirect&bpo=45007) [https://bugs.python.org/issue?@action=redirect&bpo=45007]: Update to OpenSSL 1.1.1l in Windows build
- [bpo-44848](https://bugs.python.org/issue?@action=redirect&bpo=44848) [https://bugs.python.org/issue?@action=redirect&bpo=44848]: Upgrade Windows installer to use SQLite 3.36.0.
- [bpo-44572](https://bugs.python.org/issue?@action=redirect&bpo=44572) [https://bugs.python.org/issue?@action=redirect&bpo=44572]: Avoid consuming standard input in the **platform** module
- [bpo-44582](https://bugs.python.org/issue?@action=redirect&bpo=44582) [https://bugs.python.org/issue?@action=redirect&bpo=44582]: Accelerate speed of **mimetypes** initialization using a native implementation of the registry

scan.

- [bpo-41299](https://bugs.python.org/issue?@action=redirect&bpo=41299) [https://bugs.python.org/issue?@action=redirect&bpo=41299]: Fix 16 milliseconds jitter when using timeouts in `threading`, such as with `threading.Lock.acquire()` or `threading.Condition.wait()`.
- [bpo-42686](https://bugs.python.org/issue?@action=redirect&bpo=42686) [https://bugs.python.org/issue?@action=redirect&bpo=42686]: Build `sqlite3` with math functions enabled. Patch by Erlend E. Aasland.
- [bpo-40263](https://bugs.python.org/issue?@action=redirect&bpo=40263) [https://bugs.python.org/issue?@action=redirect&bpo=40263]: This is a follow-on bug from <https://bugs.python.org/issue26903>. Once that is applied we run into an off-by-one assertion problem. The assert was not correct.

## macOS

- [bpo-45007](https://bugs.python.org/issue?@action=redirect&bpo=45007) [https://bugs.python.org/issue?@action=redirect&bpo=45007]: Update macOS installer builds to use OpenSSL 1.1.1l.
- [bpo-34602](https://bugs.python.org/issue?@action=redirect&bpo=34602) [https://bugs.python.org/issue?@action=redirect&bpo=34602]: When building CPython on macOS with `./configure --with-undefined-behavior-sanitizer --with-pydebug`, the stack size is now quadrupled to allow for the entire test suite to pass.
- [bpo-44848](https://bugs.python.org/issue?@action=redirect&bpo=44848) [https://bugs.python.org/issue?@action=redirect&bpo=44848]: Update macOS installer to use SQLite 3.36.0.
- [bpo-44689](https://bugs.python.org/issue?@action=redirect&bpo=44689) [https://bugs.python.org/issue?@action=redirect&bpo=44689]: `cypes.util.find_library()` now works correctly on macOS 11 Big Sur even if Python is built on an older version of macOS. Previously, when built on older macOS systems, `find_library` was not able to find macOS system libraries when running on Big Sur due to changes in how system libraries are stored.
- [bpo-41972](https://bugs.python.org/issue?@action=redirect&bpo=41972) [https://bugs.python.org/issue?@action=redirect&bpo=41972]: The framework build's user header path in `sysconfig` is changed to add a 'pythonX.Y' component to match `distutils`'s behavior.

- [bpo-43109](https://bugs.python.org/issue?@action=redirect&bpo=43109) [https://bugs.python.org/issue?@action=redirect&bpo=43109]: Allow `-with-lto` configure option to work with Apple-supplied Xcode or Command Line Tools.
- [bpo-34932](https://bugs.python.org/issue?@action=redirect&bpo=34932) [https://bugs.python.org/issue?@action=redirect&bpo=34932]: Add `socket.TCP_KEEPALIVE` support for macOS. Patch by Shane Harvey.

## IDLE

- [bpo-45296](https://bugs.python.org/issue?@action=redirect&bpo=45296) [https://bugs.python.org/issue?@action=redirect&bpo=45296]: On Windows, change `exit/quit` message to suggest `Ctrl-D`, which works, instead of `<Ctrl-Z Return>`, which does not work in IDLE.
- [bpo-45193](https://bugs.python.org/issue?@action=redirect&bpo=45193) [https://bugs.python.org/issue?@action=redirect&bpo=45193]: Make completion boxes appear on Ubuntu again.
- [bpo-40128](https://bugs.python.org/issue?@action=redirect&bpo=40128) [https://bugs.python.org/issue?@action=redirect&bpo=40128]: Mostly fix completions on macOS when not using `tcl/tk 8.6.11` (as with 3.9). The added `update_idletask` call should be harmless and possibly helpful otherwise.
- [bpo-33962](https://bugs.python.org/issue?@action=redirect&bpo=33962) [https://bugs.python.org/issue?@action=redirect&bpo=33962]: Move the indent space setting from the Font tab to the new Windows tab. Patch by Mark Roseman and Terry Jan Reedy.
- [bpo-40468](https://bugs.python.org/issue?@action=redirect&bpo=40468) [https://bugs.python.org/issue?@action=redirect&bpo=40468]: Split the settings dialog General tab into Windows and Shell/ED tabs. Move help sources, which extend the Help menu, to the Extensions tab. Make space for new options and shorten the dialog. The latter makes the dialog better fit small screens.
- [bpo-41611](https://bugs.python.org/issue?@action=redirect&bpo=41611) [https://bugs.python.org/issue?@action=redirect&bpo=41611]: Avoid uncaught exceptions in `AutoCompleteWindow.winconfig_event()`.
- [bpo-41611](https://bugs.python.org/issue?@action=redirect&bpo=41611) [https://bugs.python.org/issue?@action=redirect&bpo=41611]: Fix IDLE sometimes freezing upon tab-completion on macOS.
- [bpo-44010](https://bugs.python.org/issue?@action=redirect&bpo=44010) [https://bugs.python.org/issue?@action=redirect&bpo=44010]: Highlight the new `match` statement's `soft keywords`: `match`, `case`, and `_`. However,

this highlighting is not perfect and will be incorrect in some rare cases, including some `_s` in `case` patterns.

- [bpo-44026](https://bugs.python.org/issue?@action=redirect&bpo=44026) [https://bugs.python.org/issue?@action=redirect&bpo=44026]: Include interpreter's typo fix suggestions in message line for `NameErrors` and `AttributeErrors`. Patch by E. Paine.

## Tools/Demos

- [bpo-44786](https://bugs.python.org/issue?@action=redirect&bpo=44786) [https://bugs.python.org/issue?@action=redirect&bpo=44786]: Fix a warning in regular expression in the `c-analyzer` script.
- [bpo-44967](https://bugs.python.org/issue?@action=redirect&bpo=44967) [https://bugs.python.org/issue?@action=redirect&bpo=44967]: `pydoc` now returns a non-zero status code when a module cannot be found.
- [bpo-44978](https://bugs.python.org/issue?@action=redirect&bpo=44978) [https://bugs.python.org/issue?@action=redirect&bpo=44978]: Allow the `Argument Clinic` tool to handle `__complex__` special methods.
- [bpo-43425](https://bugs.python.org/issue?@action=redirect&bpo=43425) [https://bugs.python.org/issue?@action=redirect&bpo=43425]: Removed the 'test2to3' demo project that demonstrated using `lib2to3` to support Python 2.x and Python 3.x from a single source in a `distutils` package. Patch by Donghee Na
- [bpo-44074](https://bugs.python.org/issue?@action=redirect&bpo=44074) [https://bugs.python.org/issue?@action=redirect&bpo=44074]: Make `patchcheck` automatically detect the correct base branch name (previously it was hardcoded to 'master')
- [bpo-20291](https://bugs.python.org/issue?@action=redirect&bpo=20291) [https://bugs.python.org/issue?@action=redirect&bpo=20291]: Added support for variadic positional parameters in `Argument Clinic`.

## C API

- [bpo-41710](https://bugs.python.org/issue?@action=redirect&bpo=41710) [https://bugs.python.org/issue?@action=redirect&bpo=41710]: The `PyThread_acquire_lock_timed()` function now clamps the timeout if it is too large, rather than aborting the process. Patch by Victor Stinner.
- [bpo-44687](https://bugs.python.org/issue?@action=redirect&bpo=44687) [https://bugs.python.org/issue?@action=redirect&bpo=44687]

@action=redirect&bpo=44687]: **BufferedReader.peek()** no longer raises **ValueError** when the entire file has already been buffered.

- [bpo-45116](https://bugs.python.org/issue?@action=redirect&bpo=45116) [https://bugs.python.org/issue?@action=redirect&bpo=45116]: Add the **Py\_ALWAYS\_INLINE** macro to ask the compiler to always inline a static inline function. The compiler can ignore it and decides to not inline the function. Patch by Victor Stinner.
- [bpo-45094](https://bugs.python.org/issue?@action=redirect&bpo=45094) [https://bugs.python.org/issue?@action=redirect&bpo=45094]: Add the **Py\_NO\_INLINE** macro to disable inlining on a function. Patch by Victor Stinner.
- [bpo-45061](https://bugs.python.org/issue?@action=redirect&bpo=45061) [https://bugs.python.org/issue?@action=redirect&bpo=45061]: Add a deallocator to the **bool** type to detect refcount bugs in C extensions which call `Py_DECREF(Py_True);` or `Py_DECREF(Py_False);` by mistake. Patch by Victor Stinner.
- [bpo-42035](https://bugs.python.org/issue?@action=redirect&bpo=42035) [https://bugs.python.org/issue?@action=redirect&bpo=42035]: Add a new **PyType\_GetQualName()** function to get type's qualified name.
- [bpo-41103](https://bugs.python.org/issue?@action=redirect&bpo=41103) [https://bugs.python.org/issue?@action=redirect&bpo=41103]: Reverts removal of the old buffer protocol because they are part of stable ABI.
- [bpo-44751](https://bugs.python.org/issue?@action=redirect&bpo=44751) [https://bugs.python.org/issue?@action=redirect&bpo=44751]: Remove `crypt.h` include from the public `Python.h` header.
- [bpo-42747](https://bugs.python.org/issue?@action=redirect&bpo=42747) [https://bugs.python.org/issue?@action=redirect&bpo=42747]: The `Py_TPFLAGS_HAVE_VERSION_TAG` type flag now does nothing. The `Py_TPFLAGS_HAVE_AM_SEND` flag (which was added in 3.10) is removed. Both were unnecessary because it is not possible to have type objects with the relevant fields missing.

- [bpo-44530](https://bugs.python.org/issue?@action=redirect&bpo=44530) [https://bugs.python.org/issue?@action=redirect&bpo=44530]: Added the `co_qualname` to the `PyCodeObject` structure to propagate the qualified name from the compiler to code objects.

Patch by Gabriele N. Torretta

- [bpo-44441](https://bugs.python.org/issue?@action=redirect&bpo=44441) [https://bugs.python.org/issue?@action=redirect&bpo=44441]: `Py_RunMain()` now resets `PyImport_Inittab` to its initial value at exit. It must be possible to call `PyImport_AppendInittab()` or `PyImport_ExtendInittab()` at each Python initialization. Patch by Victor Stinner.

- [bpo-39947](https://bugs.python.org/issue?@action=redirect&bpo=39947) [https://bugs.python.org/issue?@action=redirect&bpo=39947]: Remove 4 private trashcan C API functions which were only kept for the backward compatibility of the stable ABI with Python 3.8 and older, since the trashcan API was not usable with the limited C API on Python 3.8 and older. The trashcan API was excluded from the limited C API in Python 3.9.

Removed functions:

- `_PyTrash_deposit_object()`
- `_PyTrash_destroy_chain()`
- `_PyTrash_thread_deposit_object()`
- `_PyTrash_thread_destroy_chain()`

The trashcan C API was never usable with the limited C API, since old trashcan macros accessed directly `PyThreadState` members like `_tstate->trash_delete_nesting`, whereas the `PyThreadState` structure is opaque in the limited C API.

Exclude also the `PyTrash_UNWIND_LEVEL` constant from the C API.

Patch by Victor Stinner.

- [bpo-40939](https://bugs.python.org/issue?@action=redirect&bpo=40939) [https://bugs.python.org/issue?@action=redirect&bpo=40939]

@action=redirect&bpo=40939]: Removed documentation for the removed `PyParser_*` C API.

- [bpo-43795](https://bugs.python.org/issue?@action=redirect&bpo=43795) [https://bugs.python.org/issue?@action=redirect&bpo=43795]: The list in [Contents of Limited API](#) now shows the public name `PyFrameObject` rather than `_frame`. The non-existing entry `_node` no longer appears in the list.
- [bpo-44378](https://bugs.python.org/issue?@action=redirect&bpo=44378) [https://bugs.python.org/issue?@action=redirect&bpo=44378]: `Py_IS_TYPE()` no longer uses `Py_TYPE()` to avoid a compiler warning: no longer cast `const PyObject*` to `PyObject*`. Patch by Victor Stinner.
- [bpo-39573](https://bugs.python.org/issue?@action=redirect&bpo=39573) [https://bugs.python.org/issue?@action=redirect&bpo=39573]: Convert the `Py_TYPE()` and `Py_SIZE()` macros to static inline functions. The `Py_SET_TYPE()` and `Py_SET_SIZE()` functions must now be used to set an object type and size. Patch by Victor Stinner.
- [bpo-44263](https://bugs.python.org/issue?@action=redirect&bpo=44263) [https://bugs.python.org/issue?@action=redirect&bpo=44263]: The `PyType_Ready()` function now raises an error if a type is defined with the `Py_TPFLAGS_HAVE_GC` flag set but has no traverse function (`PyTypeObject.tp_traverse`). Patch by Victor Stinner.
- [bpo-43795](https://bugs.python.org/issue?@action=redirect&bpo=43795) [https://bugs.python.org/issue?@action=redirect&bpo=43795]: The undocumented function `Py_FrozenMain()` is removed from the Limited API.
- [bpo-44113](https://bugs.python.org/issue?@action=redirect&bpo=44113) [https://bugs.python.org/issue?@action=redirect&bpo=44113]: Deprecate the following functions to configure the Python initialization:
  - `PySys_AddWarnOptionUnicode()`
  - `PySys_AddWarnOption()`
  - `PySys_AddXOption()`
  - `PySys_HasWarnOptions()`
  - `Py_SetPath()`
  - `Py_SetProgramName()`

- `Py_SetPythonHome()`
- `Py_SetStandardStreamEncoding()`
- `_Py_SetProgramFullPath()`

Use the new **PyConfig** API of the **Python Initialization Configuration** instead (**PEP 587** [<https://peps.python.org/pep-0587/>]).

- **bpo-44094** [<https://bugs.python.org/issue?@action=redirect&bpo=44094>]: **Remove**  
`PyErr_SetFromErrnoWithUnicodeFilename()`,  
`PyErr_SetFromWindowsErrWithUnicodeFilename()`,  
**and**  
`PyErr_SetExcFromWindowsErrWithUnicodeFilename()`.  
 They are not documented and have been deprecated since Python 3.3.
- **bpo-43795** [<https://bugs.python.org/issue?@action=redirect&bpo=43795>]: **PyCodec\_Unregister()** is now properly exported as a function in the Windows Stable ABI DLL.
- **bpo-44029** [<https://bugs.python.org/issue?@action=redirect&bpo=44029>]: **Remove deprecated**  
**Py\_UNICODE APIs:** `PyUnicode_Encode`,  
`PyUnicode_EncodeUTF7`, `PyUnicode_EncodeUTF8`,  
`PyUnicode_EncodeUTF16`, `PyUnicode_EncodeUTF32`,  
`PyUnicode_EncodeLatin1`, `PyUnicode_EncodeMBCS`,  
`PyUnicode_EncodeDecimal`,  
`PyUnicode_EncodeRawUnicodeEscape`,  
`PyUnicode_EncodeCharmap`,  
`PyUnicode_EncodeUnicodeEscape`,  
`PyUnicode_TransformDecimalToASCII`,  
`PyUnicode_TranslateCharmap`,  
`PyUnicodeEncodeError_Create`,  
`PyUnicodeTranslateError_Create`. See **PEP 393** [<https://peps.python.org/pep-0393/>] and **PEP 624** [<https://peps.python.org/pep-0624/>] for reference.
- **bpo-42035** [<https://bugs.python.org/issue?@action=redirect&bpo=42035>]: **Add a new** `PyType_GetName()`

function to get type's short name.

# Python 3.10.0 beta 1

*Release date: 2021-05-03*

## Security

- [bpo-43434](https://bugs.python.org/issue?@action=redirect&bpo=43434) [https://bugs.python.org/issue?@action=redirect&bpo=43434]: Creating `sqlite3.Connection` objects now also produces `sqlite3.connect` and `sqlite3.connect/handle` [auditing events](#). Previously these events were only produced by `sqlite3.connect()` calls. Patch by Erlend E. Aasland.
- [bpo-43998](https://bugs.python.org/issue?@action=redirect&bpo=43998) [https://bugs.python.org/issue?@action=redirect&bpo=43998]: The `ssl` module sets more secure cipher suites defaults. Ciphers without forward secrecy and with SHA-1 MAC are disabled by default. Security level 2 prohibits weak RSA, DH, and ECC keys with less than 112 bits of security. `SSLContext` defaults to minimum protocol version TLS 1.2. Settings are based on Hynek Schlawack's research.
- [bpo-43882](https://bugs.python.org/issue?@action=redirect&bpo=43882) [https://bugs.python.org/issue?@action=redirect&bpo=43882]: The presence of newline or tab characters in parts of a URL could allow some forms of attacks.

Following the controlling specification for URLs defined by WHATWG `urllib.parse()` now removes ASCII newlines and tabs from URLs, preventing such attacks.

- [bpo-43472](https://bugs.python.org/issue?@action=redirect&bpo=43472) [https://bugs.python.org/issue?@action=redirect&bpo=43472]: Ensures interpreter-level audit hooks receive the `cpython.PyInterpreterState_New` event when called through the `_xxsubinterpreters` module.
- [bpo-43362](https://bugs.python.org/issue?@action=redirect&bpo=43362) [https://bugs.python.org/issue?@action=redirect&bpo=43362]

@action=redirect&bpo=43362]: Fix invalid free in `_sha3` module. The issue was introduced in 3.10.0a1. Python 3.9 and earlier are not affected.

- [bpo-43762](https://bugs.python.org/issue?@action=redirect&bpo=43762) [https://bugs.python.org/issue?@action=redirect&bpo=43762]: Add audit events for `sqlite3.connect()`, `sqlite3.Connection.enable_load_extension()`, and `sqlite3.Connection.load_extension()`. Patch by Erlend E. Aasland.
- [bpo-43756](https://bugs.python.org/issue?@action=redirect&bpo=43756) [https://bugs.python.org/issue?@action=redirect&bpo=43756]: Add new audit event `glob.glob/2` to incorporate the new `root_dir` and `dir_fd` arguments added to `glob.glob()` and `glob.iglob()`.
- [bpo-36384](https://bugs.python.org/issue?@action=redirect&bpo=36384) [https://bugs.python.org/issue?@action=redirect&bpo=36384]: `ipaddress` module no longer accepts any leading zeros in IPv4 address strings. Leading zeros are ambiguous and interpreted as octal notation by some libraries. For example the legacy function `socket.inet_aton()` treats leading zeros as octal notation. glibc implementation of modern `inet_pton()` does not accept any leading zeros. For a while the `ipaddress` module used to accept ambiguous leading zeros.
- [bpo-43075](https://bugs.python.org/issue?@action=redirect&bpo=43075) [https://bugs.python.org/issue?@action=redirect&bpo=43075]: Fix Regular Expression Denial of Service (ReDoS) vulnerability in `urllib.request.AbstractBasicAuthHandler`. The ReDoS-vulnerable regex has quadratic worst-case complexity and it allows cause a denial of service when identifying crafted invalid RFCs. This ReDoS issue is on the client side and needs remote attackers to control the HTTP server.
- [bpo-42800](https://bugs.python.org/issue?@action=redirect&bpo=42800) [https://bugs.python.org/issue?@action=redirect&bpo=42800]: Audit hooks are now fired for `frame.f_code`, `traceback.tb_frame`, and generator code/frame attribute access.
- [bpo-37363](https://bugs.python.org/issue?@action=redirect&bpo=37363) [https://bugs.python.org/issue?@action=redirect&bpo=37363]

@action=redirect&bpo=37363]: Add audit events to the `http.client` module.

## Core and Builtins

- [bpo-43977](https://bugs.python.org/issue?@action=redirect&bpo=43977) [https://bugs.python.org/issue?@action=redirect&bpo=43977]: Prevent classes being both a sequence and a mapping when pattern matching.
- [bpo-43977](https://bugs.python.org/issue?@action=redirect&bpo=43977) [https://bugs.python.org/issue?@action=redirect&bpo=43977]: Use `tp_flags` on the class object to determine if the subject is a sequence or mapping when pattern matching. Avoids the need to import `collections.abc` when pattern matching.
- [bpo-43892](https://bugs.python.org/issue?@action=redirect&bpo=43892) [https://bugs.python.org/issue?@action=redirect&bpo=43892]: Restore proper validation of complex literal value patterns when parsing `match` blocks.
- [bpo-43933](https://bugs.python.org/issue?@action=redirect&bpo=43933) [https://bugs.python.org/issue?@action=redirect&bpo=43933]: Set `frame.f_lineno` to the line number of the ‘with’ keyword when executing the call to `__exit__`.
- [bpo-43933](https://bugs.python.org/issue?@action=redirect&bpo=43933) [https://bugs.python.org/issue?@action=redirect&bpo=43933]: If the current position in a frame has no line number then set the `f_lineno` attribute to `None`, instead of `-1`, to conform to PEP 626. This should not normally be possible, but might occur in some unusual circumstances.
- [bpo-43963](https://bugs.python.org/issue?@action=redirect&bpo=43963) [https://bugs.python.org/issue?@action=redirect&bpo=43963]: Importing the `_signal` module in a subinterpreter has no longer side effects.
- [bpo-42739](https://bugs.python.org/issue?@action=redirect&bpo=42739) [https://bugs.python.org/issue?@action=redirect&bpo=42739]: The internal representation of line number tables is changed to not use sentinels, and an explicit length parameter is added to the out of process API function `PyLineTable_InitAddressRange`. This makes the handling of line number tables more robust in some circumstances.
- [bpo-43908](https://bugs.python.org/issue?@action=redirect&bpo=43908) [https://bugs.python.org/issue?@action=redirect&bpo=43908]: Make `re` types immutable. Patch by Erlend E. Aasland.
- [bpo-43908](https://bugs.python.org/issue?@action=redirect&bpo=43908) [https://bugs.python.org/issue?@action=redirect&bpo=43908]

@action=redirect&bpo=43908]: Make the `array.array` type immutable. Patch by Erlend E. Aasland.

- [bpo-43901](https://bugs.python.org/issue?@action=redirect&bpo=43901) [https://bugs.python.org/issue?@action=redirect&bpo=43901]: Change class and module objects to lazy-create empty annotations dicts on demand. The annotations dicts are stored in the object's `__dict__` for backwards compatibility.
- [bpo-43892](https://bugs.python.org/issue?@action=redirect&bpo=43892) [https://bugs.python.org/issue?@action=redirect&bpo=43892]: Match patterns now use new dedicated AST nodes (`MatchValue`, `MatchSingleton`, `MatchSequence`, `MatchStar`, `MatchMapping`, `MatchClass`) rather than reusing expression AST nodes. `MatchAs` and `MatchOr` are now defined as pattern nodes rather than as expression nodes. Patch by Nick Coghlan.
- [bpo-42725](https://bugs.python.org/issue?@action=redirect&bpo=42725) [https://bugs.python.org/issue?@action=redirect&bpo=42725]: Usage of `await/yield/yield from` and named expressions within an annotation is now forbidden when PEP 563 is activated.
- [bpo-43754](https://bugs.python.org/issue?@action=redirect&bpo=43754) [https://bugs.python.org/issue?@action=redirect&bpo=43754]: When performing structural pattern matching ([PEP 634](https://peps.python.org/pep-0634/) [https://peps.python.org/pep-0634/]), captured names are now left unbound until the *entire* pattern has matched successfully.
- [bpo-42737](https://bugs.python.org/issue?@action=redirect&bpo=42737) [https://bugs.python.org/issue?@action=redirect&bpo=42737]: Annotations for complex targets (everything beside simple names) no longer cause any runtime effects with `from __future__ import annotations`.
- [bpo-43914](https://bugs.python.org/issue?@action=redirect&bpo=43914) [https://bugs.python.org/issue?@action=redirect&bpo=43914]: `SyntaxError` exceptions raised by the interpreter will highlight the full error range of the expression that constitutes the syntax error itself, instead of just where the problem is detected. Patch by Pablo Galindo.
- [bpo-38605](https://bugs.python.org/issue?@action=redirect&bpo=38605) [https://bugs.python.org/issue?@action=redirect&bpo=38605]: Revert making `from __future__ import annotations` the default. This follows the Steering Council decision to postpone PEP 563 changes to at least Python 3.11. See the original email for more information regarding the decision: <https://mail.python.org/archives/list/python-dev@python.org/>

[thread/CLVXXPQ2T2LQ5MP2Y53VVQFCXYWQJHKZ/](https://bugs.python.org/issue?@action=redirect&bpo=43475). Patch by Pablo Galindo.

- [bpo-43475](https://bugs.python.org/issue?@action=redirect&bpo=43475) [https://bugs.python.org/issue?@action=redirect&bpo=43475]: Hashes of NaN values now depend on object identity. Formerly, they always hashed to 0 even though NaN values are not equal to one another. Having the same hash for unequal values caused pile-ups in hash tables.
- [bpo-43859](https://bugs.python.org/issue?@action=redirect&bpo=43859) [https://bugs.python.org/issue?@action=redirect&bpo=43859]: Improve the error message for **IndentationError** exceptions. Patch by Pablo Galindo
- [bpo-41323](https://bugs.python.org/issue?@action=redirect&bpo=41323) [https://bugs.python.org/issue?@action=redirect&bpo=41323]: Constant tuple folding in bytecode optimizer now reuses tuple in constant table.
- [bpo-43846](https://bugs.python.org/issue?@action=redirect&bpo=43846) [https://bugs.python.org/issue?@action=redirect&bpo=43846]: Data stack usage is much reduced for large literal and call expressions.
- [bpo-38530](https://bugs.python.org/issue?@action=redirect&bpo=38530) [https://bugs.python.org/issue?@action=redirect&bpo=38530]: When printing **NameError** raised by the interpreter, **PyErr\_Display()** will offer suggestions of similar variable names in the function that the exception was raised from. Patch by Pablo Galindo
- [bpo-43823](https://bugs.python.org/issue?@action=redirect&bpo=43823) [https://bugs.python.org/issue?@action=redirect&bpo=43823]: Improve syntax errors for invalid dictionary literals. Patch by Pablo Galindo.
- [bpo-43822](https://bugs.python.org/issue?@action=redirect&bpo=43822) [https://bugs.python.org/issue?@action=redirect&bpo=43822]: Improve syntax errors in the parser for missing commas between expressions. Patch by Pablo Galindo.
- [bpo-43798](https://bugs.python.org/issue?@action=redirect&bpo=43798) [https://bugs.python.org/issue?@action=redirect&bpo=43798]: **ast.alias** nodes now include source location metadata attributes e.g. **lineno**, **col\_offset**.
- [bpo-43797](https://bugs.python.org/issue?@action=redirect&bpo=43797) [https://bugs.python.org/issue?@action=redirect&bpo=43797]: Improve **SyntaxError** error messages for invalid comparisons. Patch by Pablo Galindo.
- [bpo-43760](https://bugs.python.org/issue?@action=redirect&bpo=43760) [https://bugs.python.org/issue?@action=redirect&bpo=43760]: Move the flag for checking whether tracing is enabled to the C stack, from the heap. Should speed up dispatch in the interpreter.
- [bpo-43682](https://bugs.python.org/issue?@action=redirect&bpo=43682) [https://bugs.python.org/issue?@action=redirect&bpo=43682]

@action=redirect&bpo=43682]: Static methods

(**@staticmethod**) and class methods (**@classmethod**) now inherit the method attributes (`__module__`, `__name__`, `__qualname__`, `__doc__`, `__annotations__`) and have a new `__wrapped__` attribute. Patch by Victor Stinner.

- [bpo-43751](https://bugs.python.org/issue?@action=redirect&bpo=43751) [https://bugs.python.org/issue?@action=redirect&bpo=43751]: Fixed a bug where `anext(ait, default)` would erroneously return `None`.
- [bpo-42128](https://bugs.python.org/issue?@action=redirect&bpo=42128) [https://bugs.python.org/issue?@action=redirect&bpo=42128]: **`__match_args__`** is no longer allowed to be a list.
- [bpo-43683](https://bugs.python.org/issue?@action=redirect&bpo=43683) [https://bugs.python.org/issue?@action=redirect&bpo=43683]: Add `GEN_START` opcode. Marks start of generator, including `async`, or coroutine and handles sending values to a newly created generator or coroutine.
- [bpo-43105](https://bugs.python.org/issue?@action=redirect&bpo=43105) [https://bugs.python.org/issue?@action=redirect&bpo=43105]: `Importlib` now resolves relative paths when creating module spec objects from file locations.
- [bpo-43682](https://bugs.python.org/issue?@action=redirect&bpo=43682) [https://bugs.python.org/issue?@action=redirect&bpo=43682]: Static methods (**@staticmethod**) are now callable as regular functions. Patch by Victor Stinner.
- [bpo-42609](https://bugs.python.org/issue?@action=redirect&bpo=42609) [https://bugs.python.org/issue?@action=redirect&bpo=42609]: Prevented crashes in the AST validator and optimizer when compiling some absurdly long expressions like `" +0 " * 1000000`. **`RecursionError`** is now raised instead.
- [bpo-38530](https://bugs.python.org/issue?@action=redirect&bpo=38530) [https://bugs.python.org/issue?@action=redirect&bpo=38530]: When printing **`AttributeError`**, **`PyErr_Display()`** will offer suggestions of similar attribute names in the object that the exception was raised from. Patch by Pablo Galindo

## Library

- [bpo-44015](https://bugs.python.org/issue?@action=redirect&bpo=44015) [https://bugs.python.org/issue?@action=redirect&bpo=44015]: In **`@dataclass()`**, raise a **`TypeError`** if **`KW_ONLY`** is specified more than once.
- [bpo-25478](https://bugs.python.org/issue?@action=redirect&bpo=25478) [https://bugs.python.org/issue?@action=redirect&bpo=25478]

@action=redirect&bpo=25478]: Added a *total()* method to `collections.Counter()` to compute the sum of the counts.

- [bpo-43733](https://bugs.python.org/issue?@action=redirect&bpo=43733) [https://bugs.python.org/issue?@action=redirect&bpo=43733]: Change `netrc.netrc` to use UTF-8 encoding before using locale encoding.
- [bpo-43979](https://bugs.python.org/issue?@action=redirect&bpo=43979) [https://bugs.python.org/issue?@action=redirect&bpo=43979]: Removed an unnecessary list comprehension before looping from `urllib.parse.parse_qs()`. Patch by Christoph Zwerschke and Donghee Na.
- [bpo-43993](https://bugs.python.org/issue?@action=redirect&bpo=43993) [https://bugs.python.org/issue?@action=redirect&bpo=43993]: Update bundled pip to 21.1.1.
- [bpo-43957](https://bugs.python.org/issue?@action=redirect&bpo=43957) [https://bugs.python.org/issue?@action=redirect&bpo=43957]: [Enum] Deprecate `TypeError` when non-member is used in a containment check; In 3.12 `True` or `False` will be returned instead, and containment will return `True` if the value is either a member of that enum or one of its members' value.
- [bpo-42904](https://bugs.python.org/issue?@action=redirect&bpo=42904) [https://bugs.python.org/issue?@action=redirect&bpo=42904]: For backwards compatibility with previous minor versions of Python, if `typing.get_type_hints()` receives no namespace dictionary arguments, `typing.get_type_hints()` will search through the global then local namespaces during evaluation of stringized type annotations (string forward references) inside a class.
- [bpo-43945](https://bugs.python.org/issue?@action=redirect&bpo=43945) [https://bugs.python.org/issue?@action=redirect&bpo=43945]: [Enum] Deprecate non-standard `mixin format()` behavior: in 3.12 the enum member, not the member's value, will be used for `format()` calls.
- [bpo-41139](https://bugs.python.org/issue?@action=redirect&bpo=41139) [https://bugs.python.org/issue?@action=redirect&bpo=41139]: Deprecate undocumented `cgi.log()` API.

- [bpo-43937](https://bugs.python.org/issue?@action=redirect&bpo=43937) [https://bugs.python.org/issue?@action=redirect&bpo=43937]: Fixed the `turtle` module working with non-default root window.
- [bpo-43930](https://bugs.python.org/issue?@action=redirect&bpo=43930) [https://bugs.python.org/issue?@action=redirect&bpo=43930]: Update bundled pip to 21.1 and setuptools to 56.0.0
- [bpo-43907](https://bugs.python.org/issue?@action=redirect&bpo=43907) [https://bugs.python.org/issue?@action=redirect&bpo=43907]: Fix a bug in the pure-Python pickle implementation when using protocol 5, where bytearray instances that occur several time in the pickled object graph would incorrectly unpickle into repeated copies of the bytearray object.
- [bpo-43926](https://bugs.python.org/issue?@action=redirect&bpo=43926) [https://bugs.python.org/issue?@action=redirect&bpo=43926]: In `importlib.metadata`, provide a uniform interface to `Description`, allow for any field to be encoded with multiline values, remove continuation lines from multiline values, and add a `.json` property for easy access to the PEP 566 JSON-compatible form. Sync with `importlib_metadata` 4.0.
- [bpo-43920](https://bugs.python.org/issue?@action=redirect&bpo=43920) [https://bugs.python.org/issue?@action=redirect&bpo=43920]: OpenSSL 3.0.0: `load_verify_locations()` now returns a consistent error message when cadata contains no valid certificate.
- [bpo-43607](https://bugs.python.org/issue?@action=redirect&bpo=43607) [https://bugs.python.org/issue?@action=redirect&bpo=43607]: `urllib` can now convert Windows paths with `\\?\\` prefixes into URL paths.
- [bpo-43817](https://bugs.python.org/issue?@action=redirect&bpo=43817) [https://bugs.python.org/issue?@action=redirect&bpo=43817]: Add `inspect.get_annotations()`, which safely computes the annotations defined on an object. It works around the quirks of accessing the annotations from various types of objects, and makes very few assumptions about the object passed in. `inspect.get_annotations()` can also correctly un-stringize stringized annotations.

`inspect.signature()`, `inspect.from_callable()`, and `inspect.from_function()` now call `inspect.get_annotations()` to retrieve annotations. This means `inspect.signature()` and `inspect.from_callable()` can now un-stringize stringized annotations, too.

- [bpo-43284](https://bugs.python.org/issue?@action=redirect&bpo=43284) [https://bugs.python.org/issue?@action=redirect&bpo=43284]: `platform.win32_ver` derives the windows version from `sys.getwindowsversion().platform_version` which in turn derives the version from `kernel32.dll` (which can be of a different version than Windows itself). Therefore change the `platform.win32_ver` to determine the version using the `platform` module's `_syscmd_ver` private function to return an accurate version.
- [bpo-42854](https://bugs.python.org/issue?@action=redirect&bpo=42854) [https://bugs.python.org/issue?@action=redirect&bpo=42854]: The `ssl` module now uses `SSL_read_ex` and `SSL_write_ex` internally. The functions support reading and writing of data larger than 2 GB. Writing zero-length data no longer fails with a protocol violation error.
- [bpo-42333](https://bugs.python.org/issue?@action=redirect&bpo=42333) [https://bugs.python.org/issue?@action=redirect&bpo=42333]: Port `_ssl` extension module to multiphase initialization.
- [bpo-43880](https://bugs.python.org/issue?@action=redirect&bpo=43880) [https://bugs.python.org/issue?@action=redirect&bpo=43880]: `ssl` now raises `DeprecationWarning` for `OP_NO_SSL/TLS*` options, old TLS versions, old protocols, and other features that have been deprecated since Python 3.6, 3.7, or OpenSSL 1.1.0.
- [bpo-41559](https://bugs.python.org/issue?@action=redirect&bpo=41559) [https://bugs.python.org/issue?@action=redirect&bpo=41559]: [PEP 612](https://peps.python.org/pep-0612/) [https://peps.python.org/pep-0612/] is now implemented purely in Python; builtin `types.GenericAlias` objects no longer include `typing.ParamSpec` in `__parameters__` (with the exception of `collections.abc.Callable`'s `GenericAlias`). This means previously invalid uses of

ParamSpec (such as `list[P]`) which worked in earlier versions of Python 3.10 alpha, will now raise `TypeError` during substitution.

- [bpo-43867](https://bugs.python.org/issue?@action=redirect&bpo=43867) [https://bugs.python.org/issue?@action=redirect&bpo=43867]: The `multiprocessing` Server class now explicitly catches `SystemExit` and closes the client connection in this case. It happens when the `Server.serve_client()` method reaches the end of file (EOF).
- [bpo-40443](https://bugs.python.org/issue?@action=redirect&bpo=40443) [https://bugs.python.org/issue?@action=redirect&bpo=40443]: Remove unused imports: `pyclbr` no longer uses `copy`, and `typing` no longer uses `ast`. Patch by Victor Stinner.
- [bpo-43820](https://bugs.python.org/issue?@action=redirect&bpo=43820) [https://bugs.python.org/issue?@action=redirect&bpo=43820]: Remove an unneeded copy of the namespace passed to `dataclasses.make_dataclass()`.
- [bpo-43787](https://bugs.python.org/issue?@action=redirect&bpo=43787) [https://bugs.python.org/issue?@action=redirect&bpo=43787]: Add `__iter__()` method to `bz2.BZ2File`, `gzip.GzipFile`, and `lzma.LZMAFile`. It makes iterating them about 2x faster. Patch by Inada Naoki.
- [bpo-43680](https://bugs.python.org/issue?@action=redirect&bpo=43680) [https://bugs.python.org/issue?@action=redirect&bpo=43680]: Deprecate `io.OpenWrapper` and `_pyio.OpenWrapper`: use `io.open` and `_pyio.open` instead. Until Python 3.9, `_pyio.open` was not a static method and `builtins.open` was set to `OpenWrapper` to not become a bound method when set to a class variable. `_io.open` is a built-in function whereas `_pyio.open` is a Python function. In Python 3.10, `_pyio.open()` is now a static method, and `builtins.open()` is now `io.open()`.
- [bpo-43680](https://bugs.python.org/issue?@action=redirect&bpo=43680) [https://bugs.python.org/issue?@action=redirect&bpo=43680]: The Python `_pyio.open()` function becomes a static method to behave as `io.open()` built-in function: don't become a bound method when stored as a class variable. It becomes possible since static methods are now callable in Python 3.10. Moreover,

`_pyio.OpenWrapper()` becomes a simple alias to `_pyio.open()`. Patch by Victor Stinner.

- [bpo-41515](https://bugs.python.org/issue?@action=redirect&bpo=41515) [https://bugs.python.org/issue?@action=redirect&bpo=41515]: Fix `KeyError` raised in `typing.get_type_hints()` due to synthetic modules that don't appear in `sys.modules`.
- [bpo-43776](https://bugs.python.org/issue?@action=redirect&bpo=43776) [https://bugs.python.org/issue?@action=redirect&bpo=43776]: When `subprocess.Popen` args are provided as a string or as `pathlib.Path`, the `Popen` instance repr now shows the right thing.
- [bpo-42248](https://bugs.python.org/issue?@action=redirect&bpo=42248) [https://bugs.python.org/issue?@action=redirect&bpo=42248]: `[Enum]` ensure exceptions raised in `__missing__` are released
- [bpo-43744](https://bugs.python.org/issue?@action=redirect&bpo=43744) [https://bugs.python.org/issue?@action=redirect&bpo=43744]: fix issue with enum member name matching the start of a private variable name
- [bpo-43772](https://bugs.python.org/issue?@action=redirect&bpo=43772) [https://bugs.python.org/issue?@action=redirect&bpo=43772]: Fixed the return value of `TypeVar.__ror__`. Patch by Jelle Zijlstra.
- [bpo-43764](https://bugs.python.org/issue?@action=redirect&bpo=43764) [https://bugs.python.org/issue?@action=redirect&bpo=43764]: Add `match_args` parameter to `@dataclass` decorator to allow suppression of `__match_args__` generation.
- [bpo-43799](https://bugs.python.org/issue?@action=redirect&bpo=43799) [https://bugs.python.org/issue?@action=redirect&bpo=43799]: OpenSSL 3.0.0: define `OPENSSL_API_COMPAT 1.1.1` to suppress deprecation warnings. Python requires OpenSSL 1.1.1 APIs.
- [bpo-43478](https://bugs.python.org/issue?@action=redirect&bpo=43478) [https://bugs.python.org/issue?@action=redirect&bpo=43478]: Mocks can no longer be used as the specs for other Mocks. As a result, an already-mocked object cannot have an attribute mocked using `autospec=True` or be the subject of a `create_autospec(...)` call. This can uncover bugs in

tests since these Mock-derived Mocks will always pass certain tests (e.g. `isinstance()`) and builtin assert functions (e.g. `assert_called_once_with`) will unconditionally pass.

- [bpo-43794](https://bugs.python.org/issue?@action=redirect&bpo=43794) [https://bugs.python.org/issue?@action=redirect&bpo=43794]: Add `ssl.OP_IGNORE_UNEXPECTED_EOF` constants (OpenSSL 3.0.0)
- [bpo-43785](https://bugs.python.org/issue?@action=redirect&bpo=43785) [https://bugs.python.org/issue?@action=redirect&bpo=43785]: Improve `bz2.BZ2File` performance by removing the `RLock` from `BZ2File`. This makes `BZ2File` thread unsafe in the face of multiple simultaneous readers or writers, just like its equivalent classes in `gzip` and `lzma` have always been. Patch by Inada Naoki.
- [bpo-43789](https://bugs.python.org/issue?@action=redirect&bpo=43789) [https://bugs.python.org/issue?@action=redirect&bpo=43789]: OpenSSL 3.0.0: Don't call the password callback function a second time when first call has signaled an error condition.
- [bpo-43788](https://bugs.python.org/issue?@action=redirect&bpo=43788) [https://bugs.python.org/issue?@action=redirect&bpo=43788]: The header files for `ssl` error codes are now OpenSSL version-specific. Exceptions will now show correct reason and library codes. The `make_ssl_data.py` script has been rewritten to use OpenSSL's text file with error codes.
- [bpo-43766](https://bugs.python.org/issue?@action=redirect&bpo=43766) [https://bugs.python.org/issue?@action=redirect&bpo=43766]: Implement [PEP 647](https://peps.python.org/pep-0647/) [https://peps.python.org/pep-0647/] in the `typing` module by adding **TypeGuard**.
- [bpo-25264](https://bugs.python.org/issue?@action=redirect&bpo=25264) [https://bugs.python.org/issue?@action=redirect&bpo=25264]: `os.path.realpath()` now accepts a *strict* keyword-only argument. When set to `True`, `OSError` is raised if a path doesn't exist or a symlink loop is encountered.
- [bpo-43780](https://bugs.python.org/issue?@action=redirect&bpo=43780) [https://bugs.python.org/issue?@action=redirect&bpo=43780]: In `importlib.metadata`,

incorporate changes from `importlib_metadata 3.10`: Add mtime-based caching during distribution discovery. Flagged use of dict result from `entry_points()` as deprecated.

- The `P.args` and `P.kwargs` attributes of `typing.ParamSpec` are now instances of the new classes `typing.ParamSpecArgs` and `typing.ParamSpecKwargs`, which enables a more useful `repr()`. Patch by Jelle Zijlstra.
- [bpo-43731](https://bugs.python.org/issue?@action=redirect&bpo=43731) [https://bugs.python.org/issue?@action=redirect&bpo=43731]: Add an encoding parameter `logging.fileConfig()`.
- [bpo-43712](https://bugs.python.org/issue?@action=redirect&bpo=43712) [https://bugs.python.org/issue?@action=redirect&bpo=43712]: Add encoding and errors parameters to `fileinput.input()` and `fileinput.FileInput`.
- [bpo-38659](https://bugs.python.org/issue?@action=redirect&bpo=38659) [https://bugs.python.org/issue?@action=redirect&bpo=38659]: A `simple_enum` decorator is added to the `enum` module to convert a normal class into an Enum. `test_simple_enum` added to test simple enums against a corresponding normal Enum. Standard library modules updated to use `simple_enum`.
- [bpo-43764](https://bugs.python.org/issue?@action=redirect&bpo=43764) [https://bugs.python.org/issue?@action=redirect&bpo=43764]: Fix an issue where `__match_args__` generation could fail for some `dataclasses`.
- [bpo-43752](https://bugs.python.org/issue?@action=redirect&bpo=43752) [https://bugs.python.org/issue?@action=redirect&bpo=43752]: Fix `sqlite3` regression for zero-sized blobs with converters, where `b""` was returned instead of `None`. The regression was introduced by PR 24723. Patch by Erlend E. Aasland.
- [bpo-43655](https://bugs.python.org/issue?@action=redirect&bpo=43655) [https://bugs.python.org/issue?@action=redirect&bpo=43655]: `tkinter` dialog windows are now recognized as dialogs by window managers on macOS and X Window.

- [bpo-43723](https://bugs.python.org/issue?@action=redirect&bpo=43723) [https://bugs.python.org/issue?@action=redirect&bpo=43723]: The following `threading` methods are now deprecated and should be replaced:

- `currentThread => threading.current\_thread\(\)`
- `activeCount => threading.active\_count\(\)`
- `Condition.notifyAll => threading.Condition.notify\_all\(\)`
- `Event.isSet => threading.Event.is\_set\(\)`
- `Thread.setName => threading.Thread.name`
- `thread.getName => threading.Thread.name`
- `Thread.isDaemon => threading.Thread.daemon`
- `Thread.setDaemon => threading.Thread.daemon`

Patch by Jelle Zijlstra.

- [bpo-2135](https://bugs.python.org/issue?@action=redirect&bpo=2135) [https://bugs.python.org/issue?@action=redirect&bpo=2135]: Deprecate `find_module()` and `find_loader()` implementations in `importlib` and `zipimport`.
- [bpo-43534](https://bugs.python.org/issue?@action=redirect&bpo=43534) [https://bugs.python.org/issue?@action=redirect&bpo=43534]: [turtle.textinput\(\)](#) and [turtle.numinput\(\)](#) create now a transient window working on behalf of the canvas window.
- [bpo-43532](https://bugs.python.org/issue?@action=redirect&bpo=43532) [https://bugs.python.org/issue?@action=redirect&bpo=43532]: Add the ability to specify keyword-only fields to dataclasses. These fields will become keyword-only arguments to the generated `__init__`.
- [bpo-43522](https://bugs.python.org/issue?@action=redirect&bpo=43522) [https://bugs.python.org/issue?@action=redirect&bpo=43522]: Fix problem with [hostname\\_checks\\_common\\_name](#). OpenSSL does not copy `hostflags` from `struct SSL_CTX` to `struct SSL`.
- [bpo-8978](https://bugs.python.org/issue?@action=redirect&bpo=8978) [https://bugs.python.org/issue?@action=redirect&bpo=8978]: Improve error message for [tarfile.open\(\)](#) when `lzma` / `bz2` are unavailable. Patch by Anthony Sottile.

- [bpo-42967](https://bugs.python.org/issue?@action=redirect&bpo=42967) [https://bugs.python.org/issue?@action=redirect&bpo=42967]: Allow **bytes** separator argument in `urllib.parse.parse_qs` and `urllib.parse.parse_qs_l` when parsing **str** query strings. Previously, this raised a `TypeError`.
- [bpo-43296](https://bugs.python.org/issue?@action=redirect&bpo=43296) [https://bugs.python.org/issue?@action=redirect&bpo=43296]: Improve **sqlite3** error handling: `sqlite3_value_blob()` errors that set `SQLITE_NOMEM` now raise **MemoryError**. Patch by Erlend E. Aasland.
- [bpo-43312](https://bugs.python.org/issue?@action=redirect&bpo=43312) [https://bugs.python.org/issue?@action=redirect&bpo=43312]: New functions **`sysconfig.get_preferred_scheme()`** and **`sysconfig.get_default_scheme()`** are added to query a platform for its preferred “user”, “home”, and “prefix” (default) scheme names.
- [bpo-43265](https://bugs.python.org/issue?@action=redirect&bpo=43265) [https://bugs.python.org/issue?@action=redirect&bpo=43265]: Improve **`sqlite3.Connection.backup()`** error handling. The error message for non-existent target database names is now unknown database <database name> instead of SQL logic error. Patch by Erlend E. Aasland.
- [bpo-41282](https://bugs.python.org/issue?@action=redirect&bpo=41282) [https://bugs.python.org/issue?@action=redirect&bpo=41282]: Install schemes in `distutils.command.install` are now loaded from **`sysconfig`**.
- [bpo-41282](https://bugs.python.org/issue?@action=redirect&bpo=41282) [https://bugs.python.org/issue?@action=redirect&bpo=41282]: `distutils.sysconfig` has been merged to **`sysconfig`**.
- [bpo-43176](https://bugs.python.org/issue?@action=redirect&bpo=43176) [https://bugs.python.org/issue?@action=redirect&bpo=43176]: Fixed processing of a dataclass that inherits from a frozen dataclass with no fields. It is now correctly detected as an error.
- [bpo-43080](https://bugs.python.org/issue?@action=redirect&bpo=43080) [https://bugs.python.org/issue?@action=redirect&bpo=43080]

@action=redirect&bpo=43080]: [pprint](#) now has support for [dataclasses.dataclass](#). Patch by Lewis Gaul.

- [bpo-39950](#) [<https://bugs.python.org/issue?@action=redirect&bpo=39950>]: Add [pathlib.Path.hardlink\\_to\(\)](#) method that supersedes [link\\_to\(\)](#). The new method has the same argument order as [symlink\\_to\(\)](#).
- [bpo-42904](#) [<https://bugs.python.org/issue?@action=redirect&bpo=42904>]: [typing.get\\_type\\_hints\(\)](#) now checks the local namespace of a class when evaluating [PEP 563](#) [<https://peps.python.org/pep-0563/>] annotations inside said class.
- [bpo-42269](#) [<https://bugs.python.org/issue?@action=redirect&bpo=42269>]: Add `slots` parameter to [dataclasses.dataclass](#) decorator to automatically generate `__slots__` for class. Patch provided by Yuri Karabas.
- [bpo-39529](#) [<https://bugs.python.org/issue?@action=redirect&bpo=39529>]: Deprecated use of [asyncio.get\\_event\\_loop\(\)](#) without running event loop. Emit deprecation warning for [asyncio](#) functions which implicitly create a [Future](#) or [Task](#) objects if there is no running event loop and no explicit *loop* argument is passed: [ensure\\_future\(\)](#), [wrap\\_future\(\)](#), [gather\(\)](#), [shield\(\)](#), [as\\_completed\(\)](#) and constructors of [Future](#), [Task](#), [StreamReader](#), [StreamReaderProtocol](#).
- [bpo-18369](#) [<https://bugs.python.org/issue?@action=redirect&bpo=18369>]: [Certificate](#) and [PrivateKey](#) classes were added to the [ssl](#) module. Certificates and keys can now be loaded from memory buffer, too.
- [bpo-41486](#) [<https://bugs.python.org/issue?@action=redirect&bpo=41486>]: Use a new output buffer management code for [bz2](#) / [lzma](#) / [zlib](#) modules, and add [.readall\(\)](#) function to [\\_compression.DecompressReader](#) class. These bring

some performance improvements. Patch by Ma Lin.

- [bpo-31870](https://bugs.python.org/issue?@action=redirect&bpo=31870) [https://bugs.python.org/issue?@action=redirect&bpo=31870]: The `ssl.get_server_certificate()` function now has a `timeout` parameter.
- [bpo-41735](https://bugs.python.org/issue?@action=redirect&bpo=41735) [https://bugs.python.org/issue?@action=redirect&bpo=41735]: Fix thread locks in zlib module may go wrong in rare case. Patch by Ma Lin.
- [bpo-36470](https://bugs.python.org/issue?@action=redirect&bpo=36470) [https://bugs.python.org/issue?@action=redirect&bpo=36470]: Fix dataclasses with `InitVars` and `replace()`. Patch by Claudiu Popa.
- [bpo-40849](https://bugs.python.org/issue?@action=redirect&bpo=40849) [https://bugs.python.org/issue?@action=redirect&bpo=40849]: Expose `X509_V_FLAG_PARTIAL_CHAIN` ssl flag
- [bpo-35114](https://bugs.python.org/issue?@action=redirect&bpo=35114) [https://bugs.python.org/issue?@action=redirect&bpo=35114]: `ssl.RAND_status()` now returns a boolean value (as documented) instead of `1` or `0`.
- [bpo-39906](https://bugs.python.org/issue?@action=redirect&bpo=39906) [https://bugs.python.org/issue?@action=redirect&bpo=39906]: `pathlib.Path.stat()` and `chmod()` now accept a `follow_symlinks` keyword-only argument for consistency with corresponding functions in the `os` module.
- [bpo-39899](https://bugs.python.org/issue?@action=redirect&bpo=39899) [https://bugs.python.org/issue?@action=redirect&bpo=39899]: `os.path.expanduser()` now refuses to guess Windows home directories if the basename of current user's home directory does not match their username.

`pathlib.Path.expanduser()` and `home()` now consistently raise `RuntimeError` exception when a home directory cannot be resolved. Previously a `KeyError` exception could be raised on Windows when the `"USERNAME"` environment variable was unset.

- [bpo-36076](https://bugs.python.org/issue?@action=redirect&bpo=36076) [https://bugs.python.org/issue?@action=redirect&bpo=36076]

@action=redirect&bpo=36076]: Added SNI support to `ssl.get_server_certificate()`.

- [bpo-38490](https://bugs.python.org/issue?@action=redirect&bpo=38490) [https://bugs.python.org/issue?@action=redirect&bpo=38490]: Covariance, Pearson's correlation, and simple linear regression functionality was added to statistics module. Patch by Tymoteusz Wołodźko.
- [bpo-33731](https://bugs.python.org/issue?@action=redirect&bpo=33731) [https://bugs.python.org/issue?@action=redirect&bpo=33731]: Provide a `locale.localize()` function, which converts a normalized number string into a locale format.
- [bpo-32745](https://bugs.python.org/issue?@action=redirect&bpo=32745) [https://bugs.python.org/issue?@action=redirect&bpo=32745]: Fix a regression in the handling of ctypes' `ctypes.c_wchar_p` type: embedded null characters would cause a `ValueError` to be raised. Patch by Zackery Spytz.

## Documentation

- [bpo-43987](https://bugs.python.org/issue?@action=redirect&bpo=43987) [https://bugs.python.org/issue?@action=redirect&bpo=43987]: Add “Annotations Best Practices” document as a new HOWTO.
- [bpo-43977](https://bugs.python.org/issue?@action=redirect&bpo=43977) [https://bugs.python.org/issue?@action=redirect&bpo=43977]: Document the new `Py_TPFLAGS_MAPPING` and `Py_TPFLAGS_SEQUENCE` type flags.
- [bpo-43959](https://bugs.python.org/issue?@action=redirect&bpo=43959) [https://bugs.python.org/issue?@action=redirect&bpo=43959]: The documentation on the PyContextVar C-API was clarified.
- [bpo-43938](https://bugs.python.org/issue?@action=redirect&bpo=43938) [https://bugs.python.org/issue?@action=redirect&bpo=43938]: Update dataclasses documentation to express that `FrozenInstanceError` is derived from `AttributeError`.
- [bpo-43778](https://bugs.python.org/issue?@action=redirect&bpo=43778) [https://bugs.python.org/issue?@action=redirect&bpo=43778]: Fix the Sphinx `glossary_search` extension: create the `_static/` sub-directory if it doesn't exist.
- [bpo-43755](https://bugs.python.org/issue?@action=redirect&bpo=43755) [https://bugs.python.org/issue?@action=redirect&bpo=43755]: Update documentation to reflect

that unparenthesized lambda expressions can no longer be the expression part in an `if` clause in comprehensions and generator expressions since Python 3.9.

- [bpo-43739](https://bugs.python.org/issue?@action=redirect&bpo=43739) [https://bugs.python.org/issue?@action=redirect&bpo=43739]: Fixing the example code in Doc/ extending/ extending.rst to declare and initialize the pmodule variable to be of the right type.

## Tests

- [bpo-43961](https://bugs.python.org/issue?@action=redirect&bpo=43961) [https://bugs.python.org/issue?@action=redirect&bpo=43961]: Fix `test_logging.test_namer_rotator_inheritance()` on Windows: use `os.replace()` rather than `os.rename()`. Patch by Victor Stinner.
- [bpo-43842](https://bugs.python.org/issue?@action=redirect&bpo=43842) [https://bugs.python.org/issue?@action=redirect&bpo=43842]: Fix a race condition in the SMTP test of `test_logging`. Don't close a file descriptor (socket) from a different thread while `asyncore.loop()` is polling the file descriptor. Patch by Victor Stinner.
- [bpo-43843](https://bugs.python.org/issue?@action=redirect&bpo=43843) [https://bugs.python.org/issue?@action=redirect&bpo=43843]: `test.libregtest` now marks a test as `ENV_CHANGED` (altered the execution environment) if a thread raises an exception but does not catch it. It sets a hook on `threading.excepthook()`. Use `--fail-env-changed` option to mark the test as failed. Patch by Victor Stinner.
- [bpo-43811](https://bugs.python.org/issue?@action=redirect&bpo=43811) [https://bugs.python.org/issue?@action=redirect&bpo=43811]: Tests multiple OpenSSL versions on GitHub Actions. Use `ccache` to speed up testing.
- [bpo-43791](https://bugs.python.org/issue?@action=redirect&bpo=43791) [https://bugs.python.org/issue?@action=redirect&bpo=43791]: OpenSSL 3.0.0: Disable testing of legacy protocols TLS 1.0 and 1.1. Tests are failing with `TLSV1_ALERT_INTERNAL_ERROR`.

## Build

- [bpo-43567](https://bugs.python.org/issue?@action=redirect&bpo=43567) [https://bugs.python.org/issue?@action=redirect&bpo=43567]: Improved generated code refresh (AST/tokens/opcodes/keywords) on Windows.

- [bpo-43669](https://bugs.python.org/issue?@action=redirect&bpo=43669) [https://bugs.python.org/issue?@action=redirect&bpo=43669]: Implement [PEP 644](https://peps.python.org/pep-0644/) [https://peps.python.org/pep-0644/]. Python now requires OpenSSL 1.1.1 or newer.

## Windows

- [bpo-35306](https://bugs.python.org/issue?@action=redirect&bpo=35306) [https://bugs.python.org/issue?@action=redirect&bpo=35306]: Adds additional arguments to `os.startfile()` function.
- [bpo-43538](https://bugs.python.org/issue?@action=redirect&bpo=43538) [https://bugs.python.org/issue?@action=redirect&bpo=43538]: Avoid raising errors from `pathlib.Path.exists()` when passed an invalid filename.
- [bpo-38822](https://bugs.python.org/issue?@action=redirect&bpo=38822) [https://bugs.python.org/issue?@action=redirect&bpo=38822]: Fixed `os.stat()` failing on inaccessible directories with a trailing slash, rather than falling back to the parent directory's metadata. This implicitly affected `os.path.exists()` and `os.path.isdir()`.
- [bpo-26227](https://bugs.python.org/issue?@action=redirect&bpo=26227) [https://bugs.python.org/issue?@action=redirect&bpo=26227]: Fixed decoding of host names in `socket.gethostbyaddr()` and `socket.gethostbyname_ex()`.
- [bpo-40432](https://bugs.python.org/issue?@action=redirect&bpo=40432) [https://bugs.python.org/issue?@action=redirect&bpo=40432]: Updated pegen regeneration script on Windows to find and use Python 3.8 or higher. Prior to this, pegen regeneration already required 3.8 or higher, but the script may have used lower versions of Python.
- [bpo-43745](https://bugs.python.org/issue?@action=redirect&bpo=43745) [https://bugs.python.org/issue?@action=redirect&bpo=43745]: Actually updates Windows release to OpenSSL 1.1.1k. Earlier releases were mislabelled and actually included 1.1.1i again.
- [bpo-43652](https://bugs.python.org/issue?@action=redirect&bpo=43652) [https://bugs.python.org/issue?@action=redirect&bpo=43652]: Update Tcl and Tk to 8.6.11 in Windows installer.
- [bpo-43492](https://bugs.python.org/issue?@action=redirect&bpo=43492) [https://bugs.python.org/issue?@action=redirect&bpo=43492]: Upgrade Windows installer to use SQLite 3.35.5.
- [bpo-30555](https://bugs.python.org/issue?@action=redirect&bpo=30555) [https://bugs.python.org/issue?@action=redirect&bpo=30555]: Fix WindowsConsoleIO errors

in the presence of fd redirection. Patch by Segev Finer.

## macOS

- [bpo-42119](https://bugs.python.org/issue?@action=redirect&bpo=42119) [https://bugs.python.org/issue?@action=redirect&bpo=42119]: Fix check for macOS SDK paths when building Python. Narrow search to match contents of SDKs, namely only files in `/System/Library`, `/System/IOSSupport`, and `/usr` other than `/usr/local`. Previously, anything under `/System` was assumed to be in an SDK which causes problems with the new file system layout in 10.15+ where user file systems may appear to be mounted under `/System`. Paths in `/Library` were also incorrectly treated as SDK locations.
- [bpo-43568](https://bugs.python.org/issue?@action=redirect&bpo=43568) [https://bugs.python.org/issue?@action=redirect&bpo=43568]: Drop support for `MACOSX_DEPLOYMENT_TARGET < 10.3`
- [bpo-44009](https://bugs.python.org/issue?@action=redirect&bpo=44009) [https://bugs.python.org/issue?@action=redirect&bpo=44009]: Provide “python3.x-intel64” executable to allow reliably forcing macOS universal2 framework builds to run under Rosetta 2 Intel-64 emulation on Apple Silicon Macs. This can be useful for testing or when universal2 wheels are not yet available.
- [bpo-43851](https://bugs.python.org/issue?@action=redirect&bpo=43851) [https://bugs.python.org/issue?@action=redirect&bpo=43851]: Build SQLite with `SQLITE_OMIT_AUTOINIT` on macOS. Patch by Erlend E. Aasland.
- [bpo-43492](https://bugs.python.org/issue?@action=redirect&bpo=43492) [https://bugs.python.org/issue?@action=redirect&bpo=43492]: Update macOS installer to use SQLite 3.35.4.
- [bpo-42235](https://bugs.python.org/issue?@action=redirect&bpo=42235) [https://bugs.python.org/issue?@action=redirect&bpo=42235]: `Mac/BuildScript/build-installer.py` will now use “`--enable-optimizations`” and “`--with-lto`” when building on macOS 10.15 or later.

## IDLE

- [bpo-37903](https://bugs.python.org/issue?@action=redirect&bpo=37903) [https://bugs.python.org/issue?@action=redirect&bpo=37903]: Add mouse actions to the shell sidebar. Left click and optional drag selects one or more lines,

as with the editor line number sidebar. Right click after selecting raises a context menu with ‘copy with prompts’. This zips together prompts from the sidebar with lines from the selected text.

- [bpo-43981](https://bugs.python.org/issue?@action=redirect&bpo=43981) [https://bugs.python.org/issue?@action=redirect&bpo=43981]: Fix reference leak in test\_sidebar and test\_squeezer. Patches by Terry Jan Reedy and Pablo Galindo
- [bpo-37892](https://bugs.python.org/issue?@action=redirect&bpo=37892) [https://bugs.python.org/issue?@action=redirect&bpo=37892]: Indent IDLE Shell input with spaces instead of tabs
- [bpo-43655](https://bugs.python.org/issue?@action=redirect&bpo=43655) [https://bugs.python.org/issue?@action=redirect&bpo=43655]: IDLE dialog windows are now recognized as dialogs by window managers on macOS and X Window.
- [bpo-37903](https://bugs.python.org/issue?@action=redirect&bpo=37903) [https://bugs.python.org/issue?@action=redirect&bpo=37903]: IDLE’s shell now shows prompts in a separate side-bar.

## C API

- [bpo-43916](https://bugs.python.org/issue?@action=redirect&bpo=43916) [https://bugs.python.org/issue?@action=redirect&bpo=43916]: Add a new **Py\_TPFLAGS\_DISALLOW\_INSTANTIATION** type flag to disallow creating type instances. Patch by Victor Stinner.
- [bpo-43774](https://bugs.python.org/issue?@action=redirect&bpo=43774) [https://bugs.python.org/issue?@action=redirect&bpo=43774]: Remove the now unused PYMALLOC\_DEBUG macro. Debug hooks on memory allocators are now installed by default if Python is built in debug mode (if Py\_DEBUG macro is defined). Moreover, they can now be used on Python build in release mode (ex: using PYTHONMALLOC=debug environment variable).
- [bpo-43962](https://bugs.python.org/issue?@action=redirect&bpo=43962) [https://bugs.python.org/issue?@action=redirect&bpo=43962]: \_PyInterpreterState\_IDIncref() now calls \_PyInterpreterState\_IDInitref() and always increments id\_refcount. Previously, calling \_xxsubinterpreters.get\_current() could create an id\_refcount inconsistency when a \_xxsubinterpreters.InterpreterID object was deallocated. Patch by Victor Stinner.
- [bpo-28254](https://bugs.python.org/issue?@action=redirect&bpo=28254) [https://bugs.python.org/issue?@action=redirect&bpo=28254]

@action=redirect&bpo=28254]: Add new C-API functions to control the state of the garbage collector: `PyGC_Enable()`, `PyGC_Disable()`, `PyGC_IsEnabled()`, corresponding to the functions in the `gc` module.

- [bpo-43908](https://bugs.python.org/issue?@action=redirect&bpo=43908) [https://bugs.python.org/issue?@action=redirect&bpo=43908]: Introduce `Py_TPFLAGS_IMMUTABLETYPE` flag for immutable type objects, and modify `PyType_Ready()` to set it for static types. Patch by Erlend E. Aasland.
- [bpo-43795](https://bugs.python.org/issue?@action=redirect&bpo=43795) [https://bugs.python.org/issue?@action=redirect&bpo=43795]: `PyMem_Calloc()` is now available in the limited C API (`Py_LIMITED_API`).
- [bpo-43868](https://bugs.python.org/issue?@action=redirect&bpo=43868) [https://bugs.python.org/issue?@action=redirect&bpo=43868]: `PyOS_ReadlineFunctionPointer()` is no longer exported by limited C API headers and by `python3.dll` on Windows. Like any function that takes `FILE*`, it is not part of the stable ABI.
- [bpo-43795](https://bugs.python.org/issue?@action=redirect&bpo=43795) [https://bugs.python.org/issue?@action=redirect&bpo=43795]: Stable ABI and limited API definitions are generated from a central manifest ([PEP 652](https://peps.python.org/pep-0652/) [https://peps.python.org/pep-0652/]).
- [bpo-43753](https://bugs.python.org/issue?@action=redirect&bpo=43753) [https://bugs.python.org/issue?@action=redirect&bpo=43753]: Add the `Py_Is(x, y)` function to test if the `x` object is the `y` object, the same as `x is y` in Python. Add also the `Py_IsNone()`, `Py_IsTrue()`, `Py_IsFalse()` functions to test if an object is, respectively, the `None` singleton, the `True` singleton or the `False` singleton. Patch by Victor Stinner.

## Python 3.10.0 alpha 7

*Release date: 2021-04-05*

### Security

- [bpo-42988](https://bugs.python.org/issue?@action=redirect&bpo=42988) [https://bugs.python.org/issue?@action=redirect&bpo=42988]: CVE-2021-3426: Remove the `getfile` feature of the `pydoc` module which could be

abused to read arbitrary files on the disk (directory traversal vulnerability). Moreover, even source code of Python modules can contain sensitive data like passwords. Vulnerability reported by David Schwörer.

- [bpo-43285](https://bugs.python.org/issue?@action=redirect&bpo=43285) [https://bugs.python.org/issue?@action=redirect&bpo=43285]: **ftplib** no longer trusts the IP address value returned from the server in response to the PASV command by default. This prevents a malicious FTP server from using the response to probe IPv4 address and port combinations on the client network.

Code that requires the former vulnerable behavior may set a `trust_server_pasv_ipv4_address` attribute on their **ftplib.FTP** instances to `True` to re-enable it.

- [bpo-43439](https://bugs.python.org/issue?@action=redirect&bpo=43439) [https://bugs.python.org/issue?@action=redirect&bpo=43439]: Add audit hooks for **gc.get\_objects()**, **gc.get\_referrers()** and **gc.get\_referents()**. Patch by Pablo Galindo.

## Core and Builtins

- [bpo-27129](https://bugs.python.org/issue?@action=redirect&bpo=27129) [https://bugs.python.org/issue?@action=redirect&bpo=27129]: Update CPython bytecode magic number.
- [bpo-43672](https://bugs.python.org/issue?@action=redirect&bpo=43672) [https://bugs.python.org/issue?@action=redirect&bpo=43672]: Raise `ImportWarning` when calling `find_loader()`.
- [bpo-43660](https://bugs.python.org/issue?@action=redirect&bpo=43660) [https://bugs.python.org/issue?@action=redirect&bpo=43660]: Fix crash that happens when replacing `sys.stderr` with a callable that can remove the object while an exception is being printed. Patch by Pablo Galindo.
- [bpo-27129](https://bugs.python.org/issue?@action=redirect&bpo=27129) [https://bugs.python.org/issue?@action=redirect&bpo=27129]: The bytecode interpreter uses instruction, rather byte, offsets internally. This reduces the number of `EXTENDED_ARG` instructions needed and

streamlines instruction dispatch a bit.

- [bpo-40645](https://bugs.python.org/issue?@action=redirect&bpo=40645) [https://bugs.python.org/issue?@action=redirect&bpo=40645]: Fix reference leak in the `_hashopenssl` extension. Patch by Pablo Galindo.
- [bpo-42134](https://bugs.python.org/issue?@action=redirect&bpo=42134) [https://bugs.python.org/issue?@action=redirect&bpo=42134]: Calls to `find_module()` by the import system now raise `ImportWarning`.
- [bpo-41064](https://bugs.python.org/issue?@action=redirect&bpo=41064) [https://bugs.python.org/issue?@action=redirect&bpo=41064]: Improve the syntax error for invalid usage of double starred elements (`**`) in f-strings. Patch by Pablo Galindo.
- [bpo-43575](https://bugs.python.org/issue?@action=redirect&bpo=43575) [https://bugs.python.org/issue?@action=redirect&bpo=43575]: Speed up calls to `map()` by using the [PEP 590](https://peps.python.org/pep-0590/) [https://peps.python.org/pep-0590/] `vectorcall` calling convention. Patch by Donghee Na.
- [bpo-42137](https://bugs.python.org/issue?@action=redirect&bpo=42137) [https://bugs.python.org/issue?@action=redirect&bpo=42137]: The import system now prefers using `__spec__` for `ModuleType.__repr__` over `module_repr()`.
- [bpo-43452](https://bugs.python.org/issue?@action=redirect&bpo=43452) [https://bugs.python.org/issue?@action=redirect&bpo=43452]: Added micro-optimizations to `_PyType_Lookup()` to improve cache lookup performance in the common case of cache hits.
- [bpo-43555](https://bugs.python.org/issue?@action=redirect&bpo=43555) [https://bugs.python.org/issue?@action=redirect&bpo=43555]: Report the column offset for `SyntaxError` for invalid line continuation characters. Patch by Pablo Galindo.
- [bpo-43517](https://bugs.python.org/issue?@action=redirect&bpo=43517) [https://bugs.python.org/issue?@action=redirect&bpo=43517]: Fix misdetection of circular imports when using `from pkg.mod import attr`, which caused false positives in non-trivial multi-threaded code.
- [bpo-43497](https://bugs.python.org/issue?@action=redirect&bpo=43497) [https://bugs.python.org/issue?@action=redirect&bpo=43497]

@action=redirect&bpo=43497]: Emit SyntaxWarnings for assertions with tuple constants, this is a regression introduced in python3.7

- [bpo-39316](https://bugs.python.org/issue?@action=redirect&bpo=39316) [https://bugs.python.org/issue?@action=redirect&bpo=39316]: Tracing now has correct line numbers for attribute accesses when the attribute is on a different line from the object. Improves debugging and profiling for multi-line method chains.
- [bpo-35883](https://bugs.python.org/issue?@action=redirect&bpo=35883) [https://bugs.python.org/issue?@action=redirect&bpo=35883]: Python no longer fails at startup with a fatal error if a command line argument contains an invalid Unicode character. The `Py_DecodeLocale()` function now escapes byte sequences which would be decoded as Unicode characters outside the [U + 0000; U + 10ffff] range.
- [bpo-43410](https://bugs.python.org/issue?@action=redirect&bpo=43410) [https://bugs.python.org/issue?@action=redirect&bpo=43410]: Fix a bug that was causing the parser to crash when emitting syntax errors when reading input from stdin. Patch by Pablo Galindo
- [bpo-43406](https://bugs.python.org/issue?@action=redirect&bpo=43406) [https://bugs.python.org/issue?@action=redirect&bpo=43406]: Fix a possible race condition where `PyErr_CheckSignals` tries to execute a non-Python signal handler.
- [bpo-42128](https://bugs.python.org/issue?@action=redirect&bpo=42128) [https://bugs.python.org/issue?@action=redirect&bpo=42128]: Add `__match_args__` to [struct sequence objects](#). Patch by Pablo Galindo.
- [bpo-43390](https://bugs.python.org/issue?@action=redirect&bpo=43390) [https://bugs.python.org/issue?@action=redirect&bpo=43390]: CPython now sets the `SA_ONSTACK` flag in `PyOS_setsig` for the VM's default signal handlers. This is friendlier to other in-process code that an extension module or embedding use could pull in (such as Golang's `cgo`) where tiny thread stacks are the norm and `sigaltstack()` has been used to provide for signal handlers. This is a no-op change for the vast majority of processes that don't use `sigaltstack`.

- [bpo-43287](https://bugs.python.org/issue?@action=redirect&bpo=43287) [https://bugs.python.org/issue?@action=redirect&bpo=43287]: Speed up calls to `filter()` by using the [PEP 590](https://peps.python.org/pep-0590/) [https://peps.python.org/pep-0590/] `vectorcall` calling convention. Patch by Donghee Na.
- [bpo-37448](https://bugs.python.org/issue?@action=redirect&bpo=37448) [https://bugs.python.org/issue?@action=redirect&bpo=37448]: Add a radix tree based memory map to track in-use obmalloc arenas. Use to replace the old implementation of `address_in_range()`. The radix tree approach makes it easy to increase pool sizes beyond the OS page size. Boosting the pool and arena size allows obmalloc to handle a significantly higher percentage of requests from its ultra-fast paths.

It also has the advantage of eliminating the memory unsanitary behavior of the previous `address_in_range()`. The old `address_in_range()` was marked with the annotations `_Py_NO_SANITIZE_ADDRESS`, `_Py_NO_SANITIZE_THREAD`, and `_Py_NO_SANITIZE_MEMORY`. Those annotations are no longer needed.

To disable the radix tree map, set a preprocessor flag as follows: `-DWITH_PYMALLOC_RADIX_TREE=0`.

Co-authored-by: Tim Peters <[tim.peters@gmail.com](mailto:tim.peters@gmail.com)>

- [bpo-29988](https://bugs.python.org/issue?@action=redirect&bpo=29988) [https://bugs.python.org/issue?@action=redirect&bpo=29988]: Only handle asynchronous exceptions and requests to drop the GIL when returning from a call or on the back edges of loops. Makes sure that `__exit__()` is always called in with statements, even for interrupts.

## Library

- [bpo-43720](https://bugs.python.org/issue?@action=redirect&bpo=43720) [https://bugs.python.org/issue?@action=redirect&bpo=43720]: Document various stdlib deprecations in `imp`, `pkgutil`, and `importlib.util` for removal in Python 3.12.
- [bpo-43433](https://bugs.python.org/issue?@action=redirect&bpo=43433) [https://bugs.python.org/issue?@action=redirect&bpo=43433]

@action=redirect&bpo=43433]: `xmlrpc.client.ServerProxy` no longer ignores query and fragment in the URL of the server.

- [bpo-31956](https://bugs.python.org/issue?@action=redirect&bpo=31956) [https://bugs.python.org/issue?@action=redirect&bpo=31956]: The `index()` method of `array.array` now has optional *start* and *stop* parameters.
- [bpo-40066](https://bugs.python.org/issue?@action=redirect&bpo=40066) [https://bugs.python.org/issue?@action=redirect&bpo=40066]: Enum: adjust `repr()` to show only enum and member name (not value, nor angle brackets) and `str()` to show only member name. Update and improve documentation to match.
- [bpo-42136](https://bugs.python.org/issue?@action=redirect&bpo=42136) [https://bugs.python.org/issue?@action=redirect&bpo=42136]: Deprecate all `module_repr()` methods found in `importlib` as their use is being phased out by Python 3.12.
- [bpo-35930](https://bugs.python.org/issue?@action=redirect&bpo=35930) [https://bugs.python.org/issue?@action=redirect&bpo=35930]: Raising an exception raised in a “future” instance will create reference cycles.
- [bpo-41369](https://bugs.python.org/issue?@action=redirect&bpo=41369) [https://bugs.python.org/issue?@action=redirect&bpo=41369]: Finish updating the vendored `libmpdec` to version 2.5.1. Patch by Stefan Krah.
- [bpo-43422](https://bugs.python.org/issue?@action=redirect&bpo=43422) [https://bugs.python.org/issue?@action=redirect&bpo=43422]: Revert the `_decimal` C API which was added in [bpo-41324](https://bugs.python.org/issue?@action=redirect&bpo=41324) [https://bugs.python.org/issue?@action=redirect&bpo=41324].
- [bpo-43577](https://bugs.python.org/issue?@action=redirect&bpo=43577) [https://bugs.python.org/issue?@action=redirect&bpo=43577]: Fix deadlock when using `ssl.SSLContext` debug callback with `ssl.SSLContext.sni_callback()`.
- [bpo-43571](https://bugs.python.org/issue?@action=redirect&bpo=43571) [https://bugs.python.org/issue?@action=redirect&bpo=43571]: It's now possible to create MPTCP sockets with `IPPROTO_MPTCP`

- [bpo-43542](https://bugs.python.org/issue?@action=redirect&bpo=43542) [https://bugs.python.org/issue?@action=redirect&bpo=43542]: `image/heic` and `image/heif` were added to **mimetypes**.
- [bpo-40645](https://bugs.python.org/issue?@action=redirect&bpo=40645) [https://bugs.python.org/issue?@action=redirect&bpo=40645]: The **hmac** module now uses OpenSSL's HMAC implementation when `digestmod` argument is a hash name or builtin hash function.
- [bpo-43510](https://bugs.python.org/issue?@action=redirect&bpo=43510) [https://bugs.python.org/issue?@action=redirect&bpo=43510]: Implement **PEP 597** [https://peps.python.org/pep-0597/]: Add `EncodingWarning` warning, `-X warn_default_encoding` option, **PYTHONWARNDEFAULTENCODING** environment variable and `encoding="locale"` argument value.
- [bpo-43521](https://bugs.python.org/issue?@action=redirect&bpo=43521) [https://bugs.python.org/issue?@action=redirect&bpo=43521]: `ast.unparse` can now render NaNs and empty sets.
- [bpo-42914](https://bugs.python.org/issue?@action=redirect&bpo=42914) [https://bugs.python.org/issue?@action=redirect&bpo=42914]: **`pprint.pprint()`** gains a new boolean `underscore_numbers` optional argument to emit integers with thousands separated by an underscore character for improved readability (for example `1_000_000` instead of `1000000`).
- [bpo-41361](https://bugs.python.org/issue?@action=redirect&bpo=41361) [https://bugs.python.org/issue?@action=redirect&bpo=41361]: **`rotate()`** calls are now slightly faster due to faster argument parsing.
- [bpo-43423](https://bugs.python.org/issue?@action=redirect&bpo=43423) [https://bugs.python.org/issue?@action=redirect&bpo=43423]: **`subprocess.communicate()`** no longer raises an `IndexError` when there is an empty stdout or stderr IO buffer during a timeout on Windows.
- [bpo-27820](https://bugs.python.org/issue?@action=redirect&bpo=27820) [https://bugs.python.org/issue?@action=redirect&bpo=27820]: Fixed long-standing bug of `smtplib.SMTP` where doing AUTH LOGIN with `initial_response_ok=False` will fail.

The cause is that `SMTP.auth_login_always_` returns a password if provided with a challenge string, thus non-compliant with the standard for AUTH LOGIN.

Also fixes bug with the test for `smtpd`.

- [bpo-43445](https://bugs.python.org/issue?@action=redirect&bpo=43445) [https://bugs.python.org/issue?@action=redirect&bpo=43445]: Add frozen modules to `sys.stdlib_module_names`. For example, add `"_frozen_importlib"` and `"_frozen_importlib_external"` names.
- [bpo-43245](https://bugs.python.org/issue?@action=redirect&bpo=43245) [https://bugs.python.org/issue?@action=redirect&bpo=43245]: Add keyword arguments support to `ChainMap.new_child()`.
- [bpo-29982](https://bugs.python.org/issue?@action=redirect&bpo=29982) [https://bugs.python.org/issue?@action=redirect&bpo=29982]: Add optional parameter `ignore_cleanup_errors` to `tempfile.TemporaryDirectory()` and allow multiple `cleanup()` attempts. Contributed by C.A.M. Gerlach.
- [bpo-43428](https://bugs.python.org/issue?@action=redirect&bpo=43428) [https://bugs.python.org/issue?@action=redirect&bpo=43428]: Include changes from [importlib-metadata 3.7](https://importlib-metadata.readthedocs.io/en/latest/history.html#v3-7-0) [https://importlib-metadata.readthedocs.io/en/latest/history.html#v3-7-0]:

Performance enhancements to distribution discovery.

`entry_points` only returns unique distributions.

Introduces new `EntryPoints` object for containing a set of entry points with convenience methods for selecting entry points by group or name. `entry_points` now returns this object if selection parameters are supplied but continues to return a dict object for compatibility. Users are encouraged to rely on the selection interface. The dict object result is likely to be deprecated in the future.

Added `packages_distributions` function to return a mapping of packages to the distributions that provide them.

- [bpo-43332](https://bugs.python.org/issue?@action=redirect&bpo=43332) [https://bugs.python.org/issue?@action=redirect&bpo=43332]: Improves the networking efficiency of `http.client` when using a proxy via `set_tunnel()`. Fewer small send calls are made during connection setup.
- [bpo-43420](https://bugs.python.org/issue?@action=redirect&bpo=43420) [https://bugs.python.org/issue?@action=redirect&bpo=43420]: Improve performance of `fractions.Fraction` arithmetics for large components. Contributed by Sergey B. Kirpichev.
- [bpo-43356](https://bugs.python.org/issue?@action=redirect&bpo=43356) [https://bugs.python.org/issue?@action=redirect&bpo=43356]: Allow passing a signal number to `_thread.interrupt_main()`.
- [bpo-43399](https://bugs.python.org/issue?@action=redirect&bpo=43399) [https://bugs.python.org/issue?@action=redirect&bpo=43399]: Fix `ElementTree.extend` not working on iterators when using the Python implementation
- [bpo-43369](https://bugs.python.org/issue?@action=redirect&bpo=43369) [https://bugs.python.org/issue?@action=redirect&bpo=43369]: Improve `sqlite3` error handling: If `sqlite3_column_text()` and `sqlite3_column_blob()` set `SQLITE_NOMEM`, `MemoryError` is now raised. Patch by Erlend E. Aasland.
- [bpo-43368](https://bugs.python.org/issue?@action=redirect&bpo=43368) [https://bugs.python.org/issue?@action=redirect&bpo=43368]: Fix a regression introduced in PR 24562, where an empty bytestring was fetched as `None` instead of `b''` in `sqlite3`. Patch by Mariusz Felisiak.
- [bpo-41282](https://bugs.python.org/issue?@action=redirect&bpo=41282) [https://bugs.python.org/issue?@action=redirect&bpo=41282]: Fixed stacklevel of `DeprecationWarning` emitted from `import distutils`.
- [bpo-42129](https://bugs.python.org/issue?@action=redirect&bpo=42129) [https://bugs.python.org/issue?@action=redirect&bpo=42129]: `importlib.resources` now honors namespace packages, merging resources from each location in the namespace as introduced in `importlib_resources` 3.2 and including incidental changes through 5.0.3.

- [bpo-43295](https://bugs.python.org/issue?@action=redirect&bpo=43295) [https://bugs.python.org/issue?@action=redirect&bpo=43295]: `datetime.datetime.strptime()` now raises `ValueError` instead of `IndexError` when matching 'z' with the %z format specifier.
- [bpo-43125](https://bugs.python.org/issue?@action=redirect&bpo=43125) [https://bugs.python.org/issue?@action=redirect&bpo=43125]: Return empty string if `base64mime.body_encode` receive empty bytes
- [bpo-43084](https://bugs.python.org/issue?@action=redirect&bpo=43084) [https://bugs.python.org/issue?@action=redirect&bpo=43084]: `curses.window.enclose()` returns now `True` or `False` (as was documented) instead of `1` or `0`.
- [bpo-42994](https://bugs.python.org/issue?@action=redirect&bpo=42994) [https://bugs.python.org/issue?@action=redirect&bpo=42994]: Add MIME types for opus, AAC, 3gpp and 3gpp2
- [bpo-14678](https://bugs.python.org/issue?@action=redirect&bpo=14678) [https://bugs.python.org/issue?@action=redirect&bpo=14678]: Add an `invalidate_caches()` method to the `zipimport.zipimporter` class to support `importlib.invalidate_caches()`. Patch by Desmond Cheong.
- [bpo-42782](https://bugs.python.org/issue?@action=redirect&bpo=42782) [https://bugs.python.org/issue?@action=redirect&bpo=42782]: Fail fast in `shutil.move()` to avoid creating destination directories on failure.
- [bpo-40066](https://bugs.python.org/issue?@action=redirect&bpo=40066) [https://bugs.python.org/issue?@action=redirect&bpo=40066]: Enum's `repr()` and `str()` have changed: `repr()` is now `EnumClass.MemberName` and `str()` is `MemberName`. Additionally, `stdlib Enum`'s whose contents are available as module attributes, such as `RegexFlag.IGNORECASE`, have their `repr()` as `module.name`, e.g. `re.IGNORECASE`.
- [bpo-26053](https://bugs.python.org/issue?@action=redirect&bpo=26053) [https://bugs.python.org/issue?@action=redirect&bpo=26053]: Fixed bug where the `pdb` interactive run command echoed the args from the shell command line, even if those have been overridden at the `pdb` prompt.

- [bpo-24160](https://bugs.python.org/issue?@action=redirect&bpo=24160) [https://bugs.python.org/issue?@action=redirect&bpo=24160]: Fixed bug where breakpoints did not persist across multiple debugger sessions in `pdb`'s interactive mode.
- [bpo-40701](https://bugs.python.org/issue?@action=redirect&bpo=40701) [https://bugs.python.org/issue?@action=redirect&bpo=40701]: When the `tempfile.tempdir` global variable is set to a value of type bytes, it is now handled consistently. Previously exceptions could be raised from some `tempfile` APIs when the directory did not already exist in this situation. Also ensures that the `tempfile.gettempdir()` and `tempfile.gettempdirb()` functions *always* return `str` and `bytes` respectively.
- [bpo-39342](https://bugs.python.org/issue?@action=redirect&bpo=39342) [https://bugs.python.org/issue?@action=redirect&bpo=39342]: Expose `X509_V_FLAG_ALLOW_PROXY_CERTS` as `VERIFY_ALLOW_PROXY_CERTS` to allow proxy certificate validation as explained in <https://www.openssl.org/docs/man1.1.1/man7/proxy-certificates.html>.
- [bpo-31861](https://bugs.python.org/issue?@action=redirect&bpo=31861) [https://bugs.python.org/issue?@action=redirect&bpo=31861]: Add `builtins.aiter` and `builtins.anext`. Patch by Joshua Bronson (@jab), Daniel Pope (@lordmauve), and Justin Wang (@justin39).

## Documentation

- [bpo-43199](https://bugs.python.org/issue?@action=redirect&bpo=43199) [https://bugs.python.org/issue?@action=redirect&bpo=43199]: Answer “Why is there no goto?” in the Design and History FAQ.
- [bpo-43407](https://bugs.python.org/issue?@action=redirect&bpo=43407) [https://bugs.python.org/issue?@action=redirect&bpo=43407]: Clarified that a result from `time.monotonic()`, `time.perf_counter()`, `time.process_time()`, or `time.thread_time()` can be compared with the result from any following call to the same function - not just the next immediate call.
- [bpo-43354](https://bugs.python.org/issue?@action=redirect&bpo=43354) [https://bugs.python.org/issue?@action=redirect&bpo=43354]: Fix type documentation for

`Fault.faultCode`; the type has to be `int` instead of `str`.

- [bpo-41933](https://bugs.python.org/issue?@action=redirect&bpo=41933) [https://bugs.python.org/issue?@action=redirect&bpo=41933]: Clarified wording of `s * n` in the Common Sequence Operations

## Tests

- [bpo-37945](https://bugs.python.org/issue?@action=redirect&bpo=37945) [https://bugs.python.org/issue?@action=redirect&bpo=37945]: Fix `test_getsetlocale_issue1813()` of `test_locale`: skip the test if `setlocale()` fails. Patch by Victor Stinner.
- [bpo-41561](https://bugs.python.org/issue?@action=redirect&bpo=41561) [https://bugs.python.org/issue?@action=redirect&bpo=41561]: Add workaround for Ubuntu's custom OpenSSL security level policy.

## Build

- [bpo-43179](https://bugs.python.org/issue?@action=redirect&bpo=43179) [https://bugs.python.org/issue?@action=redirect&bpo=43179]: Introduce and correctly use `ALIGNOF_X` in place of `SIZEOF_X` for alignment-related code in optimized string routines. Patch by Jessica Clarke.
- [bpo-43631](https://bugs.python.org/issue?@action=redirect&bpo=43631) [https://bugs.python.org/issue?@action=redirect&bpo=43631]: Update macOS, Windows, and CI to OpenSSL 1.1.1k.
- [bpo-43617](https://bugs.python.org/issue?@action=redirect&bpo=43617) [https://bugs.python.org/issue?@action=redirect&bpo=43617]: Improve `configure.ac`: Check for presence of `autoconf-archive` package and remove our copies of M4 macros.
- [bpo-43466](https://bugs.python.org/issue?@action=redirect&bpo=43466) [https://bugs.python.org/issue?@action=redirect&bpo=43466]: The `configure` script now supports `--with-openssl-rpath` option.
- [bpo-43372](https://bugs.python.org/issue?@action=redirect&bpo=43372) [https://bugs.python.org/issue?@action=redirect&bpo=43372]: Use `_freeze_importlib` to generate code for the `__hello__` module. This approach ensures the code matches the interpreter version. Previously, `PYTHON_FOR_REGEN` was used to generate the code, which might be wrong. The marshal format for code objects has changed with [bpo-42246](https://bugs.python.org/issue?@action=redirect&bpo=42246) [https://bugs.python.org/issue?@action=redirect&bpo=42246], commit 877df851. Update the code and the expected code sizes in `ctypes test_frozentable`.

## Windows

- [bpo-43440](https://bugs.python.org/issue?@action=redirect&bpo=43440) [https://bugs.python.org/issue?@action=redirect&bpo=43440]: Build `sqlite3` with the `R*Tree` module enabled. Patch by Erlend E. Aasland.

## IDLE

- [bpo-42225](https://bugs.python.org/issue?@action=redirect&bpo=42225) [https://bugs.python.org/issue?@action=redirect&bpo=42225]: Document that IDLE can fail on Unix either from misconfigured IP masquerade rules or failure displaying complex colored (non-ascii) characters.

## C API

- [bpo-43688](https://bugs.python.org/issue?@action=redirect&bpo=43688) [https://bugs.python.org/issue?@action=redirect&bpo=43688]: The limited C API is now supported if Python is built in debug mode (if the `Py_DEBUG` macro is defined). In the limited C API, the `Py_INCREF()` and `Py_DECREF()` functions are now implemented as opaque function calls, rather than accessing directly the `PyObject.ob_refcnt` member, if Python is built in debug mode and the `Py_LIMITED_API` macro targets Python 3.10 or newer. It became possible to support the limited C API in debug mode because the `PyObject` structure is the same in release and debug mode since Python 3.8 (see [bpo-36465](https://bugs.python.org/issue?@action=redirect&bpo=36465) [https://bugs.python.org/issue?@action=redirect&bpo=36465]).

The limited C API is still not supported in the `--with-trace-refs` special build (`Py_TRACE_REFS` macro).

Patch by Victor Stinner.

- [bpo-43244](https://bugs.python.org/issue?@action=redirect&bpo=43244) [https://bugs.python.org/issue?@action=redirect&bpo=43244]: Remove the `pyarena.h` header file with functions:
  - `PyArena_New()`
  - `PyArena_Free()`
  - `PyArena_Malloc()`

○ `PyArena_AddPyObject()`

These functions were undocumented, excluded from the limited C API, and were only used internally by the compiler. Patch by Victor Stinner.

- [bpo-43244](https://bugs.python.org/issue?@action=redirect&bpo=43244) [https://bugs.python.org/issue?@action=redirect&bpo=43244]: Remove the compiler and parser functions using `struct _mod` type, because the public AST C API was removed:

○ `PyAST_Compile()`  
○ `PyAST_CompileEx()`  
○ `PyAST_CompileObject()`  
○ `PyFuture_FromAST()`  
○ `PyFuture_FromASTObject()`  
○ `PyParser_ASTFromFile()`  
○ `PyParser_ASTFromFileObject()`  
○ `PyParser_ASTFromFilename()`  
○ `PyParser_ASTFromString()`  
○ `PyParser_ASTFromStringObject()`

These functions were undocumented and excluded from the limited C API. Patch by Victor Stinner.

- [bpo-43244](https://bugs.python.org/issue?@action=redirect&bpo=43244) [https://bugs.python.org/issue?@action=redirect&bpo=43244]: Remove `ast.h`, `asdl.h`, and `Python-ast.h` header files. These functions were undocumented and excluded from the limited C API. Most names defined by these header files were not prefixed by `Py` and so could create names conflicts. For example, `Python-ast.h` defined a `Yield` macro which was conflict with the `Yield` name used by the Windows `<winbase.h>` header. Use the Python `ast` module instead. Patch by Victor Stinner.
- [bpo-43541](https://bugs.python.org/issue?@action=redirect&bpo=43541) [https://bugs.python.org/issue?@action=redirect&bpo=43541]: Fix a `PyEval_EvalCodeEx()` regression: fix reference counting on builtins. Patch by Victor Stinner.
- [bpo-43244](https://bugs.python.org/issue?@action=redirect&bpo=43244) [https://bugs.python.org/issue?@action=redirect&bpo=43244]:

@action=redirect&bpo=43244]: Remove the `symtable.h` header file and the undocumented functions:

- `PyST_GetScope()`
- `PySymtable_Build()`
- `PySymtable_BuildObject()`
- `PySymtable_Free()`
- `Py_SymtableString()`
- `Py_SymtableStringObject()`

The `Py_SymtableString()` function was part the stable ABI by mistake but it could not be used, because the `symtable.h` header file was excluded from the limited C API.

The Python `symtable` module remains available and is unchanged.

Patch by Victor Stinner.

- [bpo-43244](https://bugs.python.org/issue?@action=redirect&bpo=43244) [https://bugs.python.org/issue?@action=redirect&bpo=43244]: Remove the `PyAST_Validate()` function. It is no longer possible to build a AST object (`mod_ty` type) with the public C API. The function was already excluded from the limited C API ([PEP 384](https://peps.python.org/pep-0384/) [https://peps.python.org/pep-0384/]). Patch by Victor Stinner.

## Python 3.10.0 alpha 6

*Release date: 2021-03-01*

### Security

- [bpo-42967](https://bugs.python.org/issue?@action=redirect&bpo=42967) [https://bugs.python.org/issue?@action=redirect&bpo=42967]: Fix web cache poisoning vulnerability by defaulting the query args separator to `&`, and allowing the user to choose a custom separator.

### Core and Builtins

- [bpo-43321](https://bugs.python.org/issue?@action=redirect&bpo=43321) [https://bugs.python.org/issue?@action=redirect&bpo=43321]: Fix `SystemError` raised when `PyArg_Parse*()` is used with `#` but without `PY_SSIZE_T_CLEAN` defined.
- [bpo-36346](https://bugs.python.org/issue?@action=redirect&bpo=36346) [https://bugs.python.org/issue?@action=redirect&bpo=36346]: `PyArg_Parse*()` functions now emits `DeprecationWarning` when `u` or `Z` format is used. See [PEP 623](https://peps.python.org/pep-0623/) [https://peps.python.org/pep-0623/] for detail.
- [bpo-43277](https://bugs.python.org/issue?@action=redirect&bpo=43277) [https://bugs.python.org/issue?@action=redirect&bpo=43277]: Add a new `PySet_CheckExact()` function to the C-API to check if an object is an instance of `set` but not an instance of a subtype. Patch by Pablo Galindo.
- [bpo-42990](https://bugs.python.org/issue?@action=redirect&bpo=42990) [https://bugs.python.org/issue?@action=redirect&bpo=42990]: The `types.FunctionType` constructor now inherits the current builtins if the `globals` dictionary has no `"__builtins__"` key, rather than using `{"None": None}` as builtins: same behavior as `eval()` and `exec()` functions. Defining a function with `def function(...): ...` in Python is not affected, `globals` cannot be overridden with this syntax: it also inherits the current builtins. Patch by Victor Stinner.
- [bpo-42990](https://bugs.python.org/issue?@action=redirect&bpo=42990) [https://bugs.python.org/issue?@action=redirect&bpo=42990]: Functions have a new `__builtins__` attribute which is used to look for builtin symbols when a function is executed, instead of looking into `__globals__['__builtins__']`. Patch by Mark Shannon and Victor Stinner.
- [bpo-43149](https://bugs.python.org/issue?@action=redirect&bpo=43149) [https://bugs.python.org/issue?@action=redirect&bpo=43149]: Improve the error message in the parser for exception groups without parentheses. Patch by Pablo Galindo.
- [bpo-43121](https://bugs.python.org/issue?@action=redirect&bpo=43121) [https://bugs.python.org/issue?@action=redirect&bpo=43121]: Fixed an incorrect `SyntaxError` message for missing comma in literals. Patch by Pablo Galindo.
- [bpo-42819](https://bugs.python.org/issue?@action=redirect&bpo=42819) [https://bugs.python.org/issue?@action=redirect&bpo=42819]: `readline`: Explicitly disable bracketed paste in the interactive interpreter, even if it's set in the inputrc, is enabled by default (eg GNU Readline 8.1),

or a user calls `readline.read_init_file()`. The Python REPL has not implemented bracketed paste support. Also, bracketed mode writes the `"\x1b[?2004h"` escape sequence into stdout which causes test failures in applications that don't support it. It can still be explicitly enabled by calling `readline.parse_and_bind("set enable-bracketed-paste on")`. Patch by Dustin Rodrigues.

- [bpo-42808](https://bugs.python.org/issue?@action=redirect&bpo=42808) [https://bugs.python.org/issue?@action=redirect&bpo=42808]: Simple calls to `type(object)` are now faster due to the `vectorcall` calling convention. Patch by Dennis Sweeney.
- [bpo-42217](https://bugs.python.org/issue?@action=redirect&bpo=42217) [https://bugs.python.org/issue?@action=redirect&bpo=42217]: Make the compiler merges same `co_code` and `co_linetable` objects in a module like already did for `co_consts`.
- [bpo-41972](https://bugs.python.org/issue?@action=redirect&bpo=41972) [https://bugs.python.org/issue?@action=redirect&bpo=41972]: Substring search functions such as `str1 in str2` and `str2.find(str1)` now sometimes use the “Two-Way” string comparison algorithm to avoid quadratic behavior on long strings.
- [bpo-42128](https://bugs.python.org/issue?@action=redirect&bpo=42128) [https://bugs.python.org/issue?@action=redirect&bpo=42128]: Implement [PEP 634](https://peps.python.org/pep-0634/) [https://peps.python.org/pep-0634/] (structural pattern matching). Patch by Brandt Bucher.
- [bpo-40692](https://bugs.python.org/issue?@action=redirect&bpo=40692) [https://bugs.python.org/issue?@action=redirect&bpo=40692]: In the `concurrent.futures.ProcessPoolExecutor`, validate that `multiprocess.synchronize()` is available on a given platform and rely on that check in the `concurrent.futures` test suite so we can run tests that are unrelated to `ProcessPoolExecutor` on those platforms.
- [bpo-38302](https://bugs.python.org/issue?@action=redirect&bpo=38302) [https://bugs.python.org/issue?@action=redirect&bpo=38302]: If `object.__ipow__()` returns `NotImplemented`, the operator will correctly fall back to `object.__pow__()` and `object.__rpow__()` as expected.

## Library

- [bpo-43316](https://bugs.python.org/issue?@action=redirect&bpo=43316) [https://bugs.python.org/issue?@action=redirect&bpo=43316]

@action=redirect&bpo=43316]: The `python -m gzip` command line application now properly fails when detecting an unsupported extension. It exits with a non-zero exit code and prints an error message to `stderr`.

- [bpo-43317](https://bugs.python.org/issue?@action=redirect&bpo=43317) [https://bugs.python.org/issue?@action=redirect&bpo=43317]: Set the chunk size for the `gzip` module main function to `io.DEFAULT_BUFFER_SIZE`. This is slightly faster than the 1024 bytes constant that was used previously.
- [bpo-43146](https://bugs.python.org/issue?@action=redirect&bpo=43146) [https://bugs.python.org/issue?@action=redirect&bpo=43146]: Handle `None` in single-arg versions of `print_exception()` and `format_exception()`.
- [bpo-43260](https://bugs.python.org/issue?@action=redirect&bpo=43260) [https://bugs.python.org/issue?@action=redirect&bpo=43260]: Fix `TextIOWrapper` can not flush internal buffer forever after very large text is written.
- [bpo-43258](https://bugs.python.org/issue?@action=redirect&bpo=43258) [https://bugs.python.org/issue?@action=redirect&bpo=43258]: Prevent needless allocation of `sqlite3` aggregate function context when no rows match an aggregate query. Patch by Erlend E. Aasland.
- [bpo-43251](https://bugs.python.org/issue?@action=redirect&bpo=43251) [https://bugs.python.org/issue?@action=redirect&bpo=43251]: Improve `sqlite3` error handling: `sqlite3_column_name()` failures now result in `MemoryError`. Patch by Erlend E. Aasland.
- [bpo-40956](https://bugs.python.org/issue?@action=redirect&bpo=40956) [https://bugs.python.org/issue?@action=redirect&bpo=40956]: Fix segfault in `sqlite3.Connection.backup()` if no argument was provided. The regression was introduced by PR 23838. Patch by Erlend E. Aasland.
- [bpo-43172](https://bugs.python.org/issue?@action=redirect&bpo=43172) [https://bugs.python.org/issue?@action=redirect&bpo=43172]: The `readline` module now passes its tests when built directly against `libedit`. Existing irreconcilable API differences remain in `readline.get_begidx()` and `readline.get_endidx()` behavior based on `libreadline` vs `libedit` use.
- [bpo-43163](https://bugs.python.org/issue?@action=redirect&bpo=43163) [https://bugs.python.org/issue?@action=redirect&bpo=43163]: Fix a bug in `codeop` that was causing it to not ask for more input when multi-line snippets have unclosed parentheses. Patch by Pablo Galindo

- [bpo-43162](https://bugs.python.org/issue?@action=redirect&bpo=43162) [https://bugs.python.org/issue?@action=redirect&bpo=43162]: deprecate unsupported ability to access enum members as attributes of other enum members
- [bpo-43146](https://bugs.python.org/issue?@action=redirect&bpo=43146) [https://bugs.python.org/issue?@action=redirect&bpo=43146]: Fix recent regression in None argument handling in `traceback` module functions.
- [bpo-43102](https://bugs.python.org/issue?@action=redirect&bpo=43102) [https://bugs.python.org/issue?@action=redirect&bpo=43102]: The namedtuple `_new_` method had its `_builtins_` set to None instead of an actual dictionary. This created problems for introspection tools.
- [bpo-43106](https://bugs.python.org/issue?@action=redirect&bpo=43106) [https://bugs.python.org/issue?@action=redirect&bpo=43106]: Added `O_EVTONLY`, `O_FSYNC`, `O_SYMLINK` and `O_NOFOLLOW_ANY` for macOS. Patch by Donghee Na.
- [bpo-42960](https://bugs.python.org/issue?@action=redirect&bpo=42960) [https://bugs.python.org/issue?@action=redirect&bpo=42960]: Adds `resource.RLIMIT_KQUEUES` constant from FreeBSD to the `resource` module.
- [bpo-42151](https://bugs.python.org/issue?@action=redirect&bpo=42151) [https://bugs.python.org/issue?@action=redirect&bpo=42151]: Make the pure Python implementation of `xml.etree.ElementTree` behave the same as the C implementation (`_elementtree`) regarding default attribute values (by not setting `specified_attributes=1`).
- [bpo-29753](https://bugs.python.org/issue?@action=redirect&bpo=29753) [https://bugs.python.org/issue?@action=redirect&bpo=29753]: In ctypes, now packed bitfields are calculated properly and the first item of packed bitfields is now shrank correctly.

## Documentation

- [bpo-27646](https://bugs.python.org/issue?@action=redirect&bpo=27646) [https://bugs.python.org/issue?@action=redirect&bpo=27646]: Clarify that ‘yield from <expr>’ works with any iterable, not just iterators.
- [bpo-36346](https://bugs.python.org/issue?@action=redirect&bpo=36346) [https://bugs.python.org/issue?@action=redirect&bpo=36346]: Update some deprecated unicode APIs which are documented as “will be removed in 4.0” to “3.12”. See [PEP 623](https://peps.python.org/pep-0623/) [https://peps.python.org/pep-0623/] for detail.

## Tests

- [bpo-43288](https://bugs.python.org/issue?@action=redirect&bpo=43288) [https://bugs.python.org/issue?@action=redirect&bpo=43288]: Fix test\_importlib to correctly skip Unicode file tests if the filesystem does not support them.

## Build

- [bpo-43174](https://bugs.python.org/issue?@action=redirect&bpo=43174) [https://bugs.python.org/issue?@action=redirect&bpo=43174]: Windows build now uses `/utf-8` compiler option.
- [bpo-43103](https://bugs.python.org/issue?@action=redirect&bpo=43103) [https://bugs.python.org/issue?@action=redirect&bpo=43103]: Add a new configure `--without-static-libpython` option to not build the `libpythonMAJOR.MINOR.a` static library and not install the `python.o` object file.
- [bpo-13501](https://bugs.python.org/issue?@action=redirect&bpo=13501) [https://bugs.python.org/issue?@action=redirect&bpo=13501]: The configure script can now use *libedit* instead of *readline* with the command line option `--with-readline=editline`.
- [bpo-42603](https://bugs.python.org/issue?@action=redirect&bpo=42603) [https://bugs.python.org/issue?@action=redirect&bpo=42603]: Make configure script use pkg-config to detect the location of Tcl/Tk headers and libraries, used to build tkinter.

On macOS, a Tcl/Tk configuration provided by pkg-config will be preferred over Tcl/Tk frameworks installed in `/System/Library/Frameworks`. If both exist and the latter is preferred, the appropriate `--with-tcltk=*` configuration options need to be explicitly set.

- [bpo-39448](https://bugs.python.org/issue?@action=redirect&bpo=39448) [https://bugs.python.org/issue?@action=redirect&bpo=39448]: Add the “regen-frozen” makefile target that regenerates the code for the frozen `__hello__` module.

## Windows

- [bpo-43155](https://bugs.python.org/issue?@action=redirect&bpo=43155) [https://bugs.python.org/issue?@action=redirect&bpo=43155]: **PyCMethod\_New()** is now

present in `python3.lib`.

## macOS

- [bpo-41837](https://bugs.python.org/issue?@action=redirect&bpo=41837) [https://bugs.python.org/issue?@action=redirect&bpo=41837]: Update macOS installer build to use OpenSSL 1.1.1j.

## IDLE

- [bpo-43283](https://bugs.python.org/issue?@action=redirect&bpo=43283) [https://bugs.python.org/issue?@action=redirect&bpo=43283]: Document why printing to IDLE's Shell is often slower than printing to a system terminal and that it can be made faster by pre-formatting a single string before printing.

## C API

- [bpo-43278](https://bugs.python.org/issue?@action=redirect&bpo=43278) [https://bugs.python.org/issue?@action=redirect&bpo=43278]: Always put compiler and system information on the first line of the REPL welcome message.
- [bpo-43270](https://bugs.python.org/issue?@action=redirect&bpo=43270) [https://bugs.python.org/issue?@action=redirect&bpo=43270]: Remove the private `_PyErr_OCCURRED()` macro: use the public `PyErr_Occurred()` function instead.
- [bpo-35134](https://bugs.python.org/issue?@action=redirect&bpo=35134) [https://bugs.python.org/issue?@action=redirect&bpo=35134]: Move `odictobject.h`, `parser_interface.h`, `picklebufobject.h`, `pydebug.h`, and `pyfpe.h` into the `cpython/` directory. They must not be included directly, as they are already included by `Python.h`: [Include Files](#).
- [bpo-35134](https://bugs.python.org/issue?@action=redirect&bpo=35134) [https://bugs.python.org/issue?@action=redirect&bpo=35134]: Move `pyarena.h`, `pyctype.h`, and `pytime.h` into the `cpython/` directory. They must not be included directly, as they are already included by `Python.h`: [Include Files](#).
- [bpo-40170](https://bugs.python.org/issue?@action=redirect&bpo=40170) [https://bugs.python.org/issue?@action=redirect&bpo=40170]: `PyExceptionClass_Name()` is now always declared as a function, in order to hide implementation details. The macro accessed

`PyObject.tp_name` directly. Patch by Erlend E. Aasland.

- [bpo-43239](https://bugs.python.org/issue?@action=redirect&bpo=43239) [https://bugs.python.org/issue?@action=redirect&bpo=43239]: The `PyCFFunction_New()` function is now exported in the ABI when compiled with `-fvisibility=hidden`.
- [bpo-40170](https://bugs.python.org/issue?@action=redirect&bpo=40170) [https://bugs.python.org/issue?@action=redirect&bpo=40170]: `PyIter_Check()` is now always declared as a function, in order to hide implementation details. The macro accessed `PyObject.tp_iternext` directly. Patch by Erlend E. Aasland.
- [bpo-40170](https://bugs.python.org/issue?@action=redirect&bpo=40170) [https://bugs.python.org/issue?@action=redirect&bpo=40170]: Convert `PyDescr_IsData()` macro to a function to hide implementation details: The macro accessed `PyObject.tp_descr_set` directly. Patch by Erlend E. Aasland.
- [bpo-43181](https://bugs.python.org/issue?@action=redirect&bpo=43181) [https://bugs.python.org/issue?@action=redirect&bpo=43181]: Convert `PyObject_TypeCheck()` macro to a static inline function. Patch by Erlend E. Aasland.

## Python 3.10.0 alpha 5

*Release date: 2021-02-02*

### Security

- [bpo-42938](https://bugs.python.org/issue?@action=redirect&bpo=42938) [https://bugs.python.org/issue?@action=redirect&bpo=42938]: Avoid static buffers when computing the repr of `ctypes.c_double` and `ctypes.c_longdouble` values.

### Core and Builtins

- [bpo-42990](https://bugs.python.org/issue?@action=redirect&bpo=42990) [https://bugs.python.org/issue?@action=redirect&bpo=42990]: Refactor the `PyEval_` family of functions.
  - An new function `_PyEval_Vector` is added to simplify calls to Python from C.

- `_PyEval_EvalCodeWithName` is removed
- `PyEval_EvalCodeEx` is retained as part of the API, but is not used internally
- [bpo-38631](https://bugs.python.org/issue?@action=redirect&bpo=38631) [https://bugs.python.org/issue?@action=redirect&bpo=38631]: Replace `Py_FatalError()` calls in the compiler with regular `SystemError` exceptions. Patch by Victor Stinner.
- [bpo-42997](https://bugs.python.org/issue?@action=redirect&bpo=42997) [https://bugs.python.org/issue?@action=redirect&bpo=42997]: Improve error message for missing “:” before blocks. Patch by Pablo Galindo.
- [bpo-43017](https://bugs.python.org/issue?@action=redirect&bpo=43017) [https://bugs.python.org/issue?@action=redirect&bpo=43017]: Improve error message in the parser when using un-parenthesised tuples in comprehensions. Patch by Pablo Galindo.
- [bpo-42986](https://bugs.python.org/issue?@action=redirect&bpo=42986) [https://bugs.python.org/issue?@action=redirect&bpo=42986]: Fix parser crash when reporting syntax errors in f-string with newlines. Patch by Pablo Galindo.
- [bpo-40176](https://bugs.python.org/issue?@action=redirect&bpo=40176) [https://bugs.python.org/issue?@action=redirect&bpo=40176]: Syntax errors for unterminated string literals now point to the start of the string instead of reporting EOF/EOL.
- [bpo-42927](https://bugs.python.org/issue?@action=redirect&bpo=42927) [https://bugs.python.org/issue?@action=redirect&bpo=42927]: The inline cache for `LOAD_ATTR` now also optimizes access to attributes defined by `__slots__`. This makes reading such attribute up to 30% faster.
- [bpo-42864](https://bugs.python.org/issue?@action=redirect&bpo=42864) [https://bugs.python.org/issue?@action=redirect&bpo=42864]: Improve error messages in the parser when parentheses are not closed. Patch by Pablo Galindo.
- [bpo-42924](https://bugs.python.org/issue?@action=redirect&bpo=42924) [https://bugs.python.org/issue?@action=redirect&bpo=42924]: Fix `bytearray` repetition incorrectly copying data from the start of the buffer, even if the data is offset within the buffer (e.g. after reassigning a slice at the start of the `bytearray` to a shorter byte string).
- [bpo-42882](https://bugs.python.org/issue?@action=redirect&bpo=42882) [https://bugs.python.org/issue?@action=redirect&bpo=42882]: Fix the `_PyUnicode_FromId()` function (`_Py_IDENTIFIER(var)` API) when `Py_Initialize()` / `Py_Finalize()` is called multiple

times: preserve `_PyRuntime.unicode_ids.next_index` value.

- [bpo-42827](https://bugs.python.org/issue?@action=redirect&bpo=42827) [https://bugs.python.org/issue?@action=redirect&bpo=42827]: Fix a crash when working out the error line of a **SyntaxError** in some multi-line expressions.
- [bpo-42823](https://bugs.python.org/issue?@action=redirect&bpo=42823) [https://bugs.python.org/issue?@action=redirect&bpo=42823]: `frame.f_lineno` is correct even if `frame.f_trace` is set to `True`
- [bpo-37324](https://bugs.python.org/issue?@action=redirect&bpo=37324) [https://bugs.python.org/issue?@action=redirect&bpo=37324]: Remove deprecated aliases to **Collections Abstract Base Classes** from the **collections** module.
- [bpo-41994](https://bugs.python.org/issue?@action=redirect&bpo=41994) [https://bugs.python.org/issue?@action=redirect&bpo=41994]: Fixed possible leak in `import` when `sys.modules` is not a `dict`.
- [bpo-27772](https://bugs.python.org/issue?@action=redirect&bpo=27772) [https://bugs.python.org/issue?@action=redirect&bpo=27772]: In string formatting, preceding the *width* field by `'0'` no longer affects the default alignment for strings.

## Library

- [bpo-43108](https://bugs.python.org/issue?@action=redirect&bpo=43108) [https://bugs.python.org/issue?@action=redirect&bpo=43108]: Fixed a reference leak in the **curses** module. Patch by Pablo Galindo
- [bpo-43077](https://bugs.python.org/issue?@action=redirect&bpo=43077) [https://bugs.python.org/issue?@action=redirect&bpo=43077]: Update the bundled pip to 21.0.1 and setuptools to 52.0.0.
- [bpo-41282](https://bugs.python.org/issue?@action=redirect&bpo=41282) [https://bugs.python.org/issue?@action=redirect&bpo=41282]: Deprecate `distutils` in documentation and add warning on import.
- [bpo-43014](https://bugs.python.org/issue?@action=redirect&bpo=43014) [https://bugs.python.org/issue?@action=redirect&bpo=43014]: Improve performance of **tokenize** by 20-30%. Patch by Anthony Sottile.
- [bpo-42323](https://bugs.python.org/issue?@action=redirect&bpo=42323) [https://bugs.python.org/issue?@action=redirect&bpo=42323]: Fix **`math.nextafter()`** for NaN on AIX.
- [bpo-42955](https://bugs.python.org/issue?@action=redirect&bpo=42955) [https://bugs.python.org/issue?@action=redirect&bpo=42955]: Add **`sys.stdlib_module_names`**, containing the list of the

standard library module names. Patch by Victor Stinner.

- [bpo-42944](https://bugs.python.org/issue?@action=redirect&bpo=42944) [https://bugs.python.org/issue?@action=redirect&bpo=42944]: Fix `random.Random.sample` when `counts` argument is not `None`.
- [bpo-42934](https://bugs.python.org/issue?@action=redirect&bpo=42934) [https://bugs.python.org/issue?@action=redirect&bpo=42934]: Use `TracebackException`'s new `compact` param in `TestResult` to reduce time and memory consumed by traceback formatting.
- [bpo-42931](https://bugs.python.org/issue?@action=redirect&bpo=42931) [https://bugs.python.org/issue?@action=redirect&bpo=42931]: Add `randbytes()` to `random.__all__`.
- [bpo-38250](https://bugs.python.org/issue?@action=redirect&bpo=38250) [https://bugs.python.org/issue?@action=redirect&bpo=38250]: [Enum] Flags consisting of a single bit are now considered canonical, and will be the only flags returned from listing and iterating over a Flag class or a Flag member. Multi-bit flags are considered aliases; they will be returned from lookups and operations that result in their value. Iteration for both Flag and Flag members is in definition order.
- [bpo-42877](https://bugs.python.org/issue?@action=redirect&bpo=42877) [https://bugs.python.org/issue?@action=redirect&bpo=42877]: Added the `compact` parameter to the constructor of `traceback.TracebackException` to reduce time and memory for use cases that only need to call `TracebackException.format()` and `TracebackException.format_exception_only()`.
- [bpo-42923](https://bugs.python.org/issue?@action=redirect&bpo=42923) [https://bugs.python.org/issue?@action=redirect&bpo=42923]: The `Py_FatalError()` function and the `faulthandler` module now dump the list of extension modules on a fatal error.
- [bpo-42848](https://bugs.python.org/issue?@action=redirect&bpo=42848) [https://bugs.python.org/issue?@action=redirect&bpo=42848]: Removed recursion from `TracebackException` to allow it to handle long exception chains.
- [bpo-42901](https://bugs.python.org/issue?@action=redirect&bpo=42901) [https://bugs.python.org/issue?@action=redirect&bpo=42901]: [Enum] move member creation from `EnumMeta.__new__` to `__proto_member.__set_name__`, allowing members to be created and visible in `__init_subclass__`.
- [bpo-42780](https://bugs.python.org/issue?@action=redirect&bpo=42780) [https://bugs.python.org/issue?@action=redirect&bpo=42780]: Fix `os.set_inheritable()` for

O\_PATH file descriptors on Linux.

- [bpo-42866](https://bugs.python.org/issue?@action=redirect&bpo=42866) [https://bugs.python.org/issue?@action=redirect&bpo=42866]: Fix a reference leak in the `getcodec()` function of CJK codecs. Patch by Victor Stinner.
- [bpo-42846](https://bugs.python.org/issue?@action=redirect&bpo=42846) [https://bugs.python.org/issue?@action=redirect&bpo=42846]: Convert the 6 CJK codec extension modules (`_codecs_cn`, `_codecs_hk`, `_codecs_iso2022`, `_codecs_jp`, `_codecs_kr` and `_codecs_tw`) to the multiphase initialization API ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]). Patch by Victor Stinner.
- [bpo-42851](https://bugs.python.org/issue?@action=redirect&bpo=42851) [https://bugs.python.org/issue?@action=redirect&bpo=42851]: remove `__init_subclass__` support for Enum members
- [bpo-42834](https://bugs.python.org/issue?@action=redirect&bpo=42834) [https://bugs.python.org/issue?@action=redirect&bpo=42834]: Make internal caches of the `_json` module compatible with subinterpreters.
- [bpo-41748](https://bugs.python.org/issue?@action=redirect&bpo=41748) [https://bugs.python.org/issue?@action=redirect&bpo=41748]: Fix HTMLParser parsing rules for element attributes containing commas with spaces. Patch by Karl Dubost.
- [bpo-40810](https://bugs.python.org/issue?@action=redirect&bpo=40810) [https://bugs.python.org/issue?@action=redirect&bpo=40810]: Require SQLite 3.7.15 or newer. Patch by Erlend E. Aasland.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Convert the `_multibytecodec` extension module (CJK codecs) to multi-phase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]). Patch by Erlend E. Aasland.
- [bpo-42802](https://bugs.python.org/issue?@action=redirect&bpo=42802) [https://bugs.python.org/issue?@action=redirect&bpo=42802]: The `distutils bdist_wininst` command deprecated in Python 3.8 has been removed. The `distutils bdist_wheel` command is now recommended to distribute binary packages on Windows.
- [bpo-24464](https://bugs.python.org/issue?@action=redirect&bpo=24464) [https://bugs.python.org/issue?@action=redirect&bpo=24464]: The undocumented built-in function `sqlite3.enable_shared_cache` is now deprecated, scheduled for removal in Python 3.12. Its use is strongly discouraged by the SQLite3 documentation. Patch by Erlend E. Aasland.
- [bpo-42384](https://bugs.python.org/issue?@action=redirect&bpo=42384) [https://bugs.python.org/issue?@action=redirect&bpo=42384]:

- @action=redirect&bpo=42384]: Make pdb populate sys.path[0] exactly the same as regular python execution.
- [bpo-42383](https://bugs.python.org/issue?@action=redirect&bpo=42383) [https://bugs.python.org/issue?@action=redirect&bpo=42383]: Fix pdb: previously pdb would fail to restart the debugging target if it was specified using a relative path and the current directory changed.
  - [bpo-42005](https://bugs.python.org/issue?@action=redirect&bpo=42005) [https://bugs.python.org/issue?@action=redirect&bpo=42005]: Fix CLI of **cProfile** and **profile** to catch **BrokenPipeError**.
  - [bpo-41604](https://bugs.python.org/issue?@action=redirect&bpo=41604) [https://bugs.python.org/issue?@action=redirect&bpo=41604]: Don't decrement the reference count of the previous user\_ptr when set\_panel\_userptr fails.
  - [bpo-41149](https://bugs.python.org/issue?@action=redirect&bpo=41149) [https://bugs.python.org/issue?@action=redirect&bpo=41149]: Allow executing callables that have a boolean value of `False` when passed to **Threading.thread** as the target. Patch contributed by Barney Stratford.
  - [bpo-38307](https://bugs.python.org/issue?@action=redirect&bpo=38307) [https://bugs.python.org/issue?@action=redirect&bpo=38307]: Add an 'end\_lineno' attribute to the Class and Function objects that appear in the tree returned by pycldr functions. This and the existing 'lineno' attribute define the extent of class and def statements. Patch by Aviral Srivastava.
  - [bpo-39273](https://bugs.python.org/issue?@action=redirect&bpo=39273) [https://bugs.python.org/issue?@action=redirect&bpo=39273]: The `BUTTON5_*` constants are now exposed in the **curses** module if available.
  - [bpo-33289](https://bugs.python.org/issue?@action=redirect&bpo=33289) [https://bugs.python.org/issue?@action=redirect&bpo=33289]: Correct call to **tkinter.colorchooser** to return RGB triplet of ints instead of floats. Patch by Cheryl Sabella.

## Documentation

- [bpo-40304](https://bugs.python.org/issue?@action=redirect&bpo=40304) [https://bugs.python.org/issue?@action=redirect&bpo=40304]: Fix doc for type(name, bases, dict). Patch by Boris Verkhovskiy and Éric Araujo.
- [bpo-42811](https://bugs.python.org/issue?@action=redirect&bpo=42811) [https://bugs.python.org/issue?@action=redirect&bpo=42811]: Updated `importlib.util.resolve_name()` doc to use `__spec__.parent` instead of `__package__`. (Thanks Yair Frid.)

## Tests

- [bpo-40823](https://bugs.python.org/issue?@action=redirect&bpo=40823) [https://bugs.python.org/issue?@action=redirect&bpo=40823]: Use **`unittest.TestLoader().loadTestsFromTestCase()`** instead of **`unittest.makeSuite()`** in **`sqlite3`** tests. Patch by Erlend E. Aasland.
- [bpo-40810](https://bugs.python.org/issue?@action=redirect&bpo=40810) [https://bugs.python.org/issue?@action=redirect&bpo=40810]: In **`sqlite3`**, fix **`CheckTraceCallbackContent`** for SQLite pre 3.7.15.

## Build

- [bpo-43031](https://bugs.python.org/issue?@action=redirect&bpo=43031) [https://bugs.python.org/issue?@action=redirect&bpo=43031]: Pass **`--timeout= $(TESTTIMEOUT)`** option to the default profile task **`./python -m test --pgo`** command.
- [bpo-36143](https://bugs.python.org/issue?@action=redirect&bpo=36143) [https://bugs.python.org/issue?@action=redirect&bpo=36143]: make **`regen-all`** now also runs **`regen-keyword`**. Patch by Victor Stinner.
- [bpo-42874](https://bugs.python.org/issue?@action=redirect&bpo=42874) [https://bugs.python.org/issue?@action=redirect&bpo=42874]: Removed the **`grep -q`** and **`-E`** flags in the **`tzpath`** validation section of the **`configure`** script to better accommodate users of some platforms (specifically Solaris 10).
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Add library search path by **`wr-cc`** in **`add_cross_compiling_paths()`** for VxWorks.
- [bpo-42856](https://bugs.python.org/issue?@action=redirect&bpo=42856) [https://bugs.python.org/issue?@action=redirect&bpo=42856]: Add **`--with-wheel-pkg-dir=PATH`** option to the **`./configure`** script. If specified, the **`ensurepip`** module looks for **`setuptools`** and **`pip`** wheel packages in this directory: if both are present, these wheel packages are used instead of **`ensurepip`** bundled wheel packages.

Some Linux distribution packaging policies recommend

against bundling dependencies. For example, Fedora installs wheel packages in the `/usr/share/python-wheels/` directory and don't install the `ensurepip._bundled` package.

## Windows

- [bpo-41837](https://bugs.python.org/issue?@action=redirect&bpo=41837) [https://bugs.python.org/issue?@action=redirect&bpo=41837]: Updated Windows installer to include OpenSSL 1.1.1i
- [bpo-42584](https://bugs.python.org/issue?@action=redirect&bpo=42584) [https://bugs.python.org/issue?@action=redirect&bpo=42584]: Upgrade Windows installer to use SQLite 3.34.0.

## macOS

- [bpo-42504](https://bugs.python.org/issue?@action=redirect&bpo=42504) [https://bugs.python.org/issue?@action=redirect&bpo=42504]: Ensure that the value of `sysconfig.get_config_var('MACOSX_DEPLOYMENT_TARGET')` is always a string, even in when the value is parsable as an integer.

## IDLE

- [bpo-43008](https://bugs.python.org/issue?@action=redirect&bpo=43008) [https://bugs.python.org/issue?@action=redirect&bpo=43008]: Make IDLE invoke `sys.excepthook()` in normal, 2-process mode. Patch by Ken Hilton.
- [bpo-33065](https://bugs.python.org/issue?@action=redirect&bpo=33065) [https://bugs.python.org/issue?@action=redirect&bpo=33065]: Fix problem debugging user classes with `_repr_` method.
- [bpo-23544](https://bugs.python.org/issue?@action=redirect&bpo=23544) [https://bugs.python.org/issue?@action=redirect&bpo=23544]: Disable Debug => Stack Viewer when user code is running or Debugger is active, to prevent hang or crash. Patch by Zackery Spytz.
- [bpo-32631](https://bugs.python.org/issue?@action=redirect&bpo=32631) [https://bugs.python.org/issue?@action=redirect&bpo=32631]: Finish `zzdummy` example extension module: make menu entries work; add docstrings and tests with 100% coverage.

## C API

- [bpo-42979](https://bugs.python.org/issue?@action=redirect&bpo=42979) [https://bugs.python.org/issue?@action=redirect&bpo=42979]: When Python is built in debug mode (with C assertions), calling a type slot like `sq_length` (`__len__()` in Python) now fails with a fatal error if the slot succeeded with an exception set, or failed with no exception set. The error message contains the slot, the type name, and the current exception (if an exception is set). Patch by Victor Stinner.
- [bpo-43030](https://bugs.python.org/issue?@action=redirect&bpo=43030) [https://bugs.python.org/issue?@action=redirect&bpo=43030]: Fixed a compiler warning in `Py_UNICODE_ISSPACE()` on platforms with signed `wchar_t`.

## Python 3.10.0 alpha 4

*Release date: 2021-01-04*

### Core and Builtins

- [bpo-42814](https://bugs.python.org/issue?@action=redirect&bpo=42814) [https://bugs.python.org/issue?@action=redirect&bpo=42814]: Fix undefined behavior in `Objects/genericaliasobject.c`.
- [bpo-42806](https://bugs.python.org/issue?@action=redirect&bpo=42806) [https://bugs.python.org/issue?@action=redirect&bpo=42806]: Fix the column offsets for f-strings `ast` nodes surrounded by parentheses and for nodes that spawn multiple lines. Patch by Pablo Galindo.
- [bpo-40631](https://bugs.python.org/issue?@action=redirect&bpo=40631) [https://bugs.python.org/issue?@action=redirect&bpo=40631]: Fix regression where a single parenthesized starred expression was a valid assignment target.
- [bpo-27794](https://bugs.python.org/issue?@action=redirect&bpo=27794) [https://bugs.python.org/issue?@action=redirect&bpo=27794]: Improve the error message for failed writes/deletes to property objects. When possible, the attribute name is now shown. Patch provided by Yurii Karabas.
- [bpo-42745](https://bugs.python.org/issue?@action=redirect&bpo=42745) [https://bugs.python.org/issue?@action=redirect&bpo=42745]: Make the type attribute lookup

cache per-interpreter. Patch by Victor Stinner.

- [bpo-42246](https://bugs.python.org/issue?@action=redirect&bpo=42246) [https://bugs.python.org/issue?@action=redirect&bpo=42246]: Jumps to jumps are not eliminated when it would break PEP 626.
- [bpo-42246](https://bugs.python.org/issue?@action=redirect&bpo=42246) [https://bugs.python.org/issue?@action=redirect&bpo=42246]: Make sure that the `f_lasti` and `f_lineno` attributes of a frame are set correctly when an exception is raised or re-raised. Required for PEP 626.
- [bpo-32381](https://bugs.python.org/issue?@action=redirect&bpo=32381) [https://bugs.python.org/issue?@action=redirect&bpo=32381]: The coding cookie (ex: `# coding: latin1`) is now ignored in the command passed to the `-c` command line option. Patch by Victor Stinner.
- [bpo-30858](https://bugs.python.org/issue?@action=redirect&bpo=30858) [https://bugs.python.org/issue?@action=redirect&bpo=30858]: Improve error location in expressions that contain assignments. Patch by Pablo Galindo and Lysandros Nikolaou.
- [bpo-42615](https://bugs.python.org/issue?@action=redirect&bpo=42615) [https://bugs.python.org/issue?@action=redirect&bpo=42615]: Remove jump commands made redundant by the deletion of unreachable bytecode blocks
- [bpo-42639](https://bugs.python.org/issue?@action=redirect&bpo=42639) [https://bugs.python.org/issue?@action=redirect&bpo=42639]: Make the `atexit` module state per-interpreter. It is now safe have more than one `atexit` module instance. Patch by Donghee Na and Victor Stinner.
- [bpo-32381](https://bugs.python.org/issue?@action=redirect&bpo=32381) [https://bugs.python.org/issue?@action=redirect&bpo=32381]: Fix encoding name when running a `.pyc` file on Windows: `PyRun_SimpleFileExFlags()` now uses the correct encoding to decode the filename.
- [bpo-42195](https://bugs.python.org/issue?@action=redirect&bpo=42195) [https://bugs.python.org/issue?@action=redirect&bpo=42195]: The `__args__` of the parameterized generics for `typing.Callable` and `collections.abc.Callable` are now consistent. The `__args__` for `collections.abc.Callable` are now flattened while `typing.Callable`'s have not changed. To allow this change, `types.GenericAlias` can now be subclassed and `collections.abc.Callable`'s `__class_getitem__` will now return a subclass of `types.GenericAlias`. Tests for typing were also updated to not subclass things like `Callable[..., T]` as that is not a valid base class. Finally, both `Callables` no longer validate their `argtypes`, in `Callable[[argtypes],`

`resulttype]` to prepare for [PEP 612](https://peps.python.org/pep-0612/) [https://peps.python.org/pep-0612/]. Patch by Ken Jin.

- [bpo-40137](https://bugs.python.org/issue?@action=redirect&bpo=40137) [https://bugs.python.org/issue?@action=redirect&bpo=40137]: Convert `functools` module to use `PyType_FromModuleAndSpec()`.
- [bpo-40077](https://bugs.python.org/issue?@action=redirect&bpo=40077) [https://bugs.python.org/issue?@action=redirect&bpo=40077]: Convert `array` to use heap types, and establish module state for these.
- [bpo-42008](https://bugs.python.org/issue?@action=redirect&bpo=42008) [https://bugs.python.org/issue?@action=redirect&bpo=42008]: Fix `_random.Random()` seeding.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the `pyexpat` extension module to multi-phase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-40521](https://bugs.python.org/issue?@action=redirect&bpo=40521) [https://bugs.python.org/issue?@action=redirect&bpo=40521]: Make the Unicode dictionary of interned strings compatible with subinterpreters. Patch by Victor Stinner.
- [bpo-39465](https://bugs.python.org/issue?@action=redirect&bpo=39465) [https://bugs.python.org/issue?@action=redirect&bpo=39465]: Make `_PyUnicode_FromId()` function compatible with subinterpreters. Each interpreter now has an array of identifier objects (interned strings decoded from UTF-8). Patch by Victor Stinner.

## Library

- [bpo-42257](https://bugs.python.org/issue?@action=redirect&bpo=42257) [https://bugs.python.org/issue?@action=redirect&bpo=42257]: Handle empty string in variable executable in `platform.libc_ver()`
- [bpo-42772](https://bugs.python.org/issue?@action=redirect&bpo=42772) [https://bugs.python.org/issue?@action=redirect&bpo=42772]: `randrange()` now raises a `TypeError` when `step` is specified without a `stop` argument. Formerly, it silently ignored the `step` argument.
- [bpo-42759](https://bugs.python.org/issue?@action=redirect&bpo=42759) [https://bugs.python.org/issue?@action=redirect&bpo=42759]: Fixed equality comparison of `tkinter.Variable` and `tkinter.font.Font`. Objects which belong to different Tcl interpreters are now always different, even if they have the same name.

- [bpo-42756](https://bugs.python.org/issue?@action=redirect&bpo=42756) [https://bugs.python.org/issue?@action=redirect&bpo=42756]: Configure LMTP Unix-domain socket to use socket global default timeout when a timeout is not explicitly provided.
- [bpo-23328](https://bugs.python.org/issue?@action=redirect&bpo=23328) [https://bugs.python.org/issue?@action=redirect&bpo=23328]: Allow / character in username, password fields on `_PROXY` envvars.
- [bpo-42740](https://bugs.python.org/issue?@action=redirect&bpo=42740) [https://bugs.python.org/issue?@action=redirect&bpo=42740]: `typing.get_args()` and `typing.get_origin()` now support [PEP 604](https://peps.python.org/pep-0604/) [https://peps.python.org/pep-0604/] union types and [PEP 612](https://peps.python.org/pep-0612/) [https://peps.python.org/pep-0612/] additions to `Callable`.
- [bpo-42655](https://bugs.python.org/issue?@action=redirect&bpo=42655) [https://bugs.python.org/issue?@action=redirect&bpo=42655]: `subprocess.extra_groups` is now correctly passed into `setgroups()` system call.
- [bpo-42727](https://bugs.python.org/issue?@action=redirect&bpo=42727) [https://bugs.python.org/issue?@action=redirect&bpo=42727]: `EnumMeta.__prepare__` now accepts `**kwds` to properly support `__init_subclass__`
- [bpo-38308](https://bugs.python.org/issue?@action=redirect&bpo=38308) [https://bugs.python.org/issue?@action=redirect&bpo=38308]: Add optional *weights* to `statistics.harmonic_mean()`.
- [bpo-42721](https://bugs.python.org/issue?@action=redirect&bpo=42721) [https://bugs.python.org/issue?@action=redirect&bpo=42721]: When simple query dialogs (`tkinter.simpdialog`), message boxes (`tkinter.messagebox`) or color choose dialog (`tkinter.colorchooser`) are created without arguments *master* and *parent*, and the default root window is not yet created, and `NoDefaultRoot()` was not called, a new temporal hidden root window will be created automatically. It will not be set as the default root window and will be destroyed right after closing the dialog window. It will help to use these simple dialog windows in programs which do not need other GUI.
- [bpo-25246](https://bugs.python.org/issue?@action=redirect&bpo=25246) [https://bugs.python.org/issue?@action=redirect&bpo=25246]

@action=redirect&bpo=25246]: Optimized  
`collections.deque.remove()`.

- [bpo-35728](https://bugs.python.org/issue?@action=redirect&bpo=35728) [https://bugs.python.org/issue?@action=redirect&bpo=35728]: Added a root parameter to `tkinter.font.nametofont()`.
- [bpo-15303](https://bugs.python.org/issue?@action=redirect&bpo=15303) [https://bugs.python.org/issue?@action=redirect&bpo=15303]: `tkinter` supports now widgets with boolean value False.
- [bpo-42681](https://bugs.python.org/issue?@action=redirect&bpo=42681) [https://bugs.python.org/issue?@action=redirect&bpo=42681]: Fixed range checks for color and pair numbers in `curses`.
- [bpo-42685](https://bugs.python.org/issue?@action=redirect&bpo=42685) [https://bugs.python.org/issue?@action=redirect&bpo=42685]: Improved placing of simple query windows in Tkinter (such as `tkinter.simpledialog.askinteger()`). They are now centered at the center of the parent window if it is specified and shown, otherwise at the center of the screen.
- [bpo-9694](https://bugs.python.org/issue?@action=redirect&bpo=9694) [https://bugs.python.org/issue?@action=redirect&bpo=9694]: Argparse help no longer uses the confusing phrase, “optional arguments”. It uses “options” instead.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the `_thread` extension module to the multiphase initialization API ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]) and convert its static types to heap types.
- [bpo-37961](https://bugs.python.org/issue?@action=redirect&bpo=37961) [https://bugs.python.org/issue?@action=redirect&bpo=37961]: Fix crash in `tracemalloc.Traceback.__repr__()` (regressed in Python 3.9).
- [bpo-42630](https://bugs.python.org/issue?@action=redirect&bpo=42630) [https://bugs.python.org/issue?@action=redirect&bpo=42630]: `tkinter` functions and constructors which need a default root window raise now `RuntimeError` with descriptive message instead of obscure

**AttributeError** or **NameError** if it is not created yet or cannot be created automatically.

- [bpo-42639](https://bugs.python.org/issue?@action=redirect&bpo=42639) [https://bugs.python.org/issue?@action=redirect&bpo=42639]: **atexit.\_run\_exitfuncs()** now logs callback exceptions using **sys.unraisablehook**, rather than logging them directly into **sys.stderr** and raise the last exception.
- [bpo-42644](https://bugs.python.org/issue?@action=redirect&bpo=42644) [https://bugs.python.org/issue?@action=redirect&bpo=42644]: **logging.disable** will now validate the types and value of its parameter. It also now accepts strings representing the levels (as does **logging.setLevel()**) instead of only the numerical values.
- [bpo-42639](https://bugs.python.org/issue?@action=redirect&bpo=42639) [https://bugs.python.org/issue?@action=redirect&bpo=42639]: At Python exit, if a callback registered with **atexit.register()** fails, its exception is now logged. Previously, only some exceptions were logged, and the last exception was always silently ignored.
- [bpo-36541](https://bugs.python.org/issue?@action=redirect&bpo=36541) [https://bugs.python.org/issue?@action=redirect&bpo=36541]: Fixed **lib2to3.pgen2** to be able to parse PEP-570 positional only argument syntax.
- [bpo-42382](https://bugs.python.org/issue?@action=redirect&bpo=42382) [https://bugs.python.org/issue?@action=redirect&bpo=42382]: In **importlib.metadata: - EntryPoint** objects now expose a **.dist** object referencing the **Distribution** when constructed from a **Distribution**. - Add support for package discovery under package normalization rules. - The object returned by **metadata()** now has a formally defined protocol called **PackageMetadata** with declared support for the **.get\_all()** method. - Synced with **importlib\_metadata 3.3**.
- [bpo-41877](https://bugs.python.org/issue?@action=redirect&bpo=41877) [https://bugs.python.org/issue?@action=redirect&bpo=41877]: A check is added against misspellings of **autospect**, **auto\_spec** and **set\_spec** being passed as arguments to **patch**, **patch.object** and **create\_autospec**.
- [bpo-39717](https://bugs.python.org/issue?@action=redirect&bpo=39717) [https://bugs.python.org/issue?@action=redirect&bpo=39717]

@action=redirect&bpo=39717]: [tarfile] update nested exception raising to use from None or from e

- [bpo-41877](https://bugs.python.org/issue?@action=redirect&bpo=41877) [https://bugs.python.org/issue?@action=redirect&bpo=41877]: `AttributeError` for suspected misspellings of assertions on mocks are now pointing out that the cause are misspelled assertions and also what to do if the misspelling is actually an intended attribute name. The `unittest.mock` document is also updated to reflect the current set of recognised misspellings.
- [bpo-41559](https://bugs.python.org/issue?@action=redirect&bpo=41559) [https://bugs.python.org/issue?@action=redirect&bpo=41559]: Implemented [PEP 612](https://peps.python.org/pep-0612/) [https://peps.python.org/pep-0612/]: added `ParamSpec` and `Concatenate` to [typing](#). Patch by Ken Jin.
- [bpo-42385](https://bugs.python.org/issue?@action=redirect&bpo=42385) [https://bugs.python.org/issue?@action=redirect&bpo=42385]: `StrEnum`: fix `_generate_next_value_` to return a str
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Define `THREAD_STACK_SIZE` for VxWorks.
- [bpo-34750](https://bugs.python.org/issue?@action=redirect&bpo=34750) [https://bugs.python.org/issue?@action=redirect&bpo=34750]: `[Enum] _EnumDict.update()` is now supported
- [bpo-42517](https://bugs.python.org/issue?@action=redirect&bpo=42517) [https://bugs.python.org/issue?@action=redirect&bpo=42517]: `Enum`: private names do not become members / do not generate errors – they remain normal attributes
- [bpo-42678](https://bugs.python.org/issue?@action=redirect&bpo=42678) [https://bugs.python.org/issue?@action=redirect&bpo=42678]: `Enum`: call `__init_subclass__` after members have been added
- [bpo-28964](https://bugs.python.org/issue?@action=redirect&bpo=28964) [https://bugs.python.org/issue?@action=redirect&bpo=28964]: [ast.literal\\_eval\(\)](#) adds line number information (if available) in error message for malformed nodes.

- [bpo-42470](https://bugs.python.org/issue?@action=redirect&bpo=42470) [https://bugs.python.org/issue?@action=redirect&bpo=42470]: `random.sample()` no longer warns on a sequence which is also a set.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: `posixpath.expanduser()` returns the input *path* unchanged if user home directory is None on VxWorks.
- [bpo-42388](https://bugs.python.org/issue?@action=redirect&bpo=42388) [https://bugs.python.org/issue?@action=redirect&bpo=42388]: Fix `subprocess.check_output(..., input=None)` behavior when `text=True` to be consistent with that of the documentation and `universal_newlines=True`.
- [bpo-34463](https://bugs.python.org/issue?@action=redirect&bpo=34463) [https://bugs.python.org/issue?@action=redirect&bpo=34463]: Fixed discrepancy between `traceback` and the interpreter in formatting of `SyntaxError` with `lineno` not set (`traceback` was changed to match interpreter).
- [bpo-42393](https://bugs.python.org/issue?@action=redirect&bpo=42393) [https://bugs.python.org/issue?@action=redirect&bpo=42393]: Raise `OverflowError` instead of silent truncation in `socket.ntohs()` and `socket.htons()`. Silent truncation was deprecated in Python 3.7. Patch by Erlend E. Aasland
- [bpo-42222](https://bugs.python.org/issue?@action=redirect&bpo=42222) [https://bugs.python.org/issue?@action=redirect&bpo=42222]: Harmonized `random.randrange()` argument handling to match `range()`.
  - The integer test and conversion in `randrange()` now uses `operator.index()`.
  - Non-integer arguments to `randrange()` are deprecated.
  - The `ValueError` is deprecated in favor of a `TypeError`.
  - It now runs a little faster than before.

(Contributed by Raymond Hettinger and Serhiy Storchaka.)

- [bpo-42163](https://bugs.python.org/issue?@action=redirect&bpo=42163) [https://bugs.python.org/issue?@action=redirect&bpo=42163]: Restore compatibility for `uname_result` around `deepcopy` and `_replace`.
- [bpo-42090](https://bugs.python.org/issue?@action=redirect&bpo=42090) [https://bugs.python.org/issue?@action=redirect&bpo=42090]: `zipfile.Path.joinpath` now accepts arbitrary arguments, same as `pathlib.Path.joinpath`.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the `_csv` module to the multi-phase initialization API ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-42059](https://bugs.python.org/issue?@action=redirect&bpo=42059) [https://bugs.python.org/issue?@action=redirect&bpo=42059]: `typing.TypedDict` types created using the alternative call-style syntax now correctly respect the `total` keyword argument when setting their `__required_keys__` and `__optional_keys__` class attributes.
- [bpo-41960](https://bugs.python.org/issue?@action=redirect&bpo=41960) [https://bugs.python.org/issue?@action=redirect&bpo=41960]: Add `globals` and `locals` parameters to the `inspect.signature()` and `inspect.Signature.from_callable()`.
- [bpo-41907](https://bugs.python.org/issue?@action=redirect&bpo=41907) [https://bugs.python.org/issue?@action=redirect&bpo=41907]: fix `format()` behavior for `IntFlag`
- [bpo-41891](https://bugs.python.org/issue?@action=redirect&bpo=41891) [https://bugs.python.org/issue?@action=redirect&bpo=41891]: Ensure `asyncio.wait_for` waits for task completion
- [bpo-24792](https://bugs.python.org/issue?@action=redirect&bpo=24792) [https://bugs.python.org/issue?@action=redirect&bpo=24792]: Fixed bug where `zipimporter` sometimes reports an incorrect cause of import errors.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Fix `site` and `sysconfig` modules for VxWorks RTOS which has no home directories.

- [bpo-41462](https://bugs.python.org/issue?@action=redirect&bpo=41462) [https://bugs.python.org/issue?@action=redirect&bpo=41462]: Add `os.set_blocking()` support for VxWorks RTOS.
- [bpo-40219](https://bugs.python.org/issue?@action=redirect&bpo=40219) [https://bugs.python.org/issue?@action=redirect&bpo=40219]: Lowered `tkinter.ttk.LabeledScale` dummy widget to prevent hiding part of the content label.
- [bpo-37193](https://bugs.python.org/issue?@action=redirect&bpo=37193) [https://bugs.python.org/issue?@action=redirect&bpo=37193]: Fixed memory leak in `socketserver.ThreadingMixIn` introduced in Python 3.7.
- [bpo-39068](https://bugs.python.org/issue?@action=redirect&bpo=39068) [https://bugs.python.org/issue?@action=redirect&bpo=39068]: Fix initialization race condition in `a85encode()` and `b85encode()` in `base64`. Patch by Brandon Stansbury.

## Documentation

- [bpo-17140](https://bugs.python.org/issue?@action=redirect&bpo=17140) [https://bugs.python.org/issue?@action=redirect&bpo=17140]: Add documentation for the `multiprocessing.pool.ThreadPool` class.
- [bpo-34398](https://bugs.python.org/issue?@action=redirect&bpo=34398) [https://bugs.python.org/issue?@action=redirect&bpo=34398]: Prominently feature listings from the glossary in documentation search results. Patch by Ammar Askar.

## Tests

- [bpo-42794](https://bugs.python.org/issue?@action=redirect&bpo=42794) [https://bugs.python.org/issue?@action=redirect&bpo=42794]: Update test\_nntplib to use official group name of news.aioe.org for testing. Patch by Donghee Na.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Skip some asyncio tests on VxWorks.
- [bpo-42641](https://bugs.python.org/issue?@action=redirect&bpo=42641) [https://bugs.python.org/issue?@action=redirect&bpo=42641]: Enhance

`test_select.test_select()`: it now takes 500 milliseconds rather than 10 seconds. Use Python rather than a shell to make the test more portable.

- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Skip some tests in `_test_all_chown_common()` on VxWorks.
- [bpo-42199](https://bugs.python.org/issue?@action=redirect&bpo=42199) [https://bugs.python.org/issue?@action=redirect&bpo=42199]: Fix bytecode helper `assertNotInBytecode`.
- [bpo-41443](https://bugs.python.org/issue?@action=redirect&bpo=41443) [https://bugs.python.org/issue?@action=redirect&bpo=41443]: Add more attribute checking in `test_posix.py`
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Disable `os.popen` and impacted tests on VxWorks
- [bpo-41439](https://bugs.python.org/issue?@action=redirect&bpo=41439) [https://bugs.python.org/issue?@action=redirect&bpo=41439]: Port `test_ssl` and `test_uuid` to VxWorks RTOS.

## Build

- [bpo-42692](https://bugs.python.org/issue?@action=redirect&bpo=42692) [https://bugs.python.org/issue?@action=redirect&bpo=42692]: Fix `_builtin_available` check on older compilers. Patch by Joshua Root.
- [bpo-27640](https://bugs.python.org/issue?@action=redirect&bpo=27640) [https://bugs.python.org/issue?@action=redirect&bpo=27640]: Added `--disable-test-modules` option to the `configure` script: don't build nor install test modules. Patch by Xavier de Gaye, Thomas Petazzoni and Peixing Xin.
- [bpo-42604](https://bugs.python.org/issue?@action=redirect&bpo=42604) [https://bugs.python.org/issue?@action=redirect&bpo=42604]: Now all platforms use a value for the “EXT\_SUFFIX” build variable derived from SOABI (for instance in FreeBSD, “EXT\_SUFFIX” is now “.cpython-310d.so” instead of “.so”). Previously only Linux, Mac and VxWorks were using a value for “EXT\_SUFFIX” that included “SOABI”.
- [bpo-42598](https://bugs.python.org/issue?@action=redirect&bpo=42598) [https://bugs.python.org/issue?@action=redirect&bpo=42598]: Fix implicit function declarations in `configure` which could have resulted in incorrect configuration checks. Patch contributed by Joshua Root.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]

@action=redirect&bpo=31904]: Enable libpython3.so for VxWorks.

- [bpo-29076](https://bugs.python.org/issue?@action=redirect&bpo=29076) [https://bugs.python.org/issue?@action=redirect&bpo=29076]: Add fish shell support to macOS installer.

## macOS

- [bpo-42361](https://bugs.python.org/issue?@action=redirect&bpo=42361) [https://bugs.python.org/issue?@action=redirect&bpo=42361]: Update macOS installer build to use Tcl/Tk 8.6.11 (rc2, expected to be final release).
- [bpo-41837](https://bugs.python.org/issue?@action=redirect&bpo=41837) [https://bugs.python.org/issue?@action=redirect&bpo=41837]: Update macOS installer build to use OpenSSL 1.1.1i.
- [bpo-42584](https://bugs.python.org/issue?@action=redirect&bpo=42584) [https://bugs.python.org/issue?@action=redirect&bpo=42584]: Update macOS installer to use SQLite 3.34.0.

## Tools/Demos

- [bpo-42726](https://bugs.python.org/issue?@action=redirect&bpo=42726) [https://bugs.python.org/issue?@action=redirect&bpo=42726]: Fixed Python 3 compatibility issue with gdb/libpython.py handling of attribute dictionaries.
- [bpo-42613](https://bugs.python.org/issue?@action=redirect&bpo=42613) [https://bugs.python.org/issue?@action=redirect&bpo=42613]: Fix `freeze.py` tool to use the proper config and library directories. Patch by Victor Stinner.

## C API

- [bpo-42591](https://bugs.python.org/issue?@action=redirect&bpo=42591) [https://bugs.python.org/issue?@action=redirect&bpo=42591]: Export the `Py_FrozenMain()` function: fix a Python 3.9.0 regression. Python 3.9 uses `-fvisibility=hidden` and the function was not exported explicitly and so not exported.
- [bpo-32381](https://bugs.python.org/issue?@action=redirect&bpo=32381) [https://bugs.python.org/issue?@action=redirect&bpo=32381]: Remove the private `_Py_fopen()` function which is no longer needed. Use `_Py_wfopen()` or `_Py_fopen_obj()` instead. Patch by Victor Stinner.

- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port **resource** extension module to module state
- [bpo-42111](https://bugs.python.org/issue?@action=redirect&bpo=42111) [https://bugs.python.org/issue?@action=redirect&bpo=42111]: Update the `xxlimited` module to be a better example of how to use the limited C API.
- [bpo-40052](https://bugs.python.org/issue?@action=redirect&bpo=40052) [https://bugs.python.org/issue?@action=redirect&bpo=40052]: Fix an alignment build warning/error in function `PyVectorcall_Function()`. Patch by Andreas Schneider, Antoine Pitrou and Petr Viktorin.

## Python 3.10.0 alpha 3

*Release date: 2020-12-07*

### Security

- [bpo-40791](https://bugs.python.org/issue?@action=redirect&bpo=40791) [https://bugs.python.org/issue?@action=redirect&bpo=40791]: Add `volatile` to the accumulator variable in `hmac.compare_digest`, making constant-time-defeating optimizations less likely.

### Core and Builtins

- [bpo-42576](https://bugs.python.org/issue?@action=redirect&bpo=42576) [https://bugs.python.org/issue?@action=redirect&bpo=42576]: `types.GenericAlias` will now raise a `TypeError` when attempting to initialize with a keyword argument. Previously, this would cause the interpreter to crash if the interpreter was compiled with debug symbols. This does not affect interpreters compiled for release. Patch by Ken Jin.
- [bpo-42536](https://bugs.python.org/issue?@action=redirect&bpo=42536) [https://bugs.python.org/issue?@action=redirect&bpo=42536]: Several built-in and standard library types now ensure that their internal result tuples are always tracked by the **garbage collector**:

- `collections.OrderedDict.items()`
- `dict.items()`

- `enumerate()`
- `functools.reduce()`
- `itertools.combinations()`
- `itertools.combinations_with_replacement()`
- `itertools.permutations()`
- `itertools.product()`
- `itertools.zip_longest()`
- `zip()`

Previously, they could have become untracked by a prior garbage collection. Patch by Brandt Bucher.

- [bpo-42500](https://bugs.python.org/issue?@action=redirect&bpo=42500) [https://bugs.python.org/issue?@action=redirect&bpo=42500]: Improve handling of exceptions near recursion limit. Converts a number of Fatal Errors in RecursionErrors.
- [bpo-42246](https://bugs.python.org/issue?@action=redirect&bpo=42246) [https://bugs.python.org/issue?@action=redirect&bpo=42246]: PEP 626: After a return, the `f_lineno` attribute of a frame is always the last line executed.
- [bpo-42435](https://bugs.python.org/issue?@action=redirect&bpo=42435) [https://bugs.python.org/issue?@action=redirect&bpo=42435]: Speed up comparison of bytes objects with non-bytes objects when option `-b` is specified. Speed up comparison of bytearray objects with non-buffer object.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the `_warnings` extension module to the multi-phase initialization API ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]). Patch by Victor Stinner.
- [bpo-41686](https://bugs.python.org/issue?@action=redirect&bpo=41686) [https://bugs.python.org/issue?@action=redirect&bpo=41686]: On Windows, the `SIGINT` event, `_PyOS_SigintEvent()`, is now created even if Python is configured to not install signal handlers (if `PyConfig.install_signal_handlers` equals to 0, or `Py_InitializeEx(0)`).
- [bpo-42381](https://bugs.python.org/issue?@action=redirect&bpo=42381) [https://bugs.python.org/issue?@action=redirect&bpo=42381]: Allow assignment expressions in

set literals and set comprehensions as per PEP 572. Patch by Pablo Galindo.

- [bpo-42202](https://bugs.python.org/issue?@action=redirect&bpo=42202) [https://bugs.python.org/issue?@action=redirect&bpo=42202]: Change function parameters annotations internal representation to tuple of strings. Patch provided by Yurii Karabas.
- [bpo-42374](https://bugs.python.org/issue?@action=redirect&bpo=42374) [https://bugs.python.org/issue?@action=redirect&bpo=42374]: Fix a regression introduced by the new parser, where an unparenthesized walrus operator was not allowed within generator expressions.
- [bpo-42316](https://bugs.python.org/issue?@action=redirect&bpo=42316) [https://bugs.python.org/issue?@action=redirect&bpo=42316]: Allow an unparenthesized walrus in subscript indexes.
- [bpo-42349](https://bugs.python.org/issue?@action=redirect&bpo=42349) [https://bugs.python.org/issue?@action=redirect&bpo=42349]: Make sure that the compiler front-end produces a well-formed control flow graph. Be more aggressive in the compiler back-end, as it is now safe to do so.
- [bpo-42296](https://bugs.python.org/issue?@action=redirect&bpo=42296) [https://bugs.python.org/issue?@action=redirect&bpo=42296]: On Windows, fix a regression in signal handling which prevented to interrupt a program using CTRL + C. The signal handler can be run in a thread different than the Python thread, in which case the test deciding if the thread can handle signals is wrong.
- [bpo-42332](https://bugs.python.org/issue?@action=redirect&bpo=42332) [https://bugs.python.org/issue?@action=redirect&bpo=42332]: `types.GenericAlias` objects can now be the targets of weakrefs.
- [bpo-42282](https://bugs.python.org/issue?@action=redirect&bpo=42282) [https://bugs.python.org/issue?@action=redirect&bpo=42282]: Optimise constant subexpressions that appear as part of named expressions (previously the AST optimiser did not descend into named expressions). Patch by Nick Coghlan.
- [bpo-42266](https://bugs.python.org/issue?@action=redirect&bpo=42266) [https://bugs.python.org/issue?@action=redirect&bpo=42266]: Fixed a bug with the LOAD\_ATTR

opcode cache that was not respecting monkey-patching a class-level attribute to make it a descriptor. Patch by Pablo Galindo.

- [bpo-40077](https://bugs.python.org/issue?@action=redirect&bpo=40077) [https://bugs.python.org/issue?@action=redirect&bpo=40077]: Convert `queue` to use heap types.
- [bpo-42246](https://bugs.python.org/issue?@action=redirect&bpo=42246) [https://bugs.python.org/issue?@action=redirect&bpo=42246]: Improved accuracy of line tracing events and `f_lineno` attribute of Frame objects. See PEP 626 for details.
- [bpo-40077](https://bugs.python.org/issue?@action=redirect&bpo=40077) [https://bugs.python.org/issue?@action=redirect&bpo=40077]: Convert `mmap` to use heap types.
- [bpo-42233](https://bugs.python.org/issue?@action=redirect&bpo=42233) [https://bugs.python.org/issue?@action=redirect&bpo=42233]: Allow `GenericAlias` objects to use `union type expressions`. This allows expressions like `list[int] | dict[float, str]` where previously a `TypeError` would have been thrown. This also fixes union type expressions not de-duplicating `GenericAlias` objects. (Contributed by Ken Jin in [bpo-42233](https://bugs.python.org/issue?@action=redirect&bpo=42233) [https://bugs.python.org/issue?@action=redirect&bpo=42233].)
- [bpo-26131](https://bugs.python.org/issue?@action=redirect&bpo=26131) [https://bugs.python.org/issue?@action=redirect&bpo=26131]: The import system triggers a `ImportWarning` when it falls back to using `load_module()`.

## Library

- [bpo-5054](https://bugs.python.org/issue?@action=redirect&bpo=5054) [https://bugs.python.org/issue?@action=redirect&bpo=5054]: `CGIHTTPRequestHandler.run_cgi()` `HTTP_ACCEPT` improperly parsed. Replace the special purpose `getallmatchingheaders` with generic `get_all` method and add relevant tests.

Original Patch by Martin Panter. Modified by Senthil Kumaran.

- [bpo-42562](https://bugs.python.org/issue?@action=redirect&bpo=42562) [https://bugs.python.org/issue?@action=redirect&bpo=42562]

@action=redirect&bpo=42562]: Fix issue when dis failed to parse function that has no line numbers. Patch provided by Yurii Karabas.

- [bpo-17735](https://bugs.python.org/issue?@action=redirect&bpo=17735) [https://bugs.python.org/issue?@action=redirect&bpo=17735]: `inspect.findsource()` now raises `OSError` instead of `IndexError` when `co_lineno` of a code object is greater than the file length. This can happen, for example, when a file is edited after it was imported. PR by Irit Katriel.
- [bpo-42116](https://bugs.python.org/issue?@action=redirect&bpo=42116) [https://bugs.python.org/issue?@action=redirect&bpo=42116]: Fix handling of trailing comments by `inspect.getsource()`.
- [bpo-42532](https://bugs.python.org/issue?@action=redirect&bpo=42532) [https://bugs.python.org/issue?@action=redirect&bpo=42532]: Remove unexpected call of `__bool__` when passing a `spec_arg` argument to a `Mock`.
- [bpo-38200](https://bugs.python.org/issue?@action=redirect&bpo=38200) [https://bugs.python.org/issue?@action=redirect&bpo=38200]: Added `itertools.pairwise()`
- [bpo-41818](https://bugs.python.org/issue?@action=redirect&bpo=41818) [https://bugs.python.org/issue?@action=redirect&bpo=41818]: Fix `test_master_read()` so that it succeeds on all platforms that either raise `OSError` or return `b""` upon reading from master.
- [bpo-42487](https://bugs.python.org/issue?@action=redirect&bpo=42487) [https://bugs.python.org/issue?@action=redirect&bpo=42487]: `ChainMap.__iter__` no longer calls `__getitem__` on underlying maps
- [bpo-42482](https://bugs.python.org/issue?@action=redirect&bpo=42482) [https://bugs.python.org/issue?@action=redirect&bpo=42482]: `TracebackException` no longer holds a reference to the exception's traceback object. Consequently, instances of `TracebackException` for equivalent but non-equal exceptions now compare as equal.
- [bpo-41818](https://bugs.python.org/issue?@action=redirect&bpo=41818) [https://bugs.python.org/issue?@action=redirect&bpo=41818]: Make `test_openpty()` avoid unexpected success due to number of rows and/or number of columns being `= 0`.

- [bpo-42392](https://bugs.python.org/issue?@action=redirect&bpo=42392) [https://bugs.python.org/issue?@action=redirect&bpo=42392]: Remove loop parameter from `asyncio.subprocess` and `asyncio.tasks` functions. Patch provided by Yurii Karabas.
- [bpo-42392](https://bugs.python.org/issue?@action=redirect&bpo=42392) [https://bugs.python.org/issue?@action=redirect&bpo=42392]: Remove loop parameter from `asyncio.open_connection` and `asyncio.start_server` functions. Patch provided by Yurii Karabas.
- [bpo-28468](https://bugs.python.org/issue?@action=redirect&bpo=28468) [https://bugs.python.org/issue?@action=redirect&bpo=28468]: Add `platform.freedesktop_os_release()` function to parse `freedesktop.org` `os-release` files.
- [bpo-42299](https://bugs.python.org/issue?@action=redirect&bpo=42299) [https://bugs.python.org/issue?@action=redirect&bpo=42299]: Removed the `formatter` module, which was deprecated in Python 3.4. It is somewhat obsolete, little used, and not tested. It was originally scheduled to be removed in Python 3.6, but such removals were delayed until after Python 2.7 EOL. Existing users should copy whatever classes they use into their code. Patch by Donghee Na and and Terry J. Reedy.
- [bpo-26131](https://bugs.python.org/issue?@action=redirect&bpo=26131) [https://bugs.python.org/issue?@action=redirect&bpo=26131]: Deprecate `zipimport.zipimporter.load_module()` in favour of `exec_module()`.
- [bpo-41818](https://bugs.python.org/issue?@action=redirect&bpo=41818) [https://bugs.python.org/issue?@action=redirect&bpo=41818]: Updated tests for the `pty` library. `test_basic()` has been changed to `test_openpty()`; this additionally checks if slave `termios` and slave `winsize` are being set properly by `pty.openpty()`. In order to add support for FreeBSD, NetBSD, OpenBSD, and Darwin, this also adds `test_master_read()`, which demonstrates that `pty.spawn()` should not depend on an `OSError` to exit from its copy loop.
- [bpo-42392](https://bugs.python.org/issue?@action=redirect&bpo=42392) [https://bugs.python.org/issue?@action=redirect&bpo=42392]: Remove loop parameter from

`__init__` in all `asyncio.locks` and `asyncio.Queue` classes. Patch provided by Yurii Karabas.

- [bpo-15450](https://bugs.python.org/issue?@action=redirect&bpo=15450) [https://bugs.python.org/issue?@action=redirect&bpo=15450]: Make `filecmp.dircmp` respect subclassing. Now the `filecmp.dircmp.subdirs` behaves as expected when subclassing `dircmp`.
- [bpo-42413](https://bugs.python.org/issue?@action=redirect&bpo=42413) [https://bugs.python.org/issue?@action=redirect&bpo=42413]: The exception `socket.timeout` is now an alias of `TimeoutError`.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Support signal module on VxWorks.
- [bpo-42406](https://bugs.python.org/issue?@action=redirect&bpo=42406) [https://bugs.python.org/issue?@action=redirect&bpo=42406]: We fixed an issue in `pickle.whichmodule` in which importing `multiprocessing` could change the how pickle identifies which module an object belongs to, potentially breaking the unpickling of those objects.
- [bpo-42403](https://bugs.python.org/issue?@action=redirect&bpo=42403) [https://bugs.python.org/issue?@action=redirect&bpo=42403]: Simplify the `importlib` external bootstrap code: `importlib._bootstrap_external` now uses regular imports to import builtin modules. When it is imported, the builtin `__import__()` function is already fully working and so can be used to import builtin modules like `sys`. Patch by Victor Stinner.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Convert `_sre` module types to heap types (PEP 384). Patch by Erlend E. Aasland.
- [bpo-42375](https://bugs.python.org/issue?@action=redirect&bpo=42375) [https://bugs.python.org/issue?@action=redirect&bpo=42375]: subprocess module update for DragonFlyBSD support.
- [bpo-41713](https://bugs.python.org/issue?@action=redirect&bpo=41713) [https://bugs.python.org/issue?@action=redirect&bpo=41713]: Port the `_signal` extension

module to the multi-phase initialization API ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]). Patch by Victor Stinner and Mohamed Koubaa.

- [bpo-37205](https://bugs.python.org/issue?@action=redirect&bpo=37205) [https://bugs.python.org/issue?@action=redirect&bpo=37205]: `time.time()`, `time.perf_counter()` and `time.monotonic()` functions can no longer fail with a Python fatal error, instead raise a regular Python exception on failure.
- [bpo-42328](https://bugs.python.org/issue?@action=redirect&bpo=42328) [https://bugs.python.org/issue?@action=redirect&bpo=42328]: Fixed `tkinter.ttk.Style.map()`. The function accepts now the representation of the default state as empty sequence (as returned by `Style.map()`). The structure of the result is now the same on all platform and does not depend on the value of `wantobjects`.
- [bpo-42345](https://bugs.python.org/issue?@action=redirect&bpo=42345) [https://bugs.python.org/issue?@action=redirect&bpo=42345]: Fix various issues with `typing.Literal` parameter handling (flatten, deduplicate, use type to cache key). Patch provided by Yurii Karabas.
- [bpo-37205](https://bugs.python.org/issue?@action=redirect&bpo=37205) [https://bugs.python.org/issue?@action=redirect&bpo=37205]: `time.perf_counter()` on Windows and `time.monotonic()` on macOS are now system-wide. Previously, they used an offset computed at startup to reduce the precision loss caused by the float type. Use `time.perf_counter_ns()` and `time.monotonic_ns()` added in Python 3.7 to avoid this precision loss.
- [bpo-42318](https://bugs.python.org/issue?@action=redirect&bpo=42318) [https://bugs.python.org/issue?@action=redirect&bpo=42318]: Fixed support of non-BMP characters in `tkinter` on macOS.
- [bpo-42350](https://bugs.python.org/issue?@action=redirect&bpo=42350) [https://bugs.python.org/issue?@action=redirect&bpo=42350]: Fix the `threading.Thread` class at fork: do nothing if the thread is already stopped (ex: fork called at Python exit). Previously, an error was logged in the child process.

- [bpo-42333](https://bugs.python.org/issue?@action=redirect&bpo=42333) [https://bugs.python.org/issue?@action=redirect&bpo=42333]: Port `_ssl` extension module to heap types.
- [bpo-42014](https://bugs.python.org/issue?@action=redirect&bpo=42014) [https://bugs.python.org/issue?@action=redirect&bpo=42014]: The `onerror` callback from `shutil.rmtree` now receives correct function when `os.open` fails.
- [bpo-42237](https://bugs.python.org/issue?@action=redirect&bpo=42237) [https://bugs.python.org/issue?@action=redirect&bpo=42237]: Fix `os.sendfile()` on illumos.
- [bpo-42308](https://bugs.python.org/issue?@action=redirect&bpo=42308) [https://bugs.python.org/issue?@action=redirect&bpo=42308]: Add `threading.__excepthook__` to allow retrieving the original value of `threading.excepthook()` in case it is set to a broken or a different value. Patch by Mario Corchero.
- [bpo-42131](https://bugs.python.org/issue?@action=redirect&bpo=42131) [https://bugs.python.org/issue?@action=redirect&bpo=42131]: Implement PEP 451/spec methods on `zipimport.zipimporter`: `find_spec()`, `create_module()`, and `exec_module()`.

This also allows for the documented deprecation of `find_loader()`, `find_module()`, and `load_module()`.

- [bpo-41877](https://bugs.python.org/issue?@action=redirect&bpo=41877) [https://bugs.python.org/issue?@action=redirect&bpo=41877]: Mock objects which are not unsafe will now raise an `AttributeError` if an attribute with the prefix `assert`, `aseert`, or `assrt` is accessed, in addition to this already happening for the prefixes `assert` or `assert`.
- [bpo-42264](https://bugs.python.org/issue?@action=redirect&bpo=42264) [https://bugs.python.org/issue?@action=redirect&bpo=42264]: `sqlite3.OptimizedUnicode` has been undocumented and obsolete since Python 3.3, when it was made an alias to `str`. It is now deprecated, scheduled for removal in Python 3.12.
- [bpo-42251](https://bugs.python.org/issue?@action=redirect&bpo=42251) [https://bugs.python.org/issue?@action=redirect&bpo=42251]: Added `threading.gettrace()` and

`threading.getprofile()` to retrieve the functions set by `threading.settrace()` and `threading.setprofile()` respectively. Patch by Mario Corchero.

- [bpo-42249](https://bugs.python.org/issue?@action=redirect&bpo=42249) [https://bugs.python.org/issue?@action=redirect&bpo=42249]: Fixed writing binary Plist files larger than 4 GiB.
- [bpo-42236](https://bugs.python.org/issue?@action=redirect&bpo=42236) [https://bugs.python.org/issue?@action=redirect&bpo=42236]: On Unix, the `os.device_encoding()` function now returns `'UTF-8'` rather than the device encoding if the [Python UTF-8 Mode](#) is enabled.
- [bpo-41754](https://bugs.python.org/issue?@action=redirect&bpo=41754) [https://bugs.python.org/issue?@action=redirect&bpo=41754]: webbrowser: Ignore `NotADirectoryError` when calling `xdg-settings`.
- [bpo-42183](https://bugs.python.org/issue?@action=redirect&bpo=42183) [https://bugs.python.org/issue?@action=redirect&bpo=42183]: Fix a stack overflow error for `asyncio Task` or `Future repr()`.

The overflow occurs under some circumstances when a `Task` or `Future` recursively returns itself.

- [bpo-42140](https://bugs.python.org/issue?@action=redirect&bpo=42140) [https://bugs.python.org/issue?@action=redirect&bpo=42140]: Improve `asyncio.wait` function to create the futures set just one time.
- [bpo-42133](https://bugs.python.org/issue?@action=redirect&bpo=42133) [https://bugs.python.org/issue?@action=redirect&bpo=42133]: Update various modules in the stdlib to fall back on `__spec__.loader` when `__loader__` isn't defined on a module.
- [bpo-26131](https://bugs.python.org/issue?@action=redirect&bpo=26131) [https://bugs.python.org/issue?@action=redirect&bpo=26131]: The `load_module()` methods found in `importlib` now trigger a `DeprecationWarning`.
- [bpo-39825](https://bugs.python.org/issue?@action=redirect&bpo=39825) [https://bugs.python.org/issue?@action=redirect&bpo=39825]: Windows: Change

`sysconfig.get_config_var('EXT_SUFFIX')` to the expected full `platform_tag.extension` format. Previously it was hard-coded to `.pyd`, now it is compatible with `distutils.sysconfig` and will result in something like `.cp38-win_amd64.pyd`. This brings windows into conformance with the other platforms.

- [bpo-26389](https://bugs.python.org/issue?@action=redirect&bpo=26389) [https://bugs.python.org/issue?@action=redirect&bpo=26389]: The `traceback.format_exception()`, `traceback.format_exception_only()`, and `traceback.print_exception()` functions can now take an exception object as a positional-only argument.
- [bpo-41889](https://bugs.python.org/issue?@action=redirect&bpo=41889) [https://bugs.python.org/issue?@action=redirect&bpo=41889]: Enum: fix regression involving inheriting a multiply inherited enum
- [bpo-41861](https://bugs.python.org/issue?@action=redirect&bpo=41861) [https://bugs.python.org/issue?@action=redirect&bpo=41861]: Convert `sqlite3` to use heap types (PEP 384). Patch by Erlend E. Aasland.
- [bpo-40624](https://bugs.python.org/issue?@action=redirect&bpo=40624) [https://bugs.python.org/issue?@action=redirect&bpo=40624]: Added support for the XPath `!=` operator in `xml.etree`
- [bpo-28850](https://bugs.python.org/issue?@action=redirect&bpo=28850) [https://bugs.python.org/issue?@action=redirect&bpo=28850]: Fix `pprint.PrettyPrinter.format()` overrides being ignored for contents of small containers. The `pprint._safe_repr()` function was removed.
- [bpo-41625](https://bugs.python.org/issue?@action=redirect&bpo=41625) [https://bugs.python.org/issue?@action=redirect&bpo=41625]: Expose the `splice()` as `os.splice()` in the `os` module. Patch by Pablo Galindo
- [bpo-34215](https://bugs.python.org/issue?@action=redirect&bpo=34215) [https://bugs.python.org/issue?@action=redirect&bpo=34215]: Clarify the error message for `asyncio.IncompleteReadError` when `expected` is `None`.

- [bpo-41543](https://bugs.python.org/issue?@action=redirect&bpo=41543) [https://bugs.python.org/issue?@action=redirect&bpo=41543]: Add async context manager support for `contextlib.nullcontext`.
- [bpo-21041](https://bugs.python.org/issue?@action=redirect&bpo=21041) [https://bugs.python.org/issue?@action=redirect&bpo=21041]: `pathlib.PurePath.parents` now supports negative indexing. Patch contributed by Yaroslav Pankovych.
- [bpo-41332](https://bugs.python.org/issue?@action=redirect&bpo=41332) [https://bugs.python.org/issue?@action=redirect&bpo=41332]: Added missing `connect_accepted_socket()` method to `asyncio.AbstractEventLoop`.
- [bpo-12800](https://bugs.python.org/issue?@action=redirect&bpo=12800) [https://bugs.python.org/issue?@action=redirect&bpo=12800]: Extracting a symlink from a tarball should succeed and overwrite the symlink if it already exists. The fix is to remove the existing file or symlink before extraction. Based on patch by Chris AtLee, Jeffrey Kintscher, and Senthil Kumaran.
- [bpo-40968](https://bugs.python.org/issue?@action=redirect&bpo=40968) [https://bugs.python.org/issue?@action=redirect&bpo=40968]: `urllib.request` and `http.client` now send `http/1.1` ALPN extension during TLS handshake when no custom context is supplied.
- [bpo-41001](https://bugs.python.org/issue?@action=redirect&bpo=41001) [https://bugs.python.org/issue?@action=redirect&bpo=41001]: Add func:`os.eventfd` to provide a low level interface for Linux's event notification file descriptor.
- [bpo-40816](https://bugs.python.org/issue?@action=redirect&bpo=40816) [https://bugs.python.org/issue?@action=redirect&bpo=40816]: Add `AsyncContextDecorator` to `contextlib` to support async context manager as a decorator.
- [bpo-40550](https://bugs.python.org/issue?@action=redirect&bpo=40550) [https://bugs.python.org/issue?@action=redirect&bpo=40550]: Fix time-of-check/time-of-action issue in `subprocess.Popen.send_signal`.
- [bpo-39411](https://bugs.python.org/issue?@action=redirect&bpo=39411) [https://bugs.python.org/issue?@action=redirect&bpo=39411]: Add an `is_async` identifier to

**pycblbr**'s Function objects. Patch by Batuhan Taskaya

- [bpo-35498](https://bugs.python.org/issue?@action=redirect&bpo=35498) [https://bugs.python.org/issue?@action=redirect&bpo=35498]: Add slice support to **pathlib.PurePath.parents**.

## Documentation

- [bpo-42238](https://bugs.python.org/issue?@action=redirect&bpo=42238) [https://bugs.python.org/issue?@action=redirect&bpo=42238]: Tentative to deprecate `make_suspicious` by first removing it from the CI and documentation builds, but keeping it around for manual uses.
- [bpo-42153](https://bugs.python.org/issue?@action=redirect&bpo=42153) [https://bugs.python.org/issue?@action=redirect&bpo=42153]: Fix the URL for the IMAP protocol documents.
- [bpo-41028](https://bugs.python.org/issue?@action=redirect&bpo=41028) [https://bugs.python.org/issue?@action=redirect&bpo=41028]: Language and version switchers, previously maintained in every cpython branches, are now handled by docsbuild-script.

## Tests

- [bpo-41473](https://bugs.python.org/issue?@action=redirect&bpo=41473) [https://bugs.python.org/issue?@action=redirect&bpo=41473]: Re-enable `test_gdb` on gdb 9.2 and newer: [https://bugzilla.redhat.com/show\\_bug.cgi?id=1866884](https://bugzilla.redhat.com/show_bug.cgi?id=1866884) bug is fixed in gdb 10.1.
- [bpo-42553](https://bugs.python.org/issue?@action=redirect&bpo=42553) [https://bugs.python.org/issue?@action=redirect&bpo=42553]: Fix `test_asyncio.test_call_later()` race condition: don't measure asyncio performance in the `call_later()` unit test. The test failed randomly on the CI.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Fix `test_netrc` on VxWorks: create temporary directories using `temp_cwd()`.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: skip `test_getaddrinfo_ipv6_scopeid_symbolic` and `test_getnameinfo_ipv6_scopeid_symbolic` on VxWorks
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: skip `test_test` of `test_mailcap` on

## VxWorks

- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: add shell requirement for `test_pipes`
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: skip some tests related to fifo on VxWorks
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Fix `test_doctest.py` failures for VxWorks.
- [bpo-40754](https://bugs.python.org/issue?@action=redirect&bpo=40754) [https://bugs.python.org/issue?@action=redirect&bpo=40754]: Include `_testinternalcapi` module in Windows installer for test suite
- [bpo-41561](https://bugs.python.org/issue?@action=redirect&bpo=41561) [https://bugs.python.org/issue?@action=redirect&bpo=41561]: `test_ssl: skip test_min_max_version_mismatch` when TLS 1.0 is not available
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Fix os module failures for VxWorks RTOS.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Fix fifo test cases for VxWorks RTOS.

## Build

- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: remove libnet dependency from `detect_socket()` for VxWorks
- [bpo-42398](https://bugs.python.org/issue?@action=redirect&bpo=42398) [https://bugs.python.org/issue?@action=redirect&bpo=42398]: Fix a race condition in “make regen-all” when make -jN option is used to run jobs in parallel. The `clinic.py` script now only use atomic write to write files. Moreover, generated files are now left unchanged if the content does not change, to not change the file modification time.
- [bpo-41617](https://bugs.python.org/issue?@action=redirect&bpo=41617) [https://bugs.python.org/issue?@action=redirect&bpo=41617]: Fix building `pycore_bitutils.h` internal header on old clang version without `__builtin_bswap16()` (ex: Xcode 4.6.3 on Mac OS X 10.7). Patch by Joshua Root and Victor Stinner.

- [bpo-38823](https://bugs.python.org/issue?@action=redirect&bpo=38823) [https://bugs.python.org/issue?@action=redirect&bpo=38823]: It is no longer possible to build the `_ctypes` extension module without `wchar_t` type: remove `CTYPES_UNICODE` macro. Anyway, the `wchar_t` type is required to build Python. Patch by Victor Stinner.
- [bpo-42087](https://bugs.python.org/issue?@action=redirect&bpo=42087) [https://bugs.python.org/issue?@action=redirect&bpo=42087]: Support was removed for AIX 5.3 and below. See [bpo-40680](https://bugs.python.org/issue?@action=redirect&bpo=40680) [https://bugs.python.org/issue?@action=redirect&bpo=40680].
- [bpo-40998](https://bugs.python.org/issue?@action=redirect&bpo=40998) [https://bugs.python.org/issue?@action=redirect&bpo=40998]: Addressed three compiler warnings found by undefined behavior sanitizer (ubsan).

## Windows

- [bpo-42120](https://bugs.python.org/issue?@action=redirect&bpo=42120) [https://bugs.python.org/issue?@action=redirect&bpo=42120]: Remove macro definition of `copysign` (to `_copysign`) in headers.
- [bpo-38506](https://bugs.python.org/issue?@action=redirect&bpo=38506) [https://bugs.python.org/issue?@action=redirect&bpo=38506]: The Windows launcher now properly handles Python 3.10 when listing installed Python versions.

## macOS

- [bpo-42504](https://bugs.python.org/issue?@action=redirect&bpo=42504) [https://bugs.python.org/issue?@action=redirect&bpo=42504]: Fix build on macOS Big Sur when `MACOSX_DEPLOYMENT_TARGET = 11`
- [bpo-41116](https://bugs.python.org/issue?@action=redirect&bpo=41116) [https://bugs.python.org/issue?@action=redirect&bpo=41116]: Ensure `distutils.unixccompiler.find_library_file` can find system provided libraries on macOS 11.
- [bpo-41100](https://bugs.python.org/issue?@action=redirect&bpo=41100) [https://bugs.python.org/issue?@action=redirect&bpo=41100]: Add support for macOS 11 and Apple Silicon systems.

It is now possible to build “Universal 2” binaries using “`-enable-universalsdk -with-universal-archs=universal2`”.

Binaries build on later macOS versions can be deployed back to older versions (tested up to macOS 10.9), when using the correct deployment target. This is tested using Xcode 11 and later.

- [bpo-42232](https://bugs.python.org/issue?@action=redirect&bpo=42232) [https://bugs.python.org/issue?@action=redirect&bpo=42232]: Added Darwin specific madvise options to mmap module.
- [bpo-38443](https://bugs.python.org/issue?@action=redirect&bpo=38443) [https://bugs.python.org/issue?@action=redirect&bpo=38443]: The `--enable-universalsdk` and `--with-universal-archs` options for the configure script now check that the specified architectures can be used.

## IDLE

- [bpo-42508](https://bugs.python.org/issue?@action=redirect&bpo=42508) [https://bugs.python.org/issue?@action=redirect&bpo=42508]: Keep IDLE running on macOS. Remove obsolete workaround that prevented running files with shortcuts when using new universal2 installers built on macOS 11.
- [bpo-42426](https://bugs.python.org/issue?@action=redirect&bpo=42426) [https://bugs.python.org/issue?@action=redirect&bpo=42426]: Fix reporting offset of the RE error in searchengine.
- [bpo-42415](https://bugs.python.org/issue?@action=redirect&bpo=42415) [https://bugs.python.org/issue?@action=redirect&bpo=42415]: Get docstrings for IDLE calltips more often by using inspect.getdoc.

## Tools/Demos

- [bpo-42212](https://bugs.python.org/issue?@action=redirect&bpo=42212) [https://bugs.python.org/issue?@action=redirect&bpo=42212]: The `smelly.py` script now also checks the Python dynamic library and extension modules, not only the Python static library. Make also the script more verbose: explain what it does.
- [bpo-36310](https://bugs.python.org/issue?@action=redirect&bpo=36310) [https://bugs.python.org/issue?@action=redirect&bpo=36310]: Allow `Tools/i18n/pygettext.py` to detect calls to `gettext` in f-strings.

## C API

- [bpo-42423](https://bugs.python.org/issue?@action=redirect&bpo=42423) [https://bugs.python.org/issue?@action=redirect&bpo=42423]: The `PyType_FromSpecWithBases()` and `PyType_FromModuleAndSpec()` functions now accept a single class as the *bases* argument.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `select` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_posixsubprocess` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_posixshm` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_struct` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `spwd` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `gc` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `queue` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-39573](https://bugs.python.org/issue?@action=redirect&bpo=39573) [https://bugs.python.org/issue?@action=redirect&bpo=39573]: Convert `Py_TYPE()` and `Py_SIZE()` back to macros to allow using them as an l-value. Many third party C extension modules rely on the ability of using `Py_TYPE()` and `Py_SIZE()` to set an object type and size: `Py_TYPE(obj) = type;` and `Py_SIZE(obj) = size;`.

- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port **symtable** extension module to multiphase initialization (**PEP 489** [https://peps.python.org/pep-0489/])
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port **grp** and **pwd** extension modules to multiphase initialization (**PEP 489** [https://peps.python.org/pep-0489/])
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port **\_random** extension module to multiphase initialization (**PEP 489** [https://peps.python.org/pep-0489/])
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port **\_hashlib** extension module to multiphase initialization (**PEP 489** [https://peps.python.org/pep-0489/])
- [bpo-41713](https://bugs.python.org/issue?@action=redirect&bpo=41713) [https://bugs.python.org/issue?@action=redirect&bpo=41713]: Removed the undocumented `PyOS_InitInterrupts()` function. Initializing Python already implicitly installs signal handlers: see **[PyConfig.install\\_signal\\_handlers](#)**. Patch by Victor Stinner.
- [bpo-40170](https://bugs.python.org/issue?@action=redirect&bpo=40170) [https://bugs.python.org/issue?@action=redirect&bpo=40170]: The `Py_TRASHCAN_BEGIN` macro no longer accesses `PyObject` attributes, but now can get the condition by calling the new private `_PyTrash_cond()` function which hides implementation details.
- [bpo-42260](https://bugs.python.org/issue?@action=redirect&bpo=42260) [https://bugs.python.org/issue?@action=redirect&bpo=42260]: **[Py\\_GetPath\(\)](#)**, **[Py\\_GetPrefix\(\)](#)**, **[Py\\_GetExecPrefix\(\)](#)**, **[Py\\_GetProgramFullPath\(\)](#)**, **[Py\\_GetPythonHome\(\)](#)** and **[Py\\_GetProgramName\(\)](#)** functions now return `NULL` if called before **[Py\\_Initialize\(\)](#)** (before Python is initialized). Use the new **[Python Initialization Configuration API](#)** to get the **[Python Path Configuration](#)**.. Patch by Victor Stinner.
- [bpo-42260](https://bugs.python.org/issue?@action=redirect&bpo=42260) [https://bugs.python.org/issue?@action=redirect&bpo=42260]: The **[PyConfig\\_Read\(\)](#)** function now only parses **[PyConfig.argv](#)** arguments once:

`PyConfig.parse_argv` is set to 2 after arguments are parsed. Since Python arguments are stripped from `PyConfig.argv`, parsing arguments twice would parse the application options as Python options.

- [bpo-42262](https://bugs.python.org/issue?@action=redirect&bpo=42262) [https://bugs.python.org/issue?@action=redirect&bpo=42262]: Added `Py_NewRef()` and `Py_XNewRef()` functions to increment the reference count of an object and return the object. Patch by Victor Stinner.
- [bpo-42260](https://bugs.python.org/issue?@action=redirect&bpo=42260) [https://bugs.python.org/issue?@action=redirect&bpo=42260]: When `Py_Initialize()` is called twice, the second call now updates more `sys` attributes for the configuration, rather than only `sys.argv`. Patch by Victor Stinner.
- [bpo-41832](https://bugs.python.org/issue?@action=redirect&bpo=41832) [https://bugs.python.org/issue?@action=redirect&bpo=41832]: The `PyType_FromModuleAndSpec()` function now accepts NULL `tp_doc` slot.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Added `PyModule_AddObjectRef()` function: similar to `PyModule_AddObject()` but don't steal a reference to the value on success. Patch by Victor Stinner.
- [bpo-42171](https://bugs.python.org/issue?@action=redirect&bpo=42171) [https://bugs.python.org/issue?@action=redirect&bpo=42171]: The `METH_FASTCALL` calling convention is added to the limited API. The functions `PyModule_AddType()`, `PyType_FromModuleAndSpec()`, `PyType_GetModule()` and `PyType_GetModuleState()` are added to the limited API on Windows.
- [bpo-42085](https://bugs.python.org/issue?@action=redirect&bpo=42085) [https://bugs.python.org/issue?@action=redirect&bpo=42085]: Add dedicated entry to `PyAsyncMethods` for sending values
- [bpo-41073](https://bugs.python.org/issue?@action=redirect&bpo=41073) [https://bugs.python.org/issue?@action=redirect&bpo=41073]: `PyType_GetSlot()` can now accept static types.
- [bpo-30459](https://bugs.python.org/issue?@action=redirect&bpo=30459) [https://bugs.python.org/issue?@action=redirect&bpo=30459]: `PyList_SET_ITEM()`, `PyTuple_SET_ITEM()` and `PyCell_SET()` macros can no longer be used as l-value or r-value. For example, `x = PyList_SET_ITEM(a, b, c)` and `PyList_SET_ITEM(a, b, c) = x` now fail with a

compiler error. It prevents bugs like `if (PyList_SET_ITEM (a, b, c) < 0) ... test`. Patch by Zackery Spytz and Victor Stinner.

## Python 3.10.0 alpha 2

*Release date: 2020-11-03*

### Security

- [bpo-42103](https://bugs.python.org/issue?@action=redirect&bpo=42103) [https://bugs.python.org/issue?@action=redirect&bpo=42103]: Prevented potential DoS attack via CPU and RAM exhaustion when processing malformed Apple Property List files in binary format.
- [bpo-42051](https://bugs.python.org/issue?@action=redirect&bpo=42051) [https://bugs.python.org/issue?@action=redirect&bpo=42051]: The `plistlib` module no longer accepts entity declarations in XML plist files to avoid XML vulnerabilities. This should not affect users as entity declarations are not used in regular plist files.

### Core and Builtins

- [bpo-42236](https://bugs.python.org/issue?@action=redirect&bpo=42236) [https://bugs.python.org/issue?@action=redirect&bpo=42236]: If the `nl_langinfo(CODESET)` function returns an empty string, Python now uses UTF-8 as the filesystem encoding. Patch by Victor Stinner.
- [bpo-42218](https://bugs.python.org/issue?@action=redirect&bpo=42218) [https://bugs.python.org/issue?@action=redirect&bpo=42218]: Fixed a bug in the PEG parser that was causing crashes in debug mode. Now errors are checked in left-recursive rules to avoid cases where such errors do not get handled in time and appear as long-distance crashes in other places.
- [bpo-42214](https://bugs.python.org/issue?@action=redirect&bpo=42214) [https://bugs.python.org/issue?@action=redirect&bpo=42214]: Fixed a possible crash in the PEG parser when checking for the `'!='` token in the `barry_as_flufl` rule. Patch by Pablo Galindo.
- [bpo-42206](https://bugs.python.org/issue?@action=redirect&bpo=42206) [https://bugs.python.org/issue?@action=redirect&bpo=42206]: Propagate and raise the errors caused by `PyAST_Validate()` in the parser.

- [bpo-41796](https://bugs.python.org/issue?@action=redirect&bpo=41796) [https://bugs.python.org/issue?@action=redirect&bpo=41796]: The **ast** module internal state is now per interpreter. Patch by Victor Stinner.
- [bpo-42143](https://bugs.python.org/issue?@action=redirect&bpo=42143) [https://bugs.python.org/issue?@action=redirect&bpo=42143]: Fix handling of errors during creation of `PyFunctionObject`, which resulted in operations on uninitialized memory. Patch by Yonatan Goldschmidt.
- [bpo-41659](https://bugs.python.org/issue?@action=redirect&bpo=41659) [https://bugs.python.org/issue?@action=redirect&bpo=41659]: Fix a bug in the parser, where a curly brace following a **primary** didn't fail immediately. This led to invalid expressions like `a {b}` to throw a **SyntaxError** with a wrong offset, or invalid expressions ending with a curly brace like `a {` to not fail immediately in the REPL.
- [bpo-42150](https://bugs.python.org/issue?@action=redirect&bpo=42150) [https://bugs.python.org/issue?@action=redirect&bpo=42150]: Fix possible buffer overflow in the new parser when checking for continuation lines. Patch by Pablo Galindo.
- [bpo-42123](https://bugs.python.org/issue?@action=redirect&bpo=42123) [https://bugs.python.org/issue?@action=redirect&bpo=42123]: Run the parser two times. On the first run, disable all the rules that only generate better error messages to gain performance. If there's a parse failure, run the parser a second time with those enabled.
- [bpo-42093](https://bugs.python.org/issue?@action=redirect&bpo=42093) [https://bugs.python.org/issue?@action=redirect&bpo=42093]: The `LOAD_ATTR` instruction now uses new "per opcode cache" mechanism and it is about 36% faster now. Patch by Pablo Galindo and Yuri Selivanov.
- [bpo-42030](https://bugs.python.org/issue?@action=redirect&bpo=42030) [https://bugs.python.org/issue?@action=redirect&bpo=42030]: Support for the legacy AIX-specific shared library loading support has been removed. All versions of AIX since 4.3 have supported and defaulted to using the common Unix mechanism instead.
- [bpo-41984](https://bugs.python.org/issue?@action=redirect&bpo=41984) [https://bugs.python.org/issue?@action=redirect&bpo=41984]: The garbage collector now tracks all user-defined classes. Patch by Brandt Bucher.
- [bpo-41993](https://bugs.python.org/issue?@action=redirect&bpo=41993) [https://bugs.python.org/issue?@action=redirect&bpo=41993]: Fixed potential issues with removing not completely initialized module from `sys.modules` when import fails.

- [bpo-41979](https://bugs.python.org/issue?@action=redirect&bpo=41979) [https://bugs.python.org/issue?@action=redirect&bpo=41979]: Star-unpacking is now allowed for with item's targets in the PEG parser.
- [bpo-41974](https://bugs.python.org/issue?@action=redirect&bpo=41974) [https://bugs.python.org/issue?@action=redirect&bpo=41974]: Removed special methods `__int__`, `__float__`, `__floordiv__`, `__mod__`, `__divmod__`, `__rfloordiv__`, `__rmod__` and `__rdivmod__` of the `complex` class. They always raised a `TypeError`.
- [bpo-41902](https://bugs.python.org/issue?@action=redirect&bpo=41902) [https://bugs.python.org/issue?@action=redirect&bpo=41902]: Micro optimization when compute `sq_item` and `mp_subscript` of `range`. Patch by Donghee Na.
- [bpo-41894](https://bugs.python.org/issue?@action=redirect&bpo=41894) [https://bugs.python.org/issue?@action=redirect&bpo=41894]: When loading a native module and a load failure occurs, prevent a possible `UnicodeDecodeError` when not running in a UTF-8 locale by decoding the load error message using the current locale's encoding.
- [bpo-41902](https://bugs.python.org/issue?@action=redirect&bpo=41902) [https://bugs.python.org/issue?@action=redirect&bpo=41902]: Micro optimization for `range.index` if step is 1. Patch by Donghee Na.
- [bpo-41435](https://bugs.python.org/issue?@action=redirect&bpo=41435) [https://bugs.python.org/issue?@action=redirect&bpo=41435]: Add `sys._current_exceptions()` function to retrieve a dictionary mapping each thread's identifier to the topmost exception currently active in that thread at the time the function is called.
- [bpo-38605](https://bugs.python.org/issue?@action=redirect&bpo=38605) [https://bugs.python.org/issue?@action=redirect&bpo=38605]: Enable `from __future__ import annotations` ([PEP 563](https://peps.python.org/pep-0563/) [https://peps.python.org/pep-0563/]) by default. The values found in `__annotations__` dicts are now strings, e.g. `{"x": "int"}` instead of `{"x": int}`.

## Library

- [bpo-35455](https://bugs.python.org/issue?@action=redirect&bpo=35455) [https://bugs.python.org/issue?@action=redirect&bpo=35455]: On Solaris, `thread_time()` is now implemented with `gethrvtime()` because

`clock_gettime(CLOCK_THREAD_CPUTIME_ID)` is not always available. Patch by Jakub Kulik.

- [bpo-42233](https://bugs.python.org/issue?@action=redirect&bpo=42233) [https://bugs.python.org/issue?@action=redirect&bpo=42233]: The `repr()` of `typing` types containing `Generic Alias Types` previously did not show the parameterized types in the `GenericAlias`. They have now been changed to do so.
- [bpo-29566](https://bugs.python.org/issue?@action=redirect&bpo=29566) [https://bugs.python.org/issue?@action=redirect&bpo=29566]: `binhex.binhex()` consistently writes macOS 9 line endings.
- [bpo-26789](https://bugs.python.org/issue?@action=redirect&bpo=26789) [https://bugs.python.org/issue?@action=redirect&bpo=26789]: The `logging.FileHandler` class now keeps a reference to the builtin `open()` function to be able to open or reopen the file during Python finalization. Fix errors like: `NameError: name 'open' is not defined`. Patch by Victor Stinner.
- [bpo-42157](https://bugs.python.org/issue?@action=redirect&bpo=42157) [https://bugs.python.org/issue?@action=redirect&bpo=42157]: Removed the `unicodedata.ucnhash_CAPI` attribute which was an internal PyCapsule object. The related private `_PyUnicode_Name_CAPI` structure was moved to the internal C API. Patch by Victor Stinner.
- [bpo-42157](https://bugs.python.org/issue?@action=redirect&bpo=42157) [https://bugs.python.org/issue?@action=redirect&bpo=42157]: Convert the `unicodedata` extension module to the multiphase initialization API ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]) and convert the `unicodedata.UCD` static type to a heap type. Patch by Mohamed Koubaa and Victor Stinner.
- [bpo-42146](https://bugs.python.org/issue?@action=redirect&bpo=42146) [https://bugs.python.org/issue?@action=redirect&bpo=42146]: Fix memory leak in `subprocess.Popen()` in case an uid (gid) specified in `user (group, extra_groups)` overflows `uid_t (gid_t)`.
- [bpo-42103](https://bugs.python.org/issue?@action=redirect&bpo=42103) [https://bugs.python.org/issue?@action=redirect&bpo=42103]: `InvalidFileException` and

**RecursionError** are now the only errors caused by loading malformed binary Plist file (previously **ValueError** and **TypeError** could be raised in some specific cases).

- **bpo-41490** [<https://bugs.python.org/issue?@action=redirect&bpo=41490>]: In `importlib.resources`, `.path` method is more aggressive about releasing handles to zipfile objects early, enabling use-cases like certifi to leave the context open but delete the underlying zip file.
- **bpo-41052** [<https://bugs.python.org/issue?@action=redirect&bpo=41052>]: Pickling heap types implemented in C with protocols 0 and 1 raises now an error instead of producing incorrect data.
- **bpo-42089** [<https://bugs.python.org/issue?@action=redirect&bpo=42089>]: In `importlib.metadata.PackageNotFoundError`, make reference to the package metadata being missing to improve the user experience.
- **bpo-41491** [<https://bugs.python.org/issue?@action=redirect&bpo=41491>]: `plistlib`: fix parsing XML plists with hexadecimal integer values
- **bpo-42065** [<https://bugs.python.org/issue?@action=redirect&bpo=42065>]: Fix an incorrectly formatted error from `_codecs.charmap_decode()` when called with a mapped value outside the range of valid Unicode code points. PR by Max Bernstein.
- **bpo-41966** [<https://bugs.python.org/issue?@action=redirect&bpo=41966>]: Fix pickling pure Python `datetime.time` subclasses. Patch by Dean Inwood.
- **bpo-19270** [<https://bugs.python.org/issue?@action=redirect&bpo=19270>]: `sched.scheduler.cancel()` will now cancel the correct event, if two events with same priority are scheduled for the same time. Patch by Bar Harel.
- **bpo-28660** [<https://bugs.python.org/issue?>]

@action=redirect&bpo=28660]: `textwrap.wrap()` now attempts to break long words after hyphens when `break_long_words=True` and `break_on_hyphens=True`.

- [bpo-35823](https://bugs.python.org/issue?@action=redirect&bpo=35823) [https://bugs.python.org/issue?@action=redirect&bpo=35823]: Use `vfork()` instead of `fork()` for `subprocess.Popen()` on Linux to improve performance in cases where it is deemed safe.
- [bpo-42043](https://bugs.python.org/issue?@action=redirect&bpo=42043) [https://bugs.python.org/issue?@action=redirect&bpo=42043]: Add support for `zipfile.Path` inheritance. `zipfile.Path.is_file()` now returns `False` for non-existent names. `zipfile.Path` objects now expose a `.filename` attribute and rely on that to resolve `.name` and `.parent` when the `Path` object is at the root of the `zipfile`.
- [bpo-42021](https://bugs.python.org/issue?@action=redirect&bpo=42021) [https://bugs.python.org/issue?@action=redirect&bpo=42021]: Fix possible ref leaks in `sqlite3` module init.
- [bpo-39101](https://bugs.python.org/issue?@action=redirect&bpo=39101) [https://bugs.python.org/issue?@action=redirect&bpo=39101]: Fixed tests using `IsolatedAsyncioTestCase` from hanging on `BaseExceptions`.
- [bpo-41976](https://bugs.python.org/issue?@action=redirect&bpo=41976) [https://bugs.python.org/issue?@action=redirect&bpo=41976]: Fixed a bug that was causing `ctypes.util.find_library()` to return `None` when trying to locate a library in an environment when `gcc >= 9` is available and `ldconfig` is not. Patch by Pablo Galindo
- [bpo-41943](https://bugs.python.org/issue?@action=redirect&bpo=41943) [https://bugs.python.org/issue?@action=redirect&bpo=41943]: Fix bug where `TestCase.assertLogs` doesn't correctly filter messages by level.
- [bpo-41923](https://bugs.python.org/issue?@action=redirect&bpo=41923) [https://bugs.python.org/issue?@action=redirect&bpo=41923]: Implement [PEP 613](https://peps.python.org/pep-0613/) [https://peps.python.org/pep-0613/], introducing `typing.TypeAlias` annotation.

- [bpo-41905](https://bugs.python.org/issue?@action=redirect&bpo=41905) [https://bugs.python.org/issue?@action=redirect&bpo=41905]: A new function in `abc.update_abstractmethods` to re-calculate an abstract class's abstract status. In addition, `dataclass` has been changed to call this function.
- [bpo-23706](https://bugs.python.org/issue?@action=redirect&bpo=23706) [https://bugs.python.org/issue?@action=redirect&bpo=23706]: Added *newline* parameter to `pathlib.Path.write_text()`.
- [bpo-41876](https://bugs.python.org/issue?@action=redirect&bpo=41876) [https://bugs.python.org/issue?@action=redirect&bpo=41876]: Tkinter font class repr uses font name
- [bpo-41831](https://bugs.python.org/issue?@action=redirect&bpo=41831) [https://bugs.python.org/issue?@action=redirect&bpo=41831]: `str()` for the `type` attribute of the `tkinter.Event` object always returns now the numeric code returned by Tk instead of the name of the event type.
- [bpo-39337](https://bugs.python.org/issue?@action=redirect&bpo=39337) [https://bugs.python.org/issue?@action=redirect&bpo=39337]: `encodings.normalize_encoding()` now ignores non-ASCII characters.
- [bpo-41747](https://bugs.python.org/issue?@action=redirect&bpo=41747) [https://bugs.python.org/issue?@action=redirect&bpo=41747]: Ensure all methods that generated from `dataclasses.dataclass()` objects now have the proper `__qualname__` attribute referring to the class they belong to. Patch by Batuhan Taskaya.
- [bpo-30681](https://bugs.python.org/issue?@action=redirect&bpo=30681) [https://bugs.python.org/issue?@action=redirect&bpo=30681]: Handle exceptions caused by unparsable date headers when using email “default” policy. Patch by Tim Bell, Georges Toth
- [bpo-41586](https://bugs.python.org/issue?@action=redirect&bpo=41586) [https://bugs.python.org/issue?@action=redirect&bpo=41586]: Add `F_SETPIPE_SZ` and `F_GETPIPE_SZ` to `fcntl` module. Allow setting pipesize on `subprocess.Popen`.
- [bpo-41229](https://bugs.python.org/issue?@action=redirect&bpo=41229) [https://bugs.python.org/issue?@action=redirect&bpo=41229]

@action=redirect&bpo=41229]: Add `contextlib.aclosing` for deterministic cleanup of async generators which is analogous to `contextlib.closing` for non-async generators. Patch by Joongi Kim and John Belmonte.

- [bpo-16396](https://bugs.python.org/issue?@action=redirect&bpo=16396) [https://bugs.python.org/issue?@action=redirect&bpo=16396]: Allow `ctypes.wintypes` to be imported on non-Windows systems.
- [bpo-4356](https://bugs.python.org/issue?@action=redirect&bpo=4356) [https://bugs.python.org/issue?@action=redirect&bpo=4356]: Add a key function to the `bisect` module.
- [bpo-40592](https://bugs.python.org/issue?@action=redirect&bpo=40592) [https://bugs.python.org/issue?@action=redirect&bpo=40592]: `shutil.which()` now ignores empty entries in `PATHEXT` instead of treating them as a match.
- [bpo-40492](https://bugs.python.org/issue?@action=redirect&bpo=40492) [https://bugs.python.org/issue?@action=redirect&bpo=40492]: Fix `--outfile` for `cProfile` / `profile` not writing the output file in the original directory when the program being profiled changes the working directory. PR by Anthony Sottile.
- [bpo-34204](https://bugs.python.org/issue?@action=redirect&bpo=34204) [https://bugs.python.org/issue?@action=redirect&bpo=34204]: The `shelve` module now uses `pickle.DEFAULT_PROTOCOL` by default instead of `pickle` protocol 3.
- [bpo-27321](https://bugs.python.org/issue?@action=redirect&bpo=27321) [https://bugs.python.org/issue?@action=redirect&bpo=27321]: Fixed `KeyError` exception when flattening an email to a string attempts to replace a non-existent Content-Transfer-Encoding header.
- [bpo-38976](https://bugs.python.org/issue?@action=redirect&bpo=38976) [https://bugs.python.org/issue?@action=redirect&bpo=38976]: The `http.cookiejar` module now supports the parsing of cookies in CURL-style cookiejar files through `MozillaCookieJar` on all platforms. Previously, such cookie entries would be silently ignored when loading a cookiejar with such entries.

Additionally, the HTTP Only attribute is persisted in the

object, and will be correctly written to file if the `MozillaCookieJar` object is subsequently dumped.

## Documentation

- [bpo-42061](https://bugs.python.org/issue?@action=redirect&bpo=42061) [https://bugs.python.org/issue?@action=redirect&bpo=42061]: Document `_format_` functionality for IP addresses.
- [bpo-41910](https://bugs.python.org/issue?@action=redirect&bpo=41910) [https://bugs.python.org/issue?@action=redirect&bpo=41910]: Document the default implementation of `object.__eq__`.
- [bpo-42010](https://bugs.python.org/issue?@action=redirect&bpo=42010) [https://bugs.python.org/issue?@action=redirect&bpo=42010]: Clarify that subscription expressions are also valid for certain `classes` and `types` in the standard library, and for user-defined classes and types if the classmethod `__class_getitem__()` is provided.
- [bpo-41805](https://bugs.python.org/issue?@action=redirect&bpo=41805) [https://bugs.python.org/issue?@action=redirect&bpo=41805]: Documented `generic alias type` and `types.GenericAlias`. Also added an entry in glossary for `generic types`.
- [bpo-39693](https://bugs.python.org/issue?@action=redirect&bpo=39693) [https://bugs.python.org/issue?@action=redirect&bpo=39693]: Fix `tarfile`'s `extractfile` documentation
- [bpo-39416](https://bugs.python.org/issue?@action=redirect&bpo=39416) [https://bugs.python.org/issue?@action=redirect&bpo=39416]: Document some restrictions on the default string representations of numeric classes.

## Tests

- [bpo-41739](https://bugs.python.org/issue?@action=redirect&bpo=41739) [https://bugs.python.org/issue?@action=redirect&bpo=41739]: Fix `test_logging.test_race_between_set_target_and_flush()`: the test now waits until all threads complete to avoid leaking running threads.
- [bpo-41970](https://bugs.python.org/issue?@action=redirect&bpo=41970) [https://bugs.python.org/issue?@action=redirect&bpo=41970]: Avoid a test failure in `test_lib2to3` if the module has already imported at the time the test executes. Patch by Pablo Galindo.
- [bpo-41944](https://bugs.python.org/issue?@action=redirect&bpo=41944) [https://bugs.python.org/issue?@action=redirect&bpo=41944]: Tests for CJK codecs no longer

call `eval()` on content received via HTTP.

- [bpo-41306](https://bugs.python.org/issue?@action=redirect&bpo=41306) [https://bugs.python.org/issue?@action=redirect&bpo=41306]: Fixed a failure in `test_tk.test_widgets.ScaleTest` happening when executing the test with Tk 8.6.10.

## Build

- [bpo-38980](https://bugs.python.org/issue?@action=redirect&bpo=38980) [https://bugs.python.org/issue?@action=redirect&bpo=38980]: Add `-fno-semantic-interposition` to both the compile and link line when building with `--enable-optimizations`. Patch by Victor Stinner and Pablo Galindo.

## Windows

- [bpo-38439](https://bugs.python.org/issue?@action=redirect&bpo=38439) [https://bugs.python.org/issue?@action=redirect&bpo=38439]: Updates the icons for IDLE in the Windows Store package.
- [bpo-38252](https://bugs.python.org/issue?@action=redirect&bpo=38252) [https://bugs.python.org/issue?@action=redirect&bpo=38252]: Use 8-byte step to detect ASCII sequence in 64-bit Windows build.
- [bpo-39107](https://bugs.python.org/issue?@action=redirect&bpo=39107) [https://bugs.python.org/issue?@action=redirect&bpo=39107]: Update Tcl and Tk to 8.6.10 in Windows installer.
- [bpo-41557](https://bugs.python.org/issue?@action=redirect&bpo=41557) [https://bugs.python.org/issue?@action=redirect&bpo=41557]: Update Windows installer to use SQLite 3.33.0.
- [bpo-38324](https://bugs.python.org/issue?@action=redirect&bpo=38324) [https://bugs.python.org/issue?@action=redirect&bpo=38324]: Avoid Unicode errors when accessing certain locale data on Windows.

## macOS

- [bpo-41471](https://bugs.python.org/issue?@action=redirect&bpo=41471) [https://bugs.python.org/issue?@action=redirect&bpo=41471]: Ignore invalid prefix lengths in system proxy excludes.

## IDLE

- [bpo-33987](https://bugs.python.org/issue?@action=redirect&bpo=33987) [https://bugs.python.org/issue?@action=redirect&bpo=33987]: Mostly finish using ttk widgets, mainly for editor, settings, and searches. Some patches by Mark Roseman.
- [bpo-40511](https://bugs.python.org/issue?@action=redirect&bpo=40511) [https://bugs.python.org/issue?@action=redirect&bpo=40511]: Typing opening and closing parentheses inside the parentheses of a function call will no longer cause unnecessary “flashing” off and on of an existing open call-tip, e.g. when typed in a string literal.
- [bpo-38439](https://bugs.python.org/issue?@action=redirect&bpo=38439) [https://bugs.python.org/issue?@action=redirect&bpo=38439]: Add a 256 × 256 pixel IDLE icon to the Windows .ico file. Created by Andrew Clover. Remove the low-color gif variations from the .ico file.

## C API

- [bpo-42157](https://bugs.python.org/issue?@action=redirect&bpo=42157) [https://bugs.python.org/issue?@action=redirect&bpo=42157]: The private `_PyUnicode_Name_CAPI` structure of the PyCapsule API `unicodedata.ucnhash_CAPI` has been moved to the internal C API. Patch by Victor Stinner.
- [bpo-42015](https://bugs.python.org/issue?@action=redirect&bpo=42015) [https://bugs.python.org/issue?@action=redirect&bpo=42015]: Fix potential crash in deallocating method objects when dynamically allocated `PyMethodDef`’s lifetime is managed through the `self` argument of a `PyCFunction`.
- [bpo-40423](https://bugs.python.org/issue?@action=redirect&bpo=40423) [https://bugs.python.org/issue?@action=redirect&bpo=40423]: The `subprocess` module and `os.closerange` will now use the `close_range(low, high, flags)` syscall when it is available for more efficient closing of ranges of descriptors.
- [bpo-41845](https://bugs.python.org/issue?@action=redirect&bpo=41845) [https://bugs.python.org/issue?@action=redirect&bpo=41845]: `PyObject_GenericGetDict()` is available again in the limited API when targeting 3.10 or later.
- [bpo-40422](https://bugs.python.org/issue?@action=redirect&bpo=40422) [https://bugs.python.org/issue?@action=redirect&bpo=40422]: Add `_Py_closerange` function to provide performant closing of a range of file descriptors.
- [bpo-41986](https://bugs.python.org/issue?@action=redirect&bpo=41986) [https://bugs.python.org/issue?@action=redirect&bpo=41986]:

**Py\_FileSystemDefaultEncodeErrors** and **Py\_UTF8Mode** are available again in limited API.

- [bpo-41756](https://bugs.python.org/issue?@action=redirect&bpo=41756) [https://bugs.python.org/issue?@action=redirect&bpo=41756]: Add **PyIter\_Send** function to allow sending value into generator/coroutine/iterator without raising **StopIteration** exception to signal return.
- [bpo-41784](https://bugs.python.org/issue?@action=redirect&bpo=41784) [https://bugs.python.org/issue?@action=redirect&bpo=41784]: Added **PyUnicode\_AsUTF8AndSize** to the limited C API.

## Python 3.10.0 alpha 1

*Release date: 2020-10-05*

### Security

- [bpo-41304](https://bugs.python.org/issue?@action=redirect&bpo=41304) [https://bugs.python.org/issue?@action=redirect&bpo=41304]: Fixes **python3x.\_pth** being ignored on Windows, caused by the fix for [bpo-29778](https://bugs.python.org/issue?@action=redirect&bpo=29778) [https://bugs.python.org/issue?@action=redirect&bpo=29778] (CVE-2020-15801).
- [bpo-41162](https://bugs.python.org/issue?@action=redirect&bpo=41162) [https://bugs.python.org/issue?@action=redirect&bpo=41162]: Audit hooks are now cleared later during finalization to avoid missing events.
- [bpo-29778](https://bugs.python.org/issue?@action=redirect&bpo=29778) [https://bugs.python.org/issue?@action=redirect&bpo=29778]: Ensure **python3.dll** is loaded from correct locations when Python is embedded (CVE-2020-15523).
- [bpo-41004](https://bugs.python.org/issue?@action=redirect&bpo=41004) [https://bugs.python.org/issue?@action=redirect&bpo=41004]: The **\_hash\_()** methods of **ipaddress.IPv4Interface** and **ipaddress.IPv6Interface** incorrectly generated constant hash values of 32 and 128 respectively. This resulted in always causing hash collisions. The fix uses **hash()** to generate hash values for the tuple of (address, mask length, network address).
- [bpo-39603](https://bugs.python.org/issue?@action=redirect&bpo=39603) [https://bugs.python.org/issue?@action=redirect&bpo=39603]: Prevent http header injection by rejecting control characters in **http.client.putrequest(...)**.

## Core and Builtins

- [bpo-41909](https://bugs.python.org/issue?@action=redirect&bpo=41909) [https://bugs.python.org/issue?@action=redirect&bpo=41909]: Fixed stack overflow in `issubclass()` and `isinstance()` when getting the `__bases__` attribute leads to infinite recursion.
- [bpo-41922](https://bugs.python.org/issue?@action=redirect&bpo=41922) [https://bugs.python.org/issue?@action=redirect&bpo=41922]: Speed up calls to `reversed()` by using the [PEP 590](https://peps.python.org/pep-0590/) [https://peps.python.org/pep-0590/] `vectorcall` calling convention. Patch by Donghee Na.
- [bpo-41873](https://bugs.python.org/issue?@action=redirect&bpo=41873) [https://bugs.python.org/issue?@action=redirect&bpo=41873]: Calls to `float()` are now faster due to the `vectorcall` calling convention. Patch by Dennis Sweeney.
- [bpo-41870](https://bugs.python.org/issue?@action=redirect&bpo=41870) [https://bugs.python.org/issue?@action=redirect&bpo=41870]: Speed up calls to `bool()` by using the [PEP 590](https://peps.python.org/pep-0590/) [https://peps.python.org/pep-0590/] `vectorcall` calling convention. Patch by Donghee Na.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the `_bisect` module to the multi-phase initialization API ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-39934](https://bugs.python.org/issue?@action=redirect&bpo=39934) [https://bugs.python.org/issue?@action=redirect&bpo=39934]: Correctly count control blocks in ‘except’ in compiler. Ensures that a syntax error, rather a fatal error, occurs for deeply nested, named exception handlers.
- [bpo-41780](https://bugs.python.org/issue?@action=redirect&bpo=41780) [https://bugs.python.org/issue?@action=redirect&bpo=41780]: Fix `__dir__()` of `types.GenericAlias`. Patch by Batuhan Taskaya.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the `_lsprof` extension module to multi-phase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).

- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the **cmath** extension module to multi-phase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the **\_scproxy** extension module to multi-phase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the **termios** extension module to multi-phase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Convert the **\_sha256** extension module types to heap types.
- [bpo-41690](https://bugs.python.org/issue?@action=redirect&bpo=41690) [https://bugs.python.org/issue?@action=redirect&bpo=41690]: Fix a possible stack overflow in the parser when parsing functions and classes with a huge amount of arguments. Patch by Pablo Galindo.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the **\_overlapped** extension module to multi-phase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the **\_curses\_panel** extension module to multi-phase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the **\_opcode** extension module to multi-phase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-41681](https://bugs.python.org/issue?@action=redirect&bpo=41681) [https://bugs.python.org/issue?@action=redirect&bpo=41681]: Fixes the wrong error description

in the error raised by using `2` , in format string in f-string and `str.format()` .

- [bpo-41675](https://bugs.python.org/issue?@action=redirect&bpo=41675) [https://bugs.python.org/issue?@action=redirect&bpo=41675]: The implementation of `signal.siginterrupt()` now uses `sigaction()` (if it is available in the system) instead of the deprecated `siginterrupt()` . Patch by Pablo Galindo.
- [bpo-41670](https://bugs.python.org/issue?@action=redirect&bpo=41670) [https://bugs.python.org/issue?@action=redirect&bpo=41670]: Prevent line trace being skipped on platforms not compiled with `USE_COMPUTED_GOTOS` . Fixes issue where some lines nested within a try-except block were not being traced on Windows.
- [bpo-41654](https://bugs.python.org/issue?@action=redirect&bpo=41654) [https://bugs.python.org/issue?@action=redirect&bpo=41654]: Fix a crash that occurred when destroying subclasses of `MemoryError` . Patch by Pablo Galindo.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the `zlib` extension module to multi-phase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-41631](https://bugs.python.org/issue?@action=redirect&bpo=41631) [https://bugs.python.org/issue?@action=redirect&bpo=41631]: The `_ast` module uses again a global state. Using a module state per module instance is causing subtle practical problems. For example, the Mercurial project replaces the `__import__()` function to implement lazy import, whereas Python expected that `import _ast` always return a fully initialized `_ast` module.
- [bpo-40077](https://bugs.python.org/issue?@action=redirect&bpo=40077) [https://bugs.python.org/issue?@action=redirect&bpo=40077]: Convert `_operator` to use `PyType_FromSpec()` .
- [bpo-1653741](https://bugs.python.org/issue?@action=redirect&bpo=1653741) [https://bugs.python.org/issue?@action=redirect&bpo=1653741]: Port `_sha3` to multi-phase init. Convert static types to heap types.

- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the **`_blake2`** extension module to the multi-phase initialization API (**PEP 489** [https://peps.python.org/pep-0489/]).
- [bpo-41533](https://bugs.python.org/issue?@action=redirect&bpo=41533) [https://bugs.python.org/issue?@action=redirect&bpo=41533]: Free the stack allocated in `va_build_stack` if `do_mkstack` fails and the stack is not a `small_stack`.
- [bpo-41531](https://bugs.python.org/issue?@action=redirect&bpo=41531) [https://bugs.python.org/issue?@action=redirect&bpo=41531]: Fix a bug that was dropping keys when compiling dict literals with more than 0xFFFF elements. Patch by Pablo Galindo.
- [bpo-41525](https://bugs.python.org/issue?@action=redirect&bpo=41525) [https://bugs.python.org/issue?@action=redirect&bpo=41525]: The output of `python --help` contains now only ASCII characters.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the **`_sha1`**, **`_sha512`**, and **`_md5`** extension modules to multi-phase initialization API (**PEP 489** [https://peps.python.org/pep-0489/]).
- [bpo-41431](https://bugs.python.org/issue?@action=redirect&bpo=41431) [https://bugs.python.org/issue?@action=redirect&bpo=41431]: Optimize `dict_merge()` for copying dict (e.g. `dict(d)` and `{ }.update(d)`).
- [bpo-41428](https://bugs.python.org/issue?@action=redirect&bpo=41428) [https://bugs.python.org/issue?@action=redirect&bpo=41428]: Implement PEP 604. This supports `(int | str)` etc. in place of `Union[str, int]`.
- [bpo-41340](https://bugs.python.org/issue?@action=redirect&bpo=41340) [https://bugs.python.org/issue?@action=redirect&bpo=41340]: Removed fallback implementation for `strdup`.
- [bpo-38156](https://bugs.python.org/issue?@action=redirect&bpo=38156) [https://bugs.python.org/issue?@action=redirect&bpo=38156]: Handle interrupts that come after EOF correctly in `PyOS_StdioReadline`.
- [bpo-41342](https://bugs.python.org/issue?@action=redirect&bpo=41342) [https://bugs.python.org/issue?@action=redirect&bpo=41342]

@action=redirect&bpo=41342]: **round()** with integer argument is now faster (9–60%).

- **bpo-41334** [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=41334)  
@action=redirect&bpo=41334]: Constructors **str()**, **bytes()** and **bytearray()** are now faster (around 30–40% for small objects).
- **bpo-41295** [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=41295)  
@action=redirect&bpo=41295]: Resolve a regression in CPython 3.8.4 where defining “`__setattr__`” in a multi-inheritance setup and calling up the hierarchy chain could fail if builtins/extension types were involved in the base types.
- **bpo-41323** [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=41323)  
@action=redirect&bpo=41323]: Bytecode optimizations are performed directly on the control flow graph. This will result in slightly more compact code objects in some circumstances.
- **bpo-41247** [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=41247)  
@action=redirect&bpo=41247]: Always cache the running loop holder when running `asyncio.set_running_loop`.
- **bpo-41252** [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=41252)  
@action=redirect&bpo=41252]: Fix incorrect refcounting in `_ssl.c's _servername_callback()`.
- **bpo-1635741** [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=1635741)  
@action=redirect&bpo=1635741]: Port **multiprocessing** to multi-phase initialization
- **bpo-1635741** [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=1635741)  
@action=redirect&bpo=1635741]: Port **winapi** to multiphase initialization
- **bpo-41215** [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=41215)  
@action=redirect&bpo=41215]: Use non-NULL default values in the PEG parser keyword list to overcome a bug that was preventing Python from being properly compiled when using the XLC compiler. Patch by Pablo Galindo.

- [bpo-41218](https://bugs.python.org/issue?@action=redirect&bpo=41218) [https://bugs.python.org/issue?@action=redirect&bpo=41218]: Python 3.8.3 had a regression where compiling with `ast.PyCF_ALLOW_TOP_LEVEL_AWAIT` would aggressively mark list comprehension with `CO_COROUTINE`. Now only list comprehension making use of `async/await` will be tagged as so.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port **`faulthandler`** to multiphase initialization.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port **`sha256`** to multiphase initialization
- [bpo-41175](https://bugs.python.org/issue?@action=redirect&bpo=41175) [https://bugs.python.org/issue?@action=redirect&bpo=41175]: Guard against a NULL pointer dereference within `bytearrayobject` triggered by the `bytearray() + bytearray()` operation.
- [bpo-41100](https://bugs.python.org/issue?@action=redirect&bpo=41100) [https://bugs.python.org/issue?@action=redirect&bpo=41100]: add arm64 to the allowable Mac OS arches in `mpdecimal.h`
- [bpo-41094](https://bugs.python.org/issue?@action=redirect&bpo=41094) [https://bugs.python.org/issue?@action=redirect&bpo=41094]: Fix decoding errors with audit when open files with non-ASCII names on non-UTF-8 locale.
- [bpo-39960](https://bugs.python.org/issue?@action=redirect&bpo=39960) [https://bugs.python.org/issue?@action=redirect&bpo=39960]: The “hackcheck” that prevents sneaking around a type’s `__setattr__()` by calling the superclass method was rewritten to allow C implemented heap types.
- [bpo-41084](https://bugs.python.org/issue?@action=redirect&bpo=41084) [https://bugs.python.org/issue?@action=redirect&bpo=41084]: Prefix the error message with ‘f-string: ‘, when parsing an f-string expression which throws a **`SyntaxError`**.
- [bpo-40521](https://bugs.python.org/issue?@action=redirect&bpo=40521) [https://bugs.python.org/issue?@action=redirect&bpo=40521]: Empty frozensets are no longer singletons.

- [bpo-41076](https://bugs.python.org/issue?@action=redirect&bpo=41076) [https://bugs.python.org/issue?@action=redirect&bpo=41076]: Pre-feed the parser with the location of the f-string expression, not the f-string itself, which allows us to skip the shifting of the AST node locations after the parsing is completed.
- [bpo-41056](https://bugs.python.org/issue?@action=redirect&bpo=41056) [https://bugs.python.org/issue?@action=redirect&bpo=41056]: Fixes a reference to deallocated stack space during startup when constructing sys.path involving a relative symlink when code was supplied via -c. (discovered via Coverity)
- [bpo-41061](https://bugs.python.org/issue?@action=redirect&bpo=41061) [https://bugs.python.org/issue?@action=redirect&bpo=41061]: Fix incorrect expressions and asserts in hashtable code and tests.
- [bpo-41052](https://bugs.python.org/issue?@action=redirect&bpo=41052) [https://bugs.python.org/issue?@action=redirect&bpo=41052]: Opt out serialization/deserialization for `_random.Random`
- [bpo-40939](https://bugs.python.org/issue?@action=redirect&bpo=40939) [https://bugs.python.org/issue?@action=redirect&bpo=40939]: Rename **PyPegen\*** functions to **PyParser\***, so that we can remove the old set of **PyParser\*** functions that were using the old parser, but keep everything backwards-compatible.
- [bpo-35975](https://bugs.python.org/issue?@action=redirect&bpo=35975) [https://bugs.python.org/issue?@action=redirect&bpo=35975]: Stefan Behnel reported that `cf_feature_version` is used even when `PyCF_ONLY_AST` is not set. This is against the intention and against the documented behavior, so it's been fixed.
- [bpo-40939](https://bugs.python.org/issue?@action=redirect&bpo=40939) [https://bugs.python.org/issue?@action=redirect&bpo=40939]: Remove the remaining files from the old parser and the **symbol** module.
- [bpo-40077](https://bugs.python.org/issue?@action=redirect&bpo=40077) [https://bugs.python.org/issue?@action=redirect&bpo=40077]: Convert `_bz2` to use `PyType_FromSpec()`.
- [bpo-41006](https://bugs.python.org/issue?@action=redirect&bpo=41006) [https://bugs.python.org/issue?@action=redirect&bpo=41006]

@action=redirect&bpo=41006]: The `encodings.latin_1` module is no longer imported at startup. Now it is only imported when it is the filesystem encoding or the stdio encoding.

- [bpo-40636](https://bugs.python.org/issue?@action=redirect&bpo=40636) [https://bugs.python.org/issue?@action=redirect&bpo=40636]: `zip()` now supports [PEP 618](https://peps.python.org/pep-0618/) [https://peps.python.org/pep-0618/]’s `strict` parameter, which raises a `ValueError` if the arguments are exhausted at different lengths. Patch by Brandt Bucher.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_gdbm` to multiphase initialization.
- [bpo-40985](https://bugs.python.org/issue?@action=redirect&bpo=40985) [https://bugs.python.org/issue?@action=redirect&bpo=40985]: Fix a bug that caused the `SyntaxError` text to be empty when a file ends with a line ending in a line continuation character (i.e. backslash). The error text should contain the text of the last line.
- [bpo-40958](https://bugs.python.org/issue?@action=redirect&bpo=40958) [https://bugs.python.org/issue?@action=redirect&bpo=40958]: Fix a possible buffer overflow in the PEG parser when gathering information for emitting syntax errors. Patch by Pablo Galindo.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_dbm` to multiphase initialization.
- [bpo-40957](https://bugs.python.org/issue?@action=redirect&bpo=40957) [https://bugs.python.org/issue?@action=redirect&bpo=40957]: Fix refleak in `_Py_fopen_obj()` when `PySys_Audit()` fails
- [bpo-40950](https://bugs.python.org/issue?@action=redirect&bpo=40950) [https://bugs.python.org/issue?@action=redirect&bpo=40950]: Add a state to the `nis` module ([PEP 3121](https://peps.python.org/pep-3121/) [https://peps.python.org/pep-3121/]) and apply the multiphase initialization. Patch by Donghee Na.
- [bpo-40947](https://bugs.python.org/issue?@action=redirect&bpo=40947) [https://bugs.python.org/issue?@action=redirect&bpo=40947]: The Python [Path Configuration](#)

now takes `PyConfig.platlibdir` in account.

- [bpo-40939](https://bugs.python.org/issue?@action=redirect&bpo=40939) [https://bugs.python.org/issue?@action=redirect&bpo=40939]: Remove the old parser, the **parser** module and all associated support code, command-line options and environment variables. Patch by Pablo Galindo.
- [bpo-40847](https://bugs.python.org/issue?@action=redirect&bpo=40847) [https://bugs.python.org/issue?@action=redirect&bpo=40847]: Fix a bug where a line with only a line continuation character is not considered a blank line at tokenizer level. In such cases, more than a single **NEWLINE** token was emitted. The old parser was working around the issue, but the new parser threw a **SyntaxError** for valid input due to this. For example, an empty line following a line continuation character was interpreted as a **SyntaxError**.
- [bpo-40890](https://bugs.python.org/issue?@action=redirect&bpo=40890) [https://bugs.python.org/issue?@action=redirect&bpo=40890]: Each dictionary view now has a `mapping` attribute that provides a **types.MappingProxyType** wrapping the original dictionary. Patch contributed by Dennis Sweeney.
- [bpo-40889](https://bugs.python.org/issue?@action=redirect&bpo=40889) [https://bugs.python.org/issue?@action=redirect&bpo=40889]: Improved the performance of symmetric difference operations on dictionary item views. Patch by Dennis Sweeney.
- [bpo-40904](https://bugs.python.org/issue?@action=redirect&bpo=40904) [https://bugs.python.org/issue?@action=redirect&bpo=40904]: Fix possible segfault in the new PEG parser when parsing f-string containing yield statements with no value (f"{yield}"). Patch by Pablo Galindo
- [bpo-40903](https://bugs.python.org/issue?@action=redirect&bpo=40903) [https://bugs.python.org/issue?@action=redirect&bpo=40903]: Fixed a possible segfault in the new PEG parser when producing error messages for invalid assignments of the form `p=p=`. Patch by Pablo Galindo
- [bpo-40880](https://bugs.python.org/issue?@action=redirect&bpo=40880) [https://bugs.python.org/issue?@action=redirect&bpo=40880]: Fix invalid memory read in the new parser when checking newlines in string literals. Patch

by Pablo Galindo.

- [bpo-40883](https://bugs.python.org/issue?@action=redirect&bpo=40883) [https://bugs.python.org/issue?@action=redirect&bpo=40883]: Fix memory leak in when parsing f-strings in the new parser. Patch by Pablo Galindo
- [bpo-40870](https://bugs.python.org/issue?@action=redirect&bpo=40870) [https://bugs.python.org/issue?@action=redirect&bpo=40870]: Raise **ValueError** when validating custom AST's where the constants `True`, `False` and `None` are used within a **ast.Name** node.
- [bpo-40854](https://bugs.python.org/issue?@action=redirect&bpo=40854) [https://bugs.python.org/issue?@action=redirect&bpo=40854]: Allow overriding **sys.platlibdir** via a new **PYTHONPLATLIBDIR** environment variable.
- [bpo-40826](https://bugs.python.org/issue?@action=redirect&bpo=40826) [https://bugs.python.org/issue?@action=redirect&bpo=40826]: Fix GIL usage in **PyOS\_Readline()**: lock the GIL to set an exception and pass the Python thread state when checking if there is a pending signal.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port **fcntl** to multiphase initialization.
- [bpo-19468](https://bugs.python.org/issue?@action=redirect&bpo=19468) [https://bugs.python.org/issue?@action=redirect&bpo=19468]: Delete unnecessary instance check in `importlib.reload()`. Patch by Furkan Önder.
- [bpo-40824](https://bugs.python.org/issue?@action=redirect&bpo=40824) [https://bugs.python.org/issue?@action=redirect&bpo=40824]: Unexpected errors in calling the `__iter__` method are no longer masked by `TypeError` in the `in` operator and functions **contains()**, **indexOf()** and **countOf()** of the **operator** module.
- [bpo-40792](https://bugs.python.org/issue?@action=redirect&bpo=40792) [https://bugs.python.org/issue?@action=redirect&bpo=40792]: Attributes `start`, `stop` and `step` of the **range** object now always has exact type **int**. Previously, they could have been an instance of a subclass of `int`.

- [bpo-40780](https://bugs.python.org/issue?@action=redirect&bpo=40780) [https://bugs.python.org/issue?@action=redirect&bpo=40780]: Fix a corner case where g-style string formatting of a float failed to remove trailing zeros.
- [bpo-38964](https://bugs.python.org/issue?@action=redirect&bpo=38964) [https://bugs.python.org/issue?@action=redirect&bpo=38964]: When there's a **SyntaxError** in the expression part of an fstring, the filename attribute of the **SyntaxError** gets correctly set to the name of the file the fstring resides in.
- [bpo-40750](https://bugs.python.org/issue?@action=redirect&bpo=40750) [https://bugs.python.org/issue?@action=redirect&bpo=40750]: Support the “-d” debug flag in the new PEG parser. Patch by Pablo Galindo
- [bpo-40217](https://bugs.python.org/issue?@action=redirect&bpo=40217) [https://bugs.python.org/issue?@action=redirect&bpo=40217]: Instances of types created with **PyType\_FromSpecWithBases()** will no longer automatically visit their class object when traversing references in the garbage collector. The user is expected to manually visit the object's class. Patch by Pablo Galindo.
- [bpo-39573](https://bugs.python.org/issue?@action=redirect&bpo=39573) [https://bugs.python.org/issue?@action=redirect&bpo=39573]: **Py\_TYPE()** is changed to the inline static function. Patch by Donghee Na.
- [bpo-40696](https://bugs.python.org/issue?@action=redirect&bpo=40696) [https://bugs.python.org/issue?@action=redirect&bpo=40696]: Fix a hang that can arise after **generator.throw()** due to a cycle in the exception context chain.
- [bpo-40521](https://bugs.python.org/issue?@action=redirect&bpo=40521) [https://bugs.python.org/issue?@action=redirect&bpo=40521]: Each interpreter now has its own free lists, singletons and caches:
  - Free lists: float, tuple, list, dict, frame, context, asynchronous generator, MemoryError.
  - Singletons: empty tuple, empty bytes string, empty Unicode string, single byte character, single Unicode (latin1) character.
  - Slice cache.

They are no longer shared by all interpreters.

- [bpo-40679](https://bugs.python.org/issue?@action=redirect&bpo=40679) [https://bugs.python.org/issue?@action=redirect&bpo=40679]: Certain **TypeError** messages about missing or extra arguments now include the function's **qualified name**. Patch by Dennis Sweeney.
- [bpo-29590](https://bugs.python.org/issue?@action=redirect&bpo=29590) [https://bugs.python.org/issue?@action=redirect&bpo=29590]: Make the stack trace correct after calling **generator.throw()** on a generator that has yielded from a **yield from**.
- [bpo-4022](https://bugs.python.org/issue?@action=redirect&bpo=4022) [https://bugs.python.org/issue?@action=redirect&bpo=4022]: Improve performance of generators by not raising internal **StopIteration**.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port **mmap** to multiphase initialization.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port **\_lzma** to multiphase initialization.
- [bpo-37999](https://bugs.python.org/issue?@action=redirect&bpo=37999) [https://bugs.python.org/issue?@action=redirect&bpo=37999]: Builtin and extension functions that take integer arguments no longer accept **Decimals**, **Fractions** and other objects that can be converted to integers only with a loss (e.g. that have the **\_\_int\_\_()** method but do not have the **\_\_index\_\_()** method).
- [bpo-29882](https://bugs.python.org/issue?@action=redirect&bpo=29882) [https://bugs.python.org/issue?@action=redirect&bpo=29882]: Add **int.bit\_count()**, counting the number of ones in the binary representation of an integer. Patch by Niklas Fiekas.
- [bpo-36982](https://bugs.python.org/issue?@action=redirect&bpo=36982) [https://bugs.python.org/issue?@action=redirect&bpo=36982]: Use ncurses extended color functions when available to support terminals with 256 colors, and add the new function **curses.has\_extended\_color\_support()** to indicate

whether extended color support is provided by the underlying ncurses library.

- [bpo-19569](https://bugs.python.org/issue?@action=redirect&bpo=19569) [https://bugs.python.org/issue?@action=redirect&bpo=19569]: Add the private macros `_Py_COMP_DIAG_PUSH`, `_Py_COMP_DIAG_IGNORE_DEPR_DECLS`, and `_Py_COMP_DIAG_POP`.
- [bpo-26680](https://bugs.python.org/issue?@action=redirect&bpo=26680) [https://bugs.python.org/issue?@action=redirect&bpo=26680]: The `int` type now supports the `x.is_integer()` method for compatibility with `float`.

## Library

- [bpo-41900](https://bugs.python.org/issue?@action=redirect&bpo=41900) [https://bugs.python.org/issue?@action=redirect&bpo=41900]: C14N 2.0 serialisation in `xml.etree.ElementTree` failed for unprefixed attributes when a default namespace was defined.
- [bpo-41887](https://bugs.python.org/issue?@action=redirect&bpo=41887) [https://bugs.python.org/issue?@action=redirect&bpo=41887]: Strip leading spaces and tabs on `ast.literal_eval()`. Also document stripping of spaces and tabs for `eval()`.
- [bpo-41773](https://bugs.python.org/issue?@action=redirect&bpo=41773) [https://bugs.python.org/issue?@action=redirect&bpo=41773]: Note in documentation that `random.choices()` doesn't support non-finite weights, raise `ValueError` when given non-finite weights.
- [bpo-41840](https://bugs.python.org/issue?@action=redirect&bpo=41840) [https://bugs.python.org/issue?@action=redirect&bpo=41840]: Fix a bug in the `symtable` module that was causing module-scope global variables to not be reported as both local and global. Patch by Pablo Galindo.
- [bpo-41842](https://bugs.python.org/issue?@action=redirect&bpo=41842) [https://bugs.python.org/issue?@action=redirect&bpo=41842]: Add `codecs.unregister()` function to unregister a codec search function.
- [bpo-40564](https://bugs.python.org/issue?@action=redirect&bpo=40564) [https://bugs.python.org/issue?@action=redirect&bpo=40564]: In `zipfile.Path`, mutate the

passed `ZipFile` object type instead of making a copy. Prevents issues when both the local copy and the caller's copy attempt to close the same file handle.

- [bpo-40670](https://bugs.python.org/issue?@action=redirect&bpo=40670) [https://bugs.python.org/issue?@action=redirect&bpo=40670]: More reliable validation of statements in `timeit.Timer`. It now accepts “empty” statements (only whitespaces and comments) and rejects misindented statements.
- [bpo-41833](https://bugs.python.org/issue?@action=redirect&bpo=41833) [https://bugs.python.org/issue?@action=redirect&bpo=41833]: The `threading.Thread` constructor now uses the target name if the *target* argument is specified but the *name* argument is omitted.
- [bpo-41817](https://bugs.python.org/issue?@action=redirect&bpo=41817) [https://bugs.python.org/issue?@action=redirect&bpo=41817]: fix `tkinter.EventType` Enum so all members are strings, and none are tuples
- [bpo-41810](https://bugs.python.org/issue?@action=redirect&bpo=41810) [https://bugs.python.org/issue?@action=redirect&bpo=41810]: `types.EllipsisType`, `types.NotImplementedType` and `types.NoneType` have been reintroduced, providing a new set of types readily interpretable by static type checkers.
- [bpo-41815](https://bugs.python.org/issue?@action=redirect&bpo=41815) [https://bugs.python.org/issue?@action=redirect&bpo=41815]: Fix SQLite3 segfault when backing up closed database. Patch contributed by Peter David McCormick.
- [bpo-41816](https://bugs.python.org/issue?@action=redirect&bpo=41816) [https://bugs.python.org/issue?@action=redirect&bpo=41816]: `StrEnum` added: it ensures that all members are already strings or string candidates
- [bpo-41517](https://bugs.python.org/issue?@action=redirect&bpo=41517) [https://bugs.python.org/issue?@action=redirect&bpo=41517]: fix bug allowing Enums to be extended via multiple inheritance
- [bpo-39587](https://bugs.python.org/issue?@action=redirect&bpo=39587) [https://bugs.python.org/issue?@action=redirect&bpo=39587]: use the correct mix-in data type when constructing Enums

- [bpo-41792](https://bugs.python.org/issue?@action=redirect&bpo=41792) [https://bugs.python.org/issue?@action=redirect&bpo=41792]: Add `is_typeddict` function to `typing.py` to check if a type is a `TypedDict` class

Previously there was no way to check that without using private API. See the **relevant issue in python/typing**

- [bpo-41789](https://bugs.python.org/issue?@action=redirect&bpo=41789) [https://bugs.python.org/issue?@action=redirect&bpo=41789]: Honor `object` overrides in `Enum` class creation (specifically, `__str__`, `__repr__`, `__format__`, and `__reduce_ex__`).
- [bpo-32218](https://bugs.python.org/issue?@action=redirect&bpo=32218) [https://bugs.python.org/issue?@action=redirect&bpo=32218]: `enum.Flag` and `enum.IntFlag` members are now iterable
- [bpo-39651](https://bugs.python.org/issue?@action=redirect&bpo=39651) [https://bugs.python.org/issue?@action=redirect&bpo=39651]: Fix a race condition in the `call_soon_threadsafe()` method of `asyncio.ProactorEventLoop`: do nothing if the self-pipe socket has been closed.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the `marshal` extension module to the multi-phase initialization API ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port the `_string` extension module to the multi-phase initialization API ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-41732](https://bugs.python.org/issue?@action=redirect&bpo=41732) [https://bugs.python.org/issue?@action=redirect&bpo=41732]: Added an `iterator` to `memoryview`.
- [bpo-41720](https://bugs.python.org/issue?@action=redirect&bpo=41720) [https://bugs.python.org/issue?@action=redirect&bpo=41720]: Fixed `turtle.Vec2D.__rmul__()` for arguments which are not int or float.

- [bpo-41696](https://bugs.python.org/issue?@action=redirect&bpo=41696) [https://bugs.python.org/issue?@action=redirect&bpo=41696]: Fix handling of debug mode in `asyncio.run()`. This allows setting `PYTHONASYNCIODEBUG` or `-X dev` to enable asyncio debug mode when using `asyncio.run()`.
- [bpo-41687](https://bugs.python.org/issue?@action=redirect&bpo=41687) [https://bugs.python.org/issue?@action=redirect&bpo=41687]: Fix implementation of `sendfile` to be compatible with Solaris.
- [bpo-41662](https://bugs.python.org/issue?@action=redirect&bpo=41662) [https://bugs.python.org/issue?@action=redirect&bpo=41662]: No longer override exceptions raised in `__len__()` of a sequence of parameters in `sqlite3` with `ProgrammingError`.
- [bpo-39010](https://bugs.python.org/issue?@action=redirect&bpo=39010) [https://bugs.python.org/issue?@action=redirect&bpo=39010]: Restarting a `ProactorEventLoop` on Windows no longer logs spurious `ConnectionResetErrors`.
- [bpo-41638](https://bugs.python.org/issue?@action=redirect&bpo=41638) [https://bugs.python.org/issue?@action=redirect&bpo=41638]: `ProgrammingError` message for absent parameter in `sqlite3` contains now the name of the parameter instead of its index when parameters are supplied as a dict.
- [bpo-41662](https://bugs.python.org/issue?@action=redirect&bpo=41662) [https://bugs.python.org/issue?@action=redirect&bpo=41662]: Fixed crash when mutate list of parameters during iteration in `sqlite3`.
- [bpo-41513](https://bugs.python.org/issue?@action=redirect&bpo=41513) [https://bugs.python.org/issue?@action=redirect&bpo=41513]: Improved the accuracy of `math.hypot()`. Internally, each step is computed with extra precision so that the result is now almost always correctly rounded.
- [bpo-41609](https://bugs.python.org/issue?@action=redirect&bpo=41609) [https://bugs.python.org/issue?@action=redirect&bpo=41609]: The `pdb` `whatis` command correctly reports instance methods as 'Method' rather than 'Function'.

- [bpo-39994](https://bugs.python.org/issue?@action=redirect&bpo=39994) [https://bugs.python.org/issue?@action=redirect&bpo=39994]: Fixed pprint's handling of dict subclasses that override `__repr__`.
- [bpo-32751](https://bugs.python.org/issue?@action=redirect&bpo=32751) [https://bugs.python.org/issue?@action=redirect&bpo=32751]: When cancelling the task due to a timeout, `asyncio.wait_for()` will now wait until the cancellation is complete also in the case when *timeout* is `<= 0`, like it does with positive timeouts.
- [bpo-37658](https://bugs.python.org/issue?@action=redirect&bpo=37658) [https://bugs.python.org/issue?@action=redirect&bpo=37658]: `asyncio.wait_for()` now properly handles races between cancellation of itself and the completion of the wrapped awaitable.
- [bpo-40782](https://bugs.python.org/issue?@action=redirect&bpo=40782) [https://bugs.python.org/issue?@action=redirect&bpo=40782]: Change the method `asyncio.AbstractEventLoop.run_in_executor` to not be a coroutine.
- [bpo-41520](https://bugs.python.org/issue?@action=redirect&bpo=41520) [https://bugs.python.org/issue?@action=redirect&bpo=41520]: Fix `codeop` regression that prevented turning compile warnings into errors.
- [bpo-41528](https://bugs.python.org/issue?@action=redirect&bpo=41528) [https://bugs.python.org/issue?@action=redirect&bpo=41528]: `turtle` uses `math` module functions to convert degrees to radians and vice versa and to calculate vector norm
- [bpo-41513](https://bugs.python.org/issue?@action=redirect&bpo=41513) [https://bugs.python.org/issue?@action=redirect&bpo=41513]: Minor algorithmic improvement to `math.hypot()` and `math.dist()` giving small gains in speed and accuracy.
- [bpo-41503](https://bugs.python.org/issue?@action=redirect&bpo=41503) [https://bugs.python.org/issue?@action=redirect&bpo=41503]: Fixed a race between `setTarget` and `flush` in `logging.handlers.MemoryHandler`.
- [bpo-41497](https://bugs.python.org/issue?@action=redirect&bpo=41497) [https://bugs.python.org/issue?@action=redirect&bpo=41497]: Fix potential `UnicodeDecodeError` in `dis` module.

- [bpo-41467](https://bugs.python.org/issue?@action=redirect&bpo=41467) [https://bugs.python.org/issue?@action=redirect&bpo=41467]: On Windows, fix `asyncio.recv_into()` return value when the socket/pipe is closed (**BrokenPipeError**): return `0` rather than an empty byte string (`b''`).
- [bpo-41425](https://bugs.python.org/issue?@action=redirect&bpo=41425) [https://bugs.python.org/issue?@action=redirect&bpo=41425]: Make tkinter doc example runnable.
- [bpo-41421](https://bugs.python.org/issue?@action=redirect&bpo=41421) [https://bugs.python.org/issue?@action=redirect&bpo=41421]: Make an algebraic simplification to `random.paretovariate()`. It now is slightly less subject to round-off error and is slightly faster. Inputs that used to cause `ZeroDivisionError` now cause an `OverflowError` instead.
- [bpo-41440](https://bugs.python.org/issue?@action=redirect&bpo=41440) [https://bugs.python.org/issue?@action=redirect&bpo=41440]: Add `os.cpu_count()` support for VxWorks RTOS.
- [bpo-41316](https://bugs.python.org/issue?@action=redirect&bpo=41316) [https://bugs.python.org/issue?@action=redirect&bpo=41316]: Fix the **tarfile** module to write only basename of TAR file to GZIP compression header.
- [bpo-41384](https://bugs.python.org/issue?@action=redirect&bpo=41384) [https://bugs.python.org/issue?@action=redirect&bpo=41384]: Raise `TclError` instead of `TypeError` when an unknown option is passed to `tkinter.OptionMenu`.
- [bpo-41317](https://bugs.python.org/issue?@action=redirect&bpo=41317) [https://bugs.python.org/issue?@action=redirect&bpo=41317]: Use `add_done_callback()` in `asyncio.loop.sock_accept()` to unsubscribe reader early on cancellation.
- [bpo-41364](https://bugs.python.org/issue?@action=redirect&bpo=41364) [https://bugs.python.org/issue?@action=redirect&bpo=41364]: Reduce import overhead of **uuid**.
- [bpo-35328](https://bugs.python.org/issue?@action=redirect&bpo=35328) [https://bugs.python.org/issue?@action=redirect&bpo=35328]: Set the environment variable `VIRTUAL_ENV_PROMPT` at **venv** activation.

- [bpo-41341](https://bugs.python.org/issue?@action=redirect&bpo=41341) [https://bugs.python.org/issue?@action=redirect&bpo=41341]: Recursive evaluation of `typing.ForwardRef` in `get_type_hints`.
- [bpo-41344](https://bugs.python.org/issue?@action=redirect&bpo=41344) [https://bugs.python.org/issue?@action=redirect&bpo=41344]: Prevent creating `shared_memory.SharedMemory` objects with `size=0`.
- [bpo-41333](https://bugs.python.org/issue?@action=redirect&bpo=41333) [https://bugs.python.org/issue?@action=redirect&bpo=41333]: `collections.OrderedDict.pop()` is now 2 times faster.
- [bpo-41288](https://bugs.python.org/issue?@action=redirect&bpo=41288) [https://bugs.python.org/issue?@action=redirect&bpo=41288]: Unpickling invalid NEWOBJ\_EX opcode with the C implementation raises now `UnpicklingError` instead of crashing.
- [bpo-39017](https://bugs.python.org/issue?@action=redirect&bpo=39017) [https://bugs.python.org/issue?@action=redirect&bpo=39017]: Avoid infinite loop when reading specially crafted TAR files using the `tarfile` module (CVE-2019-20907).
- [bpo-41273](https://bugs.python.org/issue?@action=redirect&bpo=41273) [https://bugs.python.org/issue?@action=redirect&bpo=41273]: Speed up any transport using `_ProactorReadPipeTransport` by calling `recv_into` instead of `recv`, thus not creating a new buffer for each `recv` call in the transport's read loop.
- [bpo-41235](https://bugs.python.org/issue?@action=redirect&bpo=41235) [https://bugs.python.org/issue?@action=redirect&bpo=41235]: Fix the error handling in `ssl.SSLContext.load_dh_params()`.
- [bpo-41207](https://bugs.python.org/issue?@action=redirect&bpo=41207) [https://bugs.python.org/issue?@action=redirect&bpo=41207]: In `distutils.spawn`, restore expectation that `DistutilsExecError` is raised when the command is not found.
- [bpo-29727](https://bugs.python.org/issue?@action=redirect&bpo=29727) [https://bugs.python.org/issue?@action=redirect&bpo=29727]: Register `array.array` as a `MutableSequence`. Patch by Pablo Galindo.

- [bpo-39168](https://bugs.python.org/issue?@action=redirect&bpo=39168) [https://bugs.python.org/issue?@action=redirect&bpo=39168]: Remove the `__new__` method of `typing.Generic`.
- [bpo-41194](https://bugs.python.org/issue?@action=redirect&bpo=41194) [https://bugs.python.org/issue?@action=redirect&bpo=41194]: Fix a crash in the `_ast` module: it can no longer be loaded more than once. It now uses a global state rather than a module state.
- [bpo-41195](https://bugs.python.org/issue?@action=redirect&bpo=41195) [https://bugs.python.org/issue?@action=redirect&bpo=41195]: Add `read-only` `ssl.SSLContext.security_level` attribute to retrieve the context's security level.
- [bpo-41193](https://bugs.python.org/issue?@action=redirect&bpo=41193) [https://bugs.python.org/issue?@action=redirect&bpo=41193]: The `write_history()` `atexit` function of the readline completer now ignores any `OSError` to ignore error if the filesystem is read-only, instead of only ignoring `FileNotFoundError` and `PermissionError`.
- [bpo-41182](https://bugs.python.org/issue?@action=redirect&bpo=41182) [https://bugs.python.org/issue?@action=redirect&bpo=41182]: `selector`: use `DefaultSelector` based upon implementation
- [bpo-41161](https://bugs.python.org/issue?@action=redirect&bpo=41161) [https://bugs.python.org/issue?@action=redirect&bpo=41161]: The decimal module now requires `libmpdec-2.5.0`. Users of `-with-system-libmpdec` should update their system library.
- [bpo-40874](https://bugs.python.org/issue?@action=redirect&bpo=40874) [https://bugs.python.org/issue?@action=redirect&bpo=40874]: The decimal module now requires `libmpdec-2.5.0`.
- [bpo-41138](https://bugs.python.org/issue?@action=redirect&bpo=41138) [https://bugs.python.org/issue?@action=redirect&bpo=41138]: Fixed the `trace` module CLI for Python source files with non-UTF-8 encoding.
- [bpo-31082](https://bugs.python.org/issue?@action=redirect&bpo=31082) [https://bugs.python.org/issue?@action=redirect&bpo=31082]: Use the term “iterable” in the docstring for `functools.reduce()`.

- [bpo-40521](https://bugs.python.org/issue?@action=redirect&bpo=40521) [https://bugs.python.org/issue?@action=redirect&bpo=40521]: Remove freelist from `collections.deque()`.
- [bpo-31938](https://bugs.python.org/issue?@action=redirect&bpo=31938) [https://bugs.python.org/issue?@action=redirect&bpo=31938]: Fix default-value signatures of several functions in the `select` module - by Anthony Sottile.
- [bpo-41068](https://bugs.python.org/issue?@action=redirect&bpo=41068) [https://bugs.python.org/issue?@action=redirect&bpo=41068]: Fixed reading files with non-ASCII names from ZIP archive directly after writing them.
- [bpo-41058](https://bugs.python.org/issue?@action=redirect&bpo=41058) [https://bugs.python.org/issue?@action=redirect&bpo=41058]: `pdb.find_function()` now correctly determines the source file encoding.
- [bpo-41056](https://bugs.python.org/issue?@action=redirect&bpo=41056) [https://bugs.python.org/issue?@action=redirect&bpo=41056]: Invalid file descriptor values are now prevented from being passed to `os.fpathconf`. (discovered by Coverity)
- [bpo-41056](https://bugs.python.org/issue?@action=redirect&bpo=41056) [https://bugs.python.org/issue?@action=redirect&bpo=41056]: Fix a NULL pointer dereference within the `ssl` module during a `MemoryError` in the `keylog` callback. (discovered by Coverity)
- [bpo-41056](https://bugs.python.org/issue?@action=redirect&bpo=41056) [https://bugs.python.org/issue?@action=redirect&bpo=41056]: Fixed an instance where a `MemoryError` within the `zoneinfo` module might not be reported or not reported at its source. (found by Coverity)
- [bpo-41048](https://bugs.python.org/issue?@action=redirect&bpo=41048) [https://bugs.python.org/issue?@action=redirect&bpo=41048]: `mimetypes.read_mime_types()` function reads the rule file using UTF-8 encoding, not the locale encoding. Patch by Srinivas Reddy Thatiparthi.
- [bpo-41043](https://bugs.python.org/issue?@action=redirect&bpo=41043) [https://bugs.python.org/issue?@action=redirect&bpo=41043]: Fixed the use of `glob()` in the `stdlib`: literal part of the path is now always correctly escaped.

- [bpo-41025](https://bugs.python.org/issue?@action=redirect&bpo=41025) [https://bugs.python.org/issue?@action=redirect&bpo=41025]: Fixed an issue preventing the C implementation of `zoneinfo.ZoneInfo` from being subclassed.
- [bpo-35018](https://bugs.python.org/issue?@action=redirect&bpo=35018) [https://bugs.python.org/issue?@action=redirect&bpo=35018]: Add the `xml.sax.handler.LexicalHandler` class that is present in other SAX XML implementations.
- [bpo-41002](https://bugs.python.org/issue?@action=redirect&bpo=41002) [https://bugs.python.org/issue?@action=redirect&bpo=41002]: Improve performance of `HTTPResponse.read` with a given amount. Patch by Bruce Merry.
- [bpo-40448](https://bugs.python.org/issue?@action=redirect&bpo=40448) [https://bugs.python.org/issue?@action=redirect&bpo=40448]: `ensurepip` now disables the use of `pip` cache when installing the bundled versions of `pip` and `setuptools`. Patch by Krzysztof Konopko.
- [bpo-40967](https://bugs.python.org/issue?@action=redirect&bpo=40967) [https://bugs.python.org/issue?@action=redirect&bpo=40967]: Removed `asyncio.Task.current_task()` and `asyncio.Task.all_tasks()`. Patch contributed by Rémi Lapeyre.
- [bpo-40924](https://bugs.python.org/issue?@action=redirect&bpo=40924) [https://bugs.python.org/issue?@action=redirect&bpo=40924]: Ensure `importlib.resources.path` returns an extant path for the `SourceFileLoader`'s resource reader. Avoids the regression identified in master while a long-term solution is devised.
- [bpo-40955](https://bugs.python.org/issue?@action=redirect&bpo=40955) [https://bugs.python.org/issue?@action=redirect&bpo=40955]: Fix a minor memory leak in `subprocess` module when `extra_groups` was specified.
- [bpo-40855](https://bugs.python.org/issue?@action=redirect&bpo=40855) [https://bugs.python.org/issue?@action=redirect&bpo=40855]: The standard deviation and variance functions in the statistics module were ignoring their `mu` and `xbar` arguments.

- [bpo-40939](https://bugs.python.org/issue?@action=redirect&bpo=40939) [https://bugs.python.org/issue?@action=redirect&bpo=40939]: Use the new PEG parser when generating the stdlib **keyword** module.
- [bpo-23427](https://bugs.python.org/issue?@action=redirect&bpo=23427) [https://bugs.python.org/issue?@action=redirect&bpo=23427]: Add **sys.orig\_argv** attribute: the list of the original command line arguments passed to the Python executable.
- [bpo-33689](https://bugs.python.org/issue?@action=redirect&bpo=33689) [https://bugs.python.org/issue?@action=redirect&bpo=33689]: Ignore empty or whitespace-only lines in .pth files. This matches the documented behavior. Before, empty lines caused the site-packages dir to appear multiple times in sys.path. By Ido Michael, contributors Malcolm Smith and Tal Einat.
- [bpo-40884](https://bugs.python.org/issue?@action=redirect&bpo=40884) [https://bugs.python.org/issue?@action=redirect&bpo=40884]: Added a **defaults** parameter to **logging.Formatter**, to allow specifying default values for custom fields. Patch by Asaf Alon and Bar Harel.
- [bpo-40876](https://bugs.python.org/issue?@action=redirect&bpo=40876) [https://bugs.python.org/issue?@action=redirect&bpo=40876]: Clarify error message in the **csv** module.
- [bpo-39791](https://bugs.python.org/issue?@action=redirect&bpo=39791) [https://bugs.python.org/issue?@action=redirect&bpo=39791]: Refresh importlib.metadata from importlib\_metadata 1.6.1.
- [bpo-40807](https://bugs.python.org/issue?@action=redirect&bpo=40807) [https://bugs.python.org/issue?@action=redirect&bpo=40807]: Stop codeop.\_maybe\_compile, used by code.InteractiveInterpreter (and IDLE). from emitting each warning three times.
- [bpo-32604](https://bugs.python.org/issue?@action=redirect&bpo=32604) [https://bugs.python.org/issue?@action=redirect&bpo=32604]: Fix reference leak in the **select** module when the module is imported in a subinterpreter.
- [bpo-39791](https://bugs.python.org/issue?@action=redirect&bpo=39791) [https://bugs.python.org/issue?@action=redirect&bpo=39791]: Built-in loaders (SourceFileLoader and ZipImporter) now supply TraversableResources

implementations for `ResourceReader`, and the fallback function has been removed.

- [bpo-39314](https://bugs.python.org/issue?@action=redirect&bpo=39314) [https://bugs.python.org/issue?@action=redirect&bpo=39314]: `rlcompleter.Completer` and the standard Python shell now close the parenthesis for functions that take no arguments. Patch contributed by Rémi Lapeyre.
- [bpo-17005](https://bugs.python.org/issue?@action=redirect&bpo=17005) [https://bugs.python.org/issue?@action=redirect&bpo=17005]: The topological sort functionality that was introduced initially in the `functools` module has been moved to a new `graphlib` module to better accommodate the new tools and keep the original scope of the `functools` module. Patch by Pablo Galindo
- [bpo-40834](https://bugs.python.org/issue?@action=redirect&bpo=40834) [https://bugs.python.org/issue?@action=redirect&bpo=40834]: Fix truncate when sending str object with `_xxsubinterpreters.channel_send`.
- [bpo-40755](https://bugs.python.org/issue?@action=redirect&bpo=40755) [https://bugs.python.org/issue?@action=redirect&bpo=40755]: Add rich comparisons to `collections.Counter()`.
- [bpo-26407](https://bugs.python.org/issue?@action=redirect&bpo=26407) [https://bugs.python.org/issue?@action=redirect&bpo=26407]: Unexpected errors in calling the `__iter__` method are no longer masked by `TypeError` in `csv.reader()`, `csv.writer.writerow()` and `csv.writer.writerows()`.
- [bpo-39384](https://bugs.python.org/issue?@action=redirect&bpo=39384) [https://bugs.python.org/issue?@action=redirect&bpo=39384]: Fixed `email.contentmanager` to allow `set_content()` to set a null string.
- [bpo-40744](https://bugs.python.org/issue?@action=redirect&bpo=40744) [https://bugs.python.org/issue?@action=redirect&bpo=40744]: The `sqlite3` module uses SQLite API functions that require SQLite v3.7.3 or higher. This patch removes support for older SQLite versions, and explicitly requires SQLite 3.7.3 both at build, compile and runtime. Patch by Sergey Fedoseev and Erlend E. Aasland.

- [bpo-40777](https://bugs.python.org/issue?@action=redirect&bpo=40777) [https://bugs.python.org/issue?@action=redirect&bpo=40777]: Initialize `PyDateTime_IsoCalendarDateType.tp_base` at run-time to avoid errors on some compilers.
- [bpo-38488](https://bugs.python.org/issue?@action=redirect&bpo=38488) [https://bugs.python.org/issue?@action=redirect&bpo=38488]: Update `ensurepip` to install `pip 20.1.1` and `setuptools 47.1.0`.
- [bpo-40792](https://bugs.python.org/issue?@action=redirect&bpo=40792) [https://bugs.python.org/issue?@action=redirect&bpo=40792]: The result of `operator.index()` now always has exact type `int`. Previously, the result could have been an instance of a subclass of `int`.
- [bpo-40767](https://bugs.python.org/issue?@action=redirect&bpo=40767) [https://bugs.python.org/issue?@action=redirect&bpo=40767]: `webbrowser` now properly finds the default browser in pure Wayland systems by checking the `WAYLAND_DISPLAY` environment variable. Patch contributed by J  r  my Attali.
- [bpo-40791](https://bugs.python.org/issue?@action=redirect&bpo=40791) [https://bugs.python.org/issue?@action=redirect&bpo=40791]: `hashlib.compare_digest()` uses OpenSSL's `CRYPTO_memcmp()` function when OpenSSL is available.
- [bpo-40795](https://bugs.python.org/issue?@action=redirect&bpo=40795) [https://bugs.python.org/issue?@action=redirect&bpo=40795]: `ctypes` module: If `ctypes` fails to convert the result of a callback or if a `ctypes` callback function raises an exception, `sys.unraisablehook` is now called with an exception set. Previously, the error was logged into `stderr` by `PyErr_Print()`.
- [bpo-16995](https://bugs.python.org/issue?@action=redirect&bpo=16995) [https://bugs.python.org/issue?@action=redirect&bpo=16995]: Add `base64.b32hexencode()` and `base64.b32hexdecode()` to support the Base32 Encoding with Extended Hex Alphabet.
- [bpo-30008](https://bugs.python.org/issue?@action=redirect&bpo=30008) [https://bugs.python.org/issue?@action=redirect&bpo=30008]: Fix `ssl` code to be compatible with OpenSSL 1.1.x builds that use `no-deprecated` and `--`

api=1.1.0.

- [bpo-30064](https://bugs.python.org/issue?@action=redirect&bpo=30064) [https://bugs.python.org/issue?@action=redirect&bpo=30064]: Fix `asyncio loop.sock_*` race condition issue
- [bpo-40759](https://bugs.python.org/issue?@action=redirect&bpo=40759) [https://bugs.python.org/issue?@action=redirect&bpo=40759]: Deprecate the `symbol` module.
- [bpo-40756](https://bugs.python.org/issue?@action=redirect&bpo=40756) [https://bugs.python.org/issue?@action=redirect&bpo=40756]: The second argument (extra) of `LoggerAdapter.__init__` now defaults to `None`.
- [bpo-37129](https://bugs.python.org/issue?@action=redirect&bpo=37129) [https://bugs.python.org/issue?@action=redirect&bpo=37129]: Add a new `os.RWF_APPEND` flag for `os.pwritev()`.
- [bpo-40737](https://bugs.python.org/issue?@action=redirect&bpo=40737) [https://bugs.python.org/issue?@action=redirect&bpo=40737]: Fix possible reference leak for `sqlite3` initialization.
- [bpo-40726](https://bugs.python.org/issue?@action=redirect&bpo=40726) [https://bugs.python.org/issue?@action=redirect&bpo=40726]: Handle cases where the `end_lineno` is `None` on `ast.increment_lineno()`.
- [bpo-40698](https://bugs.python.org/issue?@action=redirect&bpo=40698) [https://bugs.python.org/issue?@action=redirect&bpo=40698]: `distutils` upload creates SHA2-256 and Blake2b-256 digests. MD5 digests is skipped if platform blocks MD5.
- [bpo-40695](https://bugs.python.org/issue?@action=redirect&bpo=40695) [https://bugs.python.org/issue?@action=redirect&bpo=40695]: `hashlib` no longer falls back to builtin hash implementations when OpenSSL provides a hash digest and the algorithm is blocked by security policy.
- [bpo-9216](https://bugs.python.org/issue?@action=redirect&bpo=9216) [https://bugs.python.org/issue?@action=redirect&bpo=9216]: func:`hashlib.new` passed `usedforsecurity` to OpenSSL EVP constructor `_hashlib.new()`. `test_hashlib` and `test_smtplib` handle strict security policy better.
- [bpo-40614](https://bugs.python.org/issue?@action=redirect&bpo=40614) [https://bugs.python.org/issue?@action=redirect&bpo=40614]: `ast.parse()` will not parse self

documenting expressions in f-strings when passed  
`feature_version` is less than `(3, 8)`.

- [bpo-40626](https://bugs.python.org/issue?@action=redirect&bpo=40626) [https://bugs.python.org/issue?@action=redirect&bpo=40626]: Add h5 file extension as MIME Type application/x-hdf5, as per HDF Group recommendation for HDF5 formatted data files. Patch contributed by Mark Schwab.
- [bpo-25920](https://bugs.python.org/issue?@action=redirect&bpo=25920) [https://bugs.python.org/issue?@action=redirect&bpo=25920]: On macOS, when building Python for macOS 10.4 and older, which wasn't the case for python.org macOS installer, `socket.getaddrinfo()` no longer uses an internal lock to prevent race conditions when calling `getaddrinfo()` which is thread-safe since macOS 10.5. Python 3.9 requires macOS 10.6 or newer. The internal lock caused random hang on fork when another thread was calling `socket.getaddrinfo()`. The lock was also used on FreeBSD older than 5.3, OpenBSD older than 201311 and NetBSD older than 4.
- [bpo-40671](https://bugs.python.org/issue?@action=redirect&bpo=40671) [https://bugs.python.org/issue?@action=redirect&bpo=40671]: Prepare `_hashlib` for [PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/] and use `PyModule_AddType()`.
- [bpo-32309](https://bugs.python.org/issue?@action=redirect&bpo=32309) [https://bugs.python.org/issue?@action=redirect&bpo=32309]: Added a new `coroutine asyncio.to_thread()`. It is mainly used for running IO-bound functions in a separate thread to avoid blocking the event loop, and essentially works as a high-level version of `run_in_executor()` that can directly take keyword arguments.
- [bpo-36543](https://bugs.python.org/issue?@action=redirect&bpo=36543) [https://bugs.python.org/issue?@action=redirect&bpo=36543]: Restored the deprecated `xml.etree.cElementTree` module.
- [bpo-40611](https://bugs.python.org/issue?@action=redirect&bpo=40611) [https://bugs.python.org/issue?@action=redirect&bpo=40611]: `MAP_POPULATE` constant has now been added to the list of exported `mmap` module flags.

- [bpo-39881](https://bugs.python.org/issue?@action=redirect&bpo=39881) [https://bugs.python.org/issue?@action=redirect&bpo=39881]: PEP 554 for use in the test suite. (Patch By Joanna Nanjeyke)
- [bpo-13097](https://bugs.python.org/issue?@action=redirect&bpo=13097) [https://bugs.python.org/issue?@action=redirect&bpo=13097]: `ctypes` now raises an `ArgumentError` when a callback is invoked with more than 1024 arguments.
- [bpo-39385](https://bugs.python.org/issue?@action=redirect&bpo=39385) [https://bugs.python.org/issue?@action=redirect&bpo=39385]: A new test assertion context-manager, `unittest.assertNoLogs()` will ensure a given block of code emits no log messages using the logging module. Contributed by Kit Yan Choi.
- [bpo-23082](https://bugs.python.org/issue?@action=redirect&bpo=23082) [https://bugs.python.org/issue?@action=redirect&bpo=23082]: Updated the error message and docs of `PurePath.relative_to()` to better reflect the function behaviour.
- [bpo-40318](https://bugs.python.org/issue?@action=redirect&bpo=40318) [https://bugs.python.org/issue?@action=redirect&bpo=40318]: Use SQLite3 trace v2 API, if it is available.
- [bpo-40105](https://bugs.python.org/issue?@action=redirect&bpo=40105) [https://bugs.python.org/issue?@action=redirect&bpo=40105]: `ZipFile` truncates files to avoid corruption when a shorter comment is provided in append (“a”) mode. Patch by Jan Mazur.
- [bpo-40084](https://bugs.python.org/issue?@action=redirect&bpo=40084) [https://bugs.python.org/issue?@action=redirect&bpo=40084]: Fix `Enum.__dir__`: `dir(Enum.member)` now includes attributes as well as methods.
- [bpo-31122](https://bugs.python.org/issue?@action=redirect&bpo=31122) [https://bugs.python.org/issue?@action=redirect&bpo=31122]: `ssl.wrap_socket()` now raises `ssl.SSLEOFError` rather than `OSError` when peer closes connection during TLS negotiation
- [bpo-39728](https://bugs.python.org/issue?@action=redirect&bpo=39728) [https://bugs.python.org/issue?@action=redirect&bpo=39728]: fix default `_missing_` so a

duplicate `ValueError` is not set as the `__context__` of the original `ValueError`

- [bpo-39244](https://bugs.python.org/issue?@action=redirect&bpo=39244) [https://bugs.python.org/issue?@action=redirect&bpo=39244]: Fixed `multiprocessing.context.get_all_start_methods` to properly return the default method first on macOS.
- [bpo-39040](https://bugs.python.org/issue?@action=redirect&bpo=39040) [https://bugs.python.org/issue?@action=redirect&bpo=39040]: Fix parsing of invalid mime headers parameters by collapsing whitespace between encoded words in a bare-quote-string.
- [bpo-38731](https://bugs.python.org/issue?@action=redirect&bpo=38731) [https://bugs.python.org/issue?@action=redirect&bpo=38731]: Add `--quiet` option to command-line interface of `py_compile`. Patch by Gregory Schevchenko.
- [bpo-35714](https://bugs.python.org/issue?@action=redirect&bpo=35714) [https://bugs.python.org/issue?@action=redirect&bpo=35714]: `struct.error` is now raised if there is a null character in a `struct` format string.
- [bpo-38144](https://bugs.python.org/issue?@action=redirect&bpo=38144) [https://bugs.python.org/issue?@action=redirect&bpo=38144]: Added the `root_dir` and `dir_fd` parameters in `glob.glob()`.
- [bpo-26543](https://bugs.python.org/issue?@action=redirect&bpo=26543) [https://bugs.python.org/issue?@action=redirect&bpo=26543]: Fix `IMAP4.noop()` when debug mode is enabled (ex: `imaplib.Debug = 3`).
- [bpo-12178](https://bugs.python.org/issue?@action=redirect&bpo=12178) [https://bugs.python.org/issue?@action=redirect&bpo=12178]: `csv.writer()` now correctly escapes `escapechar` when input contains `escapechar`. Patch by Catalin Iacob, Berker Peksag, and Itay Elbirt.
- [bpo-36290](https://bugs.python.org/issue?@action=redirect&bpo=36290) [https://bugs.python.org/issue?@action=redirect&bpo=36290]: AST nodes are now raising `TypeError` on conflicting keyword arguments. Patch contributed by Rémi Lapeyre.
- [bpo-33944](https://bugs.python.org/issue?@action=redirect&bpo=33944) [https://bugs.python.org/issue?@action=redirect&bpo=33944]

@action=redirect&bpo=33944]: Added site.py site-packages tracing in verbose mode.

- [bpo-35078](https://bugs.python.org/issue?@action=redirect&bpo=35078) [https://bugs.python.org/issue?@action=redirect&bpo=35078]: Refactor formatweekday, formatmonthname methods in LocaleHTMLCalendar and LocaleTextCalendar classes in calendar module to call the base class methods. This enables customizable CSS classes for LocaleHTMLCalendar. Patch by Srinivas Reddy Thatiparthi
- [bpo-29620](https://bugs.python.org/issue?@action=redirect&bpo=29620) [https://bugs.python.org/issue?@action=redirect&bpo=29620]: `assertWarns()` no longer raises a `RuntimeException` when accessing a module's `__warningregistry__` causes importation of a new module, or when a new module is imported in another thread. Patch by Kernc.
- [bpo-31844](https://bugs.python.org/issue?@action=redirect&bpo=31844) [https://bugs.python.org/issue?@action=redirect&bpo=31844]: Remove `ParserBase.error()` method from the private and undocumented `_markupbase` module. `html.parser.HTMLParser` is the only subclass of `ParserBase` and its `error()` implementation was deprecated in Python 3.4 and removed in Python 3.5.
- [bpo-34226](https://bugs.python.org/issue?@action=redirect&bpo=34226) [https://bugs.python.org/issue?@action=redirect&bpo=34226]: Fix `cgi.parse_multipart` without `content_length`. Patch by Roger Duran
- [bpo-33660](https://bugs.python.org/issue?@action=redirect&bpo=33660) [https://bugs.python.org/issue?@action=redirect&bpo=33660]: Fix `pathlib.PosixPath` to resolve a relative path located on the root directory properly.
- [bpo-28557](https://bugs.python.org/issue?@action=redirect&bpo=28557) [https://bugs.python.org/issue?@action=redirect&bpo=28557]: Improve the error message for a misbehaving `rawio.readinto`
- [bpo-26680](https://bugs.python.org/issue?@action=redirect&bpo=26680) [https://bugs.python.org/issue?@action=redirect&bpo=26680]: The `d.is_integer()` method is added to the `Decimal` type, for compatibility with other number types.

- [bpo-26680](https://bugs.python.org/issue?@action=redirect&bpo=26680) [https://bugs.python.org/issue?@action=redirect&bpo=26680]: The `x.is_integer()` method is incorporated into the abstract types of the numeric tower, Real, Rational and Integral, with appropriate default implementations.

## Documentation

- [bpo-41428](https://bugs.python.org/issue?@action=redirect&bpo=41428) [https://bugs.python.org/issue?@action=redirect&bpo=41428]: Add documentation for [PEP 604](https://peps.python.org/pep-0604/) [https://peps.python.org/pep-0604/] (Allow writing union types as `X | Y`).
- [bpo-41774](https://bugs.python.org/issue?@action=redirect&bpo=41774) [https://bugs.python.org/issue?@action=redirect&bpo=41774]: In Programming FAQ “Sequences (Tuples/Lists)” section, add “How do you remove multiple items from a list”.
- [bpo-35293](https://bugs.python.org/issue?@action=redirect&bpo=35293) [https://bugs.python.org/issue?@action=redirect&bpo=35293]: Fix RemovedInSphinx40Warning when building the documentation. Patch by Donghee Na.
- [bpo-37149](https://bugs.python.org/issue?@action=redirect&bpo=37149) [https://bugs.python.org/issue?@action=redirect&bpo=37149]: Change Shipman tkinter doc link from archive.org to TkDocs. (The doc has been removed from the NMT server.) The new link responds much faster and includes a short explanatory note.
- [bpo-41726](https://bugs.python.org/issue?@action=redirect&bpo=41726) [https://bugs.python.org/issue?@action=redirect&bpo=41726]: Update the refcounts info of `PyType_FromModuleAndSpec`.
- [bpo-41624](https://bugs.python.org/issue?@action=redirect&bpo=41624) [https://bugs.python.org/issue?@action=redirect&bpo=41624]: Fix the signature of `typing.Coroutine`.
- [bpo-40204](https://bugs.python.org/issue?@action=redirect&bpo=40204) [https://bugs.python.org/issue?@action=redirect&bpo=40204]: Enable Sphinx 3.2 `c_allow_pre_v3` option and disable `c_warn_on_allowed_pre_v3` option to make the documentation compatible with Sphinx 2 and Sphinx 3.
- [bpo-41045](https://bugs.python.org/issue?@action=redirect&bpo=41045) [https://bugs.python.org/issue?@action=redirect&bpo=41045]: Add documentation for debug feature of f-strings.
- [bpo-41314](https://bugs.python.org/issue?@action=redirect&bpo=41314) [https://bugs.python.org/issue?@action=redirect&bpo=41314]: Changed the release when `from`

`__future__` import annotations becomes the default from 4.0 to 3.10 (following a change in PEP 563).

- [bpo-40979](https://bugs.python.org/issue?@action=redirect&bpo=40979) [https://bugs.python.org/issue?@action=redirect&bpo=40979]: Refactored `typing.rst`, arranging more than 70 classes, functions, and decorators into new subsections.
- [bpo-40552](https://bugs.python.org/issue?@action=redirect&bpo=40552) [https://bugs.python.org/issue?@action=redirect&bpo=40552]: Fix in tutorial section 4.2. Code snippet is now correct.
- [bpo-39883](https://bugs.python.org/issue?@action=redirect&bpo=39883) [https://bugs.python.org/issue?@action=redirect&bpo=39883]: Make code, examples, and recipes in the Python documentation be licensed under the more permissive BSD0 license in addition to the existing Python 2.0 license.
- [bpo-37703](https://bugs.python.org/issue?@action=redirect&bpo=37703) [https://bugs.python.org/issue?@action=redirect&bpo=37703]: Updated Documentation to comprehensively elaborate on the behaviour of `gather.cancel()`

## Tests

- [bpo-41939](https://bugs.python.org/issue?@action=redirect&bpo=41939) [https://bugs.python.org/issue?@action=redirect&bpo=41939]: Fix `test_site.test_license_exists_at_url()`: call `urllib.request.urlcleanup()` to reset the global `urllib.request._opener`. Patch by Victor Stinner.
- [bpo-41731](https://bugs.python.org/issue?@action=redirect&bpo=41731) [https://bugs.python.org/issue?@action=redirect&bpo=41731]: Make `test_cmd_line_script` pass with option `'-vv'`.
- [bpo-41602](https://bugs.python.org/issue?@action=redirect&bpo=41602) [https://bugs.python.org/issue?@action=redirect&bpo=41602]: Add tests for SIGINT handling in the `runpy` module.
- [bpo-41521](https://bugs.python.org/issue?@action=redirect&bpo=41521) [https://bugs.python.org/issue?@action=redirect&bpo=41521]: **test.support**: Rename `blacklist` parameter of `check_all__()` to `not_exported`.
- [bpo-41477](https://bugs.python.org/issue?@action=redirect&bpo=41477) [https://bugs.python.org/issue?@action=redirect&bpo=41477]: Make `ctypes` optional in `test_genericalias`.
- [bpo-41085](https://bugs.python.org/issue?@action=redirect&bpo=41085) [https://bugs.python.org/issue?@action=redirect&bpo=41085]

@action=redirect&bpo=41085]: Fix integer overflow in the `array.array.index()` method on 64-bit Windows for index larger than `2**31`.

- [bpo-41069](https://bugs.python.org/issue?@action=redirect&bpo=41069) [https://bugs.python.org/issue?@action=redirect&bpo=41069]: `test.support.TESTFN` and the current directory for tests when run via `test.regrtest` contain now non-ascii characters if possible.
- [bpo-38377](https://bugs.python.org/issue?@action=redirect&bpo=38377) [https://bugs.python.org/issue?@action=redirect&bpo=38377]: On Linux, skip tests using multiprocessing if the current user cannot create a file in `/dev/shm/` directory. Add the `skip_if_broken_multiprocessing_synchronize()` function to the `test.support` module.
- [bpo-41009](https://bugs.python.org/issue?@action=redirect&bpo=41009) [https://bugs.python.org/issue?@action=redirect&bpo=41009]: Fix use of `support.require_{linux|mac|freebsd}_version()` decorators as class decorator.
- [bpo-41003](https://bugs.python.org/issue?@action=redirect&bpo=41003) [https://bugs.python.org/issue?@action=redirect&bpo=41003]: Fix `test_copyreg` when numpy is installed: `test.pickletester` now saves/restores warnings filters when importing numpy, to ignore filters installed by numpy.
- [bpo-40964](https://bugs.python.org/issue?@action=redirect&bpo=40964) [https://bugs.python.org/issue?@action=redirect&bpo=40964]: Disable remote `imaplib` tests, host `cyrus.andrew.cmu.edu` is blocking incoming connections.
- [bpo-40927](https://bugs.python.org/issue?@action=redirect&bpo=40927) [https://bugs.python.org/issue?@action=redirect&bpo=40927]: Fix `test_binhex` when run twice: it now uses `import_fresh_module()` to ensure that it raises `DeprecationWarning` each time.
- [bpo-17258](https://bugs.python.org/issue?@action=redirect&bpo=17258) [https://bugs.python.org/issue?@action=redirect&bpo=17258]: Skip some `multiprocessing` tests when MD5 hash digest is blocked.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Increase `LOOPBACK_TIMEOUT` to 10 for VxWorks RTOS.
- [bpo-38169](https://bugs.python.org/issue?@action=redirect&bpo=38169) [https://bugs.python.org/issue?@action=redirect&bpo=38169]: Increase code coverage for `SharedMemory` and `ShareableList`
- [bpo-34401](https://bugs.python.org/issue?@action=redirect&bpo=34401) [https://bugs.python.org/issue?@action=redirect&bpo=34401]: Make `test_gdb` properly run on

HP-UX. Patch by Michael Osipov.

## Build

- [bpo-38249](https://bugs.python.org/issue?@action=redirect&bpo=38249) [https://bugs.python.org/issue?@action=redirect&bpo=38249]: Update **Py\_UNREACHABLE** to use **\_builtin\_unreachable()** if only the compiler is able to use it. Patch by Donghee Na.
- [bpo-41617](https://bugs.python.org/issue?@action=redirect&bpo=41617) [https://bugs.python.org/issue?@action=redirect&bpo=41617]: Fix **pycore\_bitutils.h** header file to support old clang versions: **\_\_builtin\_bswap16()** is not available in LLVM clang 3.0.
- [bpo-40204](https://bugs.python.org/issue?@action=redirect&bpo=40204) [https://bugs.python.org/issue?@action=redirect&bpo=40204]: Pin Sphinx version to 2.3.1 in **Doc/Makefile**.
- [bpo-36020](https://bugs.python.org/issue?@action=redirect&bpo=36020) [https://bugs.python.org/issue?@action=redirect&bpo=36020]: The C99 functions **snprintf()** and **vsnprintf()** are now required to build Python.
- [bpo-40684](https://bugs.python.org/issue?@action=redirect&bpo=40684) [https://bugs.python.org/issue?@action=redirect&bpo=40684]: **make install** now uses the **PLATLIBDIR** variable for the destination **lib-dynload/** directory when **./configure --with-platlibdir** is used.
- [bpo-40683](https://bugs.python.org/issue?@action=redirect&bpo=40683) [https://bugs.python.org/issue?@action=redirect&bpo=40683]: Fixed an issue where the **zoneinfo** module and its tests were not included when Python is installed with **make**.

## Windows

- [bpo-41744](https://bugs.python.org/issue?@action=redirect&bpo=41744) [https://bugs.python.org/issue?@action=redirect&bpo=41744]: Fixes automatic import of props file when using the Nuget package.
- [bpo-41627](https://bugs.python.org/issue?@action=redirect&bpo=41627) [https://bugs.python.org/issue?@action=redirect&bpo=41627]: The user site directory for 32-bit now includes a **-32** suffix to distinguish it from the 64-bit interpreter's directory.
- [bpo-41526](https://bugs.python.org/issue?@action=redirect&bpo=41526) [https://bugs.python.org/issue?@action=redirect&bpo=41526]: Fixed layout of final page of the installer by removing the special thanks to Mark Hammond

(with his permission).

- [bpo-41492](https://bugs.python.org/issue?@action=redirect&bpo=41492) [https://bugs.python.org/issue?@action=redirect&bpo=41492]: Fixes the description that appears in UAC prompts.
- [bpo-40948](https://bugs.python.org/issue?@action=redirect&bpo=40948) [https://bugs.python.org/issue?@action=redirect&bpo=40948]: Improve post-install message to direct people to the “py” command.
- [bpo-41412](https://bugs.python.org/issue?@action=redirect&bpo=41412) [https://bugs.python.org/issue?@action=redirect&bpo=41412]: The installer will now fail to install on Windows 7 and Windows 8. Further, the UCRT dependency is now always downloaded on demand.
- [bpo-40741](https://bugs.python.org/issue?@action=redirect&bpo=40741) [https://bugs.python.org/issue?@action=redirect&bpo=40741]: Update Windows release to include SQLite 3.32.3.
- [bpo-41142](https://bugs.python.org/issue?@action=redirect&bpo=41142) [https://bugs.python.org/issue?@action=redirect&bpo=41142]: **msilib** now supports creating CAB files with non-ASCII file path and adding files with non-ASCII file path to them.
- [bpo-41074](https://bugs.python.org/issue?@action=redirect&bpo=41074) [https://bugs.python.org/issue?@action=redirect&bpo=41074]: Fixed support of non-ASCII names in functions **msilib.OpenDatabase()** and **msilib.init\_database()** and non-ASCII SQL in method **msilib.Database.OpenView()**.
- [bpo-41039](https://bugs.python.org/issue?@action=redirect&bpo=41039) [https://bugs.python.org/issue?@action=redirect&bpo=41039]: Stable ABI redirection DLL (python3.dll) now uses `#pragma comment(linker)` for re-exporting.
- [bpo-40164](https://bugs.python.org/issue?@action=redirect&bpo=40164) [https://bugs.python.org/issue?@action=redirect&bpo=40164]: Updates Windows OpenSSL to 1.1.1g
- [bpo-39631](https://bugs.python.org/issue?@action=redirect&bpo=39631) [https://bugs.python.org/issue?@action=redirect&bpo=39631]: Changes the registered MIME type for .py files on Windows to `text/x-python` instead of `text/plain`.
- [bpo-40677](https://bugs.python.org/issue?@action=redirect&bpo=40677) [https://bugs.python.org/issue?@action=redirect&bpo=40677]: Manually define `IO_REPARSE_TAG_APPEXECLINK` in case some old Windows SDK doesn't have it.
- [bpo-37556](https://bugs.python.org/issue?@action=redirect&bpo=37556) [https://bugs.python.org/issue?@action=redirect&bpo=37556]: Extend py.exe help to mention

overrides via venv, shebang, environmental variables & ini files.

## macOS

- [bpo-41557](https://bugs.python.org/issue?@action=redirect&bpo=41557) [https://bugs.python.org/issue?@action=redirect&bpo=41557]: Update macOS installer to use SQLite 3.33.0.
- [bpo-39580](https://bugs.python.org/issue?@action=redirect&bpo=39580) [https://bugs.python.org/issue?@action=redirect&bpo=39580]: Avoid opening Finder window if running installer from the command line. Patch contributed by Rick Heil.
- [bpo-41100](https://bugs.python.org/issue?@action=redirect&bpo=41100) [https://bugs.python.org/issue?@action=redirect&bpo=41100]: Fix configure error when building on macOS 11. Note that the current Python release was released shortly after the first developer preview of macOS 11 (Big Sur); there are other known issues with building and running on the developer preview. Big Sur is expected to be fully supported in a future bugfix release of Python 3.8.x and with 3.9.0.
- [bpo-40741](https://bugs.python.org/issue?@action=redirect&bpo=40741) [https://bugs.python.org/issue?@action=redirect&bpo=40741]: Update macOS installer to use SQLite 3.32.3.
- [bpo-41005](https://bugs.python.org/issue?@action=redirect&bpo=41005) [https://bugs.python.org/issue?@action=redirect&bpo=41005]: fixed an XDG settings issue not allowing macos to open browser in webbrowser.py
- [bpo-40741](https://bugs.python.org/issue?@action=redirect&bpo=40741) [https://bugs.python.org/issue?@action=redirect&bpo=40741]: Update macOS installer to use SQLite 3.32.2.

## IDLE

- [bpo-41775](https://bugs.python.org/issue?@action=redirect&bpo=41775) [https://bugs.python.org/issue?@action=redirect&bpo=41775]: Use 'IDLE Shell' as shell title
- [bpo-35764](https://bugs.python.org/issue?@action=redirect&bpo=35764) [https://bugs.python.org/issue?@action=redirect&bpo=35764]: Rewrite the Calltips doc section.
- [bpo-40181](https://bugs.python.org/issue?@action=redirect&bpo=40181) [https://bugs.python.org/issue?@action=redirect&bpo=40181]: In calltips, stop reminding that '/' marks the end of positional-only arguments.
- [bpo-41468](https://bugs.python.org/issue?@action=redirect&bpo=41468) [https://bugs.python.org/issue?@action=redirect&bpo=41468]

@action=redirect&bpo=41468]: Improve IDLE run crash error message (which users should never see).

- [bpo-41373](https://bugs.python.org/issue?@action=redirect&bpo=41373) [https://bugs.python.org/issue?@action=redirect&bpo=41373]: Save files loaded with no line ending, as when blank, or different line endings, by setting its line ending to the system default. Fix regression in 3.8.4 and 3.9.0b4.
- [bpo-41300](https://bugs.python.org/issue?@action=redirect&bpo=41300) [https://bugs.python.org/issue?@action=redirect&bpo=41300]: Save files with non-ascii chars. Fix regression released in 3.9.0b4 and 3.8.4.
- [bpo-37765](https://bugs.python.org/issue?@action=redirect&bpo=37765) [https://bugs.python.org/issue?@action=redirect&bpo=37765]: Add keywords to module name completion list. Rewrite Completions section of IDLE doc.
- [bpo-41152](https://bugs.python.org/issue?@action=redirect&bpo=41152) [https://bugs.python.org/issue?@action=redirect&bpo=41152]: The encoding of `stdin`, `stdout` and `stderr` in IDLE is now always UTF-8.
- [bpo-41144](https://bugs.python.org/issue?@action=redirect&bpo=41144) [https://bugs.python.org/issue?@action=redirect&bpo=41144]: Make Open Module open a special module such as `os.path`.
- [bpo-39885](https://bugs.python.org/issue?@action=redirect&bpo=39885) [https://bugs.python.org/issue?@action=redirect&bpo=39885]: Make context menu Cut and Copy work again when right-clicking within a selection.
- [bpo-40723](https://bugs.python.org/issue?@action=redirect&bpo=40723) [https://bugs.python.org/issue?@action=redirect&bpo=40723]: Make `test_idle` pass when run after import.

## C API

- [bpo-41936](https://bugs.python.org/issue?@action=redirect&bpo=41936) [https://bugs.python.org/issue?@action=redirect&bpo=41936]: Removed undocumented macros `Py_ALLOW_RECURSION` and `Py_END_ALLOW_RECURSION` and the `recursion_critical` field of the `PyInterpreterState` structure.
- [bpo-41692](https://bugs.python.org/issue?@action=redirect&bpo=41692) [https://bugs.python.org/issue?@action=redirect&bpo=41692]: The `PyUnicode_InternImmortal()` function is now deprecated and will be removed in Python 3.12: use `PyUnicode_InternInPlace()` instead. Patch by Victor Stinner.
- [bpo-41842](https://bugs.python.org/issue?@action=redirect&bpo=41842) [https://bugs.python.org/issue?@action=redirect&bpo=41842]

@action=redirect&bpo=41842]: Add `PyCodec_Unregister()` function to unregister a codec search function.

- [bpo-41834](https://bugs.python.org/issue?@action=redirect&bpo=41834) [https://bugs.python.org/issue?@action=redirect&bpo=41834]: Remove the `_Py_CheckRecursionLimit` variable: it has been replaced by `ceval.recursion_limit` of the `PyInterpreterState` structure. Patch by Victor Stinner.
- [bpo-41689](https://bugs.python.org/issue?@action=redirect&bpo=41689) [https://bugs.python.org/issue?@action=redirect&bpo=41689]: Types created with `PyType_FromSpec()` now make any signature in their `tp_doc` slot accessible from `__text_signature__`.
- [bpo-41524](https://bugs.python.org/issue?@action=redirect&bpo=41524) [https://bugs.python.org/issue?@action=redirect&bpo=41524]: Fix bug in `PyOS_mystrnicmp` and `PyOS_mystricmp` that incremented pointers beyond the end of a string.
- [bpo-41324](https://bugs.python.org/issue?@action=redirect&bpo=41324) [https://bugs.python.org/issue?@action=redirect&bpo=41324]: Add a minimal decimal capsule API. The API supports fast conversions between Decimals up to 38 digits and their triple representation as a C struct.
- [bpo-30155](https://bugs.python.org/issue?@action=redirect&bpo=30155) [https://bugs.python.org/issue?@action=redirect&bpo=30155]: Add `PyDateTime_DATE_GET_TZINFO()` and `PyDateTime_TIME_GET_TZINFO()` macros for accessing the `tzinfo` attributes of `datetime.datetime` and `datetime.time` objects.
- [bpo-40170](https://bugs.python.org/issue?@action=redirect&bpo=40170) [https://bugs.python.org/issue?@action=redirect&bpo=40170]: Revert `PyType_HasFeature()` change: it reads again directly the `PyTypeObject.tp_flags` member when the limited C API is not used, rather than always calling `PyType_GetFlags()` which hides implementation details.
- [bpo-41123](https://bugs.python.org/issue?@action=redirect&bpo=41123) [https://bugs.python.org/issue?@action=redirect&bpo=41123]: Remove `PyUnicode_AsUnicodeCopy`.
- [bpo-41123](https://bugs.python.org/issue?@action=redirect&bpo=41123) [https://bugs.python.org/issue?@action=redirect&bpo=41123]: Removed `PyLong_FromUnicode()`.
- [bpo-41123](https://bugs.python.org/issue?@action=redirect&bpo=41123) [https://bugs.python.org/issue?@action=redirect&bpo=41123]: Removed `PyUnicode_GetMax()`.

- [bpo-41123](https://bugs.python.org/issue?@action=redirect&bpo=41123) [https://bugs.python.org/issue?@action=redirect&bpo=41123]: Removed `Py_UNICODE_str*` functions manipulating `Py_UNICODE*` strings.
- [bpo-41103](https://bugs.python.org/issue?@action=redirect&bpo=41103) [https://bugs.python.org/issue?@action=redirect&bpo=41103]: `PyObject_AsCharBuffer()`, `PyObject_AsReadBuffer()`, `PyObject_CheckReadBuffer()`, and `PyObject_AsWriteBuffer()` are removed. Please migrate to new buffer protocol; [PyObject\\_GetBuffer\(\)](#) and [PyBuffer\\_Release\(\)](#).
- [bpo-36346](https://bugs.python.org/issue?@action=redirect&bpo=36346) [https://bugs.python.org/issue?@action=redirect&bpo=36346]: Raises `DeprecationWarning` for `PyUnicode_FromUnicode(NULL, size)` and `PyUnicode_FromStringAndSize(NULL, size)` with `size > 0`.
- [bpo-36346](https://bugs.python.org/issue?@action=redirect&bpo=36346) [https://bugs.python.org/issue?@action=redirect&bpo=36346]: Mark `Py_UNICODE_COPY`, `Py_UNICODE_FILL`, `PyUnicode_WSTR_LENGTH`, `PyUnicode_FromUnicode`, `PyUnicode_AsUnicode`, and `PyUnicode_AsUnicodeAndSize` as deprecated in C. Remove `Py_UNICODE_MATCH` which was deprecated and broken since Python 3.3.
- [bpo-40989](https://bugs.python.org/issue?@action=redirect&bpo=40989) [https://bugs.python.org/issue?@action=redirect&bpo=40989]: The `PyObject_INIT()` and `PyObject_INIT_VAR()` macros become aliases to, respectively, [PyObject\\_Init\(\)](#) and [PyObject\\_InitVar\(\)](#) functions.
- [bpo-36020](https://bugs.python.org/issue?@action=redirect&bpo=36020) [https://bugs.python.org/issue?@action=redirect&bpo=36020]: On Windows, `#include "pyerrors.h"` no longer defines `snprintf` and `vsnprintf` macros.
- [bpo-40943](https://bugs.python.org/issue?@action=redirect&bpo=40943) [https://bugs.python.org/issue?@action=redirect&bpo=40943]: The `PY_SSIZE_T_CLEAN` macro must now be defined to use [PyArg\\_ParseTuple\(\)](#) and [Py\\_BuildValue\(\)](#) formats which use `#: es#`, `et#`, `s#`, `u#`, `y#`, `z#`, `U#` and `Z#`. See [Parsing arguments and building values](#) and the [PEP 353](https://peps.python.org/pep-0353/) [https://peps.python.org/pep-0353/].
- [bpo-40910](https://bugs.python.org/issue?@action=redirect&bpo=40910) [https://bugs.python.org/issue?@action=redirect&bpo=40910]: Export explicitly the

**Py\_GetArgcArgv()** function to the C API and document the function. Previously, it was exported implicitly which no longer works since Python is built with `-fvisibility=hidden`.

- [bpo-40724](https://bugs.python.org/issue?@action=redirect&bpo=40724) [https://bugs.python.org/issue?@action=redirect&bpo=40724]: Allow defining buffer slots in type specs.
- [bpo-40679](https://bugs.python.org/issue?@action=redirect&bpo=40679) [https://bugs.python.org/issue?@action=redirect&bpo=40679]: Fix a `_PyEval_EvalCode()` crash if *qualname* argument is NULL.
- [bpo-40839](https://bugs.python.org/issue?@action=redirect&bpo=40839) [https://bugs.python.org/issue?@action=redirect&bpo=40839]: Calling **PyDict\_GetItem()** without GIL held had been allowed for historical reason. It is no longer allowed.
- [bpo-40826](https://bugs.python.org/issue?@action=redirect&bpo=40826) [https://bugs.python.org/issue?@action=redirect&bpo=40826]: **PyOS\_InterruptOccurred()** now fails with a fatal error if it is called with the GIL released.
- [bpo-40792](https://bugs.python.org/issue?@action=redirect&bpo=40792) [https://bugs.python.org/issue?@action=redirect&bpo=40792]: The result of **PyNumber\_Index()** now always has exact type `int`. Previously, the result could have been an instance of a subclass of `int`.
- [bpo-39573](https://bugs.python.org/issue?@action=redirect&bpo=39573) [https://bugs.python.org/issue?@action=redirect&bpo=39573]: Convert **Py\_REFCNT()** and **Py\_SIZE()** macros to static inline functions. They cannot be used as l-value anymore: use **Py\_SET\_REFCNT()** and **Py\_SET\_SIZE()** to set an object reference count and size. This change is backward incompatible on purpose, to prepare the C API for an opaque **PyObject** structure.
- [bpo-40703](https://bugs.python.org/issue?@action=redirect&bpo=40703) [https://bugs.python.org/issue?@action=redirect&bpo=40703]: The `PyType_FromSpec*` functions no longer overwrite the type's `"_module_"` attribute if it is set via `"Py_tp_members"` or `"Py_tp_getset"`.
- [bpo-39583](https://bugs.python.org/issue?@action=redirect&bpo=39583) [https://bugs.python.org/issue?@action=redirect&bpo=39583]: Remove superfluous `"extern C"` declarations from `Include/cpython/*.h`.

## Python 3.9.0 beta 1

Release date: 2020-05-19

## Security

- [bpo-40501](https://bugs.python.org/issue?@action=redirect&bpo=40501) [https://bugs.python.org/issue?@action=redirect&bpo=40501]: `uuid` no longer uses `ctypes` to load `libuuid` or `rpcrt4.dll` at runtime.

## Core and Builtins

- [bpo-40663](https://bugs.python.org/issue?@action=redirect&bpo=40663) [https://bugs.python.org/issue?@action=redirect&bpo=40663]: Correctly generate annotations where parentheses are omitted but required (e.g: `Type[(str, int, *other)]`).
- [bpo-40596](https://bugs.python.org/issue?@action=redirect&bpo=40596) [https://bugs.python.org/issue?@action=redirect&bpo=40596]: Fixed `str.isidentifier()` for non-canonicalized strings containing non-BMP characters on Windows.
- [bpo-40593](https://bugs.python.org/issue?@action=redirect&bpo=40593) [https://bugs.python.org/issue?@action=redirect&bpo=40593]: Improved syntax errors for invalid characters in source code.
- [bpo-40585](https://bugs.python.org/issue?@action=redirect&bpo=40585) [https://bugs.python.org/issue?@action=redirect&bpo=40585]: Fixed a bug when using `codeop.compile_command()` that was causing exceptions to be swallowed with the new parser. Patch by Pablo Galindo
- [bpo-40566](https://bugs.python.org/issue?@action=redirect&bpo=40566) [https://bugs.python.org/issue?@action=redirect&bpo=40566]: Apply [PEP 573](https://peps.python.org/pep-0573/) [https://peps.python.org/pep-0573/] to `abc`.
- [bpo-40502](https://bugs.python.org/issue?@action=redirect&bpo=40502) [https://bugs.python.org/issue?@action=redirect&bpo=40502]: Initialize `n->n_col_offset`. (Patch by Joannah Nanjey)
- [bpo-40527](https://bugs.python.org/issue?@action=redirect&bpo=40527) [https://bugs.python.org/issue?@action=redirect&bpo=40527]: Fix command line argument parsing: no longer write errors multiple times into stderr.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `errno` to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-40523](https://bugs.python.org/issue?@action=redirect&bpo=40523) [https://bugs.python.org/issue?@action=redirect&bpo=40523]: Add pass-throughs for `hash()` and `reversed()` to `weakref.proxy` objects. Patch by

Pablo Galindo.

- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port **syslog** to multiphase initialization (**PEP 489** [https://peps.python.org/pep-0489/]).
- [bpo-40246](https://bugs.python.org/issue?@action=redirect&bpo=40246) [https://bugs.python.org/issue?@action=redirect&bpo=40246]: Reporting a specialised error message for invalid string prefixes, which was introduced in [bpo-40246](https://bugs.python.org/issue?@action=redirect&bpo=40246) [https://bugs.python.org/issue?@action=redirect&bpo=40246], is being reverted due to backwards compatibility concerns for strings that immediately follow a reserved keyword without whitespace between them. Constructs like **bg="#d00" if clear else"#fca"** were failing to parse, which is not an acceptable breakage on such short notice.
- [bpo-40417](https://bugs.python.org/issue?@action=redirect&bpo=40417) [https://bugs.python.org/issue?@action=redirect&bpo=40417]: Fix imp module deprecation warning when PyImport\_ReloadModule is called. Patch by Robert Rouhani.
- [bpo-40408](https://bugs.python.org/issue?@action=redirect&bpo=40408) [https://bugs.python.org/issue?@action=redirect&bpo=40408]: Fixed support of nested type variables in GenericAlias (e.g. `list[list[T]]`).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_stat` module to multiphase initialization (**PEP 489** [https://peps.python.org/pep-0489/]).
- [bpo-29587](https://bugs.python.org/issue?@action=redirect&bpo=29587) [https://bugs.python.org/issue?@action=redirect&bpo=29587]: Enable implicit exception chaining when calling **generator.throw()**.
- [bpo-40328](https://bugs.python.org/issue?@action=redirect&bpo=40328) [https://bugs.python.org/issue?@action=redirect&bpo=40328]: Add tools for generating mappings headers for CJKCodecs.
- [bpo-40228](https://bugs.python.org/issue?@action=redirect&bpo=40228) [https://bugs.python.org/issue?@action=redirect&bpo=40228]: Setting `frame.f_lineno` is now robust w.r.t. changes in the source-to-bytecode compiler
- [bpo-38880](https://bugs.python.org/issue?@action=redirect&bpo=38880) [https://bugs.python.org/issue?@action=redirect&bpo=38880]: Added the ability to list interpreters associated with channel ends in the internal subinterpreters module.
- [bpo-37986](https://bugs.python.org/issue?@action=redirect&bpo=37986) [https://bugs.python.org/issue?@action=redirect&bpo=37986]: Improve performance of **PyLong\_FromDouble()** for values that fit into long.

## Library

- [bpo-40662](https://bugs.python.org/issue?@action=redirect&bpo=40662) [https://bugs.python.org/issue?@action=redirect&bpo=40662]: Fixed `ast.get_source_segment()` for ast nodes that have incomplete location information. Patch by Irit Katriel.
- [bpo-40665](https://bugs.python.org/issue?@action=redirect&bpo=40665) [https://bugs.python.org/issue?@action=redirect&bpo=40665]: Convert `bisect` to use Argument Clinic.
- [bpo-40536](https://bugs.python.org/issue?@action=redirect&bpo=40536) [https://bugs.python.org/issue?@action=redirect&bpo=40536]: Added the `available_timezones()` function to the `zoneinfo` module. Patch by Paul Ganssle.
- [bpo-40645](https://bugs.python.org/issue?@action=redirect&bpo=40645) [https://bugs.python.org/issue?@action=redirect&bpo=40645]: The `hmac.HMAC` exposes internal implementation details. The attributes `digest_cons`, `inner`, and `outer` are deprecated and will be removed in the future.
- [bpo-40645](https://bugs.python.org/issue?@action=redirect&bpo=40645) [https://bugs.python.org/issue?@action=redirect&bpo=40645]: The internal module `_hashlib` wraps and exposes OpenSSL's HMAC API. The new code will be used in Python 3.10 after the internal implementation details of the pure Python HMAC module are no longer part of the public API.
- [bpo-40637](https://bugs.python.org/issue?@action=redirect&bpo=40637) [https://bugs.python.org/issue?@action=redirect&bpo=40637]: Builtin hash modules can now be disabled or selectively enabled with `configure --with-builtin-hashlib-hashes=sha3,blake1` or `--without-builtin-hashlib-hashes`.
- [bpo-37630](https://bugs.python.org/issue?@action=redirect&bpo=37630) [https://bugs.python.org/issue?@action=redirect&bpo=37630]: The `hashlib` module can now use SHA3 hashes and SHAKE XOF from OpenSSL when available.
- [bpo-40479](https://bugs.python.org/issue?@action=redirect&bpo=40479) [https://bugs.python.org/issue?@action=redirect&bpo=40479]: The `hashlib` now compiles with OpenSSL 3.0.0-alpha2.
- [bpo-40257](https://bugs.python.org/issue?@action=redirect&bpo=40257) [https://bugs.python.org/issue?@action=redirect&bpo=40257]: Revert changes to `inspect.getdoc()`.
- [bpo-40607](https://bugs.python.org/issue?@action=redirect&bpo=40607) [https://bugs.python.org/issue?@action=redirect&bpo=40607]

@action=redirect&bpo=40607]: When cancelling a task due to timeout, `asyncio.wait_for()` will now propagate the exception if an error happens during cancellation. Patch by Roman Skurikhin.

- [bpo-40612](https://bugs.python.org/issue?@action=redirect&bpo=40612) [https://bugs.python.org/issue?@action=redirect&bpo=40612]: Fix edge cases in `SyntaxError` formatting. If the offset is  $\leq 0$ , no caret is printed. If the offset is  $>$  line length, the caret is printed pointing just after the last character.
- [bpo-40597](https://bugs.python.org/issue?@action=redirect&bpo=40597) [https://bugs.python.org/issue?@action=redirect&bpo=40597]: If text content lines are longer than `policy.max_line_length`, always use a content-encoding to make sure they are wrapped.
- [bpo-40571](https://bugs.python.org/issue?@action=redirect&bpo=40571) [https://bugs.python.org/issue?@action=redirect&bpo=40571]: Added `functools.cache()` as a simpler, more discoverable way to access the unbounded cache variant of `lru_cache(maxsize=None)`.
- [bpo-40503](https://bugs.python.org/issue?@action=redirect&bpo=40503) [https://bugs.python.org/issue?@action=redirect&bpo=40503]: [PEP 615](https://peps.python.org/pep-0615/) [https://peps.python.org/pep-0615/], the [zoneinfo](#) module. Adds support for the IANA time zone database.
- [bpo-40397](https://bugs.python.org/issue?@action=redirect&bpo=40397) [https://bugs.python.org/issue?@action=redirect&bpo=40397]: Removed attributes `__args__` and `__parameters__` from special generic aliases like `typing.List` (not subscripted).
- [bpo-40549](https://bugs.python.org/issue?@action=redirect&bpo=40549) [https://bugs.python.org/issue?@action=redirect&bpo=40549]: Convert `posixmodule.c` (“posix” or “nt” module) to the multiphase initialization (PEP 489).
- [bpo-31033](https://bugs.python.org/issue?@action=redirect&bpo=31033) [https://bugs.python.org/issue?@action=redirect&bpo=31033]: Add a `msg` argument to `Future.cancel()` and `Task.cancel()`.
- [bpo-40541](https://bugs.python.org/issue?@action=redirect&bpo=40541) [https://bugs.python.org/issue?@action=redirect&bpo=40541]: Added an optional `counts` parameter to `random.sample()`.
- [bpo-40515](https://bugs.python.org/issue?@action=redirect&bpo=40515) [https://bugs.python.org/issue?@action=redirect&bpo=40515]: The [ssl](#) and [hashlib](#) modules now actively check that OpenSSL is build with thread support. Python 3.7.0 made thread support mandatory and no longer works safely with a no-thread builds.
- [bpo-31033](https://bugs.python.org/issue?@action=redirect&bpo=31033) [https://bugs.python.org/issue?@action=redirect&bpo=31033]

@action=redirect&bpo=31033]: When a `asyncio.Task` is cancelled, the exception traceback now chains all the way back to where the task was first interrupted.

- [bpo-40504](https://bugs.python.org/issue?@action=redirect&bpo=40504) [https://bugs.python.org/issue?@action=redirect&bpo=40504]: `functools.lru_cache()` objects can now be the targets of weakrefs.
- [bpo-40559](https://bugs.python.org/issue?@action=redirect&bpo=40559) [https://bugs.python.org/issue?@action=redirect&bpo=40559]: Fix possible memory leak in the C implementation of `asyncio.Task`.
- [bpo-40480](https://bugs.python.org/issue?@action=redirect&bpo=40480) [https://bugs.python.org/issue?@action=redirect&bpo=40480]: `fnmatch.fnmatch()` could take exponential time in the presence of multiple `*` pattern characters. This was repaired by generating more elaborate regular expressions to avoid futile backtracking.
- [bpo-40495](https://bugs.python.org/issue?@action=redirect&bpo=40495) [https://bugs.python.org/issue?@action=redirect&bpo=40495]: `compileall` is now able to use hardlinks to prevent duplicates in a case when `.pyc` files for different optimization levels have the same content.
- [bpo-40457](https://bugs.python.org/issue?@action=redirect&bpo=40457) [https://bugs.python.org/issue?@action=redirect&bpo=40457]: The `ssl` module now support OpenSSL builds without TLS 1.0 and 1.1 methods.
- [bpo-40355](https://bugs.python.org/issue?@action=redirect&bpo=40355) [https://bugs.python.org/issue?@action=redirect&bpo=40355]: Improve error reporting in `ast.literal_eval()` in the presence of malformed `ast.Dict` nodes instead of silently ignoring any non-conforming elements. Patch by Curtis Bucher.
- [bpo-40465](https://bugs.python.org/issue?@action=redirect&bpo=40465) [https://bugs.python.org/issue?@action=redirect&bpo=40465]: Deprecated the optional *random* argument to `random.shuffle()`.
- [bpo-40459](https://bugs.python.org/issue?@action=redirect&bpo=40459) [https://bugs.python.org/issue?@action=redirect&bpo=40459]: `platform.win32_ver()` now produces correct *p*type strings instead of empty strings.
- [bpo-39435](https://bugs.python.org/issue?@action=redirect&bpo=39435) [https://bugs.python.org/issue?@action=redirect&bpo=39435]: The first argument of `pickle.loads()` is now positional-only.
- [bpo-39305](https://bugs.python.org/issue?@action=redirect&bpo=39305) [https://bugs.python.org/issue?@action=redirect&bpo=39305]: Update `nntplib` to merge `nntplib.NNTP` and `nntplib._NNTPBase`. Patch by Donghee Na.
- [bpo-32494](https://bugs.python.org/issue?@action=redirect&bpo=32494) [https://bugs.python.org/issue?@action=redirect&bpo=32494]

@action=redirect&bpo=32494]: Update [dbm.gnu](#) to use `gdbm_count` if possible when calling `len()`. Patch by Donghee Na.

- [bpo-40453](#) [https://bugs.python.org/issue?@action=redirect&bpo=40453]: Add `isolated=True` keyword-only parameter to `_xxsubinterpreters.create()`. An isolated subinterpreter cannot spawn threads, spawn a child process or call `os.fork()`.
- [bpo-40286](#) [https://bugs.python.org/issue?@action=redirect&bpo=40286]: Remove `_random.Random.randbytes()`: the C implementation of `randbytes()`. Implement the method in Python to ease subclassing: `randbytes()` now directly reuses `getrandbits()`.
- [bpo-40394](#) [https://bugs.python.org/issue?@action=redirect&bpo=40394]: Added default arguments to [difflib.SequenceMatcher.find\\_longest\\_match\(\)](#).
- [bpo-39995](#) [https://bugs.python.org/issue?@action=redirect&bpo=39995]: Fix a race condition in `concurrent.futures.ThreadWakeup`: access to `_ThreadWakeup` is now protected with the shutdown lock.
- [bpo-30966](#) [https://bugs.python.org/issue?@action=redirect&bpo=30966]: `Process.shutdown(wait=True)` of [concurrent.futures](#) now closes explicitly the result queue.
- [bpo-30966](#) [https://bugs.python.org/issue?@action=redirect&bpo=30966]: Add a new `close()` method to the [SimpleQueue](#) class to explicitly close the queue.
- [bpo-39966](#) [https://bugs.python.org/issue?@action=redirect&bpo=39966]: Revert [bpo-25597](#) [https://bugs.python.org/issue?@action=redirect&bpo=25597]. [unittest.mock.MagicMock](#) with wraps' set uses default return values for magic methods.
- [bpo-39791](#) [https://bugs.python.org/issue?@action=redirect&bpo=39791]: Added `files()` function to `importlib.resources` with support for subdirectories in package data, matching backport in `importlib_resources` 1.5.
- [bpo-40375](#) [https://bugs.python.org/issue?@action=redirect&bpo=40375]: [imaplib.IMAP4.unselect\(\)](#)

is added. Patch by Donghee Na.

- [bpo-40389](https://bugs.python.org/issue?@action=redirect&bpo=40389) [https://bugs.python.org/issue?@action=redirect&bpo=40389]: `repr()` now returns `typing.Optional[T]` when called for `typing.Union` of two types, one of which is `NoneType`.
- [bpo-40291](https://bugs.python.org/issue?@action=redirect&bpo=40291) [https://bugs.python.org/issue?@action=redirect&bpo=40291]: Add support for `CAN_J1939` sockets (available on Linux 5.4+)
- [bpo-40273](https://bugs.python.org/issue?@action=redirect&bpo=40273) [https://bugs.python.org/issue?@action=redirect&bpo=40273]: `types.MappingProxyType` is now reversible.
- [bpo-39075](https://bugs.python.org/issue?@action=redirect&bpo=39075) [https://bugs.python.org/issue?@action=redirect&bpo=39075]: The repr for `types.SimpleNamespace` is now insertion ordered rather than alphabetical.
- [bpo-40192](https://bugs.python.org/issue?@action=redirect&bpo=40192) [https://bugs.python.org/issue?@action=redirect&bpo=40192]: On AIX, `thread_time()` is now implemented with `thread_cputime()` which has nanosecond resolution, rather than `clock_gettime(CLOCK_THREAD_CPUTIME_ID)` which has a resolution of 10 milliseconds. Patch by Batuhan Taskaya.
- [bpo-40025](https://bugs.python.org/issue?@action=redirect&bpo=40025) [https://bugs.python.org/issue?@action=redirect&bpo=40025]: Raise `TypeError` when `_generate_next_value_` is defined after members. Patch by Ethan Onstott.
- [bpo-39058](https://bugs.python.org/issue?@action=redirect&bpo=39058) [https://bugs.python.org/issue?@action=redirect&bpo=39058]: In the `argparse` module, the repr for `Namespace()` and other argument holders now displayed in the order attributes were added. Formerly, it displayed in alphabetical order even though argument order is preserved the user visible parts of the module.
- [bpo-24416](https://bugs.python.org/issue?@action=redirect&bpo=24416) [https://bugs.python.org/issue?@action=redirect&bpo=24416]: The `isocalendar()` methods of `datetime.date` and `datetime.datetime` now return a named tuple instead of a `tuple`.

## Documentation

- [bpo-34790](https://bugs.python.org/issue?@action=redirect&bpo=34790) [https://bugs.python.org/issue?@action=redirect&bpo=34790]: Add version of removal for

explicit passing of coros to `asyncio.wait()`'s documentation

- [bpo-40561](https://bugs.python.org/issue?@action=redirect&bpo=40561) [https://bugs.python.org/issue?@action=redirect&bpo=40561]: Provide docstrings for webbrowser open functions.
- [bpo-40499](https://bugs.python.org/issue?@action=redirect&bpo=40499) [https://bugs.python.org/issue?@action=redirect&bpo=40499]: Mention that `asyncio.wait()` requires a non-empty set of awaitables.
- [bpo-39705](https://bugs.python.org/issue?@action=redirect&bpo=39705) [https://bugs.python.org/issue?@action=redirect&bpo=39705]: Tutorial example for sorted() in the Loop Techniques section is given a better explanation. Also a new example is included to explain sorted()'s basic behavior.
- [bpo-39435](https://bugs.python.org/issue?@action=redirect&bpo=39435) [https://bugs.python.org/issue?@action=redirect&bpo=39435]: Fix an incorrect signature for `pickle.loads()` in the docs

## Tests

- [bpo-40055](https://bugs.python.org/issue?@action=redirect&bpo=40055) [https://bugs.python.org/issue?@action=redirect&bpo=40055]: distutils.tests now saves/restores warnings filters to leave them unchanged. Importing tests imports docutils which imports pkg\_resources which adds a warnings filter.
- [bpo-40436](https://bugs.python.org/issue?@action=redirect&bpo=40436) [https://bugs.python.org/issue?@action=redirect&bpo=40436]: test\_gdb and test.pythoninfo now check gdb command exit code.

## Build

- [bpo-40653](https://bugs.python.org/issue?@action=redirect&bpo=40653) [https://bugs.python.org/issue?@action=redirect&bpo=40653]: Move \_dirnameW out of HAVE\_SYMLINK to fix a potential compiling issue.
- [bpo-40514](https://bugs.python.org/issue?@action=redirect&bpo=40514) [https://bugs.python.org/issue?@action=redirect&bpo=40514]: Add `--with-experimental-isolated-subinterpreters` build option to configure: better isolate subinterpreters, experimental build mode.

## Windows

- [bpo-40650](https://bugs.python.org/issue?@action=redirect&bpo=40650) [https://bugs.python.org/issue?@action=redirect&bpo=40650]: Include winsock2.h in pytime.c for timeval.
- [bpo-40458](https://bugs.python.org/issue?@action=redirect&bpo=40458) [https://bugs.python.org/issue?@action=redirect&bpo=40458]: Increase reserved stack space to prevent overflow crash on Windows.
- [bpo-39148](https://bugs.python.org/issue?@action=redirect&bpo=39148) [https://bugs.python.org/issue?@action=redirect&bpo=39148]: Add IPv6 support to **asyncio** datagram endpoints in ProactorEventLoop. Change the raised exception for unknown address families to ValueError as it's not coming from Windows API.

## macOS

- [bpo-34956](https://bugs.python.org/issue?@action=redirect&bpo=34956) [https://bugs.python.org/issue?@action=redirect&bpo=34956]: When building Python on macOS from source, `_tkinter` now links with non-system Tcl and Tk frameworks if they are installed in `/Library/Frameworks`, as had been the case on older releases of macOS. If a macOS SDK is explicitly configured, by using `--enable-universalsdk=` or `-isysroot`, only the SDK itself is searched. The default behavior can still be overridden with `--with-tcltk-includes` and `--with-tcltk-libs`.
- [bpo-35569](https://bugs.python.org/issue?@action=redirect&bpo=35569) [https://bugs.python.org/issue?@action=redirect&bpo=35569]: Expose RFC 3542 IPv6 socket options.

## Tools/Demos

- [bpo-40479](https://bugs.python.org/issue?@action=redirect&bpo=40479) [https://bugs.python.org/issue?@action=redirect&bpo=40479]: Update multissltest helper to test with latest OpenSSL 1.0.2, 1.1.0, 1.1.1, and 3.0.0-alpha.
- [bpo-40431](https://bugs.python.org/issue?@action=redirect&bpo=40431) [https://bugs.python.org/issue?@action=redirect&bpo=40431]: Fix a syntax typo in `turtledemo` that now raises a `SyntaxError`.
- [bpo-40163](https://bugs.python.org/issue?@action=redirect&bpo=40163) [https://bugs.python.org/issue?@action=redirect&bpo=40163]: Fix multissltest tool. OpenSSL has changed download URL for old releases. The multissltest tool now tries to download from current and old download URLs.

## C API

- [bpo-39465](https://bugs.python.org/issue?@action=redirect&bpo=39465) [https://bugs.python.org/issue?@action=redirect&bpo=39465]: Remove the `_PyUnicode_ClearStaticStrings()` function from the C API.
- [bpo-38787](https://bugs.python.org/issue?@action=redirect&bpo=38787) [https://bugs.python.org/issue?@action=redirect&bpo=38787]: Add `PyCFunction_CheckExact()` macro for exact type checks now that we allow subtypes of `PyCFunction`, as well as `PyCMethod_CheckExact()` and `PyCMethod_Check()` for the new `PyCMethod` subtype.
- [bpo-40545](https://bugs.python.org/issue?@action=redirect&bpo=40545) [https://bugs.python.org/issue?@action=redirect&bpo=40545]: Declare `_PyErr_GetTopmostException()` with `PyAPI_FUNC()` to properly export the function in the C API. The function remains private (`_Py`) prefix.
- [bpo-40412](https://bugs.python.org/issue?@action=redirect&bpo=40412) [https://bugs.python.org/issue?@action=redirect&bpo=40412]: Nullify `inittab_copy` during finalization, preventing future interpreter initializations in an embedded situation from crashing. Patch by Gregory Szorc.
- [bpo-40429](https://bugs.python.org/issue?@action=redirect&bpo=40429) [https://bugs.python.org/issue?@action=redirect&bpo=40429]: The `PyThreadState_GetFrame()` function now returns a strong reference to the frame.
- [bpo-40428](https://bugs.python.org/issue?@action=redirect&bpo=40428) [https://bugs.python.org/issue?@action=redirect&bpo=40428]: Remove the following functions from the C API. Call `PyGC_Collect()` explicitly to free all free lists.
  - `PyAsyncGen_ClearFreeLists()`
  - `PyContext_ClearFreeList()`
  - `PyDict_ClearFreeList()`
  - `PyFloat_ClearFreeList()`
  - `PyFrame_ClearFreeList()`
  - `PyList_ClearFreeList()`
  - `PySet_ClearFreeList()`
  - `PyTuple_ClearFreeList()`
- [bpo-40421](https://bugs.python.org/issue?@action=redirect&bpo=40421) [https://bugs.python.org/issue?@action=redirect&bpo=40421]: New `PyFrame_GetBack()` function: get the frame next outer frame.
- [bpo-40421](https://bugs.python.org/issue?) [https://bugs.python.org/issue?]

@action=redirect&bpo=40421]: New `PyFrame_GetCode()` function: return a borrowed reference to the frame code.

- [bpo-40217](https://bugs.python.org/issue?@action=redirect&bpo=40217) [https://bugs.python.org/issue?@action=redirect&bpo=40217]: Ensure that instances of types created with `PyType_FromSpecWithBases()` will visit its class object when traversing references in the garbage collector (implemented as an extension of the provided `tp_traverse`). Patch by Pablo Galindo.
- [bpo-38787](https://bugs.python.org/issue?@action=redirect&bpo=38787) [https://bugs.python.org/issue?@action=redirect&bpo=38787]: Module C state is now accessible from C-defined heap type methods ([PEP 573](https://peps.python.org/pep-0573/) [https://peps.python.org/pep-0573/]). Patch by Marcel Plch and Petr Viktorin.

## Python 3.9.0 alpha 6

*Release date: 2020-04-27*

### Security

- [bpo-40121](https://bugs.python.org/issue?@action=redirect&bpo=40121) [https://bugs.python.org/issue?@action=redirect&bpo=40121]: Fixes audit events raised on creating a new socket.
- [bpo-39073](https://bugs.python.org/issue?@action=redirect&bpo=39073) [https://bugs.python.org/issue?@action=redirect&bpo=39073]: Disallow CR or LF in `email.headerregistry.Address` arguments to guard against header injection attacks.
- [bpo-39503](https://bugs.python.org/issue?@action=redirect&bpo=39503) [https://bugs.python.org/issue?@action=redirect&bpo=39503]: CVE-2020-8492: The `AbstractBasicAuthHandler` class of the `urllib.request` module uses an inefficient regular expression which can be exploited by an attacker to cause a denial of service. Fix the regex to prevent the catastrophic backtracking. Vulnerability reported by Ben Caller and Matt Schwager.

### Core and Builtins

- [bpo-40313](https://bugs.python.org/issue?@action=redirect&bpo=40313) [https://bugs.python.org/issue?@action=redirect&bpo=40313]

@action=redirect&bpo=40313]: Improve the performance of `bytes.hex()`.

- [bpo-40334](https://bugs.python.org/issue?@action=redirect&bpo=40334) [https://bugs.python.org/issue?@action=redirect&bpo=40334]: Switch to a new parser, based on PEG. For more details see PEP 617. To temporarily switch back to the old parser, use `-X oldparser` or `PYTHONOLDPARSER=1`. In Python 3.10 we will remove the old parser completely, including the `parser` module (already deprecated) and anything that depends on it.
- [bpo-40267](https://bugs.python.org/issue?@action=redirect&bpo=40267) [https://bugs.python.org/issue?@action=redirect&bpo=40267]: Fix the tokenizer to display the correct error message, when there is a `SyntaxError` on the last input character and no newline follows. It used to be **unexpected EOF while parsing**, while it should be **invalid syntax**.
- [bpo-39522](https://bugs.python.org/issue?@action=redirect&bpo=39522) [https://bugs.python.org/issue?@action=redirect&bpo=39522]: Correctly unparse explicit `u` prefix for strings when postponed evaluation for annotations activated. Patch by Batuhan Taskaya.
- [bpo-40246](https://bugs.python.org/issue?@action=redirect&bpo=40246) [https://bugs.python.org/issue?@action=redirect&bpo=40246]: Report a specialized error message, **invalid string prefix**, when the tokenizer encounters a string with an invalid prefix.
- [bpo-40082](https://bugs.python.org/issue?@action=redirect&bpo=40082) [https://bugs.python.org/issue?@action=redirect&bpo=40082]: Fix the signal handler: it now always uses the main interpreter, rather than trying to get the current Python thread state.
- [bpo-37388](https://bugs.python.org/issue?@action=redirect&bpo=37388) [https://bugs.python.org/issue?@action=redirect&bpo=37388]: `str.encode()` and `str.decode()` no longer check the encoding and errors in development mode or in debug mode during Python finalization. The codecs machinery can no longer work on very late calls to `str.encode()` and `str.decode()`.
- [bpo-40077](https://bugs.python.org/issue?@action=redirect&bpo=40077) [https://bugs.python.org/issue?@action=redirect&bpo=40077]: Fix possible refleaks in `_json`, memo of `PyScannerObject` should be traversed.
- [bpo-37207](https://bugs.python.org/issue?@action=redirect&bpo=37207) [https://bugs.python.org/issue?@action=redirect&bpo=37207]: Speed up calls to `dict()` by using the [PEP 590](https://peps.python.org/pep-0590/) [https://peps.python.org/pep-0590/] `vectorcall` calling convention.

- [bpo-40141](https://bugs.python.org/issue?@action=redirect&bpo=40141) [https://bugs.python.org/issue?@action=redirect&bpo=40141]: Add column and line information to `ast.keyword` nodes. Patch by Pablo Galindo.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port [resource](#) to multiphase initialization ([PEP 489](#) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port [math](#) to multiphase initialization ([PEP 489](#) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_uuid` module to multiphase initialization ([PEP 489](#) [https://peps.python.org/pep-0489/]).
- [bpo-40077](https://bugs.python.org/issue?@action=redirect&bpo=40077) [https://bugs.python.org/issue?@action=redirect&bpo=40077]: Convert `json` module to use [PyType\\_FromSpec\(\)](#).
- [bpo-40067](https://bugs.python.org/issue?@action=redirect&bpo=40067) [https://bugs.python.org/issue?@action=redirect&bpo=40067]: Improve the error message for multiple star expressions in an assignment. Patch by Furkan Onder
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_functools` module to multiphase initialization ([PEP 489](#)). Patch by Paulo Henrique Silva.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `operator` module to multiphase initialization ([PEP 489](#)). Patch by Paulo Henrique Silva.
- [bpo-20526](https://bugs.python.org/issue?@action=redirect&bpo=20526) [https://bugs.python.org/issue?@action=redirect&bpo=20526]: Fix [PyThreadState\\_Clear\(\)](#). `PyThreadState.frame` is a borrowed reference, not a strong reference: `PyThreadState_Clear()` must not call `Py_CLEAR(tstate->frame)`.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `time` module to multiphase initialization ([PEP 489](#) [https://peps.python.org/pep-0489/]). Patch by Paulo Henrique Silva.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_weakref` extension module to multiphase initialization ([PEP 489](#) [https://peps.python.org/

pep-0489/]).

- [bpo-40020](https://bugs.python.org/issue?@action=redirect&bpo=40020) [https://bugs.python.org/issue?@action=redirect&bpo=40020]: Fix a leak and subsequent crash in `parsetok.c` caused by `realloc` misuse on a rare codepath.
- [bpo-39939](https://bugs.python.org/issue?@action=redirect&bpo=39939) [https://bugs.python.org/issue?@action=redirect&bpo=39939]: Added `str.removeprefix` and `str.removesuffix` methods and corresponding `bytes`, `bytearray`, and `collections.UserString` methods to remove affixes from a string if present. See [PEP 616](https://peps.python.org/pep-0616/) [https://peps.python.org/pep-0616/] for a full description. Patch by Dennis Sweeney.
- [bpo-39481](https://bugs.python.org/issue?@action=redirect&bpo=39481) [https://bugs.python.org/issue?@action=redirect&bpo=39481]: Implement PEP 585. This supports `list[int]`, `tuple[str, ...]` etc.
- [bpo-32894](https://bugs.python.org/issue?@action=redirect&bpo=32894) [https://bugs.python.org/issue?@action=redirect&bpo=32894]: Support unparsing of infinity numbers in postponed annotations. Patch by Batuhan Taşkaya.
- [bpo-37207](https://bugs.python.org/issue?@action=redirect&bpo=37207) [https://bugs.python.org/issue?@action=redirect&bpo=37207]: Speed up calls to `list()` by using the [PEP 590](https://peps.python.org/pep-0590/) [https://peps.python.org/pep-0590/] `vectorcall` calling convention. Patch by Mark Shannon.

## Library

- [bpo-40398](https://bugs.python.org/issue?@action=redirect&bpo=40398) [https://bugs.python.org/issue?@action=redirect&bpo=40398]: `typing.get_args()` now always returns an empty tuple for special generic aliases.
- [bpo-40396](https://bugs.python.org/issue?@action=redirect&bpo=40396) [https://bugs.python.org/issue?@action=redirect&bpo=40396]: Functions `typing.get_origin()`, `typing.get_args()` and `typing.get_type_hints()` support now generic aliases like `list[int]`.
- [bpo-38061](https://bugs.python.org/issue?@action=redirect&bpo=38061) [https://bugs.python.org/issue?@action=redirect&bpo=38061]: Optimize the `subprocess` module on FreeBSD using `closefrom()`. A single `close(fd)` syscall is cheap, but when `sysconf(_SC_OPEN_MAX)` is high, the loop calling `close(fd)` on each file descriptor can take several

milliseconds.

The workaround on FreeBSD to improve performance was to load and mount the `fdescfs` kernel module, but this is not enabled by default.

Initial patch by Ed Maste (emaste), Conrad Meyer (cem), Kyle Evans (kevans) and Kubilay Kocak (koobs): [https://bugs.freebsd.org/bugzilla/show\\_bug.cgi?id=242274](https://bugs.freebsd.org/bugzilla/show_bug.cgi?id=242274)

- [bpo-38061](https://bugs.python.org/issue?@action=redirect&bpo=38061) [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=38061)  
`@action=redirect&bpo=38061`]: On FreeBSD,  
`os.closerange(fd_low, fd_high)` now calls  
`closefrom(fd_low)` if `fd_high` is greater than or equal to  
`sysconf(_SC_OPEN_MAX)`.

Initial patch by Ed Maste (emaste), Conrad Meyer (cem), Kyle Evans (kevans) and Kubilay Kocak (koobs): [https://bugs.freebsd.org/bugzilla/show\\_bug.cgi?id=242274](https://bugs.freebsd.org/bugzilla/show_bug.cgi?id=242274)

- [bpo-40360](https://bugs.python.org/issue?@action=redirect&bpo=40360) [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=40360)  
`@action=redirect&bpo=40360`]: The `lib2to3` module is pending deprecation due to [PEP 617](https://peps.python.org/pep-0617/) [<https://peps.python.org/pep-0617/>].
- [bpo-40138](https://bugs.python.org/issue?@action=redirect&bpo=40138) [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=40138)  
`@action=redirect&bpo=40138`]: Fix the Windows implementation of `os.waitpid()` for exit code larger than `INT_MAX >> 8`. The exit status is now interpreted as an unsigned number.
- [bpo-39942](https://bugs.python.org/issue?@action=redirect&bpo=39942) [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=39942)  
`@action=redirect&bpo=39942`]: Set “`__main__`” as the default module name when “`__name__`” is missing in `typing.TypeVar`. Patch by Weipeng Hong.
- [bpo-40275](https://bugs.python.org/issue?@action=redirect&bpo=40275) [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=40275)  
`@action=redirect&bpo=40275`]: The `logging` package is now imported lazily in `unittest` only when the `assertLogs()` assertion is used.
- [bpo-40275](https://bugs.python.org/issue?@action=redirect&bpo=40275) [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=40275)  
`@action=redirect&bpo=40275`]: The `asyncio` package is now

imported lazily in `unittest` only when the `IsolatedAsyncioTestCase` class is used.

- [bpo-40330](https://bugs.python.org/issue?@action=redirect&bpo=40330) [https://bugs.python.org/issue?@action=redirect&bpo=40330]: In `ShareableList.__setitem__()`, check the size of a new string item after encoding it to utf-8, not before.
- [bpo-40148](https://bugs.python.org/issue?@action=redirect&bpo=40148) [https://bugs.python.org/issue?@action=redirect&bpo=40148]: Added `pathlib.Path.with_stem()` to create a new Path with the stem replaced.
- [bpo-40325](https://bugs.python.org/issue?@action=redirect&bpo=40325) [https://bugs.python.org/issue?@action=redirect&bpo=40325]: Deprecated support for set objects in `random.sample()`.
- [bpo-40257](https://bugs.python.org/issue?@action=redirect&bpo=40257) [https://bugs.python.org/issue?@action=redirect&bpo=40257]: Improved help for the `typing` module. Docstrings are now shown for all special forms and special generic aliases (like `Union` and `List`). Using `help()` with generic alias like `List[int]` will show the help for the correspondent concrete type (`list` in this case).
- [bpo-40257](https://bugs.python.org/issue?@action=redirect&bpo=40257) [https://bugs.python.org/issue?@action=redirect&bpo=40257]: func:`inspect.getdoc` no longer returns docstring inherited from the type of the object or from parent class if it is a class if it is not defined in the object itself. In `pydoc` the documentation string is now shown not only for class, function, method etc, but for any object that has its own `__doc__` attribute.
- [bpo-40287](https://bugs.python.org/issue?@action=redirect&bpo=40287) [https://bugs.python.org/issue?@action=redirect&bpo=40287]: Fixed `SpooledTemporaryFile.seek()` to return the position.
- [bpo-40290](https://bugs.python.org/issue?@action=redirect&bpo=40290) [https://bugs.python.org/issue?@action=redirect&bpo=40290]: Added `zscore()` to `statistics.NormalDist()`.
- [bpo-40282](https://bugs.python.org/issue?@action=redirect&bpo=40282) [https://bugs.python.org/issue?@action=redirect&bpo=40282]

@action=redirect&bpo=40282]: Allow `random.getrandbits(0)` to succeed and to return 0.

- [bpo-40286](https://bugs.python.org/issue?@action=redirect&bpo=40286) [https://bugs.python.org/issue?@action=redirect&bpo=40286]: Add `random.randbytes()` function and `random.Random.randbytes()` method to generate random bytes.
- [bpo-40277](https://bugs.python.org/issue?@action=redirect&bpo=40277) [https://bugs.python.org/issue?@action=redirect&bpo=40277]: `collections.namedtuple()` now provides a human-readable repr for its field accessors.
- [bpo-40270](https://bugs.python.org/issue?@action=redirect&bpo=40270) [https://bugs.python.org/issue?@action=redirect&bpo=40270]: The included copy of sqlite3 on Windows is now compiled with the json extension. This allows the use of functions such as `json_object`.
- [bpo-29255](https://bugs.python.org/issue?@action=redirect&bpo=29255) [https://bugs.python.org/issue?@action=redirect&bpo=29255]: Wait in `KqueueSelector.select` when no fds are registered
- [bpo-40260](https://bugs.python.org/issue?@action=redirect&bpo=40260) [https://bugs.python.org/issue?@action=redirect&bpo=40260]: Ensure `modulefinder` uses `io.open_code()` and respects coding comments.
- [bpo-40234](https://bugs.python.org/issue?@action=redirect&bpo=40234) [https://bugs.python.org/issue?@action=redirect&bpo=40234]: Allow again to spawn daemon threads in subinterpreters (revert change which denied them).
- [bpo-39207](https://bugs.python.org/issue?@action=redirect&bpo=39207) [https://bugs.python.org/issue?@action=redirect&bpo=39207]: Workers in `ProcessPoolExecutor` are now spawned on demand, only when there are no available idle workers to reuse. This optimizes startup overhead and reduces the amount of lost CPU time to idle workers. Patch by Kyle Stanley.
- [bpo-40091](https://bugs.python.org/issue?@action=redirect&bpo=40091) [https://bugs.python.org/issue?@action=redirect&bpo=40091]: Fix a hang at fork in the logging module: the new private `_at_fork_reinit()` method is now used to reinitialize locks at fork in the child process.

- [bpo-40149](https://bugs.python.org/issue?@action=redirect&bpo=40149) [https://bugs.python.org/issue?@action=redirect&bpo=40149]: Implement traverse and clear slots in `_abc._abc_data` type.
- [bpo-40208](https://bugs.python.org/issue?@action=redirect&bpo=40208) [https://bugs.python.org/issue?@action=redirect&bpo=40208]: Remove deprecated `symtable.SymbolTable.has_exec()`.
- [bpo-40196](https://bugs.python.org/issue?@action=redirect&bpo=40196) [https://bugs.python.org/issue?@action=redirect&bpo=40196]: Fix a bug in the `symtable` module that was causing incorrectly report global variables as local. Patch by Pablo Galindo.
- [bpo-40190](https://bugs.python.org/issue?@action=redirect&bpo=40190) [https://bugs.python.org/issue?@action=redirect&bpo=40190]: Add support for `_SC_AIX_REALMEM` to `posix.sysconf()`.
- [bpo-40182](https://bugs.python.org/issue?@action=redirect&bpo=40182) [https://bugs.python.org/issue?@action=redirect&bpo=40182]: Removed the `_field_types` attribute of the `typing.NamedTuple` class.
- [bpo-36517](https://bugs.python.org/issue?@action=redirect&bpo=36517) [https://bugs.python.org/issue?@action=redirect&bpo=36517]: Multiple inheritance with `typing.NamedTuple` now raises an error instead of silently ignoring other types.
- [bpo-40126](https://bugs.python.org/issue?@action=redirect&bpo=40126) [https://bugs.python.org/issue?@action=redirect&bpo=40126]: Fixed reverting multiple patches in `unittest.mock.Patcher`'s `__exit__()` is now never called if its `__enter__()` is failed. Returning true from `__exit__()` silences now the exception.
- [bpo-40094](https://bugs.python.org/issue?@action=redirect&bpo=40094) [https://bugs.python.org/issue?@action=redirect&bpo=40094]: `CGIHTTPRequestHandler` of `http.server` now logs the CGI script exit code, rather than the CGI script exit status of `os.waitpid()`. For example, if the script is killed by signal 11, it now logs: "CGI script exit code -11."
- [bpo-40108](https://bugs.python.org/issue?@action=redirect&bpo=40108) [https://bugs.python.org/issue?@action=redirect&bpo=40108]: Improve the error message when

trying to import a module using **runpy** and incorrently use the “.py” extension at the end of the module name. Patch by Pablo Galindo.

- [bpo-40094](https://bugs.python.org/issue?@action=redirect&bpo=40094) [https://bugs.python.org/issue?@action=redirect&bpo=40094]: Add **os.waitstatus\_to\_exitcode()** function: convert a wait status to an exit code.
- [bpo-40089](https://bugs.python.org/issue?@action=redirect&bpo=40089) [https://bugs.python.org/issue?@action=redirect&bpo=40089]: Fix **threading.\_after\_fork()**: if **fork** was not called by a thread spawned by **threading.Thread**, **threading.\_after\_fork()** now creates a **\_MainThread** instance for **\_main\_thread**, instead of a **\_DummyThread** instance.
- [bpo-40089](https://bugs.python.org/issue?@action=redirect&bpo=40089) [https://bugs.python.org/issue?@action=redirect&bpo=40089]: Add a private **\_at\_fork\_reinit()** method to **\_thread.Lock**, **\_thread.RLock**, **threading.RLock** and **threading.Condition** classes: reinitialize the lock at **fork** in the child process, reset the lock to the unlocked state. Rename also the private **\_reset\_internal\_locks()** method of **threading.Event** to **\_at\_fork\_reinit()**.
- [bpo-25780](https://bugs.python.org/issue?@action=redirect&bpo=25780) [https://bugs.python.org/issue?@action=redirect&bpo=25780]: Expose **CAN\_RAW\_JOIN\_FILTERS** in the **socket** module.
- [bpo-39503](https://bugs.python.org/issue?@action=redirect&bpo=39503) [https://bugs.python.org/issue?@action=redirect&bpo=39503]: **AbstractBasicAuthHandler** of **urllib.request** now parses all WWW-Authenticate HTTP headers and accepts multiple challenges per header: use the realm of the first Basic challenge.
- [bpo-39812](https://bugs.python.org/issue?@action=redirect&bpo=39812) [https://bugs.python.org/issue?@action=redirect&bpo=39812]: Removed daemon threads from **concurrent.futures** by adding an internal **threading.\_register\_atexit()**, which calls registered functions prior to joining all non-daemon threads. This allows for compatibility with subinterpreters, which don't support daemon threads.

- [bpo-40050](https://bugs.python.org/issue?@action=redirect&bpo=40050) [https://bugs.python.org/issue?@action=redirect&bpo=40050]: Fix `importlib._bootstrap_external`: avoid creating a new `winreg` builtin module if it's already available in `sys.modules`, and remove redundant imports.
- [bpo-40014](https://bugs.python.org/issue?@action=redirect&bpo=40014) [https://bugs.python.org/issue?@action=redirect&bpo=40014]: Fix `os.getgrouplist()`: if `getgrouplist()` function fails because the group list is too small, retry with a larger group list. On failure, the glibc implementation of `getgrouplist()` sets `ngroups` to the total number of groups. For other implementations, double the group list size.
- [bpo-40017](https://bugs.python.org/issue?@action=redirect&bpo=40017) [https://bugs.python.org/issue?@action=redirect&bpo=40017]: Add `time.CLOCK_TAI` constant if the operating system support it.
- [bpo-40016](https://bugs.python.org/issue?@action=redirect&bpo=40016) [https://bugs.python.org/issue?@action=redirect&bpo=40016]: In re docstring, clarify the relationship between inline and argument compile flags.
- [bpo-39953](https://bugs.python.org/issue?@action=redirect&bpo=39953) [https://bugs.python.org/issue?@action=redirect&bpo=39953]: Update internal table of OpenSSL error codes in the `ssl` module.
- [bpo-36144](https://bugs.python.org/issue?@action=redirect&bpo=36144) [https://bugs.python.org/issue?@action=redirect&bpo=36144]: Added [PEP 584](https://peps.python.org/pep-0584/) [https://peps.python.org/pep-0584/] operators to `weakref.WeakValueDictionary`.
- [bpo-36144](https://bugs.python.org/issue?@action=redirect&bpo=36144) [https://bugs.python.org/issue?@action=redirect&bpo=36144]: Added [PEP 584](https://peps.python.org/pep-0584/) [https://peps.python.org/pep-0584/] operators to `weakref.WeakKeyDictionary`.
- [bpo-38891](https://bugs.python.org/issue?@action=redirect&bpo=38891) [https://bugs.python.org/issue?@action=redirect&bpo=38891]: Fix linear runtime behaviour of the `__getitem__` and `__setitem__` methods in `multiprocessing.shared_memory.ShareableList`. This avoids quadratic performance when iterating a

## **ShareableList**. Patch by Thomas Krennwallner.

- [bpo-39682](https://bugs.python.org/issue?@action=redirect&bpo=39682) [https://bugs.python.org/issue?@action=redirect&bpo=39682]: Remove undocumented support for *closing* a `pathlib.Path` object via its context manager. The context manager magic methods remain, but they are now a no-op, making `Path` objects immutable.
- [bpo-36144](https://bugs.python.org/issue?@action=redirect&bpo=36144) [https://bugs.python.org/issue?@action=redirect&bpo=36144]: Added [PEP 584](https://peps.python.org/pep-0584/) [https://peps.python.org/pep-0584/] operators (`|` and `|=`) to `collections.ChainMap`.
- [bpo-39011](https://bugs.python.org/issue?@action=redirect&bpo=39011) [https://bugs.python.org/issue?@action=redirect&bpo=39011]: Normalization of line endings in `ElementTree` attributes was removed, as line endings which were replaced by entity numbers should be preserved in original form.
- [bpo-38410](https://bugs.python.org/issue?@action=redirect&bpo=38410) [https://bugs.python.org/issue?@action=redirect&bpo=38410]: Properly handle `sys.audit()` failures in `sys.set_asyncgen_hooks()`.
- [bpo-36541](https://bugs.python.org/issue?@action=redirect&bpo=36541) [https://bugs.python.org/issue?@action=redirect&bpo=36541]: `lib2to3` now recognizes named assignment expressions (the walrus operator, `:=`)
- [bpo-35967](https://bugs.python.org/issue?@action=redirect&bpo=35967) [https://bugs.python.org/issue?@action=redirect&bpo=35967]: In platform, delay the invocation of `'uname -p'` until the processor attribute is requested.
- [bpo-35113](https://bugs.python.org/issue?@action=redirect&bpo=35113) [https://bugs.python.org/issue?@action=redirect&bpo=35113]: `inspect.getsource()` now returns correct source code for inner class with same name as module level class. Decorators are also returned as part of source of the class. Patch by Karthikeyan Singaravelan.
- [bpo-33262](https://bugs.python.org/issue?@action=redirect&bpo=33262) [https://bugs.python.org/issue?@action=redirect&bpo=33262]: Deprecate passing `None` as an argument for `shlex.split()`'s `s` parameter. Patch by Zackery Spytz.

- [bpo-31758](https://bugs.python.org/issue?@action=redirect&bpo=31758) [https://bugs.python.org/issue?@action=redirect&bpo=31758]: Prevent crashes when using an uninitialized `_elementtree.XMLParser` object. Patch by Oren Milman.

## Documentation

- [bpo-27635](https://bugs.python.org/issue?@action=redirect&bpo=27635) [https://bugs.python.org/issue?@action=redirect&bpo=27635]: The pickle documentation incorrectly claimed that `__new__` isn't called by default when unpickling.
- [bpo-39879](https://bugs.python.org/issue?@action=redirect&bpo=39879) [https://bugs.python.org/issue?@action=redirect&bpo=39879]: Updated [Data model](#) docs to include [dict\(\)](#) insertion order preservation. Patch by Furkan Onder and Samy Lahfa.
- [bpo-38387](https://bugs.python.org/issue?@action=redirect&bpo=38387) [https://bugs.python.org/issue?@action=redirect&bpo=38387]: Document [PyDoc\\_STRVAR](#) macro in the C-API reference.
- [bpo-13743](https://bugs.python.org/issue?@action=redirect&bpo=13743) [https://bugs.python.org/issue?@action=redirect&bpo=13743]: Some methods within `xml.dom.minidom.Element` class are now better documented.

## Tests

- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Set expected default encoding in `test_c_locale_coercion.py` for VxWorks RTOS.
- [bpo-40162](https://bugs.python.org/issue?@action=redirect&bpo=40162) [https://bugs.python.org/issue?@action=redirect&bpo=40162]: Update Travis CI configuration to OpenSSL 1.1.1f.
- [bpo-40146](https://bugs.python.org/issue?@action=redirect&bpo=40146) [https://bugs.python.org/issue?@action=redirect&bpo=40146]: Update OpenSSL to 1.1.1f in Azure Pipelines.
- [bpo-40094](https://bugs.python.org/issue?@action=redirect&bpo=40094) [https://bugs.python.org/issue?@action=redirect&bpo=40094]: Add [test.support.wait\\_process\(\)](#) function.
- [bpo-40003](https://bugs.python.org/issue?@action=redirect&bpo=40003) [https://bugs.python.org/issue?@action=redirect&bpo=40003]: `test.bisect_cmd` now copies Python command line options like `-O` or `-W`. Moreover, emit a warning if `test.bisect_cmd` is used with `-w/--`

verbose2 option.

- [bpo-39380](https://bugs.python.org/issue?@action=redirect&bpo=39380) [https://bugs.python.org/issue?@action=redirect&bpo=39380]: Add the encoding in **ftplib.FTP** and **ftplib.FTP\_TLS** to the constructor as keyword-only and change the default from `latin-1` to `utf-8` to follow [RFC 2640](https://datatracker.ietf.org/doc/html/rfc2640) [https://datatracker.ietf.org/doc/html/rfc2640.html].
- [bpo-39793](https://bugs.python.org/issue?@action=redirect&bpo=39793) [https://bugs.python.org/issue?@action=redirect&bpo=39793]: Use the same domain when testing `make_msgid`. Patch by Batuhan Taskaya.
- [bpo-1812](https://bugs.python.org/issue?@action=redirect&bpo=1812) [https://bugs.python.org/issue?@action=redirect&bpo=1812]: Fix newline handling in `doctest.testfile` when loading from a package whose loader has a `get_data` method. Patch by Peter Donis.

## Build

- [bpo-38360](https://bugs.python.org/issue?@action=redirect&bpo=38360) [https://bugs.python.org/issue?@action=redirect&bpo=38360]: Support single-argument form of `macOS -isysroot` flag.
- [bpo-40158](https://bugs.python.org/issue?@action=redirect&bpo=40158) [https://bugs.python.org/issue?@action=redirect&bpo=40158]: Fix CPython MSBuild Properties in NuGet Package (`build/native/python.props`)
- [bpo-38527](https://bugs.python.org/issue?@action=redirect&bpo=38527) [https://bugs.python.org/issue?@action=redirect&bpo=38527]: Fix configure check on Solaris for “float word ordering”: sometimes, the correct “grep” command was not being used. Patch by Arnon Yaari.

## Windows

- [bpo-40164](https://bugs.python.org/issue?@action=redirect&bpo=40164) [https://bugs.python.org/issue?@action=redirect&bpo=40164]: Updates Windows to OpenSSL 1.1.1f
- [bpo-8901](https://bugs.python.org/issue?@action=redirect&bpo=8901) [https://bugs.python.org/issue?@action=redirect&bpo=8901]: Ignore the Windows registry when the `-E` option is used.

## macOS

- [bpo-38329](https://bugs.python.org/issue?@action=redirect&bpo=38329) [https://bugs.python.org/issue?@action=redirect&bpo=38329]: `python.org` macOS installers now

update the Current version symlink of /Library/Frameworks/Python.framework/Versions for 3.9 installs. Previously, Current was only updated for Python 2.x installs. This should make it easier to embed Python 3 into other macOS applications.

- [bpo-40164](https://bugs.python.org/issue?@action=redirect&bpo=40164) [https://bugs.python.org/issue?@action=redirect&bpo=40164]: Update macOS installer builds to use OpenSSL 1.1.1g.

## IDLE

- [bpo-38439](https://bugs.python.org/issue?@action=redirect&bpo=38439) [https://bugs.python.org/issue?@action=redirect&bpo=38439]: Add a 256 × 256 pixel IDLE icon to support more modern environments. Created by Andrew Clover. Delete the unused macOS idle.icns icon file.
- [bpo-38689](https://bugs.python.org/issue?@action=redirect&bpo=38689) [https://bugs.python.org/issue?@action=redirect&bpo=38689]: IDLE will no longer freeze when inspect.signature fails when fetching a calltip.

## Tools/Demos

- [bpo-40385](https://bugs.python.org/issue?@action=redirect&bpo=40385) [https://bugs.python.org/issue?@action=redirect&bpo=40385]: Removed the checkpyc.py tool. Please see compileall without force mode as a potential alternative.
- [bpo-40179](https://bugs.python.org/issue?@action=redirect&bpo=40179) [https://bugs.python.org/issue?@action=redirect&bpo=40179]: Fixed translation of `#elif` in Argument Clinic.
- [bpo-40094](https://bugs.python.org/issue?@action=redirect&bpo=40094) [https://bugs.python.org/issue?@action=redirect&bpo=40094]: Fix `which.py` script exit code: it now uses `os.waitstatus_to_exitcode()` to convert `os.system()` exit status into an exit code.

## C API

- [bpo-40241](https://bugs.python.org/issue?@action=redirect&bpo=40241) [https://bugs.python.org/issue?@action=redirect&bpo=40241]: Move the `PyGC_Head` structure to the internal C API.
- [bpo-40170](https://bugs.python.org/issue?@action=redirect&bpo=40170) [https://bugs.python.org/issue?@action=redirect&bpo=40170]: Convert `PyObject_IS_GC()`

macro to a function to hide implementation details.

- [bpo-40241](https://bugs.python.org/issue?@action=redirect&bpo=40241) [https://bugs.python.org/issue?@action=redirect&bpo=40241]: Add the functions `PyObject_GC_IsTracked()` and `PyObject_GC_IsFinalized()` to the public API to allow to query if Python objects are being currently tracked or have been already finalized by the garbage collector respectively. Patch by Pablo Galindo.
- [bpo-40170](https://bugs.python.org/issue?@action=redirect&bpo=40170) [https://bugs.python.org/issue?@action=redirect&bpo=40170]: The `PyObject_NEW()` macro becomes an alias to the `PyObject_New()` macro, and the `PyObject_NEW_VAR()` macro becomes an alias to the `PyObject_NewVar()` macro, to hide implementation details. They no longer access directly the `PyTypeObject.tp_basicsize` member.
- [bpo-40170](https://bugs.python.org/issue?@action=redirect&bpo=40170) [https://bugs.python.org/issue?@action=redirect&bpo=40170]: `PyType_HasFeature()` now always calls `PyType_GetFlags()` to hide implementation details. Previously, it accessed directly the `PyTypeObject.tp_flags` member when the limited C API was not used.
- [bpo-40170](https://bugs.python.org/issue?@action=redirect&bpo=40170) [https://bugs.python.org/issue?@action=redirect&bpo=40170]: Convert the `PyObject_GET_WEAKREFS_LISTPTR()` macro to a function to hide implementation details: the macro accessed directly to the `PyTypeObject.tp_weaklistoffset` member.
- [bpo-40170](https://bugs.python.org/issue?@action=redirect&bpo=40170) [https://bugs.python.org/issue?@action=redirect&bpo=40170]: Convert `PyObject_CheckBuffer()` macro to a function to hide implementation details: the macro accessed directly the `PyTypeObject.tp_as_buffer` member.
- [bpo-40170](https://bugs.python.org/issue?@action=redirect&bpo=40170) [https://bugs.python.org/issue?@action=redirect&bpo=40170]: Always declare `PyIndex_Check()` as an opaque function to hide implementation details: remove `PyIndex_Check()` macro. The macro accessed directly the `PyTypeObject.tp_as_number` member.
- [bpo-39947](https://bugs.python.org/issue?@action=redirect&bpo=39947) [https://bugs.python.org/issue?@action=redirect&bpo=39947]: Add `PyThreadState_GetID()` function: get the unique identifier of a Python thread state.

# Python 3.9.0 alpha 5

*Release date: 2020-03-23*

## Security

- [bpo-38576](https://bugs.python.org/issue?@action=redirect&bpo=38576) [https://bugs.python.org/issue?@action=redirect&bpo=38576]: Disallow control characters in hostnames in `http.client`, addressing CVE-2019-18348. Such potentially malicious header injection URLs now cause a `InvalidURL` to be raised.

## Core and Builtins

- [bpo-40010](https://bugs.python.org/issue?@action=redirect&bpo=40010) [https://bugs.python.org/issue?@action=redirect&bpo=40010]: Optimize pending calls in multithreaded applications. If a thread different than the main thread schedules a pending call (`Py_AddPendingCall()`), the bytecode evaluation loop is no longer interrupted at each bytecode instruction to check for pending calls which cannot be executed. Only the main thread can execute pending calls.

Previously, the bytecode evaluation loop was interrupted at each instruction until the main thread executes pending calls.

- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_weakref` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_collections` module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-40010](https://bugs.python.org/issue?@action=redirect&bpo=40010) [https://bugs.python.org/issue?@action=redirect&bpo=40010]: Optimize signal handling in multithreaded applications. If a thread different than the main thread gets a signal, the bytecode evaluation loop is no

longer interrupted at each bytecode instruction to check for pending signals which cannot be handled. Only the main thread of the main interpreter can handle signals.

Previously, the bytecode evaluation loop was interrupted at each instruction until the main thread handles signals.

- [bpo-39984](https://bugs.python.org/issue?@action=redirect&bpo=39984) [https://bugs.python.org/issue?@action=redirect&bpo=39984]: If `Py_AddPendingCall()` is called in a subinterpreter, the function is now scheduled to be called from the subinterpreter, rather than being called from the main interpreter. Each subinterpreter now has its own list of scheduled calls.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_heapq` module to multiphase initialization.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `itertools` module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-37207](https://bugs.python.org/issue?@action=redirect&bpo=37207) [https://bugs.python.org/issue?@action=redirect&bpo=37207]: Speed up calls to `frozenset()` by using the [PEP 590](https://peps.python.org/pep-0590/) [https://peps.python.org/pep-0590/] `vectorcall` calling convention. Patch by Donghee Na.
- [bpo-39984](https://bugs.python.org/issue?@action=redirect&bpo=39984) [https://bugs.python.org/issue?@action=redirect&bpo=39984]: subinterpreters: Move `_PyRuntimeState.ceval.tracing_possible` to `PyInterpreterState.ceval.tracing_possible`: each interpreter now has its own variable.
- [bpo-37207](https://bugs.python.org/issue?@action=redirect&bpo=37207) [https://bugs.python.org/issue?@action=redirect&bpo=37207]: Speed up calls to `set()` by using the [PEP 590](https://peps.python.org/pep-0590/) [https://peps.python.org/pep-0590/] `vectorcall` calling convention. Patch by Donghee Na.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_statistics` module to

multiphase initialization (**PEP 489** [<https://peps.python.org/pep-0489/>]).

- **bpo-39968** [<https://bugs.python.org/issue?@action=redirect&bpo=39968>]: Use inline function to replace extension modules' `get_module_state` macros.
- **bpo-39965** [<https://bugs.python.org/issue?@action=redirect&bpo=39965>]: Correctly raise `SyntaxError` if *await* is used inside non-async functions and `PyCF_ALLOW_TOP_LEVEL_AWAIT` is set (like in the `asyncio` REPL). Patch by Pablo Galindo.
- **bpo-39562** [<https://bugs.python.org/issue?@action=redirect&bpo=39562>]: Allow executing asynchronous comprehensions on the top level when the `PyCF_ALLOW_TOP_LEVEL_AWAIT` flag is given. Patch by Batuhan Taskaya.
- **bpo-37207** [<https://bugs.python.org/issue?@action=redirect&bpo=37207>]: Speed up calls to `tuple()` by using the **PEP 590** [<https://peps.python.org/pep-0590/>] `vectorcall` calling convention. Patch by Donghee Na.
- **bpo-38373** [<https://bugs.python.org/issue?@action=redirect&bpo=38373>]: Changed list overallocation strategy. It no longer overallocates if the new size is closer to overallocated size than to the old size and adds padding.
- **bpo-39926** [<https://bugs.python.org/issue?@action=redirect&bpo=39926>]: Update Unicode database to Unicode version 13.0.0.
- **bpo-19466** [<https://bugs.python.org/issue?@action=redirect&bpo=19466>]: Clear the frames of daemon threads earlier during the Python shutdown to call objects destructors. So “unclosed file” resource warnings are now emitted for daemon threads in a more reliable way.
- **bpo-38894** [<https://bugs.python.org/issue?@action=redirect&bpo=38894>]: Fix a bug that was causing

incomplete results when calling `pathlib.Path.glob` in the presence of symlinks that point to files where the user does not have read access. Patch by Pablo Galindo and Matt Wozniski.

- [bpo-39877](https://bugs.python.org/issue?@action=redirect&bpo=39877) [https://bugs.python.org/issue?@action=redirect&bpo=39877]: Fix `PyEval_RestoreThread()` random crash at exit with daemon threads. It now accesses the `_PyRuntime` variable directly instead of using `tstate->interp->runtime`, since `tstate` can be a dangling pointer after `Py_Finalize()` has been called. Moreover, the daemon thread now exits before trying to take the GIL.
- [bpo-39871](https://bugs.python.org/issue?@action=redirect&bpo=39871) [https://bugs.python.org/issue?@action=redirect&bpo=39871]: Fix a possible `SystemError` in `math.{atan2, copysign, remainder}()` when the first argument cannot be converted to a `float`. Patch by Zackery Spytz.
- [bpo-39776](https://bugs.python.org/issue?@action=redirect&bpo=39776) [https://bugs.python.org/issue?@action=redirect&bpo=39776]: Fix race condition where threads created by `PyGILState_Ensure()` could get a duplicate id.

This affects consumers of `tstate->id` like the contextvar caching machinery, which could return invalid cached objects under heavy thread load (observed in embedded scenarios).

- [bpo-39778](https://bugs.python.org/issue?@action=redirect&bpo=39778) [https://bugs.python.org/issue?@action=redirect&bpo=39778]: Fixed a crash due to incorrect handling of weak references in `collections.OrderedDict` classes. Patch by Pablo Galindo.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port audioop extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-39702](https://bugs.python.org/issue?@action=redirect&bpo=39702) [https://bugs.python.org/issue?@action=redirect&bpo=39702]: Relax `decorator` grammar restrictions to allow any valid expression ([PEP 614](https://peps.python.org/pep-614/) [https://

[peps.python.org/pep-0614/](https://peps.python.org/pep-0614/)).

- [bpo-38091](https://bugs.python.org/issue?@action=redirect&bpo=38091) [https://bugs.python.org/issue?@action=redirect&bpo=38091]: Tweak import deadlock detection code to not deadlock itself.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_locale` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-39087](https://bugs.python.org/issue?@action=redirect&bpo=39087) [https://bugs.python.org/issue?@action=redirect&bpo=39087]: Optimize `PyUnicode_AsUTF8()` and `PyUnicode_AsUTF8AndSize()` slightly when they need to create internal UTF-8 cache.
- [bpo-39520](https://bugs.python.org/issue?@action=redirect&bpo=39520) [https://bugs.python.org/issue?@action=redirect&bpo=39520]: Fix unparsing of ext slices with no items (`f○○[: , ]`). Patch by Batuhan Taskaya.
- [bpo-39220](https://bugs.python.org/issue?@action=redirect&bpo=39220) [https://bugs.python.org/issue?@action=redirect&bpo=39220]: Do not optimize annotations if ‘from `_future_` import annotations’ is used. Patch by Pablo Galindo.
- [bpo-35712](https://bugs.python.org/issue?@action=redirect&bpo=35712) [https://bugs.python.org/issue?@action=redirect&bpo=35712]: Using `NotImplemented` in a boolean context has been deprecated. Patch contributed by Josh Rosenberg.
- [bpo-22490](https://bugs.python.org/issue?@action=redirect&bpo=22490) [https://bugs.python.org/issue?@action=redirect&bpo=22490]: Don’t leak environment variable `__PYENVN__LAUNCHER__` into the interpreter session on macOS.

## Library

- [bpo-39830](https://bugs.python.org/issue?@action=redirect&bpo=39830) [https://bugs.python.org/issue?@action=redirect&bpo=39830]: Add `zipfile.Path` to `__all__` in the `zipfile` module.

- [bpo-40000](https://bugs.python.org/issue?@action=redirect&bpo=40000) [https://bugs.python.org/issue?@action=redirect&bpo=40000]: Improved error messages for validation of `ast.Constant` nodes. Patch by Batuhan Taskaya.
- [bpo-39999](https://bugs.python.org/issue?@action=redirect&bpo=39999) [https://bugs.python.org/issue?@action=redirect&bpo=39999]: `__module__` of the AST node classes is now set to “ast” instead of “\_ast”. Added docstrings for dummy AST node classes and deprecated attributes.
- [bpo-39991](https://bugs.python.org/issue?@action=redirect&bpo=39991) [https://bugs.python.org/issue?@action=redirect&bpo=39991]: `uuid.getnode()` now skips IPv6 addresses with the same string length than a MAC address (17 characters): only use MAC addresses.
- [bpo-39988](https://bugs.python.org/issue?@action=redirect&bpo=39988) [https://bugs.python.org/issue?@action=redirect&bpo=39988]: Deprecated `ast.AugLoad` and `ast.AugStore` node classes because they are no longer used.
- [bpo-39656](https://bugs.python.org/issue?@action=redirect&bpo=39656) [https://bugs.python.org/issue?@action=redirect&bpo=39656]: Ensure `bin/python3.#` is always present in virtual environments on POSIX platforms - by Anthony Sottile.
- [bpo-39969](https://bugs.python.org/issue?@action=redirect&bpo=39969) [https://bugs.python.org/issue?@action=redirect&bpo=39969]: Deprecated `ast.Param` node class because it's no longer used. Patch by Batuhan Taskaya.
- [bpo-39360](https://bugs.python.org/issue?@action=redirect&bpo=39360) [https://bugs.python.org/issue?@action=redirect&bpo=39360]: Ensure all workers exit when finalizing a `multiprocessing.Pool` implicitly via the module finalization handlers of multiprocessing. This fixes a deadlock situation that can be experienced when the Pool is not properly finalized via the context manager or a call to `multiprocessing.Pool.terminate`. Patch by Batuhan Taskaya and Pablo Galindo.
- [bpo-35370](https://bugs.python.org/issue?@action=redirect&bpo=35370) [https://bugs.python.org/issue?@action=redirect&bpo=35370]: `sys.settrace()`, `sys.setprofile()` and `_lsprof.Profiler.enable()` now properly report `PySys_Audit()` error if “sys.setprofile” or “sys.settrace” audit event is denied.
- [bpo-39936](https://bugs.python.org/issue?@action=redirect&bpo=39936) [https://bugs.python.org/issue?@action=redirect&bpo=39936]: AIX: Fix `_aix_support` module when the subprocess is not available, when building Python from scratch. It now uses new private `_bootsubprocess`

module, rather than having two implementations depending if subprocess is available or not. So `_aix_support.aix_platform()` result is now the same if subprocess is available or not.

- [bpo-36144](https://bugs.python.org/issue?@action=redirect&bpo=36144) [https://bugs.python.org/issue?@action=redirect&bpo=36144]: `collections.OrderedDict` now implements `|` and `|=` ([PEP 584](https://peps.python.org/pep-0584/) [https://peps.python.org/pep-0584/]).
- [bpo-39652](https://bugs.python.org/issue?@action=redirect&bpo=39652) [https://bugs.python.org/issue?@action=redirect&bpo=39652]: The column name found in `sqlite3.Cursor.description` is now truncated on the first '[' only if the `PARSE_COLNAMES` option is set.
- [bpo-39915](https://bugs.python.org/issue?@action=redirect&bpo=39915) [https://bugs.python.org/issue?@action=redirect&bpo=39915]: Ensure `unittest.mock.AsyncMock.await_args_list` has call objects in the order of awaited arguments instead of using `unittest.mock.Mock.call_args` which has the last value of the call. Patch by Karthikeyan Singaravelan.
- [bpo-36144](https://bugs.python.org/issue?@action=redirect&bpo=36144) [https://bugs.python.org/issue?@action=redirect&bpo=36144]: Updated `os.environ` and `os.environb` to support [PEP 584](https://peps.python.org/pep-0584/) [https://peps.python.org/pep-0584/]’s merge (`|`) and update (`|=`) operators.
- [bpo-38662](https://bugs.python.org/issue?@action=redirect&bpo=38662) [https://bugs.python.org/issue?@action=redirect&bpo=38662]: The `ensurepip` module now invokes `pip` via the `runpy` module. Hence it is no longer tightly coupled with the internal API of the bundled `pip` version, allowing easier updates to a newer `pip` version both internally and for distributors.
- [bpo-38075](https://bugs.python.org/issue?@action=redirect&bpo=38075) [https://bugs.python.org/issue?@action=redirect&bpo=38075]: Fix the `random.Random.seed()` method when a `bool` is passed as the seed.
- [bpo-39916](https://bugs.python.org/issue?@action=redirect&bpo=39916) [https://bugs.python.org/issue?@action=redirect&bpo=39916]: More reliable use of `os.scandir()` in `Path.glob()`. It no longer emits a `ResourceWarning` when interrupted.
- [bpo-39850](https://bugs.python.org/issue?@action=redirect&bpo=39850) [https://bugs.python.org/issue?@action=redirect&bpo=39850]: `multiprocessing` now supports abstract socket addresses (if abstract sockets are supported in the running platform). When creating arbitrary

addresses (like when default-constructing `multiprocessing.connection.Listener` objects) abstract sockets are preferred to avoid the case when the temporary-file-generated address is too large for an AF\_UNIX socket address. Patch by Pablo Galindo.

- [bpo-36287](https://bugs.python.org/issue?@action=redirect&bpo=36287) [https://bugs.python.org/issue?@action=redirect&bpo=36287]: `ast.dump()` no longer outputs optional fields and attributes with default values. The default values for optional fields and attributes of AST nodes are now set as class attributes (e.g. `Constant.kind` is set to `None`).
- [bpo-39889](https://bugs.python.org/issue?@action=redirect&bpo=39889) [https://bugs.python.org/issue?@action=redirect&bpo=39889]: Fixed `ast.unparse()` for extended slices containing a single element (e.g. `a[i:j, ]`). Remove redundant tuples when index with a tuple (e.g. `a[i, j]`).
- [bpo-39828](https://bugs.python.org/issue?@action=redirect&bpo=39828) [https://bugs.python.org/issue?@action=redirect&bpo=39828]: Fix `json.tool` to catch `BrokenPipeError`. Patch by Donghee Na.
- [bpo-13487](https://bugs.python.org/issue?@action=redirect&bpo=13487) [https://bugs.python.org/issue?@action=redirect&bpo=13487]: Avoid a possible “*RuntimeError: dictionary changed size during iteration*” from `inspect.getmodule()` when it tried to loop through `sys.modules`.
- [bpo-39674](https://bugs.python.org/issue?@action=redirect&bpo=39674) [https://bugs.python.org/issue?@action=redirect&bpo=39674]: Revert “[bpo-37330](https://bugs.python.org/issue?@action=redirect&bpo=37330) [https://bugs.python.org/issue?@action=redirect&bpo=37330]: `open()` no longer accept ‘U’ in file mode”. The “U” mode of `open()` is kept in Python 3.9 to ease transition from Python 2.7, but will be removed in Python 3.10.
- [bpo-28577](https://bugs.python.org/issue?@action=redirect&bpo=28577) [https://bugs.python.org/issue?@action=redirect&bpo=28577]: The `hosts` method on 32-bit prefix length `IPv4Networks` and 128-bit prefix `IPv6Networks` now returns a list containing the single Address instead of an empty list.
- [bpo-39826](https://bugs.python.org/issue?@action=redirect&bpo=39826) [https://bugs.python.org/issue?@action=redirect&bpo=39826]: Add `getConnection` method to logging `HTTPHandler` to enable custom connections.
- [bpo-39763](https://bugs.python.org/issue?@action=redirect&bpo=39763) [https://bugs.python.org/issue?@action=redirect&bpo=39763]: Reimplement `distutils.spawn.spawn` function with the `subprocess`

module.

- [bpo-39794](https://bugs.python.org/issue?@action=redirect&bpo=39794) [https://bugs.python.org/issue?@action=redirect&bpo=39794]: Add `-without-decimal-contextvar` build option. This enables a thread-local rather than a coroutine local context.
- [bpo-36144](https://bugs.python.org/issue?@action=redirect&bpo=36144) [https://bugs.python.org/issue?@action=redirect&bpo=36144]: `collections.defaultdict` now implements `|` (PEP 584 [https://peps.python.org/pep-0584/]).
- [bpo-39517](https://bugs.python.org/issue?@action=redirect&bpo=39517) [https://bugs.python.org/issue?@action=redirect&bpo=39517]: Fix `runpy.run_path()` when using pathlike objects
- [bpo-39775](https://bugs.python.org/issue?@action=redirect&bpo=39775) [https://bugs.python.org/issue?@action=redirect&bpo=39775]: Change `inspect.Signature.parameters` back to `collections.OrderedDict`. This was changed to `dict` in Python 3.9.0a4.
- [bpo-39678](https://bugs.python.org/issue?@action=redirect&bpo=39678) [https://bugs.python.org/issue?@action=redirect&bpo=39678]: Refactor `queue_manager` in `concurrent.futures.ProcessPoolExecutor` to make it easier to maintain.
- [bpo-39764](https://bugs.python.org/issue?@action=redirect&bpo=39764) [https://bugs.python.org/issue?@action=redirect&bpo=39764]: Fix `AttributeError` when calling `get_stack` on a `PyAsyncGenObject` Task
- [bpo-39769](https://bugs.python.org/issue?@action=redirect&bpo=39769) [https://bugs.python.org/issue?@action=redirect&bpo=39769]: The `compileall.compile_dir()` function's `ddir` parameter and the `compileall` command line flag `-d` no longer write the wrong pathname to the generated pyc file for submodules beneath the root of the directory tree being compiled. This fixes a regression introduced with Python 3.5.
- [bpo-36144](https://bugs.python.org/issue?@action=redirect&bpo=36144) [https://bugs.python.org/issue?@action=redirect&bpo=36144]: `types.MappingProxyType` objects now support the `merge (|)` operator from PEP 584 [https://peps.python.org/pep-0584/].
- [bpo-38691](https://bugs.python.org/issue?@action=redirect&bpo=38691) [https://bugs.python.org/issue?@action=redirect&bpo=38691]: The `importlib` module now ignores the `PYTHONCASEOK` environment variable when the `-E` or `-I` command line options are being used.
- [bpo-39719](https://bugs.python.org/issue?@action=redirect&bpo=39719) [https://bugs.python.org/issue?@action=redirect&bpo=39719]: Remove

`tempfile.SpooledTemporaryFile.softspace()` as files no longer have the `softspace` attribute in Python 3. Patch by Shantanu.

- [bpo-39667](https://bugs.python.org/issue?@action=redirect&bpo=39667) [https://bugs.python.org/issue?@action=redirect&bpo=39667]: Improve `pathlib.Path` compatibility on `zipfile.Path` and correct performance degradation as found in `zipp 3.0`.
- [bpo-39638](https://bugs.python.org/issue?@action=redirect&bpo=39638) [https://bugs.python.org/issue?@action=redirect&bpo=39638]: Keep ASDL signatures in the docstrings for AST nodes. Patch by Batuhan Taskaya
- [bpo-39639](https://bugs.python.org/issue?@action=redirect&bpo=39639) [https://bugs.python.org/issue?@action=redirect&bpo=39639]: Deprecated `ast.Suite` node class because it's no longer used. Patch by Batuhan Taskaya.
- [bpo-39609](https://bugs.python.org/issue?@action=redirect&bpo=39609) [https://bugs.python.org/issue?@action=redirect&bpo=39609]: Add `thread_name_prefix` to default `asyncio` executor
- [bpo-39548](https://bugs.python.org/issue?@action=redirect&bpo=39548) [https://bugs.python.org/issue?@action=redirect&bpo=39548]: Fix handling of header in `urllib.request.AbstractDigestAuthHandler` when the optional `qop` parameter is not present.
- [bpo-39509](https://bugs.python.org/issue?@action=redirect&bpo=39509) [https://bugs.python.org/issue?@action=redirect&bpo=39509]: HTTP status codes `103` `EARLY_HINTS` and `425` `TOO_EARLY` are added to `http.HTTPStatus`. Patch by Donghee Na.
- [bpo-39507](https://bugs.python.org/issue?@action=redirect&bpo=39507) [https://bugs.python.org/issue?@action=redirect&bpo=39507]: Adding HTTP status `418` “I’m a Teapot” to `HTTPStatus` in `http` library. Patch by Ross Rhodes.
- [bpo-39495](https://bugs.python.org/issue?@action=redirect&bpo=39495) [https://bugs.python.org/issue?@action=redirect&bpo=39495]: Remove default value from `attrs` parameter of `xml.etree.ElementTree.TreeBuilder.start()` for consistency between Python and C implementations.
- [bpo-38971](https://bugs.python.org/issue?@action=redirect&bpo=38971) [https://bugs.python.org/issue?@action=redirect&bpo=38971]: Open issue in the BPO indicated a desire to make the implementation of `codecs.open()` at parity with `io.open()`, which implements a try/except to assure file stream gets closed before an exception is raised.
- [bpo-38641](https://bugs.python.org/issue?@action=redirect&bpo=38641) [https://bugs.python.org/issue?@action=redirect&bpo=38641]: Added starred expressions support to `return` and `yield` statements for `lib2to3`. Patch by

Vlad Emelianov.

- [bpo-37534](https://bugs.python.org/issue?@action=redirect&bpo=37534) [https://bugs.python.org/issue?@action=redirect&bpo=37534]: When using minidom module to generate XML documents the ability to add Standalone Document Declaration is added. All the changes are made to generate a document in compliance with Extensible Markup Language (XML) 1.0 (Fifth Edition) W3C Recommendation (available here: <https://www.w3.org/TR/xml/#sec-prolog-dtd>).
- [bpo-34788](https://bugs.python.org/issue?@action=redirect&bpo=34788) [https://bugs.python.org/issue?@action=redirect&bpo=34788]: Add support for scoped IPv6 addresses to `ipaddress`. Patch by Oleksandr Pavliuk.
- [bpo-34822](https://bugs.python.org/issue?@action=redirect&bpo=34822) [https://bugs.python.org/issue?@action=redirect&bpo=34822]: Simplified AST for subscription. Simple indices are now represented by their value, extended slices are represented as tuples. `ast` classes `Index` and `ExtSlice` are considered deprecated and will be removed in future Python versions. In the meantime, `Index(value)` now returns a `value` itself, `ExtSlice(slices)` returns `Tuple(slices, Load())`.

## Documentation

- [bpo-39868](https://bugs.python.org/issue?@action=redirect&bpo=39868) [https://bugs.python.org/issue?@action=redirect&bpo=39868]: Updated the Language Reference for [PEP 572](https://peps.python.org/pep-0572/) [https://peps.python.org/pep-0572/].
- [bpo-13790](https://bugs.python.org/issue?@action=redirect&bpo=13790) [https://bugs.python.org/issue?@action=redirect&bpo=13790]: Change ‘string’ to ‘specification’ in format doc.
- [bpo-17422](https://bugs.python.org/issue?@action=redirect&bpo=17422) [https://bugs.python.org/issue?@action=redirect&bpo=17422]: The language reference no longer restricts default class namespaces to dicts only.
- [bpo-39530](https://bugs.python.org/issue?@action=redirect&bpo=39530) [https://bugs.python.org/issue?@action=redirect&bpo=39530]: Fix misleading documentation about mixed-type numeric comparisons.
- [bpo-39718](https://bugs.python.org/issue?@action=redirect&bpo=39718) [https://bugs.python.org/issue?@action=redirect&bpo=39718]: Update `token` documentation to reflect additions in Python 3.8
- [bpo-39677](https://bugs.python.org/issue?@action=redirect&bpo=39677) [https://bugs.python.org/issue?@action=redirect&bpo=39677]: Changed operand name of

## MAKE\_FUNCTION from *argc* to *flags* for module **dis**

### Tests

- **bpo-40019** [<https://bugs.python.org/issue?@action=redirect&bpo=40019>]: `test_gdb` now skips tests if it detects that `gdb` failed to read debug information because the Python binary is optimized.
- **bpo-27807** [<https://bugs.python.org/issue?@action=redirect&bpo=27807>]: `test_site.test_startup_imports()` is now skipped if a path of **sys.path** contains a `.pth` file.
- **bpo-26067** [<https://bugs.python.org/issue?@action=redirect&bpo=26067>]: Do not fail `test_shutil.test_chown` test when `uid` or `gid` of user cannot be resolved to a name.
- **bpo-39855** [<https://bugs.python.org/issue?@action=redirect&bpo=39855>]: `test_subprocess.test_user()` now skips the test on an user name if the user name doesn't exist. For example, skip the test if the user "nobody" doesn't exist on Linux.

### Build

- **bpo-39761** [<https://bugs.python.org/issue?@action=redirect&bpo=39761>]: Fix build with `DTrace` but without additional `DFLAGS`.
- **bpo-39763** [<https://bugs.python.org/issue?@action=redirect&bpo=39763>]: `setup.py` now uses a basic implementation of the **subprocess** module if the **subprocess** module is not available: before required C extension modules are built.
- **bpo-1294959** [<https://bugs.python.org/issue?@action=redirect&bpo=1294959>]: Add `--with-platlibdir` option to the configure script: name of the platform-specific library directory, stored in the new **sys.platlibdir** attribute. It is used to build the path of platform-specific extension modules and the path of the standard library. It is equal to `"lib"` on most platforms. On Fedora and SuSE, it is equal to `"lib64"` on 64-bit platforms. Patch by Jan Matějček, Matěj Cepl, Charalampos Stratakis and Victor Stinner.

## Windows

- [bpo-39930](https://bugs.python.org/issue?@action=redirect&bpo=39930) [https://bugs.python.org/issue?@action=redirect&bpo=39930]: Ensures the required `vcruntime140.dll` is included in install packages.
- [bpo-39847](https://bugs.python.org/issue?@action=redirect&bpo=39847) [https://bugs.python.org/issue?@action=redirect&bpo=39847]: Avoid hang when computer is hibernated whilst waiting for a mutex (for lock-related objects from [threading](#)) around 49-day uptime.
- [bpo-38597](https://bugs.python.org/issue?@action=redirect&bpo=38597) [https://bugs.python.org/issue?@action=redirect&bpo=38597]: `distutils` will no longer statically link `vcruntime140.dll` when a redistributable version is unavailable. All future releases of CPython will include a copy of this DLL to ensure distributed extensions can continue to load.
- [bpo-38380](https://bugs.python.org/issue?@action=redirect&bpo=38380) [https://bugs.python.org/issue?@action=redirect&bpo=38380]: Update Windows builds to use SQLite 3.31.1
- [bpo-39789](https://bugs.python.org/issue?@action=redirect&bpo=39789) [https://bugs.python.org/issue?@action=redirect&bpo=39789]: Update Windows release build machines to Visual Studio 2019 (MSVC 14.2).
- [bpo-34803](https://bugs.python.org/issue?@action=redirect&bpo=34803) [https://bugs.python.org/issue?@action=redirect&bpo=34803]: Package for nuget.org now includes repository reference and bundled icon image.

## macOS

- [bpo-38380](https://bugs.python.org/issue?@action=redirect&bpo=38380) [https://bugs.python.org/issue?@action=redirect&bpo=38380]: Update macOS builds to use SQLite 3.31.1

## IDLE

- [bpo-27115](https://bugs.python.org/issue?@action=redirect&bpo=27115) [https://bugs.python.org/issue?@action=redirect&bpo=27115]: For ‘Go to Line’, use a Query box subclass with IDLE standard behavior and improved error checking.
- [bpo-39885](https://bugs.python.org/issue?@action=redirect&bpo=39885) [https://bugs.python.org/issue?@action=redirect&bpo=39885]: Since clicking to get an IDLE context menu moves the cursor, any text selection should be

and now is cleared.

- [bpo-39852](https://bugs.python.org/issue?@action=redirect&bpo=39852) [https://bugs.python.org/issue?@action=redirect&bpo=39852]: Edit “Go to line” now clears any selection, preventing accidental deletion. It also updates Ln and Col on the status bar.
- [bpo-39781](https://bugs.python.org/issue?@action=redirect&bpo=39781) [https://bugs.python.org/issue?@action=redirect&bpo=39781]: Selecting code context lines no longer causes a jump.

## Tools/Demos

- [bpo-36184](https://bugs.python.org/issue?@action=redirect&bpo=36184) [https://bugs.python.org/issue?@action=redirect&bpo=36184]: Port python-gdb.py to FreeBSD. python-gdb.py now checks for “take\_gil” function name to check if a frame tries to acquire the GIL, instead of checking for “pthread\_cond\_timedwait” which is specific to Linux and can be a different condition than the GIL.
- [bpo-38080](https://bugs.python.org/issue?@action=redirect&bpo=38080) [https://bugs.python.org/issue?@action=redirect&bpo=38080]: Added support to fix getproxies in the **lib2to3.fixes.fix\_urllib** module. Patch by José Roberto Meza Cabrera.

## C API

- [bpo-40024](https://bugs.python.org/issue?@action=redirect&bpo=40024) [https://bugs.python.org/issue?@action=redirect&bpo=40024]: Add **PyModule\_AddType()** helper function: add a type to a module. Patch by Donghee Na.
- [bpo-39946](https://bugs.python.org/issue?@action=redirect&bpo=39946) [https://bugs.python.org/issue?@action=redirect&bpo=39946]: Remove `_PyRuntime.getframe` hook and remove `_PyThreadState_GetFrame` macro which was an alias to `_PyRuntime.getframe`. They were only exposed by the internal C API. Remove also `PyThreadFrameGetter` type.
- [bpo-39947](https://bugs.python.org/issue?@action=redirect&bpo=39947) [https://bugs.python.org/issue?@action=redirect&bpo=39947]: Add **PyThreadState\_GetFrame()** function: get the current frame of a Python thread state.

- [bpo-37207](https://bugs.python.org/issue?@action=redirect&bpo=37207) [https://bugs.python.org/issue?@action=redirect&bpo=37207]: Add `_PyArg_NoKwnames` helper function. Patch by Donghee Na.
- [bpo-39947](https://bugs.python.org/issue?@action=redirect&bpo=39947) [https://bugs.python.org/issue?@action=redirect&bpo=39947]: Add `PyThreadState_GetInterpreter()`: get the interpreter of a Python thread state.
- [bpo-39947](https://bugs.python.org/issue?@action=redirect&bpo=39947) [https://bugs.python.org/issue?@action=redirect&bpo=39947]: Add `PyInterpreterState_Get()` function to the limited C API.
- [bpo-35370](https://bugs.python.org/issue?@action=redirect&bpo=35370) [https://bugs.python.org/issue?@action=redirect&bpo=35370]: If `PySys_Audit()` fails in `PyEval_SetProfile()` or `PyEval_SetTrace()`, log the error as an unraisable exception.
- [bpo-39947](https://bugs.python.org/issue?@action=redirect&bpo=39947) [https://bugs.python.org/issue?@action=redirect&bpo=39947]: Move the static inline function flavor of `Py_EnterRecursiveCall()` and `Py_LeaveRecursiveCall()` to the internal C API: they access `PyThreadState` attributes. The limited C API provides regular functions which hide implementation details.
- [bpo-39947](https://bugs.python.org/issue?@action=redirect&bpo=39947) [https://bugs.python.org/issue?@action=redirect&bpo=39947]: `Py_TRASHCAN_BEGIN_CONDITION` and `Py_TRASHCAN_END` macro no longer access `PyThreadState` attributes, but call new private `_PyTrash_begin()` and `_PyTrash_end()` functions which hide implementation details.
- [bpo-39884](https://bugs.python.org/issue?@action=redirect&bpo=39884) [https://bugs.python.org/issue?@action=redirect&bpo=39884]: `PyDescr_NewMethod()` and `PyCFunction_NewEx()` now include the method name in the `SystemError` “bad call flags” error message to ease debug.
- [bpo-39877](https://bugs.python.org/issue?@action=redirect&bpo=39877) [https://bugs.python.org/issue?@action=redirect&bpo=39877]: Deprecated `PyEval_InitThreads()` and

**PyEval\_ThreadsInitialized()**. Calling **PyEval\_InitThreads()** now does nothing.

- [bpo-38249](https://bugs.python.org/issue?@action=redirect&bpo=38249) [https://bugs.python.org/issue?@action=redirect&bpo=38249]: **Py\_UNREACHABLE** is now implemented with `__builtin_unreachable()` and analogs in release mode.
- [bpo-38643](https://bugs.python.org/issue?@action=redirect&bpo=38643) [https://bugs.python.org/issue?@action=redirect&bpo=38643]: **PyNumber\_ToBase()** now raises a **SystemError** instead of crashing when called with invalid base.
- [bpo-39882](https://bugs.python.org/issue?@action=redirect&bpo=39882) [https://bugs.python.org/issue?@action=redirect&bpo=39882]: The **Py\_FatalError()** function is replaced with a macro which logs automatically the name of the current function, unless the `PY_LIMITED_API` macro is defined.
- [bpo-39824](https://bugs.python.org/issue?@action=redirect&bpo=39824) [https://bugs.python.org/issue?@action=redirect&bpo=39824]: Extension modules: **m\_traverse**, **m\_clear** and **m\_free** functions of **PyModuleDef** are no longer called if the module state was requested but is not allocated yet. This is the case immediately after the module is created and before the module is executed (**Py\_mod\_exec** function). More precisely, these functions are not called if **m\_size** is greater than 0 and the module state (as returned by **PyModule\_GetState()**) is `NULL`.

Extension modules without module state (`m_size <= 0`) are not affected.

- [bpo-38913](https://bugs.python.org/issue?@action=redirect&bpo=38913) [https://bugs.python.org/issue?@action=redirect&bpo=38913]: Fixed segfault in **Py\_BuildValue()** called with a format containing “#” and undefined `PY_SSIZE_T_CLEAN` when an exception is set.
- [bpo-38500](https://bugs.python.org/issue?@action=redirect&bpo=38500) [https://bugs.python.org/issue?@action=redirect&bpo=38500]: Add a private API to get and set the frame evaluation function: add

`_PyInterpreterState_GetEvalFrameFunc()` and `_PyInterpreterState_SetEvalFrameFunc()` C functions. The `_PyFrameEvalFunction` function type now takes a `tstate` parameter.

## Python 3.9.0 alpha 4

*Release date: 2020-02-25*

### Security

- [bpo-39184](https://bugs.python.org/issue?@action=redirect&bpo=39184) [https://bugs.python.org/issue?@action=redirect&bpo=39184]: Add audit events to functions in `fcntl`, `msvcrt`, `os`, `resource`, `shutil`, `signal` and `syslog`.
- [bpo-39401](https://bugs.python.org/issue?@action=redirect&bpo=39401) [https://bugs.python.org/issue?@action=redirect&bpo=39401]: Avoid unsafe DLL load at startup on Windows 7 and earlier.
- [bpo-39184](https://bugs.python.org/issue?@action=redirect&bpo=39184) [https://bugs.python.org/issue?@action=redirect&bpo=39184]: Add audit events to command execution functions in `os` and `pty` modules.

### Core and Builtins

- [bpo-39382](https://bugs.python.org/issue?@action=redirect&bpo=39382) [https://bugs.python.org/issue?@action=redirect&bpo=39382]: Fix a use-after-free in the single inheritance path of `issubclass()`, when the `__bases__` of an object has a single reference, and so does its first item. Patch by Yonatan Goldschmidt.
- [bpo-39573](https://bugs.python.org/issue?@action=redirect&bpo=39573) [https://bugs.python.org/issue?@action=redirect&bpo=39573]: Update clinic tool to use `Py_IS_TYPE()`. Patch by Donghee Na.
- [bpo-39619](https://bugs.python.org/issue?@action=redirect&bpo=39619) [https://bugs.python.org/issue?@action=redirect&bpo=39619]: Enable use of `os.chroot()` on HP-UX systems.
- [bpo-39573](https://bugs.python.org/issue?@action=redirect&bpo=39573) [https://bugs.python.org/issue?@action=redirect&bpo=39573]: Add `Py_IS_TYPE()` static inline function to check whether the object `o` type is `type`.
- [bpo-39606](https://bugs.python.org/issue?@action=redirect&bpo=39606) [https://bugs.python.org/issue?@action=redirect&bpo=39606]

@action=redirect&bpo=39606]: Fix regression caused by fix for [bpo-39386](https://bugs.python.org/issue?@action=redirect&bpo=39386) [https://bugs.python.org/issue?

@action=redirect&bpo=39386], that prevented calling `aclose` on an async generator that had already been closed or exhausted.

- [bpo-39579](https://bugs.python.org/issue?@action=redirect&bpo=39579) [https://bugs.python.org/issue?@action=redirect&bpo=39579]: Change the ending column offset of **Attribute** nodes constructed in **ast\_for\_dotted\_name** to point at the end of the current node and not at the end of the last **NAME** node.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_crypt` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_contextvars` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-39510](https://bugs.python.org/issue?@action=redirect&bpo=39510) [https://bugs.python.org/issue?@action=redirect&bpo=39510]: Fix segfault in `readinto()` method on closed `BufferedReader`.
- [bpo-39502](https://bugs.python.org/issue?@action=redirect&bpo=39502) [https://bugs.python.org/issue?@action=redirect&bpo=39502]: Fix `time.localtime()` on 64-bit AIX to support years before 1902 and after 2038. Patch by M Felt.
- [bpo-39492](https://bugs.python.org/issue?@action=redirect&bpo=39492) [https://bugs.python.org/issue?@action=redirect&bpo=39492]: Fix a reference cycle in the C Pickler that was preventing the garbage collection of deleted, pickled objects.
- [bpo-39453](https://bugs.python.org/issue?@action=redirect&bpo=39453) [https://bugs.python.org/issue?@action=redirect&bpo=39453]: Fixed a possible crash in `list.__contains__()` when a list is changed during comparing items. Patch by Donghee Na.
- [bpo-39434](https://bugs.python.org/issue?@action=redirect&bpo=39434) [https://bugs.python.org/issue?@action=redirect&bpo=39434]: [floor division](#) of float operation now has a better performance. Also the message of [ZeroDivisionError](#) for this operation is updated. Patch by Donghee Na.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_codecs` extension module

to multiphase initialization (**PEP 489** [https://peps.python.org/pep-0489/]).

- **bpo-1635741** [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_bz2` extension module to multiphase initialization (**PEP 489** [https://peps.python.org/pep-0489/]).
- **bpo-1635741** [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_abc` extension module to multiphase initialization (**PEP 489** [https://peps.python.org/pep-0489/]).
- **bpo-39320** [https://bugs.python.org/issue?@action=redirect&bpo=39320]: Replace two complex bytecodes for building dicts with two simpler ones. The new bytecodes `DICT_MERGE` and `DICT_UPDATE` have been added. The old bytecodes `BUILD_MAP_UNPACK` and `BUILD_MAP_UNPACK_WITH_CALL` have been removed.
- **bpo-39219** [https://bugs.python.org/issue?@action=redirect&bpo=39219]: Syntax errors raised in the tokenizer now always set correct “text” and “offset” attributes.
- **bpo-36051** [https://bugs.python.org/issue?@action=redirect&bpo=36051]: Drop the GIL during large `bytes.join` operations. Patch by Bruce Merry.
- **bpo-38960** [https://bugs.python.org/issue?@action=redirect&bpo=38960]: Fix DTrace build issues on FreeBSD. Patch by David Carlier.
- **bpo-37207** [https://bugs.python.org/issue?@action=redirect&bpo=37207]: Speed up calls to `range()` by about 30%, by using the PEP 590 `vectorcall` calling convention. Patch by Mark Shannon.
- **bpo-36144** [https://bugs.python.org/issue?@action=redirect&bpo=36144]: **`dict`** (and **`collections.UserDict`**) objects now support PEP 584’s `merge()` and `update()` operators. Patch by Brandt Bucher.
- **bpo-32856** [https://bugs.python.org/issue?@action=redirect&bpo=32856]: Optimized the idiom for assignment a temporary variable in comprehensions. Now `for y in [expr] in comprehensions` is as fast as a simple assignment `y = expr`.

## Library

- [bpo-30566](https://bugs.python.org/issue?@action=redirect&bpo=30566) [https://bugs.python.org/issue?@action=redirect&bpo=30566]: Fix `IndexError` when trying to decode an invalid string with punycode codec.
- [bpo-39649](https://bugs.python.org/issue?@action=redirect&bpo=39649) [https://bugs.python.org/issue?@action=redirect&bpo=39649]: Remove obsolete check for `__args__` in `bdb.Bdb.format_stack_entry`.
- [bpo-39648](https://bugs.python.org/issue?@action=redirect&bpo=39648) [https://bugs.python.org/issue?@action=redirect&bpo=39648]: Expanded `math.gcd()` and `math.lcm()` to handle multiple arguments.
- [bpo-39681](https://bugs.python.org/issue?@action=redirect&bpo=39681) [https://bugs.python.org/issue?@action=redirect&bpo=39681]: Fix a regression where the C pickle module wouldn't allow unpickling from a file-like object that doesn't expose a `readinto()` method.
- [bpo-35950](https://bugs.python.org/issue?@action=redirect&bpo=35950) [https://bugs.python.org/issue?@action=redirect&bpo=35950]: Raise `io.UnsupportedOperation` in `io.BufferedReader.truncate()` when it is called on a read-only `io.BufferedReader` instance.
- [bpo-39479](https://bugs.python.org/issue?@action=redirect&bpo=39479) [https://bugs.python.org/issue?@action=redirect&bpo=39479]: Add `math.lcm()` function: least common multiple.
- [bpo-39674](https://bugs.python.org/issue?@action=redirect&bpo=39674) [https://bugs.python.org/issue?@action=redirect&bpo=39674]: Revert “Do not expose abstract collection classes in the collections module” change ([bpo-25988](https://bugs.python.org/issue?@action=redirect&bpo=25988) [https://bugs.python.org/issue?@action=redirect&bpo=25988]). Aliases to ABC like `collections.Mapping` are kept in Python 3.9 to ease transition from Python 2.7, but will be removed in Python 3.10.
- [bpo-39104](https://bugs.python.org/issue?@action=redirect&bpo=39104) [https://bugs.python.org/issue?@action=redirect&bpo=39104]: Fix hanging `ProcessPoolExecutor` on `shutdown(wait=False)` when a task has failed pickling.
- [bpo-39627](https://bugs.python.org/issue?@action=redirect&bpo=39627) [https://bugs.python.org/issue?@action=redirect&bpo=39627]: Fixed `TypedDict` totality check for inherited keys.
- [bpo-39474](https://bugs.python.org/issue?@action=redirect&bpo=39474) [https://bugs.python.org/issue?@action=redirect&bpo=39474]: Fixed starting position of AST for expressions like `(a) (b)`, `(a) [b]` and `(a) .b`.

- [bpo-21016](https://bugs.python.org/issue?@action=redirect&bpo=21016) [https://bugs.python.org/issue?@action=redirect&bpo=21016]: The `pydoc` and `trace` modules now use the `sysconfig` module to get the path to the Python standard library, to support uncommon installation path like `/usr/lib64/python3.9/` on Fedora. Patch by Jan Matějka.
- [bpo-39590](https://bugs.python.org/issue?@action=redirect&bpo=39590) [https://bugs.python.org/issue?@action=redirect&bpo=39590]: `Collections.deque` now holds strong references during `deque._contains_` and `deque.count`, fixing crashes.
- [bpo-39586](https://bugs.python.org/issue?@action=redirect&bpo=39586) [https://bugs.python.org/issue?@action=redirect&bpo=39586]: The `distutils bdist_msi` command is deprecated in Python 3.9, use `bdist_wheel` (wheel packages) instead.
- [bpo-39595](https://bugs.python.org/issue?@action=redirect&bpo=39595) [https://bugs.python.org/issue?@action=redirect&bpo=39595]: Improved performance of `zipfile.Path` for files with a large number of entries. Also improved performance and fixed minor issue as published with [importlib\\_metadata 1.5](https://importlib-metadata.readthedocs.io/en/latest/history.html#v1-5-0) [https://importlib-metadata.readthedocs.io/en/latest/history.html#v1-5-0].
- [bpo-39350](https://bugs.python.org/issue?@action=redirect&bpo=39350) [https://bugs.python.org/issue?@action=redirect&bpo=39350]: Fix regression in `fractions.Fraction` if the numerator and/or the denominator is an `int` subclass. The `math.gcd()` function is now used to normalize the *numerator* and *denominator*. `math.gcd()` always return a `int` type. Previously, the GCD type depended on *numerator* and *denominator*.
- [bpo-39567](https://bugs.python.org/issue?@action=redirect&bpo=39567) [https://bugs.python.org/issue?@action=redirect&bpo=39567]: Added audit for `os.walk()`, `os.fwalk()`, `pathlib.Path.glob()` and `pathlib.Path.rglob()`.
- [bpo-39559](https://bugs.python.org/issue?@action=redirect&bpo=39559) [https://bugs.python.org/issue?@action=redirect&bpo=39559]: Remove unused, undocumented argument `getters` from `uuid.getnode()`
- [bpo-38149](https://bugs.python.org/issue?@action=redirect&bpo=38149) [https://bugs.python.org/issue?@action=redirect&bpo=38149]: `sys.audit()` is now called only once per call of `glob.glob()` and `glob.iglob()`.
- [bpo-39546](https://bugs.python.org/issue?@action=redirect&bpo=39546) [https://bugs.python.org/issue?@action=redirect&bpo=39546]: Fix a regression in `ArgumentParser` where `allow_abbrev=False` was

ignored for long options that used a prefix character other than “-“.

- [bpo-39450](https://bugs.python.org/issue?@action=redirect&bpo=39450) [https://bugs.python.org/issue?@action=redirect&bpo=39450]: Striped whitespace from docstring before returning it from `unittest.case.shortDescription()`.
- [bpo-12915](https://bugs.python.org/issue?@action=redirect&bpo=12915) [https://bugs.python.org/issue?@action=redirect&bpo=12915]: A new function `resolve_name` has been added to the `pkgutil` module. This resolves a string of the form `'a.b.c.d'` or `'a.b:c.d'` to an object. In the example, `a.b` is a package/module and `c.d` is an object within that package/module reached via recursive attribute access.
- [bpo-39353](https://bugs.python.org/issue?@action=redirect&bpo=39353) [https://bugs.python.org/issue?@action=redirect&bpo=39353]: The `binascii.crc_hqx()` function is no longer deprecated.
- [bpo-39493](https://bugs.python.org/issue?@action=redirect&bpo=39493) [https://bugs.python.org/issue?@action=redirect&bpo=39493]: Mark `typing.IO.closed` as a property
- [bpo-39491](https://bugs.python.org/issue?@action=redirect&bpo=39491) [https://bugs.python.org/issue?@action=redirect&bpo=39491]: Add `typing.Annotated` and `include_extras` parameter to `typing.get_type_hints()` as part of [PEP 593](https://peps.python.org/pep-0593/) [https://peps.python.org/pep-0593/]. Patch by Till Varoquaux, documentation by Till Varoquaux and Konstantin Kashin.
- [bpo-39485](https://bugs.python.org/issue?@action=redirect&bpo=39485) [https://bugs.python.org/issue?@action=redirect&bpo=39485]: Fix a bug in `unittest.mock.create_autospec()` that would complain about the wrong number of arguments for custom descriptors defined in an extension module returning functions.
- [bpo-38932](https://bugs.python.org/issue?@action=redirect&bpo=38932) [https://bugs.python.org/issue?@action=redirect&bpo=38932]: Mock fully resets child objects on `reset_mock()`. Patch by Vegard Stikbakke
- [bpo-39082](https://bugs.python.org/issue?@action=redirect&bpo=39082) [https://bugs.python.org/issue?@action=redirect&bpo=39082]: Allow `AsyncMock` to correctly patch static/class methods
- [bpo-39432](https://bugs.python.org/issue?@action=redirect&bpo=39432) [https://bugs.python.org/issue?@action=redirect&bpo=39432]: Implement PEP-489 algorithm for non-ascii “PyInit...” symbol names in distutils to make it

export the correct init symbol also on Windows.

- [bpo-18819](https://bugs.python.org/issue?@action=redirect&bpo=18819) [https://bugs.python.org/issue?@action=redirect&bpo=18819]: Omit `devmajor` and `devminor` fields for non-device files in `tarfile` archives, enabling bit-for-bit compatibility with GNU `tar(1)`.
- [bpo-39349](https://bugs.python.org/issue?@action=redirect&bpo=39349) [https://bugs.python.org/issue?@action=redirect&bpo=39349]: Added a new `cancel_futures` parameter to `concurrent.futures.Executor.shutdown()` that cancels all pending futures which have not started running, instead of waiting for them to complete before shutting down the executor.
- [bpo-39274](https://bugs.python.org/issue?@action=redirect&bpo=39274) [https://bugs.python.org/issue?@action=redirect&bpo=39274]: `bool(fraction.Fraction)` now returns a boolean even if `(numerator != 0)` does not return a boolean (ex: numpy number).
- [bpo-34793](https://bugs.python.org/issue?@action=redirect&bpo=34793) [https://bugs.python.org/issue?@action=redirect&bpo=34793]: Remove support for `with (await asyncio.lock):` and `with (yield from asyncio.lock):`. The same is correct for `asyncio.Condition` and `asyncio.Semaphore`.
- [bpo-25597](https://bugs.python.org/issue?@action=redirect&bpo=25597) [https://bugs.python.org/issue?@action=redirect&bpo=25597]: Ensure, if `wraps` is supplied to `unittest.mock.MagicMock`, it is used to calculate return values for the magic methods instead of using the default return values. Patch by Karthikeyan Singaravelan.
- [bpo-36350](https://bugs.python.org/issue?@action=redirect&bpo=36350) [https://bugs.python.org/issue?@action=redirect&bpo=36350]: `inspect.Signature.parameters` and `inspect.BoundArguments.arguments` are now dicts instead of `OrderedDicts`. Patch contributed by Rémi Lapeyre.
- [bpo-35727](https://bugs.python.org/issue?@action=redirect&bpo=35727) [https://bugs.python.org/issue?@action=redirect&bpo=35727]: Fix `sys.exit()` and `sys.exit(None)` exit code propagation when used in `multiprocessing.Process`.
- [bpo-32173](https://bugs.python.org/issue?@action=redirect&bpo=32173) [https://bugs.python.org/issue?@action=redirect&bpo=32173]: \* Add `lazycache` function to `__all__`. \* Use `dict.clear` to clear the cache. \* Refactoring `get_line` function and `checkcache` function.

## Documentation

- [bpo-17422](https://bugs.python.org/issue?@action=redirect&bpo=17422) [https://bugs.python.org/issue?@action=redirect&bpo=17422]: The language reference now specifies restrictions on class namespaces. Adapted from a patch by Ethan Furman.
- [bpo-39572](https://bugs.python.org/issue?@action=redirect&bpo=39572) [https://bugs.python.org/issue?@action=redirect&bpo=39572]: Updated documentation of total flag of TypedDict.
- [bpo-39654](https://bugs.python.org/issue?@action=redirect&bpo=39654) [https://bugs.python.org/issue?@action=redirect&bpo=39654]: In pycldr doc, update ‘class’ to ‘module’ where appropriate and add readmodule comment. Patch by Hakan Çelik.
- [bpo-39153](https://bugs.python.org/issue?@action=redirect&bpo=39153) [https://bugs.python.org/issue?@action=redirect&bpo=39153]: Clarify refcounting semantics for the following functions: - PyObject\_SetItem - PyMapping\_SetItemString - PyDict\_SetItem - PyDict\_SetItemString
- [bpo-39392](https://bugs.python.org/issue?@action=redirect&bpo=39392) [https://bugs.python.org/issue?@action=redirect&bpo=39392]: Explain that when filling with turtle, overlap regions may be left unfilled.
- [bpo-39369](https://bugs.python.org/issue?@action=redirect&bpo=39369) [https://bugs.python.org/issue?@action=redirect&bpo=39369]: Update mmap readline method description. The fact that the readline method does update the file position should not be ignored since this might give the impression for the programmer that it doesn’t update it.
- [bpo-9056](https://bugs.python.org/issue?@action=redirect&bpo=9056) [https://bugs.python.org/issue?@action=redirect&bpo=9056]: Include subsection in TOC for PDF version of docs.

## Tests

- [bpo-38325](https://bugs.python.org/issue?@action=redirect&bpo=38325) [https://bugs.python.org/issue?@action=redirect&bpo=38325]: Skip tests on non-BMP characters of test\_winconsoleio.
- [bpo-39502](https://bugs.python.org/issue?@action=redirect&bpo=39502) [https://bugs.python.org/issue?@action=redirect&bpo=39502]: Skip test\_zipfile.test\_add\_file\_after\_2107() if `time.localtime()` fails with `OverflowError`. It is the case on AIX 6.1 for example.

## Build

- [bpo-39489](https://bugs.python.org/issue?@action=redirect&bpo=39489) [https://bugs.python.org/issue?@action=redirect&bpo=39489]: Remove `COUNT_ALLOCS` special build.

## Windows

- [bpo-39553](https://bugs.python.org/issue?@action=redirect&bpo=39553) [https://bugs.python.org/issue?@action=redirect&bpo=39553]: Delete unused code related to SxS manifests.
- [bpo-39439](https://bugs.python.org/issue?@action=redirect&bpo=39439) [https://bugs.python.org/issue?@action=redirect&bpo=39439]: Honor the Python path when a virtualenv is active on Windows.
- [bpo-39393](https://bugs.python.org/issue?@action=redirect&bpo=39393) [https://bugs.python.org/issue?@action=redirect&bpo=39393]: Improve the error message when attempting to load a DLL with unresolved dependencies.
- [bpo-38883](https://bugs.python.org/issue?@action=redirect&bpo=38883) [https://bugs.python.org/issue?@action=redirect&bpo=38883]: `home()` and `expanduser()` on Windows now prefer `USERPROFILE` and no longer use `HOME`, which is not normally set for regular user accounts. This makes them again behave like `os.path.expanduser()`, which was changed to ignore `HOME` in 3.8, see [bpo-36264](https://bugs.python.org/issue?@action=redirect&bpo=36264) [https://bugs.python.org/issue?@action=redirect&bpo=36264].
- [bpo-39185](https://bugs.python.org/issue?@action=redirect&bpo=39185) [https://bugs.python.org/issue?@action=redirect&bpo=39185]: The build.bat script has additional options for very-quiet output (`-q`) and very-verbose output (`-vv`)

## IDLE

- [bpo-39663](https://bugs.python.org/issue?@action=redirect&bpo=39663) [https://bugs.python.org/issue?@action=redirect&bpo=39663]: Add tests for `pyparse.find_good_parse_start()`.
- [bpo-39600](https://bugs.python.org/issue?@action=redirect&bpo=39600) [https://bugs.python.org/issue?@action=redirect&bpo=39600]: In the font configuration window, remove duplicated font names.
- [bpo-30780](https://bugs.python.org/issue?@action=redirect&bpo=30780) [https://bugs.python.org/issue?@action=redirect&bpo=30780]: Add remaining configdialog tests for buttons and highlights and keys tabs.
- [bpo-39388](https://bugs.python.org/issue?@action=redirect&bpo=39388) [https://bugs.python.org/issue?@action=redirect&bpo=39388]

@action=redirect&bpo=39388]: IDLE Settings Cancel button now cancels pending changes

- [bpo-38792](https://bugs.python.org/issue?@action=redirect&bpo=38792) [https://bugs.python.org/issue?@action=redirect&bpo=38792]: Close an IDLE shell calltip if a **KeyboardInterrupt** or shell restart occurs. Patch by Zackery Spytz.

## C API

- [bpo-35081](https://bugs.python.org/issue?@action=redirect&bpo=35081) [https://bugs.python.org/issue?@action=redirect&bpo=35081]: Move the `bytes_methods.h` header file to the internal C API as `pycore_bytes_methods.h`: it only contains private symbols (prefixed by `_Py`), except of the `PyDoc_STRVAR_shared()` macro.
- [bpo-35081](https://bugs.python.org/issue?@action=redirect&bpo=35081) [https://bugs.python.org/issue?@action=redirect&bpo=35081]: Move the `dtoa.h` header file to the internal C API as `pycore_dtoa.h`: it only contains private functions (prefixed by `_Py`). The **math** and **cmath** modules must now be compiled with the `Py_BUILD_CORE` macro defined.
- [bpo-39573](https://bugs.python.org/issue?@action=redirect&bpo=39573) [https://bugs.python.org/issue?@action=redirect&bpo=39573]: Add **Py\_SET\_SIZE()** function to set the size of an object.
- [bpo-39500](https://bugs.python.org/issue?@action=redirect&bpo=39500) [https://bugs.python.org/issue?@action=redirect&bpo=39500]: **PyUnicode\_IsIdentifier()** does not call **Py\_FatalError()** anymore if the string is not ready.
- [bpo-39573](https://bugs.python.org/issue?@action=redirect&bpo=39573) [https://bugs.python.org/issue?@action=redirect&bpo=39573]: Add **Py\_SET\_TYPE()** function to set the type of an object.
- [bpo-39573](https://bugs.python.org/issue?@action=redirect&bpo=39573) [https://bugs.python.org/issue?@action=redirect&bpo=39573]: Add a **Py\_SET\_REFCNT()** function to set the reference counter of an object.
- [bpo-39542](https://bugs.python.org/issue?@action=redirect&bpo=39542) [https://bugs.python.org/issue?@action=redirect&bpo=39542]: Convert **PyType\_HasFeature()**, **PyType\_Check()** and **PyType\_CheckExact()** macros to static inline functions.
- [bpo-39542](https://bugs.python.org/issue?@action=redirect&bpo=39542) [https://bugs.python.org/issue?@action=redirect&bpo=39542]: In the limited C API,

`PyObject_INIT()` and `PyObject_INIT_VAR()` are now defined as aliases to `PyObject_Init()` and `PyObject_InitVar()` to make their implementation opaque. It avoids to leak implementation details in the limited C API. Exclude the following functions from the limited C API: `_Py_NewReference()`, `_Py_ForgetReference()`, `_PyTraceMalloc_NewReference()` and `_Py_GetRefTotal()`.

- [bpo-39542](https://bugs.python.org/issue?@action=redirect&bpo=39542) [https://bugs.python.org/issue?@action=redirect&bpo=39542]: Exclude trashcan mechanism from the limited C API: it requires access to `PyTypeObject` and `PyThreadState` structure fields, whereas these structures are opaque in the limited C API.
- [bpo-39511](https://bugs.python.org/issue?@action=redirect&bpo=39511) [https://bugs.python.org/issue?@action=redirect&bpo=39511]: The `PyThreadState_Clear()` function now calls the `PyThreadState.on_delete` callback. Previously, that happened in `PyThreadState_Delete()`.
- [bpo-38076](https://bugs.python.org/issue?@action=redirect&bpo=38076) [https://bugs.python.org/issue?@action=redirect&bpo=38076]: Fix to clear the interpreter state only after clearing module globals to guarantee module state access from C Extensions during runtime destruction
- [bpo-39245](https://bugs.python.org/issue?@action=redirect&bpo=39245) [https://bugs.python.org/issue?@action=redirect&bpo=39245]: The Vectorcall API (PEP 590) was made public, adding the functions `PyObject_Vectorcall`, `PyObject_VectorcallMethod`, `PyVectorcall_Function`, `PyObject_CallOneArg`, `PyObject_CallMethodNoArgs`, `PyObject_CallMethodOneArg`, `PyObject_FastCallDict`, and the flag `Py_TPFLAGS_HAVE_VECTORCALL`.

## Python 3.9.0 alpha 3

*Release date: 2020-01-24*

### Core and Builtins

- [bpo-39427](https://bugs.python.org/issue?@action=redirect&bpo=39427) [https://bugs.python.org/issue?@action=redirect&bpo=39427]: Document all possibilities for the `-X` options in the command line help section. Patch by Pablo Galindo.
- [bpo-39421](https://bugs.python.org/issue?@action=redirect&bpo=39421) [https://bugs.python.org/issue?@action=redirect&bpo=39421]: Fix possible crashes when operating with the functions in the `heapq` module and custom comparison operators.
- [bpo-39386](https://bugs.python.org/issue?@action=redirect&bpo=39386) [https://bugs.python.org/issue?@action=redirect&bpo=39386]: Prevent double awaiting of async iterator.
- [bpo-17005](https://bugs.python.org/issue?@action=redirect&bpo=17005) [https://bugs.python.org/issue?@action=redirect&bpo=17005]: Add **`functools.TopologicalSorter`** to the `functools` module to offers functionality to perform topological sorting of graphs. Patch by Pablo Galindo, Tim Peters and Larry Hastings.
- [bpo-39320](https://bugs.python.org/issue?@action=redirect&bpo=39320) [https://bugs.python.org/issue?@action=redirect&bpo=39320]: Replace four complex bytecodes for building sequences with three simpler ones.

The following four bytecodes have been removed:

- `BUILD_LIST_UNPACK`
- `BUILD_TUPLE_UNPACK`
- `BUILD_SET_UNPACK`
- `BUILD_TUPLE_UNPACK_WITH_CALL`

The following three bytecodes have been added:

- `LIST_TO_TUPLE`
- `LIST_EXTEND`
- `SET_UPDATE`

- [bpo-39336](https://bugs.python.org/issue?@action=redirect&bpo=39336) [https://bugs.python.org/issue?@action=redirect&bpo=39336]: Import loaders which publish immutable module objects can now publish immutable

packages in addition to individual modules.

- [bpo-39322](https://bugs.python.org/issue?@action=redirect&bpo=39322) [https://bugs.python.org/issue?@action=redirect&bpo=39322]: Added a new function `gc.is_finalized()` to check if an object has been finalized by the garbage collector. Patch by Pablo Galindo.
- [bpo-39048](https://bugs.python.org/issue?@action=redirect&bpo=39048) [https://bugs.python.org/issue?@action=redirect&bpo=39048]: Improve the displayed error message when incorrect types are passed to `async with` statements by looking up the `__aenter__()` special method before the `__aexit__()` special method when entering an asynchronous context manager. Patch by Géry Ogam.
- [bpo-39235](https://bugs.python.org/issue?@action=redirect&bpo=39235) [https://bugs.python.org/issue?@action=redirect&bpo=39235]: Fix AST end location for lone generator expression in function call, e.g. `f(i for i in a)`.
- [bpo-39209](https://bugs.python.org/issue?@action=redirect&bpo=39209) [https://bugs.python.org/issue?@action=redirect&bpo=39209]: Correctly handle multi-line tokens in interactive mode. Patch by Pablo Galindo.
- [bpo-1635741](https://bugs.python.org/issue?@action=redirect&bpo=1635741) [https://bugs.python.org/issue?@action=redirect&bpo=1635741]: Port `_json` extension module to multiphase initialization ([PEP 489](https://peps.python.org/pep-0489/) [https://peps.python.org/pep-0489/]).
- [bpo-39216](https://bugs.python.org/issue?@action=redirect&bpo=39216) [https://bugs.python.org/issue?@action=redirect&bpo=39216]: Fix constant folding optimization for positional only arguments - by Anthony Sottile.
- [bpo-39215](https://bugs.python.org/issue?@action=redirect&bpo=39215) [https://bugs.python.org/issue?@action=redirect&bpo=39215]: Fix `SystemError` when nested function has annotation on positional-only argument - by Anthony Sottile.
- [bpo-39200](https://bugs.python.org/issue?@action=redirect&bpo=39200) [https://bugs.python.org/issue?@action=redirect&bpo=39200]: Correct the error message when calling the `min()` or `max()` with no arguments. Patch by Donghee Na.

- [bpo-39200](https://bugs.python.org/issue?@action=redirect&bpo=39200) [https://bugs.python.org/issue?@action=redirect&bpo=39200]: Correct the error message when trying to construct **range** objects with no arguments. Patch by Pablo Galindo.
- [bpo-39166](https://bugs.python.org/issue?@action=redirect&bpo=39166) [https://bugs.python.org/issue?@action=redirect&bpo=39166]: Fix incorrect line execution reporting in trace functions when tracing the last iteration of asynchronous for loops. Patch by Pablo Galindo.
- [bpo-39114](https://bugs.python.org/issue?@action=redirect&bpo=39114) [https://bugs.python.org/issue?@action=redirect&bpo=39114]: Fix incorrect line execution reporting in trace functions when tracing exception handlers with name binding. Patch by Pablo Galindo.
- [bpo-39156](https://bugs.python.org/issue?@action=redirect&bpo=39156) [https://bugs.python.org/issue?@action=redirect&bpo=39156]: Split the COMPARE\_OP bytecode instruction into four distinct instructions.
  - COMPARE\_OP for rich comparisons
  - IS\_OP for 'is' and 'is not' tests
  - CONTAINS\_OP for 'in' and 'is not' tests
  - JUMP\_IF\_NOT\_EXC\_MATCH for checking exceptions in 'try-except' statements.

This improves the clarity of the interpreter and should provide a modest speedup.

- [bpo-38588](https://bugs.python.org/issue?@action=redirect&bpo=38588) [https://bugs.python.org/issue?@action=redirect&bpo=38588]: Fix possible crashes in dict and list when calling **PyObject\_RichCompareBool()**.
- [bpo-13601](https://bugs.python.org/issue?@action=redirect&bpo=13601) [https://bugs.python.org/issue?@action=redirect&bpo=13601]: By default, `sys.stderr` is line-buffered now, even if `stderr` is redirected to a file. You can still make `sys.stderr` unbuffered by passing the **-u** command-line option or setting the **PYTHONUNBUFFERED** environment variable.

(Contributed by Jendrik Seipp in [bpo-13601](https://bugs.python.org/issue?@action=redirect&bpo=13601) [https://bugs.python.org/issue?@action=redirect&bpo=13601].)

- [bpo-38610](https://bugs.python.org/issue?@action=redirect&bpo=38610) [https://bugs.python.org/issue?@action=redirect&bpo=38610]: Fix possible crashes in several list methods by holding strong references to list elements when calling `PyObject_RichCompareBool()`.
- [bpo-32021](https://bugs.python.org/issue?@action=redirect&bpo=32021) [https://bugs.python.org/issue?@action=redirect&bpo=32021]: Include brotli .br encoding in mimetypes encodings\_map

## Library

- [bpo-39430](https://bugs.python.org/issue?@action=redirect&bpo=39430) [https://bugs.python.org/issue?@action=redirect&bpo=39430]: Fixed race condition in lazy imports in `tarfile`.
- [bpo-39413](https://bugs.python.org/issue?@action=redirect&bpo=39413) [https://bugs.python.org/issue?@action=redirect&bpo=39413]: The `os.unsetenv()` function is now also available on Windows.
- [bpo-39390](https://bugs.python.org/issue?@action=redirect&bpo=39390) [https://bugs.python.org/issue?@action=redirect&bpo=39390]: Fixed a regression with the `ignore` callback of `shutil.copytree()`. The argument types are now str and List[str] again.
- [bpo-39395](https://bugs.python.org/issue?@action=redirect&bpo=39395) [https://bugs.python.org/issue?@action=redirect&bpo=39395]: The `os.putenv()` and `os.unsetenv()` functions are now always available.
- [bpo-39406](https://bugs.python.org/issue?@action=redirect&bpo=39406) [https://bugs.python.org/issue?@action=redirect&bpo=39406]: If `setenv()` C function is available, `os.putenv()` is now implemented with `setenv()` instead of `putenv()`, so Python doesn't have to handle the environment variable memory.
- [bpo-39396](https://bugs.python.org/issue?@action=redirect&bpo=39396) [https://bugs.python.org/issue?@action=redirect&bpo=39396]: Fix `math.nextafter(-0.0, +0.0)` on AIX 7.1.
- [bpo-29435](https://bugs.python.org/issue?@action=redirect&bpo=29435) [https://bugs.python.org/issue?@action=redirect&bpo=29435]: Allow `tarfile.is_tarfile()` to be used with file and file-like objects, like `zipfile.is_zipfile()`. Patch by William Woodruff.
- [bpo-39377](https://bugs.python.org/issue?@action=redirect&bpo=39377) [https://bugs.python.org/issue?@action=redirect&bpo=39377]: Removed `encoding` option from `json.loads()`. It has been deprecated since Python 3.1.
- [bpo-39389](https://bugs.python.org/issue?@action=redirect&bpo=39389) [https://bugs.python.org/issue?@action=redirect&bpo=39389]

@action=redirect&bpo=39389]: Write accurate compression level metadata in **gzip** archives, rather than always signaling maximum compression.

- **bpo-39366** [<https://bugs.python.org/issue?@action=redirect&bpo=39366>]: The previously deprecated `xpath()` and `xgtitle()` methods of **ntplib.NNTP** have been removed.
- **bpo-39357** [<https://bugs.python.org/issue?@action=redirect&bpo=39357>]: Remove the *buffering* parameter of **bz2.BZ2File**. Since Python 3.0, it was ignored and using it was emitting **DeprecationWarning**. Pass an open file object, to control how the file is opened. The *compresslevel* parameter becomes keyword-only.
- **bpo-39353** [<https://bugs.python.org/issue?@action=redirect&bpo=39353>]: Deprecate `binhex4` and `hexbin4` standards. Deprecate the **binhex** module and the following **binascii** functions: `b2a_hqx()`, `a2b_hqx()`, `rlecode_hqx()`, `rledecode_hqx()`, `crc_hqx()`.
- **bpo-39351** [<https://bugs.python.org/issue?@action=redirect&bpo=39351>]: Remove `base64.encodestring()` and `base64.decodestring()`, aliases deprecated since Python 3.1: use **base64.encodebytes()** and **base64.decodebytes()** instead.
- **bpo-39350** [<https://bugs.python.org/issue?@action=redirect&bpo=39350>]: Remove `fractions.gcd()` function, deprecated since Python 3.5 (**bpo-22486** [<https://bugs.python.org/issue?@action=redirect&bpo=22486>]): use **math.gcd()** instead.
- **bpo-39329** [<https://bugs.python.org/issue?@action=redirect&bpo=39329>]: **LMTP** constructor now has an optional *timeout* parameter. Patch by Donghee Na.
- **bpo-39313** [<https://bugs.python.org/issue?@action=redirect&bpo=39313>]: Add a new `exec_function` option (*-exec-function* in the CLI) to **RefactoringTool** for making `exec` a function. Patch by Batuhan Taskaya.
- **bpo-39259** [<https://bugs.python.org/issue?@action=redirect&bpo=39259>]: **FTP\_TLS** and **FTP\_TLS** now raise a **ValueError** if the given timeout for their constructor is zero to prevent the creation of a non-blocking

socket. Patch by Donghee Na.

- [bpo-39259](https://bugs.python.org/issue?@action=redirect&bpo=39259) [https://bugs.python.org/issue?@action=redirect&bpo=39259]: **SMTP** and **SMTP\_SSL** now raise a **ValueError** if the given timeout for their constructor is zero to prevent the creation of a non-blocking socket. Patch by Donghee Na.
- [bpo-39310](https://bugs.python.org/issue?@action=redirect&bpo=39310) [https://bugs.python.org/issue?@action=redirect&bpo=39310]: Add **math.ulp()**: return the value of the least significant bit of a float.
- [bpo-39297](https://bugs.python.org/issue?@action=redirect&bpo=39297) [https://bugs.python.org/issue?@action=redirect&bpo=39297]: Improved performance of **importlib.metadata** distribution discovery and resilient to inaccessible **sys.path** entries (**importlib.metadata** v1.4.0).
- [bpo-39259](https://bugs.python.org/issue?@action=redirect&bpo=39259) [https://bugs.python.org/issue?@action=redirect&bpo=39259]: **NNTP** and **NNTP\_SSL** now raise a **ValueError** if the given timeout for their constructor is zero to prevent the creation of a non-blocking socket. Patch by Donghee Na.
- [bpo-38901](https://bugs.python.org/issue?@action=redirect&bpo=38901) [https://bugs.python.org/issue?@action=redirect&bpo=38901]: When you specify **prompt=''** or equivalently **python -m venv --prompt . ...** the **basename** of the current directory is used to set the created **venv**'s prompt when it's activated.
- [bpo-39288](https://bugs.python.org/issue?@action=redirect&bpo=39288) [https://bugs.python.org/issue?@action=redirect&bpo=39288]: Add **math.nextafter()**: return the next floating-point value after **x** towards **y**.
- [bpo-39259](https://bugs.python.org/issue?@action=redirect&bpo=39259) [https://bugs.python.org/issue?@action=redirect&bpo=39259]: **POP3** and **POP3\_SSL** now raise a **ValueError** if the given timeout for their constructor is zero to prevent the creation of a non-blocking socket. Patch by Donghee Na.
- [bpo-39242](https://bugs.python.org/issue?@action=redirect&bpo=39242) [https://bugs.python.org/issue?@action=redirect&bpo=39242]: Updated the **Gmane** domain from **news.gmane.org** to **news.gmane.io** which is used for examples of **NNTP** news reader server and **nntplib** tests.
- [bpo-35292](https://bugs.python.org/issue?@action=redirect&bpo=35292) [https://bugs.python.org/issue?@action=redirect&bpo=35292]: Proxy the **SimpleHTTPRequestHandler.guess\_type** to **mimetypes.guess\_type** so the **mimetypes.init** is called lazily to avoid unnecessary costs when **http.server**

module is imported.

- [bpo-39239](https://bugs.python.org/issue?@action=redirect&bpo=39239) [https://bugs.python.org/issue?@action=redirect&bpo=39239]: The `select.epoll.unregister()` method no longer ignores the `EBADF` error.
- [bpo-38907](https://bugs.python.org/issue?@action=redirect&bpo=38907) [https://bugs.python.org/issue?@action=redirect&bpo=38907]: In `http.server` script, restore binding to IPv4 on Windows.
- [bpo-39152](https://bugs.python.org/issue?@action=redirect&bpo=39152) [https://bugs.python.org/issue?@action=redirect&bpo=39152]: Fix `ttk.Scale.configure([name])` to return configuration tuple for name or all options. Giovanni Lombardo contributed part of the patch.
- [bpo-39198](https://bugs.python.org/issue?@action=redirect&bpo=39198) [https://bugs.python.org/issue?@action=redirect&bpo=39198]: If an exception were to be thrown in `Logger.isEnabledFor` (say, by `asyncio` timeouts or `stopit`), the `logging` global lock may not be released appropriately, resulting in deadlock. This change wraps that block of code with `try...finally` to ensure the lock is released.
- [bpo-39191](https://bugs.python.org/issue?@action=redirect&bpo=39191) [https://bugs.python.org/issue?@action=redirect&bpo=39191]: Perform a check for running loop before starting a new task in `loop.run_until_complete()` to fail fast; it prevents the side effect of new task spawning before exception raising.
- [bpo-38871](https://bugs.python.org/issue?@action=redirect&bpo=38871) [https://bugs.python.org/issue?@action=redirect&bpo=38871]: Correctly parenthesize filter-based statements that contain lambda expressions in mod:`lib2to3`. Patch by Donghee Na.
- [bpo-39142](https://bugs.python.org/issue?@action=redirect&bpo=39142) [https://bugs.python.org/issue?@action=redirect&bpo=39142]: A change was made to `logging.config.dictConfig` to avoid converting instances of named tuples to `ConvertingTuple`. It's assumed that named tuples are too specialised to be treated like ordinary tuples; if a user of named tuples requires `ConvertingTuple` functionality, they will have to implement that themselves in their named tuple class.
- [bpo-39158](https://bugs.python.org/issue?@action=redirect&bpo=39158) [https://bugs.python.org/issue?@action=redirect&bpo=39158]: `ast.literal_eval()` now supports empty sets.
- [bpo-39129](https://bugs.python.org/issue?@action=redirect&bpo=39129) [https://bugs.python.org/issue?@action=redirect&bpo=39129]

@action=redirect&bpo=39129]: Fix import path for  
`asyncio.TimeoutError`

- [bpo-39057](https://bugs.python.org/issue?@action=redirect&bpo=39057) [https://bugs.python.org/issue?@action=redirect&bpo=39057]:  
`urllib.request.proxy_bypass_environment()` now ignores leading dots and no longer ignores a trailing newline.
- [bpo-39056](https://bugs.python.org/issue?@action=redirect&bpo=39056) [https://bugs.python.org/issue?@action=redirect&bpo=39056]: Fixed handling invalid warning category in the `-W` option. No longer import the `re` module if it is not needed.
- [bpo-39055](https://bugs.python.org/issue?@action=redirect&bpo=39055) [https://bugs.python.org/issue?@action=redirect&bpo=39055]: `base64.b64decode()` with `validate=True` raises now a `binascii.Error` if the input ends with a single `\n`.
- [bpo-21600](https://bugs.python.org/issue?@action=redirect&bpo=21600) [https://bugs.python.org/issue?@action=redirect&bpo=21600]: Fix `mock.patch.stopall()` to stop active patches that were created with `mock.patch.dict()`.
- [bpo-39019](https://bugs.python.org/issue?@action=redirect&bpo=39019) [https://bugs.python.org/issue?@action=redirect&bpo=39019]: Implement dummy `__class_getitem__` for `tempfile.SpooledTemporaryFile`.
- [bpo-39019](https://bugs.python.org/issue?@action=redirect&bpo=39019) [https://bugs.python.org/issue?@action=redirect&bpo=39019]: Implement dummy `__class_getitem__` for `subprocess.Popen`, `subprocess.CompletedProcess`
- [bpo-38914](https://bugs.python.org/issue?@action=redirect&bpo=38914) [https://bugs.python.org/issue?@action=redirect&bpo=38914]: Adjusted the wording of the warning issued by `distutils' check` command when the `author` and `maintainer` fields are supplied but no corresponding e-mail field (`author_email` or `maintainer_email`) is found. The wording now reflects the fact that these fields are suggested, but not required. Patch by Juergen Gmach.
- [bpo-38878](https://bugs.python.org/issue?@action=redirect&bpo=38878) [https://bugs.python.org/issue?@action=redirect&bpo=38878]: Fixed `__subclasshook__` of `os.PathLike` to return a correct result upon inheritance. Patch by Bar Harel.
- [bpo-38615](https://bugs.python.org/issue?@action=redirect&bpo=38615) [https://bugs.python.org/issue?@action=redirect&bpo=38615]: `IMAP4` and `IMAP4_SSL` now

have an optional *timeout* parameter for their constructors. Also, the `open()` method now has an optional *timeout* parameter with this change. The overridden methods of `IMAP4_SSL` and `IMAP4_stream` were applied to this change. Patch by Donghee Na.

- [bpo-35182](https://bugs.python.org/issue?@action=redirect&bpo=35182) [https://bugs.python.org/issue?@action=redirect&bpo=35182]: Fixed `Popen.communicate()` subsequent call crash when the child process has already closed any piped standard stream, but still continues to be running. Patch by Andriy Maletsky.
- [bpo-38630](https://bugs.python.org/issue?@action=redirect&bpo=38630) [https://bugs.python.org/issue?@action=redirect&bpo=38630]: On Unix, `subprocess.Popen.send_signal()` now polls the process status. Polling reduces the risk of sending a signal to the wrong process if the process completed, the `subprocess.Popen.returncode` attribute is still `None`, and the pid has been reassigned (recycled) to a new different process.
- [bpo-38536](https://bugs.python.org/issue?@action=redirect&bpo=38536) [https://bugs.python.org/issue?@action=redirect&bpo=38536]: Removes trailing space in formatted currency with `international=True` and a locale with symbol following value. E.g. `locale.currency(12.34, international=True)` returned `'12,34 EUR '` instead of `'12,34 EUR'`.
- [bpo-38473](https://bugs.python.org/issue?@action=redirect&bpo=38473) [https://bugs.python.org/issue?@action=redirect&bpo=38473]: Use signature from inner mock for autospecced methods attached with `unittest.mock.attach_mock()`. Patch by Karthikeyan Singaravelan.
- [bpo-38361](https://bugs.python.org/issue?@action=redirect&bpo=38361) [https://bugs.python.org/issue?@action=redirect&bpo=38361]: Fixed an issue where `ident` could include a leading path separator when `syslog.openlog()` was called without arguments.
- [bpo-38293](https://bugs.python.org/issue?@action=redirect&bpo=38293) [https://bugs.python.org/issue?@action=redirect&bpo=38293]: Add `copy.copy()` and `copy.deepcopy()` support to `property` objects.
- [bpo-37958](https://bugs.python.org/issue?@action=redirect&bpo=37958) [https://bugs.python.org/issue?@action=redirect&bpo=37958]: Added the `pstats.Stats.get_profile_dict()` method to return the profile data as a `StatsProfile` instance.

- [bpo-28367](https://bugs.python.org/issue?@action=redirect&bpo=28367) [https://bugs.python.org/issue?@action=redirect&bpo=28367]: Termios magic constants for the following baud rates: - B500000 - B576000 - B921600 - B1000000 - B1152000 - B1500000 - B2000000 - B2500000 - B3000000 - B3500000 - B4000000 Patch by Andrey Smirnov

## Documentation

- [bpo-39381](https://bugs.python.org/issue?@action=redirect&bpo=39381) [https://bugs.python.org/issue?@action=redirect&bpo=39381]: Mention in docs that [asyncio.get\\_event\\_loop\(\)](#) implicitly creates new event loop only if called from the main thread.
- [bpo-38918](https://bugs.python.org/issue?@action=redirect&bpo=38918) [https://bugs.python.org/issue?@action=redirect&bpo=38918]: Add an entry for `__module__` in the “function” & “method” sections of the [inspect](#) docs’ [Types and members](#) table.
- [bpo-3530](https://bugs.python.org/issue?@action=redirect&bpo=3530) [https://bugs.python.org/issue?@action=redirect&bpo=3530]: In the [ast](#) module documentation, fix a misleading `NodeTransformer` example and add advice on when to use the `fix_missing_locations` function.

## Build

- [bpo-39395](https://bugs.python.org/issue?@action=redirect&bpo=39395) [https://bugs.python.org/issue?@action=redirect&bpo=39395]: On non-Windows platforms, the `setenv()` and `unsetenv()` functions are now required to build Python.
- [bpo-39160](https://bugs.python.org/issue?@action=redirect&bpo=39160) [https://bugs.python.org/issue?@action=redirect&bpo=39160]: Updated the documentation in `/configure --help` to show default values, reference documentation where required and add additional explanation where needed.
- [bpo-39144](https://bugs.python.org/issue?@action=redirect&bpo=39144) [https://bugs.python.org/issue?@action=redirect&bpo=39144]: The `ctags` and `etags` build targets both include `Modules/_ctypes` and Python standard library source files.

## IDLE

- [bpo-39050](https://bugs.python.org/issue?@action=redirect&bpo=39050) [https://bugs.python.org/issue?@action=redirect&bpo=39050]

@action=redirect&bpo=39050]: Make IDLE Settings dialog Help button work again.

- [bpo-34118](https://bugs.python.org/issue?@action=redirect&bpo=34118) [https://bugs.python.org/issue?@action=redirect&bpo=34118]: Tag memoryview, range, and tuple as classes, the same as list, etcetera, in the library manual built-in functions list.
- [bpo-32989](https://bugs.python.org/issue?@action=redirect&bpo=32989) [https://bugs.python.org/issue?@action=redirect&bpo=32989]: Add tests for editor newline\_and\_indent\_event method. Remove dead code from pyparse find\_good\_parse\_start method.

## C API

- [bpo-39372](https://bugs.python.org/issue?@action=redirect&bpo=39372) [https://bugs.python.org/issue?@action=redirect&bpo=39372]: Clean header files of interfaces defined but with no implementation. The public API symbols being removed are:  
\_PyBytes\_InsertThousandsGroupingLocale,  
\_PyBytes\_InsertThousandsGrouping,  
\_Py\_InitializeFromArgs,  
\_Py\_InitializeFromWideArgs, \_PyFloat\_Repr,  
\_PyFloat\_Digits, \_PyFloat\_DigitsInit,  
PyFrame\_ExtendStack, \_PyAIterWrapper\_Type,  
PyNullImporter\_Type, PyCmpWrapper\_Type,  
PySortWrapper\_Type, PyNoArgsFunction.
- [bpo-39164](https://bugs.python.org/issue?@action=redirect&bpo=39164) [https://bugs.python.org/issue?@action=redirect&bpo=39164]: Add a private \_PyErr\_GetExcInfo() function to retrieve exception information of the specified Python thread state.

## Python 3.9.0 alpha 2

*Release date: 2019-12-18*

### Security

- [bpo-38945](https://bugs.python.org/issue?@action=redirect&bpo=38945) [https://bugs.python.org/issue?@action=redirect&bpo=38945]: Newline characters have been escaped when performing uu encoding to prevent them from

overflowing into to content section of the encoded file. This prevents malicious or accidental modification of data during the decoding process.

- [bpo-37228](https://bugs.python.org/issue?@action=redirect&bpo=37228) [https://bugs.python.org/issue?@action=redirect&bpo=37228]: Due to significant security concerns, the *reuse\_address* parameter of `asyncio.loop.create_datagram_endpoint()` is no longer supported. This is because of the behavior of `SO_REUSEADDR` in UDP. For more details, see the documentation for `loop.create_datagram_endpoint()`. (Contributed by Kyle Stanley, Antoine Pitrou, and Yuri Selivanov in [bpo-37228](https://bugs.python.org/issue?@action=redirect&bpo=37228) [https://bugs.python.org/issue?@action=redirect&bpo=37228].)
- [bpo-38804](https://bugs.python.org/issue?@action=redirect&bpo=38804) [https://bugs.python.org/issue?@action=redirect&bpo=38804]: Fixes a ReDoS vulnerability in [http.cookiejar](#). Patch by Ben Caller.

## Core and Builtins

- [bpo-39028](https://bugs.python.org/issue?@action=redirect&bpo=39028) [https://bugs.python.org/issue?@action=redirect&bpo=39028]: Slightly improve the speed of keyword argument parsing with many kwargs by strengthening the assumption that kwargs are interned strings.
- [bpo-39080](https://bugs.python.org/issue?@action=redirect&bpo=39080) [https://bugs.python.org/issue?@action=redirect&bpo=39080]: Fix the value of *end\_col\_offset* for Starred Expression AST nodes when they are among the elements in the *args* attribute of Call AST nodes.
- [bpo-39031](https://bugs.python.org/issue?@action=redirect&bpo=39031) [https://bugs.python.org/issue?@action=redirect&bpo=39031]: When parsing an “elif” node, *lineno* and *col\_offset* of the node now point to the “elif” keyword and not to its condition, making it consistent with the “if” node. Patch by Lysandros Nikolaou.
- [bpo-20443](https://bugs.python.org/issue?@action=redirect&bpo=20443) [https://bugs.python.org/issue?@action=redirect&bpo=20443]: In Python 3.9.0a1, `sys.argv[0]` was made an absolute path if a filename was specified on the command line. Revert this change, since most users expect `sys.argv` to be unmodified.
- [bpo-39008](https://bugs.python.org/issue?@action=redirect&bpo=39008) [https://bugs.python.org/issue?@action=redirect&bpo=39008]

@action=redirect&bpo=39008]: **PySys\_Audit()** now requires `Py_ssize_t` to be used for size arguments in the format string, regardless of whether `PY_SSIZE_T_CLEAN` was defined at include time.

- **bpo-38673** [<https://bugs.python.org/issue?@action=redirect&bpo=38673>]: In REPL mode, don't switch to PS2 if the line starts with comment or whitespace. Based on work by Batuhan Taşkaya.
- **bpo-38922** [<https://bugs.python.org/issue?@action=redirect&bpo=38922>]: Calling `replace` on a code object now raises the `code.__new__` audit event.
- **bpo-38920** [<https://bugs.python.org/issue?@action=redirect&bpo=38920>]: Add audit hooks for when **`sys.excepthook()`** and **`sys.unraisablehook()`** are invoked.
- **bpo-38892** [<https://bugs.python.org/issue?@action=redirect&bpo=38892>]: Improve documentation for audit events table and functions.
- **bpo-38852** [<https://bugs.python.org/issue?@action=redirect&bpo=38852>]: Set the thread stack size to 8 Mb for debug builds on android platforms.
- **bpo-38858** [<https://bugs.python.org/issue?@action=redirect&bpo=38858>]: Each Python subinterpreter now has its own “small integer singletons”: numbers in `[-5; 257]` range. It is no longer possible to change the number of small integers at build time by overriding `NSMALLNEGINTS` and `NSMALLPOSINTS` macros: macros should now be modified manually in `pycore_pystate.h` header file.
- **bpo-36854** [<https://bugs.python.org/issue?@action=redirect&bpo=36854>]: The garbage collector state becomes per interpreter (`PyInterpreterState.gc`), rather than being global (`_PyRuntimeState.gc`).
- **bpo-38835** [<https://bugs.python.org/issue?@action=redirect&bpo=38835>]: The `PyFPE_START_PROTECT()` and `PyFPE_END_PROTECT()` macros are empty: they have been doing nothing for the last year, so stop using them.
- **bpo-38328** [<https://bugs.python.org/issue?@action=redirect&bpo=38328>]: Sped up the creation time of constant **`list`** and **`set`** displays. Patch by Brandt Bucher.
- **bpo-38707** [<https://bugs.python.org/issue?@action=redirect&bpo=38707>]

@action=redirect&bpo=38707]: `MainThread.native_id` is now correctly reset in child processes spawned using `multiprocessing.Process`, instead of retaining the parent's value.

- [bpo-38629](https://bugs.python.org/issue?@action=redirect&bpo=38629) [https://bugs.python.org/issue?@action=redirect&bpo=38629]: Added `__floor__` and `__ceil__` methods to float object. Patch by Batuhan Taşkaya.
- [bpo-27145](https://bugs.python.org/issue?@action=redirect&bpo=27145) [https://bugs.python.org/issue?@action=redirect&bpo=27145]: `int + int` and `int - int` operators can now return small integer singletons. Patch by hongweipeng.
- [bpo-38021](https://bugs.python.org/issue?@action=redirect&bpo=38021) [https://bugs.python.org/issue?@action=redirect&bpo=38021]: Provide a platform tag for AIX that is sufficient for PEP425 binary distribution identification. Patch by Michael Felt.
- [bpo-35409](https://bugs.python.org/issue?@action=redirect&bpo=35409) [https://bugs.python.org/issue?@action=redirect&bpo=35409]: Ignore `GeneratorExit` exceptions when throwing an exception into the `aclose` coroutine of an asynchronous generator.
- [bpo-33387](https://bugs.python.org/issue?@action=redirect&bpo=33387) [https://bugs.python.org/issue?@action=redirect&bpo=33387]: Removed `WITH_CLEANUP_START`, `WITH_CLEANUP_FINISH`, `BEGIN_FINALLY`, `END_FINALLY`, `CALL_FINALLY` and `POP_FINALLY` bytecodes. Replaced with `RERAISE` and `WITH_EXCEPT_START` bytecodes. The compiler now generates different code for exceptional and non-exceptional branches for 'with' and 'try-except' statements. For 'try-finally' statements the 'finally' block is replicated for each exit from the 'try' body.

## Library

- [bpo-39033](https://bugs.python.org/issue?@action=redirect&bpo=39033) [https://bugs.python.org/issue?@action=redirect&bpo=39033]: Fix `NameError` in `zipimport`. Patch by Karthikeyan Singaravelan.
- [bpo-39022](https://bugs.python.org/issue?@action=redirect&bpo=39022) [https://bugs.python.org/issue?@action=redirect&bpo=39022]: Update `importlib.metadata` to include improvements from `importlib_metadata` 1.3 including

better serialization of EntryPoints and improved documentation for custom finders.

- [bpo-39006](https://bugs.python.org/issue?@action=redirect&bpo=39006) [https://bugs.python.org/issue?@action=redirect&bpo=39006]: Fix asyncio when the ssl module is missing: only check for ssl.SSLSocket instance if the ssl module is available.
- [bpo-38708](https://bugs.python.org/issue?@action=redirect&bpo=38708) [https://bugs.python.org/issue?@action=redirect&bpo=38708]: Fix a potential IndexError in email parser when parsing an empty msg-id.
- [bpo-38698](https://bugs.python.org/issue?@action=redirect&bpo=38698) [https://bugs.python.org/issue?@action=redirect&bpo=38698]: Add a new InvalidMessageID token to email parser to represent invalid Message-ID headers. Also, add defects when there is remaining value after parsing the header.
- [bpo-38994](https://bugs.python.org/issue?@action=redirect&bpo=38994) [https://bugs.python.org/issue?@action=redirect&bpo=38994]: Implement `__class_getitem__` for `os.PathLike`, `pathlib.Path`.
- [bpo-38979](https://bugs.python.org/issue?@action=redirect&bpo=38979) [https://bugs.python.org/issue?@action=redirect&bpo=38979]: Return class from `ContextVar.__class_getitem__` to simplify subclassing.
- [bpo-38978](https://bugs.python.org/issue?@action=redirect&bpo=38978) [https://bugs.python.org/issue?@action=redirect&bpo=38978]: Implement `__class_getitem__` on asyncio objects (Future, Task, Queue). Patch by Batuhan Taskaya.
- [bpo-38916](https://bugs.python.org/issue?@action=redirect&bpo=38916) [https://bugs.python.org/issue?@action=redirect&bpo=38916]: **array.array**: Remove `tostring()` and `fromstring()` methods. They were aliases to `tobytes()` and `frombytes()`, deprecated since Python 3.2.
- [bpo-38986](https://bugs.python.org/issue?@action=redirect&bpo=38986) [https://bugs.python.org/issue?@action=redirect&bpo=38986]: Make repr of C accelerated TaskWakeupMethWrapper the same as of pure Python version.

- [bpo-38982](https://bugs.python.org/issue?@action=redirect&bpo=38982) [https://bugs.python.org/issue?@action=redirect&bpo=38982]: Fix `asyncio` `PidfdChildWatcher`: `handle waitpid()` error. If `waitpid()` is called elsewhere, `waitpid()` call fails with **ChildProcessError**: use return code 255 in this case, and log a warning. It ensures that the `pidfd` file descriptor is closed if this error occurs.
- [bpo-38529](https://bugs.python.org/issue?@action=redirect&bpo=38529) [https://bugs.python.org/issue?@action=redirect&bpo=38529]: Drop too noisy `asyncio` warning about deletion of a stream without explicit `.close()` call.
- [bpo-27413](https://bugs.python.org/issue?@action=redirect&bpo=27413) [https://bugs.python.org/issue?@action=redirect&bpo=27413]: Added ability to pass through `ensure_ascii` options to `json.dumps` in the `json.tool` command-line interface.
- [bpo-38634](https://bugs.python.org/issue?@action=redirect&bpo=38634) [https://bugs.python.org/issue?@action=redirect&bpo=38634]: The **readline** module now detects if Python is linked to `libedit` at runtime on all platforms. Previously, the check was only done on macOS.
- [bpo-33684](https://bugs.python.org/issue?@action=redirect&bpo=33684) [https://bugs.python.org/issue?@action=redirect&bpo=33684]: Fix `json.tool` failed to read a JSON file with non-ASCII characters when locale encoding is not UTF-8.
- [bpo-38698](https://bugs.python.org/issue?@action=redirect&bpo=38698) [https://bugs.python.org/issue?@action=redirect&bpo=38698]: Prevent `UnboundLocalError` to pop up in `parse_message_id`.

`parse_message_id()` was improperly using a token defined inside an exception handler, which was raising **UnboundLocalError** on parsing an invalid value. Patch by Claudiu Popa.

- [bpo-38927](https://bugs.python.org/issue?@action=redirect&bpo=38927) [https://bugs.python.org/issue?@action=redirect&bpo=38927]: Use `python -m pip` instead of `pip` to upgrade dependencies in `venv`.
- [bpo-26730](https://bugs.python.org/issue?@action=redirect&bpo=26730) [https://bugs.python.org/issue?@action=redirect&bpo=26730]

@action=redirect&bpo=26730]: Fix

`SpooledTemporaryFile.rollover()` might corrupt the file when it is in text mode. Patch by Serhiy Storchaka.

- [bpo-38881](https://bugs.python.org/issue?@action=redirect&bpo=38881) [https://bugs.python.org/issue?@action=redirect&bpo=38881]: `random.choices()` now raises a `ValueError` when all the weights are zero.
- [bpo-38876](https://bugs.python.org/issue?@action=redirect&bpo=38876) [https://bugs.python.org/issue?@action=redirect&bpo=38876]: Raise `pickle.UnpicklingError` when loading an item from memo for invalid input.

The previous code was raising a `KeyError` for both the Python and C implementation. This was caused by the specified index of an invalid input which did not exist in the memo structure, where the pickle stores what objects it has seen. The malformed input would have caused either a `BINGET` or `LONG_BINGET` load from the memo, leading to a `KeyError` as the determined index was bogus. Patch by Claudiu Popa

- [bpo-38688](https://bugs.python.org/issue?@action=redirect&bpo=38688) [https://bugs.python.org/issue?@action=redirect&bpo=38688]: Calling func:`shutil.copytree` to copy a directory tree from one directory to another subdirectory resulted in an endless loop and a `RecursionError`. A fix was added to consume an iterator and create the list of the entries to be copied, avoiding the recursion for newly created directories. Patch by Bruno P. Kinoshita.
- [bpo-38863](https://bugs.python.org/issue?@action=redirect&bpo=38863) [https://bugs.python.org/issue?@action=redirect&bpo=38863]: Improve `is_cgi()` function in `http.server`, which enables processing the case that cgi directory is a child of another directory other than root.
- [bpo-37838](https://bugs.python.org/issue?@action=redirect&bpo=37838) [https://bugs.python.org/issue?@action=redirect&bpo=37838]: `typing.get_type_hints()` properly handles functions decorated with `functools.wraps()`.
- [bpo-38870](https://bugs.python.org/issue?@action=redirect&bpo=38870) [https://bugs.python.org/issue?@action=redirect&bpo=38870]: Expose `ast.unparse()` as a

function of the `ast` module that can be used to unpickle an `ast.AST` object and produce a string with code that would produce an equivalent `ast.AST` object when parsed. Patch by Pablo Galindo and Batuhan Taskaya.

- [bpo-38859](https://bugs.python.org/issue?@action=redirect&bpo=38859) [https://bugs.python.org/issue?@action=redirect&bpo=38859]: `AsyncMock` now returns `StopAsyncIteration` on the exhaustion of a `side_effects` iterable. Since PEP-479 it's impossible to raise a `StopIteration` exception from a coroutine.
- [bpo-38857](https://bugs.python.org/issue?@action=redirect&bpo=38857) [https://bugs.python.org/issue?@action=redirect&bpo=38857]: `AsyncMock` fix for return values that are awaitable types. This also covers `side_effect` iterable values that happened to be awaitable, and wraps callables that return an awaitable type. Before these awaitables were being awaited instead of being returned as is.
- [bpo-38834](https://bugs.python.org/issue?@action=redirect&bpo=38834) [https://bugs.python.org/issue?@action=redirect&bpo=38834]: `typing.TypedDict` subclasses now track which keys are optional using the `__required_keys__` and `__optional_keys__` attributes, to enable runtime validation by downstream projects. Patch by Zac Hatfield-Dodds.
- [bpo-38821](https://bugs.python.org/issue?@action=redirect&bpo=38821) [https://bugs.python.org/issue?@action=redirect&bpo=38821]: Fix unhandled exceptions in `argparse` when internationalizing error messages for arguments with `nargs` set to special (non-integer) values. Patch by Federico Bond.
- [bpo-38820](https://bugs.python.org/issue?@action=redirect&bpo=38820) [https://bugs.python.org/issue?@action=redirect&bpo=38820]: Make Python compatible with OpenSSL 3.0.0. `ssl.SSLSocket.getpeercert()` no longer returns IPv6 addresses with a trailing new line.
- [bpo-38811](https://bugs.python.org/issue?@action=redirect&bpo=38811) [https://bugs.python.org/issue?@action=redirect&bpo=38811]: Fix an unhandled exception in `pathlib` when `os.link()` is missing. Patch by Toke Høiland-Jørgensen.

- [bpo-38686](https://bugs.python.org/issue?@action=redirect&bpo=38686) [https://bugs.python.org/issue?@action=redirect&bpo=38686]: Added support for multiple `qop` values in `urllib.request.AbstractDigestAuthHandler`.
- [bpo-38712](https://bugs.python.org/issue?@action=redirect&bpo=38712) [https://bugs.python.org/issue?@action=redirect&bpo=38712]: Add the Linux-specific `signal.pidfd_send_signal()` function, which allows sending a signal to a process identified by a file descriptor rather than a pid.
- [bpo-38348](https://bugs.python.org/issue?@action=redirect&bpo=38348) [https://bugs.python.org/issue?@action=redirect&bpo=38348]: Add `-i` and `--indent` (indentation level), and `--no-type-comments` (type comments) command line options to ast parsing tool.
- [bpo-37523](https://bugs.python.org/issue?@action=redirect&bpo=37523) [https://bugs.python.org/issue?@action=redirect&bpo=37523]: Change `zipfile.ZipExtFile` to raise `ValueError` when trying to access the underlying file object after it has been closed. This new behavior is consistent with how accessing closed files is handled in other parts of Python.
- [bpo-38045](https://bugs.python.org/issue?@action=redirect&bpo=38045) [https://bugs.python.org/issue?@action=redirect&bpo=38045]: Improve the performance of `enum._decompose()` in `enum`. Patch by hongweipeng.
- [bpo-36820](https://bugs.python.org/issue?@action=redirect&bpo=36820) [https://bugs.python.org/issue?@action=redirect&bpo=36820]: Break cycle generated when saving an exception in `socket.py`, `codeop.py` and `dyld.py` as they keep alive not only the exception but user objects through the `__traceback__` attribute. Patch by Mario Corchero.
- [bpo-36406](https://bugs.python.org/issue?@action=redirect&bpo=36406) [https://bugs.python.org/issue?@action=redirect&bpo=36406]: Handle namespace packages in `doctest`. Patch by Karthikeyan Singaravelan.
- [bpo-34776](https://bugs.python.org/issue?@action=redirect&bpo=34776) [https://bugs.python.org/issue?@action=redirect&bpo=34776]: Fix dataclasses to support forward references in type annotations

- [bpo-20928](https://bugs.python.org/issue?@action=redirect&bpo=20928) [https://bugs.python.org/issue?@action=redirect&bpo=20928]: ElementTree supports recursive XInclude processing. Patch by Stefan Behnel.
- [bpo-29636](https://bugs.python.org/issue?@action=redirect&bpo=29636) [https://bugs.python.org/issue?@action=redirect&bpo=29636]: Add whitespace options for formatting JSON with the `json.tool` CLI. The following mutually exclusive options are now supported: `--indent` for setting the indent level in spaces; `--tab` for indenting with tabs; `--no-indent` for suppressing newlines; and `--compact` for suppressing all whitespace. The default behavior remains the same as `--indent=4`.

## Documentation

- [bpo-38928](https://bugs.python.org/issue?@action=redirect&bpo=38928) [https://bugs.python.org/issue?@action=redirect&bpo=38928]: Correct when `venv's upgrade_dependencies()` and `--upgrade-deps` are added.
- [bpo-38899](https://bugs.python.org/issue?@action=redirect&bpo=38899) [https://bugs.python.org/issue?@action=redirect&bpo=38899]: Update documentation to state that to activate virtual environments under fish one should use **source**, not as documented at <https://fishshell.com/docs/current/cmds/source.html>.
- [bpo-22377](https://bugs.python.org/issue?@action=redirect&bpo=22377) [https://bugs.python.org/issue?@action=redirect&bpo=22377]: Improves documentation of the values that `datetime.datetime.strptime()` accepts for `%Z`. Patch by Karl Dubost.

## Tests

- [bpo-38546](https://bugs.python.org/issue?@action=redirect&bpo=38546) [https://bugs.python.org/issue?@action=redirect&bpo=38546]: Fix `test_ressources_gced_in_workers()` of `test_concurrent_futures`: explicitly stop the manager to prevent leaking a child process running in the background after the test completes.
- [bpo-38546](https://bugs.python.org/issue?@action=redirect&bpo=38546) [https://bugs.python.org/issue?@action=redirect&bpo=38546]: Multiprocessing and `concurrent.futures` tests now stop the resource tracker process when tests complete.

- [bpo-38614](https://bugs.python.org/issue?@action=redirect&bpo=38614) [https://bugs.python.org/issue?@action=redirect&bpo=38614]: Replace hardcoded timeout constants in tests with new **test.support** constants: **LOOPBACK\_TIMEOUT**, **INTERNET\_TIMEOUT**, **SHORT\_TIMEOUT** and **LONG\_TIMEOUT**. It becomes easier to adjust these four timeout constants for all tests at once, rather than having to adjust every single test file.
- [bpo-38547](https://bugs.python.org/issue?@action=redirect&bpo=38547) [https://bugs.python.org/issue?@action=redirect&bpo=38547]: Fix test\_pty: if the process is the session leader, closing the master file descriptor raises a SIGHUP signal: simply ignore SIGHUP when running the tests.
- [bpo-38992](https://bugs.python.org/issue?@action=redirect&bpo=38992) [https://bugs.python.org/issue?@action=redirect&bpo=38992]: Fix a test for **math.fsum()** that was failing due to constant folding.
- [bpo-38991](https://bugs.python.org/issue?@action=redirect&bpo=38991) [https://bugs.python.org/issue?@action=redirect&bpo=38991]: **test.support: run\_python\_until\_end(), assert\_python\_ok() and assert\_python\_failure()** functions no longer strip whitespaces from stderr. Remove **test.support.strip\_python\_stderr()** function.
- [bpo-38965](https://bugs.python.org/issue?@action=redirect&bpo=38965) [https://bugs.python.org/issue?@action=redirect&bpo=38965]: Fix test\_faulthandler on GCC 10. Use the “volatile” keyword in **faulthandler.\_stack\_overflow()** to prevent tail call optimization on any compiler, rather than relying on compiler specific pragma.
- [bpo-38875](https://bugs.python.org/issue?@action=redirect&bpo=38875) [https://bugs.python.org/issue?@action=redirect&bpo=38875]: **test\_capi: trashcan tests** now require the test “cpu” resource.
- [bpo-38841](https://bugs.python.org/issue?@action=redirect&bpo=38841) [https://bugs.python.org/issue?@action=redirect&bpo=38841]: Skip **asyncio test\_create\_datagram\_endpoint\_existing\_sock\_unix** on platforms lacking a functional **bind()** for named unix domain sockets.
- [bpo-38692](https://bugs.python.org/issue?@action=redirect&bpo=38692) [https://bugs.python.org/issue?@action=redirect&bpo=38692]: Skip the **test\_posix.test\_pidfd\_open()** test if **os.pidfd\_open()** fails with a **PermissionError**. This situation can happen in a Linux sandbox using a syscall whitelist which doesn’t allow the **pidfd\_open()** syscall yet.

- [bpo-38839](https://bugs.python.org/issue?@action=redirect&bpo=38839) [https://bugs.python.org/issue?@action=redirect&bpo=38839]: Fix some unused functions in tests. Patch by Adam Johnson.
- [bpo-38669](https://bugs.python.org/issue?@action=redirect&bpo=38669) [https://bugs.python.org/issue?@action=redirect&bpo=38669]: Raise **TypeError** when passing target as a string with `unittest.mock.patch.object()`.
- [bpo-37957](https://bugs.python.org/issue?@action=redirect&bpo=37957) [https://bugs.python.org/issue?@action=redirect&bpo=37957]: `test.regrtest` now can receive a list of test patterns to ignore (using the `-i/--ignore` argument) or a file with a list of patterns to ignore (using the `--ignore-file` argument). Patch by Pablo Galindo.

## Build

- [bpo-37404](https://bugs.python.org/issue?@action=redirect&bpo=37404) [https://bugs.python.org/issue?@action=redirect&bpo=37404]: **asyncio** now raises **TypeError** when calling incompatible methods with an `ssl.SSLSocket` socket. Patch by Ido Michael.
- [bpo-36500](https://bugs.python.org/issue?@action=redirect&bpo=36500) [https://bugs.python.org/issue?@action=redirect&bpo=36500]: Added an optional “regen” project to the Visual Studio solution that will regenerate all grammar, tokens, and opcodes.

## Windows

- [bpo-39007](https://bugs.python.org/issue?@action=redirect&bpo=39007) [https://bugs.python.org/issue?@action=redirect&bpo=39007]: Add auditing events to functions in **winreg**.
- [bpo-33125](https://bugs.python.org/issue?@action=redirect&bpo=33125) [https://bugs.python.org/issue?@action=redirect&bpo=33125]: Add support for building and releasing Windows ARM64 packages.

## macOS

- [bpo-37931](https://bugs.python.org/issue?@action=redirect&bpo=37931) [https://bugs.python.org/issue?@action=redirect&bpo=37931]: Fixed a crash on OSX dynamic builds that occurred when re-initializing the `posix` module after a `Py_Finalize` if the environment had changed since the previous `import posix`. Patch by Benoît Hudson.

## IDLE

- [bpo-38944](https://bugs.python.org/issue?@action=redirect&bpo=38944) [https://bugs.python.org/issue?@action=redirect&bpo=38944]: Escape key now closes IDLE completion windows. Patch by Johnny Najera.
- [bpo-38943](https://bugs.python.org/issue?@action=redirect&bpo=38943) [https://bugs.python.org/issue?@action=redirect&bpo=38943]: Fix IDLE autocomplete windows not always appearing on some systems. Patch by Johnny Najera.
- [bpo-38862](https://bugs.python.org/issue?@action=redirect&bpo=38862) [https://bugs.python.org/issue?@action=redirect&bpo=38862]: ‘Strip Trailing Whitespace’ on the Format menu removes extra newlines at the end of non-shell files.
- [bpo-38636](https://bugs.python.org/issue?@action=redirect&bpo=38636) [https://bugs.python.org/issue?@action=redirect&bpo=38636]: Fix IDLE Format menu tab toggle and file indent width. These functions (default shortcuts Alt-T and Alt-U) were mistakenly disabled in 3.7.5 and 3.8.0.

## C API

- [bpo-38896](https://bugs.python.org/issue?@action=redirect&bpo=38896) [https://bugs.python.org/issue?@action=redirect&bpo=38896]: Remove `PyUnicode_ClearFreeList()` function: the Unicode free list has been removed in Python 3.3.
- [bpo-37340](https://bugs.python.org/issue?@action=redirect&bpo=37340) [https://bugs.python.org/issue?@action=redirect&bpo=37340]: Remove `PyMethod_ClearFreeList()` and `PyCFunction_ClearFreeList()` functions: the free lists of bound method objects have been removed.
- [bpo-38835](https://bugs.python.org/issue?@action=redirect&bpo=38835) [https://bugs.python.org/issue?@action=redirect&bpo=38835]: Exclude `PyFPE_START_PROTECT()` and `PyFPE_END_PROTECT()` macros of `pyfpe.h` from `Py_LIMITED_API` (stable API).

## Python 3.9.0 alpha 1

*Release date: 2019-11-19*

## Security

- [bpo-38722](https://bugs.python.org/issue?@action=redirect&bpo=38722) [https://bugs.python.org/issue?@action=redirect&bpo=38722]: **runpy** now uses **io.open\_code()** to open code files. Patch by Jason Killen.
- [bpo-38622](https://bugs.python.org/issue?@action=redirect&bpo=38622) [https://bugs.python.org/issue?@action=redirect&bpo=38622]: Add additional audit events for the **ctypes** module.
- [bpo-38418](https://bugs.python.org/issue?@action=redirect&bpo=38418) [https://bugs.python.org/issue?@action=redirect&bpo=38418]: Fixes audit event for **os.system()** to be named `os.system`.
- [bpo-38243](https://bugs.python.org/issue?@action=redirect&bpo=38243) [https://bugs.python.org/issue?@action=redirect&bpo=38243]: Escape the server title of **xmlrpc.server.DocXMLRPCServer** when rendering the document page as HTML. (Contributed by Donghee Na in [bpo-38243](https://bugs.python.org/issue?@action=redirect&bpo=38243) [https://bugs.python.org/issue?@action=redirect&bpo=38243].)
- [bpo-38174](https://bugs.python.org/issue?@action=redirect&bpo=38174) [https://bugs.python.org/issue?@action=redirect&bpo=38174]: Update vendorized expat library version to 2.2.8, which resolves CVE-2019-15903.
- [bpo-37764](https://bugs.python.org/issue?@action=redirect&bpo=37764) [https://bugs.python.org/issue?@action=redirect&bpo=37764]: Fixes `email.header_value_parser.get_unstructured` going into an infinite loop for a specific case in which the email header does not have trailing whitespace, and the case in which it contains an invalid encoded word. Patch by Ashwin Ramaswami.
- [bpo-37461](https://bugs.python.org/issue?@action=redirect&bpo=37461) [https://bugs.python.org/issue?@action=redirect&bpo=37461]: Fix an infinite loop when parsing specially crafted email headers. Patch by Abhilash Raj.
- [bpo-37363](https://bugs.python.org/issue?@action=redirect&bpo=37363) [https://bugs.python.org/issue?@action=redirect&bpo=37363]: Adds audit events for the range of supported run commands (see [Command line and environment](#)).
- [bpo-37463](https://bugs.python.org/issue?@action=redirect&bpo=37463) [https://bugs.python.org/issue?@action=redirect&bpo=37463]: `ssl.match_hostname()` no longer accepts IPv4 addresses with additional text after the address and only quad-dotted notation without trailing whitespaces. Some `inet_aton()` implementations ignore whitespace and all data after whitespace, e.g. '127.0.0.1 whatever'.
- [bpo-37363](https://bugs.python.org/issue?@action=redirect&bpo=37363) [https://bugs.python.org/issue?@action=redirect&bpo=37363]: Adds audit events for

`ensurepip`, `ftplib`, `glob`, `imaplib`, `nntplib`, `pdb`, `poplib`, `shutil`, `smtplib`, `sqlite3`, `subprocess`, `telnetlib`, `tempfile` and `webbrowser`, as well as `os.listdir()`, `os.scandir()` and `breakpoint()`.

- [bpo-37364](https://bugs.python.org/issue?@action=redirect&bpo=37364) [https://bugs.python.org/issue?@action=redirect&bpo=37364]: `io.open_code()` is now used when reading `.pth` files.
- [bpo-34631](https://bugs.python.org/issue?@action=redirect&bpo=34631) [https://bugs.python.org/issue?@action=redirect&bpo=34631]: Updated OpenSSL to 1.1.1c in Windows installer
- [bpo-34155](https://bugs.python.org/issue?@action=redirect&bpo=34155) [https://bugs.python.org/issue?@action=redirect&bpo=34155]: Fix parsing of invalid email addresses with more than one `@` (e.g. `a@b@c.com.`) to not return the part before 2nd `@` as valid email address. Patch by maxking & jplic.

## Core and Builtins

- [bpo-38631](https://bugs.python.org/issue?@action=redirect&bpo=38631) [https://bugs.python.org/issue?@action=redirect&bpo=38631]: Replace `Py_FatalError()` call with a regular `RuntimeError` exception in `float.__getformat__()`.
- [bpo-38639](https://bugs.python.org/issue?@action=redirect&bpo=38639) [https://bugs.python.org/issue?@action=redirect&bpo=38639]: Optimized `math.floor()`, `math.ceil()` and `math.trunc()` for floats.
- [bpo-38640](https://bugs.python.org/issue?@action=redirect&bpo=38640) [https://bugs.python.org/issue?@action=redirect&bpo=38640]: Fixed a bug in the compiler that was causing to raise in the presence of break statements and continue statements inside always false while loops. Patch by Pablo Galindo.
- [bpo-38613](https://bugs.python.org/issue?@action=redirect&bpo=38613) [https://bugs.python.org/issue?@action=redirect&bpo=38613]: Optimized some set operations (e.g. `|`, `^`, and `-`) of `dict_keys`. `d.keys()` | other was slower than `set(d)` | other but they are almost same performance for now.
- [bpo-28029](https://bugs.python.org/issue?@action=redirect&bpo=28029) [https://bugs.python.org/issue?@action=redirect&bpo=28029]: `"".replace("", s, n)` now

returns `s` instead of an empty string for all non-zero `n`. There are similar changes for `bytes` and `bytearray` objects.

- [bpo-38535](https://bugs.python.org/issue?@action=redirect&bpo=38535) [https://bugs.python.org/issue?@action=redirect&bpo=38535]: Fixed line numbers and column offsets for AST nodes for calls without arguments in decorators.
- [bpo-38525](https://bugs.python.org/issue?@action=redirect&bpo=38525) [https://bugs.python.org/issue?@action=redirect&bpo=38525]: Fix a segmentation fault when using reverse iterators of empty `dict` objects. Patch by Donghee Na and Inada Naoki.
- [bpo-38465](https://bugs.python.org/issue?@action=redirect&bpo=38465) [https://bugs.python.org/issue?@action=redirect&bpo=38465]: `bytearray`, `array` and `mmap` objects allow now to export more than  $2^{31}$  buffers at a time.
- [bpo-38469](https://bugs.python.org/issue?@action=redirect&bpo=38469) [https://bugs.python.org/issue?@action=redirect&bpo=38469]: Fixed a bug where the scope of named expressions was not being resolved correctly in the presence of the `global` keyword. Patch by Pablo Galindo.
- [bpo-38437](https://bugs.python.org/issue?@action=redirect&bpo=38437) [https://bugs.python.org/issue?@action=redirect&bpo=38437]: Activate the `GC_DEBUG` macro for debug builds of the interpreter (when `Py_DEBUG` is set). Patch by Pablo Galindo.
- [bpo-38379](https://bugs.python.org/issue?@action=redirect&bpo=38379) [https://bugs.python.org/issue?@action=redirect&bpo=38379]: When the garbage collector makes a collection in which some objects resurrect (they are reachable from outside the isolated cycles after the finalizers have been executed), do not block the collection of all objects that are still unreachable. Patch by Pablo Galindo and Tim Peters.
- [bpo-38379](https://bugs.python.org/issue?@action=redirect&bpo=38379) [https://bugs.python.org/issue?@action=redirect&bpo=38379]: When cyclic garbage collection (gc) runs finalizers that resurrect unreachable objects, the current gc run ends, without collecting any cyclic trash.

However, the statistics reported by `collect()` and `get_stats()` claimed that all cyclic trash found was collected, and that the resurrected objects were collected. Changed the stats to report that none were collected.

- [bpo-38392](https://bugs.python.org/issue?@action=redirect&bpo=38392) [https://bugs.python.org/issue?@action=redirect&bpo=38392]: In debug mode, **`PyObject_GC_Track()`** now calls `tp_traverse()` of the object type to ensure that the object is valid: test that objects visited by `tp_traverse()` are valid.
- [bpo-38210](https://bugs.python.org/issue?@action=redirect&bpo=38210) [https://bugs.python.org/issue?@action=redirect&bpo=38210]: Remove unnecessary intersection and update set operation in dictview with empty set. (Contributed by Donghee Na in [bpo-38210](https://bugs.python.org/issue?@action=redirect&bpo=38210) [https://bugs.python.org/issue?@action=redirect&bpo=38210].)
- [bpo-38402](https://bugs.python.org/issue?@action=redirect&bpo=38402) [https://bugs.python.org/issue?@action=redirect&bpo=38402]: Check the error from the system's underlying `crypt` or `crypt_r`.
- [bpo-37474](https://bugs.python.org/issue?@action=redirect&bpo=37474) [https://bugs.python.org/issue?@action=redirect&bpo=37474]: On FreeBSD, Python no longer calls `fedisableexcept()` at startup to control the floating point control mode. The call became useless since FreeBSD 6: it became the default mode.
- [bpo-38006](https://bugs.python.org/issue?@action=redirect&bpo=38006) [https://bugs.python.org/issue?@action=redirect&bpo=38006]: Fix a bug due to the interaction of weakrefs and the cyclic garbage collector. We must clear any weakrefs in garbage in order to prevent their callbacks from executing and causing a crash.
- [bpo-38317](https://bugs.python.org/issue?@action=redirect&bpo=38317) [https://bugs.python.org/issue?@action=redirect&bpo=38317]: Fix warnings options priority: `PyConfig.warnoptions` has the highest priority, as stated in the [PEP 587](https://peps.python.org/pep-0587/) [https://peps.python.org/pep-0587/].
- [bpo-38310](https://bugs.python.org/issue?@action=redirect&bpo=38310) [https://bugs.python.org/issue?@action=redirect&bpo=38310]: **Predict**  
`BUILD_MAP_UNPACK_WITH_CALL -> CALL_FUNCTION_EX`

opcode pairs in the main interpreter loop. Patch by Brandt Bucher.

- [bpo-36871](https://bugs.python.org/issue?@action=redirect&bpo=36871) [https://bugs.python.org/issue?@action=redirect&bpo=36871]: Improve error handling for the `assert_has_calls` and `assert_has_awaits` methods of mocks. Fixed a bug where any errors encountered while binding the expected calls to the mock's spec were silently swallowed, leading to misleading error output.
- [bpo-11410](https://bugs.python.org/issue?@action=redirect&bpo=11410) [https://bugs.python.org/issue?@action=redirect&bpo=11410]: Better control over symbol visibility is provided through use of the visibility attributes available in gcc >= 4.0, provided in a uniform way across POSIX and Windows. The POSIX build files have been updated to compile with `-fvisibility=hidden`, minimising exported symbols.
- [bpo-38219](https://bugs.python.org/issue?@action=redirect&bpo=38219) [https://bugs.python.org/issue?@action=redirect&bpo=38219]: Optimized the `dict` constructor and the `update()` method for the case when the argument is a dict.
- [bpo-38236](https://bugs.python.org/issue?@action=redirect&bpo=38236) [https://bugs.python.org/issue?@action=redirect&bpo=38236]: Python now dumps path configuration if it fails to import the Python codecs of the filesystem and stdio encodings.
- [bpo-38013](https://bugs.python.org/issue?@action=redirect&bpo=38013) [https://bugs.python.org/issue?@action=redirect&bpo=38013]: Allow to call `async_generator_athrow().throw(...)` even for non-started async generator helper. It fixes annoying warning at the end of `asyncio.run()` call.
- [bpo-38124](https://bugs.python.org/issue?@action=redirect&bpo=38124) [https://bugs.python.org/issue?@action=redirect&bpo=38124]: Fix an off-by-one error in `PyState_AddModule` that could cause out-of-bounds memory access.
- [bpo-38116](https://bugs.python.org/issue?@action=redirect&bpo=38116) [https://bugs.python.org/issue?@action=redirect&bpo=38116]: The `select` module is now PEP-384

compliant and no longer has static state

- [bpo-38113](https://bugs.python.org/issue?@action=redirect&bpo=38113) [https://bugs.python.org/issue?@action=redirect&bpo=38113]: ast module updated to PEP-384 and all statics removed
- [bpo-38076](https://bugs.python.org/issue?@action=redirect&bpo=38076) [https://bugs.python.org/issue?@action=redirect&bpo=38076]: The struct module is now PEP-384 compatible
- [bpo-38075](https://bugs.python.org/issue?@action=redirect&bpo=38075) [https://bugs.python.org/issue?@action=redirect&bpo=38075]: The random module is now PEP-384 compatible
- [bpo-38074](https://bugs.python.org/issue?@action=redirect&bpo=38074) [https://bugs.python.org/issue?@action=redirect&bpo=38074]: zlib module made PEP-384 compatible
- [bpo-38073](https://bugs.python.org/issue?@action=redirect&bpo=38073) [https://bugs.python.org/issue?@action=redirect&bpo=38073]: Make pwd extension module PEP-384 compatible
- [bpo-38072](https://bugs.python.org/issue?@action=redirect&bpo=38072) [https://bugs.python.org/issue?@action=redirect&bpo=38072]: grp module made PEP-384 compatible
- [bpo-38069](https://bugs.python.org/issue?@action=redirect&bpo=38069) [https://bugs.python.org/issue?@action=redirect&bpo=38069]: Make \_posixsubprocess PEP-384 compatible
- [bpo-38071](https://bugs.python.org/issue?@action=redirect&bpo=38071) [https://bugs.python.org/issue?@action=redirect&bpo=38071]: Make termios extension module PEP-384 compatible
- [bpo-38005](https://bugs.python.org/issue?@action=redirect&bpo=38005) [https://bugs.python.org/issue?@action=redirect&bpo=38005]: Fixed comparing and creating of InterpreterID and ChannelID.
- [bpo-36946](https://bugs.python.org/issue?@action=redirect&bpo=36946) [https://bugs.python.org/issue?@action=redirect&bpo=36946]: Fix possible signed integer overflow when handling slices. Patch by hongweipeng.

- [bpo-37994](https://bugs.python.org/issue?@action=redirect&bpo=37994) [https://bugs.python.org/issue?@action=redirect&bpo=37994]: Fixed silencing arbitrary errors if an attribute lookup fails in several sites. Only `AttributeError` should be silenced.
- [bpo-8425](https://bugs.python.org/issue?@action=redirect&bpo=8425) [https://bugs.python.org/issue?@action=redirect&bpo=8425]: Optimize `set difference_update` for the case when the other set is much larger than the base set. (Suggested by Evgeny Kapun with code contributed by Michele Orrù).
- [bpo-37966](https://bugs.python.org/issue?@action=redirect&bpo=37966) [https://bugs.python.org/issue?@action=redirect&bpo=37966]: The implementation of `is_normalized()` has been greatly sped up on strings that aren't normalized, by implementing the full normalization-quick-check algorithm from the Unicode standard.
- [bpo-37947](https://bugs.python.org/issue?@action=redirect&bpo=37947) [https://bugs.python.org/issue?@action=redirect&bpo=37947]: Adjust correctly the recursion level in the symtable generation for named expressions. Patch by Pablo Galindo.
- [bpo-37812](https://bugs.python.org/issue?@action=redirect&bpo=37812) [https://bugs.python.org/issue?@action=redirect&bpo=37812]: The `CHECK_SMALL_INT` macro used inside `Object/longobject.c` has been replaced with an explicit `return` at each call site.
- [bpo-37751](https://bugs.python.org/issue?@action=redirect&bpo=37751) [https://bugs.python.org/issue?@action=redirect&bpo=37751]: Fix `codecs.lookup()` to normalize the encoding name the same way than `encodings.normalize_encoding()`, except that `codecs.lookup()` also converts the name to lower case.
- [bpo-37830](https://bugs.python.org/issue?@action=redirect&bpo=37830) [https://bugs.python.org/issue?@action=redirect&bpo=37830]: Fixed compilation of `break` and `continue` in the `finally` block when the corresponding `try` block contains `return` with a non-constant value.
- [bpo-20490](https://bugs.python.org/issue?@action=redirect&bpo=20490) [https://bugs.python.org/issue?@action=redirect&bpo=20490]: Improve import error message for partially initialized module on circular `from imports` - by Anthony Sottile.

- [bpo-37840](https://bugs.python.org/issue?@action=redirect&bpo=37840) [https://bugs.python.org/issue?@action=redirect&bpo=37840]: Fix handling of negative indices in `sq_item` of `bytearray`. Patch by Sergey Fedoseev.
- [bpo-37802](https://bugs.python.org/issue?@action=redirect&bpo=37802) [https://bugs.python.org/issue?@action=redirect&bpo=37802]: Slightly improve performance of `PyLong_FromUnsignedLong()`, `PyLong_FromUnsignedLongLong()` and `PyLong_FromSize_t()`. Patch by Sergey Fedoseev.
- [bpo-37409](https://bugs.python.org/issue?@action=redirect&bpo=37409) [https://bugs.python.org/issue?@action=redirect&bpo=37409]: Ensure explicit relative imports from interactive sessions and scripts (having no parent package) always raise `ImportError`, rather than treating the current module as the package. Patch by Ben Lewis.
- [bpo-32912](https://bugs.python.org/issue?@action=redirect&bpo=32912) [https://bugs.python.org/issue?@action=redirect&bpo=32912]: Reverted [bpo-32912](https://bugs.python.org/issue?@action=redirect&bpo=32912) [https://bugs.python.org/issue?@action=redirect&bpo=32912]: emitting `SyntaxWarning` instead of `DeprecationWarning` for invalid escape sequences in string and bytes literals.
- [bpo-37757](https://bugs.python.org/issue?@action=redirect&bpo=37757) [https://bugs.python.org/issue?@action=redirect&bpo=37757]: [PEP 572](https://peps.python.org/pep-0572/) [https://peps.python.org/pep-0572/]: As described in the PEP, assignment expressions now raise `SyntaxError` when their interaction with comprehension scoping results in an ambiguous target scope.

The `TargetScopeError` subclass originally proposed by the PEP has been removed in favour of just raising regular syntax errors for the disallowed cases.

- [bpo-36279](https://bugs.python.org/issue?@action=redirect&bpo=36279) [https://bugs.python.org/issue?@action=redirect&bpo=36279]: Fix potential use of uninitialized memory in `os.wait3()`.
- [bpo-36311](https://bugs.python.org/issue?@action=redirect&bpo=36311) [https://bugs.python.org/issue?@action=redirect&bpo=36311]: Decoding bytes objects larger than 2GiB is faster and no longer fails when a multibyte characters spans a chunk boundary.

- [bpo-34880](https://bugs.python.org/issue?@action=redirect&bpo=34880) [https://bugs.python.org/issue?@action=redirect&bpo=34880]: The `assert` statement now works properly if the `AssertionError` exception is being shadowed. Patch by Zackery Spytz.
- [bpo-37340](https://bugs.python.org/issue?@action=redirect&bpo=37340) [https://bugs.python.org/issue?@action=redirect&bpo=37340]: Removed object cache (`free_list`) for bound method objects. Temporary bound method objects are less used than before thanks to the `LOAD_METHOD` opcode and the `_PyObject_VectorcallMethod` C API.
- [bpo-37648](https://bugs.python.org/issue?@action=redirect&bpo=37648) [https://bugs.python.org/issue?@action=redirect&bpo=37648]: Fixed minor inconsistency in `list.__contains__()`, `tuple.__contains__()` and a few other places. The collection's item is now always at the left and the needle is on the right of `==`.
- [bpo-37444](https://bugs.python.org/issue?@action=redirect&bpo=37444) [https://bugs.python.org/issue?@action=redirect&bpo=37444]: Update differing exception between `builtins.__import__()` and `importlib.__import__()`.
- [bpo-37619](https://bugs.python.org/issue?@action=redirect&bpo=37619) [https://bugs.python.org/issue?@action=redirect&bpo=37619]: When adding a wrapper descriptor from one class to a different class (for example, setting `__add__ = str.__add__` on an `int` subclass), an exception is correctly raised when the operator is called.
- [bpo-37593](https://bugs.python.org/issue?@action=redirect&bpo=37593) [https://bugs.python.org/issue?@action=redirect&bpo=37593]: Swap the positions of the `posonlyargs` and `args` parameters in the constructor of `ast.parameters` nodes.
- [bpo-37543](https://bugs.python.org/issue?@action=redirect&bpo=37543) [https://bugs.python.org/issue?@action=redirect&bpo=37543]: Optimized `pymalloc` for non PGO build.
- [bpo-37537](https://bugs.python.org/issue?@action=redirect&bpo=37537) [https://bugs.python.org/issue?@action=redirect&bpo=37537]: Compute allocated `pymalloc` blocks inside `_Py_GetAllocatedBlocks()`. This slows down

`_Py_GetAllocatedBlocks()` but gives a small speedup to `_PyObject_Malloc()` and `_PyObject_Free()`.

- [bpo-37467](https://bugs.python.org/issue?@action=redirect&bpo=37467) [https://bugs.python.org/issue?@action=redirect&bpo=37467]: Fix `sys.excepthook()` and `PyErr_Display()` if a filename is a bytes string. For example, for a `SyntaxError` exception where the filename attribute is a bytes string.
- [bpo-37433](https://bugs.python.org/issue?@action=redirect&bpo=37433) [https://bugs.python.org/issue?@action=redirect&bpo=37433]: Fix `SyntaxError` indicator printing too many spaces for multi-line strings - by Anthony Sottile.
- [bpo-37417](https://bugs.python.org/issue?@action=redirect&bpo=37417) [https://bugs.python.org/issue?@action=redirect&bpo=37417]: `bytearray.extend()` now correctly handles errors that arise during iteration. Patch by Brandt Bucher.
- [bpo-37414](https://bugs.python.org/issue?@action=redirect&bpo=37414) [https://bugs.python.org/issue?@action=redirect&bpo=37414]: The undocumented `sys.callstats()` function has been removed. Since Python 3.7, it was deprecated and always returned `None`. It required a special build option `CALL_PROFILE` which was already removed in Python 3.7.
- [bpo-37392](https://bugs.python.org/issue?@action=redirect&bpo=37392) [https://bugs.python.org/issue?@action=redirect&bpo=37392]: Remove `sys.getcheckinterval()` and `sys.setcheckinterval()` functions. They were deprecated since Python 3.2. Use `sys.getswitchinterval()` and `sys.setswitchinterval()` instead. Remove also `check_interval` field of the `PyInterpreterState` structure.
- [bpo-37388](https://bugs.python.org/issue?@action=redirect&bpo=37388) [https://bugs.python.org/issue?@action=redirect&bpo=37388]: In development mode and in debug build, `encoding` and `errors` arguments are now checked on string encoding and decoding operations. Examples: `open()`, `str.encode()` and `bytes.decode()`.

By default, for best performances, the *errors* argument is only checked at the first encoding/decoding error, and the *encoding* argument is sometimes ignored for empty strings.

- [bpo-37348](https://bugs.python.org/issue?@action=redirect&bpo=37348) [https://bugs.python.org/issue?@action=redirect&bpo=37348]: Optimized decoding short ASCII string with UTF-8 and ascii codecs. `b"foo".decode()` is about 15% faster. Patch by Inada Naoki.
- [bpo-24214](https://bugs.python.org/issue?@action=redirect&bpo=24214) [https://bugs.python.org/issue?@action=redirect&bpo=24214]: Improved support of the surrogatepass error handler in the UTF-8 and UTF-16 incremental decoders.
- [bpo-37330](https://bugs.python.org/issue?@action=redirect&bpo=37330) [https://bugs.python.org/issue?@action=redirect&bpo=37330]: `open()`, `io.open()`, `codecs.open()` and `fileinput.FileInput` no longer accept `'U'` (“universal newline”) in the file mode. This flag was deprecated since Python 3.3.
- [bpo-35224](https://bugs.python.org/issue?@action=redirect&bpo=35224) [https://bugs.python.org/issue?@action=redirect&bpo=35224]: Reverse evaluation order of key: value in dict comprehensions as proposed in PEP 572. I.e. in `{k: v for ...}`, `k` will be evaluated before `v`.
- [bpo-37316](https://bugs.python.org/issue?@action=redirect&bpo=37316) [https://bugs.python.org/issue?@action=redirect&bpo=37316]: Fix the `PySys_Audit()` call in `mmap.mmap`.
- [bpo-37300](https://bugs.python.org/issue?@action=redirect&bpo=37300) [https://bugs.python.org/issue?@action=redirect&bpo=37300]: Remove an unnecessary `Py_XINCREF` in `classobject.c`.
- [bpo-37269](https://bugs.python.org/issue?@action=redirect&bpo=37269) [https://bugs.python.org/issue?@action=redirect&bpo=37269]: Fix a bug in the peephole optimizer that was not treating correctly constant conditions with binary operators. Patch by Pablo Galindo.
- [bpo-20443](https://bugs.python.org/issue?@action=redirect&bpo=20443) [https://bugs.python.org/issue?@action=redirect&bpo=20443]: Python now gets the absolute path of the script filename specified on the command line (ex:

“python3 script.py”): the `__file__` attribute of the `__main__` module and `sys.path[0]` become an absolute path, rather than a relative path.

- [bpo-37257](https://bugs.python.org/issue?@action=redirect&bpo=37257) [https://bugs.python.org/issue?@action=redirect&bpo=37257]: Python’s small object allocator (`obmalloc.c`) now allows (no more than) one empty arena to remain available for immediate reuse, without returning it to the OS. This prevents thrashing in simple loops where an arena could be created and destroyed anew on each iteration.
- [bpo-37231](https://bugs.python.org/issue?@action=redirect&bpo=37231) [https://bugs.python.org/issue?@action=redirect&bpo=37231]: The dispatching of type slots to special methods (for example calling `__mul__` when doing `x * y`) has been made faster.
- [bpo-36974](https://bugs.python.org/issue?@action=redirect&bpo=36974) [https://bugs.python.org/issue?@action=redirect&bpo=36974]: Implemented separate vectorcall functions for every calling convention of builtin functions and methods. This improves performance for calls.
- [bpo-37213](https://bugs.python.org/issue?@action=redirect&bpo=37213) [https://bugs.python.org/issue?@action=redirect&bpo=37213]: Handle correctly negative line offsets in the peephole optimizer. Patch by Pablo Galindo.
- [bpo-37219](https://bugs.python.org/issue?@action=redirect&bpo=37219) [https://bugs.python.org/issue?@action=redirect&bpo=37219]: Remove erroneous optimization for empty set differences.
- [bpo-15913](https://bugs.python.org/issue?@action=redirect&bpo=15913) [https://bugs.python.org/issue?@action=redirect&bpo=15913]: Implement `PyBuffer_SizeFromFormat()` function (previously documented but not implemented): call `struct.calcsize()`. Patch by Joannah Nanjeyye.
- [bpo-36922](https://bugs.python.org/issue?@action=redirect&bpo=36922) [https://bugs.python.org/issue?@action=redirect&bpo=36922]: Slot functions optimize any callable with `Py_TPFLAGS_METHOD_DESCRIPTOR` instead of only instances of `function`.
- [bpo-36974](https://bugs.python.org/issue?@action=redirect&bpo=36974) [https://bugs.python.org/issue?@action=redirect&bpo=36974]

@action=redirect&bpo=36974]: The slot `tp_vectorcall_offset` is inherited unconditionally to support `super().__call__()` when the base class uses `vectorcall`.

- [bpo-37160](https://bugs.python.org/issue?@action=redirect&bpo=37160) [https://bugs.python.org/issue?@action=redirect&bpo=37160]: `threading.get_native_id()` now also supports NetBSD.
- [bpo-37077](https://bugs.python.org/issue?@action=redirect&bpo=37077) [https://bugs.python.org/issue?@action=redirect&bpo=37077]: Add `threading.get_native_id()` support for AIX. Patch by M. Felt
- [bpo-36781](https://bugs.python.org/issue?@action=redirect&bpo=36781) [https://bugs.python.org/issue?@action=redirect&bpo=36781]: `sum()` has been optimized for boolean values.
- [bpo-34556](https://bugs.python.org/issue?@action=redirect&bpo=34556) [https://bugs.python.org/issue?@action=redirect&bpo=34556]: Add `--upgrade-deps` to `venv` module. Patch by Cooper Ry Lees
- [bpo-20523](https://bugs.python.org/issue?@action=redirect&bpo=20523) [https://bugs.python.org/issue?@action=redirect&bpo=20523]: `pdb.Pdb` supports `~/.pdbrc` in Windows 7. Patch by Tim Hopper and Dan Lidral-Porter.
- [bpo-35551](https://bugs.python.org/issue?@action=redirect&bpo=35551) [https://bugs.python.org/issue?@action=redirect&bpo=35551]: Updated encodings: - Removed the “tis260” encoding, which was an alias for the nonexistent “tactis” codec. - Added “mac\_centeuro” as an alias for the `mac_latin2` encoding.
- [bpo-19072](https://bugs.python.org/issue?@action=redirect&bpo=19072) [https://bugs.python.org/issue?@action=redirect&bpo=19072]: The `classmethod` decorator can now wrap other descriptors such as property objects. Adapted from a patch written by Graham Dumpleton.
- [bpo-27575](https://bugs.python.org/issue?@action=redirect&bpo=27575) [https://bugs.python.org/issue?@action=redirect&bpo=27575]: Improve speed of `dictview` intersection by directly using set intersection logic. Patch by David Su.

- [bpo-30773](https://bugs.python.org/issue?@action=redirect&bpo=30773) [https://bugs.python.org/issue?@action=redirect&bpo=30773]: Prohibit parallel running of `aclose()` / `asend()` / `athrow()`. Fix `ag_running` to reflect the actual running status of the AG.

## Library

- [bpo-36589](https://bugs.python.org/issue?@action=redirect&bpo=36589) [https://bugs.python.org/issue?@action=redirect&bpo=36589]: The `curses.update_lines_cols()` function now returns `None` instead of `1` on success.
- [bpo-38807](https://bugs.python.org/issue?@action=redirect&bpo=38807) [https://bugs.python.org/issue?@action=redirect&bpo=38807]: Update `TypeError` messages for `os.path.join()` to include `os.PathLike` objects as acceptable input types.
- [bpo-38724](https://bugs.python.org/issue?@action=redirect&bpo=38724) [https://bugs.python.org/issue?@action=redirect&bpo=38724]: Add a repr for `subprocess.Popen` objects. Patch by Andrey Doroschenko.
- [bpo-38786](https://bugs.python.org/issue?@action=redirect&bpo=38786) [https://bugs.python.org/issue?@action=redirect&bpo=38786]: `pydoc` now recognizes and parses HTTPS URLs. Patch by python273.
- [bpo-38785](https://bugs.python.org/issue?@action=redirect&bpo=38785) [https://bugs.python.org/issue?@action=redirect&bpo=38785]: Prevent `asyncio` from crashing if parent `__init__` is not called from a constructor of object derived from `asyncio.Future`.
- [bpo-38723](https://bugs.python.org/issue?@action=redirect&bpo=38723) [https://bugs.python.org/issue?@action=redirect&bpo=38723]: `pdb` now uses `io.open_code()` to trigger auditing events.
- [bpo-27805](https://bugs.python.org/issue?@action=redirect&bpo=27805) [https://bugs.python.org/issue?@action=redirect&bpo=27805]: Allow opening pipes and other non-seekable files in append mode with `open()`.
- [bpo-38438](https://bugs.python.org/issue?@action=redirect&bpo=38438) [https://bugs.python.org/issue?@action=redirect&bpo=38438]: Simplify the `argparse` usage message for `nargs="*"`.

- [bpo-38761](https://bugs.python.org/issue?@action=redirect&bpo=38761) [https://bugs.python.org/issue?@action=redirect&bpo=38761]: `WeakSet` is now registered as a `collections.abc.MutableSet`.
- [bpo-38716](https://bugs.python.org/issue?@action=redirect&bpo=38716) [https://bugs.python.org/issue?@action=redirect&bpo=38716]: logging: change `RotatingHandler` `namer` and `rotator` to class-level attributes. This stops `__init__` from setting them to `None` in the case where a subclass defines them with eponymous methods.
- [bpo-38713](https://bugs.python.org/issue?@action=redirect&bpo=38713) [https://bugs.python.org/issue?@action=redirect&bpo=38713]: Add `os.P_PIDFD` constant, which may be passed to `os.waitid()` to wait on a Linux process file descriptor.
- [bpo-38692](https://bugs.python.org/issue?@action=redirect&bpo=38692) [https://bugs.python.org/issue?@action=redirect&bpo=38692]: Add `asyncio.PidfdChildWatcher`, a Linux-specific child watcher implementation that polls process file descriptors.
- [bpo-38692](https://bugs.python.org/issue?@action=redirect&bpo=38692) [https://bugs.python.org/issue?@action=redirect&bpo=38692]: Expose the Linux `pidfd_open` syscall as `os.pidfd_open()`.
- [bpo-38602](https://bugs.python.org/issue?@action=redirect&bpo=38602) [https://bugs.python.org/issue?@action=redirect&bpo=38602]: Added constants `F_OFD_GETTLK`, `F_OFD_SETTLK` and `F_OFD_SETTLKW` to the `fcntl` module. Patch by Donghee Na.
- [bpo-38334](https://bugs.python.org/issue?@action=redirect&bpo=38334) [https://bugs.python.org/issue?@action=redirect&bpo=38334]: Fixed seeking backward on an encrypted `zipfile.ZipExtFile`.
- [bpo-38312](https://bugs.python.org/issue?@action=redirect&bpo=38312) [https://bugs.python.org/issue?@action=redirect&bpo=38312]: Add `curses.get_escdelay()`, `curses.set_escdelay()`, `curses.get_tabsize()`, and `curses.set_tabsize()` functions - by Anthony Sottile.
- [bpo-38586](https://bugs.python.org/issue?@action=redirect&bpo=38586) [https://bugs.python.org/issue?@action=redirect&bpo=38586]: Now `fileConfig()` correctly

sets the `.name` of handlers loaded.

- [bpo-38565](https://bugs.python.org/issue?@action=redirect&bpo=38565) [https://bugs.python.org/issue?@action=redirect&bpo=38565]: Add new `cache_parameters()` method for `functools.lru_cache()` to better support pickling.
- [bpo-34679](https://bugs.python.org/issue?@action=redirect&bpo=34679) [https://bugs.python.org/issue?@action=redirect&bpo=34679]: `asyncio.ProactorEventLoop.close()` now only calls `signal.set_wakeup_fd()` in the main thread.
- [bpo-31202](https://bugs.python.org/issue?@action=redirect&bpo=31202) [https://bugs.python.org/issue?@action=redirect&bpo=31202]: The case the result of `pathlib.WindowsPath.glob()` matches now the case of the pattern for literal parts.
- [bpo-36321](https://bugs.python.org/issue?@action=redirect&bpo=36321) [https://bugs.python.org/issue?@action=redirect&bpo=36321]: Remove misspelled attribute. The 3.8 changelog noted that this would be removed in 3.9.
- [bpo-38521](https://bugs.python.org/issue?@action=redirect&bpo=38521) [https://bugs.python.org/issue?@action=redirect&bpo=38521]: Fixed erroneous equality comparison in `statistics.NormalDist()`.
- [bpo-38493](https://bugs.python.org/issue?@action=redirect&bpo=38493) [https://bugs.python.org/issue?@action=redirect&bpo=38493]: Added `CLD_KILLED` and `CLD_STOPPED` for `si_code`. Patch by Donghee Na.
- [bpo-38478](https://bugs.python.org/issue?@action=redirect&bpo=38478) [https://bugs.python.org/issue?@action=redirect&bpo=38478]: Fixed a bug in `inspect.signature.bind()` that was causing it to fail when handling a keyword argument with same name as positional-only parameter. Patch by Pablo Galindo.
- [bpo-33604](https://bugs.python.org/issue?@action=redirect&bpo=33604) [https://bugs.python.org/issue?@action=redirect&bpo=33604]: Fixed `hmac.new` and `hmac.HMAC` to raise `TypeError` instead of `ValueError` when the `digestmod` parameter, now required in 3.8, is omitted. Also clarified the `hmac` module documentation and docstrings.
- [bpo-38378](https://bugs.python.org/issue?@action=redirect&bpo=38378) [https://bugs.python.org/issue?@action=redirect&bpo=38378]

@action=redirect&bpo=38378]: Parameters *out* and *in* of `os.sendfile()` was renamed to *out\_fd* and *in\_fd*.

- [bpo-38417](https://bugs.python.org/issue?@action=redirect&bpo=38417) [https://bugs.python.org/issue?@action=redirect&bpo=38417]: Added support for setting the umask in the child process to the subprocess module on POSIX systems.
- [bpo-38449](https://bugs.python.org/issue?@action=redirect&bpo=38449) [https://bugs.python.org/issue?@action=redirect&bpo=38449]: Revert PR 15522, which introduces a regression in `mimetypes.guess_type()` due to improper handling of filenames as urls.
- [bpo-38431](https://bugs.python.org/issue?@action=redirect&bpo=38431) [https://bugs.python.org/issue?@action=redirect&bpo=38431]: Fix `__repr__` method for `dataclasses.InitVar` to support typing objects, patch by Samuel Colvin.
- [bpo-38109](https://bugs.python.org/issue?@action=redirect&bpo=38109) [https://bugs.python.org/issue?@action=redirect&bpo=38109]: Add missing `stat.S_IFDOOR`, `stat.S_IFPORT`, `stat.S_IFWHT`, `stat.S_ISDOOR()`, `stat.S_ISPORT()`, and `stat.S_ISWHT()` values to the Python implementation of `stat`.
- [bpo-38422](https://bugs.python.org/issue?@action=redirect&bpo=38422) [https://bugs.python.org/issue?@action=redirect&bpo=38422]: Clarify docstrings of `pathlib.suffix(es)`
- [bpo-38405](https://bugs.python.org/issue?@action=redirect&bpo=38405) [https://bugs.python.org/issue?@action=redirect&bpo=38405]: Nested subclasses of `typing.NamedTuple` are now pickleable.
- [bpo-38332](https://bugs.python.org/issue?@action=redirect&bpo=38332) [https://bugs.python.org/issue?@action=redirect&bpo=38332]: Prevent `KeyError` thrown by `_encoded_words.decode()` when given an encoded-word with invalid content-type encoding from propagating all the way to `email.message.get()`.
- [bpo-38371](https://bugs.python.org/issue?@action=redirect&bpo=38371) [https://bugs.python.org/issue?@action=redirect&bpo=38371]: Deprecated the `split()` method in `_tkinter.TkappType` in favour of the `splitlist()`

method which has more consistent and predicable behavior.

- [bpo-38341](https://bugs.python.org/issue?@action=redirect&bpo=38341) [https://bugs.python.org/issue?@action=redirect&bpo=38341]: Add **smtplib.SMTPNotSupportedError** to the **smtplib** exported names.
- [bpo-38319](https://bugs.python.org/issue?@action=redirect&bpo=38319) [https://bugs.python.org/issue?@action=redirect&bpo=38319]: `sendfile()` used in `socket` and `shutil` modules was raising `OverflowError` for files  $\geq 2\text{GiB}$  on 32-bit architectures. (patch by Giampaolo Rodola)
- [bpo-38242](https://bugs.python.org/issue?@action=redirect&bpo=38242) [https://bugs.python.org/issue?@action=redirect&bpo=38242]: Revert the new `asyncio Streams API`
- [bpo-13153](https://bugs.python.org/issue?@action=redirect&bpo=13153) [https://bugs.python.org/issue?@action=redirect&bpo=13153]: OS native encoding is now used for converting between Python strings and Tcl objects. This allows to display, copy and paste to clipboard emoji and other non-BMP characters. Converting strings from Tcl to Python and back now never fails (except `MemoryError`).
- [bpo-38019](https://bugs.python.org/issue?@action=redirect&bpo=38019) [https://bugs.python.org/issue?@action=redirect&bpo=38019]: Correctly handle pause/resume reading of closed `asyncio` unix pipe.
- [bpo-38163](https://bugs.python.org/issue?@action=redirect&bpo=38163) [https://bugs.python.org/issue?@action=redirect&bpo=38163]: Child mocks will now detect their type as either synchronous or asynchronous, asynchronous child mocks will be `AsyncMocks` and synchronous child mocks will be either `MagicMock` or `Mock` (depending on their parent type).
- [bpo-38161](https://bugs.python.org/issue?@action=redirect&bpo=38161) [https://bugs.python.org/issue?@action=redirect&bpo=38161]: Removes `_AwaitEvent` from `AsyncMock`.
- [bpo-38216](https://bugs.python.org/issue?@action=redirect&bpo=38216) [https://bugs.python.org/issue?@action=redirect&bpo=38216]: Allow the rare code that wants to send invalid http requests from the **http.client** library a

way to do so. The fixes for [bpo-30458](https://bugs.python.org/issue?@action=redirect&bpo=30458) [https://bugs.python.org/issue?@action=redirect&bpo=30458] led to breakage for some projects that were relying on this ability to test their own behavior in the face of bad requests.

- [bpo-28286](https://bugs.python.org/issue?@action=redirect&bpo=28286) [https://bugs.python.org/issue?@action=redirect&bpo=28286]: Deprecate opening `GzipFile` for writing implicitly. Always specify the *mode* argument for writing.
- [bpo-38108](https://bugs.python.org/issue?@action=redirect&bpo=38108) [https://bugs.python.org/issue?@action=redirect&bpo=38108]: Any synchronous magic methods on an `AsyncMock` now return a `MagicMock`. Any asynchronous magic methods on a `MagicMock` now return an `AsyncMock`.
- [bpo-38265](https://bugs.python.org/issue?@action=redirect&bpo=38265) [https://bugs.python.org/issue?@action=redirect&bpo=38265]: Update the *length* parameter of `os.pread()` to accept `Py_ssize_t` instead of `int`.
- [bpo-38112](https://bugs.python.org/issue?@action=redirect&bpo=38112) [https://bugs.python.org/issue?@action=redirect&bpo=38112]: `compileall` has a higher default recursion limit and new command-line arguments for path manipulation, symlinks handling, and multiple optimization levels.
- [bpo-38248](https://bugs.python.org/issue?@action=redirect&bpo=38248) [https://bugs.python.org/issue?@action=redirect&bpo=38248]: `asyncio`: Fix inconsistent immediate Task cancellation
- [bpo-38237](https://bugs.python.org/issue?@action=redirect&bpo=38237) [https://bugs.python.org/issue?@action=redirect&bpo=38237]: The arguments for the builtin `pow` function are more descriptive. They can now also be passed in as keywords.
- [bpo-34002](https://bugs.python.org/issue?@action=redirect&bpo=34002) [https://bugs.python.org/issue?@action=redirect&bpo=34002]: Improve efficiency in parts of email package by changing while-pop to a for loop, using `isdisjoint` instead of set intersections.
- [bpo-38191](https://bugs.python.org/issue?@action=redirect&bpo=38191) [https://bugs.python.org/issue?@action=redirect&bpo=38191]

@action=redirect&bpo=38191]: Constructors of **NamedTuple** and **TypedDict** types now accept arbitrary keyword argument names, including “cls”, “self”, “typename”, “\_typename”, “fields” and “\_fields”.

- [bpo-38155](https://bugs.python.org/issue?@action=redirect&bpo=38155) [https://bugs.python.org/issue?@action=redirect&bpo=38155]: Add `__all__` to **datetime**. Patch by Tahia Khan.
- [bpo-38185](https://bugs.python.org/issue?@action=redirect&bpo=38185) [https://bugs.python.org/issue?@action=redirect&bpo=38185]: Fixed case-insensitive string comparison in **sqlite3.Row** indexing.
- [bpo-38136](https://bugs.python.org/issue?@action=redirect&bpo=38136) [https://bugs.python.org/issue?@action=redirect&bpo=38136]: Changes AsyncMock call count and await count to be two different counters. Now await count only counts when a coroutine has been awaited, not when it has been called, and vice-versa. Update the documentation around this.
- [bpo-37828](https://bugs.python.org/issue?@action=redirect&bpo=37828) [https://bugs.python.org/issue?@action=redirect&bpo=37828]: Fix default mock name in **unittest.mock.Mock.assert\_called()** exceptions. Patch by Abraham Toriz Cruz.
- [bpo-38175](https://bugs.python.org/issue?@action=redirect&bpo=38175) [https://bugs.python.org/issue?@action=redirect&bpo=38175]: Fix a memory leak in comparison of **sqlite3.Row** objects.
- [bpo-33936](https://bugs.python.org/issue?@action=redirect&bpo=33936) [https://bugs.python.org/issue?@action=redirect&bpo=33936]: `_hashlib` no longer calls obsolete OpenSSL initialization function with OpenSSL 1.1.0 + .
- [bpo-34706](https://bugs.python.org/issue?@action=redirect&bpo=34706) [https://bugs.python.org/issue?@action=redirect&bpo=34706]: Preserve subclassing in `inspect.Signature.from_callable`.
- [bpo-38153](https://bugs.python.org/issue?@action=redirect&bpo=38153) [https://bugs.python.org/issue?@action=redirect&bpo=38153]: Names of hashing algorithms from OpenSSL are now normalized to follow Python’s naming conventions. For example OpenSSL uses sha3-512 instead of

sha3\_512 or blake2b512 instead of blake2b.

- [bpo-38115](https://bugs.python.org/issue?@action=redirect&bpo=38115) [https://bugs.python.org/issue?@action=redirect&bpo=38115]: Fix a bug in `dis.findlinestarts()` where it would return invalid bytecode offsets. Document that a code object's `co_lnotab` can contain invalid bytecode offsets.
- [bpo-38148](https://bugs.python.org/issue?@action=redirect&bpo=38148) [https://bugs.python.org/issue?@action=redirect&bpo=38148]: Add slots to **asyncio** transport classes, which can reduce memory usage.
- [bpo-38142](https://bugs.python.org/issue?@action=redirect&bpo=38142) [https://bugs.python.org/issue?@action=redirect&bpo=38142]: The `_hashlib` OpenSSL wrapper extension module is now PEP-384 compliant.
- [bpo-9216](https://bugs.python.org/issue?@action=redirect&bpo=9216) [https://bugs.python.org/issue?@action=redirect&bpo=9216]: `hashlib` constructors now support `usedforsecurity` flag to signal that a hashing algorithm is not used in a security context.
- [bpo-36991](https://bugs.python.org/issue?@action=redirect&bpo=36991) [https://bugs.python.org/issue?@action=redirect&bpo=36991]: Fixes a potential incorrect `AttributeError` exception escaping `ZipFile.extract()` in some unsupported input error situations.
- [bpo-38134](https://bugs.python.org/issue?@action=redirect&bpo=38134) [https://bugs.python.org/issue?@action=redirect&bpo=38134]: Remove obsolete copy of `PBKDF2_HMAC_fast`. All supported OpenSSL versions contain a fast implementation.
- [bpo-38132](https://bugs.python.org/issue?@action=redirect&bpo=38132) [https://bugs.python.org/issue?@action=redirect&bpo=38132]: The OpenSSL `hashlib` wrapper uses a simpler implementation. Several Macros and pointless caches are gone. The hash name now comes from OpenSSL's EVP. The algorithm name stays the same, except it is now always lower case.
- [bpo-38008](https://bugs.python.org/issue?@action=redirect&bpo=38008) [https://bugs.python.org/issue?@action=redirect&bpo=38008]: Fix parent class check in protocols to correctly identify the module that provides a builtin

protocol, instead of assuming they all come from the `collections.abc` module

- [bpo-34037](https://bugs.python.org/issue?@action=redirect&bpo=34037) [https://bugs.python.org/issue?@action=redirect&bpo=34037]: For `asyncio`, add a new coroutine `loop.shutdown_default_executor()`. The new coroutine provides an API to schedule an executor shutdown that waits on the threadpool to finish closing. Also, `asyncio.run()` has been updated to utilize the new coroutine. Patch by Kyle Stanley.
- [bpo-37405](https://bugs.python.org/issue?@action=redirect&bpo=37405) [https://bugs.python.org/issue?@action=redirect&bpo=37405]: Fixed regression bug for `socket.getsockname()` for non-CAN\_ISOTP AF\_CAN address family sockets by returning a 1-tuple instead of string.
- [bpo-38121](https://bugs.python.org/issue?@action=redirect&bpo=38121) [https://bugs.python.org/issue?@action=redirect&bpo=38121]: Update parameter names on functions in `importlib.metadata` matching the changes in the 0.22 release of `importlib_metadata`.
- [bpo-38110](https://bugs.python.org/issue?@action=redirect&bpo=38110) [https://bugs.python.org/issue?@action=redirect&bpo=38110]: The `os.closewalk()` implementation now uses the `libc fdwalk()` API on platforms where it is available.
- [bpo-38093](https://bugs.python.org/issue?@action=redirect&bpo=38093) [https://bugs.python.org/issue?@action=redirect&bpo=38093]: Fixes `AsyncMock` so it doesn't crash when used with `AsyncContextManagers` or `AsyncIterators`.
- [bpo-37488](https://bugs.python.org/issue?@action=redirect&bpo=37488) [https://bugs.python.org/issue?@action=redirect&bpo=37488]: Add warning to `datetime.utctimetuple()`, `datetime.utcnow()` and `datetime.utcfromtimestamp()`.
- [bpo-35640](https://bugs.python.org/issue?@action=redirect&bpo=35640) [https://bugs.python.org/issue?@action=redirect&bpo=35640]: Allow passing a `path-like object` as `directory` argument to the `http.server.SimpleHTTPRequestHandler` class. Patch by G  ry Ogam.

- [bpo-38086](https://bugs.python.org/issue?@action=redirect&bpo=38086) [https://bugs.python.org/issue?@action=redirect&bpo=38086]: Update `importlib.metadata` with changes from [importlib\\_metadata 0.21](https://gitlab.com/python-devs/importlib_metadata/blob/0.21/importlib_metadata/docs/changelog.rst) [https://gitlab.com/python-devs/importlib\_metadata/blob/0.21/importlib\_metadata/docs/changelog.rst].
- [bpo-37251](https://bugs.python.org/issue?@action=redirect&bpo=37251) [https://bugs.python.org/issue?@action=redirect&bpo=37251]: Remove `__code__` check in `AsyncMock` that incorrectly evaluated function specs as async objects but failed to evaluate classes with `__await__` but no `__code__` attribute defined as async objects.
- [bpo-38037](https://bugs.python.org/issue?@action=redirect&bpo=38037) [https://bugs.python.org/issue?@action=redirect&bpo=38037]: Fix reference counters in the `signal` module.
- [bpo-38066](https://bugs.python.org/issue?@action=redirect&bpo=38066) [https://bugs.python.org/issue?@action=redirect&bpo=38066]: Hide internal `asyncio.Stream` methods: `feed_eof()`, `feed_data()`, `set_exception()` and `set_transport()`.
- [bpo-38059](https://bugs.python.org/issue?@action=redirect&bpo=38059) [https://bugs.python.org/issue?@action=redirect&bpo=38059]: `inspect.py` now uses `sys.exit()` instead of `exit()`
- [bpo-38049](https://bugs.python.org/issue?@action=redirect&bpo=38049) [https://bugs.python.org/issue?@action=redirect&bpo=38049]: Added command-line interface for the `ast` module.
- [bpo-37953](https://bugs.python.org/issue?@action=redirect&bpo=37953) [https://bugs.python.org/issue?@action=redirect&bpo=37953]: In `typing`, improved the `__hash__` and `__eq__` methods for `ForwardReferences`.
- [bpo-38026](https://bugs.python.org/issue?@action=redirect&bpo=38026) [https://bugs.python.org/issue?@action=redirect&bpo=38026]: Fixed `inspect.getattr_static()` used `isinstance` while it should avoid dynamic lookup.
- [bpo-35923](https://bugs.python.org/issue?@action=redirect&bpo=35923) [https://bugs.python.org/issue?@action=redirect&bpo=35923]: Update `importlib.machinery.BuiltinImporter` to use `loader._ORIGIN` instead of a hardcoded value. Patch by

Donghee Na.

- [bpo-38010](https://bugs.python.org/issue?@action=redirect&bpo=38010) [https://bugs.python.org/issue?@action=redirect&bpo=38010]: In `importlib.metadata sync with importlib_metadata 0.20`, clarifying behavior of `files()` and fixing issue where only one requirement was returned for `requires()` on `dist-info` packages.
- [bpo-38006](https://bugs.python.org/issue?@action=redirect&bpo=38006) [https://bugs.python.org/issue?@action=redirect&bpo=38006]: `weakref.WeakValueDictionary` defines a local `remove()` function used as callback for weak references. This function was created with a closure. Modify the implementation to avoid the closure.
- [bpo-37995](https://bugs.python.org/issue?@action=redirect&bpo=37995) [https://bugs.python.org/issue?@action=redirect&bpo=37995]: Added the *indent* option to `ast.dump()` which allows it to produce a multiline indented output.
- [bpo-34410](https://bugs.python.org/issue?@action=redirect&bpo=34410) [https://bugs.python.org/issue?@action=redirect&bpo=34410]: Fixed a crash in the `tee()` iterator when re-enter it. `RuntimeError` is now raised in this case.
- [bpo-37140](https://bugs.python.org/issue?@action=redirect&bpo=37140) [https://bugs.python.org/issue?@action=redirect&bpo=37140]: Fix a ctypes regression of Python 3.8. When a `ctypes.Structure` is passed by copy to a function, ctypes internals created a temporary object which had the side effect of calling the structure finalizer (`_del_`) twice. The Python semantics requires a finalizer to be called exactly once. Fix ctypes internals to no longer call the finalizer twice.
- [bpo-37587](https://bugs.python.org/issue?@action=redirect&bpo=37587) [https://bugs.python.org/issue?@action=redirect&bpo=37587]: `__json.scanstring` is now up to 3x faster when there are many backslash escaped characters in the JSON string.
- [bpo-37834](https://bugs.python.org/issue?@action=redirect&bpo=37834) [https://bugs.python.org/issue?@action=redirect&bpo=37834]: Prevent `shutil.rmtree` exception when built on non-Windows system without `fd` system call support, like older versions of macOS.

- [bpo-10978](https://bugs.python.org/issue?@action=redirect&bpo=10978) [https://bugs.python.org/issue?@action=redirect&bpo=10978]: Semaphores and BoundedSemaphores can now release more than one waiting thread at a time.
- [bpo-37972](https://bugs.python.org/issue?@action=redirect&bpo=37972) [https://bugs.python.org/issue?@action=redirect&bpo=37972]: Subscripts to the `unittest.mock.call` objects now receive the same chaining mechanism as any other custom attributes, so that the following usage no longer raises a `TypeError`:

```
call().foo().__getitem__('bar')
```

Patch by blhsing

- [bpo-37965](https://bugs.python.org/issue?@action=redirect&bpo=37965) [https://bugs.python.org/issue?@action=redirect&bpo=37965]: Fix C compiler warning caused by `distutils.ccompiler.CCompiler.has_function`.
- [bpo-37964](https://bugs.python.org/issue?@action=redirect&bpo=37964) [https://bugs.python.org/issue?@action=redirect&bpo=37964]: Add `F_GETPATH` command to `fcntl`.
- [bpo-37960](https://bugs.python.org/issue?@action=redirect&bpo=37960) [https://bugs.python.org/issue?@action=redirect&bpo=37960]: `repr()` of buffered and text streams now silences only expected exceptions when get the value of “name” and “mode” attributes.
- [bpo-37961](https://bugs.python.org/issue?@action=redirect&bpo=37961) [https://bugs.python.org/issue?@action=redirect&bpo=37961]: Add a `total_nframe` field to the traces collected by the `tracemalloc` module. This field indicates the original number of frames before it was truncated.
- [bpo-37951](https://bugs.python.org/issue?@action=redirect&bpo=37951) [https://bugs.python.org/issue?@action=redirect&bpo=37951]: Most features of the `subprocess` module now work again in subinterpreters. Only `preexec_fn` is restricted in subinterpreters.
- [bpo-36205](https://bugs.python.org/issue?@action=redirect&bpo=36205) [https://bugs.python.org/issue?@action=redirect&bpo=36205]: Fix the `rusage` implementation of

`time.process_time()` to correctly report the sum of the system and user CPU time.

- [bpo-37950](https://bugs.python.org/issue?@action=redirect&bpo=37950) [https://bugs.python.org/issue?@action=redirect&bpo=37950]: Fix `ast.dump()` when call with incompletely initialized node.
- [bpo-34679](https://bugs.python.org/issue?@action=redirect&bpo=34679) [https://bugs.python.org/issue?@action=redirect&bpo=34679]: Restores instantiation of Windows IOCP event loops from the non-main thread.
- [bpo-36917](https://bugs.python.org/issue?@action=redirect&bpo=36917) [https://bugs.python.org/issue?@action=redirect&bpo=36917]: Add default implementation of the `ast.NodeVisitor.visit_Constant()` method which emits a deprecation warning and calls corresponding method `visit_Num()`, `visit_Str()`, etc.
- [bpo-37798](https://bugs.python.org/issue?@action=redirect&bpo=37798) [https://bugs.python.org/issue?@action=redirect&bpo=37798]: Update `test_statistics.py` to verify that the statistics module works well for both C and Python implementations. Patch by Donghee Na
- [bpo-26589](https://bugs.python.org/issue?@action=redirect&bpo=26589) [https://bugs.python.org/issue?@action=redirect&bpo=26589]: Added a new status code to the http module: 451 UNAVAILABLE\_FOR\_LEGAL\_REASONS
- [bpo-37915](https://bugs.python.org/issue?@action=redirect&bpo=37915) [https://bugs.python.org/issue?@action=redirect&bpo=37915]: Fix a segmentation fault that appeared when comparing instances of `datetime.timezone` and `datetime.tzinfo` objects. Patch by Pablo Galindo.
- [bpo-32554](https://bugs.python.org/issue?@action=redirect&bpo=32554) [https://bugs.python.org/issue?@action=redirect&bpo=32554]: Deprecate having `random.seed()` call `hash` on arbitrary types.
- [bpo-9938](https://bugs.python.org/issue?@action=redirect&bpo=9938) [https://bugs.python.org/issue?@action=redirect&bpo=9938]: Add optional keyword argument `exit_on_error` for **ArgumentParser**.
- [bpo-37851](https://bugs.python.org/issue?@action=redirect&bpo=37851) [https://bugs.python.org/issue?@action=redirect&bpo=37851]

@action=redirect&bpo=37851]: The **faulthandler** module no longer allocates its alternative stack at Python startup. Now the stack is only allocated at the first faulthandler usage.

- **bpo-32793** [<https://bugs.python.org/issue?@action=redirect&bpo=32793>]: Fix a duplicated debug message when **smtplib.SMTP.connect()** is called.
- **bpo-37885** [<https://bugs.python.org/issue?@action=redirect&bpo=37885>]: **venv**: Don't generate unset variable warning on deactivate.
- **bpo-37868** [<https://bugs.python.org/issue?@action=redirect&bpo=37868>]: Fix **dataclasses.is\_dataclass** when given an instance that never raises **AttributeError** in **\_\_getattr\_\_**. That is, an object that returns something for **\_\_dataclass\_fields\_\_** even if it's not a dataclass.
- **bpo-37811** [<https://bugs.python.org/issue?@action=redirect&bpo=37811>]: Fix **socket** module's **socket.connect(address)** function being unable to establish connection in case of interrupted system call. The problem was observed on all OSes which **poll(2)** system call can take only non-negative integers and -1 as a timeout value.
- **bpo-37863** [<https://bugs.python.org/issue?@action=redirect&bpo=37863>]: Optimizations for **Fraction.\_\_hash\_\_** suggested by Tim Peters.
- **bpo-21131** [<https://bugs.python.org/issue?@action=redirect&bpo=21131>]: Fix **faulthandler.register(chain=True)** stack. **faulthandler** now allocates a dedicated stack of **SIGSTKSZ\*2** bytes, instead of just **SIGSTKSZ** bytes. Calling the previous signal handler in **faulthandler** signal handler uses more than **SIGSTKSZ** bytes of stack memory on some platforms.
- **bpo-37798** [<https://bugs.python.org/issue?@action=redirect&bpo=37798>]: Add C fastpath for **statistics.NormalDist.inv\_cdf()** Patch by Donghee Na

- [bpo-37804](https://bugs.python.org/issue?@action=redirect&bpo=37804) [https://bugs.python.org/issue?@action=redirect&bpo=37804]: Remove the deprecated method **threading.Thread.isAlive()**. Patch by Donghee Na.
- [bpo-37819](https://bugs.python.org/issue?@action=redirect&bpo=37819) [https://bugs.python.org/issue?@action=redirect&bpo=37819]: Add **Fraction.as\_integer\_ratio()** to match the corresponding methods in bool, int, float, and decimal.
- [bpo-14465](https://bugs.python.org/issue?@action=redirect&bpo=14465) [https://bugs.python.org/issue?@action=redirect&bpo=14465]: Add an **xml.etree.ElementTree.indent()** function for pretty-printing XML trees. Contributed by Stefan Behnel.
- [bpo-37810](https://bugs.python.org/issue?@action=redirect&bpo=37810) [https://bugs.python.org/issue?@action=redirect&bpo=37810]: Fix **difflib** ? hint in diff output when dealing with tabs. Patch by Anthony Sottile.
- [bpo-37772](https://bugs.python.org/issue?@action=redirect&bpo=37772) [https://bugs.python.org/issue?@action=redirect&bpo=37772]: In **zipfile.Path**, when adding implicit dirs, ensure that ancestral directories are added and that duplicates are excluded.
- [bpo-18578](https://bugs.python.org/issue?@action=redirect&bpo=18578) [https://bugs.python.org/issue?@action=redirect&bpo=18578]: Renamed and documented **test.bytecode\_helper** as **test.support.bytecode\_helper**. Patch by Joanna Nanjekye.
- [bpo-37785](https://bugs.python.org/issue?@action=redirect&bpo=37785) [https://bugs.python.org/issue?@action=redirect&bpo=37785]: Fix xgettext warnings in **argparse**.
- [bpo-34488](https://bugs.python.org/issue?@action=redirect&bpo=34488) [https://bugs.python.org/issue?@action=redirect&bpo=34488]: **writelines()** method of **io.BytesIO** is now slightly faster when many small lines are passed. Patch by Sergey Fedoseev.
- [bpo-37449](https://bugs.python.org/issue?@action=redirect&bpo=37449) [https://bugs.python.org/issue?@action=redirect&bpo=37449]: **ensurepip** now uses **importlib.resources.read\_binary()** to read data

instead of `pkgutil.get_data()`. Patch by Joanna Nanjekye.

- [bpo-28292](https://bugs.python.org/issue?@action=redirect&bpo=28292) [https://bugs.python.org/issue?@action=redirect&bpo=28292]: Mark `calendar.py` helper functions as being private. The follows PEP 8 guidance to maintain the style conventions in the module and it addresses a known case of user confusion.
- [bpo-18049](https://bugs.python.org/issue?@action=redirect&bpo=18049) [https://bugs.python.org/issue?@action=redirect&bpo=18049]: Add definition of `THREAD_STACK_SIZE` for AIX in `Python/thread_pthread.h`. The default thread stacksize caused crashes with the default recursion limit Patch by M Felt
- [bpo-37742](https://bugs.python.org/issue?@action=redirect&bpo=37742) [https://bugs.python.org/issue?@action=redirect&bpo=37742]: The `logging.getLogger()` API now returns the root logger when passed the name 'root', whereas previously it returned a non-root logger named 'root'. This could affect cases where user code explicitly wants a non-root logger named 'root', or instantiates a logger using `logging.getLogger(_name_)` in some top-level module called 'root.py'.
- [bpo-37738](https://bugs.python.org/issue?@action=redirect&bpo=37738) [https://bugs.python.org/issue?@action=redirect&bpo=37738]: Fix the implementation of `curses.addch(str, color_pair)`: pass the color pair to `setcchar()`, instead of always passing 0 as the color pair.
- [bpo-37723](https://bugs.python.org/issue?@action=redirect&bpo=37723) [https://bugs.python.org/issue?@action=redirect&bpo=37723]: Fix performance regression on regular expression parsing with huge character sets. Patch by Yann Vaginay.
- [bpo-35943](https://bugs.python.org/issue?@action=redirect&bpo=35943) [https://bugs.python.org/issue?@action=redirect&bpo=35943]: The function `PyImport_GetModule()` now ensures any module it returns is fully initialized. Patch by Joanna Nanjekye.
- [bpo-32178](https://bugs.python.org/issue?@action=redirect&bpo=32178) [https://bugs.python.org/issue?@action=redirect&bpo=32178]: Fix `IndexError` in `email` package

when trying to parse invalid address fields starting with `:`.

- [bpo-37268](https://bugs.python.org/issue?@action=redirect&bpo=37268) [https://bugs.python.org/issue?@action=redirect&bpo=37268]: The **parser** module is deprecated and will be removed in future versions of Python.
- [bpo-11953](https://bugs.python.org/issue?@action=redirect&bpo=11953) [https://bugs.python.org/issue?@action=redirect&bpo=11953]: Completing WSA\* error codes in **socket**.
- [bpo-37685](https://bugs.python.org/issue?@action=redirect&bpo=37685) [https://bugs.python.org/issue?@action=redirect&bpo=37685]: Fixed comparisons of **datetime.timedelta** and **datetime.timezone**.
- [bpo-37697](https://bugs.python.org/issue?@action=redirect&bpo=37697) [https://bugs.python.org/issue?@action=redirect&bpo=37697]: Synchronize `importlib.metadata` with [importlib\\_metadata 0.19](https://gitlab.com/python-devs/importlib_metadata/-/milestones/20) [https://gitlab.com/python-devs/importlib\_metadata/-/milestones/20], improving handling of EGG-INFO files and fixing a crash when entry point names contained colons.
- [bpo-37695](https://bugs.python.org/issue?@action=redirect&bpo=37695) [https://bugs.python.org/issue?@action=redirect&bpo=37695]: Correct **curses.unget\_wch()** error message. Patch by Anthony Sottile.
- [bpo-37689](https://bugs.python.org/issue?@action=redirect&bpo=37689) [https://bugs.python.org/issue?@action=redirect&bpo=37689]: Add **is\_relative\_to()** in **PurePath** to determine whether or not one path is relative to another.
- [bpo-29553](https://bugs.python.org/issue?@action=redirect&bpo=29553) [https://bugs.python.org/issue?@action=redirect&bpo=29553]: Fixed **argparse.ArgumentParser.format\_usage()** for mutually exclusive groups. Patch by Andrew Nester.
- [bpo-37691](https://bugs.python.org/issue?@action=redirect&bpo=37691) [https://bugs.python.org/issue?@action=redirect&bpo=37691]: Let **math.dist()** accept coordinates as sequences (or iterables) rather than just tuples.
- [bpo-37685](https://bugs.python.org/issue?@action=redirect&bpo=37685) [https://bugs.python.org/issue?@action=redirect&bpo=37685]: Fixed **\_\_eq\_\_**, **\_\_lt\_\_** etc

implementations in some classes. They now return **NotImplemented** for unsupported type of the other operand. This allows the other operand to play role (for example the equality comparison with **ANY** will return `True`).

- [bpo-37354](https://bugs.python.org/issue?@action=redirect&bpo=37354) [https://bugs.python.org/issue?@action=redirect&bpo=37354]: Make `Activate.ps1` Powershell script static to allow for signing it.
- [bpo-37664](https://bugs.python.org/issue?@action=redirect&bpo=37664) [https://bugs.python.org/issue?@action=redirect&bpo=37664]: Update wheels bundled with `ensurepip` (pip 19.2.3 and `setuptools` 41.2.0)
- [bpo-37663](https://bugs.python.org/issue?@action=redirect&bpo=37663) [https://bugs.python.org/issue?@action=redirect&bpo=37663]: Bring consistency to `venv` shell activation scripts by always using `_VENV_PROMPT_`.
- [bpo-37642](https://bugs.python.org/issue?@action=redirect&bpo=37642) [https://bugs.python.org/issue?@action=redirect&bpo=37642]: Allowed the pure Python implementation of `datetime.timezone` to represent sub-minute offsets close to minimum and maximum boundaries, specifically in the ranges (23:59, 24:00) and (-23:59, 24:00). Patch by Ngalim Siregar
- [bpo-36161](https://bugs.python.org/issue?@action=redirect&bpo=36161) [https://bugs.python.org/issue?@action=redirect&bpo=36161]: In `posix`, use `ttynamex` instead of `ttynamex` for thread safety.
- [bpo-36324](https://bugs.python.org/issue?@action=redirect&bpo=36324) [https://bugs.python.org/issue?@action=redirect&bpo=36324]: Make internal attributes for `statistics.NormalDist()` private.
- [bpo-37555](https://bugs.python.org/issue?@action=redirect&bpo=37555) [https://bugs.python.org/issue?@action=redirect&bpo=37555]: Fix `NonCallableMock._call_matcher` returning tuple instead of `_Call` object when `self._spec_signature` exists. Patch by Elizabeth Uselton
- [bpo-29446](https://bugs.python.org/issue?@action=redirect&bpo=29446) [https://bugs.python.org/issue?@action=redirect&bpo=29446]: Make `from tkinter import`

★ import only the expected objects.

- [bpo-16970](https://bugs.python.org/issue?@action=redirect&bpo=16970) [https://bugs.python.org/issue?@action=redirect&bpo=16970]: Adding a value error when an invalid value is passed to nargs Patch by Robert Leenders
- [bpo-34443](https://bugs.python.org/issue?@action=redirect&bpo=34443) [https://bugs.python.org/issue?@action=redirect&bpo=34443]: Exceptions from `enum` now use the `__qualname__` of the enum class in the exception message instead of the `__name__`.
- [bpo-37491](https://bugs.python.org/issue?@action=redirect&bpo=37491) [https://bugs.python.org/issue?@action=redirect&bpo=37491]: Fix `IndexError` when parsing email headers with unexpectedly ending bare-quoted string value. Patch by Abhilash Raj.
- [bpo-37587](https://bugs.python.org/issue?@action=redirect&bpo=37587) [https://bugs.python.org/issue?@action=redirect&bpo=37587]: Make `json.loads` faster for long strings. (Patch by Marco Paolini)
- [bpo-18378](https://bugs.python.org/issue?@action=redirect&bpo=18378) [https://bugs.python.org/issue?@action=redirect&bpo=18378]: Recognize “UTF-8” as a valid value for `LC_CTYPE` in `locale._parse_localename`.
- [bpo-37579](https://bugs.python.org/issue?@action=redirect&bpo=37579) [https://bugs.python.org/issue?@action=redirect&bpo=37579]: Return `NotImplemented` in Python implementation of `__eq__` for `timedelta` and `time` when the other object being compared is not of the same type to match C implementation. Patch by Karthikeyan Singaravelan.
- [bpo-21478](https://bugs.python.org/issue?@action=redirect&bpo=21478) [https://bugs.python.org/issue?@action=redirect&bpo=21478]: Record calls to parent when autospecced object is attached to a mock using `unittest.mock.attach_mock()`. Patch by Karthikeyan Singaravelan.
- [bpo-37531](https://bugs.python.org/issue?@action=redirect&bpo=37531) [https://bugs.python.org/issue?@action=redirect&bpo=37531]: “python3 -m test -jN – timeout = TIMEOUT” now kills a worker process if it runs longer than `TIMEOUT` seconds.

- [bpo-37482](https://bugs.python.org/issue?@action=redirect&bpo=37482) [https://bugs.python.org/issue?@action=redirect&bpo=37482]: Fix serialization of display name in originator or destination address fields with both encoded words and special chars.
- [bpo-36993](https://bugs.python.org/issue?@action=redirect&bpo=36993) [https://bugs.python.org/issue?@action=redirect&bpo=36993]: Improve error reporting for corrupt zip files with bad zip64 extra data. Patch by Daniel Hillier.
- [bpo-37502](https://bugs.python.org/issue?@action=redirect&bpo=37502) [https://bugs.python.org/issue?@action=redirect&bpo=37502]: `pickle.loads()` no longer raises `TypeError` when the `buffers` argument is set to `None`
- [bpo-37520](https://bugs.python.org/issue?@action=redirect&bpo=37520) [https://bugs.python.org/issue?@action=redirect&bpo=37520]: Correct behavior for `zipfile.Path.parent` when the path object identifies a subdirectory.
- [bpo-18374](https://bugs.python.org/issue?@action=redirect&bpo=18374) [https://bugs.python.org/issue?@action=redirect&bpo=18374]: Fix the `.col_offset` attribute of nested `ast.BinOp` instances which had a too large value in some situations.
- [bpo-37424](https://bugs.python.org/issue?@action=redirect&bpo=37424) [https://bugs.python.org/issue?@action=redirect&bpo=37424]: Fixes a possible hang when using a timeout on `subprocess.run()` while capturing output. If the child process spawned its own children or otherwise connected its stdout or stderr handles with another process, we could hang after the timeout was reached and our child was killed when attempting to read final output from the pipes.
- [bpo-37421](https://bugs.python.org/issue?@action=redirect&bpo=37421) [https://bugs.python.org/issue?@action=redirect&bpo=37421]: Fix `multiprocessing.util.get_temp_dir()` finalizer: clear also the 'tempdir' configuration of the current process, so next call to `get_temp_dir()` will create a new temporary directory, rather than reusing the removed temporary directory.

- [bpo-37481](https://bugs.python.org/issue?@action=redirect&bpo=37481) [https://bugs.python.org/issue?@action=redirect&bpo=37481]: The `distutils bdist_wininst` command is deprecated in Python 3.8, use `bdist_wheel` (wheel packages) instead.
- [bpo-37479](https://bugs.python.org/issue?@action=redirect&bpo=37479) [https://bugs.python.org/issue?@action=redirect&bpo=37479]: When `Enum.__str__` is overridden in a derived class, the override will be used by `Enum.__format__` regardless of whether mixin classes are present.
- [bpo-37440](https://bugs.python.org/issue?@action=redirect&bpo=37440) [https://bugs.python.org/issue?@action=redirect&bpo=37440]: `http.client` now enables TLS 1.3 post-handshake authentication for default context or if a `cert_file` is passed to `HTTPSConnection`.
- [bpo-37437](https://bugs.python.org/issue?@action=redirect&bpo=37437) [https://bugs.python.org/issue?@action=redirect&bpo=37437]: Update vendored expat version to 2.2.7.
- [bpo-37428](https://bugs.python.org/issue?@action=redirect&bpo=37428) [https://bugs.python.org/issue?@action=redirect&bpo=37428]: `SSLContext.post_handshake_auth = True` no longer sets `SSL_VERIFY_POST_HANDSHAKE` verify flag for client connections. Although the option is documented as ignored for clients, OpenSSL implicitly enables cert chain validation when the flag is set.
- [bpo-37420](https://bugs.python.org/issue?@action=redirect&bpo=37420) [https://bugs.python.org/issue?@action=redirect&bpo=37420]: `os.sched_setaffinity()` now correctly handles errors that arise during iteration over its `mask` argument. Patch by Brandt Bucher.
- [bpo-37412](https://bugs.python.org/issue?@action=redirect&bpo=37412) [https://bugs.python.org/issue?@action=redirect&bpo=37412]: The `os.getcwdb()` function now uses the UTF-8 encoding on Windows, rather than the ANSI code page: see [PEP 529](https://peps.python.org/pep-0529/) [https://peps.python.org/pep-0529/] for the rationale. The function is no longer deprecated on Windows.
- [bpo-37406](https://bugs.python.org/issue?@action=redirect&bpo=37406) [https://bugs.python.org/issue?@action=redirect&bpo=37406]: The `sqliite3` module now raises

`TypeError`, rather than `ValueError`, if operation argument type is not `str`: `execute()`, `executemany()` and calling a connection.

- [bpo-29412](https://bugs.python.org/issue?@action=redirect&bpo=29412) [https://bugs.python.org/issue?@action=redirect&bpo=29412]: Fix `IndexError` in parsing a header value ending unexpectedly. Patch by Abhilash Raj.
- [bpo-36546](https://bugs.python.org/issue?@action=redirect&bpo=36546) [https://bugs.python.org/issue?@action=redirect&bpo=36546]: The `dist` argument for `statistics.quantiles()` is now positional only. The current name doesn't reflect that the argument can be either a dataset or a distribution. Marking the parameter as positional avoids confusion and makes it possible to change the name later.
- [bpo-37394](https://bugs.python.org/issue?@action=redirect&bpo=37394) [https://bugs.python.org/issue?@action=redirect&bpo=37394]: Fix a bug that was causing the `queue` module to fail if the `accelerator` module was not available. Patch by Pablo Galindo.
- [bpo-37376](https://bugs.python.org/issue?@action=redirect&bpo=37376) [https://bugs.python.org/issue?@action=redirect&bpo=37376]: `pprint` now has support for `types.SimpleNamespace`. Patch by Carl Bordum Hansen.
- [bpo-26967](https://bugs.python.org/issue?@action=redirect&bpo=26967) [https://bugs.python.org/issue?@action=redirect&bpo=26967]: An `ArgumentParser` with `allow_abbrev=False` no longer disables grouping of short flags, such as `-vv`, but only disables abbreviation of long flags as documented. Patch by Zac Hatfield-Dodds.
- [bpo-37212](https://bugs.python.org/issue?@action=redirect&bpo=37212) [https://bugs.python.org/issue?@action=redirect&bpo=37212]: `unittest.mock.call()` now preserves the order of keyword arguments in repr output. Patch by Karthikeyan Singaravelan.
- [bpo-37372](https://bugs.python.org/issue?@action=redirect&bpo=37372) [https://bugs.python.org/issue?@action=redirect&bpo=37372]: Fix error unpickling `datetime.time` objects from Python 2 with `seconds >= 24`. Patch by Justin Blanchard.
- [bpo-37345](https://bugs.python.org/issue?@action=redirect&bpo=37345) [https://bugs.python.org/issue?@action=redirect&bpo=37345]

@action=redirect&bpo=37345]: Add formal support for UDPLITE sockets. Support was present before, but it is now easier to detect support with `hasattr(socket, 'IPPROTO_UDPLITE')` and there are constants defined for each of the values needed: `socket.IPPROTO_UDPLITE`, `UDPLITE_SEND_CSCOV`, and `UDPLITE_RECV_CSCOV`. Patch by Gabe Appleton.

- [bpo-37358](https://bugs.python.org/issue?@action=redirect&bpo=37358) [https://bugs.python.org/issue?@action=redirect&bpo=37358]: Optimized `functools.partial` by using `vectorcall`.
- [bpo-37347](https://bugs.python.org/issue?@action=redirect&bpo=37347) [https://bugs.python.org/issue?@action=redirect&bpo=37347]:  
`sqlite3.Connection.create_aggregate()`,  
`sqlite3.Connection.create_function()`,  
`sqlite3.Connection.set_authorizer()`,  
`sqlite3.Connection.set_progress_handler()`  
`sqlite3.Connection.set_trace_callback()` methods lead to segfaults if some of these methods are called twice with an equal object but not the same. Now callbacks are stored more carefully. Patch by Aleksandr Balezin.
- [bpo-37163](https://bugs.python.org/issue?@action=redirect&bpo=37163) [https://bugs.python.org/issue?@action=redirect&bpo=37163]: The `obj` argument of `dataclasses.replace()` is positional-only now.
- [bpo-37085](https://bugs.python.org/issue?@action=redirect&bpo=37085) [https://bugs.python.org/issue?@action=redirect&bpo=37085]: Add the optional Linux SocketCAN Broadcast Manager constants, used as flags to configure the BCM behaviour, in the `socket` module. Patch by Karl Ding.
- [bpo-37328](https://bugs.python.org/issue?@action=redirect&bpo=37328) [https://bugs.python.org/issue?@action=redirect&bpo=37328]: `HTMLParser.unescape` is removed. It was undocumented and deprecated since Python 3.4.
- [bpo-37305](https://bugs.python.org/issue?@action=redirect&bpo=37305) [https://bugs.python.org/issue?@action=redirect&bpo=37305]: Add `.webmanifest` -> `application/manifest+json` to list of recognized file types and

## content type headers

- [bpo-37320](https://bugs.python.org/issue?@action=redirect&bpo=37320) [https://bugs.python.org/issue?@action=redirect&bpo=37320]: `aifc.openfp()` alias to `aifc.open()`, `sunau.openfp()` alias to `sunau.open()`, and `wave.openfp()` alias to `wave.open()` have been removed. They were deprecated since Python 3.7.
- [bpo-37315](https://bugs.python.org/issue?@action=redirect&bpo=37315) [https://bugs.python.org/issue?@action=redirect&bpo=37315]: Deprecated accepting floats with integral value (like `5.0`) in `math.factorial()`.
- [bpo-37312](https://bugs.python.org/issue?@action=redirect&bpo=37312) [https://bugs.python.org/issue?@action=redirect&bpo=37312]: `_dummy_thread` and `dummy_threading` modules have been removed. These modules were deprecated since Python 3.7 which requires threading support.
- [bpo-33972](https://bugs.python.org/issue?@action=redirect&bpo=33972) [https://bugs.python.org/issue?@action=redirect&bpo=33972]: Email with single part but content-type set to `multipart/*` doesn't raise `AttributeError` anymore.
- [bpo-37280](https://bugs.python.org/issue?@action=redirect&bpo=37280) [https://bugs.python.org/issue?@action=redirect&bpo=37280]: Use `threadpool` for reading from file for `sendfile` fallback mode.
- [bpo-37279](https://bugs.python.org/issue?@action=redirect&bpo=37279) [https://bugs.python.org/issue?@action=redirect&bpo=37279]: Fix `asyncio` `sendfile` support when `sendfile` sends extra data in fallback mode.
- [bpo-19865](https://bugs.python.org/issue?@action=redirect&bpo=19865) [https://bugs.python.org/issue?@action=redirect&bpo=19865]: `ctypes.create_unicode_buffer()` now also supports non-BMP characters on platforms with 16-bit `wchar_t` (for example, Windows and AIX).
- [bpo-37266](https://bugs.python.org/issue?@action=redirect&bpo=37266) [https://bugs.python.org/issue?@action=redirect&bpo=37266]: In a subinterpreter, spawning a daemon thread now raises an exception. Daemon threads were never supported in subinterpreters. Previously, the

subinterpreter finalization crashed with a Python fatal error if a daemon thread was still running.

- [bpo-37210](https://bugs.python.org/issue?@action=redirect&bpo=37210) [https://bugs.python.org/issue?@action=redirect&bpo=37210]: Allow pure Python implementation of **pickle** to work even when the C **\_pickle** module is unavailable.
- [bpo-21872](https://bugs.python.org/issue?@action=redirect&bpo=21872) [https://bugs.python.org/issue?@action=redirect&bpo=21872]: Fix **lzma**: module decompresses data incompletely. When decompressing a FORMAT\_ALONE format file, and it doesn't have the end marker, sometimes the last one to dozens bytes can't be output. Patch by Ma Lin.
- [bpo-35922](https://bugs.python.org/issue?@action=redirect&bpo=35922) [https://bugs.python.org/issue?@action=redirect&bpo=35922]: Fix **RobotFileParser.crawl\_delay()** and **RobotFileParser.request\_rate()** to return `None` rather than raise **AttributeError** when no relevant rule is defined in the robots.txt file. Patch by Rémi Lapeyre.
- [bpo-35766](https://bugs.python.org/issue?@action=redirect&bpo=35766) [https://bugs.python.org/issue?@action=redirect&bpo=35766]: Change the format of `feature_version` to be a (major, minor) tuple.
- [bpo-36607](https://bugs.python.org/issue?@action=redirect&bpo=36607) [https://bugs.python.org/issue?@action=redirect&bpo=36607]: Eliminate **RuntimeError** raised by **asyncio.all\_tasks()** if internal tasks weak set is changed by another thread during iteration.
- [bpo-18748](https://bugs.python.org/issue?@action=redirect&bpo=18748) [https://bugs.python.org/issue?@action=redirect&bpo=18748]: **\_pyio.IOBase** destructor now does nothing if getting the `closed` attribute fails to better mimic **\_io.IOBase** finalizer.
- [bpo-36402](https://bugs.python.org/issue?@action=redirect&bpo=36402) [https://bugs.python.org/issue?@action=redirect&bpo=36402]: Fix a race condition at Python shutdown when waiting for threads. Wait until the Python thread state of all non-daemon threads get deleted (join all non-daemon threads), rather than just wait until non-daemon Python threads complete.

- [bpo-37206](https://bugs.python.org/issue?@action=redirect&bpo=37206) [https://bugs.python.org/issue?@action=redirect&bpo=37206]: Default values which cannot be represented as Python objects no longer improperly represented as `None` in function signatures.
- [bpo-37111](https://bugs.python.org/issue?@action=redirect&bpo=37111) [https://bugs.python.org/issue?@action=redirect&bpo=37111]: Added `encoding` and `errors` keyword parameters to `logging.basicConfig`.
- [bpo-12144](https://bugs.python.org/issue?@action=redirect&bpo=12144) [https://bugs.python.org/issue?@action=redirect&bpo=12144]: Ensure cookies with `expires` attribute are handled in `CookieJar.make_cookies()`.
- [bpo-34886](https://bugs.python.org/issue?@action=redirect&bpo=34886) [https://bugs.python.org/issue?@action=redirect&bpo=34886]: Fix an unintended `ValueError` from `subprocess.run()` when checking for conflicting `input` and `stdin` or `capture_output` and `stdout` or `stderr` args when they were explicitly provided but with `None` values within a passed in `**kwargs` dict rather than as passed directly by name. Patch contributed by Rémi Lapeyre.
- [bpo-37173](https://bugs.python.org/issue?@action=redirect&bpo=37173) [https://bugs.python.org/issue?@action=redirect&bpo=37173]: The exception message for `inspect.getfile()` now correctly reports the passed class rather than the builtins module.
- [bpo-37178](https://bugs.python.org/issue?@action=redirect&bpo=37178) [https://bugs.python.org/issue?@action=redirect&bpo=37178]: Give `math.perm()` a one argument form that means the same as `math.factorial()`.
- [bpo-37178](https://bugs.python.org/issue?@action=redirect&bpo=37178) [https://bugs.python.org/issue?@action=redirect&bpo=37178]: For `math.perm(n, k)`, let `k` default to `n`, giving the same result as `factorial`.
- [bpo-37165](https://bugs.python.org/issue?@action=redirect&bpo=37165) [https://bugs.python.org/issue?@action=redirect&bpo=37165]: Converted `_collections._count_elements` to use the Argument Clinic.
- [bpo-34767](https://bugs.python.org/issue?@action=redirect&bpo=34767) [https://bugs.python.org/issue?@action=redirect&bpo=34767]: Do not always create a

`collections.deque` in `asyncio.Lock`.

- [bpo-37158](https://bugs.python.org/issue?@action=redirect&bpo=37158) [https://bugs.python.org/issue?@action=redirect&bpo=37158]: Speed-up `statistics.fmean()` by switching from a function to a generator.
- [bpo-34282](https://bugs.python.org/issue?@action=redirect&bpo=34282) [https://bugs.python.org/issue?@action=redirect&bpo=34282]: Remove `Enum._convert` method, deprecated in 3.8.
- [bpo-37150](https://bugs.python.org/issue?@action=redirect&bpo=37150) [https://bugs.python.org/issue?@action=redirect&bpo=37150]: `argparse._ActionsContainer.add_argument` now throws error, if someone accidentally pass `FileType` class object instead of instance of `FileType` as `type` argument
- [bpo-28724](https://bugs.python.org/issue?@action=redirect&bpo=28724) [https://bugs.python.org/issue?@action=redirect&bpo=28724]: The `socket` module now has the `socket.send_fds()` and `socket.recv_fds()` methods. Contributed by Joannah Nanjehye, Shinya Okano and Victor Stinner.
- [bpo-35621](https://bugs.python.org/issue?@action=redirect&bpo=35621) [https://bugs.python.org/issue?@action=redirect&bpo=35621]: Support running `asyncio` subprocesses when execution event loop in a thread on UNIX.
- [bpo-36520](https://bugs.python.org/issue?@action=redirect&bpo=36520) [https://bugs.python.org/issue?@action=redirect&bpo=36520]: Lengthy email headers with UTF-8 characters are now properly encoded when they are folded. Patch by Jeffrey Kintscher.
- [bpo-30835](https://bugs.python.org/issue?@action=redirect&bpo=30835) [https://bugs.python.org/issue?@action=redirect&bpo=30835]: Fixed a bug in email parsing where a message with invalid bytes in content-transfer-encoding of a multipart message can cause an `AttributeError`. Patch by Andrew Donnellan.
- [bpo-31163](https://bugs.python.org/issue?@action=redirect&bpo=31163) [https://bugs.python.org/issue?@action=redirect&bpo=31163]: `pathlib.Path` instance's `rename` and `replace` methods now return the new `Path` instance.

- [bpo-25068](https://bugs.python.org/issue?@action=redirect&bpo=25068) [https://bugs.python.org/issue?@action=redirect&bpo=25068]: `urllib.request.ProxyHandler` now lowercases the keys of the passed dictionary.
- [bpo-26185](https://bugs.python.org/issue?@action=redirect&bpo=26185) [https://bugs.python.org/issue?@action=redirect&bpo=26185]: Fix `repr()` on empty `ZipInfo` object. Patch by Mickaël Schoentgen.
- [bpo-21315](https://bugs.python.org/issue?@action=redirect&bpo=21315) [https://bugs.python.org/issue?@action=redirect&bpo=21315]: Email headers containing RFC2047 encoded words are parsed despite the missing whitespace, and a defect registered. Also missing trailing whitespace after encoded words is now registered as a defect.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Port test\_datetime to VxWorks: skip zoneinfo tests on VxWorks
- [bpo-35805](https://bugs.python.org/issue?@action=redirect&bpo=35805) [https://bugs.python.org/issue?@action=redirect&bpo=35805]: Add parser for Message-ID header and add it to default HeaderRegistry. This should prevent folding of Message-ID using RFC 2048 encoded words.
- [bpo-36871](https://bugs.python.org/issue?@action=redirect&bpo=36871) [https://bugs.python.org/issue?@action=redirect&bpo=36871]: Ensure method signature is used instead of constructor signature of a class while asserting mock object against method calls. Patch by Karthikeyan Singaravelan.
- [bpo-35070](https://bugs.python.org/issue?@action=redirect&bpo=35070) [https://bugs.python.org/issue?@action=redirect&bpo=35070]: `posix.getgrouplist()` now works correctly when the user belongs to NGROUPS\_MAX supplemental groups. Patch by Jeffrey Kintscher.
- [bpo-31783](https://bugs.python.org/issue?@action=redirect&bpo=31783) [https://bugs.python.org/issue?@action=redirect&bpo=31783]: Fix race condition in `ThreadPoolExecutor` when worker threads are created during interpreter shutdown.
- [bpo-36582](https://bugs.python.org/issue?@action=redirect&bpo=36582) [https://bugs.python.org/issue?@action=redirect&bpo=36582]

@action=redirect&bpo=36582]: Fix `UserString.encode()` to correctly return bytes rather than a `UserString` instance.

- [bpo-32424](https://bugs.python.org/issue?@action=redirect&bpo=32424) [https://bugs.python.org/issue?@action=redirect&bpo=32424]: Deprecate `xml.etree.ElementTree.Element.copy()` in favor of `copy.copy()`.

Patch by Gordon P. Hemsley

- [bpo-36564](https://bugs.python.org/issue?@action=redirect&bpo=36564) [https://bugs.python.org/issue?@action=redirect&bpo=36564]: Fix infinite loop in email header folding logic that would be triggered when an email policy's `max_line_length` is not long enough to include the required markup and any values in the message. Patch by Paul Ganssle
- [bpo-36543](https://bugs.python.org/issue?@action=redirect&bpo=36543) [https://bugs.python.org/issue?@action=redirect&bpo=36543]: Removed methods `Element.getchildren()`, `Element.getiterator()` and `ElementTree.getiterator()` and the `xml.etree.cElementTree` module.
- [bpo-36409](https://bugs.python.org/issue?@action=redirect&bpo=36409) [https://bugs.python.org/issue?@action=redirect&bpo=36409]: Remove the old `plistlib` API deprecated in Python 3.4
- [bpo-36302](https://bugs.python.org/issue?@action=redirect&bpo=36302) [https://bugs.python.org/issue?@action=redirect&bpo=36302]: `distutils` sorts source file lists so that Extension `.so` files build more reproducibly by default
- [bpo-36250](https://bugs.python.org/issue?@action=redirect&bpo=36250) [https://bugs.python.org/issue?@action=redirect&bpo=36250]: Ignore `ValueError` from `signal` with `interaction` in non-main thread.
- [bpo-36046](https://bugs.python.org/issue?@action=redirect&bpo=36046) [https://bugs.python.org/issue?@action=redirect&bpo=36046]: Added `user`, `group` and `extra_groups` parameters to the `subprocess.Popen` constructor. Patch by Patrick McLean.
- [bpo-32627](https://bugs.python.org/issue?@action=redirect&bpo=32627) [https://bugs.python.org/issue?@action=redirect&bpo=32627]: Fix compile error when `_uuid`

headers conflicting included.

- [bpo-35800](https://bugs.python.org/issue?@action=redirect&bpo=35800) [https://bugs.python.org/issue?@action=redirect&bpo=35800]: Deprecate `smtpd.MailmanProxy` ready for future removal.
- [bpo-35168](https://bugs.python.org/issue?@action=redirect&bpo=35168) [https://bugs.python.org/issue?@action=redirect&bpo=35168]: `shlex.shlex.punctuation_chars` is now a read-only property.
- [bpo-8538](https://bugs.python.org/issue?@action=redirect&bpo=8538) [https://bugs.python.org/issue?@action=redirect&bpo=8538]: Add support for boolean actions like `--foo` and `--no-foo` to `argparse`. Patch contributed by Rémi Lapeyre.
- [bpo-20504](https://bugs.python.org/issue?@action=redirect&bpo=20504) [https://bugs.python.org/issue?@action=redirect&bpo=20504]: Fixes a bug in `cgi` module when a multipart/form-data request has no `Content-Length` header.
- [bpo-25988](https://bugs.python.org/issue?@action=redirect&bpo=25988) [https://bugs.python.org/issue?@action=redirect&bpo=25988]: The abstract base classes in `collections.abc` no longer are exposed in the regular `collections` module.
- [bpo-11122](https://bugs.python.org/issue?@action=redirect&bpo=11122) [https://bugs.python.org/issue?@action=redirect&bpo=11122]: `Distutils` won't check for `rpm` build in specified paths only.
- [bpo-34775](https://bugs.python.org/issue?@action=redirect&bpo=34775) [https://bugs.python.org/issue?@action=redirect&bpo=34775]: Division handling of `PurePath` now returns `NotImplemented` instead of raising a `TypeError` when passed something other than an instance of `str` or `PurePath`. Patch by Roger Aiudi.
- [bpo-34749](https://bugs.python.org/issue?@action=redirect&bpo=34749) [https://bugs.python.org/issue?@action=redirect&bpo=34749]: `binascii.a2b_base64()` is now up to 2 times faster. Patch by Sergey Fedoseev.
- [bpo-34519](https://bugs.python.org/issue?@action=redirect&bpo=34519) [https://bugs.python.org/issue?@action=redirect&bpo=34519]: Add additional aliases for HP

## Roman 8. Patch by Michael Osipov.

- [bpo-28009](https://bugs.python.org/issue?@action=redirect&bpo=28009) [https://bugs.python.org/issue?@action=redirect&bpo=28009]: Fix `uuid.getnode()` on platforms with ‘.’ as MAC Addr delimiter as well fix for MAC Addr format that omits a leading 0 in MAC Addr values. Currently, AIX is the only know platform with these settings. Patch by Michael Felt.
- [bpo-30618](https://bugs.python.org/issue?@action=redirect&bpo=30618) [https://bugs.python.org/issue?@action=redirect&bpo=30618]: Add `readlink()`. Patch by Girts Folkmanis.
- [bpo-32498](https://bugs.python.org/issue?@action=redirect&bpo=32498) [https://bugs.python.org/issue?@action=redirect&bpo=32498]: Made `urllib.parse.unquote()` accept bytes in addition to strings. Patch by Stein Karlsen.
- [bpo-33348](https://bugs.python.org/issue?@action=redirect&bpo=33348) [https://bugs.python.org/issue?@action=redirect&bpo=33348]: `lib2to3` now recognizes expressions after `*` and `**` like in `f(*[] or [])`.
- [bpo-32689](https://bugs.python.org/issue?@action=redirect&bpo=32689) [https://bugs.python.org/issue?@action=redirect&bpo=32689]: Update `shutil.move()` function to allow for Path objects to be used as source argument. Patch by Emily Morehouse and Maxwell “5.13b” McKinnon.
- [bpo-32820](https://bugs.python.org/issue?@action=redirect&bpo=32820) [https://bugs.python.org/issue?@action=redirect&bpo=32820]: Added `_format_` to IPv4 and IPv6 classes. Always outputs a fully zero- padded string. Supports b/x/n modifiers (bin/hex/native format). Native format for IPv4 is bin, native format for IPv6 is hex. Also supports ‘#’ and ‘\_’ modifiers.
- [bpo-27657](https://bugs.python.org/issue?@action=redirect&bpo=27657) [https://bugs.python.org/issue?@action=redirect&bpo=27657]: Fix `urllib.parse.urlparse()` with numeric paths. A string like “path:80” is no longer parsed as a path but as a scheme (“path”) and a path (“80”).
- [bpo-4963](https://bugs.python.org/issue?@action=redirect&bpo=4963) [https://bugs.python.org/issue?@action=redirect&bpo=4963]:

Fixed non-deterministic behavior related to mimetypes extension mapping and module reinitialization.

## Documentation

- [bpo-21767](https://bugs.python.org/issue?@action=redirect&bpo=21767) [https://bugs.python.org/issue?@action=redirect&bpo=21767]: Explicitly mention abc support in `functools singledispatch`
- [bpo-38816](https://bugs.python.org/issue?@action=redirect&bpo=38816) [https://bugs.python.org/issue?@action=redirect&bpo=38816]: Provides more details about the interaction between `fork()` and CPython's runtime, focusing just on the C-API. This includes cautions about where `fork()` should and shouldn't be called.
- [bpo-38351](https://bugs.python.org/issue?@action=redirect&bpo=38351) [https://bugs.python.org/issue?@action=redirect&bpo=38351]: Modernize `email` examples from %-formatting to f-strings.
- [bpo-38778](https://bugs.python.org/issue?@action=redirect&bpo=38778) [https://bugs.python.org/issue?@action=redirect&bpo=38778]: Document the fact that `RuntimeError` is raised if `os.fork()` is called in a subinterpreter.
- [bpo-38592](https://bugs.python.org/issue?@action=redirect&bpo=38592) [https://bugs.python.org/issue?@action=redirect&bpo=38592]: Add Brazilian Portuguese to the language switcher at Python Documentation website.
- [bpo-38294](https://bugs.python.org/issue?@action=redirect&bpo=38294) [https://bugs.python.org/issue?@action=redirect&bpo=38294]: Add list of no-longer-escaped chars to `re.escape` documentation
- [bpo-38053](https://bugs.python.org/issue?@action=redirect&bpo=38053) [https://bugs.python.org/issue?@action=redirect&bpo=38053]: Modernized the `plistlib` documentation
- [bpo-26868](https://bugs.python.org/issue?@action=redirect&bpo=26868) [https://bugs.python.org/issue?@action=redirect&bpo=26868]: Fix example usage of `PyModule_AddObject()` to properly handle errors.
- [bpo-36797](https://bugs.python.org/issue?@action=redirect&bpo=36797) [https://bugs.python.org/issue?@action=redirect&bpo=36797]

@action=redirect&bpo=36797]: Fix a dead link in the distutils API Reference.

- [bpo-37977](https://bugs.python.org/issue?@action=redirect&bpo=37977) [https://bugs.python.org/issue?@action=redirect&bpo=37977]: Warn more strongly and clearly about pickle insecurity
- [bpo-37979](https://bugs.python.org/issue?@action=redirect&bpo=37979) [https://bugs.python.org/issue?@action=redirect&bpo=37979]: Added a link to dateutil.parser.isoparse in the datetime.fromisoformat documentation. Patch by Paul Ganssle
- [bpo-12707](https://bugs.python.org/issue?@action=redirect&bpo=12707) [https://bugs.python.org/issue?@action=redirect&bpo=12707]: Deprecate info(), geturl(), getcode() methods in favor of the headers, url, and status properties, respectively, for HTTPResponse and addinfourl. Also deprecate the code attribute of addinfourl in favor of the status attribute. Patch by Ashwin Ramaswami
- [bpo-37937](https://bugs.python.org/issue?@action=redirect&bpo=37937) [https://bugs.python.org/issue?@action=redirect&bpo=37937]: Mention `frame.f_trace` in `sys.settrace()` docs.
- [bpo-37878](https://bugs.python.org/issue?@action=redirect&bpo=37878) [https://bugs.python.org/issue?@action=redirect&bpo=37878]: Make `PyThreadState_DeleteCurrent()` Internal.
- [bpo-37759](https://bugs.python.org/issue?@action=redirect&bpo=37759) [https://bugs.python.org/issue?@action=redirect&bpo=37759]: Beginning edits to Whatsnew 3.8
- [bpo-37726](https://bugs.python.org/issue?@action=redirect&bpo=37726) [https://bugs.python.org/issue?@action=redirect&bpo=37726]: Stop recommending getopt in the tutorial for command line argument parsing and promote argparse.
- [bpo-32910](https://bugs.python.org/issue?@action=redirect&bpo=32910) [https://bugs.python.org/issue?@action=redirect&bpo=32910]: Remove implementation-specific behaviour of how venv's Deactivate works.
- [bpo-37256](https://bugs.python.org/issue?@action=redirect&bpo=37256) [https://bugs.python.org/issue?@action=redirect&bpo=37256]: Fix wording of arguments for

## Request in `urllib.request`

- [bpo-37284](https://bugs.python.org/issue?@action=redirect&bpo=37284) [https://bugs.python.org/issue?@action=redirect&bpo=37284]: Add a brief note to indicate that any new `sys.implementation` required attributes must go through the PEP process.
- [bpo-30088](https://bugs.python.org/issue?@action=redirect&bpo=30088) [https://bugs.python.org/issue?@action=redirect&bpo=30088]: Documented that `mailbox.Maildir` constructor doesn't attempt to verify the maildir folder layout correctness. Patch by Sviatoslav Sydorenko.
- [bpo-37521](https://bugs.python.org/issue?@action=redirect&bpo=37521) [https://bugs.python.org/issue?@action=redirect&bpo=37521]: Fix `importlib` examples to insert any newly created modules via `importlib.util.module_from_spec()` immediately into `sys.modules` instead of after calling `loader.exec_module()`.

Thanks to Benjamin Mintz for finding the bug.

- [bpo-37456](https://bugs.python.org/issue?@action=redirect&bpo=37456) [https://bugs.python.org/issue?@action=redirect&bpo=37456]: Slash ('/') is now part of syntax.
- [bpo-37487](https://bugs.python.org/issue?@action=redirect&bpo=37487) [https://bugs.python.org/issue?@action=redirect&bpo=37487]: Fix `PyList_GetItem` index description to include 0.
- [bpo-37149](https://bugs.python.org/issue?@action=redirect&bpo=37149) [https://bugs.python.org/issue?@action=redirect&bpo=37149]: Replace the dead link to the Tkinter 8.5 reference by John Shipman, New Mexico Tech, with a link to the archive.org copy.
- [bpo-37478](https://bugs.python.org/issue?@action=redirect&bpo=37478) [https://bugs.python.org/issue?@action=redirect&bpo=37478]: Added possible exceptions to the description of `os.chdir()`.
- [bpo-34903](https://bugs.python.org/issue?@action=redirect&bpo=34903) [https://bugs.python.org/issue?@action=redirect&bpo=34903]: Documented that in `datetime.datetime.strptime()`, the leading zero in some two-digit formats is optional. Patch by Mike Gleen.

- [bpo-36260](https://bugs.python.org/issue?@action=redirect&bpo=36260) [https://bugs.python.org/issue?@action=redirect&bpo=36260]: Add decompression pitfalls to zipfile module documentation.
- [bpo-37004](https://bugs.python.org/issue?@action=redirect&bpo=37004) [https://bugs.python.org/issue?@action=redirect&bpo=37004]: In the documentation for `difflib`, a note was added explicitly warning that the results of `SequenceMatcher`'s `ratio` method may depend on the order of the input strings.
- [bpo-36960](https://bugs.python.org/issue?@action=redirect&bpo=36960) [https://bugs.python.org/issue?@action=redirect&bpo=36960]: Restructured the `datetime` docs in the interest of making them more user-friendly and improving readability. Patch by Brad Solomon.
- [bpo-36487](https://bugs.python.org/issue?@action=redirect&bpo=36487) [https://bugs.python.org/issue?@action=redirect&bpo=36487]: Make C-API docs clear about what the “main” interpreter is.
- [bpo-23460](https://bugs.python.org/issue?@action=redirect&bpo=23460) [https://bugs.python.org/issue?@action=redirect&bpo=23460]: The documentation for decimal string formatting using the `g` specifier has been updated to reflect the correct exponential notation cutoff point. Original patch contributed by Tuomas Suutari.
- [bpo-35803](https://bugs.python.org/issue?@action=redirect&bpo=35803) [https://bugs.python.org/issue?@action=redirect&bpo=35803]: Document and test that `tempfile` functions may accept a `path-like object` for the `dir` argument. Patch by Anthony Sottile.
- [bpo-33944](https://bugs.python.org/issue?@action=redirect&bpo=33944) [https://bugs.python.org/issue?@action=redirect&bpo=33944]: Added a note about the intended use of code in `.pth` files.
- [bpo-34293](https://bugs.python.org/issue?@action=redirect&bpo=34293) [https://bugs.python.org/issue?@action=redirect&bpo=34293]: Fix the Doc/Makefile regarding `PAPER` environment variable and PDF builds
- [bpo-25237](https://bugs.python.org/issue?@action=redirect&bpo=25237) [https://bugs.python.org/issue?@action=redirect&bpo=25237]: Add documentation for `tkinter` modules

## Tests

- [bpo-38614](https://bugs.python.org/issue?@action=redirect&bpo=38614) [https://bugs.python.org/issue?@action=redirect&bpo=38614]: Fix `test_communicate()` of `test_asyncio.test_subprocess`: use `support.LONG_TIMEOUT` (5 minutes), instead of just 1 minute.
- [bpo-38614](https://bugs.python.org/issue?@action=redirect&bpo=38614) [https://bugs.python.org/issue?@action=redirect&bpo=38614]: Add timeout constants to `test.support`: `LOOPBACK_TIMEOUT`, `INTERNET_TIMEOUT`, `SHORT_TIMEOUT` and `LONG_TIMEOUT`.
- [bpo-38502](https://bugs.python.org/issue?@action=redirect&bpo=38502) [https://bugs.python.org/issue?@action=redirect&bpo=38502]: `test regrtest` now uses process groups in the multiprocessing mode (-jN command line option) if process groups are available: if `os.setsid()` and `os.killpg()` functions are available.
- [bpo-35998](https://bugs.python.org/issue?@action=redirect&bpo=35998) [https://bugs.python.org/issue?@action=redirect&bpo=35998]: Fix a race condition in `test_asyncio.test_start_tls_server_1()`. Previously, there was a race condition between the test `main()` function which replaces the protocol and the test `ServerProto` protocol which sends ANSWER once it gets HELLO. Now, only the test `main()` function is responsible to send data, `ServerProto` no longer sends data.
- [bpo-38470](https://bugs.python.org/issue?@action=redirect&bpo=38470) [https://bugs.python.org/issue?@action=redirect&bpo=38470]: Fix `test_compileall.test_compile_dir_maxlevels()` on Windows without long path support: only create 3 subdirectories instead of between 20 and 100 subdirectories.
- [bpo-37531](https://bugs.python.org/issue?@action=redirect&bpo=37531) [https://bugs.python.org/issue?@action=redirect&bpo=37531]: On timeout, `regrtest` no longer attempts to call `popen.communicate()` again: it can hang until all child processes using stdout and stderr pipes completes. Kill the worker process and ignores its output. Change also the fault handler timeout of the main process from 1 minute to 5 minutes, for Python slowest buildbots.

- [bpo-38239](https://bugs.python.org/issue?@action=redirect&bpo=38239) [https://bugs.python.org/issue?@action=redirect&bpo=38239]: Fix test\_gdb for Link Time Optimization (LTO) builds.
- [bpo-38275](https://bugs.python.org/issue?@action=redirect&bpo=38275) [https://bugs.python.org/issue?@action=redirect&bpo=38275]: test\_ssl now handles disabled TLS/SSL versions better. OpenSSL's crypto policy and run-time settings are recognized and tests for disabled versions are skipped. Tests also accept more TLS minimum\_versions for platforms that override OpenSSL's default with strict settings.
- [bpo-38271](https://bugs.python.org/issue?@action=redirect&bpo=38271) [https://bugs.python.org/issue?@action=redirect&bpo=38271]: The private keys for test\_ssl were encrypted with 3DES in traditional PKCS#5 format. 3DES and the digest algorithm of PKCS#5 are blocked by some strict crypto policies. Use PKCS#8 format with AES256 encryption instead.
- [bpo-38270](https://bugs.python.org/issue?@action=redirect&bpo=38270) [https://bugs.python.org/issue?@action=redirect&bpo=38270]: test.support now has a helper function to check for availability of a hash digest function. Several tests are refactored avoid MD5 and use SHA256 instead. Other tests are marked to use MD5 and skipped when MD5 is disabled.
- [bpo-37123](https://bugs.python.org/issue?@action=redirect&bpo=37123) [https://bugs.python.org/issue?@action=redirect&bpo=37123]: Multiprocessing test test\_mymanager() now also expects -SIGTERM, not only exitcode 0. BaseManager.\_finalize\_manager() sends SIGTERM to the manager process if it takes longer than 1 second to stop, which happens on slow buildbots.
- [bpo-38212](https://bugs.python.org/issue?@action=redirect&bpo=38212) [https://bugs.python.org/issue?@action=redirect&bpo=38212]: Multiprocessing tests: increase test\_queue\_feeder\_donot\_stop\_onexc() timeout from 1 to 60 seconds.
- [bpo-38117](https://bugs.python.org/issue?@action=redirect&bpo=38117) [https://bugs.python.org/issue?@action=redirect&bpo=38117]: Test with OpenSSL 1.1.1d
- [bpo-38018](https://bugs.python.org/issue?@action=redirect&bpo=38018) [https://bugs.python.org/issue?@action=redirect&bpo=38018]

@action=redirect&bpo=38018]: Increase code coverage for multiprocessing.shared\_memory.

- [bpo-37805](https://bugs.python.org/issue?@action=redirect&bpo=37805) [https://bugs.python.org/issue?@action=redirect&bpo=37805]: Add tests for json.dump(..., skipkeys=True). Patch by Donghee Na.
- [bpo-37531](https://bugs.python.org/issue?@action=redirect&bpo=37531) [https://bugs.python.org/issue?@action=redirect&bpo=37531]: Enhance regrtest multiprocessing timeout: write a message when killing a worker process, catch popen.kill() and popen.wait() exceptions, put a timeout on the second call to popen.communicate().
- [bpo-37876](https://bugs.python.org/issue?@action=redirect&bpo=37876) [https://bugs.python.org/issue?@action=redirect&bpo=37876]: Add tests for ROT-13 codec.
- [bpo-36833](https://bugs.python.org/issue?@action=redirect&bpo=36833) [https://bugs.python.org/issue?@action=redirect&bpo=36833]: Added tests for PyDateTime\_XXX\_GET\_XXX() macros of the C API of the **datetime** module. Patch by Joannah Nanjeyke.
- [bpo-37558](https://bugs.python.org/issue?@action=redirect&bpo=37558) [https://bugs.python.org/issue?@action=redirect&bpo=37558]: Fix test\_shared\_memory\_cleaned\_after\_process\_termination name handling
- [bpo-37526](https://bugs.python.org/issue?@action=redirect&bpo=37526) [https://bugs.python.org/issue?@action=redirect&bpo=37526]: Add **test.support.catch\_threading\_exception()**: context manager catching **threading.Thread** exception using **threading.excepthook()**.
- [bpo-37421](https://bugs.python.org/issue?@action=redirect&bpo=37421) [https://bugs.python.org/issue?@action=redirect&bpo=37421]: test\_concurrent\_futures now explicitly stops the ForkServer instance if it's running.
- [bpo-37421](https://bugs.python.org/issue?@action=redirect&bpo=37421) [https://bugs.python.org/issue?@action=redirect&bpo=37421]: multiprocessing tests now stop the ForkServer instance if it's running: close the "alive" file descriptor to ask the server to stop and then remove its UNIX address.

- [bpo-37421](https://bugs.python.org/issue?@action=redirect&bpo=37421) [https://bugs.python.org/issue?@action=redirect&bpo=37421]: `test_distutils.test_build_ext()` is now able to remove the temporary directory on Windows: don't import the newly built C extension ("xx") in the current process, but test it in a separated process.
- [bpo-37421](https://bugs.python.org/issue?@action=redirect&bpo=37421) [https://bugs.python.org/issue?@action=redirect&bpo=37421]: `test_concurrent_futures` now cleans up multiprocessing to remove immediately temporary directories created by multiprocessing.util.get\_temp\_dir().
- [bpo-37421](https://bugs.python.org/issue?@action=redirect&bpo=37421) [https://bugs.python.org/issue?@action=redirect&bpo=37421]: `test_winconsoleio` doesn't leak a temporary file anymore: use `tempfile.TemporaryFile()` to remove it when the test completes.
- [bpo-37421](https://bugs.python.org/issue?@action=redirect&bpo=37421) [https://bugs.python.org/issue?@action=redirect&bpo=37421]: multiprocessing tests now explicitly call `_run_finalizers()` to immediately remove temporary directories created by tests.
- [bpo-37421](https://bugs.python.org/issue?@action=redirect&bpo=37421) [https://bugs.python.org/issue?@action=redirect&bpo=37421]: `urllib.request` tests now call [urlcleanup\(\)](#) to remove temporary files created by `urlretrieve()` tests and to clear the `_opener` global variable set by `urlopen()` and functions calling indirectly `urlopen()`.
- [bpo-37472](https://bugs.python.org/issue?@action=redirect&bpo=37472) [https://bugs.python.org/issue?@action=redirect&bpo=37472]: Remove `Lib/test/outstanding_bugs.py`.
- [bpo-37199](https://bugs.python.org/issue?@action=redirect&bpo=37199) [https://bugs.python.org/issue?@action=redirect&bpo=37199]: Fix test failures when IPv6 is unavailable or disabled.
- [bpo-19696](https://bugs.python.org/issue?@action=redirect&bpo=19696) [https://bugs.python.org/issue?@action=redirect&bpo=19696]: Replace deprecated method "random.choose" with "random.choice" in "test\_pkg\_import.py".

- [bpo-37335](https://bugs.python.org/issue?@action=redirect&bpo=37335) [https://bugs.python.org/issue?@action=redirect&bpo=37335]: Remove no longer necessary code from c locale coercion tests
- [bpo-37421](https://bugs.python.org/issue?@action=redirect&bpo=37421) [https://bugs.python.org/issue?@action=redirect&bpo=37421]: Fix test\_shutil to no longer leak temporary files.
- [bpo-37411](https://bugs.python.org/issue?@action=redirect&bpo=37411) [https://bugs.python.org/issue?@action=redirect&bpo=37411]: Fix test\_wsgiref.testEnviron() to no longer depend on the environment variables (don't fail if "X" variable is set).
- [bpo-37400](https://bugs.python.org/issue?@action=redirect&bpo=37400) [https://bugs.python.org/issue?@action=redirect&bpo=37400]: Fix test\_os.test\_chown(): use os.getgroups() rather than grp.getgrall() to get groups. Rename also the test to test\_chown\_gid().
- [bpo-37359](https://bugs.python.org/issue?@action=redirect&bpo=37359) [https://bugs.python.org/issue?@action=redirect&bpo=37359]: Add --cleanup option to python3 -m test to remove test\_python\_\* directories of previous failed jobs. Add "make cleantest" to run python3 -m test --cleanup.
- [bpo-37362](https://bugs.python.org/issue?@action=redirect&bpo=37362) [https://bugs.python.org/issue?@action=redirect&bpo=37362]: test\_gdb no longer fails if it gets an "unexpected" message on stderr: it now ignores stderr. The purpose of test\_gdb is to test that python-gdb.py commands work as expected, not to test gdb.
- [bpo-35998](https://bugs.python.org/issue?@action=redirect&bpo=35998) [https://bugs.python.org/issue?@action=redirect&bpo=35998]: Avoid TimeoutError in test\_asyncio: test\_start\_tls\_server\_1()
- [bpo-37278](https://bugs.python.org/issue?@action=redirect&bpo=37278) [https://bugs.python.org/issue?@action=redirect&bpo=37278]: Fix test\_asyncio ProactorLoopCtrlC: join the thread to prevent leaking a running thread and leaking a reference.
- [bpo-37261](https://bugs.python.org/issue?@action=redirect&bpo=37261) [https://bugs.python.org/issue?@action=redirect&bpo=37261]: Fix

`test.support.catch_unraisable_exception()`: its `_exit_()` method now ignores unraisable exception raised when clearing its `unraisable` attribute.

- [bpo-37069](https://bugs.python.org/issue?@action=redirect&bpo=37069) [https://bugs.python.org/issue?@action=redirect&bpo=37069]: `regtest` now uses `sys.unraisablehook()` to mark a test as “environment altered” (`ENV_CHANGED`) if it emits an “unraisable exception”. Moreover, `regtest` logs a warning in this case.

Use `python3 -m test --fail-env-changed` to catch unraisable exceptions in tests.

- [bpo-37252](https://bugs.python.org/issue?@action=redirect&bpo=37252) [https://bugs.python.org/issue?@action=redirect&bpo=37252]: Fix assertions in `test_close` and `test_events_mask_overflow` devpoll tests.
- [bpo-37169](https://bugs.python.org/issue?@action=redirect&bpo=37169) [https://bugs.python.org/issue?@action=redirect&bpo=37169]: Rewrite `_PyObject_IsFreed()` unit tests.
- [bpo-37153](https://bugs.python.org/issue?@action=redirect&bpo=37153) [https://bugs.python.org/issue?@action=redirect&bpo=37153]: `test_venv.test_multiprocessing()` now explicitly calls `pool.terminate()` to wait until the pool completes.
- [bpo-34001](https://bugs.python.org/issue?@action=redirect&bpo=34001) [https://bugs.python.org/issue?@action=redirect&bpo=34001]: Make `test_ssl` pass with LibreSSL. LibreSSL handles minimum and maximum TLS version differently than OpenSSL.
- [bpo-36919](https://bugs.python.org/issue?@action=redirect&bpo=36919) [https://bugs.python.org/issue?@action=redirect&bpo=36919]: Make `test_source_encoding.test_issue2301` implementation independent. The test will work now for both CPython and IronPython.
- [bpo-30202](https://bugs.python.org/issue?@action=redirect&bpo=30202) [https://bugs.python.org/issue?@action=redirect&bpo=30202]: Update `test.test_importlib.test_abc` to test `find_spec()`.

- [bpo-28009](https://bugs.python.org/issue?@action=redirect&bpo=28009) [https://bugs.python.org/issue?@action=redirect&bpo=28009]: Modify the `test_uuid` logic to test when a program is available AND can be used to obtain a MACADDR as basis for an UUID. Patch by M. Felt
- [bpo-34596](https://bugs.python.org/issue?@action=redirect&bpo=34596) [https://bugs.python.org/issue?@action=redirect&bpo=34596]: Fallback to a default reason when `unittest.skip()` is uncalled. Patch by Naitree Zhu.

## Build

- [bpo-38809](https://bugs.python.org/issue?@action=redirect&bpo=38809) [https://bugs.python.org/issue?@action=redirect&bpo=38809]: On Windows, build scripts will now recognize and use `python.exe` from an active virtual env.
- [bpo-38684](https://bugs.python.org/issue?@action=redirect&bpo=38684) [https://bugs.python.org/issue?@action=redirect&bpo=38684]: Fix `_hashlib` build when Blake2 is disabled, but OpenSSL supports it.
- [bpo-38468](https://bugs.python.org/issue?@action=redirect&bpo=38468) [https://bugs.python.org/issue?@action=redirect&bpo=38468]: `Misc/python-config.in` now uses `getvar()` for all still existing `sysconfig.get_config_var()` calls. Patch by Joanna Nanjeyke.
- [bpo-37415](https://bugs.python.org/issue?@action=redirect&bpo=37415) [https://bugs.python.org/issue?@action=redirect&bpo=37415]: Fix `stdatomic.h` header check for ICC compiler: the ICC implementation lacks `atomic_uintptr_t` type which is needed by Python.
- [bpo-38301](https://bugs.python.org/issue?@action=redirect&bpo=38301) [https://bugs.python.org/issue?@action=redirect&bpo=38301]: In Solaris family, we must be sure to use `-D_REENTRANT`. Patch by Jesús Cea Avi3n.
- [bpo-36002](https://bugs.python.org/issue?@action=redirect&bpo=36002) [https://bugs.python.org/issue?@action=redirect&bpo=36002]: Locate `llvm-profdata` and `llvm-ar` binaries using `AC_PATH_TOOL` rather than `AC_PATH_TARGET_TOOL`.
- [bpo-37936](https://bugs.python.org/issue?@action=redirect&bpo=37936) [https://bugs.python.org/issue?@action=redirect&bpo=37936]: The `.gitignore` file

systematically keeps “rooted”, with a non-trailing slash, all the rules that are meant to apply to files in a specific place in the repo. Previously, when the intended file to ignore happened to be at the root of the repo, we’d most often accidentally also ignore files and directories with the same name anywhere in the tree.

- [bpo-37760](https://bugs.python.org/issue?@action=redirect&bpo=37760) [https://bugs.python.org/issue?@action=redirect&bpo=37760]: The `Tools/unicode/makeunicodedata.py` script, which is used for converting information from the Unicode Character Database into generated code and data used by the methods of `str` and by the `unicodedata` module, now handles each character’s data as a `dataclass` with named attributes, rather than a length-18 list of different fields.
- [bpo-37936](https://bugs.python.org/issue?@action=redirect&bpo=37936) [https://bugs.python.org/issue?@action=redirect&bpo=37936]: The `.gitignore` file no longer applies to any files that are in fact tracked in the Git repository. Patch by Greg Price.
- [bpo-37725](https://bugs.python.org/issue?@action=redirect&bpo=37725) [https://bugs.python.org/issue?@action=redirect&bpo=37725]: Change “clean” makefile target to also clean the program guided optimization (PGO) data. Previously you would have to use “make clean” and “make profile-removal”, or “make clobber”.
- [bpo-37707](https://bugs.python.org/issue?@action=redirect&bpo=37707) [https://bugs.python.org/issue?@action=redirect&bpo=37707]: Mark some individual tests to skip when `-pgo` is used. The tests marked increase the PGO task time significantly and likely don’t help improve optimization of the final executable.
- [bpo-36044](https://bugs.python.org/issue?@action=redirect&bpo=36044) [https://bugs.python.org/issue?@action=redirect&bpo=36044]: Reduce the number of unit tests run for the PGO generation task. This speeds up the task by a factor of about 15x. Running the full unit test suite is slow. This change may result in a slightly less optimized build since not as many code branches will be executed. If you are willing to wait for the much slower build, the old behavior can be restored using `./configure [...] PROFILE_TASK=""` and `make`.

test -pgo-extended". We make no guarantees as to which PGO task set produces a faster build. Users who care should run their own relevant benchmarks as results can depend on the environment, workload, and compiler tool chain.

- [bpo-37468](https://bugs.python.org/issue?@action=redirect&bpo=37468) [https://bugs.python.org/issue?@action=redirect&bpo=37468]: `make install` no longer installs `wininst-*.exe` files used by `distutils` `bdist_wininst`: `bdist_wininst` only works on Windows.
- [bpo-37189](https://bugs.python.org/issue?@action=redirect&bpo=37189) [https://bugs.python.org/issue?@action=redirect&bpo=37189]: Many `PyRun_XXX()` functions like `PyRun_String()` were no longer exported in `libpython38.dll` by mistake. Export them again to fix the ABI compatibility.
- [bpo-25361](https://bugs.python.org/issue?@action=redirect&bpo=25361) [https://bugs.python.org/issue?@action=redirect&bpo=25361]: Enables use of SSE2 instructions in Windows 32-bit build.
- [bpo-36210](https://bugs.python.org/issue?@action=redirect&bpo=36210) [https://bugs.python.org/issue?@action=redirect&bpo=36210]: Update optional extension module detection for AIX. `ossaudiodev` and `spwd` are not applicable for AIX, and are no longer reported as missing. 3rd-party packaging of `ncurses` (with ASIS support) conflicts with officially supported AIX `ncurses` library, so configure AIX to use `libncurses.a`. However, skip trying to build `_curses_panel`.

patch by M Felt

## Windows

- [bpo-38589](https://bugs.python.org/issue?@action=redirect&bpo=38589) [https://bugs.python.org/issue?@action=redirect&bpo=38589]: Fixes HTML Help shortcut when Windows is not installed to C drive
- [bpo-38453](https://bugs.python.org/issue?@action=redirect&bpo=38453) [https://bugs.python.org/issue?@action=redirect&bpo=38453]: Ensure `ntpath.realpath()` correctly resolves relative paths.
- [bpo-38519](https://bugs.python.org/issue?@action=redirect&bpo=38519) [https://bugs.python.org/issue?@action=redirect&bpo=38519]: Restores the internal C headers that were missing from the `nuget.org` and Microsoft Store

packages.

- [bpo-38492](https://bugs.python.org/issue?@action=redirect&bpo=38492) [https://bugs.python.org/issue?@action=redirect&bpo=38492]: Remove `pythonw.exe` dependency on the Microsoft C++ runtime.
- [bpo-38344](https://bugs.python.org/issue?@action=redirect&bpo=38344) [https://bugs.python.org/issue?@action=redirect&bpo=38344]: Fix error message in `activate.bat`
- [bpo-38359](https://bugs.python.org/issue?@action=redirect&bpo=38359) [https://bugs.python.org/issue?@action=redirect&bpo=38359]: Ensures `pyw.exe` launcher reads correct registry key.
- [bpo-38355](https://bugs.python.org/issue?@action=redirect&bpo=38355) [https://bugs.python.org/issue?@action=redirect&bpo=38355]: Fixes `ntpath.realpath` failing on `sys.executable`.
- [bpo-38117](https://bugs.python.org/issue?@action=redirect&bpo=38117) [https://bugs.python.org/issue?@action=redirect&bpo=38117]: Update bundled OpenSSL to 1.1.1d
- [bpo-38092](https://bugs.python.org/issue?@action=redirect&bpo=38092) [https://bugs.python.org/issue?@action=redirect&bpo=38092]: Reduce overhead when using multiprocessing in a Windows virtual environment.
- [bpo-38133](https://bugs.python.org/issue?@action=redirect&bpo=38133) [https://bugs.python.org/issue?@action=redirect&bpo=38133]: Allow `py.exe` launcher to locate installations from the Microsoft Store and improve display of active virtual environments.
- [bpo-38114](https://bugs.python.org/issue?@action=redirect&bpo=38114) [https://bugs.python.org/issue?@action=redirect&bpo=38114]: The `pip.ini` is no longer included in the Nuget package.
- [bpo-32592](https://bugs.python.org/issue?@action=redirect&bpo=32592) [https://bugs.python.org/issue?@action=redirect&bpo=32592]: Set Windows 8 as the minimum required version for API support
- [bpo-36634](https://bugs.python.org/issue?@action=redirect&bpo=36634) [https://bugs.python.org/issue?@action=redirect&bpo=36634]: `os.cpu_count()` now returns active processors rather than maximum processors.
- [bpo-36634](https://bugs.python.org/issue?@action=redirect&bpo=36634) [https://bugs.python.org/issue?@action=redirect&bpo=36634]: `venv activate.bat` now works when the existing variables contain double quote characters.
- [bpo-38081](https://bugs.python.org/issue?@action=redirect&bpo=38081) [https://bugs.python.org/issue?@action=redirect&bpo=38081]: Prevent error calling `os.path.realpath()` on `'NUL'`.
- [bpo-38087](https://bugs.python.org/issue?@action=redirect&bpo=38087) [https://bugs.python.org/issue?@action=redirect&bpo=38087]: Fix case sensitivity in `test_pathlib` and `test_ntpath`.

- [bpo-38088](https://bugs.python.org/issue?@action=redirect&bpo=38088) [https://bugs.python.org/issue?@action=redirect&bpo=38088]: Fixes distutils not finding vcruntime140.dll with only the v142 toolset installed.
- [bpo-37283](https://bugs.python.org/issue?@action=redirect&bpo=37283) [https://bugs.python.org/issue?@action=redirect&bpo=37283]: Ensure command-line and unattend.xml setting override previously detected states in Windows installer.
- [bpo-38030](https://bugs.python.org/issue?@action=redirect&bpo=38030) [https://bugs.python.org/issue?@action=redirect&bpo=38030]: Fixes `os.stat()` failing for block devices on Windows
- [bpo-38020](https://bugs.python.org/issue?@action=redirect&bpo=38020) [https://bugs.python.org/issue?@action=redirect&bpo=38020]: Fixes potential crash when calling `os.readlink()` (or indirectly through `realpath()`) on a file that is not a supported link.
- [bpo-37705](https://bugs.python.org/issue?@action=redirect&bpo=37705) [https://bugs.python.org/issue?@action=redirect&bpo=37705]: Improve the implementation of `winerror_to_errno()`.
- [bpo-37549](https://bugs.python.org/issue?@action=redirect&bpo=37549) [https://bugs.python.org/issue?@action=redirect&bpo=37549]: `os.dup()` no longer fails for standard streams on Windows 7.
- [bpo-1311](https://bugs.python.org/issue?@action=redirect&bpo=1311) [https://bugs.python.org/issue?@action=redirect&bpo=1311]: The `nul` file on Windows now returns `True` from `exists()` and a valid result from `os.stat()` with `S_IFCHR` set.
- [bpo-9949](https://bugs.python.org/issue?@action=redirect&bpo=9949) [https://bugs.python.org/issue?@action=redirect&bpo=9949]: Enable support for following symlinks in `os.realpath()`.
- [bpo-37834](https://bugs.python.org/issue?@action=redirect&bpo=37834) [https://bugs.python.org/issue?@action=redirect&bpo=37834]: Treat all name surrogate reparse points on Windows in `os.lstat()` and other reparse points as regular files in `os.stat()`.
- [bpo-36266](https://bugs.python.org/issue?@action=redirect&bpo=36266) [https://bugs.python.org/issue?@action=redirect&bpo=36266]: Add the module name in the formatted error message when DLL load fail happens during module import in `_PyImport_FindSharedFuncptrWindows()`. Patch by Srinivas Nyayapati.
- [bpo-25172](https://bugs.python.org/issue?@action=redirect&bpo=25172) [https://bugs.python.org/issue?@action=redirect&bpo=25172]: Trying to import the `crypt` module on Windows will result in an `ImportError` with a message explaining that the module isn't supported on Windows. On other platforms, if the underlying `_crypt`

module is not available, the `ImportError` will include a message explaining the problem.

- [bpo-37778](https://bugs.python.org/issue?@action=redirect&bpo=37778) [https://bugs.python.org/issue?@action=redirect&bpo=37778]: Fixes the icons used for file associations to the Microsoft Store package.
- [bpo-37734](https://bugs.python.org/issue?@action=redirect&bpo=37734) [https://bugs.python.org/issue?@action=redirect&bpo=37734]: Fix use of registry values to launch Python from Microsoft Store app.
- [bpo-37702](https://bugs.python.org/issue?@action=redirect&bpo=37702) [https://bugs.python.org/issue?@action=redirect&bpo=37702]: Fix memory leak on Windows in creating an `SSLContext` object or running `urllib.request.urlopen('https://...')`.
- [bpo-37672](https://bugs.python.org/issue?@action=redirect&bpo=37672) [https://bugs.python.org/issue?@action=redirect&bpo=37672]: Switch Windows Store package's `pip` to use bundled `pip.ini` instead of `PIP_USER` variable.
- [bpo-10945](https://bugs.python.org/issue?@action=redirect&bpo=10945) [https://bugs.python.org/issue?@action=redirect&bpo=10945]: Officially drop support for creating `bdist_wininst` installers on non-Windows systems.
- [bpo-37445](https://bugs.python.org/issue?@action=redirect&bpo=37445) [https://bugs.python.org/issue?@action=redirect&bpo=37445]: Include the `FORMAT_MESSAGE_IGNORE_INSERTS` flag in `FormatMessageW()` calls.
- [bpo-37369](https://bugs.python.org/issue?@action=redirect&bpo=37369) [https://bugs.python.org/issue?@action=redirect&bpo=37369]: Fixes path for `sys.executable` when running from the Microsoft Store.
- [bpo-37380](https://bugs.python.org/issue?@action=redirect&bpo=37380) [https://bugs.python.org/issue?@action=redirect&bpo=37380]: Don't collect unfinished processes with `subprocess._active` on Windows to cleanup later. Patch by Ruslan Kuprieiev.
- [bpo-37351](https://bugs.python.org/issue?@action=redirect&bpo=37351) [https://bugs.python.org/issue?@action=redirect&bpo=37351]: Removes `libpython38.a` from standard Windows distribution.
- [bpo-35360](https://bugs.python.org/issue?@action=redirect&bpo=35360) [https://bugs.python.org/issue?@action=redirect&bpo=35360]: Update Windows builds to use SQLite 3.28.0.
- [bpo-37267](https://bugs.python.org/issue?@action=redirect&bpo=37267) [https://bugs.python.org/issue?@action=redirect&bpo=37267]: On Windows, `os.dup()` no longer creates an inheritable fd when handling a character file.
- [bpo-36779](https://bugs.python.org/issue?@action=redirect&bpo=36779) [https://bugs.python.org/issue?@action=redirect&bpo=36779]

@action=redirect&bpo=36779]: Ensure `time.tzname` is correct on Windows when the active code page is set to CP\_UTF7 or CP\_UTF8.

- [bpo-32587](https://bugs.python.org/issue?@action=redirect&bpo=32587) [https://bugs.python.org/issue?@action=redirect&bpo=32587]: Make `winreg.REG_MULTI_SZ` support zero-length strings.
- [bpo-28269](https://bugs.python.org/issue?@action=redirect&bpo=28269) [https://bugs.python.org/issue?@action=redirect&bpo=28269]: Replace use of `strcasecmp()` for the system function `_stricmp()`. Patch by Minmin Gong.
- [bpo-36590](https://bugs.python.org/issue?@action=redirect&bpo=36590) [https://bugs.python.org/issue?@action=redirect&bpo=36590]: Add native Bluetooth RFCOMM support to socket module.

## macOS

- [bpo-38117](https://bugs.python.org/issue?@action=redirect&bpo=38117) [https://bugs.python.org/issue?@action=redirect&bpo=38117]: Updated OpenSSL to 1.1.1d in macOS installer.
- [bpo-38089](https://bugs.python.org/issue?@action=redirect&bpo=38089) [https://bugs.python.org/issue?@action=redirect&bpo=38089]: Move Azure Pipelines to latest VM versions and make macOS tests optional
- [bpo-18049](https://bugs.python.org/issue?@action=redirect&bpo=18049) [https://bugs.python.org/issue?@action=redirect&bpo=18049]: Increase the default stack size of threads from 5MB to 16MB on macOS, to match the stack size of the main thread. This avoids crashes on deep recursion in threads.
- [bpo-34602](https://bugs.python.org/issue?@action=redirect&bpo=34602) [https://bugs.python.org/issue?@action=redirect&bpo=34602]: Avoid test suite failures on macOS by no longer calling `resource.setrlimit` to increase the process stack size limit at runtime. The runtime change is no longer needed since the interpreter is being built with a larger default stack size.
- [bpo-35360](https://bugs.python.org/issue?@action=redirect&bpo=35360) [https://bugs.python.org/issue?@action=redirect&bpo=35360]: Update macOS installer to use SQLite 3.28.0.
- [bpo-34631](https://bugs.python.org/issue?@action=redirect&bpo=34631) [https://bugs.python.org/issue?@action=redirect&bpo=34631]: Updated OpenSSL to 1.1.1c in macOS installer.

## IDLE

- [bpo-26353](https://bugs.python.org/issue?@action=redirect&bpo=26353) [https://bugs.python.org/issue?@action=redirect&bpo=26353]: Stop adding newline when saving an IDLE shell window.
- [bpo-4630](https://bugs.python.org/issue?@action=redirect&bpo=4630) [https://bugs.python.org/issue?@action=redirect&bpo=4630]: Add an option to toggle IDLE's cursor blink for shell, editor, and output windows. See Settings, General, Window Preferences, Cursor Blink. Patch by Zackery Spytz.
- [bpo-38598](https://bugs.python.org/issue?@action=redirect&bpo=38598) [https://bugs.python.org/issue?@action=redirect&bpo=38598]: Do not try to compile IDLE shell or output windows
- [bpo-36698](https://bugs.python.org/issue?@action=redirect&bpo=36698) [https://bugs.python.org/issue?@action=redirect&bpo=36698]: IDLE no longer fails when write non-encodable characters to stderr. It now escapes them with a backslash, as the regular Python interpreter. Added the `errors` field to the standard streams.
- [bpo-35379](https://bugs.python.org/issue?@action=redirect&bpo=35379) [https://bugs.python.org/issue?@action=redirect&bpo=35379]: When exiting IDLE, catch any `AttributeError`. One happens when `EditorWindow.close` is called twice. Printing a traceback, when IDLE is run from a terminal, is useless and annoying.
- [bpo-38183](https://bugs.python.org/issue?@action=redirect&bpo=38183) [https://bugs.python.org/issue?@action=redirect&bpo=38183]: To avoid problems, `test_idle` ignores the user config directory. It no longer tries to create or access `.idlerc` or any files within. Users must run IDLE to discover problems with saving settings.
- [bpo-38077](https://bugs.python.org/issue?@action=redirect&bpo=38077) [https://bugs.python.org/issue?@action=redirect&bpo=38077]: IDLE no longer adds `'argv'` to the user namespace when initializing it. This bug only affected 3.7.4 and 3.8.0b2 to 3.8.0b4.
- [bpo-38041](https://bugs.python.org/issue?@action=redirect&bpo=38041) [https://bugs.python.org/issue?@action=redirect&bpo=38041]: Shell restart lines now fill the window width, always start with `'='`, and avoid wrapping unnecessarily. The line will still wrap if the included file name is long relative to the width.
- [bpo-35771](https://bugs.python.org/issue?@action=redirect&bpo=35771) [https://bugs.python.org/issue?@action=redirect&bpo=35771]: To avoid occasional spurious `test_idle` failures on slower machines, increase the `hover_delay` in `test_tooltip`.

- [bpo-37824](https://bugs.python.org/issue?@action=redirect&bpo=37824) [https://bugs.python.org/issue?@action=redirect&bpo=37824]: Properly handle user input warnings in IDLE shell. Cease turning SyntaxWarnings into SyntaxErrors.
- [bpo-37929](https://bugs.python.org/issue?@action=redirect&bpo=37929) [https://bugs.python.org/issue?@action=redirect&bpo=37929]: IDLE Settings dialog now closes properly when there is no shell window.
- [bpo-37902](https://bugs.python.org/issue?@action=redirect&bpo=37902) [https://bugs.python.org/issue?@action=redirect&bpo=37902]: Add mousewheel scrolling for IDLE module, path, and stack browsers. Patch by George Zhang.
- [bpo-37849](https://bugs.python.org/issue?@action=redirect&bpo=37849) [https://bugs.python.org/issue?@action=redirect&bpo=37849]: Fixed completions list appearing too high or low when shown above the current line.
- [bpo-36419](https://bugs.python.org/issue?@action=redirect&bpo=36419) [https://bugs.python.org/issue?@action=redirect&bpo=36419]: Refactor IDLE autocomplete and improve testing.
- [bpo-37748](https://bugs.python.org/issue?@action=redirect&bpo=37748) [https://bugs.python.org/issue?@action=redirect&bpo=37748]: Reorder the Run menu. Put the most common choice, Run Module, at the top.
- [bpo-37692](https://bugs.python.org/issue?@action=redirect&bpo=37692) [https://bugs.python.org/issue?@action=redirect&bpo=37692]: Improve highlight config sample with example shell interaction and better labels for shell elements.
- [bpo-37628](https://bugs.python.org/issue?@action=redirect&bpo=37628) [https://bugs.python.org/issue?@action=redirect&bpo=37628]: Settings dialog no longer expands with font size.
- [bpo-37627](https://bugs.python.org/issue?@action=redirect&bpo=37627) [https://bugs.python.org/issue?@action=redirect&bpo=37627]: Initialize the Customize Run dialog with the command line arguments most recently entered before. The user can optionally edit before submitting them.
- [bpo-33610](https://bugs.python.org/issue?@action=redirect&bpo=33610) [https://bugs.python.org/issue?@action=redirect&bpo=33610]: Fix code context not showing the correct context when first toggled on.
- [bpo-37530](https://bugs.python.org/issue?@action=redirect&bpo=37530) [https://bugs.python.org/issue?@action=redirect&bpo=37530]: Optimize code context to reduce unneeded background activity. Font and highlight changes now occur along with text changes instead of after a random delay.

- [bpo-27452](https://bugs.python.org/issue?@action=redirect&bpo=27452) [https://bugs.python.org/issue?@action=redirect&bpo=27452]: Cleanup `config.py` by inlining `RemoveFile` and simplifying the handling of `file` in `CreateConfigHandlers`.
- [bpo-37325](https://bugs.python.org/issue?@action=redirect&bpo=37325) [https://bugs.python.org/issue?@action=redirect&bpo=37325]: Fix tab focus traversal order for help source and custom run dialogs.
- [bpo-37321](https://bugs.python.org/issue?@action=redirect&bpo=37321) [https://bugs.python.org/issue?@action=redirect&bpo=37321]: Both subprocess connection error messages now refer to the ‘Startup failure’ section of the IDLE doc.
- [bpo-17535](https://bugs.python.org/issue?@action=redirect&bpo=17535) [https://bugs.python.org/issue?@action=redirect&bpo=17535]: Add optional line numbers for IDLE editor windows. Windows open without line numbers unless set otherwise in the General tab of the configuration dialog.
- [bpo-26806](https://bugs.python.org/issue?@action=redirect&bpo=26806) [https://bugs.python.org/issue?@action=redirect&bpo=26806]: To compensate for stack frames added by IDLE and avoid possible problems with low recursion limits, add 30 to limits in the user code execution process. Subtract 30 when reporting recursion limits to make this addition mostly transparent.
- [bpo-37177](https://bugs.python.org/issue?@action=redirect&bpo=37177) [https://bugs.python.org/issue?@action=redirect&bpo=37177]: Properly ‘attach’ search dialogs to their main window so that they behave like other dialogs and do not get hidden behind their main window.
- [bpo-37039](https://bugs.python.org/issue?@action=redirect&bpo=37039) [https://bugs.python.org/issue?@action=redirect&bpo=37039]: Adjust “Zoom Height” to individual screens by momentarily maximizing the window on first use with a particular screen. Changing screen settings may invalidate the saved height. While a window is maximized, “Zoom Height” has no effect.
- [bpo-35763](https://bugs.python.org/issue?@action=redirect&bpo=35763) [https://bugs.python.org/issue?@action=redirect&bpo=35763]: Make calltip reminder about ‘/’ meaning positional-only less obtrusive by only adding it when there is room on the first line.
- [bpo-5680](https://bugs.python.org/issue?@action=redirect&bpo=5680) [https://bugs.python.org/issue?@action=redirect&bpo=5680]: Add ‘Run... Customized’ to the Run menu to run a module with customized settings. Any ‘command line arguments’ entered are added to `sys.argv`. One can suppress the normal

Shell main module restart.

- [bpo-36390](https://bugs.python.org/issue?@action=redirect&bpo=36390) [https://bugs.python.org/issue?@action=redirect&bpo=36390]: Gather Format menu functions into format.py. Combine paragraph.py, rstrip.py, and format methods from editor.py.

## Tools/Demos

- [bpo-38118](https://bugs.python.org/issue?@action=redirect&bpo=38118) [https://bugs.python.org/issue?@action=redirect&bpo=38118]: Update Valgrind suppression file to ignore a false alarm in `PyUnicode_Decode()` when using GCC builtin strcmp().
- [bpo-38347](https://bugs.python.org/issue?@action=redirect&bpo=38347) [https://bugs.python.org/issue?@action=redirect&bpo=38347]: pathfix.py: Assume all files that end on '.py' are Python scripts when working recursively.
- [bpo-37803](https://bugs.python.org/issue?@action=redirect&bpo=37803) [https://bugs.python.org/issue?@action=redirect&bpo=37803]: pdb's --help and --version long options now work.
- [bpo-37942](https://bugs.python.org/issue?@action=redirect&bpo=37942) [https://bugs.python.org/issue?@action=redirect&bpo=37942]: Improve ArgumentClinic converter for floats.
- [bpo-37704](https://bugs.python.org/issue?@action=redirect&bpo=37704) [https://bugs.python.org/issue?@action=redirect&bpo=37704]: Remove Tools/scripts/h2py.py: use cffi to access a C API in Python.
- [bpo-37675](https://bugs.python.org/issue?@action=redirect&bpo=37675) [https://bugs.python.org/issue?@action=redirect&bpo=37675]: 2to3 now works when run from a zipped standard library.
- [bpo-37034](https://bugs.python.org/issue?@action=redirect&bpo=37034) [https://bugs.python.org/issue?@action=redirect&bpo=37034]: Argument Clinic now uses the argument name on errors with keyword-only argument instead of their position. Patch contributed by Rémi Lapeyre.
- [bpo-37064](https://bugs.python.org/issue?@action=redirect&bpo=37064) [https://bugs.python.org/issue?@action=redirect&bpo=37064]: Add option -k to pathscript.py script: preserve shebang flags. Add option -a to pathscript.py script: add flags.

## C API

- [bpo-37633](https://bugs.python.org/issue?@action=redirect&bpo=37633) [https://bugs.python.org/issue?@action=redirect&bpo=37633]: Re-export some function

compatibility wrappers for macros in `pythonrun.h`.

- [bpo-38644](https://bugs.python.org/issue?@action=redirect&bpo=38644) [https://bugs.python.org/issue?@action=redirect&bpo=38644]: Provide `Py_EnterRecursiveCall()` and `Py_LeaveRecursiveCall()` as regular functions for the limited API. Previously, there were defined as macros, but these macros didn't work with the limited API which cannot access `PyThreadState.recursion_depth` field. Remove `_Py_CheckRecursionLimit` from the stable ABI.
- [bpo-38650](https://bugs.python.org/issue?@action=redirect&bpo=38650) [https://bugs.python.org/issue?@action=redirect&bpo=38650]: The global variable `PyStructSequence_UnnamedField` is now a constant and refers to a constant string.
- [bpo-38540](https://bugs.python.org/issue?@action=redirect&bpo=38540) [https://bugs.python.org/issue?@action=redirect&bpo=38540]: Fixed possible leak in `PyArg_Parse()` and similar functions for format units `"es#"` and `"et#"` when the macro `PY_SSIZE_T_CLEAN` is not defined.
- [bpo-38395](https://bugs.python.org/issue?@action=redirect&bpo=38395) [https://bugs.python.org/issue?@action=redirect&bpo=38395]: Fix a crash in `weakref.proxy` objects due to incorrect lifetime management when calling some associated methods that may delete the last reference to object being referenced by the proxy. Patch by Pablo Galindo.
- [bpo-36389](https://bugs.python.org/issue?@action=redirect&bpo=36389) [https://bugs.python.org/issue?@action=redirect&bpo=36389]: The `_PyObject_CheckConsistency()` function is now also available in release mode. For example, it can be used to debug a crash in the `visit_decref()` function of the GC.
- [bpo-38266](https://bugs.python.org/issue?@action=redirect&bpo=38266) [https://bugs.python.org/issue?@action=redirect&bpo=38266]: Revert the removal of `PyThreadState_DeleteCurrent()` with documentation.
- [bpo-38303](https://bugs.python.org/issue?@action=redirect&bpo=38303) [https://bugs.python.org/issue?@action=redirect&bpo=38303]: Update audioop extension module to use the stable ABI (PEP-384). Patch by Tyler Kieft.
- [bpo-38234](https://bugs.python.org/issue?@action=redirect&bpo=38234) [https://bugs.python.org/issue?@action=redirect&bpo=38234]: `Py_SetPath()` now sets `sys.executable` to the program full path (`Py_GetProgramFullPath()`) rather than to the program name (`Py_GetProgramName()`).
- [bpo-38234](https://bugs.python.org/issue?@action=redirect&bpo=38234) [https://bugs.python.org/issue?@action=redirect&bpo=38234]

@action=redirect&bpo=38234]: Python ignored arguments passed to **Py\_SetPath()**, **Py\_SetPythonHome()** and **Py\_SetProgramName()**: fix Python initialization to use specified arguments.

- [bpo-38205](https://bugs.python.org/issue?@action=redirect&bpo=38205) [https://bugs.python.org/issue?@action=redirect&bpo=38205]: The **Py\_UNREACHABLE()** macro now calls **Py\_FatalError()**.
- [bpo-38140](https://bugs.python.org/issue?@action=redirect&bpo=38140) [https://bugs.python.org/issue?@action=redirect&bpo=38140]: Make dict and weakref offsets opaque for C heap types by passing the offsets through PyMemberDef
- [bpo-15088](https://bugs.python.org/issue?@action=redirect&bpo=15088) [https://bugs.python.org/issue?@action=redirect&bpo=15088]: The C function PyGen\_NeedsFinalizing has been removed. It was not documented, tested or used anywhere within CPython after the implementation of [PEP 442](https://peps.python.org/pep-0442/) [https://peps.python.org/pep-0442/]. Patch by Joannah Nanjekye. (Patch by Joannah Nanjekye)
- [bpo-36763](https://bugs.python.org/issue?@action=redirect&bpo=36763) [https://bugs.python.org/issue?@action=redirect&bpo=36763]: Options added by PySys\_AddXOption() are now handled the same way than PyConfig.xoptions and command line -X options.
- [bpo-37926](https://bugs.python.org/issue?@action=redirect&bpo=37926) [https://bugs.python.org/issue?@action=redirect&bpo=37926]: Fix a crash in PySys\_SetArgvEx(0, NULL, 0).
- [bpo-37879](https://bugs.python.org/issue?@action=redirect&bpo=37879) [https://bugs.python.org/issue?@action=redirect&bpo=37879]: Fix subtype\_dealloc to suppress the type decref when the base type is a C heap type
- [bpo-37645](https://bugs.python.org/issue?@action=redirect&bpo=37645) [https://bugs.python.org/issue?@action=redirect&bpo=37645]: Add **\_PyObject\_FunctionStr()** to get a user-friendly string representation of a function-like object. Patch by Jeroen Demeyer.
- [bpo-29548](https://bugs.python.org/issue?@action=redirect&bpo=29548) [https://bugs.python.org/issue?@action=redirect&bpo=29548]: The functions PyEval\_CallObject, PyEval\_CallFunction, PyEval\_CallMethod and PyEval\_CallObjectWithKeywords are deprecated. Use **PyObject\_Call()** and its variants instead.
- [bpo-37151](https://bugs.python.org/issue?@action=redirect&bpo=37151) [https://bugs.python.org/issue?@action=redirect&bpo=37151]

@action=redirect&bpo=37151]: `PyCFunction_Call` is now a deprecated alias of `PyObject_Call()`.

- [bpo-37540](https://bugs.python.org/issue?@action=redirect&bpo=37540) [https://bugs.python.org/issue?@action=redirect&bpo=37540]: The vectorcall protocol now requires that the caller passes only strings as keyword names.
- [bpo-37207](https://bugs.python.org/issue?@action=redirect&bpo=37207) [https://bugs.python.org/issue?@action=redirect&bpo=37207]: The vectorcall protocol is now enabled for type objects: set `tp_vectorcall` to a vectorcall function to be used instead of `tp_new` and `tp_init` when calling the class itself.
- [bpo-21120](https://bugs.python.org/issue?@action=redirect&bpo=21120) [https://bugs.python.org/issue?@action=redirect&bpo=21120]: Exclude Python-ast.h, ast.h and asdl.h from the limited API.
- [bpo-37483](https://bugs.python.org/issue?@action=redirect&bpo=37483) [https://bugs.python.org/issue?@action=redirect&bpo=37483]: Add new function `_PyObject_CallOneArg` for calling an object with one positional argument.
- [bpo-36763](https://bugs.python.org/issue?@action=redirect&bpo=36763) [https://bugs.python.org/issue?@action=redirect&bpo=36763]: Add `PyConfig_SetWideStringList()` function.
- [bpo-37337](https://bugs.python.org/issue?@action=redirect&bpo=37337) [https://bugs.python.org/issue?@action=redirect&bpo=37337]: Add fast functions for calling methods: `_PyObject_VectorcallMethod()`, `_PyObject_CallMethodNoArgs()` and `_PyObject_CallMethodOneArg()`.
- [bpo-28805](https://bugs.python.org/issue?@action=redirect&bpo=28805) [https://bugs.python.org/issue?@action=redirect&bpo=28805]: The `METH_FASTCALL` calling convention has been documented.
- [bpo-37221](https://bugs.python.org/issue?@action=redirect&bpo=37221) [https://bugs.python.org/issue?@action=redirect&bpo=37221]: The new function `PyCode_NewWithPosOnlyArgs()` allows to create code objects like `PyCode_New()`, but with an extra *posonlyargcount* parameter for indicating the number of positional-only arguments.
- [bpo-37215](https://bugs.python.org/issue?@action=redirect&bpo=37215) [https://bugs.python.org/issue?@action=redirect&bpo=37215]: Fix dtrace issue introduced by [bpo-36842](https://bugs.python.org/issue?@action=redirect&bpo=36842) [https://bugs.python.org/issue?@action=redirect&bpo=36842]
- [bpo-37194](https://bugs.python.org/issue?@action=redirect&bpo=37194) [https://bugs.python.org/issue?@action=redirect&bpo=37194]: Add a new public

`PyObject_CallNoArgs()` function to the C API: call a callable Python object without any arguments. It is the most efficient way to call a callback without any argument. On x86-64, for example,

`PyObject_CallFunctionObjArgs(func, NULL)`

allocates 960 bytes on the stack per call, whereas

`PyObject_CallNoArgs(func)` only allocates 624 bytes per call.

- [bpo-37170](https://bugs.python.org/issue?@action=redirect&bpo=37170) [https://bugs.python.org/issue?@action=redirect&bpo=37170]: Fix the cast on error in `PyLong_AsUnsignedLongLongMask()`.
- [bpo-35381](https://bugs.python.org/issue?@action=redirect&bpo=35381) [https://bugs.python.org/issue?@action=redirect&bpo=35381]: Convert `posixmodule.c` statically allocated types `DirEntryType` and `ScandirIteratorType` to heap-allocated types.
- [bpo-34331](https://bugs.python.org/issue?@action=redirect&bpo=34331) [https://bugs.python.org/issue?@action=redirect&bpo=34331]: Use singular/plural noun in error message when instantiating an abstract class with non-overridden abstract method(s).

## Python 3.8.0 beta 1

*Release date: 2019-06-04*

### Security

- [bpo-35907](https://bugs.python.org/issue?@action=redirect&bpo=35907) [https://bugs.python.org/issue?@action=redirect&bpo=35907]: CVE-2019-9948: Avoid file reading by disallowing `local-file://` and `local_file://` URL schemes in `URLopener().open()` and `URLopener().retrieve()` of `urllib.request`.
- [bpo-33529](https://bugs.python.org/issue?@action=redirect&bpo=33529) [https://bugs.python.org/issue?@action=redirect&bpo=33529]: Prevent fold function used in email header encoding from entering infinite loop when there are too many non-ASCII characters in a header.
- [bpo-33164](https://bugs.python.org/issue?@action=redirect&bpo=33164) [https://bugs.python.org/issue?@action=redirect&bpo=33164]: Updated blake2 implementation which uses secure memset implementation provided by platform.

## Core and Builtins

- [bpo-35814](https://bugs.python.org/issue?@action=redirect&bpo=35814) [https://bugs.python.org/issue?@action=redirect&bpo=35814]: Allow unpacking in the right hand side of annotated assignments. In particular, `t: Tuple[int, ...] = x, y, *z` is now allowed.
- [bpo-37126](https://bugs.python.org/issue?@action=redirect&bpo=37126) [https://bugs.python.org/issue?@action=redirect&bpo=37126]: All structseq objects are now tracked by the garbage collector. Patch by Pablo Galindo.
- [bpo-37122](https://bugs.python.org/issue?@action=redirect&bpo=37122) [https://bugs.python.org/issue?@action=redirect&bpo=37122]: Make the `co_argcount` attribute of code objects represent the total number of positional arguments (including positional-only arguments). The value of `co_posonlyargcount` can be used to distinguish which arguments are positional only, and the difference (`co_argcount` - `co_posonlyargcount`) is the number of positional-or-keyword arguments. Patch by Pablo Galindo.
- [bpo-20092](https://bugs.python.org/issue?@action=redirect&bpo=20092) [https://bugs.python.org/issue?@action=redirect&bpo=20092]: Constructors of `int`, `float` and `complex` will now use the `__index__()` special method, if available and the corresponding method `__int__()`, `__float__()` or `__complex__()` is not available.
- [bpo-37087](https://bugs.python.org/issue?@action=redirect&bpo=37087) [https://bugs.python.org/issue?@action=redirect&bpo=37087]: Add native thread ID (TID) support to OpenBSD.
- [bpo-26219](https://bugs.python.org/issue?@action=redirect&bpo=26219) [https://bugs.python.org/issue?@action=redirect&bpo=26219]: Implemented per opcode cache mechanism and `LOAD_GLOBAL` instruction use it. `LOAD_GLOBAL` is now about 40% faster. Contributed by Yury Selivanov, and Inada Naoki.
- [bpo-37072](https://bugs.python.org/issue?@action=redirect&bpo=37072) [https://bugs.python.org/issue?@action=redirect&bpo=37072]: Fix crash in `PyAST_FromNodeObject()` when flags is NULL.
- [bpo-37029](https://bugs.python.org/issue?@action=redirect&bpo=37029) [https://bugs.python.org/issue?@action=redirect&bpo=37029]: Freeing a great many small objects could take time quadratic in the number of arenas, due to using linear search to keep `obmalloc.c`'s list of usable arenas sorted by order of number of free memory pools. This is accomplished without search now, leaving the worst-case time linear in the number of arenas. For programs

where this quite visibly matters (typically with more than 100 thousand small objects alive simultaneously), this can greatly reduce the time needed to release their memory.

- [bpo-26423](https://bugs.python.org/issue?@action=redirect&bpo=26423) [https://bugs.python.org/issue?@action=redirect&bpo=26423]: Fix possible overflow in `wrap_lenfunc()` when `sizeof(long) < sizeof(Py_ssize_t)` (e.g., 64-bit Windows).
- [bpo-37050](https://bugs.python.org/issue?@action=redirect&bpo=37050) [https://bugs.python.org/issue?@action=redirect&bpo=37050]: Improve the AST for “debug” f-strings, which use ‘=’ to print out the source of the expression being evaluated. Delete `expr_text` from the `FormattedValue` node, and instead use a `Constant` string node (possibly merged with adjacent constant expressions inside the f-string).
- [bpo-22385](https://bugs.python.org/issue?@action=redirect&bpo=22385) [https://bugs.python.org/issue?@action=redirect&bpo=22385]: The `bytes.hex`, `bytearray.hex`, and `memoryview.hex` methods as well as the `binascii.hexlify` and `b2a_hex` functions now have the ability to include an optional separator between hex bytes. This functionality was inspired by MicroPython’s `hexlify` implementation.
- [bpo-26836](https://bugs.python.org/issue?@action=redirect&bpo=26836) [https://bugs.python.org/issue?@action=redirect&bpo=26836]: Add `os.memfd_create()`.
- [bpo-37032](https://bugs.python.org/issue?@action=redirect&bpo=37032) [https://bugs.python.org/issue?@action=redirect&bpo=37032]: Added new `replace()` method to the code type (`types.CodeType`).
- [bpo-37007](https://bugs.python.org/issue?@action=redirect&bpo=37007) [https://bugs.python.org/issue?@action=redirect&bpo=37007]: Implement `socket.if_nameindex()`, `socket.if_nameindex()`, and `socket.if_indextoname()` on Windows.
- [bpo-36829](https://bugs.python.org/issue?@action=redirect&bpo=36829) [https://bugs.python.org/issue?@action=redirect&bpo=36829]: `PyErr_WriteUnraisable()` now creates a traceback object if there is no current traceback. Moreover, call `PyErr_NormalizeException()` and `PyException_SetTraceback()` to normalize the exception value. Ignore any error.
- [bpo-36878](https://bugs.python.org/issue?@action=redirect&bpo=36878) [https://bugs.python.org/issue?@action=redirect&bpo=36878]: Only accept text after `# type: ignore` if the first character is ASCII. This is to disallow things like `# type: ignoreé`.

- [bpo-36878](https://bugs.python.org/issue?@action=redirect&bpo=36878) [https://bugs.python.org/issue?@action=redirect&bpo=36878]: Store text appearing after a **# type: ignore** comment in the AST. For example a type ignore like **# type: ignore[E1000]** will have the string "[E1000]" stored in its AST node.
- [bpo-2180](https://bugs.python.org/issue?@action=redirect&bpo=2180) [https://bugs.python.org/issue?@action=redirect&bpo=2180]: Treat line continuation at EOF as a `SyntaxError` by Anthony Sottile.
- [bpo-36907](https://bugs.python.org/issue?@action=redirect&bpo=36907) [https://bugs.python.org/issue?@action=redirect&bpo=36907]: Fix a crash when calling a C function with a keyword dict (`f(**kwargs)`) and changing the dict `kwargs` while that function is running.
- [bpo-36946](https://bugs.python.org/issue?@action=redirect&bpo=36946) [https://bugs.python.org/issue?@action=redirect&bpo=36946]: Fix possible signed integer overflow when handling slices.
- [bpo-36826](https://bugs.python.org/issue?@action=redirect&bpo=36826) [https://bugs.python.org/issue?@action=redirect&bpo=36826]: Add `NamedExpression` kind support to `ast_unparse.c`
- [bpo-1875](https://bugs.python.org/issue?@action=redirect&bpo=1875) [https://bugs.python.org/issue?@action=redirect&bpo=1875]: A `SyntaxError` is now raised if a code blocks that will be optimized away (e.g. if conditions that are always false) contains syntax errors. Patch by Pablo Galindo.
- [bpo-36027](https://bugs.python.org/issue?@action=redirect&bpo=36027) [https://bugs.python.org/issue?@action=redirect&bpo=36027]: Allow computation of modular inverses via three-argument `pow`: the second argument is now permitted to be negative in the case where the first and third arguments are relatively prime.
- [bpo-36861](https://bugs.python.org/issue?@action=redirect&bpo=36861) [https://bugs.python.org/issue?@action=redirect&bpo=36861]: Update the Unicode database to version 12.1.0.
- [bpo-28866](https://bugs.python.org/issue?@action=redirect&bpo=28866) [https://bugs.python.org/issue?@action=redirect&bpo=28866]: Avoid caching attributes of classes which type defines `mro()` to avoid a hard cache invalidation problem.
- [bpo-36851](https://bugs.python.org/issue?@action=redirect&bpo=36851) [https://bugs.python.org/issue?@action=redirect&bpo=36851]: The `FrameType` stack is now correctly cleaned up if the execution ends with a return and the stack is not empty.
- [bpo-34616](https://bugs.python.org/issue?@action=redirect&bpo=34616) [https://bugs.python.org/issue?@action=redirect&bpo=34616]: The `compile()` builtin functions

now support the `ast.PyCF_ALLOW_TOP_LEVEL_AWAIT` flag, which allow to compile sources that contains top-level `await`, `async with` or `async for`. This is useful to evaluate `async`-code from with an already `async` functions; for example in a custom REPL.

- [bpo-36842](https://bugs.python.org/issue?@action=redirect&bpo=36842) [https://bugs.python.org/issue?@action=redirect&bpo=36842]: Implement PEP 578, adding `sys.audit`, `io.open_code` and related APIs.
- [bpo-27639](https://bugs.python.org/issue?@action=redirect&bpo=27639) [https://bugs.python.org/issue?@action=redirect&bpo=27639]: Correct return type for `UserList` slicing operations. Patch by Michael Blahay, Erick Cervantes, and vaultah
- [bpo-36737](https://bugs.python.org/issue?@action=redirect&bpo=36737) [https://bugs.python.org/issue?@action=redirect&bpo=36737]: Move `PyRuntimeState.warnings` into per-interpreter state (via “module state”).
- [bpo-36793](https://bugs.python.org/issue?@action=redirect&bpo=36793) [https://bugs.python.org/issue?@action=redirect&bpo=36793]: Removed `__str__` implementations from builtin types `bool`, `int`, `float`, `complex` and few classes from the standard library. They now inherit `__str__()` from `object`.
- [bpo-36817](https://bugs.python.org/issue?@action=redirect&bpo=36817) [https://bugs.python.org/issue?@action=redirect&bpo=36817]: Add `a =` feature f-strings for debugging. This can precede `!s`, `!r`, or `!a`. It produces the text of the expression, followed by an equal sign, followed by the repr of the value of the expression. So `f'{3*9+15=}'` would be equal to the string `'3*9+15=42'`. If `=` is specified, the default conversion is set to `!r`, unless a format spec is given, in which case the formatting behavior is unchanged, and `_format_` will be used.
- [bpo-24048](https://bugs.python.org/issue?@action=redirect&bpo=24048) [https://bugs.python.org/issue?@action=redirect&bpo=24048]: Save the live exception during `import.c's remove_module()`.
- [bpo-27987](https://bugs.python.org/issue?@action=redirect&bpo=27987) [https://bugs.python.org/issue?@action=redirect&bpo=27987]: `pymalloc` returns memory blocks aligned by 16 bytes, instead of 8 bytes, on 64-bit platforms to conform x86-64 ABI. Recent compilers assume this alignment more often. Patch by Inada Naoki.
- [bpo-36601](https://bugs.python.org/issue?@action=redirect&bpo=36601) [https://bugs.python.org/issue?@action=redirect&bpo=36601]: A long-since-meaningless check for `getpid() == main_pid` was removed from Python's

internal C signal handler.

- [bpo-36594](https://bugs.python.org/issue?@action=redirect&bpo=36594) [https://bugs.python.org/issue?@action=redirect&bpo=36594]: Fix incorrect use of `%p` in format strings. Patch by Zackery Spytz.
- [bpo-36045](https://bugs.python.org/issue?@action=redirect&bpo=36045) [https://bugs.python.org/issue?@action=redirect&bpo=36045]: `builtins.help()` now prefixes **async** for async functions
- [bpo-36084](https://bugs.python.org/issue?@action=redirect&bpo=36084) [https://bugs.python.org/issue?@action=redirect&bpo=36084]: Add native thread ID (TID) to `threading.Thread` objects (supported platforms: Windows, FreeBSD, Linux, macOS)
- [bpo-36035](https://bugs.python.org/issue?@action=redirect&bpo=36035) [https://bugs.python.org/issue?@action=redirect&bpo=36035]: Added fix for broken symlinks in combination with `pathlib`
- [bpo-35983](https://bugs.python.org/issue?@action=redirect&bpo=35983) [https://bugs.python.org/issue?@action=redirect&bpo=35983]: Added new trashcan macros to deal with a double deallocation that could occur when the `tp_dealloc` of a subclass calls the `tp_dealloc` of a base class and that base class uses the trashcan mechanism. Patch by Jeroen Demeyer.
- [bpo-20602](https://bugs.python.org/issue?@action=redirect&bpo=20602) [https://bugs.python.org/issue?@action=redirect&bpo=20602]: Do not clear `sys.flags` and `sys.float_info` during shutdown. Patch by Zackery Spytz.
- [bpo-26826](https://bugs.python.org/issue?@action=redirect&bpo=26826) [https://bugs.python.org/issue?@action=redirect&bpo=26826]: Expose `copy_file_range()` as a low level API in the `os` module.
- [bpo-32388](https://bugs.python.org/issue?@action=redirect&bpo=32388) [https://bugs.python.org/issue?@action=redirect&bpo=32388]: Remove cross-version binary compatibility requirement in `tp_flags`.
- [bpo-31862](https://bugs.python.org/issue?@action=redirect&bpo=31862) [https://bugs.python.org/issue?@action=redirect&bpo=31862]: Port `binascii` to PEP 489 multiphase initialization. Patch by Marcel Plch.

## Library

- [bpo-37128](https://bugs.python.org/issue?@action=redirect&bpo=37128) [https://bugs.python.org/issue?@action=redirect&bpo=37128]: Added `math.perm()`.
- [bpo-37120](https://bugs.python.org/issue?@action=redirect&bpo=37120) [https://bugs.python.org/issue?@action=redirect&bpo=37120]: Add `SSLContext.num_tickets` to

control the number of TLSv1.3 session tickets.

- [bpo-12202](https://bugs.python.org/issue?@action=redirect&bpo=12202) [https://bugs.python.org/issue?@action=redirect&bpo=12202]: Fix the error handling in `msilib.SummaryInformation.GetProperty()`. Patch by Zackery Spytz.
- [bpo-26835](https://bugs.python.org/issue?@action=redirect&bpo=26835) [https://bugs.python.org/issue?@action=redirect&bpo=26835]: The `fcntl` module now contains file sealing constants for sealing of `memfds`.
- [bpo-29262](https://bugs.python.org/issue?@action=redirect&bpo=29262) [https://bugs.python.org/issue?@action=redirect&bpo=29262]: Add `get_origin()` and `get_args()` introspection helpers to `typing` module.
- [bpo-12639](https://bugs.python.org/issue?@action=redirect&bpo=12639) [https://bugs.python.org/issue?@action=redirect&bpo=12639]: `msilib.Directory.start_component()` no longer fails if `keyfile` is not `None`.
- [bpo-36999](https://bugs.python.org/issue?@action=redirect&bpo=36999) [https://bugs.python.org/issue?@action=redirect&bpo=36999]: Add the `asyncio.Task.get_coro()` method to publicly expose the tasks's coroutine object.
- [bpo-35246](https://bugs.python.org/issue?@action=redirect&bpo=35246) [https://bugs.python.org/issue?@action=redirect&bpo=35246]: Make `asyncio.create_subprocess_exec()` accept path-like arguments.
- [bpo-35279](https://bugs.python.org/issue?@action=redirect&bpo=35279) [https://bugs.python.org/issue?@action=redirect&bpo=35279]: Change default `max_workers` of `ThreadPoolExecutor` from `cpu_count() * 5` to `min(32, cpu_count() + 4)`. Previous value was unreasonably large on many cores machines.
- [bpo-37076](https://bugs.python.org/issue?@action=redirect&bpo=37076) [https://bugs.python.org/issue?@action=redirect&bpo=37076]: `_thread.start_new_thread()` now logs uncaught exception raised by the function using `sys.unraisablehook()`, rather than

`sys.excepthook()`, so the hook gets access to the function which raised the exception.

- [bpo-33725](https://bugs.python.org/issue?@action=redirect&bpo=33725) [https://bugs.python.org/issue?@action=redirect&bpo=33725]: On macOS, the `multiprocessing` module now uses *spawn* start method by default.
- [bpo-37054](https://bugs.python.org/issue?@action=redirect&bpo=37054) [https://bugs.python.org/issue?@action=redirect&bpo=37054]: Fix destructor `_pyio.BytesIO` and `_pyio.TextIOWrapper`: initialize their `_buffer` attribute as soon as possible (in the class body), because it's used by `__del__()` which calls `close()`.
- [bpo-37058](https://bugs.python.org/issue?@action=redirect&bpo=37058) [https://bugs.python.org/issue?@action=redirect&bpo=37058]: PEP 544: Add `Protocol` and `@runtime_checkable` to the `typing` module.
- [bpo-36933](https://bugs.python.org/issue?@action=redirect&bpo=36933) [https://bugs.python.org/issue?@action=redirect&bpo=36933]: The functions `sys.set_coroutine_wrapper` and `sys.get_coroutine_wrapper` that were deprecated and marked for removal in 3.8 have been removed.
- [bpo-37047](https://bugs.python.org/issue?@action=redirect&bpo=37047) [https://bugs.python.org/issue?@action=redirect&bpo=37047]: Handle late binding and attribute access in `unittest.mock.AsyncMock` setup for autospeccing. Document newly implemented async methods in `unittest.mock.MagicMock`.
- [bpo-37049](https://bugs.python.org/issue?@action=redirect&bpo=37049) [https://bugs.python.org/issue?@action=redirect&bpo=37049]: PEP 589: Add `TypedDict` to the `typing` module.
- [bpo-37046](https://bugs.python.org/issue?@action=redirect&bpo=37046) [https://bugs.python.org/issue?@action=redirect&bpo=37046]: PEP 586: Add `Literal` to the `typing` module.
- [bpo-37045](https://bugs.python.org/issue?@action=redirect&bpo=37045) [https://bugs.python.org/issue?@action=redirect&bpo=37045]: PEP 591: Add `Final` qualifier and `@final` decorator to the `typing` module.

- [bpo-37035](https://bugs.python.org/issue?@action=redirect&bpo=37035) [https://bugs.python.org/issue?@action=redirect&bpo=37035]: Don't log OSError based exceptions if a fatal error has occurred in asyncio transport. Peer can generate almost any OSError, user cannot avoid these exceptions by fixing own code. Errors are still propagated to user code, it's just logging them is pointless and pollute asyncio logs.
- [bpo-37001](https://bugs.python.org/issue?@action=redirect&bpo=37001) [https://bugs.python.org/issue?@action=redirect&bpo=37001]: `symtable.symtable()` now accepts the same input types for source code as the built-in `compile()` function. Patch by Dino Viehland.
- [bpo-37028](https://bugs.python.org/issue?@action=redirect&bpo=37028) [https://bugs.python.org/issue?@action=redirect&bpo=37028]: Implement asyncio REPL
- [bpo-37027](https://bugs.python.org/issue?@action=redirect&bpo=37027) [https://bugs.python.org/issue?@action=redirect&bpo=37027]: Return safe to use proxy socket object from `transport.get_extra_info('socket')`
- [bpo-32528](https://bugs.python.org/issue?@action=redirect&bpo=32528) [https://bugs.python.org/issue?@action=redirect&bpo=32528]: Make `asyncio.CancelledError` a `BaseException`.

This will address the common mistake many asyncio users make: an “except Exception” clause breaking Tasks cancellation.

In addition to this change, we stop inheriting `asyncio.TimeoutError` and `asyncio.InvalidStateError` from their `concurrent.futures.*` counterparts. There's no point for these exceptions to share the inheritance chain.

- [bpo-1230540](https://bugs.python.org/issue?@action=redirect&bpo=1230540) [https://bugs.python.org/issue?@action=redirect&bpo=1230540]: Add a new `threading.excepthook()` function which handles uncaught `threading.Thread.run()` exception. It can be overridden to control how uncaught `threading.Thread.run()` exceptions are handled.
- [bpo-36996](https://bugs.python.org/issue?@action=redirect&bpo=36996) [https://bugs.python.org/issue?@action=redirect&bpo=36996]

@action=redirect&bpo=36996]: Handle `unittest.mock.patch()` used as a decorator on async functions.

- [bpo-37008](https://bugs.python.org/issue?@action=redirect&bpo=37008) [https://bugs.python.org/issue?@action=redirect&bpo=37008]: Add support for calling `next()` with the mock resulting from `unittest.mock.mock_open()`
- [bpo-27737](https://bugs.python.org/issue?@action=redirect&bpo=27737) [https://bugs.python.org/issue?@action=redirect&bpo=27737]: Allow whitespace only header encoding in `email.header` - by Batuhan Taskaya
- [bpo-36969](https://bugs.python.org/issue?@action=redirect&bpo=36969) [https://bugs.python.org/issue?@action=redirect&bpo=36969]: PDB command `args` now display positional only arguments. Patch contributed by Rémi Lapeyre.
- [bpo-36969](https://bugs.python.org/issue?@action=redirect&bpo=36969) [https://bugs.python.org/issue?@action=redirect&bpo=36969]: PDB command `args` now display keyword only arguments. Patch contributed by Rémi Lapeyre.
- [bpo-36983](https://bugs.python.org/issue?@action=redirect&bpo=36983) [https://bugs.python.org/issue?@action=redirect&bpo=36983]: Add missing names to `typing.__all__`: `ChainMap`, `ForwardRef`, `OrderedDict` - by Anthony Sottile.
- [bpo-36972](https://bugs.python.org/issue?@action=redirect&bpo=36972) [https://bugs.python.org/issue?@action=redirect&bpo=36972]: Add `SupportsIndex` protocol to the `typing` module to allow type checking to detect classes that can be passed to `hex()`, `oct()` and `bin()`.
- [bpo-32972](https://bugs.python.org/issue?@action=redirect&bpo=32972) [https://bugs.python.org/issue?@action=redirect&bpo=32972]: Implement `unittest.IsolatedAsyncioTestCase` to help testing asyncio-based code.
- [bpo-36952](https://bugs.python.org/issue?@action=redirect&bpo=36952) [https://bugs.python.org/issue?@action=redirect&bpo=36952]: `fileinput.input()` and `fileinput.FileInput` `bufsize` argument has been removed (was deprecated and ignored since Python 3.6), and

as a result the **mode** and **openhook** arguments have been made keyword-only.

- [bpo-36952](https://bugs.python.org/issue?@action=redirect&bpo=36952) [https://bugs.python.org/issue?@action=redirect&bpo=36952]: Starting with Python 3.3, importing ABCs from `collections` is deprecated, and import should be done from `collections.abc`. Still being able to import from `collections` was marked for removal in 3.8, but has been delayed to 3.9; documentation and `DeprecationWarning` clarified.
- [bpo-36949](https://bugs.python.org/issue?@action=redirect&bpo=36949) [https://bugs.python.org/issue?@action=redirect&bpo=36949]: Implement `__repr__` for `WeakSet` objects.
- [bpo-36948](https://bugs.python.org/issue?@action=redirect&bpo=36948) [https://bugs.python.org/issue?@action=redirect&bpo=36948]: Fix `NameError` in `urllib.request.URLopener.retrieve()`. Patch by Karthikeyan Singaravelan.
- [bpo-33524](https://bugs.python.org/issue?@action=redirect&bpo=33524) [https://bugs.python.org/issue?@action=redirect&bpo=33524]: Fix the folding of email header when the `max_line_length` is 0 or `None` and the header contains non-ascii characters. Contributed by Licht Takeuchi (@Licht-T).
- [bpo-24564](https://bugs.python.org/issue?@action=redirect&bpo=24564) [https://bugs.python.org/issue?@action=redirect&bpo=24564]: `shutil.copystat()` now ignores `errno.EINVAL` on `os.setxattr()` which may occur when copying files on filesystems without extended attributes support.

Original patch by Giampaolo Rodola, updated by Ying Wang.

- [bpo-36888](https://bugs.python.org/issue?@action=redirect&bpo=36888) [https://bugs.python.org/issue?@action=redirect&bpo=36888]: Python child processes can now access the status of their parent process using `multiprocessing.process.parent_process`
- [bpo-36921](https://bugs.python.org/issue?@action=redirect&bpo=36921) [https://bugs.python.org/issue?@action=redirect&bpo=36921]: Deprecate `@coroutine` for sake

of `async def`.

- [bpo-25652](https://bugs.python.org/issue?@action=redirect&bpo=25652) [https://bugs.python.org/issue?@action=redirect&bpo=25652]: Fix bug in `__rmod__` of `UserString` - by Batuhan Taskaya.
- [bpo-36916](https://bugs.python.org/issue?@action=redirect&bpo=36916) [https://bugs.python.org/issue?@action=redirect&bpo=36916]: Remove a message about an unhandled exception in a task when `writer.write()` is used without `await` and `writer.drain()` fails with an exception.
- [bpo-36889](https://bugs.python.org/issue?@action=redirect&bpo=36889) [https://bugs.python.org/issue?@action=redirect&bpo=36889]: Introduce `asyncio.Stream` class that merges `asyncio.StreamReader` and `asyncio.StreamWriter` functionality. `asyncio.Stream` can work in readonly, writeonly and readwrite modes. Provide `asyncio.connect()`, `asyncio.connect_unix()`, `asyncio.connect_read_pipe()` and `asyncio.connect_write_pipe()` factories to open `asyncio.Stream` connections. Provide `asyncio.StreamServer` and `UnixStreamServer` to serve servers with `asyncio.Stream` API. Modify `asyncio.create_subprocess_shell()` and `asyncio.create_subprocess_exec()` to use `asyncio.Stream` instead of deprecated `StreamReader` and `StreamWriter`. Deprecate `asyncio.StreamReader` and `asyncio.StreamWriter`. Deprecate usage of private classes, e.g. `asyncio.FlowControlMixing` and `asyncio.StreamReaderProtocol` outside of `asyncio` package.
- [bpo-36845](https://bugs.python.org/issue?@action=redirect&bpo=36845) [https://bugs.python.org/issue?@action=redirect&bpo=36845]: Added validation of integer prefixes to the construction of IP networks and interfaces in the `ipaddress` module.
- [bpo-23378](https://bugs.python.org/issue?@action=redirect&bpo=23378) [https://bugs.python.org/issue?@action=redirect&bpo=23378]: Add an `extend` action to `argparser`.

- [bpo-36867](https://bugs.python.org/issue?@action=redirect&bpo=36867) [https://bugs.python.org/issue?@action=redirect&bpo=36867]: Fix a bug making a SharedMemoryManager instance and its parent process use two separate resource\_tracker processes.
- [bpo-23896](https://bugs.python.org/issue?@action=redirect&bpo=23896) [https://bugs.python.org/issue?@action=redirect&bpo=23896]: Adds a grammar to lib2to3.pygram that contains exec as a function not as statement.
- [bpo-36895](https://bugs.python.org/issue?@action=redirect&bpo=36895) [https://bugs.python.org/issue?@action=redirect&bpo=36895]: The function `time.clock()` was deprecated in 3.3 in favor of `time.perf_counter()` and marked for removal in 3.8, it has removed.
- [bpo-35545](https://bugs.python.org/issue?@action=redirect&bpo=35545) [https://bugs.python.org/issue?@action=redirect&bpo=35545]: Fix asyncio discarding IPv6 scopes when ensuring hostname resolutions internally
- [bpo-36887](https://bugs.python.org/issue?@action=redirect&bpo=36887) [https://bugs.python.org/issue?@action=redirect&bpo=36887]: Add new function `math.isqrt()` to compute integer square roots.
- [bpo-34632](https://bugs.python.org/issue?@action=redirect&bpo=34632) [https://bugs.python.org/issue?@action=redirect&bpo=34632]: Introduce the `importlib.metadata` module with (provisional) support for reading metadata from third-party packages.
- [bpo-36878](https://bugs.python.org/issue?@action=redirect&bpo=36878) [https://bugs.python.org/issue?@action=redirect&bpo=36878]: When using `type_comments=True` in `ast.parse`, treat `# type: ignore` followed by a non-alphanumeric character and then arbitrary text as a type ignore, instead of requiring nothing but whitespace or another comment. This is to permit formations such as `# type: ignore[E100]`.
- [bpo-36778](https://bugs.python.org/issue?@action=redirect&bpo=36778) [https://bugs.python.org/issue?@action=redirect&bpo=36778]: `cp65001` encoding (Windows code page 65001) becomes an alias to `utf_8` encoding.
- [bpo-36867](https://bugs.python.org/issue?) [https://bugs.python.org/issue?]

@action=redirect&bpo=36867]: The multiprocessing.resource\_tracker replaces the multiprocessing.semaphore\_tracker module. Other than semaphores, resource\_tracker also tracks shared\_memory segments.

- [bpo-30262](https://bugs.python.org/issue?@action=redirect&bpo=30262) [https://bugs.python.org/issue?@action=redirect&bpo=30262]: The Cache and Statement objects of the `sqlite3` module are not exposed to the user. Patch by Aviv Palivoda.
- [bpo-24538](https://bugs.python.org/issue?@action=redirect&bpo=24538) [https://bugs.python.org/issue?@action=redirect&bpo=24538]: In `shutil.copystat()`, first copy extended file attributes and then file permissions, since extended attributes can only be set on the destination while it is still writeable.
- [bpo-36829](https://bugs.python.org/issue?@action=redirect&bpo=36829) [https://bugs.python.org/issue?@action=redirect&bpo=36829]: Add new `sys.unraisablehook()` function which can be overridden to control how “unraisable exceptions” are handled. It is called when an exception has occurred but there is no way for Python to handle it. For example, when a destructor raises an exception or during garbage collection (`gc.collect()`).
- [bpo-36832](https://bugs.python.org/issue?@action=redirect&bpo=36832) [https://bugs.python.org/issue?@action=redirect&bpo=36832]: Introducing `zipfile.Path`, a pathlib-compatible wrapper for traversing zip files.
- [bpo-36814](https://bugs.python.org/issue?@action=redirect&bpo=36814) [https://bugs.python.org/issue?@action=redirect&bpo=36814]: Fix an issue where `os.posix_spawnnp()` would incorrectly raise a `TypeError` when `file_actions` is `None`.
- [bpo-33110](https://bugs.python.org/issue?@action=redirect&bpo=33110) [https://bugs.python.org/issue?@action=redirect&bpo=33110]: Handle exceptions raised by functions added by `concurrent.futures.add_done_callback` correctly when the Future has already completed.
- [bpo-26903](https://bugs.python.org/issue?@action=redirect&bpo=26903) [https://bugs.python.org/issue?@action=redirect&bpo=26903]: Limit `max_workers` in

**ProcessPoolExecutor** to 61 to work around a `WaitForMultipleObjects` limitation.

- [bpo-36813](https://bugs.python.org/issue?@action=redirect&bpo=36813) [https://bugs.python.org/issue?@action=redirect&bpo=36813]: Fix **QueueListener** to call `queue.task_done()` upon stopping. Patch by Bar Harel.
- [bpo-36806](https://bugs.python.org/issue?@action=redirect&bpo=36806) [https://bugs.python.org/issue?@action=redirect&bpo=36806]: Forbid creation of asyncio stream objects like `StreamReader`, `StreamWriter`, `Process`, and their protocols outside of asyncio package.
- [bpo-36802](https://bugs.python.org/issue?@action=redirect&bpo=36802) [https://bugs.python.org/issue?@action=redirect&bpo=36802]: Provide both sync and async calls for `StreamWriter.write()` and `StreamWriter.close()`
- [bpo-36801](https://bugs.python.org/issue?@action=redirect&bpo=36801) [https://bugs.python.org/issue?@action=redirect&bpo=36801]: Properly handle SSL connection closing in asyncio `StreamWriter.drain()` call.
- [bpo-36785](https://bugs.python.org/issue?@action=redirect&bpo=36785) [https://bugs.python.org/issue?@action=redirect&bpo=36785]: Implement PEP 574 (pickle protocol 5 with out-of-band buffers).
- [bpo-36772](https://bugs.python.org/issue?@action=redirect&bpo=36772) [https://bugs.python.org/issue?@action=redirect&bpo=36772]: `functools.lru_cache()` can now be used as a straight decorator in addition to its existing usage as a function that returns a decorator.
- [bpo-6584](https://bugs.python.org/issue?@action=redirect&bpo=6584) [https://bugs.python.org/issue?@action=redirect&bpo=6584]: Add a **BadGzipFile** exception to the **gzip** module.
- [bpo-36748](https://bugs.python.org/issue?@action=redirect&bpo=36748) [https://bugs.python.org/issue?@action=redirect&bpo=36748]: Optimized write buffering in C implementation of `TextIOWrapper`. Writing ASCII string to `TextIOWrapper` with `ascii`, `latin1`, or `utf-8` encoding is about 20% faster. Patch by Inada Naoki.
- [bpo-8138](https://bugs.python.org/issue?@action=redirect&bpo=8138) [https://bugs.python.org/issue?@action=redirect&bpo=8138]: Don't mark `wsgiref.simple_server.SimpleServer` as multi-threaded since

`wsgiref.simple_server.WSGIServer` is single-threaded.

- [bpo-22640](https://bugs.python.org/issue?@action=redirect&bpo=22640) [https://bugs.python.org/issue?@action=redirect&bpo=22640]: `py_compile.compile()` now supports silent mode. Patch by Joannah Nanjeye
- [bpo-29183](https://bugs.python.org/issue?@action=redirect&bpo=29183) [https://bugs.python.org/issue?@action=redirect&bpo=29183]: Fix double exceptions in `wsgiref.handlers.BaseHandler` by calling its `close()` method only when no exception is raised.
- [bpo-36548](https://bugs.python.org/issue?@action=redirect&bpo=36548) [https://bugs.python.org/issue?@action=redirect&bpo=36548]: Improved the repr of regular expression flags.
- [bpo-36542](https://bugs.python.org/issue?@action=redirect&bpo=36542) [https://bugs.python.org/issue?@action=redirect&bpo=36542]: The signature of Python functions can now be overridden by specifying the `__text_signature__` attribute.
- [bpo-36533](https://bugs.python.org/issue?@action=redirect&bpo=36533) [https://bugs.python.org/issue?@action=redirect&bpo=36533]: Reinitialize logging.Handler locks in forked child processes instead of attempting to acquire them all in the parent before forking only to be released in the child process. The acquire/release pattern was leading to deadlocks in code that has implemented any form of chained logging handlers that depend upon one another as the lock acquisition order cannot be guaranteed.
- [bpo-35252](https://bugs.python.org/issue?@action=redirect&bpo=35252) [https://bugs.python.org/issue?@action=redirect&bpo=35252]: Throw a `TypeError` instead of an `AssertionError` when using an invalid type annotation with `singledispatch`.
- [bpo-35900](https://bugs.python.org/issue?@action=redirect&bpo=35900) [https://bugs.python.org/issue?@action=redirect&bpo=35900]: Allow reduction methods to return a 6-item tuple where the 6th item specifies a custom state-setting method that's called instead of the regular `__setstate__` method.
- [bpo-35900](https://bugs.python.org/issue?@action=redirect&bpo=35900) [https://bugs.python.org/issue?@action=redirect&bpo=35900]

@action=redirect&bpo=35900]: enable custom reduction callback registration for functions and classes in `_pickle.c`, using the new Pickler's attribute `reducer_override`

- [bpo-36368](https://bugs.python.org/issue?@action=redirect&bpo=36368) [https://bugs.python.org/issue?@action=redirect&bpo=36368]: Fix a bug crashing `SharedMemoryManager` instances in interactive sessions after a ctrl-c (`KeyboardInterrupt`) was sent
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Fix mmap fail for VxWorks
- [bpo-27497](https://bugs.python.org/issue?@action=redirect&bpo=27497) [https://bugs.python.org/issue?@action=redirect&bpo=27497]:  
`csv.DictWriter.writeheader()` now returns the return value of the underlying `csv.Writer.writerow()` method. Patch contributed by Ashish Nitin Patil.
- [bpo-36239](https://bugs.python.org/issue?@action=redirect&bpo=36239) [https://bugs.python.org/issue?@action=redirect&bpo=36239]: Parsing `.mo` files now ignores comments starting and ending with `#-#-#-#-#`.
- [bpo-26707](https://bugs.python.org/issue?@action=redirect&bpo=26707) [https://bugs.python.org/issue?@action=redirect&bpo=26707]: Enable `plistlib` to read and write binary plist files that were created as a `KeyedArchive` file. Specifically, this allows the `plistlib` to process `0x80` tokens as `UID` objects.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Add `posix` module support for VxWorks.
- [bpo-35125](https://bugs.python.org/issue?@action=redirect&bpo=35125) [https://bugs.python.org/issue?@action=redirect&bpo=35125]: `Asyncio`: Remove inner callback on outer cancellation in `shield`
- [bpo-35721](https://bugs.python.org/issue?@action=redirect&bpo=35721) [https://bugs.python.org/issue?@action=redirect&bpo=35721]: Fix `asyncio.SelectorEventLoop.subprocess_exec()` leaks file descriptors if `Popen` fails and called with `stdin=subprocess.PIPE`. Patch by Niklas Fiekas.

- [bpo-31855](https://bugs.python.org/issue?@action=redirect&bpo=31855) [https://bugs.python.org/issue?@action=redirect&bpo=31855]: `unittest.mock.mock_open()` results now respects the argument of `read([size])`. Patch contributed by Rémi Lapeyre.
- [bpo-35431](https://bugs.python.org/issue?@action=redirect&bpo=35431) [https://bugs.python.org/issue?@action=redirect&bpo=35431]: Implement `math.comb()` that returns binomial coefficient, that computes the number of ways to choose k items from n items without repetition and without order. Patch by Yash Aggarwal and Keller Fuchs.
- [bpo-26660](https://bugs.python.org/issue?@action=redirect&bpo=26660) [https://bugs.python.org/issue?@action=redirect&bpo=26660]: Fixed permission errors in `TemporaryDirectory` clean up. Previously `TemporaryDirectory.cleanup()` failed when non-writable or non-searchable files or directories were created inside a temporary directory.
- [bpo-34271](https://bugs.python.org/issue?@action=redirect&bpo=34271) [https://bugs.python.org/issue?@action=redirect&bpo=34271]: Add debugging helpers to `ssl` module. It's now possible to dump key material and to trace TLS protocol. The default and `stdlib` contexts also support `SSLKEYLOGFILE` env var.
- [bpo-26467](https://bugs.python.org/issue?@action=redirect&bpo=26467) [https://bugs.python.org/issue?@action=redirect&bpo=26467]: Added `AsyncMock` to support using `unittest` to mock `asyncio` coroutines. Patch by Lisa Roach.
- [bpo-33569](https://bugs.python.org/issue?@action=redirect&bpo=33569) [https://bugs.python.org/issue?@action=redirect&bpo=33569]: `dataclasses.InitVar`: Exposes the type used to create the init var.
- [bpo-34424](https://bugs.python.org/issue?@action=redirect&bpo=34424) [https://bugs.python.org/issue?@action=redirect&bpo=34424]: Fix serialization of messages containing encoded strings when the `policy.linsep` is set to a multi-character string. Patch by Jens Troeger.
- [bpo-34303](https://bugs.python.org/issue?@action=redirect&bpo=34303) [https://bugs.python.org/issue?@action=redirect&bpo=34303]: Performance of `functools.reduce()` is slightly improved. Patch by Sergey

Fedoseev.

- [bpo-33361](https://bugs.python.org/issue?@action=redirect&bpo=33361) [https://bugs.python.org/issue?@action=redirect&bpo=33361]: Fix a bug in `codecs.StreamRecoder` where seeking might leave old data in a buffer and break subsequent read calls. Patch by Ammar Askar.
- [bpo-22454](https://bugs.python.org/issue?@action=redirect&bpo=22454) [https://bugs.python.org/issue?@action=redirect&bpo=22454]: The `shlex` module now exposes `shlex.join()`, the inverse of `shlex.split()`. Patch by Bo Bayles.
- [bpo-31922](https://bugs.python.org/issue?@action=redirect&bpo=31922) [https://bugs.python.org/issue?@action=redirect&bpo=31922]: `asyncio.AbstractEventLoop.create_datagram_endpoint()` Do not connect UDP socket when broadcast is allowed. This allows to receive replies after a UDP broadcast.
- [bpo-24882](https://bugs.python.org/issue?@action=redirect&bpo=24882) [https://bugs.python.org/issue?@action=redirect&bpo=24882]: Change `ThreadPoolExecutor` to use existing idle threads before spinning up new ones.
- [bpo-31961](https://bugs.python.org/issue?@action=redirect&bpo=31961) [https://bugs.python.org/issue?@action=redirect&bpo=31961]: Added support for bytes and path-like objects in `subprocess.Popen()` on Windows. The `args` parameter now accepts a `path-like object` if `shell` is `False` and a sequence containing bytes and path-like objects. The `executable` parameter now accepts a bytes and `path-like object`. The `cwd` parameter now accepts a bytes object. Based on patch by Anders Lorentsen.
- [bpo-33123](https://bugs.python.org/issue?@action=redirect&bpo=33123) [https://bugs.python.org/issue?@action=redirect&bpo=33123]: `pathlib.Path.unlink` now accepts a `missing_ok` parameter to avoid a `FileNotFoundError` from being raised. Patch by Robert Buchholz.
- [bpo-32941](https://bugs.python.org/issue?@action=redirect&bpo=32941) [https://bugs.python.org/issue?@action=redirect&bpo=32941]: Allow `mmap.mmap` objects to access the `madvise()` system call (through

`mmap.mmap.madvise()`).

- [bpo-22102](https://bugs.python.org/issue?@action=redirect&bpo=22102) [https://bugs.python.org/issue?@action=redirect&bpo=22102]: Added support for ZIP files with disks set to 0. Such files are commonly created by builtin tools on Windows when use ZIP64 extension. Patch by Francisco Facioni.
- [bpo-32515](https://bugs.python.org/issue?@action=redirect&bpo=32515) [https://bugs.python.org/issue?@action=redirect&bpo=32515]: `trace.py` can now run modules via `python3 -m trace -t -module module_name`
- [bpo-32299](https://bugs.python.org/issue?@action=redirect&bpo=32299) [https://bugs.python.org/issue?@action=redirect&bpo=32299]: Changed `unittest.mock.patch.dict()` to return the patched dictionary when used as context manager. Patch by Vadim Tsander.
- [bpo-27141](https://bugs.python.org/issue?@action=redirect&bpo=27141) [https://bugs.python.org/issue?@action=redirect&bpo=27141]: Added a `__copy__()` to `collections.UserList` and `collections.UserDict` in order to correctly implement shallow copying of the objects. Patch by Bar Harel.
- [bpo-31829](https://bugs.python.org/issue?@action=redirect&bpo=31829) [https://bugs.python.org/issue?@action=redirect&bpo=31829]: `\r`, `\0` and `\x1a` (end-of-file on Windows) are now escaped in protocol 0 pickles of Unicode strings. This allows to load them without loss from files open in text mode in Python 2.
- [bpo-23395](https://bugs.python.org/issue?@action=redirect&bpo=23395) [https://bugs.python.org/issue?@action=redirect&bpo=23395]: `_thread.interrupt_main()` now avoids setting the Python error status if the `SIGINT` signal is ignored or not handled by Python.

## Documentation

- [bpo-36896](https://bugs.python.org/issue?@action=redirect&bpo=36896) [https://bugs.python.org/issue?@action=redirect&bpo=36896]: Clarify that some types have unstable constructor signature between Python versions.

- [bpo-36686](https://bugs.python.org/issue?@action=redirect&bpo=36686) [https://bugs.python.org/issue?@action=redirect&bpo=36686]: Improve documentation of the `stdin`, `stdout`, and `stderr` arguments of the `asyncio.subprocess_exec` function to specify which values are supported. Also mention that decoding as text is not supported.

Add a few tests to verify that the various values passed to the `std*` arguments actually work.

- [bpo-36984](https://bugs.python.org/issue?@action=redirect&bpo=36984) [https://bugs.python.org/issue?@action=redirect&bpo=36984]: Improve version added references in `typing` module - by Anthony Sottile.
- [bpo-36868](https://bugs.python.org/issue?@action=redirect&bpo=36868) [https://bugs.python.org/issue?@action=redirect&bpo=36868]: What's new now mentions `SSLContext.hostname_checks_common_name` instead of `SSLContext.host_flags`.
- [bpo-35924](https://bugs.python.org/issue?@action=redirect&bpo=35924) [https://bugs.python.org/issue?@action=redirect&bpo=35924]: Add a note to the `curses.addstr()` documentation to warn that multiline strings can cause segfaults because of an ncurses bug.
- [bpo-36783](https://bugs.python.org/issue?@action=redirect&bpo=36783) [https://bugs.python.org/issue?@action=redirect&bpo=36783]: Added C API Documentation for `Time_FromTimeAndFold` and `PyDateTime_FromDateAndTimeAndFold` as per PEP 495. Patch by Edison Abahurire.
- [bpo-36797](https://bugs.python.org/issue?@action=redirect&bpo=36797) [https://bugs.python.org/issue?@action=redirect&bpo=36797]: More of the legacy distutils documentation has been either pruned, or else more clearly marked as being retained solely until the setuptools documentation covers it independently.
- [bpo-22865](https://bugs.python.org/issue?@action=redirect&bpo=22865) [https://bugs.python.org/issue?@action=redirect&bpo=22865]: Add detail to the documentation on the `pty.spawn` function.
- [bpo-35397](https://bugs.python.org/issue?@action=redirect&bpo=35397) [https://bugs.python.org/issue?@action=redirect&bpo=35397]

@action=redirect&bpo=35397]: Remove deprecation and document `urllib.parse.unwrap()`. Patch contributed by Rémi Lapeyre.

- [bpo-32995](https://bugs.python.org/issue?@action=redirect&bpo=32995) [https://bugs.python.org/issue?@action=redirect&bpo=32995]: Added the context variable in glossary.
- [bpo-33519](https://bugs.python.org/issue?@action=redirect&bpo=33519) [https://bugs.python.org/issue?@action=redirect&bpo=33519]: Clarify that `copy()` is not part of the `MutableSequence` ABC.
- [bpo-33482](https://bugs.python.org/issue?@action=redirect&bpo=33482) [https://bugs.python.org/issue?@action=redirect&bpo=33482]: Make `codecs.StreamRecoder.writelines` take a list of bytes.
- [bpo-25735](https://bugs.python.org/issue?@action=redirect&bpo=25735) [https://bugs.python.org/issue?@action=redirect&bpo=25735]: Added documentation for `funcfactorial` to indicate that returns integer values
- [bpo-20285](https://bugs.python.org/issue?@action=redirect&bpo=20285) [https://bugs.python.org/issue?@action=redirect&bpo=20285]: Expand `object.__doc__` (docstring) to make it clearer. Modify `pydoc.py` so that `help(object)` lists object methods (for other classes, `help` omits methods of the object base class.)

## Tests

- [bpo-37069](https://bugs.python.org/issue?@action=redirect&bpo=37069) [https://bugs.python.org/issue?@action=redirect&bpo=37069]: Modify `test_coroutines`, `test_cprofile`, `test_generators`, `test_raise`, `test_ssl` and `test_yield_from` to use `test.support.catch_unraisable_exception()` rather than `test.support.captured_stderr()`.
- [bpo-37098](https://bugs.python.org/issue?@action=redirect&bpo=37098) [https://bugs.python.org/issue?@action=redirect&bpo=37098]: Fix `test_memfd_create` on older Linux Kernels.
- [bpo-37081](https://bugs.python.org/issue?@action=redirect&bpo=37081) [https://bugs.python.org/issue?@action=redirect&bpo=37081]: Test with OpenSSL 1.1.1c
- [bpo-36829](https://bugs.python.org/issue?@action=redirect&bpo=36829) [https://bugs.python.org/issue?@action=redirect&bpo=36829]: Add

`test.support.catch_unraisable_exception()`:  
context manager catching unraisable exception using  
`sys.unraisablehook()`.

- [bpo-36915](https://bugs.python.org/issue?@action=redirect&bpo=36915) [https://bugs.python.org/issue?@action=redirect&bpo=36915]: The main regrtest process now always removes all temporary directories of worker processes even if they crash or if they are killed on KeyboardInterrupt (CTRL + c).
- [bpo-36719](https://bugs.python.org/issue?@action=redirect&bpo=36719) [https://bugs.python.org/issue?@action=redirect&bpo=36719]: “python3 -m test -jN ...” now continues the execution of next tests when a worker process crash (CHILD\_ERROR state). Previously, the test suite stopped immediately. Use `--failfast` to stop at the first error.
- [bpo-36816](https://bugs.python.org/issue?@action=redirect&bpo=36816) [https://bugs.python.org/issue?@action=redirect&bpo=36816]: Update Lib/test/selfsigned\_pythontestdotnet.pem to match self-signed.pythontest.net’s new TLS certificate.
- [bpo-35925](https://bugs.python.org/issue?@action=redirect&bpo=35925) [https://bugs.python.org/issue?@action=redirect&bpo=35925]: Skip httplib and nntplib networking tests when they would otherwise fail due to a modern OS or distro with a default OpenSSL policy of rejecting connections to servers with weak certificates.
- [bpo-36782](https://bugs.python.org/issue?@action=redirect&bpo=36782) [https://bugs.python.org/issue?@action=redirect&bpo=36782]: Add tests for several C API functions in the `datetime` module. Patch by Edison Abahurire.
- [bpo-36342](https://bugs.python.org/issue?@action=redirect&bpo=36342) [https://bugs.python.org/issue?@action=redirect&bpo=36342]: Fix test\_multiprocessing in test\_venv if platform lacks functioning sem\_open.

## Build

- [bpo-36721](https://bugs.python.org/issue?@action=redirect&bpo=36721) [https://bugs.python.org/issue?@action=redirect&bpo=36721]: To embed Python into an application, a new `--embed` option must be passed to `python3-config --libs --embed` to get `-lpython3.8` (link the application to libpython). To support both 3.8 and older, try `python3-config --libs --embed` first and fallback to `python3-config --libs` (without `--embed`) if the previous command fails.

Add a `pkg-config python-3.8-embed` module to embed Python into an application: `pkg-config python-3.8-embed --libs includes -lpython3.8`. To support both 3.8 and older, try `pkg-config python-X.Y-embed --libs` first and fallback to `pkg-config python-X.Y --libs` (without `--embed`) if the previous command fails (replace `X.Y` with the Python version).

On the other hand, `pkg-config python3.8 --libs` no longer contains `-lpython3.8`. C extensions must not be linked to `libpython` (except on Android, case handled by the script); this change is backward incompatible on purpose.

- [bpo-36786](https://bugs.python.org/issue?@action=redirect&bpo=36786) [https://bugs.python.org/issue?@action=redirect&bpo=36786]: “make install” now runs `compileall` in parallel.

## Windows

- [bpo-36965](https://bugs.python.org/issue?@action=redirect&bpo=36965) [https://bugs.python.org/issue?@action=redirect&bpo=36965]: include of `STATUS_CONTROL_C_EXIT` without depending on MSC compiler
- [bpo-35926](https://bugs.python.org/issue?@action=redirect&bpo=35926) [https://bugs.python.org/issue?@action=redirect&bpo=35926]: Update to OpenSSL 1.1.1b for Windows.
- [bpo-29883](https://bugs.python.org/issue?@action=redirect&bpo=29883) [https://bugs.python.org/issue?@action=redirect&bpo=29883]: Add Windows support for UDP transports for the Proactor Event Loop. Patch by Adam Meily.
- [bpo-33407](https://bugs.python.org/issue?@action=redirect&bpo=33407) [https://bugs.python.org/issue?@action=redirect&bpo=33407]: The `Py_DEPRECATED()` macro has been implemented for MSVC.

## macOS

- [bpo-36231](https://bugs.python.org/issue?@action=redirect&bpo=36231) [https://bugs.python.org/issue?@action=redirect&bpo=36231]: Support building Python on macOS without `/usr/include` installed. As of macOS 10.14, system header files are only available within an SDK provided by either the Command Line Tools or the Xcode app.

## IDLE

- [bpo-35610](https://bugs.python.org/issue?@action=redirect&bpo=35610) [https://bugs.python.org/issue?@action=redirect&bpo=35610]: Replace now redundant `.context_use_ps1` with `.prompt_last_line`. This finishes change started in [bpo-31858](https://bugs.python.org/issue?@action=redirect&bpo=31858) [https://bugs.python.org/issue?@action=redirect&bpo=31858].
- [bpo-37038](https://bugs.python.org/issue?@action=redirect&bpo=37038) [https://bugs.python.org/issue?@action=redirect&bpo=37038]: Make `idlelib.run` runnable; add test clause.
- [bpo-36958](https://bugs.python.org/issue?@action=redirect&bpo=36958) [https://bugs.python.org/issue?@action=redirect&bpo=36958]: Print any argument other than `None` or `int` passed to `SystemExit` or `sys.exit()`.
- [bpo-36807](https://bugs.python.org/issue?@action=redirect&bpo=36807) [https://bugs.python.org/issue?@action=redirect&bpo=36807]: When saving a file, call `os.fsync()` so bits are flushed to e.g. USB drive.
- [bpo-32411](https://bugs.python.org/issue?@action=redirect&bpo=32411) [https://bugs.python.org/issue?@action=redirect&bpo=32411]: In `browser.py`, remove extraneous sorting by line number since dictionary was created in line number order.

## Tools/Demos

- [bpo-37053](https://bugs.python.org/issue?@action=redirect&bpo=37053) [https://bugs.python.org/issue?@action=redirect&bpo=37053]: Handle strings like `u"bar"` correctly in `Tools/parser/unparse.py`. Patch by Chih-Hsuan Yen.

## C API

- [bpo-36763](https://bugs.python.org/issue?@action=redirect&bpo=36763) [https://bugs.python.org/issue?@action=redirect&bpo=36763]: Implement the [PEP 587](https://peps.python.org/pep-0587/) [https://peps.python.org/pep-0587/] “Python Initialization Configuration”.
- [bpo-36379](https://bugs.python.org/issue?@action=redirect&bpo=36379) [https://bugs.python.org/issue?@action=redirect&bpo=36379]: Fix crashes when attempting to use the *modulo* parameter when `__ipow__` is implemented in C.
- [bpo-37107](https://bugs.python.org/issue?@action=redirect&bpo=37107) [https://bugs.python.org/issue?@action=redirect&bpo=37107]: Update `PyObject_CallMethodObjArgs()` and

`_PyObject_CallMethodIdObjArgs` to use `_PyObject_GetMethod` to avoid creating a bound method object in many cases. Patch by Michael J. Sullivan.

- [bpo-36974](https://bugs.python.org/issue?@action=redirect&bpo=36974) [https://bugs.python.org/issue?@action=redirect&bpo=36974]: Implement **PEP 590** [https://peps.python.org/pep-0590/]: Vectorcall: a fast calling protocol for CPython. This is a new protocol to optimize calls of custom callable objects.
- [bpo-36763](https://bugs.python.org/issue?@action=redirect&bpo=36763) [https://bugs.python.org/issue?@action=redirect&bpo=36763]: `Py_Main()` now returns the `exitcode` rather than calling `Py_Exit(exitcode)` when calling `PyErr_Print()` if the current exception type is `SystemExit`.
- [bpo-36922](https://bugs.python.org/issue?@action=redirect&bpo=36922) [https://bugs.python.org/issue?@action=redirect&bpo=36922]: Add new type flag `Py_TPFLAGS_METHOD_DESCRIPTOR` for objects behaving like unbound methods. These are objects supporting the optimization given by the `LOAD_METHOD/CALL_METHOD` opcodes. See PEP 590.
- [bpo-36728](https://bugs.python.org/issue?@action=redirect&bpo=36728) [https://bugs.python.org/issue?@action=redirect&bpo=36728]: The **`PyEval_ReInitThreads()`** function has been removed from the C API. It should not be called explicitly: use **`PyOS_AfterFork_Child()`** instead.

## Python 3.8.0 alpha 4

*Release date: 2019-05-06*

### Security

- [bpo-36742](https://bugs.python.org/issue?@action=redirect&bpo=36742) [https://bugs.python.org/issue?@action=redirect&bpo=36742]: Fixes mishandling of pre-normalization characters in `urlsplit()`.
- [bpo-30458](https://bugs.python.org/issue?@action=redirect&bpo=30458) [https://bugs.python.org/issue?@action=redirect&bpo=30458]: Address CVE-2019-9740 by disallowing URL paths with embedded whitespace or control characters through into the underlying http client request. Such potentially malicious header injection URLs now cause

an `http.client.InvalidURL` exception to be raised.

- [bpo-35755](https://bugs.python.org/issue?@action=redirect&bpo=35755) [https://bugs.python.org/issue?@action=redirect&bpo=35755]: `shutil.which()` now uses `os.confstr("CS_PATH")` if available and if the `PATH` environment variable is not set. Remove also the current directory from `posixpath.defpath`. On Unix, `shutil.which()` and the `subprocess` module no longer search the executable in the current directory if the `PATH` environment variable is not set.

## Core and Builtins

- [bpo-36722](https://bugs.python.org/issue?@action=redirect&bpo=36722) [https://bugs.python.org/issue?@action=redirect&bpo=36722]: In debug build, import now also looks for C extensions compiled in release mode and for C extensions compiled in the stable ABI.
- [bpo-32849](https://bugs.python.org/issue?@action=redirect&bpo=32849) [https://bugs.python.org/issue?@action=redirect&bpo=32849]: Fix Python Initialization code on FreeBSD to detect properly when stdin file descriptor (fd 0) is invalid.
- [bpo-36623](https://bugs.python.org/issue?@action=redirect&bpo=36623) [https://bugs.python.org/issue?@action=redirect&bpo=36623]: Remove parser headers and related function declarations that lack implementations after the removal of pgen.
- [bpo-20180](https://bugs.python.org/issue?@action=redirect&bpo=20180) [https://bugs.python.org/issue?@action=redirect&bpo=20180]: `dict.pop()` is now up to 33% faster thanks to Argument Clinic. Patch by Inada Naoki.
- [bpo-36611](https://bugs.python.org/issue?@action=redirect&bpo=36611) [https://bugs.python.org/issue?@action=redirect&bpo=36611]: Debug memory allocators: disable `serialno` field by default from debug hooks on Python memory allocators to reduce the memory footprint by 5%. Enable `tracemalloc` to get the traceback where a memory block has been allocated when a fatal memory error is logged to decide where to put a breakpoint. Compile Python with `PYMEM_DEBUG_SERIALNO` defined to get back the field.
- [bpo-36588](https://bugs.python.org/issue?@action=redirect&bpo=36588) [https://bugs.python.org/issue?@action=redirect&bpo=36588]: On AIX, `sys.platform` doesn't contain the major version anymore. Always return `'aix'`, instead of `'aix3' .. 'aix7'`. Since older Python versions include the version number, it is recommended to always use

`sys.platform.startswith('aix')`. Contributed by M. Felt.

- [bpo-36549](https://bugs.python.org/issue?@action=redirect&bpo=36549) [https://bugs.python.org/issue?@action=redirect&bpo=36549]: Change `str.capitalize` to use titlecase for the first character instead of uppercase.
- [bpo-36540](https://bugs.python.org/issue?@action=redirect&bpo=36540) [https://bugs.python.org/issue?@action=redirect&bpo=36540]: Implement [PEP 570](https://peps.python.org/pep-0570/) (Python positional-only parameters). Patch by Pablo Galindo.
- [bpo-36475](https://bugs.python.org/issue?@action=redirect&bpo=36475) [https://bugs.python.org/issue?@action=redirect&bpo=36475]: `PyEval_AcquireLock()` and `PyEval_AcquireThread()` now terminate the current thread if called while the interpreter is finalizing, making them consistent with `PyEval_RestoreThread()`, `Py_END_ALLOW_THREADS()`, and `PyGILState_Ensure()`.
- [bpo-36504](https://bugs.python.org/issue?@action=redirect&bpo=36504) [https://bugs.python.org/issue?@action=redirect&bpo=36504]: Fix signed integer overflow in `_ctypes.c's PyCArrayType_new()`.
- [bpo-20844](https://bugs.python.org/issue?@action=redirect&bpo=20844) [https://bugs.python.org/issue?@action=redirect&bpo=20844]: Fix running script with encoding cookie and LF line ending may fail on Windows.
- [bpo-24214](https://bugs.python.org/issue?@action=redirect&bpo=24214) [https://bugs.python.org/issue?@action=redirect&bpo=24214]: Fixed support of the surrogatepass error handler in the UTF-8 incremental decoder.
- [bpo-36452](https://bugs.python.org/issue?@action=redirect&bpo=36452) [https://bugs.python.org/issue?@action=redirect&bpo=36452]: Changing dict keys during iteration of the dict itself, `keys()`, `values()`, or `items()` will now be detected in certain corner cases where keys are deleted/added so that the number of keys isn't changed. A `RuntimeError` will be raised after `len(dict)` iterations. Contributed by Thomas Perl.
- [bpo-36459](https://bugs.python.org/issue?@action=redirect&bpo=36459) [https://bugs.python.org/issue?@action=redirect&bpo=36459]: Fix a possible double `PyMem_FREE()` due to `tokenizer.c's tok_nextc()`.
- [bpo-36433](https://bugs.python.org/issue?@action=redirect&bpo=36433) [https://bugs.python.org/issue?@action=redirect&bpo=36433]: Fixed `TypeError` message in `classmethoddescr_call`.
- [bpo-36430](https://bugs.python.org/issue?@action=redirect&bpo=36430) [https://bugs.python.org/issue?@action=redirect&bpo=36430]: Fix a possible reference leak in

`itertools.count()`.

- [bpo-36440](https://bugs.python.org/issue?@action=redirect&bpo=36440) [https://bugs.python.org/issue?@action=redirect&bpo=36440]: Include node names in `ParserError` messages, instead of numeric IDs. Patch by A. Skrobov.
- [bpo-36143](https://bugs.python.org/issue?@action=redirect&bpo=36143) [https://bugs.python.org/issue?@action=redirect&bpo=36143]: Regenerate `keyword` from the Grammar and Tokens file using `pgen`. Patch by Pablo Galindo.
- [bpo-18372](https://bugs.python.org/issue?@action=redirect&bpo=18372) [https://bugs.python.org/issue?@action=redirect&bpo=18372]: Add missing `PyObject_GC_Track()` calls in the `pickle` module. Patch by Zackery Spytz.

## Library

- [bpo-35952](https://bugs.python.org/issue?@action=redirect&bpo=35952) [https://bugs.python.org/issue?@action=redirect&bpo=35952]: Fix `pythoninfo` when the compiler is missing.
- [bpo-28238](https://bugs.python.org/issue?@action=redirect&bpo=28238) [https://bugs.python.org/issue?@action=redirect&bpo=28238]: The `.find*()` methods of `xml.etree.ElementTree` can now search for wildcards like `{*}` tag and `{ns}*` that match a tag in any namespace or all tags in a namespace. Patch by Stefan Behnel.
- [bpo-26978](https://bugs.python.org/issue?@action=redirect&bpo=26978) [https://bugs.python.org/issue?@action=redirect&bpo=26978]: `pathlib.path.link_to()` is now implemented. It creates a hard link pointing to a path.
- [bpo-1613500](https://bugs.python.org/issue?@action=redirect&bpo=1613500) [https://bugs.python.org/issue?@action=redirect&bpo=1613500]: `fileinput.FileInput` now uses the input file mode to correctly set the output file mode (previously it was hardcoded to `'w'`) when `inplace=True` is passed to its constructor.
- [bpo-36734](https://bugs.python.org/issue?@action=redirect&bpo=36734) [https://bugs.python.org/issue?@action=redirect&bpo=36734]: Fix compilation of `faulthandler.c` on HP-UX. Initialize `stack_t current_stack` to zero using `memset()`.
- [bpo-13611](https://bugs.python.org/issue?@action=redirect&bpo=13611) [https://bugs.python.org/issue?@action=redirect&bpo=13611]: The `xml.etree.ElementTree` packages gained support for C14N 2.0 serialisation. Patch by Stefan Behnel.
- [bpo-36669](https://bugs.python.org/issue?@action=redirect&bpo=36669) [https://bugs.python.org/issue?@action=redirect&bpo=36669]

@action=redirect&bpo=36669]: Add missing matrix multiplication operator support to weakref.proxy.

- [bpo-36676](https://bugs.python.org/issue?@action=redirect&bpo=36676) [https://bugs.python.org/issue?@action=redirect&bpo=36676]: The XMLParser() in xml.etree.ElementTree provides namespace prefix context to the parser target if it defines the callback methods “start\_ns()” and/or “end\_ns()”. Patch by Stefan Behnel.
- [bpo-36673](https://bugs.python.org/issue?@action=redirect&bpo=36673) [https://bugs.python.org/issue?@action=redirect&bpo=36673]: The TreeBuilder and XMLPullParser in xml.etree.ElementTree gained support for parsing comments and processing instructions. Patch by Stefan Behnel.
- [bpo-36650](https://bugs.python.org/issue?@action=redirect&bpo=36650) [https://bugs.python.org/issue?@action=redirect&bpo=36650]: The C version of functools.lru\_cache() was treating calls with an empty `**kwargs` dictionary as being distinct from calls with no keywords at all. This did not result in an incorrect answer, but it did trigger an unexpected cache miss.
- [bpo-28552](https://bugs.python.org/issue?@action=redirect&bpo=28552) [https://bugs.python.org/issue?@action=redirect&bpo=28552]: Fix `distutils.sysconfig` if `sys.executable` is None or an empty string: use `os.getcwd()` to initialize `project_base`. Fix also the `distutils` build command: don't use `sys.executable` if it is None or an empty string.
- [bpo-35755](https://bugs.python.org/issue?@action=redirect&bpo=35755) [https://bugs.python.org/issue?@action=redirect&bpo=35755]: `shutil.which()` and `distutils.spawn.find_executable` now use `os.confstr("CS_PATH")` if available instead of `os.defpath`, if the `PATH` environment variable is not set. Moreover, don't use `os.confstr("CS_PATH")` nor `os.defpath` if the `PATH` environment variable is set to an empty string.
- [bpo-25430](https://bugs.python.org/issue?@action=redirect&bpo=25430) [https://bugs.python.org/issue?@action=redirect&bpo=25430]: improve performance of `IPNetwork.__contains__()`
- [bpo-30485](https://bugs.python.org/issue?@action=redirect&bpo=30485) [https://bugs.python.org/issue?@action=redirect&bpo=30485]: Path expressions in `xml.etree.ElementTree` can now avoid explicit namespace prefixes for tags (or the “{namespace}tag” notation) by passing a default namespace with an empty string prefix.

- [bpo-36613](https://bugs.python.org/issue?@action=redirect&bpo=36613) [https://bugs.python.org/issue?@action=redirect&bpo=36613]: Fix `asyncio` `wait()` not removing callback if exception
- [bpo-36598](https://bugs.python.org/issue?@action=redirect&bpo=36598) [https://bugs.python.org/issue?@action=redirect&bpo=36598]: Fix `isinstance` check for Mock objects with spec when the code is executed under tracing. Patch by Karthikeyan Singaravelan.
- [bpo-18748](https://bugs.python.org/issue?@action=redirect&bpo=18748) [https://bugs.python.org/issue?@action=redirect&bpo=18748]: In development mode (`-X dev`) and in debug build, the `io.IOBase` destructor now logs `close()` exceptions. These exceptions are silent by default in release mode.
- [bpo-36575](https://bugs.python.org/issue?@action=redirect&bpo=36575) [https://bugs.python.org/issue?@action=redirect&bpo=36575]: The `_lsprof` module now uses internal timer same to `time.perf_counter()` by default. `gettimeofday(2)` was used on Unix. New timer has better resolution on most Unix platforms and timings are no longer impacted by system clock updates since `perf_counter()` is monotonic. Patch by Inada Naoki.
- [bpo-33461](https://bugs.python.org/issue?@action=redirect&bpo=33461) [https://bugs.python.org/issue?@action=redirect&bpo=33461]: `json.loads` now emits `DeprecationWarning` when `encoding` option is specified. Patch by Matthias Bussonnier.
- [bpo-36559](https://bugs.python.org/issue?@action=redirect&bpo=36559) [https://bugs.python.org/issue?@action=redirect&bpo=36559]: The `random` module now prefers the lean internal `_sha512` module over `hashlib` for `seed(version=2)` to optimize import time.
- [bpo-17561](https://bugs.python.org/issue?@action=redirect&bpo=17561) [https://bugs.python.org/issue?@action=redirect&bpo=17561]: Set `backlog=None` as the default for `socket.create_server`.
- [bpo-34373](https://bugs.python.org/issue?@action=redirect&bpo=34373) [https://bugs.python.org/issue?@action=redirect&bpo=34373]: Fix `time.mktime()` error handling on AIX for year before 1970.
- [bpo-36232](https://bugs.python.org/issue?@action=redirect&bpo=36232) [https://bugs.python.org/issue?@action=redirect&bpo=36232]: Improve error message when trying to open existing DBM database that actually doesn't exist. Patch by Marco Rougeth.
- [bpo-36546](https://bugs.python.org/issue?@action=redirect&bpo=36546) [https://bugs.python.org/issue?@action=redirect&bpo=36546]: Add `statistics.quantiles()`
- [bpo-36050](https://bugs.python.org/issue?@action=redirect&bpo=36050) [https://bugs.python.org/issue?@action=redirect&bpo=36050]

@action=redirect&bpo=36050]: Optimized

`http.client.HTTPResponse.read()` for large response.

Patch by Inada Naoki.

- [bpo-36522](https://bugs.python.org/issue?@action=redirect&bpo=36522) [https://bugs.python.org/issue?@action=redirect&bpo=36522]: If *debuglevel* is set to `> 0` in `http.client`, print all values for headers with multiple values for the same header name. Patch by Matt Houghlum.
- [bpo-36492](https://bugs.python.org/issue?@action=redirect&bpo=36492) [https://bugs.python.org/issue?@action=redirect&bpo=36492]: Deprecated passing required arguments like *func* as keyword arguments in functions which should accept arbitrary keyword arguments and pass them to other function. Arbitrary keyword arguments (even with names “self” and “func”) can now be passed to these functions if the required arguments are passed as positional arguments.
- [bpo-27181](https://bugs.python.org/issue?@action=redirect&bpo=27181) [https://bugs.python.org/issue?@action=redirect&bpo=27181]: Add `statistics.geometric_mean()`.
- [bpo-30427](https://bugs.python.org/issue?@action=redirect&bpo=30427) [https://bugs.python.org/issue?@action=redirect&bpo=30427]: `os.path.normcase()` relies on `os.fspath()` to check the type of its argument. Redundant checks have been removed from its `posixpath.normcase()` and `ntpath.normcase()` implementations. Patch by Wolfgang Maier.
- [bpo-36385](https://bugs.python.org/issue?@action=redirect&bpo=36385) [https://bugs.python.org/issue?@action=redirect&bpo=36385]: Stop rejecting IPv4 octets for being ambiguously octal. Leading zeros are ignored, and no longer are assumed to specify octal octets. Octets are always decimal numbers. Octets must still be no more than three digits, including leading zeroes.
- [bpo-36434](https://bugs.python.org/issue?@action=redirect&bpo=36434) [https://bugs.python.org/issue?@action=redirect&bpo=36434]: Errors during writing to a ZIP file no longer prevent to properly close it.
- [bpo-36407](https://bugs.python.org/issue?@action=redirect&bpo=36407) [https://bugs.python.org/issue?@action=redirect&bpo=36407]: Fixed wrong indentation writing for CDATA section in `xml.dom.minidom`. Patch by Vladimir Surjaninov.
- [bpo-36326](https://bugs.python.org/issue?@action=redirect&bpo=36326) [https://bugs.python.org/issue?@action=redirect&bpo=36326]: `inspect.getdoc()` can now find docstrings for member objects when `__slots__` is a dictionary.
- [bpo-36366](https://bugs.python.org/issue?@action=redirect&bpo=36366) [https://bugs.python.org/issue?@action=redirect&bpo=36366]

@action=redirect&bpo=36366]: Calling `stop()` on an unstarted or stopped `unittest.mock.patch()` object will now return `None` instead of raising `RuntimeError`, making the method idempotent. Patch by Karthikeyan Singaravelan.

- [bpo-36348](https://bugs.python.org/issue?@action=redirect&bpo=36348) [https://bugs.python.org/issue?@action=redirect&bpo=36348]: The `imap.IMAP4.logout()` method no longer ignores silently arbitrary exceptions.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Add time module support and fix `test_time` failures for VxWorks.
- [bpo-36227](https://bugs.python.org/issue?@action=redirect&bpo=36227) [https://bugs.python.org/issue?@action=redirect&bpo=36227]: Added support for keyword arguments `default_namespace` and `xml_declaration` in functions `ElementTree.tostring()` and `ElementTree.tostringlist()`.
- [bpo-36004](https://bugs.python.org/issue?@action=redirect&bpo=36004) [https://bugs.python.org/issue?@action=redirect&bpo=36004]: Added new alternate constructors `datetime.date.fromisocalendar()` and `datetime.datetime.fromisocalendar()`, which construct date objects from ISO year, week number and weekday; these are the inverse of each class's `isocalendar` method. Patch by Paul Ganssle.
- [bpo-35936](https://bugs.python.org/issue?@action=redirect&bpo=35936) [https://bugs.python.org/issue?@action=redirect&bpo=35936]: `modulefinder` no longer depends on the deprecated `imp` module, and the initializer for `modulefinder.ModuleFinder` now has immutable default arguments. Patch by Brandt Bucher.
- [bpo-35376](https://bugs.python.org/issue?@action=redirect&bpo=35376) [https://bugs.python.org/issue?@action=redirect&bpo=35376]: `modulefinder` correctly handles modules that have the same name as a bad package. Patch by Brandt Bucher.
- [bpo-17396](https://bugs.python.org/issue?@action=redirect&bpo=17396) [https://bugs.python.org/issue?@action=redirect&bpo=17396]: `modulefinder` no longer crashes when encountering syntax errors in followed imports. Patch by Brandt Bucher.
- [bpo-35934](https://bugs.python.org/issue?@action=redirect&bpo=35934) [https://bugs.python.org/issue?@action=redirect&bpo=35934]: Added `create_server()` and `has_dualstack_ipv6()` convenience functions to automate the necessary tasks usually involved when creating a server socket, including accepting both IPv4 and IPv6

connections on the same socket. (Contributed by Giampaolo Rodola in [bpo-17561](https://bugs.python.org/issue?@action=redirect&bpo=17561) [https://bugs.python.org/issue?@action=redirect&bpo=17561].)

- [bpo-23078](https://bugs.python.org/issue?@action=redirect&bpo=23078) [https://bugs.python.org/issue?@action=redirect&bpo=23078]: Add support for `classmethod()` and `staticmethod()` to `unittest.mock.create_autospec()`. Initial patch by Felipe Ochoa.
- [bpo-35416](https://bugs.python.org/issue?@action=redirect&bpo=35416) [https://bugs.python.org/issue?@action=redirect&bpo=35416]: Fix potential resource warnings in `distutils`. Patch by Mickaël Schoentgen.
- [bpo-25451](https://bugs.python.org/issue?@action=redirect&bpo=25451) [https://bugs.python.org/issue?@action=redirect&bpo=25451]: Add transparency methods to `tkinter.PhotoImage`. Patch by Zackery Spytz.
- [bpo-35082](https://bugs.python.org/issue?@action=redirect&bpo=35082) [https://bugs.python.org/issue?@action=redirect&bpo=35082]: Don't return deleted attributes when calling `dir` on a `unittest.mock.Mock`.
- [bpo-34547](https://bugs.python.org/issue?@action=redirect&bpo=34547) [https://bugs.python.org/issue?@action=redirect&bpo=34547]: `wsgiref.handlers.BaseHandler` now handles abrupt client connection terminations gracefully. Patch by Petter Strandmark.
- [bpo-31658](https://bugs.python.org/issue?@action=redirect&bpo=31658) [https://bugs.python.org/issue?@action=redirect&bpo=31658]: `xml.sax.parse()` now supports `path-like`. Patch by Mickaël Schoentgen.
- [bpo-34139](https://bugs.python.org/issue?@action=redirect&bpo=34139) [https://bugs.python.org/issue?@action=redirect&bpo=34139]: Remove stale unix datagram socket before binding
- [bpo-33530](https://bugs.python.org/issue?@action=redirect&bpo=33530) [https://bugs.python.org/issue?@action=redirect&bpo=33530]: Implemented Happy Eyeballs in `asyncio.create_connection()`. Added two new arguments, `happy_eyeballs_delay` and `interleave`, to specify Happy Eyeballs behavior.
- [bpo-33291](https://bugs.python.org/issue?@action=redirect&bpo=33291) [https://bugs.python.org/issue?@action=redirect&bpo=33291]: Do not raise `AttributeError` when calling the inspect functions `isgeneratorfunction`, `iscoroutinefunction`, `isasyncgenfunction` on a method created from an arbitrary callable. Instead, return `False`.
- [bpo-31310](https://bugs.python.org/issue?@action=redirect&bpo=31310) [https://bugs.python.org/issue?@action=redirect&bpo=31310]: Fix the

multiprocessing.semaphore\_tracker so it is reused by child processes

- [bpo-31292](https://bugs.python.org/issue?@action=redirect&bpo=31292) [https://bugs.python.org/issue?@action=redirect&bpo=31292]: Fix `setup.py` check `--restructuredtext` for files containing `include` directives.

## Documentation

- [bpo-36625](https://bugs.python.org/issue?@action=redirect&bpo=36625) [https://bugs.python.org/issue?@action=redirect&bpo=36625]: Remove obsolete comments from docstrings in `fractions.Fraction`
- [bpo-30840](https://bugs.python.org/issue?@action=redirect&bpo=30840) [https://bugs.python.org/issue?@action=redirect&bpo=30840]: Document relative imports
- [bpo-36523](https://bugs.python.org/issue?@action=redirect&bpo=36523) [https://bugs.python.org/issue?@action=redirect&bpo=36523]: Add docstring for `io.IOBase.writelines()`.
- [bpo-36425](https://bugs.python.org/issue?@action=redirect&bpo=36425) [https://bugs.python.org/issue?@action=redirect&bpo=36425]: New documentation translation: [Simplified Chinese](https://docs.python.org/zh-cn/) [https://docs.python.org/zh-cn/].
- [bpo-36345](https://bugs.python.org/issue?@action=redirect&bpo=36345) [https://bugs.python.org/issue?@action=redirect&bpo=36345]: Avoid the duplication of code from `Tools/scripts/serve.py` in using the **literalinclude** directive for the basic `wsgiref`-based web server in the documentation of `wsgiref`. Contributed by Stéphane Wirtel.
- [bpo-36345](https://bugs.python.org/issue?@action=redirect&bpo=36345) [https://bugs.python.org/issue?@action=redirect&bpo=36345]: Using the code of the `Tools/scripts/serve.py` script as an example in the `wsgiref` documentation. Contributed by Stéphane Wirtel.
- [bpo-36157](https://bugs.python.org/issue?@action=redirect&bpo=36157) [https://bugs.python.org/issue?@action=redirect&bpo=36157]: Added Documentation for `PyInterpreterState_Main()`.
- [bpo-33043](https://bugs.python.org/issue?@action=redirect&bpo=33043) [https://bugs.python.org/issue?@action=redirect&bpo=33043]: Updates the `docs.python.org` page with the addition of a ‘Contributing to Docs’ link at the end of the page (between ‘Reporting Bugs’ and ‘About Documentation’). Updates the ‘Found a Bug’ page with additional links and information in the Documentation Bugs section.

- [bpo-35581](https://bugs.python.org/issue?@action=redirect&bpo=35581) [https://bugs.python.org/issue?@action=redirect&bpo=35581]: `@typing.type_check_only` now allows type stubs to mark functions and classes not available during runtime.
- [bpo-33832](https://bugs.python.org/issue?@action=redirect&bpo=33832) [https://bugs.python.org/issue?@action=redirect&bpo=33832]: Add glossary entry for ‘magic method’.
- [bpo-32913](https://bugs.python.org/issue?@action=redirect&bpo=32913) [https://bugs.python.org/issue?@action=redirect&bpo=32913]: Added `re.Match.groupdict` example to regex HOWTO.

## Tests

- [bpo-36719](https://bugs.python.org/issue?@action=redirect&bpo=36719) [https://bugs.python.org/issue?@action=redirect&bpo=36719]: `regtest` now always detects uncollectable objects. Previously, the check was only enabled by `--findleaks`. The check now also works with `-jN/--multiprocess N`. `--findleaks` becomes a deprecated alias to `--fail-env-changed`.
- [bpo-36725](https://bugs.python.org/issue?@action=redirect&bpo=36725) [https://bugs.python.org/issue?@action=redirect&bpo=36725]: When using multiprocessing mode (`-jN`), `regtest` now better reports errors if a worker process fails, and it exits immediately on a worker thread failure or when interrupted.
- [bpo-36454](https://bugs.python.org/issue?@action=redirect&bpo=36454) [https://bugs.python.org/issue?@action=redirect&bpo=36454]: Change `test_time.test_monotonic()` to test only the lower bound of elapsed time after a sleep command rather than the upper bound. This prevents unnecessary test failures on slow buildbots. Patch by Victor Stinner.
- [bpo-32424](https://bugs.python.org/issue?@action=redirect&bpo=32424) [https://bugs.python.org/issue?@action=redirect&bpo=32424]: Improve test coverage for `xml.etree.ElementTree`. Patch by Gordon P. Hemsley.
- [bpo-32424](https://bugs.python.org/issue?@action=redirect&bpo=32424) [https://bugs.python.org/issue?@action=redirect&bpo=32424]: Fix typo in `test_cyclic_gc()` test for `xml.etree.ElementTree`. Patch by Gordon P. Hemsley.
- [bpo-36635](https://bugs.python.org/issue?@action=redirect&bpo=36635) [https://bugs.python.org/issue?@action=redirect&bpo=36635]: Add a new `_testinternalcapi` module to test the internal C API.
- [bpo-36629](https://bugs.python.org/issue?@action=redirect&bpo=36629) [https://bugs.python.org/issue?@action=redirect&bpo=36629]

- @action=redirect&bpo=36629]: Fix  
 test\_imap4\_host\_default\_value() of  
 test\_imaplib: catch also **errno.ENETUNREACH** error.
- bpo-36611** [https://bugs.python.org/issue?@action=redirect&bpo=36611]: Fix  
 test\_sys.test\_getallocatedblocks() when  
**tracemalloc** is enabled.
- bpo-36560** [https://bugs.python.org/issue?@action=redirect&bpo=36560]: Fix reference leak hunting in  
 regrtest: compute also deltas (of reference count, allocated  
 memory blocks, file descriptor count) during warmup, to  
 ensure that everything is initialized before starting to hunt  
 reference leaks.
- bpo-36565** [https://bugs.python.org/issue?@action=redirect&bpo=36565]: Fix reference hunting (python3  
 -m test -R 3:3) when Python has no built-in abc module.
- bpo-31904** [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Port test\_resource to VxWorks:  
 skip tests cases setting RLIMIT\_FSIZE and RLIMIT\_CPU.
- bpo-31904** [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Fix test\_tabnanny on VxWorks:  
 adjust ENOENT error message.
- bpo-36436** [https://bugs.python.org/issue?@action=redirect&bpo=36436]: Fix  
 \_testcapi.pymem\_buffer\_overflow(): handle memory  
 allocation failure.
- bpo-31904** [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Fix test\_utf8\_mode on VxWorks:  
 Python always use UTF-8 on VxWorks.
- bpo-36341** [https://bugs.python.org/issue?@action=redirect&bpo=36341]: Fix tests that may fail with  
 PermissionError upon calling bind() on AF\_UNIX sockets.

## Build

- bpo-36747** [https://bugs.python.org/issue?@action=redirect&bpo=36747]: Remove the stale scriptsinstall  
 Makefile target.
- bpo-21536** [https://bugs.python.org/issue?@action=redirect&bpo=21536]: Fix tests that may fail with  
 PermissionError upon calling bind() on AF\_UNIX sockets.

@action=redirect&bpo=21536]: On Unix, C extensions are no longer linked to libpython except on Android and Cygwin.

It is now possible for a statically linked Python to load a C extension built using a shared library Python.

When Python is embedded, `libpython` must not be loaded with `RTLD_LOCAL`, but `RTLD_GLOBAL` instead. Previously, using `RTLD_LOCAL`, it was already not possible to load C extensions which were not linked to `libpython`, such as C extensions of the standard library built by the `*shared*` section of `Modules/Setup`.

`distutils`, `python-config` and `python-config.py` have been modified.

- [bpo-36707](https://bugs.python.org/issue?@action=redirect&bpo=36707) [https://bugs.python.org/issue?@action=redirect&bpo=36707]: `./configure --with-pymalloc` no longer adds the `m` flag to `SOABI` (`sys.implementation.cache_tag`). Enabling or disabling `pymalloc` has no impact on the ABI.
- [bpo-36635](https://bugs.python.org/issue?@action=redirect&bpo=36635) [https://bugs.python.org/issue?@action=redirect&bpo=36635]: Change `PyAPI_FUNC` (`type`), `PyAPI_DATA` (`type`) and `PyMODINIT_FUNC` macros of `pyport.h` when `Py_BUILD_CORE_MODULE` is defined. The `Py_BUILD_CORE_MODULE` define must be now be used to build a C extension as a dynamic library accessing Python internals: export the `PyInit_xxx()` function in DLL exports on Windows.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Don't build the `_crypt` extension on VxWorks.
- [bpo-36618](https://bugs.python.org/issue?@action=redirect&bpo=36618) [https://bugs.python.org/issue?@action=redirect&bpo=36618]: Add `-fmax-type-align=8` to `CFLAGS` when clang compiler is detected. The `pymalloc` memory allocator aligns memory on 8 bytes. On x86-64, clang expects alignment on 16 bytes by default and so uses `MOVAPS` instruction which can lead to segmentation fault.

Instruct clang that Python is limited to alignment on 8 bytes to use MOVUPS instruction instead: slower but don't trigger a SIGSEGV if the memory is not aligned on 16 bytes. Sadly, the flag must be added to `CFLAGS` and not just `CFLAGS_NODIST`, since third party C extensions can have the same issue.

- [bpo-36605](https://bugs.python.org/issue?@action=redirect&bpo=36605) [https://bugs.python.org/issue?@action=redirect&bpo=36605]: make `tags` and make `TAGS` now also parse `Modules/_io/*.c` and `Modules/_io/*.h`.
- [bpo-36465](https://bugs.python.org/issue?@action=redirect&bpo=36465) [https://bugs.python.org/issue?@action=redirect&bpo=36465]: Release builds and debug builds are now ABI compatible: defining the `Py_DEBUG` macro no longer implies the `Py_TRACE_REFS` macro, which introduces the only ABI incompatibility. The `Py_TRACE_REFS` macro, which adds the **`sys.getobjects()`** function and the **`PYTHONDUMPREFS`** environment variable, can be set using the new `./configure --with-trace-refs` build option.
- [bpo-36577](https://bugs.python.org/issue?@action=redirect&bpo=36577) [https://bugs.python.org/issue?@action=redirect&bpo=36577]: `setup.py` now correctly reports missing OpenSSL headers and libraries again.
- [bpo-36544](https://bugs.python.org/issue?@action=redirect&bpo=36544) [https://bugs.python.org/issue?@action=redirect&bpo=36544]: Fix regression introduced in [bpo-36146](https://bugs.python.org/issue?@action=redirect&bpo=36146) [https://bugs.python.org/issue?@action=redirect&bpo=36146] refactoring `setup.py`
- [bpo-36508](https://bugs.python.org/issue?@action=redirect&bpo=36508) [https://bugs.python.org/issue?@action=redirect&bpo=36508]: `python-config --ldflags` no longer includes flags of the `LINKFORSHARED` variable. The `LINKFORSHARED` variable must only be used to build executables.
- [bpo-36503](https://bugs.python.org/issue?@action=redirect&bpo=36503) [https://bugs.python.org/issue?@action=redirect&bpo=36503]: Remove references to “aix3” and “aix4”. Patch by M. Felt.

## Windows

- [bpo-35920](https://bugs.python.org/issue?@action=redirect&bpo=35920) [https://bugs.python.org/issue?@action=redirect&bpo=35920]: Added `platform.win32_edition()` and `platform.win32_is_iot()`. Added support for cross-compiling packages for Windows ARM32. Skip tests that are not expected to work on Windows IoT Core ARM32.
- [bpo-36649](https://bugs.python.org/issue?@action=redirect&bpo=36649) [https://bugs.python.org/issue?@action=redirect&bpo=36649]: Remove trailing spaces for registry keys when installed via the Store.
- [bpo-34144](https://bugs.python.org/issue?@action=redirect&bpo=34144) [https://bugs.python.org/issue?@action=redirect&bpo=34144]: Fixed `activate.bat` to correctly update codepage when `chcp.com` returns dots in output. Patch by Lorenz Mende.
- [bpo-36509](https://bugs.python.org/issue?@action=redirect&bpo=36509) [https://bugs.python.org/issue?@action=redirect&bpo=36509]: Added preset-iot layout for Windows IoT ARM containers. This layout doesn't contain UI components like `tkinter` or `IDLE`. It also doesn't contain files to support on-target builds since Windows ARM32 builds must be cross-compiled when using `MSVC`.
- [bpo-35941](https://bugs.python.org/issue?@action=redirect&bpo=35941) [https://bugs.python.org/issue?@action=redirect&bpo=35941]: `enum_certificates` function of the `ssl` module now returns certificates from all available certificate stores inside windows in a query instead of returning only certificates from the system wide certificate store. This includes certificates from these certificate stores: local machine, local machine enterprise, local machine group policy, current user, current user group policy, services, users. `ssl.enum_crls()` function is changed in the same way to return all certificate revocation lists inside the windows certificate revocation list stores.
- [bpo-36441](https://bugs.python.org/issue?@action=redirect&bpo=36441) [https://bugs.python.org/issue?@action=redirect&bpo=36441]: Fixes creating a `venv` when debug binaries are installed.
- [bpo-36085](https://bugs.python.org/issue?@action=redirect&bpo=36085) [https://bugs.python.org/issue?@action=redirect&bpo=36085]: Enable better DLL resolution on Windows by using safe DLL search paths and adding `os.add_dll_directory()`.
- [bpo-36010](https://bugs.python.org/issue?@action=redirect&bpo=36010) [https://bugs.python.org/issue?@action=redirect&bpo=36010]: Add the `venv` standard library

module to the nuget distribution for Windows.

- [bpo-29515](https://bugs.python.org/issue?@action=redirect&bpo=29515) [https://bugs.python.org/issue?@action=redirect&bpo=29515]: Add the following socket module constants on Windows: IPPROTO\_AH IPPROTO\_CBT IPPROTO\_DSTOPTS IPPROTO\_EGP IPPROTO\_ESP IPPROTO\_FRAGMENT IPPROTO\_GGP IPPROTO\_HOPOPTS IPPROTO\_ICLFXBM IPPROTO\_ICMPV6 IPPROTO\_IDP IPPROTO\_IGMP IPPROTO\_IGP IPPROTO\_IPV4 IPPROTO\_IPV6 IPPROTO\_L2TP IPPROTO\_MAX IPPROTO\_ND IPPROTO\_NONE IPPROTO\_PGM IPPROTO\_PIM IPPROTO\_PUP IPPROTO\_RDP IPPROTO\_ROUTING IPPROTO\_SCTP IPPROTO\_ST
- [bpo-35947](https://bugs.python.org/issue?@action=redirect&bpo=35947) [https://bugs.python.org/issue?@action=redirect&bpo=35947]: Added current version of libffi to cpython-source-deps. Change \_ctypes to use current version of libffi on Windows.
- [bpo-34060](https://bugs.python.org/issue?@action=redirect&bpo=34060) [https://bugs.python.org/issue?@action=redirect&bpo=34060]: Report system load when running test suite on Windows. Patch by Ammar Askar. Based on prior work by Jeremy Kloth.
- [bpo-31512](https://bugs.python.org/issue?@action=redirect&bpo=31512) [https://bugs.python.org/issue?@action=redirect&bpo=31512]: With the Windows 10 Creators Update, non-elevated users can now create symlinks as long as the computer has Developer Mode enabled.

## macOS

- [bpo-34602](https://bugs.python.org/issue?@action=redirect&bpo=34602) [https://bugs.python.org/issue?@action=redirect&bpo=34602]: Avoid failures setting macOS stack resource limit with resource.setrlimit. This reverts an earlier fix for [bpo-18075](https://bugs.python.org/issue?@action=redirect&bpo=18075) [https://bugs.python.org/issue?@action=redirect&bpo=18075] which forced a non-default stack size when building the interpreter executable on macOS.

## IDLE

- [bpo-36429](https://bugs.python.org/issue?@action=redirect&bpo=36429) [https://bugs.python.org/issue?@action=redirect&bpo=36429]: Fix starting IDLE with pyshell. Add idlelib.pyshell alias at top; remove pyshell alias at bottom. Remove obsolete `__name__ == '__main__'` command.

## Tools/Demos

- [bpo-14546](https://bugs.python.org/issue?@action=redirect&bpo=14546) [https://bugs.python.org/issue?@action=redirect&bpo=14546]: Fix the argument handling in Tools/scripts/lll.py.

## C API

- [bpo-36763](https://bugs.python.org/issue?@action=redirect&bpo=36763) [https://bugs.python.org/issue?@action=redirect&bpo=36763]: Fix memory leak in `Py_SetStandardStreamEncoding()`: release memory if the function is called twice.
- [bpo-36641](https://bugs.python.org/issue?@action=redirect&bpo=36641) [https://bugs.python.org/issue?@action=redirect&bpo=36641]: `PyDoc_VAR(name)` and `PyDoc_STRVAR(name, str)` now create static const char name[] instead of static char name[]. Patch by Inada Naoki.
- [bpo-36389](https://bugs.python.org/issue?@action=redirect&bpo=36389) [https://bugs.python.org/issue?@action=redirect&bpo=36389]: Change the value of `CLEANBYTE`, `DEADBYTE` and `FORBIDDENBYTE` internal constants used by debug hooks on Python memory allocators (`PyMem_SetupDebugHooks()` function). Byte patterns `0xCB`, `0xDB` and `0xFB` have been replaced with `0xCD`, `0xDD` and `0xFD` to use the same values than Windows CRT debug `malloc()` and `free()`.
- [bpo-36443](https://bugs.python.org/issue?@action=redirect&bpo=36443) [https://bugs.python.org/issue?@action=redirect&bpo=36443]: Since Python 3.7.0, calling `Py_DecodeLocale()` before `Py_Initialize()` produces mojibake if the `LC_CTYPE` locale is coerced and/or if the UTF-8 Mode is enabled by the user configuration. The `LC_CTYPE` coercion and UTF-8 Mode are now disabled by default to fix the mojibake issue. They must now be enabled explicitly (opt-in) using the new `_Py_PreInitialize()` API with `_PyPreConfig`.
- [bpo-36025](https://bugs.python.org/issue?@action=redirect&bpo=36025) [https://bugs.python.org/issue?@action=redirect&bpo=36025]: Fixed an accidental change to the datetime C API where the arguments to the `PyDate_FromTimestamp()` function were incorrectly interpreted as a single timestamp rather than an arguments tuple, which causes existing code to start raising

**TypeError.** The backwards-incompatible change was only present in alpha releases of Python 3.8. Patch by Paul Ganssle.

- [bpo-35810](https://bugs.python.org/issue?@action=redirect&bpo=35810) [https://bugs.python.org/issue?@action=redirect&bpo=35810]: Modify `PyObject_Init` to correctly increase the refcount of heap-allocated Type objects. Also fix the refcounts of the heap-allocated types that were either doing this manually or not decreasing the type's refcount in `tp_dealloc`

## Python 3.8.0 alpha 3

*Release date: 2019-03-25*

### Security

- [bpo-36216](https://bugs.python.org/issue?@action=redirect&bpo=36216) [https://bugs.python.org/issue?@action=redirect&bpo=36216]: Changes `urlsplit()` to raise `ValueError` when the URL contains characters that decompose under IDNA encoding (NFKC-normalization) into characters that affect how the URL is parsed.
- [bpo-35121](https://bugs.python.org/issue?@action=redirect&bpo=35121) [https://bugs.python.org/issue?@action=redirect&bpo=35121]: Don't send cookies of domain A without Domain attribute to domain B when domain A is a suffix match of domain B while using a cookiejar with [http.cookiejar.DefaultCookiePolicy](#) policy. Patch by Karthikeyan Singaravelan.

### Core and Builtins

- [bpo-36421](https://bugs.python.org/issue?@action=redirect&bpo=36421) [https://bugs.python.org/issue?@action=redirect&bpo=36421]: Fix a possible double decref in `_ctypes.c's PyCArrayType_new()`.
- [bpo-36412](https://bugs.python.org/issue?@action=redirect&bpo=36412) [https://bugs.python.org/issue?@action=redirect&bpo=36412]: Fix a possible crash when creating a new dictionary.
- [bpo-36398](https://bugs.python.org/issue?@action=redirect&bpo=36398) [https://bugs.python.org/issue?@action=redirect&bpo=36398]: Fix a possible crash in `structseq_repr()`.

- [bpo-36256](https://bugs.python.org/issue?@action=redirect&bpo=36256) [https://bugs.python.org/issue?@action=redirect&bpo=36256]: Fix bug in parsermodule when parsing a state in a DFA that has two or more arcs with labels of the same type. Patch by Pablo Galindo.
- [bpo-36365](https://bugs.python.org/issue?@action=redirect&bpo=36365) [https://bugs.python.org/issue?@action=redirect&bpo=36365]: repr(structseq) is no longer limited to 512 bytes.
- [bpo-36374](https://bugs.python.org/issue?@action=redirect&bpo=36374) [https://bugs.python.org/issue?@action=redirect&bpo=36374]: Fix a possible null pointer dereference in merge\_consts\_recursive(). Patch by Zackery Spytz.
- [bpo-36236](https://bugs.python.org/issue?@action=redirect&bpo=36236) [https://bugs.python.org/issue?@action=redirect&bpo=36236]: At Python initialization, the current directory is no longer prepended to `sys.path` if it has been removed.
- [bpo-36352](https://bugs.python.org/issue?@action=redirect&bpo=36352) [https://bugs.python.org/issue?@action=redirect&bpo=36352]: Python initialization now fails with an error, rather than silently truncating paths, if a path is too long.
- [bpo-36301](https://bugs.python.org/issue?@action=redirect&bpo=36301) [https://bugs.python.org/issue?@action=redirect&bpo=36301]: Python initialization now fails if decoding pybuilddir.txt configuration file fails at startup.
- [bpo-36333](https://bugs.python.org/issue?@action=redirect&bpo=36333) [https://bugs.python.org/issue?@action=redirect&bpo=36333]: Fix leak in \_PyRuntimeState\_Fini. Contributed by Stéphane Wirtel.
- [bpo-36332](https://bugs.python.org/issue?@action=redirect&bpo=36332) [https://bugs.python.org/issue?@action=redirect&bpo=36332]: The builtin `compile()` can now handle AST objects that contain assignment expressions. Patch by Pablo Galindo.
- [bpo-36282](https://bugs.python.org/issue?@action=redirect&bpo=36282) [https://bugs.python.org/issue?@action=redirect&bpo=36282]: Improved error message for too much positional arguments in some builtin functions.
- [bpo-30040](https://bugs.python.org/issue?@action=redirect&bpo=30040) [https://bugs.python.org/issue?@action=redirect&bpo=30040]: New empty dict uses fewer memory for now. It used more memory than empty dict created by `dict.clear()`. And empty dict creation and deletion is about 2x faster. Patch by Inada Naoki.
- [bpo-36262](https://bugs.python.org/issue?@action=redirect&bpo=36262) [https://bugs.python.org/issue?@action=redirect&bpo=36262]: Fix an unlikely memory leak on

conversion from string to float in the function

`_Py_dg_strtod()` used by `float(str)`,  
`complex(str)`, [`pickle.load\(\)`](#), [`marshal.load\(\)`](#), etc.

- [bpo-36252](#) [<https://bugs.python.org/issue?@action=redirect&bpo=36252>]: Update Unicode databases to version 12.0.0.
- [bpo-36218](#) [<https://bugs.python.org/issue?@action=redirect&bpo=36218>]: Fix a segfault occurring when sorting a list of heterogeneous values. Patch contributed by Rémi Lapeyre and Elliot Gorokhovskiy.
- [bpo-36188](#) [<https://bugs.python.org/issue?@action=redirect&bpo=36188>]: Cleaned up left-over vestiges of Python 2 unbound method handling in method objects and documentation. Patch by Martijn Pieters
- [bpo-36124](#) [<https://bugs.python.org/issue?@action=redirect&bpo=36124>]: Add a new interpreter-specific dict and expose it in the C-API via `PyInterpreterState_GetDict()`. This parallels `PyThreadState_GetDict()`. However, extension modules should continue using `PyModule_GetState()` for their own internal per-interpreter state.
- [bpo-35975](#) [<https://bugs.python.org/issue?@action=redirect&bpo=35975>]: Add a `feature_version` flag to `ast.parse()` (documented) and `compile()` (hidden) that allows tweaking the parser to support older versions of the grammar. In particular, if `feature_version` is 5 or 6, the hacks for the `async` and `await` keyword from PEP 492 are reinstated. (For 7 or higher, these are unconditionally treated as keywords, but they are still special tokens rather than `NAME` tokens that the parser driver recognizes.)
- [bpo-31904](#) [<https://bugs.python.org/issue?@action=redirect&bpo=31904>]: Use UTF-8 as the system encoding on VxWorks.
- [bpo-36048](#) [<https://bugs.python.org/issue?@action=redirect&bpo=36048>]: The [`\_\_index\_\_\(\)`](#) special method will be used instead of [`\_\_int\_\_\(\)`](#) for implicit conversion of Python numbers to C integers. Using the [`\_\_int\_\_\(\)`](#) method in implicit conversions has been deprecated.
- [bpo-35808](#) [<https://bugs.python.org/issue?>]

@action=redirect&bpo=35808]: Retire pgen and use a modified version of pgen2 to generate the parser. Patch by Pablo Galindo.

## Library

- [bpo-36401](https://bugs.python.org/issue?@action=redirect&bpo=36401) [https://bugs.python.org/issue?@action=redirect&bpo=36401]: The class documentation created by pydoc now has a separate section for readonly properties.
- [bpo-36320](https://bugs.python.org/issue?@action=redirect&bpo=36320) [https://bugs.python.org/issue?@action=redirect&bpo=36320]: The typing.NamedTuple() class has deprecated the \_field\_types attribute in favor of the \_annotations\_ attribute which carried the same information. Also, both attributes were converted from OrderedDict to a regular dict.
- [bpo-34745](https://bugs.python.org/issue?@action=redirect&bpo=34745) [https://bugs.python.org/issue?@action=redirect&bpo=34745]: Fix [asyncio](#) ssl memory issues caused by circular references
- [bpo-36324](https://bugs.python.org/issue?@action=redirect&bpo=36324) [https://bugs.python.org/issue?@action=redirect&bpo=36324]: Add method to statistics.NormalDist for computing the inverse cumulative normal distribution.
- [bpo-36321](https://bugs.python.org/issue?@action=redirect&bpo=36321) [https://bugs.python.org/issue?@action=redirect&bpo=36321]: collections.nametuple() misspelled the name of an attribute. To be consistent with typing.NamedTuple, the attribute name should have been “\_field\_defaults” instead of “\_fields\_defaults”. For backwards compatibility, both spellings are now created. The misspelled version may be removed in the future.
- [bpo-36297](https://bugs.python.org/issue?@action=redirect&bpo=36297) [https://bugs.python.org/issue?@action=redirect&bpo=36297]: “unicode\_internal” codec is removed. It was deprecated since Python 3.3. Patch by Inada Naoki.
- [bpo-36298](https://bugs.python.org/issue?@action=redirect&bpo=36298) [https://bugs.python.org/issue?@action=redirect&bpo=36298]: Raise ModuleNotFoundError in pyclbr when a module can't be found. Thanks to ‘mental’ for the bug report.
- [bpo-36268](https://bugs.python.org/issue?@action=redirect&bpo=36268) [https://bugs.python.org/issue?@action=redirect&bpo=36268]: Switch the default format used for writing tars with mod:[tarfile](#) to the modern POSIX.1-2001

pax standard, from the vendor-specific GNU. Contributed by C.A.M. Gerlach.

- [bpo-36285](https://bugs.python.org/issue?@action=redirect&bpo=36285) [https://bugs.python.org/issue?@action=redirect&bpo=36285]: Fix integer overflows in the array module. Patch by Stephan Hohe.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Add `_signal` module support for VxWorks.
- [bpo-36272](https://bugs.python.org/issue?@action=redirect&bpo=36272) [https://bugs.python.org/issue?@action=redirect&bpo=36272]: **logging** does not silently ignore `RecursionError` anymore. Patch contributed by Rémi Lapeyre.
- [bpo-36280](https://bugs.python.org/issue?@action=redirect&bpo=36280) [https://bugs.python.org/issue?@action=redirect&bpo=36280]: Add a `kind` field to `ast.Constant`. It is `'u'` if the literal has a `'u'` prefix (i.e. a Python 2 style unicode literal), else `None`.
- [bpo-35931](https://bugs.python.org/issue?@action=redirect&bpo=35931) [https://bugs.python.org/issue?@action=redirect&bpo=35931]: The **pdb** debug command now gracefully handles all exceptions.
- [bpo-36251](https://bugs.python.org/issue?@action=redirect&bpo=36251) [https://bugs.python.org/issue?@action=redirect&bpo=36251]: Fix format strings used for `stderrprinter` and `re.Match` reprs. Patch by Stephan Hohe.
- [bpo-36235](https://bugs.python.org/issue?@action=redirect&bpo=36235) [https://bugs.python.org/issue?@action=redirect&bpo=36235]: Fix `CFLAGS` in `customize_compiler()` of `distutils.sysconfig`: when the `CFLAGS` environment variable is defined, don't override `CFLAGS` variable with the `OPT` variable anymore. Initial patch written by David Malcolm.
- [bpo-35807](https://bugs.python.org/issue?@action=redirect&bpo=35807) [https://bugs.python.org/issue?@action=redirect&bpo=35807]: Update `ensurepip` to install `pip 19.0.3` and `setuptools 40.8.0`.
- [bpo-36139](https://bugs.python.org/issue?@action=redirect&bpo=36139) [https://bugs.python.org/issue?@action=redirect&bpo=36139]: Release GIL when closing **mmap** objects.
- [bpo-36179](https://bugs.python.org/issue?@action=redirect&bpo=36179) [https://bugs.python.org/issue?@action=redirect&bpo=36179]: Fix two unlikely reference leaks in `_hashopenssl`. The leaks only occur in out-of-memory cases.
- [bpo-36169](https://bugs.python.org/issue?@action=redirect&bpo=36169) [https://bugs.python.org/issue?@action=redirect&bpo=36169]: Add `overlap()` method to `statistics.NormalDist`. Computes the overlapping coefficient for two normal distributions.

- [bpo-36103](https://bugs.python.org/issue?@action=redirect&bpo=36103) [https://bugs.python.org/issue?@action=redirect&bpo=36103]: Default buffer size used by `shutil.copyfileobj()` is changed from 16 KiB to 64 KiB on non-Windows platform to reduce system call overhead. Contributed by Inada Naoki.
- [bpo-36130](https://bugs.python.org/issue?@action=redirect&bpo=36130) [https://bugs.python.org/issue?@action=redirect&bpo=36130]: Fix `pdb` with `skip=...` when stepping into a frame without a `__name__` global. Patch by Anthony Sottile.
- [bpo-35652](https://bugs.python.org/issue?@action=redirect&bpo=35652) [https://bugs.python.org/issue?@action=redirect&bpo=35652]: `shutil.copypath(copy_function=...)` erroneously pass `DirEntry` instead of a path string.
- [bpo-35178](https://bugs.python.org/issue?@action=redirect&bpo=35178) [https://bugs.python.org/issue?@action=redirect&bpo=35178]: Ensure custom `warnings.formatwarning()` function can receive `line` as positional argument. Based on patch by Tashrif Billah.
- [bpo-36106](https://bugs.python.org/issue?@action=redirect&bpo=36106) [https://bugs.python.org/issue?@action=redirect&bpo=36106]: Resolve potential name clash with `libm's sinpi()`. Patch by Dmitrii Pasechnik.
- [bpo-36091](https://bugs.python.org/issue?@action=redirect&bpo=36091) [https://bugs.python.org/issue?@action=redirect&bpo=36091]: Clean up reference to `async` generator in `Lib/types`. Patch by Henry Chen.
- [bpo-36043](https://bugs.python.org/issue?@action=redirect&bpo=36043) [https://bugs.python.org/issue?@action=redirect&bpo=36043]: `FileCookieJar` supports `path-like object`. Contributed by Stéphane Wirtel
- [bpo-35899](https://bugs.python.org/issue?@action=redirect&bpo=35899) [https://bugs.python.org/issue?@action=redirect&bpo=35899]: `Enum` has been fixed to correctly handle empty strings and strings with non-Latin characters (ie. 'α', 'Ñ') without crashing. Original patch contributed by Maxwell. Assisted by Stéphane Wirtel.
- [bpo-21269](https://bugs.python.org/issue?@action=redirect&bpo=21269) [https://bugs.python.org/issue?@action=redirect&bpo=21269]: Add `args` and `kwargs` properties to mock call objects. Contributed by Kumar Akshay.
- [bpo-30670](https://bugs.python.org/issue?@action=redirect&bpo=30670) [https://bugs.python.org/issue?@action=redirect&bpo=30670]: `pprint.pp` has been added to pretty-print objects with dictionary keys being sorted with their insertion order by default. Parameter `sort_dicts` has been added to `pprint.pprint`, `pprint.pformat` and

- `pprint.PrettyPrinter`**. Contributed by Rémi Lapeyre.
- **`bpo-35843`** [<https://bugs.python.org/issue?@action=redirect&bpo=35843>]: Implement `__getitem__` for `_NamespacePath`. Patch by Anthony Sottile.
  - **`bpo-35802`** [<https://bugs.python.org/issue?@action=redirect&bpo=35802>]: Clean up code which checked presence of `os.stat / os.lstat / os.chmod` which are always present. Patch by Anthony Sottile.
  - **`bpo-35715`** [<https://bugs.python.org/issue?@action=redirect&bpo=35715>]: Librates the return value of a `ProcessPoolExecutor _process_worker` after it's no longer needed to free memory
  - **`bpo-35493`** [<https://bugs.python.org/issue?@action=redirect&bpo=35493>]: Use **`multiprocessing.connection.wait()`** instead of polling each 0.2 seconds for worker updates in **`multiprocessing.Pool`**. Patch by Pablo Galindo.
  - **`bpo-35661`** [<https://bugs.python.org/issue?@action=redirect&bpo=35661>]: Store the venv prompt in `pyvenv.cfg`.
  - **`bpo-35121`** [<https://bugs.python.org/issue?@action=redirect&bpo=35121>]: Don't set cookie for a request when the request path is a prefix match of the cookie's path attribute but doesn't end with `"/`. Patch by Karthikeyan Singaravelan.
  - **`bpo-21478`** [<https://bugs.python.org/issue?@action=redirect&bpo=21478>]: Calls to a child function created with **`unittest.mock.create_autospec()`** should propagate to the parent. Patch by Karthikeyan Singaravelan.
  - **`bpo-35198`** [<https://bugs.python.org/issue?@action=redirect&bpo=35198>]: Fix `C + +` extension compilation on AIX

## Documentation

- **`bpo-36329`** [<https://bugs.python.org/issue?@action=redirect&bpo=36329>]: Declare the path of the Python binary for the usage of `Tools/scripts/serve.py` when executing `make -C Doc/ serve`. Contributed by Stéphane Wirtel

- [bpo-36138](https://bugs.python.org/issue?@action=redirect&bpo=36138) [https://bugs.python.org/issue?@action=redirect&bpo=36138]: Improve documentation about converting `datetime.timedelta` to scalars.
- [bpo-21314](https://bugs.python.org/issue?@action=redirect&bpo=21314) [https://bugs.python.org/issue?@action=redirect&bpo=21314]: A new entry was added to the Core Language Section of the Programming FAQ, which explains the usage of slash(/) in the signature of a function. Patch by Lysandros Nikolaou

## Tests

- [bpo-36234](https://bugs.python.org/issue?@action=redirect&bpo=36234) [https://bugs.python.org/issue?@action=redirect&bpo=36234]: `test_posix.PosixUidGidTests`: add tests for invalid uid/gid type (str). Initial patch written by David Malcolm.
- [bpo-29571](https://bugs.python.org/issue?@action=redirect&bpo=29571) [https://bugs.python.org/issue?@action=redirect&bpo=29571]: Fix `test_re.test_locale_flag()`: use `locale.getpreferredencoding()` rather than `locale.getlocale()` to get the locale encoding. With some locales, `locale.getlocale()` returns the wrong encoding.
- [bpo-36123](https://bugs.python.org/issue?@action=redirect&bpo=36123) [https://bugs.python.org/issue?@action=redirect&bpo=36123]: Fix race condition in `test_socket`.

## Build

- [bpo-36356](https://bugs.python.org/issue?@action=redirect&bpo=36356) [https://bugs.python.org/issue?@action=redirect&bpo=36356]: Fix leaks that led to build failure when configured with address sanitizer.
- [bpo-36146](https://bugs.python.org/issue?@action=redirect&bpo=36146) [https://bugs.python.org/issue?@action=redirect&bpo=36146]: Add `TEST_EXTENSIONS` constant to `setup.py` to allow to not build test extensions like `_testcapi`.
- [bpo-36146](https://bugs.python.org/issue?@action=redirect&bpo=36146) [https://bugs.python.org/issue?@action=redirect&bpo=36146]: Fix `setup.py` on macOS: only add `/usr/include/ffi` to include directories of `_ctypes`, not for all extensions.
- [bpo-31904](https://bugs.python.org/issue?@action=redirect&bpo=31904) [https://bugs.python.org/issue?@action=redirect&bpo=31904]: Enable build system to cross-build

for VxWorks RTOS.

## Windows

- [bpo-36312](https://bugs.python.org/issue?@action=redirect&bpo=36312) [https://bugs.python.org/issue?@action=redirect&bpo=36312]: Fixed decoders for the following code pages: 50220, 50221, 50222, 50225, 50227, 50229, 57002 through 57011, 65000 and 42.
- [bpo-36264](https://bugs.python.org/issue?@action=redirect&bpo=36264) [https://bugs.python.org/issue?@action=redirect&bpo=36264]: Don't honor `os.path.expanduser` on windows. Patch by Anthony Sottile.
- [bpo-24643](https://bugs.python.org/issue?@action=redirect&bpo=24643) [https://bugs.python.org/issue?@action=redirect&bpo=24643]: Fix name collisions due to `#define timezone _timezone` in `PC/pyconfig.h`.

## IDLE

- [bpo-36405](https://bugs.python.org/issue?@action=redirect&bpo=36405) [https://bugs.python.org/issue?@action=redirect&bpo=36405]: Use dict unpacking in `idlelib`.
- [bpo-36396](https://bugs.python.org/issue?@action=redirect&bpo=36396) [https://bugs.python.org/issue?@action=redirect&bpo=36396]: Remove `fgBg` param of `idlelib.config.GetHighlight()`. This param was only used twice and changed the return type.
- [bpo-36176](https://bugs.python.org/issue?@action=redirect&bpo=36176) [https://bugs.python.org/issue?@action=redirect&bpo=36176]: Fix IDLE autocomplete & calltip popup colors. Prevent conflicts with Linux dark themes (and slightly darken calltip background).
- [bpo-23205](https://bugs.python.org/issue?@action=redirect&bpo=23205) [https://bugs.python.org/issue?@action=redirect&bpo=23205]: For the `grep` module, add tests for `findfiles`, refactor `findfiles` to be a module-level function, and refactor `findfiles` to use `os.walk`.
- [bpo-23216](https://bugs.python.org/issue?@action=redirect&bpo=23216) [https://bugs.python.org/issue?@action=redirect&bpo=23216]: Add docstrings to IDLE search modules.
- [bpo-36152](https://bugs.python.org/issue?@action=redirect&bpo=36152) [https://bugs.python.org/issue?@action=redirect&bpo=36152]: Remove `colorizer.ColorDelegator.close_when_done` and the corresponding argument of `.close()`. In IDLE, both have always been `None` or `False` since 2007.

- [bpo-32129](https://bugs.python.org/issue?@action=redirect&bpo=32129) [https://bugs.python.org/issue?@action=redirect&bpo=32129]: Avoid blurry IDLE application icon on macOS with Tk 8.6. Patch by Kevin Walzer.
- [bpo-36096](https://bugs.python.org/issue?@action=redirect&bpo=36096) [https://bugs.python.org/issue?@action=redirect&bpo=36096]: Refactor class variables to instance variables in colorizer.
- [bpo-30348](https://bugs.python.org/issue?@action=redirect&bpo=30348) [https://bugs.python.org/issue?@action=redirect&bpo=30348]: Increase test coverage of `idlelib.autocomplete` by 30%. Patch by Louie Lu

## Tools/Demos

- [bpo-35132](https://bugs.python.org/issue?@action=redirect&bpo=35132) [https://bugs.python.org/issue?@action=redirect&bpo=35132]: Fix `py-list` and `py-bt` commands of `python-gdb.py` on `gdb7`.
- [bpo-32217](https://bugs.python.org/issue?@action=redirect&bpo=32217) [https://bugs.python.org/issue?@action=redirect&bpo=32217]: Fix freeze script on Windows.

## C API

- [bpo-36381](https://bugs.python.org/issue?@action=redirect&bpo=36381) [https://bugs.python.org/issue?@action=redirect&bpo=36381]: Raise `DeprecationWarning` when `'#'` formats are used for building or parsing values without `PY_SSIZE_T_CLEAN`.
- [bpo-36142](https://bugs.python.org/issue?@action=redirect&bpo=36142) [https://bugs.python.org/issue?@action=redirect&bpo=36142]: The whole `coreconfig.h` header is now excluded from `Py_LIMITED_API`. Move functions definitions into a new internal `pycore_coreconfig.h` header.

# Python 3.8.0 alpha 2

*Release date: 2019-02-25*

## Core and Builtins

- [bpo-36052](https://bugs.python.org/issue?@action=redirect&bpo=36052) [https://bugs.python.org/issue?@action=redirect&bpo=36052]: Raise a `SyntaxError` when assigning a value to `__debug__` with the Assignment Operator. Contributed by Stéphane Wirtel and Pablo Galindo.

- [bpo-36012](https://bugs.python.org/issue?@action=redirect&bpo=36012) [https://bugs.python.org/issue?@action=redirect&bpo=36012]: Doubled the speed of class variable writes. When a non-dunder attribute was updated, there was an unnecessary call to update slots.
- [bpo-35942](https://bugs.python.org/issue?@action=redirect&bpo=35942) [https://bugs.python.org/issue?@action=redirect&bpo=35942]: The error message emitted when returning invalid types from `__fspath__` in interfaces that allow passing **PathLike** objects has been improved and now it does explain the origin of the error.
- [bpo-36016](https://bugs.python.org/issue?@action=redirect&bpo=36016) [https://bugs.python.org/issue?@action=redirect&bpo=36016]: `gc.get_objects` can now receive an optional parameter indicating a generation to get objects from. Patch by Pablo Galindo.
- [bpo-1054041](https://bugs.python.org/issue?@action=redirect&bpo=1054041) [https://bugs.python.org/issue?@action=redirect&bpo=1054041]: When the main interpreter exits due to an uncaught `KeyboardInterrupt`, the process now exits in the appropriate manner for its parent process to detect that a SIGINT or ^C terminated the process. This allows shells and batch scripts to understand that the user has asked them to stop.
- [bpo-35992](https://bugs.python.org/issue?@action=redirect&bpo=35992) [https://bugs.python.org/issue?@action=redirect&bpo=35992]: Fix `__class_getitem__()` not being called on a class with a custom non-subscriptable metaclass.
- [bpo-35993](https://bugs.python.org/issue?@action=redirect&bpo=35993) [https://bugs.python.org/issue?@action=redirect&bpo=35993]: Fix a crash on fork when using subinterpreters. Contributed by Stéphane Wirtel
- [bpo-35991](https://bugs.python.org/issue?@action=redirect&bpo=35991) [https://bugs.python.org/issue?@action=redirect&bpo=35991]: Fix a potential double free in `Modules/_randommodule.c`.
- [bpo-35961](https://bugs.python.org/issue?@action=redirect&bpo=35961) [https://bugs.python.org/issue?@action=redirect&bpo=35961]: Fix a crash in `slice_richcompare()`: use strong references rather than stolen references for the two temporary internal tuples.
- [bpo-35911](https://bugs.python.org/issue?@action=redirect&bpo=35911) [https://bugs.python.org/issue?@action=redirect&bpo=35911]: Enable the creation of cell objects by adding a `cell.__new__` method, and expose the type `cell` in `Lib/types.py` under the name `CellType`. Patch by Pierre Glaser.
- [bpo-12822](https://bugs.python.org/issue?@action=redirect&bpo=12822) [https://bugs.python.org/issue?@action=redirect&bpo=12822]

@action=redirect&bpo=12822]: Use monotonic clock for `pthread_cond_timedwait` when `pthread_condattr_setclock` and `CLOCK_MONOTONIC` are available.

- [bpo-15248](https://bugs.python.org/issue?@action=redirect&bpo=15248) [https://bugs.python.org/issue?@action=redirect&bpo=15248]: The compiler emits now syntax warnings in the case when a comma is likely missed before tuple or list.
- [bpo-35886](https://bugs.python.org/issue?@action=redirect&bpo=35886) [https://bugs.python.org/issue?@action=redirect&bpo=35886]: The implementation of `PyInterpreterState` has been moved into the internal header files (guarded by `Py_BUILD_CORE`).
- [bpo-31506](https://bugs.python.org/issue?@action=redirect&bpo=31506) [https://bugs.python.org/issue?@action=redirect&bpo=31506]: Clarify the errors reported when `object.__new__` and `object.__init__` receive more than one argument. Contributed by Sanyam Khurana.
- [bpo-35724](https://bugs.python.org/issue?@action=redirect&bpo=35724) [https://bugs.python.org/issue?@action=redirect&bpo=35724]: Signal-handling is now guaranteed to happen relative to the main interpreter.
- [bpo-33608](https://bugs.python.org/issue?@action=redirect&bpo=33608) [https://bugs.python.org/issue?@action=redirect&bpo=33608]: We added a new internal `_Py_AddPendingCall()` that operates relative to the provided interpreter. This allows us to use the existing implementation to ask another interpreter to do work that cannot be done in the current interpreter, like `decref` an object the other interpreter owns. The existing `Py_AddPendingCall()` only operates relative to the main interpreter.
- [bpo-33989](https://bugs.python.org/issue?@action=redirect&bpo=33989) [https://bugs.python.org/issue?@action=redirect&bpo=33989]: Fix a possible crash in `list.sort()` when sorting objects with `ob_type->tp_richcompare == NULL`. Patch by Zackery Spytz.

## Library

- [bpo-35512](https://bugs.python.org/issue?@action=redirect&bpo=35512) [https://bugs.python.org/issue?@action=redirect&bpo=35512]: `unittest.mock.patch.dict()` used as a decorator with string target resolves the target during function call instead of during decorator construction. Patch by Karthikeyan Singaravelan.

- [bpo-36018](https://bugs.python.org/issue?@action=redirect&bpo=36018) [https://bugs.python.org/issue?@action=redirect&bpo=36018]: Add `statistics.NormalDist`, a tool for creating and manipulating normal distributions of random variable. Features a composite class that treats the mean and standard deviation of measurement data as single entity.
- [bpo-35904](https://bugs.python.org/issue?@action=redirect&bpo=35904) [https://bugs.python.org/issue?@action=redirect&bpo=35904]: Added `statistics.fmean()` as a faster, floating point variant of the existing `mean()` function.
- [bpo-35918](https://bugs.python.org/issue?@action=redirect&bpo=35918) [https://bugs.python.org/issue?@action=redirect&bpo=35918]: Removed broken `has_key` method from `multiprocessing.managers.SyncManager.dict`. Contributed by Rémi Lapeyre.
- [bpo-18283](https://bugs.python.org/issue?@action=redirect&bpo=18283) [https://bugs.python.org/issue?@action=redirect&bpo=18283]: Add support for bytes to `shutil.which()`.
- [bpo-35960](https://bugs.python.org/issue?@action=redirect&bpo=35960) [https://bugs.python.org/issue?@action=redirect&bpo=35960]: Fix `dataclasses.field()` throwing away empty mapping objects passed as metadata.
- [bpo-35500](https://bugs.python.org/issue?@action=redirect&bpo=35500) [https://bugs.python.org/issue?@action=redirect&bpo=35500]: Write expected and actual call parameters on separate lines in `unittest.mock.Mock.assert_called_with()` assertion errors. Contributed by Susan Su.
- [bpo-35931](https://bugs.python.org/issue?@action=redirect&bpo=35931) [https://bugs.python.org/issue?@action=redirect&bpo=35931]: The `pdb` debug command now gracefully handles syntax errors.
- [bpo-24209](https://bugs.python.org/issue?@action=redirect&bpo=24209) [https://bugs.python.org/issue?@action=redirect&bpo=24209]: In `http.server` script, rely on `getaddrinfo` to bind to preferred address based on the `bind` parameter. Now default bind or binding to a name may bind to IPv6 or dual-stack, depending on the environment.
- [bpo-35321](https://bugs.python.org/issue?@action=redirect&bpo=35321) [https://bugs.python.org/issue?@action=redirect&bpo=35321]: Set `__spec__.origin` of `_frozen_importlib` to `frozen` so that it matches the behavior of `_frozen_importlib_external`. Patch by Nina Zakharenko.
- [bpo-35378](https://bugs.python.org/issue?@action=redirect&bpo=35378) [https://bugs.python.org/issue?@action=redirect&bpo=35378]: Fix a reference issue inside `multiprocessing.Pool` that caused the pool to remain alive if it was deleted without being closed or terminated

explicitly. A new strong reference is added to the pool iterators to link the lifetime of the pool to the lifetime of its iterators so the pool does not get destroyed if a pool iterator is still alive.

- [bpo-34294](https://bugs.python.org/issue?@action=redirect&bpo=34294) [https://bugs.python.org/issue?@action=redirect&bpo=34294]: re module, fix wrong capturing groups in rare cases. `re.search()`, `re.findall()`, `re.sub()` and other functions that scan through string looking for a match, should reset capturing groups between two match attempts. Patch by Ma Lin.
- [bpo-35615](https://bugs.python.org/issue?@action=redirect&bpo=35615) [https://bugs.python.org/issue?@action=redirect&bpo=35615]: **weakref**: Fix a RuntimeError when copying a WeakKeyDictionary or a WeakValueDictionary, due to some keys or values disappearing while iterating.
- [bpo-35606](https://bugs.python.org/issue?@action=redirect&bpo=35606) [https://bugs.python.org/issue?@action=redirect&bpo=35606]: Implement `math.prod()` as analogous function to `sum()` that returns the product of a 'start' value (default: 1) times an iterable of numbers. Patch by Pablo Galindo.
- [bpo-32417](https://bugs.python.org/issue?@action=redirect&bpo=32417) [https://bugs.python.org/issue?@action=redirect&bpo=32417]: Performing arithmetic between `datetime.datetime` subclasses and `datetime.timedelta` now returns an object of the same type as the `datetime.datetime` subclass. As a result, `datetime.datetime.astimezone()` and alternate constructors like `datetime.datetime.now()` and `datetime.fromtimestamp()` called with a `tz` argument now *also* retain their subclass.
- [bpo-35153](https://bugs.python.org/issue?@action=redirect&bpo=35153) [https://bugs.python.org/issue?@action=redirect&bpo=35153]: Add *headers* optional keyword-only parameter to `xmlrpc.client.ServerProxy`, `xmlrpc.client.Transport` and `xmlrpc.client.SafeTransport`. Patch by Cédric Krier.
- [bpo-34572](https://bugs.python.org/issue?@action=redirect&bpo=34572) [https://bugs.python.org/issue?@action=redirect&bpo=34572]: Fix C implementation of `pickle.loads` to use `importlib`'s locking mechanisms, and thereby avoid using partially loaded modules. Patch by Tim Burgess.

## Documentation

- [bpo-36083](https://bugs.python.org/issue?@action=redirect&bpo=36083) [https://bugs.python.org/issue?@action=redirect&bpo=36083]: Fix formatting of `-check-hash-based-pycs` options in the manpage Synopsis.
- [bpo-36007](https://bugs.python.org/issue?@action=redirect&bpo=36007) [https://bugs.python.org/issue?@action=redirect&bpo=36007]: Bump minimum sphinx version to 1.8. Patch by Anthony Sottile.
- [bpo-22062](https://bugs.python.org/issue?@action=redirect&bpo=22062) [https://bugs.python.org/issue?@action=redirect&bpo=22062]: Update documentation and docstrings for `pathlib`. Original patch by Mike Short.

## Tests

- [bpo-27313](https://bugs.python.org/issue?@action=redirect&bpo=27313) [https://bugs.python.org/issue?@action=redirect&bpo=27313]: Avoid `test_ttk_guionly` `ComboboxTest` failure with macOS Cocoa Tk.
- [bpo-36019](https://bugs.python.org/issue?@action=redirect&bpo=36019) [https://bugs.python.org/issue?@action=redirect&bpo=36019]: Add `test.support.TEST_HTTP_URL` and replace references of <http://www.example.com> by this new constant. Contributed by Stéphane Wirtel.
- [bpo-36037](https://bugs.python.org/issue?@action=redirect&bpo=36037) [https://bugs.python.org/issue?@action=redirect&bpo=36037]: Fix `test_ssl` for strict OpenSSL configuration like RHEL8 strict crypto policy. Use older TLS version for minimum TLS version of the server SSL context if needed, to test TLS version older than default minimum TLS version.
- [bpo-35798](https://bugs.python.org/issue?@action=redirect&bpo=35798) [https://bugs.python.org/issue?@action=redirect&bpo=35798]: Added `test.support.check_syntax_warning()`.
- [bpo-35505](https://bugs.python.org/issue?@action=redirect&bpo=35505) [https://bugs.python.org/issue?@action=redirect&bpo=35505]: Make `test_imap4_host_default_value` independent on whether the local IMAP server is running.
- [bpo-35917](https://bugs.python.org/issue?@action=redirect&bpo=35917) [https://bugs.python.org/issue?@action=redirect&bpo=35917]: multiprocessing: provide unit tests

for SyncManager and SharedMemoryManager classes + all the shareable types which are supposed to be supported by them. (patch by Giampaolo Rodola)

- [bpo-35704](https://bugs.python.org/issue?@action=redirect&bpo=35704) [https://bugs.python.org/issue?@action=redirect&bpo=35704]: Skip `test_shutil.test_unpack_archive_xztar` to prevent a `MemoryError` on 32-bit AIX when `MAXDATA` setting is less than `0x20000000`.

Patch by Michael Felt (aixtools)

- [bpo-34720](https://bugs.python.org/issue?@action=redirect&bpo=34720) [https://bugs.python.org/issue?@action=redirect&bpo=34720]: Assert `m_state != NULL` to mimic GC traversal functions that do not correctly handle module creation when the module state has not been created.

## Windows

- [bpo-35976](https://bugs.python.org/issue?@action=redirect&bpo=35976) [https://bugs.python.org/issue?@action=redirect&bpo=35976]: Added ARM build support to Windows build files in PCBuild.
- [bpo-35692](https://bugs.python.org/issue?@action=redirect&bpo=35692) [https://bugs.python.org/issue?@action=redirect&bpo=35692]: `pathlib` no longer raises when checking file and directory existence on drives that are not ready
- [bpo-35872](https://bugs.python.org/issue?@action=redirect&bpo=35872) [https://bugs.python.org/issue?@action=redirect&bpo=35872]: Uses the base Python executable when invoking `venv` in a virtual environment
- [bpo-35873](https://bugs.python.org/issue?@action=redirect&bpo=35873) [https://bugs.python.org/issue?@action=redirect&bpo=35873]: Prevents `venv` paths being inherited by child processes
- [bpo-35299](https://bugs.python.org/issue?@action=redirect&bpo=35299) [https://bugs.python.org/issue?@action=redirect&bpo=35299]: Fix `sysconfig` detection of the source directory and `distutils` handling of `pyconfig.h` during PGO profiling

## IDLE

- [bpo-24310](https://bugs.python.org/issue?@action=redirect&bpo=24310) [https://bugs.python.org/issue?@action=redirect&bpo=24310]

@action=redirect&bpo=24310]: IDLE – Document settings dialog font tab sample.

- [bpo-35833](https://bugs.python.org/issue?@action=redirect&bpo=35833) [https://bugs.python.org/issue?@action=redirect&bpo=35833]: Revise IDLE doc for control codes sent to Shell. Add a code example block.
- [bpo-35689](https://bugs.python.org/issue?@action=redirect&bpo=35689) [https://bugs.python.org/issue?@action=redirect&bpo=35689]: Add docstrings and unittests for colorizer.py.

## Python 3.8.0 alpha 1

*Release date: 2019-02-03*

### Security

- [bpo-35746](https://bugs.python.org/issue?@action=redirect&bpo=35746) [https://bugs.python.org/issue?@action=redirect&bpo=35746]: [CVE-2019-5010] Fix a NULL pointer deref in ssl module. The cert parser did not handle CRL distribution points with empty DP or URI correctly. A malicious or buggy certificate can result into segfault. Vulnerability (TALOS-2018-0758) reported by Colin Read and Nicolas Edet of Cisco.
- [bpo-34812](https://bugs.python.org/issue?@action=redirect&bpo=34812) [https://bugs.python.org/issue?@action=redirect&bpo=34812]: The **-I** command line option (run Python in isolated mode) is now also copied by the **multiprocessing** and **distutils** modules when spawning child processes. Previously, only **-E** and **-s** options (enabled by **-I**) were copied.
- [bpo-34791](https://bugs.python.org/issue?@action=redirect&bpo=34791) [https://bugs.python.org/issue?@action=redirect&bpo=34791]: The **xml.sax** and **xml.dom.domreg** no longer use environment variables to override parser implementations when **sys.flags.ignore\_environment** is set by **-E** or **-I** arguments.
- [bpo-17239](https://bugs.python.org/issue?@action=redirect&bpo=17239) [https://bugs.python.org/issue?@action=redirect&bpo=17239]: The **xml.sax** and **xml.dom.minidom** parsers no longer processes external entities by default. External DTD and ENTITY declarations no longer load files or create network connections.
- [bpo-34623](https://bugs.python.org/issue?@action=redirect&bpo=34623) [https://bugs.python.org/issue?@action=redirect&bpo=34623]

@action=redirect&bpo=34623]: CVE-2018-14647: The C accelerated `_elementtree` module now initializes hash randomization salt from `_Py_HashSecret` instead of libexpat's default CSPRNG.

- [bpo-34405](https://bugs.python.org/issue?@action=redirect&bpo=34405) [https://bugs.python.org/issue?@action=redirect&bpo=34405]: Updated to OpenSSL 1.1.0i for Windows builds.
- [bpo-33871](https://bugs.python.org/issue?@action=redirect&bpo=33871) [https://bugs.python.org/issue?@action=redirect&bpo=33871]: Fixed sending the part of the file in `os.sendfile()` on macOS. Using the *trailers* argument could cause sending more bytes from the input file than was specified.
- [bpo-32533](https://bugs.python.org/issue?@action=redirect&bpo=32533) [https://bugs.python.org/issue?@action=redirect&bpo=32533]: Fixed thread-safety of error handling in `_ssl`.
- [bpo-33136](https://bugs.python.org/issue?@action=redirect&bpo=33136) [https://bugs.python.org/issue?@action=redirect&bpo=33136]: Harden `ssl` module against LibreSSL CVE-2018-8970. `X509_VERIFY_PARAM_set1_host()` is called with an explicit `namelen`. A new test ensures that NULL bytes are not allowed.
- [bpo-33001](https://bugs.python.org/issue?@action=redirect&bpo=33001) [https://bugs.python.org/issue?@action=redirect&bpo=33001]: Minimal fix to prevent buffer overrun in `os.symlink` on Windows
- [bpo-32981](https://bugs.python.org/issue?@action=redirect&bpo=32981) [https://bugs.python.org/issue?@action=redirect&bpo=32981]: Regexes in `difflib` and `poplib` were vulnerable to catastrophic backtracking. These regexes formed potential DOS vectors (REDOS). They have been refactored. This resolves CVE-2018-1060 and CVE-2018-1061. Patch by Jamie Davis.
- [bpo-28414](https://bugs.python.org/issue?@action=redirect&bpo=28414) [https://bugs.python.org/issue?@action=redirect&bpo=28414]: The `ssl` module now allows users to perform their own IDN en/decoding when using SNI.

## Core and Builtins

- [bpo-35877](https://bugs.python.org/issue?@action=redirect&bpo=35877) [https://bugs.python.org/issue?@action=redirect&bpo=35877]: Make parenthesis optional for named expressions in `while` statement. Patch by Karthikeyan Singaravelan.

- [bpo-35814](https://bugs.python.org/issue?@action=redirect&bpo=35814) [https://bugs.python.org/issue?@action=redirect&bpo=35814]: Allow same right hand side expressions in annotated assignments as in normal ones. In particular, `x: Tuple[int, int] = 1, 2` (without parentheses on the right) is now allowed.
- [bpo-35766](https://bugs.python.org/issue?@action=redirect&bpo=35766) [https://bugs.python.org/issue?@action=redirect&bpo=35766]: Add the option to parse PEP 484 type comments in the ast module. (Off by default.) This is merging the key functionality of the third party fork thereof, [typed\_ast]([https://github.com/python/typed\\_ast](https://github.com/python/typed_ast)).
- [bpo-35713](https://bugs.python.org/issue?@action=redirect&bpo=35713) [https://bugs.python.org/issue?@action=redirect&bpo=35713]: Reorganize Python initialization to get working exceptions and sys.stderr earlier.
- [bpo-33416](https://bugs.python.org/issue?@action=redirect&bpo=33416) [https://bugs.python.org/issue?@action=redirect&bpo=33416]: Add end line and end column position information to the Python AST nodes. This is a C-level backwards incompatible change.
- [bpo-35720](https://bugs.python.org/issue?@action=redirect&bpo=35720) [https://bugs.python.org/issue?@action=redirect&bpo=35720]: Fixed a minor memory leak in `pymain_parse_cmdline_impl` function in `Modules/main.c`
- [bpo-35634](https://bugs.python.org/issue?@action=redirect&bpo=35634) [https://bugs.python.org/issue?@action=redirect&bpo=35634]: `func(**kwargs)` will now raise an error when `kwargs` is a mapping containing multiple entries with the same key. An error was already raised when other keyword arguments are passed before `**kwargs` since Python 3.6.
- [bpo-35623](https://bugs.python.org/issue?@action=redirect&bpo=35623) [https://bugs.python.org/issue?@action=redirect&bpo=35623]: Fix a crash when sorting very long lists. Patch by Stephan Hohe.
- [bpo-35214](https://bugs.python.org/issue?@action=redirect&bpo=35214) [https://bugs.python.org/issue?@action=redirect&bpo=35214]: clang Memory Sanitizer build instrumentation was added to work around false positives from `posix`, `socket`, `time`, `test_io`, and `test_faulthandler`.

- [bpo-35560](https://bugs.python.org/issue?@action=redirect&bpo=35560) [https://bugs.python.org/issue?@action=redirect&bpo=35560]: Fix an assertion error in `format()` in debug build for floating point formatting with “n” format, zero padding and small width. Release build is not impacted. Patch by Karthikeyan Singaravelan.
- [bpo-35552](https://bugs.python.org/issue?@action=redirect&bpo=35552) [https://bugs.python.org/issue?@action=redirect&bpo=35552]: Format characters `%s` and `%V` in `PyUnicode_FromFormat()` and `%s` in `PyBytes_FromFormat()` no longer read memory past the limit if *precision* is specified.
- [bpo-35504](https://bugs.python.org/issue?@action=redirect&bpo=35504) [https://bugs.python.org/issue?@action=redirect&bpo=35504]: Fix segfaults and `SystemErrors` when deleting certain attributes. Patch by Zackery Spytz.
- [bpo-35504](https://bugs.python.org/issue?@action=redirect&bpo=35504) [https://bugs.python.org/issue?@action=redirect&bpo=35504]: Fixed a `SystemError` when delete the `characters_written` attribute of an `OSError`.
- [bpo-35494](https://bugs.python.org/issue?@action=redirect&bpo=35494) [https://bugs.python.org/issue?@action=redirect&bpo=35494]: Improved syntax error messages for unbalanced parentheses in f-string.
- [bpo-35444](https://bugs.python.org/issue?@action=redirect&bpo=35444) [https://bugs.python.org/issue?@action=redirect&bpo=35444]: Fixed error handling in pickling methods when fail to look up builtin “getattr”. Sped up pickling iterators.
- [bpo-35436](https://bugs.python.org/issue?@action=redirect&bpo=35436) [https://bugs.python.org/issue?@action=redirect&bpo=35436]: Fix various issues with memory allocation error handling. Patch by Zackery Spytz.
- [bpo-35423](https://bugs.python.org/issue?@action=redirect&bpo=35423) [https://bugs.python.org/issue?@action=redirect&bpo=35423]: Separate the signal handling trigger in the eval loop from the “pending calls” machinery. There is no semantic change and the difference in performance is insignificant.
- [bpo-35357](https://bugs.python.org/issue?@action=redirect&bpo=35357) [https://bugs.python.org/issue?@action=redirect&bpo=35357]: Internal attributes’ names of

`unittest.mock._Call` and `unittest.mock.MagicProxy` (`name`, `parent` & `from_kall`) are now prefixed with `_mock_` in order to prevent clashes with widely used object attributes. Fixed minor typo in test function name.

- [bpo-35372](https://bugs.python.org/issue?@action=redirect&bpo=35372) [https://bugs.python.org/issue?@action=redirect&bpo=35372]: Fixed the code page decoder for input longer than 2 GiB containing undecodable bytes.
- [bpo-35336](https://bugs.python.org/issue?@action=redirect&bpo=35336) [https://bugs.python.org/issue?@action=redirect&bpo=35336]: Fix `PYTHONCOERCECLOCALE=1` environment variable: only coerce the C locale if the `LC_CTYPE` locale is “C”.
- [bpo-31241](https://bugs.python.org/issue?@action=redirect&bpo=31241) [https://bugs.python.org/issue?@action=redirect&bpo=31241]: The *lineno* and *col\_offset* attributes of AST nodes for list comprehensions, generator expressions and tuples are now point to the opening parenthesis or square brace. For tuples without parenthesis they point to the position of the first item.
- [bpo-33954](https://bugs.python.org/issue?@action=redirect&bpo=33954) [https://bugs.python.org/issue?@action=redirect&bpo=33954]: For `str.format()`, `float.__format__()` and `complex.__format__()` methods for non-ASCII decimal point when using the “n” formatter.
- [bpo-35269](https://bugs.python.org/issue?@action=redirect&bpo=35269) [https://bugs.python.org/issue?@action=redirect&bpo=35269]: Fix a possible segfault involving a newly created coroutine. Patch by Zackery Sptz.
- [bpo-35224](https://bugs.python.org/issue?@action=redirect&bpo=35224) [https://bugs.python.org/issue?@action=redirect&bpo=35224]: Implement [PEP 572](https://peps.python.org/pep-0572/) [https://peps.python.org/pep-0572/] (assignment expressions). Patch by Emily Morehouse.
- [bpo-32492](https://bugs.python.org/issue?@action=redirect&bpo=32492) [https://bugs.python.org/issue?@action=redirect&bpo=32492]: Speed up `namedtuple()` attribute access by 1.6x using a C fast-path for the name descriptors. Patch by Pablo Galindo.

- [bpo-35214](https://bugs.python.org/issue?@action=redirect&bpo=35214) [https://bugs.python.org/issue?@action=redirect&bpo=35214]: Fixed an out of bounds memory access when parsing a truncated unicode escape sequence at the end of a string such as `'\N'`. It would read one byte beyond the end of the memory allocation.
- [bpo-35214](https://bugs.python.org/issue?@action=redirect&bpo=35214) [https://bugs.python.org/issue?@action=redirect&bpo=35214]: The interpreter and extension modules have had annotations added so that they work properly under clang's Memory Sanitizer. A new configure flag `-with-memory-sanitizer` has been added to make test builds of this nature easier to perform.
- [bpo-35193](https://bugs.python.org/issue?@action=redirect&bpo=35193) [https://bugs.python.org/issue?@action=redirect&bpo=35193]: Fix an off by one error in the bytecode peephole optimizer where it could read bytes beyond the end of bounds of an array when removing unreachable code. This bug was present in every release of Python 3.6 and 3.7 until now.
- [bpo-35169](https://bugs.python.org/issue?@action=redirect&bpo=35169) [https://bugs.python.org/issue?@action=redirect&bpo=35169]: Improved error messages for forbidden assignments.
- [bpo-34022](https://bugs.python.org/issue?@action=redirect&bpo=34022) [https://bugs.python.org/issue?@action=redirect&bpo=34022]: Fix handling of hash-based bytecode files in [zipimport](#). Patch by Elvis Pranskevichus.
- [bpo-28401](https://bugs.python.org/issue?@action=redirect&bpo=28401) [https://bugs.python.org/issue?@action=redirect&bpo=28401]: Debug builds will no longer attempt to import extension modules built for the ABI as they were never compatible to begin with. Patch by Stefano Rivera.
- [bpo-29341](https://bugs.python.org/issue?@action=redirect&bpo=29341) [https://bugs.python.org/issue?@action=redirect&bpo=29341]: Clarify in the docstrings of [os](#) methods that path-like objects are also accepted as input parameters.
- [bpo-35050](https://bugs.python.org/issue?@action=redirect&bpo=35050) [https://bugs.python.org/issue?@action=redirect&bpo=35050]: [socket](#): Fix off-by-one bug in

length check for `AF_ALG` name and type.

- [bpo-29743](https://bugs.python.org/issue?@action=redirect&bpo=29743) [https://bugs.python.org/issue?@action=redirect&bpo=29743]: Raise **ValueError** instead of **OverflowError** in case of a negative `_length_` in a **ctypes.Array** subclass. Also raise **TypeError** instead of **AttributeError** for non-integer `_length_`. Original patch by Oren Milman.
- [bpo-16806](https://bugs.python.org/issue?@action=redirect&bpo=16806) [https://bugs.python.org/issue?@action=redirect&bpo=16806]: Fix `lineno` and `col_offset` for multi-line string tokens.
- [bpo-35029](https://bugs.python.org/issue?@action=redirect&bpo=35029) [https://bugs.python.org/issue?@action=redirect&bpo=35029]: **SyntaxWarning** raised as an exception at code generation time will be now replaced with a **SyntaxError** for better error reporting.
- [bpo-34983](https://bugs.python.org/issue?@action=redirect&bpo=34983) [https://bugs.python.org/issue?@action=redirect&bpo=34983]: Expose **symtable.Symbol.is\_nonlocal()** in the **symtable** module. Patch by Pablo Galindo.
- [bpo-34974](https://bugs.python.org/issue?@action=redirect&bpo=34974) [https://bugs.python.org/issue?@action=redirect&bpo=34974]: **bytes** and **bytearray** constructors no longer convert unexpected exceptions (e.g. **MemoryError** and **KeyboardInterrupt**) to **TypeError**.
- [bpo-34939](https://bugs.python.org/issue?@action=redirect&bpo=34939) [https://bugs.python.org/issue?@action=redirect&bpo=34939]: Allow annotated names in module namespace that are declared global before the annotation happens. Patch by Pablo Galindo.
- [bpo-34973](https://bugs.python.org/issue?@action=redirect&bpo=34973) [https://bugs.python.org/issue?@action=redirect&bpo=34973]: Fixed crash in **bytes()** when the **list** argument is mutated while it is iterated.
- [bpo-34876](https://bugs.python.org/issue?@action=redirect&bpo=34876) [https://bugs.python.org/issue?@action=redirect&bpo=34876]: The `lineno` and `col_offset` attributes of the AST for decorated function and class refer now to the position of the corresponding `def`, `async def` and `class`

instead of the position of the first decorator. This leads to more correct line reporting in tracing. This is the only case when the position of child AST nodes can precede the position of the parent AST node.

- [bpo-34879](https://bugs.python.org/issue?@action=redirect&bpo=34879) [https://bugs.python.org/issue?@action=redirect&bpo=34879]: Fix a possible null pointer dereference in bytesobject.c. Patch by Zackery Spytz.
- [bpo-34784](https://bugs.python.org/issue?@action=redirect&bpo=34784) [https://bugs.python.org/issue?@action=redirect&bpo=34784]: Fix the implementation of PyStructSequence\_NewType in order to create heap allocated StructSequences.
- [bpo-32912](https://bugs.python.org/issue?@action=redirect&bpo=32912) [https://bugs.python.org/issue?@action=redirect&bpo=32912]: A **SyntaxWarning** is now emitted instead of a **DeprecationWarning** for invalid escape sequences in string and bytes literals.
- [bpo-34854](https://bugs.python.org/issue?@action=redirect&bpo=34854) [https://bugs.python.org/issue?@action=redirect&bpo=34854]: Fixed a crash in compiling string annotations containing a lambda with a keyword-only argument that doesn't have a default value.
- [bpo-34850](https://bugs.python.org/issue?@action=redirect&bpo=34850) [https://bugs.python.org/issue?@action=redirect&bpo=34850]: The compiler now produces a **SyntaxWarning** when identity checks (`is` and `is not`) are used with certain types of literals (e.g. strings, ints). These can often work by accident in CPython, but are not guaranteed by the language spec. The warning advises users to use equality tests (`==` and `!=`) instead.
- [bpo-34824](https://bugs.python.org/issue?@action=redirect&bpo=34824) [https://bugs.python.org/issue?@action=redirect&bpo=34824]: Fix a possible null pointer dereference in Modules/\_ssl.c. Patch by Zackery Spytz.
- [bpo-30156](https://bugs.python.org/issue?@action=redirect&bpo=30156) [https://bugs.python.org/issue?@action=redirect&bpo=30156]: The C function `property_descr_get()` uses a “cached” tuple to optimize function calls. But this tuple can be discovered in debug mode with `sys.getobjects()`. Remove the optimization, it's not

really worth it and it causes 3 different crashes last years.

- [bpo-34762](https://bugs.python.org/issue?@action=redirect&bpo=34762) [https://bugs.python.org/issue?@action=redirect&bpo=34762]: Fix contextvars C API to use PyObject\* pointer types.
- [bpo-34751](https://bugs.python.org/issue?@action=redirect&bpo=34751) [https://bugs.python.org/issue?@action=redirect&bpo=34751]: The hash function for tuples is now based on xxHash which gives better collision results on (formerly) pathological cases. Additionally, on 64-bit systems it improves tuple hashes in general. Patch by Jeroen Demeyer with substantial contributions by Tim Peters.
- [bpo-34735](https://bugs.python.org/issue?@action=redirect&bpo=34735) [https://bugs.python.org/issue?@action=redirect&bpo=34735]: Fix a memory leak in Modules/timemodule.c. Patch by Zackery Spytz.
- [bpo-34683](https://bugs.python.org/issue?@action=redirect&bpo=34683) [https://bugs.python.org/issue?@action=redirect&bpo=34683]: Fixed a bug where some SyntaxError error pointed to locations that were off-by-one.
- [bpo-34651](https://bugs.python.org/issue?@action=redirect&bpo=34651) [https://bugs.python.org/issue?@action=redirect&bpo=34651]: Only allow the main interpreter to fork. This avoids the possibility of affecting the main interpreter, which is critical to operation of the runtime.
- [bpo-34653](https://bugs.python.org/issue?@action=redirect&bpo=34653) [https://bugs.python.org/issue?@action=redirect&bpo=34653]: Remove unused function PyParser\_SimpleParseStringFilename.
- [bpo-32236](https://bugs.python.org/issue?@action=redirect&bpo=32236) [https://bugs.python.org/issue?@action=redirect&bpo=32236]: Warn that line buffering is not supported if `open()` is called with binary mode and `buffering=1`.
- [bpo-34641](https://bugs.python.org/issue?@action=redirect&bpo=34641) [https://bugs.python.org/issue?@action=redirect&bpo=34641]: Further restrict the syntax of the left-hand side of keyword arguments in function calls. In particular, `f((keyword)=arg)` is now disallowed.
- [bpo-34637](https://bugs.python.org/issue?@action=redirect&bpo=34637) [https://bugs.python.org/issue?@action=redirect&bpo=34637]

@action=redirect&bpo=34637]: Make the *start* argument to *sum()* visible as a keyword argument.

- [bpo-1621](https://bugs.python.org/issue?@action=redirect&bpo=1621) [https://bugs.python.org/issue?@action=redirect&bpo=1621]: Do not assume signed integer overflow behavior (C undefined behavior) when performing set hash table resizing.
- [bpo-34588](https://bugs.python.org/issue?@action=redirect&bpo=34588) [https://bugs.python.org/issue?@action=redirect&bpo=34588]: Fix an off-by-one in the recursive call pruning feature of traceback formatting.
- [bpo-34485](https://bugs.python.org/issue?@action=redirect&bpo=34485) [https://bugs.python.org/issue?@action=redirect&bpo=34485]: On Windows, the LC\_CTYPE is now set to the user preferred locale at startup. Previously, the LC\_CTYPE locale was “C” at startup, but changed when calling setlocale(LC\_CTYPE, “”) or setlocale(LC\_ALL, “”).
- [bpo-34485](https://bugs.python.org/issue?@action=redirect&bpo=34485) [https://bugs.python.org/issue?@action=redirect&bpo=34485]: Standard streams like sys.stdout now use the “surrogateescape” error handler, instead of “strict”, on the POSIX locale (when the C locale is not coerced and the UTF-8 Mode is disabled).
- [bpo-34485](https://bugs.python.org/issue?@action=redirect&bpo=34485) [https://bugs.python.org/issue?@action=redirect&bpo=34485]: Fix the error handler of standard streams like sys.stdout: PYTHONIOENCODING=”:” is now ignored instead of setting the error handler to “strict”.
- [bpo-34485](https://bugs.python.org/issue?@action=redirect&bpo=34485) [https://bugs.python.org/issue?@action=redirect&bpo=34485]: Python now gets the locale encoding with C code to initialize the encoding of standard streams like sys.stdout. Moreover, the encoding is now initialized to the Python codec name to get a normalized encoding name and to ensure that the codec is loaded. The change avoids importing \_bootlocale and \_locale modules at startup by default.
- [bpo-34527](https://bugs.python.org/issue?@action=redirect&bpo=34527) [https://bugs.python.org/issue?@action=redirect&bpo=34527]: On FreeBSD, Py\_DecodeLocale() and Py\_EncodeLocale() now also forces the ASCII encoding if the LC\_CTYPE locale is “POSIX”, not only if the LC\_CTYPE

locale is “C”.

- [bpo-34527](https://bugs.python.org/issue?@action=redirect&bpo=34527) [https://bugs.python.org/issue?@action=redirect&bpo=34527]: The UTF-8 Mode is now also enabled by the “POSIX” locale, not only by the “C” locale.
- [bpo-34403](https://bugs.python.org/issue?@action=redirect&bpo=34403) [https://bugs.python.org/issue?@action=redirect&bpo=34403]: On HP-UX with C or POSIX locale, `sys.getfilesystemencoding()` now returns “ascii” instead of “roman8” (when the UTF-8 Mode is disabled and the C locale is not coerced).
- [bpo-34523](https://bugs.python.org/issue?@action=redirect&bpo=34523) [https://bugs.python.org/issue?@action=redirect&bpo=34523]: The Python filesystem encoding is now read earlier during the Python initialization.
- [bpo-12458](https://bugs.python.org/issue?@action=redirect&bpo=12458) [https://bugs.python.org/issue?@action=redirect&bpo=12458]: Tracebacks show now correct line number for subexpressions in multiline expressions. Tracebacks show now the line number of the first line for multiline expressions instead of the line number of the last subexpression.
- [bpo-34408](https://bugs.python.org/issue?@action=redirect&bpo=34408) [https://bugs.python.org/issue?@action=redirect&bpo=34408]: Prevent a null pointer dereference and resource leakage in `PyInterpreterState_New()`.
- [bpo-34400](https://bugs.python.org/issue?@action=redirect&bpo=34400) [https://bugs.python.org/issue?@action=redirect&bpo=34400]: Fix undefined behavior in `parsetok.c`. Patch by Zackery Spytz.
- [bpo-33073](https://bugs.python.org/issue?@action=redirect&bpo=33073) [https://bugs.python.org/issue?@action=redirect&bpo=33073]: Added `as_integer_ratio` to ints to make them more interoperable with floats.
- [bpo-34377](https://bugs.python.org/issue?@action=redirect&bpo=34377) [https://bugs.python.org/issue?@action=redirect&bpo=34377]: Update valgrind suppression list to use `_PyObject_Free/_PyObject_Realloc` instead of `PyObject_Free/PyObject_Realloc`.
- [bpo-34353](https://bugs.python.org/issue?@action=redirect&bpo=34353) [https://bugs.python.org/issue?@action=redirect&bpo=34353]

@action=redirect&bpo=34353]: Added the “socket” option in the `stat.filemode()` Python implementation to match the C implementation.

- [bpo-34320](https://bugs.python.org/issue?@action=redirect&bpo=34320) [https://bugs.python.org/issue?@action=redirect&bpo=34320]: Fix `dict(od)` didn't copy iteration order of `OrderedDict`.
- [bpo-34113](https://bugs.python.org/issue?@action=redirect&bpo=34113) [https://bugs.python.org/issue?@action=redirect&bpo=34113]: Fixed crash on debug builds when opcode stack was adjusted with negative numbers. Patch by Constantin Petrisor.
- [bpo-34100](https://bugs.python.org/issue?@action=redirect&bpo=34100) [https://bugs.python.org/issue?@action=redirect&bpo=34100]: Compiler now merges constants in tuples and frozensets recursively. Code attributes like `co_names` are merged too.
- [bpo-34151](https://bugs.python.org/issue?@action=redirect&bpo=34151) [https://bugs.python.org/issue?@action=redirect&bpo=34151]: Performance of list concatenation, repetition and slicing operations is slightly improved. Patch by Sergey Fedoseev.
- [bpo-34170](https://bugs.python.org/issue?@action=redirect&bpo=34170) [https://bugs.python.org/issue?@action=redirect&bpo=34170]: -X dev: it is now possible to override the memory allocator using `PYTHONMALLOC` even if the developer mode is enabled.
- [bpo-33237](https://bugs.python.org/issue?@action=redirect&bpo=33237) [https://bugs.python.org/issue?@action=redirect&bpo=33237]: Improved `AttributeError` message for partially initialized module.
- [bpo-34149](https://bugs.python.org/issue?@action=redirect&bpo=34149) [https://bugs.python.org/issue?@action=redirect&bpo=34149]: Fix `min` and `max` functions to get default behavior when key is `None`.
- [bpo-34125](https://bugs.python.org/issue?@action=redirect&bpo=34125) [https://bugs.python.org/issue?@action=redirect&bpo=34125]: Profiling of unbound built-in methods now works when `**kwargs` is given.
- [bpo-34141](https://bugs.python.org/issue?@action=redirect&bpo=34141) [https://bugs.python.org/issue?@action=redirect&bpo=34141]

@action=redirect&bpo=34141]: Optimized pickling atomic types (None, bool, int, float, bytes, str).

- [bpo-34126](https://bugs.python.org/issue?@action=redirect&bpo=34126) [https://bugs.python.org/issue?@action=redirect&bpo=34126]: Fix crashes when profiling certain invalid calls of unbound methods. Patch by Jeroen Demeyer.
- [bpo-24618](https://bugs.python.org/issue?@action=redirect&bpo=24618) [https://bugs.python.org/issue?@action=redirect&bpo=24618]: Fixed reading invalid memory when create the code object with too small varnames tuple or too large argument counts.
- [bpo-34068](https://bugs.python.org/issue?@action=redirect&bpo=34068) [https://bugs.python.org/issue?@action=redirect&bpo=34068]: In `io.IOBase.close()`, ensure that the `closed` attribute is not set with a live exception. Patch by Zackery Spytz and Serhiy Storchaka.
- [bpo-34087](https://bugs.python.org/issue?@action=redirect&bpo=34087) [https://bugs.python.org/issue?@action=redirect&bpo=34087]: Fix buffer overflow while converting unicode to numeric values.
- [bpo-34080](https://bugs.python.org/issue?@action=redirect&bpo=34080) [https://bugs.python.org/issue?@action=redirect&bpo=34080]: Fixed a memory leak in the compiler when it raised some uncommon errors during tokenizing.
- [bpo-34066](https://bugs.python.org/issue?@action=redirect&bpo=34066) [https://bugs.python.org/issue?@action=redirect&bpo=34066]: Disabled interruption by Ctrl-C between calling `open()` and entering a `with` block in `with open()`.
- [bpo-34042](https://bugs.python.org/issue?@action=redirect&bpo=34042) [https://bugs.python.org/issue?@action=redirect&bpo=34042]: Fix `dict.copy()` to maintain correct total refcount (as reported by `sys.gettotalrefcount()`).
- [bpo-33418](https://bugs.python.org/issue?@action=redirect&bpo=33418) [https://bugs.python.org/issue?@action=redirect&bpo=33418]: Fix potential memory leak in function object when it creates reference cycle.
- [bpo-33985](https://bugs.python.org/issue?@action=redirect&bpo=33985) [https://bugs.python.org/issue?@action=redirect&bpo=33985]: Implement

contextvars.ContextVar.name attribute.

- [bpo-33956](https://bugs.python.org/issue?@action=redirect&bpo=33956) [https://bugs.python.org/issue?@action=redirect&bpo=33956]: Update vendored Expat library copy to version 2.2.5.
- [bpo-24596](https://bugs.python.org/issue?@action=redirect&bpo=24596) [https://bugs.python.org/issue?@action=redirect&bpo=24596]: Decref the module object in **PyRun\_SimpleFileExFlags()** before calling **PyErr\_Print()**. Patch by Zackery Spytz.
- [bpo-33451](https://bugs.python.org/issue?@action=redirect&bpo=33451) [https://bugs.python.org/issue?@action=redirect&bpo=33451]: Close directly executed pyc files before calling **PyEval\_EvalCode()**.
- [bpo-1617161](https://bugs.python.org/issue?@action=redirect&bpo=1617161) [https://bugs.python.org/issue?@action=redirect&bpo=1617161]: The hash of **BuiltinMethodType** instances (methods of built-in classes) now depends on the hash of the identity of **\_self\_** instead of its value. The hash and equality of **ModuleType** and **MethodWrapperType** instances (methods of user-defined classes and some methods of built-in classes like **str.\_\_add\_\_**) now depend on the hash and equality of the identity of **\_self\_** instead of its value. **MethodWrapperType** instances no longer support ordering.
- [bpo-33824](https://bugs.python.org/issue?@action=redirect&bpo=33824) [https://bugs.python.org/issue?@action=redirect&bpo=33824]: Fix “LC\_ALL=C python3.7 -V”: reset properly the command line parser when the encoding changes after reading the Python configuration.
- [bpo-33803](https://bugs.python.org/issue?@action=redirect&bpo=33803) [https://bugs.python.org/issue?@action=redirect&bpo=33803]: Fix a crash in hamt.c caused by enabling GC tracking for an object that hadn't all of its fields set to NULL.
- [bpo-33738](https://bugs.python.org/issue?@action=redirect&bpo=33738) [https://bugs.python.org/issue?@action=redirect&bpo=33738]: Seven macro incompatibilities with the Limited API were fixed, and the macros **PyIter\_Check()**, **PyIndex\_Check()** and **PyExceptionClass\_Name()** were added as functions. A

script for automatic macro checks was added.

- [bpo-33786](https://bugs.python.org/issue?@action=redirect&bpo=33786) [https://bugs.python.org/issue?@action=redirect&bpo=33786]: Fix asynchronous generators to handle `GeneratorExit` in `athrow()` correctly
- [bpo-30167](https://bugs.python.org/issue?@action=redirect&bpo=30167) [https://bugs.python.org/issue?@action=redirect&bpo=30167]: `PyRun_SimpleFileExFlags` removes `__cached__` from module in addition to `__file__`.
- [bpo-33706](https://bugs.python.org/issue?@action=redirect&bpo=33706) [https://bugs.python.org/issue?@action=redirect&bpo=33706]: Fix a crash in Python initialization when parsing the command line options. Thanks Christoph Gohlke for the bug report and the fix!
- [bpo-33597](https://bugs.python.org/issue?@action=redirect&bpo=33597) [https://bugs.python.org/issue?@action=redirect&bpo=33597]: Reduce `PyGC_Head` size from 3 words to 2 words.
- [bpo-30654](https://bugs.python.org/issue?@action=redirect&bpo=30654) [https://bugs.python.org/issue?@action=redirect&bpo=30654]: Fixed reset of the SIGINT handler to `SIG_DFL` on interpreter shutdown even when there was a custom handler set previously. Patch by Philipp Kerling.
- [bpo-33622](https://bugs.python.org/issue?@action=redirect&bpo=33622) [https://bugs.python.org/issue?@action=redirect&bpo=33622]: Fixed a leak when the garbage collector fails to add an object with the `__del__` method or referenced by it into the `gc.garbage` list. `PyGC_Collect()` can now be called when an exception is set and preserves it.
- [bpo-33462](https://bugs.python.org/issue?@action=redirect&bpo=33462) [https://bugs.python.org/issue?@action=redirect&bpo=33462]: Make dict and dict views reversible. Patch by Rémi Lapeyre.
- [bpo-23722](https://bugs.python.org/issue?@action=redirect&bpo=23722) [https://bugs.python.org/issue?@action=redirect&bpo=23722]: A `RuntimeError` is now raised when the custom metaclass doesn't provide the `__classcell__` entry in the namespace passed to `type.__new__`. A `DeprecationWarning` was emitted in

## Python 3.6–3.7.

- [bpo-33499](https://bugs.python.org/issue?@action=redirect&bpo=33499) [https://bugs.python.org/issue?@action=redirect&bpo=33499]: Add **PYTHONPYCACHEPREFIX** environment variable and **-X pycache\_prefix** command-line option to set an alternate root directory for writing module bytecode cache files.
- [bpo-25711](https://bugs.python.org/issue?@action=redirect&bpo=25711) [https://bugs.python.org/issue?@action=redirect&bpo=25711]: The **zipimport** module has been rewritten in pure Python.
- [bpo-33509](https://bugs.python.org/issue?@action=redirect&bpo=33509) [https://bugs.python.org/issue?@action=redirect&bpo=33509]: Fix `module_globals` parameter of `warnings.warn_explicit()`: don't crash if `module_globals` is not a dict.
- [bpo-31849](https://bugs.python.org/issue?@action=redirect&bpo=31849) [https://bugs.python.org/issue?@action=redirect&bpo=31849]: Fix signed/unsigned comparison warning in `pyhash.c`.
- [bpo-33475](https://bugs.python.org/issue?@action=redirect&bpo=33475) [https://bugs.python.org/issue?@action=redirect&bpo=33475]: Fixed miscellaneous bugs in converting annotations to strings and optimized parentheses in the string representation.
- [bpo-20104](https://bugs.python.org/issue?@action=redirect&bpo=20104) [https://bugs.python.org/issue?@action=redirect&bpo=20104]: Added support for the **setpgroup**, **resetids**, **setsigmask**, **setsigdef** and **scheduler** parameters of **posix\_spawn**. Patch by Pablo Galindo.
- [bpo-33391](https://bugs.python.org/issue?@action=redirect&bpo=33391) [https://bugs.python.org/issue?@action=redirect&bpo=33391]: Fix a leak in `set_symmetric_difference()`.
- [bpo-33363](https://bugs.python.org/issue?@action=redirect&bpo=33363) [https://bugs.python.org/issue?@action=redirect&bpo=33363]: Raise a `SyntaxError` for `async with` and `async for` statements outside of `async` functions.
- [bpo-28055](https://bugs.python.org/issue?@action=redirect&bpo=28055) [https://bugs.python.org/issue?@action=redirect&bpo=28055]

@action=redirect&bpo=28055]: Fix unaligned accesses in `siphash24()`. Patch by Rolf Eike Beer.

- [bpo-33128](https://bugs.python.org/issue?@action=redirect&bpo=33128) [https://bugs.python.org/issue?@action=redirect&bpo=33128]: Fix a bug that causes `PathFinder` to appear twice on `sys.meta_path`. Patch by Pablo Galindo Salgado.
- [bpo-33331](https://bugs.python.org/issue?@action=redirect&bpo=33331) [https://bugs.python.org/issue?@action=redirect&bpo=33331]: Modules imported last are now cleared first at interpreter shutdown.
- [bpo-33312](https://bugs.python.org/issue?@action=redirect&bpo=33312) [https://bugs.python.org/issue?@action=redirect&bpo=33312]: Fixed clang ubsan (undefined behavior sanitizer) warnings in `dictobject.c` by adjusting how the internal struct `_dictkeyobject` shared keys structure is declared.
- [bpo-33305](https://bugs.python.org/issue?@action=redirect&bpo=33305) [https://bugs.python.org/issue?@action=redirect&bpo=33305]: Improved syntax error messages for invalid numerical literals.
- [bpo-33306](https://bugs.python.org/issue?@action=redirect&bpo=33306) [https://bugs.python.org/issue?@action=redirect&bpo=33306]: Improved syntax error messages for unbalanced parentheses.
- [bpo-33234](https://bugs.python.org/issue?@action=redirect&bpo=33234) [https://bugs.python.org/issue?@action=redirect&bpo=33234]: The list constructor will pre-size and not over-allocate when the input length is known.
- [bpo-33270](https://bugs.python.org/issue?@action=redirect&bpo=33270) [https://bugs.python.org/issue?@action=redirect&bpo=33270]: Intern the names for all anonymous code objects. Patch by Zackery Sptz.
- [bpo-30455](https://bugs.python.org/issue?@action=redirect&bpo=30455) [https://bugs.python.org/issue?@action=redirect&bpo=30455]: The C and Python code and the documentation related to tokens are now generated from a single source file `Grammar/Tokens`.
- [bpo-33176](https://bugs.python.org/issue?@action=redirect&bpo=33176) [https://bugs.python.org/issue?@action=redirect&bpo=33176]: Add a `toreadonly()` method to

memoryviews.

- [bpo-33231](https://bugs.python.org/issue?@action=redirect&bpo=33231) [https://bugs.python.org/issue?@action=redirect&bpo=33231]: Fix potential memory leak in `normalizestring()`.
- [bpo-33205](https://bugs.python.org/issue?@action=redirect&bpo=33205) [https://bugs.python.org/issue?@action=redirect&bpo=33205]: Change dict growth function from `round_up_to_power_2(used*2+hashtable_size/2)` to `round_up_to_power_2(used*3)`. Previously, dict is shrunk only when `used == 0`. Now dict has more chance to be shrunk.
- [bpo-29922](https://bugs.python.org/issue?@action=redirect&bpo=29922) [https://bugs.python.org/issue?@action=redirect&bpo=29922]: Improved error messages in ‘async with’ when `__aenter__()` or `__aexit__()` return non-awaitable object.
- [bpo-33199](https://bugs.python.org/issue?@action=redirect&bpo=33199) [https://bugs.python.org/issue?@action=redirect&bpo=33199]: Fix `ma_version_tag` in dict implementation is uninitialized when copying from key-sharing dict.
- [bpo-33053](https://bugs.python.org/issue?@action=redirect&bpo=33053) [https://bugs.python.org/issue?@action=redirect&bpo=33053]: When using the `-m` switch, `sys.path[0]` is now explicitly expanded as the *starting* working directory, rather than being left as the empty path (which allows imports from the current working directory at the time of the import)
- [bpo-33138](https://bugs.python.org/issue?@action=redirect&bpo=33138) [https://bugs.python.org/issue?@action=redirect&bpo=33138]: Changed standard error message for non-pickleable and non-copyable types. It now says “cannot pickle” instead of “can’t pickle” or “cannot serialize”.
- [bpo-33018](https://bugs.python.org/issue?@action=redirect&bpo=33018) [https://bugs.python.org/issue?@action=redirect&bpo=33018]: Improve consistency of errors raised by `issubclass()` when called with a non-class and an abstract base class as the first and second arguments, respectively. Patch by Josh Bronson.

- [bpo-33083](https://bugs.python.org/issue?@action=redirect&bpo=33083) [https://bugs.python.org/issue?@action=redirect&bpo=33083]: `math.factorial` no longer accepts arguments that are not int-like. Patch by Pablo Galindo.
- [bpo-33041](https://bugs.python.org/issue?@action=redirect&bpo=33041) [https://bugs.python.org/issue?@action=redirect&bpo=33041]: Added new opcode `END_ASYNC_FOR` and fixes the following issues:
  - Setting global `StopAsyncIteration` no longer breaks `async` for loops.
  - Jumping into an `async` for loop is now disabled.
  - Jumping out of an `async` for loop no longer corrupts the stack.
- [bpo-25750](https://bugs.python.org/issue?@action=redirect&bpo=25750) [https://bugs.python.org/issue?@action=redirect&bpo=25750]: Fix rare Python crash due to bad refcounting in `type_getattro()` if a descriptor deletes itself from the class. Patch by Jeroen Demeyer.
- [bpo-33041](https://bugs.python.org/issue?@action=redirect&bpo=33041) [https://bugs.python.org/issue?@action=redirect&bpo=33041]: Fixed bytecode generation for “async for” with a complex target. A `StopAsyncIteration` raised on assigning or unpacking will be now propagated instead of stopping the iteration.
- [bpo-33026](https://bugs.python.org/issue?@action=redirect&bpo=33026) [https://bugs.python.org/issue?@action=redirect&bpo=33026]: Fixed jumping out of “with” block by setting `f_lineno`.
- [bpo-33005](https://bugs.python.org/issue?@action=redirect&bpo=33005) [https://bugs.python.org/issue?@action=redirect&bpo=33005]: Fix a crash on fork when using a custom memory allocator (ex: using `PYTHONMALLOC` env var). `_PyGILState_Reinit()` and `_PyInterpreterState_Enable()` now use the default RAW memory allocator to allocate a new interpreters mutex on fork.
- [bpo-32911](https://bugs.python.org/issue?@action=redirect&bpo=32911) [https://bugs.python.org/issue?@action=redirect&bpo=32911]: Due to unexpected compatibility issues discovered during downstream beta testing, reverted [bpo-29463](https://bugs.python.org/issue?@action=redirect&bpo=29463) [https://bugs.python.org/issue?@action=redirect&bpo=29463]

@action=redirect&bpo=29463]. `docstring` field is removed from `Module`, `ClassDef`, `FunctionDef`, and `AsyncFunctionDef` ast nodes which was added in 3.7a1. Docstring expression is restored as a first statement in their body. Based on patch by Inada Naoki.

- [bpo-17288](https://bugs.python.org/issue?@action=redirect&bpo=17288) [https://bugs.python.org/issue?@action=redirect&bpo=17288]: Prevent jumps from ‘return’ and ‘exception’ trace events.
- [bpo-32946](https://bugs.python.org/issue?@action=redirect&bpo=32946) [https://bugs.python.org/issue?@action=redirect&bpo=32946]: Importing names from already imported module with “from ... import ...” is now 30% faster if the module is not a package.
- [bpo-32932](https://bugs.python.org/issue?@action=redirect&bpo=32932) [https://bugs.python.org/issue?@action=redirect&bpo=32932]: Make error message more revealing when there are non-str objects in `__all__`.
- [bpo-32925](https://bugs.python.org/issue?@action=redirect&bpo=32925) [https://bugs.python.org/issue?@action=redirect&bpo=32925]: Optimized iterating and containing test for literal lists consisting of non-constants: `x in [a, b]` and `for x in [a, b]`. The case of all constant elements already was optimized.
- [bpo-32889](https://bugs.python.org/issue?@action=redirect&bpo=32889) [https://bugs.python.org/issue?@action=redirect&bpo=32889]: Update Valgrind suppression list to account for the rename of `Py_ADDRESS_IN_RANG` to `address_in_range`.
- [bpo-32836](https://bugs.python.org/issue?@action=redirect&bpo=32836) [https://bugs.python.org/issue?@action=redirect&bpo=32836]: Don’t use temporary variables in cases of list/dict/set comprehensions
- [bpo-31356](https://bugs.python.org/issue?@action=redirect&bpo=31356) [https://bugs.python.org/issue?@action=redirect&bpo=31356]: Remove the new API added in [bpo-31356](https://bugs.python.org/issue?@action=redirect&bpo=31356) [https://bugs.python.org/issue?@action=redirect&bpo=31356] (`gc.ensure_disabled()` context manager).
- [bpo-32305](https://bugs.python.org/issue?@action=redirect&bpo=32305) [https://bugs.python.org/issue?@action=redirect&bpo=32305]

@action=redirect&bpo=32305]: For namespace packages, ensure that both `__file__` and `__spec__.origin` are set to `None`.

- [bpo-32303](https://bugs.python.org/issue?@action=redirect&bpo=32303) [https://bugs.python.org/issue?@action=redirect&bpo=32303]: Make sure `__spec__.loader` matches `__loader__` for namespace packages.
- [bpo-32711](https://bugs.python.org/issue?@action=redirect&bpo=32711) [https://bugs.python.org/issue?@action=redirect&bpo=32711]: Fix the warning messages for Python/ast\_unparse.c. Patch by Stéphane Wirtel
- [bpo-32583](https://bugs.python.org/issue?@action=redirect&bpo=32583) [https://bugs.python.org/issue?@action=redirect&bpo=32583]: Fix possible crashing in builtin Unicode decoders caused by write out-of-bound errors when using customized decode error handlers.
- [bpo-32489](https://bugs.python.org/issue?@action=redirect&bpo=32489) [https://bugs.python.org/issue?@action=redirect&bpo=32489]: A `continue` statement is now allowed in the `finally` clause.
- [bpo-17611](https://bugs.python.org/issue?@action=redirect&bpo=17611) [https://bugs.python.org/issue?@action=redirect&bpo=17611]: Simplified the interpreter loop by moving the logic of unrolling the stack of blocks into the compiler. The compiler emits now explicit instructions for adjusting the stack of values and calling the cleaning up code for `break`, `continue` and `return`.

Removed opcodes `BREAK_LOOP`, `CONTINUE_LOOP`, `SETUP_LOOP` and `SETUP_EXCEPT`. Added new opcodes `ROT_FOUR`, `BEGIN_FINALLY` and `CALL_FINALLY` and `POP_FINALLY`. Changed the behavior of `END_FINALLY` and `WITH_CLEANUP_START`.

- [bpo-32285](https://bugs.python.org/issue?@action=redirect&bpo=32285) [https://bugs.python.org/issue?@action=redirect&bpo=32285]: New function `unicodedata.is_normalized`, which can check whether a string is in a specific normal form.
- [bpo-10544](https://bugs.python.org/issue?@action=redirect&bpo=10544) [https://bugs.python.org/issue?@action=redirect&bpo=10544]: Yield expressions are now

disallowed in comprehensions and generator expressions except the expression for the outermost iterable.

- [bpo-32117](https://bugs.python.org/issue?@action=redirect&bpo=32117) [https://bugs.python.org/issue?@action=redirect&bpo=32117]: Iterable unpacking is now allowed without parentheses in yield and return statements, e.g. `yield 1, 2, 3, *rest`. Thanks to David Cuthbert for the change and Jordan Chapman for added tests.
- [bpo-31902](https://bugs.python.org/issue?@action=redirect&bpo=31902) [https://bugs.python.org/issue?@action=redirect&bpo=31902]: Fix the `col_offset` attribute for ast nodes `ast.AsyncFor`, `ast.AsyncFunctionDef`, and `ast.AsyncWith`. Previously, `col_offset` pointed to the keyword after `async`.
- [bpo-25862](https://bugs.python.org/issue?@action=redirect&bpo=25862) [https://bugs.python.org/issue?@action=redirect&bpo=25862]: Fix assertion failures in the `tell()` method of `io.TextIOWrapper`. Patch by Zackery Spytz.
- [bpo-21983](https://bugs.python.org/issue?@action=redirect&bpo=21983) [https://bugs.python.org/issue?@action=redirect&bpo=21983]: Fix a crash in `ctypes.cast()` in case the type argument is a ctypes structured data type. Patch by Eryk Sun and Oren Milman.
- [bpo-31577](https://bugs.python.org/issue?@action=redirect&bpo=31577) [https://bugs.python.org/issue?@action=redirect&bpo=31577]: Fix a crash in `os.utime()` in case of a bad `ns` argument. Patch by Oren Milman.
- [bpo-29832](https://bugs.python.org/issue?@action=redirect&bpo=29832) [https://bugs.python.org/issue?@action=redirect&bpo=29832]: Remove references to ‘getsockaddrarg’ from various socket error messages. Patch by Oren Milman.

## Library

- [bpo-35845](https://bugs.python.org/issue?@action=redirect&bpo=35845) [https://bugs.python.org/issue?@action=redirect&bpo=35845]: Add ‘order’ parameter to `memoryview.tobytes()`.
- [bpo-35864](https://bugs.python.org/issue?@action=redirect&bpo=35864) [https://bugs.python.org/issue?@action=redirect&bpo=35864]

@action=redirect&bpo=35864]: The `_asdict()` method for `collections.namedtuple` now returns a regular dict instead of an `OrderedDict`.

- [bpo-35537](https://bugs.python.org/issue?@action=redirect&bpo=35537) [https://bugs.python.org/issue?@action=redirect&bpo=35537]: An `ExitStack` is now used internally within `subprocess.Popen` to clean up pipe file handles. No behavior change in normal operation. But if closing one handle were ever to cause an exception, the others will now be closed instead of leaked. (patch by Giampaolo Rodola)
- [bpo-35847](https://bugs.python.org/issue?@action=redirect&bpo=35847) [https://bugs.python.org/issue?@action=redirect&bpo=35847]: RISC-V needed the `CTYPES_PASS_BY_REF_HACK`. Fixes ctypes `Structure` `test_pass_by_value`.
- [bpo-35813](https://bugs.python.org/issue?@action=redirect&bpo=35813) [https://bugs.python.org/issue?@action=redirect&bpo=35813]: Shared memory submodule added to multiprocessing to avoid need for serialization between processes
- [bpo-35780](https://bugs.python.org/issue?@action=redirect&bpo=35780) [https://bugs.python.org/issue?@action=redirect&bpo=35780]: Fix `lru_cache()` errors arising in recursive, reentrant, or multi-threaded code. These errors could result in orphan links and in the cache being trapped in a state with fewer than the specified maximum number of links. Fix handling of negative `maxsize` which should have been treated as zero. Fix errors in toggling the “full” status flag. Fix misordering of links when errors are encountered. Sync-up the C code and pure Python code for the space saving path in functions with a single positional argument. In this common case, the space overhead of an lru cache entry is reduced by almost half. Fix counting of cache misses. In error cases, the miss count was out of sync with the actual number of times the underlying user function was called.
- [bpo-35537](https://bugs.python.org/issue?@action=redirect&bpo=35537) [https://bugs.python.org/issue?@action=redirect&bpo=35537]: `os.posix_spawn()` and `os.posix_spawnnp()` now have a `setsid` parameter.

- [bpo-23846](https://bugs.python.org/issue?@action=redirect&bpo=23846) [https://bugs.python.org/issue?@action=redirect&bpo=23846]: **asyncio.ProactorEventLoop** now catches and logs send errors when the self-pipe is full.
- [bpo-34323](https://bugs.python.org/issue?@action=redirect&bpo=34323) [https://bugs.python.org/issue?@action=redirect&bpo=34323]: **asyncio**: Enhance `IocpProactor.close()` log: wait 1 second before the first log, then log every second. Log also the number of seconds since `close()` was called.
- [bpo-35674](https://bugs.python.org/issue?@action=redirect&bpo=35674) [https://bugs.python.org/issue?@action=redirect&bpo=35674]: Add a new **os.posix\_spawn()** function. Patch by Joannah Nanjekye.
- [bpo-35733](https://bugs.python.org/issue?@action=redirect&bpo=35733) [https://bugs.python.org/issue?@action=redirect&bpo=35733]: `ast.Constant( boolean )` no longer an instance of **ast.Num**. Patch by Anthony Sottile.
- [bpo-35726](https://bugs.python.org/issue?@action=redirect&bpo=35726) [https://bugs.python.org/issue?@action=redirect&bpo=35726]: `QueueHandler.prepare()` now makes a copy of the record before modifying and enqueueing it, to avoid affecting other handlers in the chain.
- [bpo-35719](https://bugs.python.org/issue?@action=redirect&bpo=35719) [https://bugs.python.org/issue?@action=redirect&bpo=35719]: Sped up multi-argument **math** functions `atan2()`, `copysign()`, `remainder()` and `hypot()` by 1.3–2.5 times.
- [bpo-35717](https://bugs.python.org/issue?@action=redirect&bpo=35717) [https://bugs.python.org/issue?@action=redirect&bpo=35717]: Fix `KeyError` exception raised when using enums and compile. Patch contributed by Rémi Lapeyre.
- [bpo-35699](https://bugs.python.org/issue?@action=redirect&bpo=35699) [https://bugs.python.org/issue?@action=redirect&bpo=35699]: Fixed detection of Visual Studio Build Tools 2017 in `distutils`
- [bpo-32710](https://bugs.python.org/issue?@action=redirect&bpo=32710) [https://bugs.python.org/issue?@action=redirect&bpo=32710]: Fix memory leaks in `asyncio.ProactorEventLoop` on overlapped operation failure.

- [bpo-35702](https://bugs.python.org/issue?@action=redirect&bpo=35702) [https://bugs.python.org/issue?@action=redirect&bpo=35702]: The `time.CLOCK_UPTIME_RAW` constant is now available for macOS 10.12.
- [bpo-32710](https://bugs.python.org/issue?@action=redirect&bpo=32710) [https://bugs.python.org/issue?@action=redirect&bpo=32710]: Fix a memory leak in `asyncio` in the `ProactorEventLoop` when `ReadFile()` or `WSASend()` overlapped operation fail immediately: release the internal buffer.
- [bpo-35682](https://bugs.python.org/issue?@action=redirect&bpo=35682) [https://bugs.python.org/issue?@action=redirect&bpo=35682]: Fix `asyncio.ProactorEventLoop.sendfile()`: don't attempt to set the result of an internal future if it's already done.
- [bpo-35283](https://bugs.python.org/issue?@action=redirect&bpo=35283) [https://bugs.python.org/issue?@action=redirect&bpo=35283]: Add a deprecated warning for the `threading.Thread.isAlive()` method. Patch by Donghee Na.
- [bpo-35664](https://bugs.python.org/issue?@action=redirect&bpo=35664) [https://bugs.python.org/issue?@action=redirect&bpo=35664]: Improve `operator.itemgetter()` performance by 33% with optimized argument handling and with adding a fast path for the common case of a single non-negative integer index into a tuple (which is the typical use case in the standard library).
- [bpo-35643](https://bugs.python.org/issue?@action=redirect&bpo=35643) [https://bugs.python.org/issue?@action=redirect&bpo=35643]: Fixed a `SyntaxWarning`: invalid escape sequence in `Modules/_sha3/cleanup.py`. Patch by Mickaël Schoentgen.
- [bpo-35619](https://bugs.python.org/issue?@action=redirect&bpo=35619) [https://bugs.python.org/issue?@action=redirect&bpo=35619]: Improved support of custom data descriptors in `help()` and `pydoc`.
- [bpo-28503](https://bugs.python.org/issue?@action=redirect&bpo=28503) [https://bugs.python.org/issue?@action=redirect&bpo=28503]: The `crypt` module now internally uses the `crypt_r()` library function instead of `crypt()` when available.

- [bpo-35614](https://bugs.python.org/issue?@action=redirect&bpo=35614) [https://bugs.python.org/issue?@action=redirect&bpo=35614]: Fixed `help()` on metaclasses. Patch by Sanyam Khurana.
- [bpo-35568](https://bugs.python.org/issue?@action=redirect&bpo=35568) [https://bugs.python.org/issue?@action=redirect&bpo=35568]: Expose `raise(signum)` as **`raise_signal`**
- [bpo-35588](https://bugs.python.org/issue?@action=redirect&bpo=35588) [https://bugs.python.org/issue?@action=redirect&bpo=35588]: The floor division and modulo operations and the **`divmod()`** function on **`fractions.Fraction`** types are 2–4x faster. Patch by Stefan Behnel.
- [bpo-35585](https://bugs.python.org/issue?@action=redirect&bpo=35585) [https://bugs.python.org/issue?@action=redirect&bpo=35585]: Speed-up building enums by value, e.g. `http.HTTPStatus(200)`.
- [bpo-30561](https://bugs.python.org/issue?@action=redirect&bpo=30561) [https://bugs.python.org/issue?@action=redirect&bpo=30561]: `random.gammavariate(1.0, beta)` now computes the same result as `random.expovariate(1.0 / beta)`. This synchronizes the two algorithms and eliminates some idiosyncrasies in the old implementation. It does however produce a difference stream of random variables than it used to.
- [bpo-35537](https://bugs.python.org/issue?@action=redirect&bpo=35537) [https://bugs.python.org/issue?@action=redirect&bpo=35537]: The **`subprocess`** module can now use the **`os.posix_spawn()`** function in some cases for better performance.
- [bpo-35526](https://bugs.python.org/issue?@action=redirect&bpo=35526) [https://bugs.python.org/issue?@action=redirect&bpo=35526]: Delaying the ‘joke’ of `barry_as_FLUFL.mandatory` to Python version 4.0
- [bpo-35523](https://bugs.python.org/issue?@action=redirect&bpo=35523) [https://bugs.python.org/issue?@action=redirect&bpo=35523]: Remove **`ctypes`** callback workaround: no longer create a callback at startup. Avoid SELinux alert on `import ctypes` and `import uuid`.
- [bpo-31784](https://bugs.python.org/issue?@action=redirect&bpo=31784) [https://bugs.python.org/issue?@action=redirect&bpo=31784]

@action=redirect&bpo=31784]: `uuid.uuid1()` now calls `time.time_ns()` rather than `int(time.time() * 1e9)`.

- [bpo-35513](https://bugs.python.org/issue?@action=redirect&bpo=35513) [https://bugs.python.org/issue?@action=redirect&bpo=35513]: `TextTestRunner` of `unittest.runner` now uses `time.perf_counter()` rather than `time.time()` to measure the execution time of a test: `time.time()` can go backwards, whereas `time.perf_counter()` is monotonic.
- [bpo-35502](https://bugs.python.org/issue?@action=redirect&bpo=35502) [https://bugs.python.org/issue?@action=redirect&bpo=35502]: Fixed reference leaks in `xml.etree.ElementTree.TreeBuilder` in case of unfinished building of the tree (in particular when an error was raised during parsing XML).
- [bpo-35348](https://bugs.python.org/issue?@action=redirect&bpo=35348) [https://bugs.python.org/issue?@action=redirect&bpo=35348]: Make `platform.architecture()` parsing of `file` command output more reliable: add the `-b` option to the `file` command to omit the filename, force the usage of the C locale, and search also the “shared object” pattern.
- [bpo-35491](https://bugs.python.org/issue?@action=redirect&bpo=35491) [https://bugs.python.org/issue?@action=redirect&bpo=35491]: `multiprocessing`: Add `Pool.__repr__()` and enhance `BaseProcess.__repr__()` (add `pid` and `parent pid`) to ease debugging. Pool state constant values are now strings instead of integers, for example `RUN` value becomes `'RUN'` instead of `0`.
- [bpo-35477](https://bugs.python.org/issue?@action=redirect&bpo=35477) [https://bugs.python.org/issue?@action=redirect&bpo=35477]: `multiprocessing.Pool.__enter__()` now fails if the pool is not running: with `pool`: fails if used more than once.
- [bpo-31446](https://bugs.python.org/issue?@action=redirect&bpo=31446) [https://bugs.python.org/issue?@action=redirect&bpo=31446]: Copy command line that was passed to `CreateProcessW` since this function can change the

content of the input buffer.

- [bpo-35471](https://bugs.python.org/issue?@action=redirect&bpo=35471) [https://bugs.python.org/issue?@action=redirect&bpo=35471]: Python 2.4 dropped MacOS 9 support. The macpath module was deprecated in Python 3.7. The module is now removed.
- [bpo-23057](https://bugs.python.org/issue?@action=redirect&bpo=23057) [https://bugs.python.org/issue?@action=redirect&bpo=23057]: Unblock Proactor event loop when keyboard interrupt is received on Windows
- [bpo-35052](https://bugs.python.org/issue?@action=redirect&bpo=35052) [https://bugs.python.org/issue?@action=redirect&bpo=35052]: Fix xml.dom.minidom cloneNode() on a document with an entity: pass the correct arguments to the user data handler of an entity.
- [bpo-20239](https://bugs.python.org/issue?@action=redirect&bpo=20239) [https://bugs.python.org/issue?@action=redirect&bpo=20239]: Allow repeated assignment deletion of `unittest.mock.Mock` attributes. Patch by Pablo Galindo.
- [bpo-17185](https://bugs.python.org/issue?@action=redirect&bpo=17185) [https://bugs.python.org/issue?@action=redirect&bpo=17185]: Set `__signature__` on mock for `inspect` to get signature. Patch by Karthikeyan Singaravelan.
- [bpo-35445](https://bugs.python.org/issue?@action=redirect&bpo=35445) [https://bugs.python.org/issue?@action=redirect&bpo=35445]: Memory errors during creating `posix.environ` no longer ignored.
- [bpo-35415](https://bugs.python.org/issue?@action=redirect&bpo=35415) [https://bugs.python.org/issue?@action=redirect&bpo=35415]: Validate `fileno =` argument to `socket.socket()`.
- [bpo-35424](https://bugs.python.org/issue?@action=redirect&bpo=35424) [https://bugs.python.org/issue?@action=redirect&bpo=35424]: `multiprocessing.Pool` destructor now emits `ResourceWarning` if the pool is still running.
- [bpo-35330](https://bugs.python.org/issue?@action=redirect&bpo=35330) [https://bugs.python.org/issue?@action=redirect&bpo=35330]: When a `Mock` instance was used

to wrap an object, if **side\_effect** is used in one of the mocks of it methods, don't call the original implementation and return the result of using the side effect the same way that it is done with `return_value`.

- [bpo-35346](https://bugs.python.org/issue?@action=redirect&bpo=35346) [https://bugs.python.org/issue?@action=redirect&bpo=35346]: Drop Mac OS 9 and Rhapsody support from the **platform** module. Rhapsody last release was in 2000. Mac OS 9 last release was in 2001.
- [bpo-10496](https://bugs.python.org/issue?@action=redirect&bpo=10496) [https://bugs.python.org/issue?@action=redirect&bpo=10496]: **check\_environ()** of `distutils.util` now catches **KeyError** on calling **pwd.getpuid()**: don't create the `HOME` environment variable in this case.
- [bpo-10496](https://bugs.python.org/issue?@action=redirect&bpo=10496) [https://bugs.python.org/issue?@action=redirect&bpo=10496]: **posixpath.expanduser()** now returns the input *path* unchanged if the `HOME` environment variable is not set and the current user has no home directory (if the current user identifier doesn't exist in the password database). This change fix the **site** module if the current user doesn't exist in the password database (if the user has no home directory).
- [bpo-35389](https://bugs.python.org/issue?@action=redirect&bpo=35389) [https://bugs.python.org/issue?@action=redirect&bpo=35389]: **platform.libc\_ver()** now uses `os.confstr('CS_GNU_LIBC_VERSION')` if available and the *executable* parameter is not set.
- [bpo-35394](https://bugs.python.org/issue?@action=redirect&bpo=35394) [https://bugs.python.org/issue?@action=redirect&bpo=35394]: Add empty slots to asyncio abstract protocols.
- [bpo-35310](https://bugs.python.org/issue?@action=redirect&bpo=35310) [https://bugs.python.org/issue?@action=redirect&bpo=35310]: Fix a bug in **select.select()** where, in some cases, the file descriptor sequences were returned unmodified after a signal interruption, even though the file descriptors might not be ready yet. **select.select()** will now always return empty lists if a timeout has occurred. Patch by Oran Avraham.

- [bpo-35380](https://bugs.python.org/issue?@action=redirect&bpo=35380) [https://bugs.python.org/issue?@action=redirect&bpo=35380]: Enable TCP\_NODELAY on Windows for proactor asyncio event loop.
- [bpo-35341](https://bugs.python.org/issue?@action=redirect&bpo=35341) [https://bugs.python.org/issue?@action=redirect&bpo=35341]: Add generic version of `collections.OrderedDict` to the `typing` module. Patch by Ismo Toijala.
- [bpo-35371](https://bugs.python.org/issue?@action=redirect&bpo=35371) [https://bugs.python.org/issue?@action=redirect&bpo=35371]: Fixed possible crash in `os.utime()` on Windows when pass incorrect arguments.
- [bpo-35346](https://bugs.python.org/issue?@action=redirect&bpo=35346) [https://bugs.python.org/issue?@action=redirect&bpo=35346]: `platform.uname()` now redirects `stderr` to `os.devnull` when running external programs like `cmd /c ver`.
- [bpo-35066](https://bugs.python.org/issue?@action=redirect&bpo=35066) [https://bugs.python.org/issue?@action=redirect&bpo=35066]: Previously, calling the `strptime()` method on a datetime object with a trailing `'%'` in the format string would result in an exception. However, this only occurred when the datetime C module was being used; the python implementation did not match this behavior. Datetime is now PEP-399 compliant, and will not throw an exception on a trailing `'%'`.
- [bpo-35345](https://bugs.python.org/issue?@action=redirect&bpo=35345) [https://bugs.python.org/issue?@action=redirect&bpo=35345]: The function `platform.popen` has been removed, it was deprecated since Python 3.3: use `os.popen()` instead.
- [bpo-35344](https://bugs.python.org/issue?@action=redirect&bpo=35344) [https://bugs.python.org/issue?@action=redirect&bpo=35344]: On macOS, `platform.platform()` now uses `platform.mac_ver()`, if it returns a non-empty release string, to get the macOS version rather than the darwin version.
- [bpo-35312](https://bugs.python.org/issue?@action=redirect&bpo=35312) [https://bugs.python.org/issue?@action=redirect&bpo=35312]: Make `lib2to3.pgen2.parse.ParseError` round-trip pickle-

able. Patch by Anthony Sottile.

- [bpo-35308](https://bugs.python.org/issue?@action=redirect&bpo=35308) [https://bugs.python.org/issue?@action=redirect&bpo=35308]: Fix regression in `webbrowser` where default browsers may be preferred over browsers in the `BROWSER` environment variable.
- [bpo-24746](https://bugs.python.org/issue?@action=redirect&bpo=24746) [https://bugs.python.org/issue?@action=redirect&bpo=24746]: Avoid stripping trailing whitespace in doctest fancy diff. Original patch by R. David Murray & Jairo Trad. Enhanced by Sanyam Khurana.
- [bpo-28604](https://bugs.python.org/issue?@action=redirect&bpo=28604) [https://bugs.python.org/issue?@action=redirect&bpo=28604]: `locale.localeconv()` now sets temporarily the `LC_CTYPE` locale to the `LC_MONETARY` locale if the two locales are different and monetary strings are non-ASCII. This temporary change affects other threads.
- [bpo-35277](https://bugs.python.org/issue?@action=redirect&bpo=35277) [https://bugs.python.org/issue?@action=redirect&bpo=35277]: Update `ensurepip` to install `pip` 18.1 and `setuptools` 40.6.2.
- [bpo-24209](https://bugs.python.org/issue?@action=redirect&bpo=24209) [https://bugs.python.org/issue?@action=redirect&bpo=24209]: Adds IPv6 support when invoking `http.server` directly.
- [bpo-35226](https://bugs.python.org/issue?@action=redirect&bpo=35226) [https://bugs.python.org/issue?@action=redirect&bpo=35226]: Recursively check arguments when testing for equality of `unittest.mock.call` objects and add note that tracking of parameters used to create ancestors of mocks in `mock_calls` is not possible.
- [bpo-29564](https://bugs.python.org/issue?@action=redirect&bpo=29564) [https://bugs.python.org/issue?@action=redirect&bpo=29564]: The `warnings` module now suggests to enable `tracemalloc` if the source is specified, the `tracemalloc` module is available, but `tracemalloc` is not tracing memory allocations.
- [bpo-35189](https://bugs.python.org/issue?@action=redirect&bpo=35189) [https://bugs.python.org/issue?@action=redirect&bpo=35189]: Modify the following `fnctl` function to retry if interrupted by a signal (`EINTR`): `flock`,

lockf, fnctl

- [bpo-30064](https://bugs.python.org/issue?@action=redirect&bpo=30064) [https://bugs.python.org/issue?@action=redirect&bpo=30064]: Use `add_done_callback()` in `sock_*` `asyncio` API to unsubscribe reader/writer early on cancellation.
- [bpo-35186](https://bugs.python.org/issue?@action=redirect&bpo=35186) [https://bugs.python.org/issue?@action=redirect&bpo=35186]: Removed the “built with” comment added when `setup.py` upload is used with either `bdist_rpm` or `bdist_dumb`.
- [bpo-35152](https://bugs.python.org/issue?@action=redirect&bpo=35152) [https://bugs.python.org/issue?@action=redirect&bpo=35152]: Allow sending more than 2 GB at once on a multiprocessing connection on non-Windows systems.
- [bpo-35062](https://bugs.python.org/issue?@action=redirect&bpo=35062) [https://bugs.python.org/issue?@action=redirect&bpo=35062]: Fix incorrect parsing of `_io.IncrementalNewlineDecoder`’s `translate` argument.
- [bpo-35065](https://bugs.python.org/issue?@action=redirect&bpo=35065) [https://bugs.python.org/issue?@action=redirect&bpo=35065]: Remove `StreamReaderProtocol._untrack_reader`. The call to `_untrack_reader` is currently performed too soon, causing the protocol to forget about the reader before `connection_lost` can run and feed the EOF to the reader.
- [bpo-34160](https://bugs.python.org/issue?@action=redirect&bpo=34160) [https://bugs.python.org/issue?@action=redirect&bpo=34160]: `ElementTree` and `minidom` now preserve the attribute order specified by the user.
- [bpo-35079](https://bugs.python.org/issue?@action=redirect&bpo=35079) [https://bugs.python.org/issue?@action=redirect&bpo=35079]: Improve `difflib.SequenceManager.get_matching_blocks` doc by adding ‘non-overlapping’ and changing ‘!=’ to ‘<’.
- [bpo-33710](https://bugs.python.org/issue?@action=redirect&bpo=33710) [https://bugs.python.org/issue?@action=redirect&bpo=33710]: Deprecated `l*gettext()` functions and methods in the `gettext` module. They return encoded bytes instead of Unicode strings and are artifacts

from Python 2 times. Also deprecated functions and methods related to setting the charset for `l*gettext()` functions and methods.

- [bpo-35017](https://bugs.python.org/issue?@action=redirect&bpo=35017) [https://bugs.python.org/issue?@action=redirect&bpo=35017]: `socketserver.BaseServer.serve_forever()` now exits immediately if it's `shutdown()` method is called while it is polling for new events.
- [bpo-35024](https://bugs.python.org/issue?@action=redirect&bpo=35024) [https://bugs.python.org/issue?@action=redirect&bpo=35024]: `importlib` no longer logs **wrote** redundantly after **(created|could not create)** is already logged. Patch by Quentin Agren.
- [bpo-35047](https://bugs.python.org/issue?@action=redirect&bpo=35047) [https://bugs.python.org/issue?@action=redirect&bpo=35047]: `unittest.mock` now includes mock calls in exception messages if `assert_not_called`, `assert_called_once`, or `assert_called_once_with` fails. Patch by Petter Strandmark.
- [bpo-31047](https://bugs.python.org/issue?@action=redirect&bpo=31047) [https://bugs.python.org/issue?@action=redirect&bpo=31047]: Fix `ntpath.abspath` regression where it didn't remove a trailing separator on Windows. Patch by Tim Graham.
- [bpo-35053](https://bugs.python.org/issue?@action=redirect&bpo=35053) [https://bugs.python.org/issue?@action=redirect&bpo=35053]: `tracemalloc` now tries to update the traceback when an object is reused from a "free list" (optimization for faster object creation, used by the builtin list type for example).
- [bpo-31553](https://bugs.python.org/issue?@action=redirect&bpo=31553) [https://bugs.python.org/issue?@action=redirect&bpo=31553]: Add the `-json-lines` option to `json.tool`. Patch by hongweipeng.
- [bpo-34794](https://bugs.python.org/issue?@action=redirect&bpo=34794) [https://bugs.python.org/issue?@action=redirect&bpo=34794]: Fixed a leak in Tkinter when pass the Python wrapper around `Tcl_Obj` back to `Tcl/Tk`.
- [bpo-34909](https://bugs.python.org/issue?@action=redirect&bpo=34909) [https://bugs.python.org/issue?@action=redirect&bpo=34909]

@action=redirect&bpo=34909]: Enum: fix grandchildren subclassing when parent mixed with concrete data types.

- [bpo-35022](https://bugs.python.org/issue?@action=redirect&bpo=35022) [https://bugs.python.org/issue?@action=redirect&bpo=35022]: `unittest.mock.MagicMock` now supports the `__fspath__` method (from `os.PathLike`).
- [bpo-35008](https://bugs.python.org/issue?@action=redirect&bpo=35008) [https://bugs.python.org/issue?@action=redirect&bpo=35008]: Fixed references leaks when call the `__setstate__()` method of `xml.etree.ElementTree.Element` in the C implementation for already initialized element.
- [bpo-23420](https://bugs.python.org/issue?@action=redirect&bpo=23420) [https://bugs.python.org/issue?@action=redirect&bpo=23420]: Verify the value for the parameter ‘-s’ of the cProfile CLI. Patch by Robert Kuska
- [bpo-33947](https://bugs.python.org/issue?@action=redirect&bpo=33947) [https://bugs.python.org/issue?@action=redirect&bpo=33947]: dataclasses now handle recursive reprs without raising RecursionError.
- [bpo-34890](https://bugs.python.org/issue?@action=redirect&bpo=34890) [https://bugs.python.org/issue?@action=redirect&bpo=34890]: Make `inspect.iscoroutinefunction()`, `inspect.isgeneratorfunction()` and `inspect.isasyncgenfunction()` work with `functools.partial()`. Patch by Pablo Galindo.
- [bpo-34521](https://bugs.python.org/issue?@action=redirect&bpo=34521) [https://bugs.python.org/issue?@action=redirect&bpo=34521]: Use `socket.CMSG_SPACE()` to calculate ancillary data size instead of `socket.CMSG_LEN()` in `multiprocessing.reduction.recvfd()` as [RFC 3542](https://datatracker.ietf.org/doc/html/rfc3542.html) [https://datatracker.ietf.org/doc/html/rfc3542.html] requires the use of the former for portable applications.
- [bpo-31522](https://bugs.python.org/issue?@action=redirect&bpo=31522) [https://bugs.python.org/issue?@action=redirect&bpo=31522]: The `mailbox.mbox.get_string` function *from\_* parameter can now successfully be set to a non-default value.

- [bpo-34970](https://bugs.python.org/issue?@action=redirect&bpo=34970) [https://bugs.python.org/issue?@action=redirect&bpo=34970]: **Protect tasks weak set manipulation in `asyncio.all_tasks()`**
- [bpo-34969](https://bugs.python.org/issue?@action=redirect&bpo=34969) [https://bugs.python.org/issue?@action=redirect&bpo=34969]: **gzip: Add `-fast`, `-best` on the gzip CLI, these parameters will be used for the fast compression method (quick) or the best method compress (slower, but smaller file). Also, change the default compression level to 6 (tradeoff).**
- [bpo-16965](https://bugs.python.org/issue?@action=redirect&bpo=16965) [https://bugs.python.org/issue?@action=redirect&bpo=16965]: **The `2to3 execfile` fixer now opens the file with mode `'rb'`. Patch by Zackery Spytz.**
- [bpo-34966](https://bugs.python.org/issue?@action=redirect&bpo=34966) [https://bugs.python.org/issue?@action=redirect&bpo=34966]: **`pydoc` now supports aliases not only to methods defined in the end class, but also to inherited methods. The docstring is not duplicated for aliases.**
- [bpo-34926](https://bugs.python.org/issue?@action=redirect&bpo=34926) [https://bugs.python.org/issue?@action=redirect&bpo=34926]: **`mimetypes.MimeTypes.guess_type()` now accepts `path-like object` in addition to url strings. Patch by Mayank Asthana.**
- [bpo-23831](https://bugs.python.org/issue?@action=redirect&bpo=23831) [https://bugs.python.org/issue?@action=redirect&bpo=23831]: **Add `moveto()` method to the `tkinter.Canvas` widget. Patch by Juliette Monsel.**
- [bpo-34941](https://bugs.python.org/issue?@action=redirect&bpo=34941) [https://bugs.python.org/issue?@action=redirect&bpo=34941]: **Methods `find()`, `findtext()` and `findall()` of the `Element` class in the `xml.etree.ElementTree` module are now able to find children which are instances of `Element` subclasses.**
- [bpo-32680](https://bugs.python.org/issue?@action=redirect&bpo=32680) [https://bugs.python.org/issue?@action=redirect&bpo=32680]: **`smtplib.SMTP` objects now always have a `sock` attribute present**
- [bpo-34769](https://bugs.python.org/issue?) [https://bugs.python.org/issue?]

@action=redirect&bpo=34769]: Fix for async generators not finalizing when event loop is in debug mode and garbage collector runs in another thread.

- [bpo-34936](https://bugs.python.org/issue?@action=redirect&bpo=34936) [https://bugs.python.org/issue?@action=redirect&bpo=34936]: Fix `TclError` in `tkinter.Spinbox.selection_element()`. Patch by Juliette Monsel.
- [bpo-34829](https://bugs.python.org/issue?@action=redirect&bpo=34829) [https://bugs.python.org/issue?@action=redirect&bpo=34829]: Add methods `selection_from`, `selection_range`, `selection_present` and `selection_to` to the `tkinter.Spinbox` for consistency with the `tkinter.Entry` widget. Patch by Juliette Monsel.
- [bpo-34911](https://bugs.python.org/issue?@action=redirect&bpo=34911) [https://bugs.python.org/issue?@action=redirect&bpo=34911]: Added `secure_protocols` argument to `http.cookiejar.DefaultCookiePolicy` to allow for tweaking of protocols and also to add support by default for `wss`, the secure websocket protocol.
- [bpo-34922](https://bugs.python.org/issue?@action=redirect&bpo=34922) [https://bugs.python.org/issue?@action=redirect&bpo=34922]: Fixed integer overflow in the `digest()` and `hexdigest()` methods for the SHAKE algorithm in the `hashlib` module.
- [bpo-34925](https://bugs.python.org/issue?@action=redirect&bpo=34925) [https://bugs.python.org/issue?@action=redirect&bpo=34925]: 25% speedup in argument parsing for the functions in the `bisect` module.
- [bpo-34900](https://bugs.python.org/issue?@action=redirect&bpo=34900) [https://bugs.python.org/issue?@action=redirect&bpo=34900]: Fixed `unittest.TestCase.debug()` when used to call test methods with subtests. Patch by Bruno Oliveira.
- [bpo-34844](https://bugs.python.org/issue?@action=redirect&bpo=34844) [https://bugs.python.org/issue?@action=redirect&bpo=34844]: `logging.Formatter` enhancement - Ensure styles and fmt matches in `logging.Formatter` - Added `validate` method in each format style class: `StrFormatStyle`, `PercentStyle`, `StringTemplateStyle`. - This method is called in the constructor of `logging.Formatter` class - Also re-raise the

KeyError in the format method of each style class, so it would be a bit clear that it's an error with the invalid format fields.

- [bpo-34897](https://bugs.python.org/issue?@action=redirect&bpo=34897) [https://bugs.python.org/issue?@action=redirect&bpo=34897]: Adjust `test.support.missing_compiler_executable` check so that a nominal command name of "" is ignored. Patch by Michael Felt.
- [bpo-34871](https://bugs.python.org/issue?@action=redirect&bpo=34871) [https://bugs.python.org/issue?@action=redirect&bpo=34871]: Fix `inspect` module polluted `sys.modules` when parsing `__text_signature__` of callable.
- [bpo-34898](https://bugs.python.org/issue?@action=redirect&bpo=34898) [https://bugs.python.org/issue?@action=redirect&bpo=34898]: Add `mtime` argument to `gzip.compress` for reproducible output. Patch by Guo Ci Teo.
- [bpo-28441](https://bugs.python.org/issue?@action=redirect&bpo=28441) [https://bugs.python.org/issue?@action=redirect&bpo=28441]: On Cygwin and MinGW, ensure that `sys.executable` always includes the full filename in the path, including the `.exe` suffix (unless it is a symbolic link).
- [bpo-34866](https://bugs.python.org/issue?@action=redirect&bpo=34866) [https://bugs.python.org/issue?@action=redirect&bpo=34866]: Adding `max_num_fields` to `cgi.FieldStorage` to make DOS attacks harder by limiting the number of `MiniFieldStorage` objects created by `FieldStorage`.
- [bpo-34711](https://bugs.python.org/issue?@action=redirect&bpo=34711) [https://bugs.python.org/issue?@action=redirect&bpo=34711]: `http.server` ensures it reports `HTTPStatus.NOT_FOUND` when the local path ends with "/" and is not a directory, even if the underlying OS (e.g. AIX) accepts such paths as a valid file reference. Patch by Michael Felt.
- [bpo-34872](https://bugs.python.org/issue?@action=redirect&bpo=34872) [https://bugs.python.org/issue?@action=redirect&bpo=34872]: Fix self-cancellation in C implementation of `asyncio.Task`

- [bpo-34849](https://bugs.python.org/issue?@action=redirect&bpo=34849) [https://bugs.python.org/issue?@action=redirect&bpo=34849]: Don't log waiting for `selector.select` in `asyncio` loop iteration. The waiting is pretty normal for any `asyncio` program, logging its time just adds a noise to logs without any useful information provided.
- [bpo-34022](https://bugs.python.org/issue?@action=redirect&bpo=34022) [https://bugs.python.org/issue?@action=redirect&bpo=34022]: The `SOURCE_DATE_EPOCH` environment variable no longer overrides the value of the `invalidation_mode` argument to `py_compile.compile()`, and determines its default value instead.
- [bpo-34819](https://bugs.python.org/issue?@action=redirect&bpo=34819) [https://bugs.python.org/issue?@action=redirect&bpo=34819]: Use a monotonic clock to compute timeouts in `Executor.map()` and `as_completed()`, in order to prevent timeouts from deviating when the system clock is adjusted.
- [bpo-34758](https://bugs.python.org/issue?@action=redirect&bpo=34758) [https://bugs.python.org/issue?@action=redirect&bpo=34758]: Add `.wasm -> application/wasm` to list of recognized file types and content type headers
- [bpo-34789](https://bugs.python.org/issue?@action=redirect&bpo=34789) [https://bugs.python.org/issue?@action=redirect&bpo=34789]: `xml.sax.make_parser()` now accepts any iterable as its `parser_list` argument. Patch by Andrés Delfino.
- [bpo-34334](https://bugs.python.org/issue?@action=redirect&bpo=34334) [https://bugs.python.org/issue?@action=redirect&bpo=34334]: In `QueueHandler`, clear `exc_text` from `LogRecord` to prevent traceback from being written twice.
- [bpo-34687](https://bugs.python.org/issue?@action=redirect&bpo=34687) [https://bugs.python.org/issue?@action=redirect&bpo=34687]: On Windows, `asyncio` now uses `ProactorEventLoop`, instead of `SelectorEventLoop`, by default.
- [bpo-5950](https://bugs.python.org/issue?@action=redirect&bpo=5950) [https://bugs.python.org/issue?@action=redirect&bpo=5950]: Support reading zip files with archive comments in `zipimport`.
- [bpo-32892](https://bugs.python.org/issue?@action=redirect&bpo=32892) [https://bugs.python.org/issue?@action=redirect&bpo=32892]

@action=redirect&bpo=32892]: The parser now represents all constants as `ast.Constant` instead of using specific constant AST types (Num, Str, Bytes, NameConstant and Ellipsis). These classes are considered deprecated and will be removed in future Python versions.

- [bpo-34728](https://bugs.python.org/issue?@action=redirect&bpo=34728) [https://bugs.python.org/issue?@action=redirect&bpo=34728]: Add deprecation warning when `loop` is used in methods: `asyncio.sleep`, `asyncio.wait` and `asyncio.wait_for`.
- [bpo-34738](https://bugs.python.org/issue?@action=redirect&bpo=34738) [https://bugs.python.org/issue?@action=redirect&bpo=34738]: ZIP files created by `distutils` will now include entries for directories.
- [bpo-34659](https://bugs.python.org/issue?@action=redirect&bpo=34659) [https://bugs.python.org/issue?@action=redirect&bpo=34659]: Add an optional *initial* argument to `itertools.accumulate()`.
- [bpo-29577](https://bugs.python.org/issue?@action=redirect&bpo=29577) [https://bugs.python.org/issue?@action=redirect&bpo=29577]: Support multiple mixin classes when creating Enums.
- [bpo-34670](https://bugs.python.org/issue?@action=redirect&bpo=34670) [https://bugs.python.org/issue?@action=redirect&bpo=34670]: Add `SSLContext.post_handshake_auth` and `SSLSocket.verify_client_post_handshake` for TLS 1.3's post handshake authentication feature.
- [bpo-32718](https://bugs.python.org/issue?@action=redirect&bpo=32718) [https://bugs.python.org/issue?@action=redirect&bpo=32718]: The `Activate.ps1` script from `venv` works with PowerShell Core 6.1 and is now available under all operating systems.
- [bpo-31177](https://bugs.python.org/issue?@action=redirect&bpo=31177) [https://bugs.python.org/issue?@action=redirect&bpo=31177]: Fix bug that prevented using `reset_mock` on mock instances with deleted attributes
- [bpo-34672](https://bugs.python.org/issue?@action=redirect&bpo=34672) [https://bugs.python.org/issue?@action=redirect&bpo=34672]: Add a workaround, so the `'Z'` `time.strftime()` specifier on the musl C library can work

in some cases.

- [bpo-34666](https://bugs.python.org/issue?@action=redirect&bpo=34666) [https://bugs.python.org/issue?@action=redirect&bpo=34666]: Implement `asyncio.StreamWriter.write` and `asyncio.StreamWriter.close()` coroutines. Methods are needed for providing a consistent stream API with control flow switched on by default.
- [bpo-6721](https://bugs.python.org/issue?@action=redirect&bpo=6721) [https://bugs.python.org/issue?@action=redirect&bpo=6721]: Acquire the logging module's commonly used internal locks while `fork()`ing to avoid deadlocks in the child process.
- [bpo-34658](https://bugs.python.org/issue?@action=redirect&bpo=34658) [https://bugs.python.org/issue?@action=redirect&bpo=34658]: Fix a rare interpreter unhandled exception state `SystemError` only seen when using `subprocess` with a `preexec_fn` while an `after_parent` handler has been registered with `os.register_at_fork` and the `fork` system call fails.
- [bpo-34652](https://bugs.python.org/issue?@action=redirect&bpo=34652) [https://bugs.python.org/issue?@action=redirect&bpo=34652]: Ensure `os.lchmod()` is never defined on Linux.
- [bpo-34638](https://bugs.python.org/issue?@action=redirect&bpo=34638) [https://bugs.python.org/issue?@action=redirect&bpo=34638]: Store a weak reference to stream reader to break strong references loop between reader and protocol. It allows to detect and close the socket if the stream is deleted (garbage collected) without `close()` call.
- [bpo-34536](https://bugs.python.org/issue?@action=redirect&bpo=34536) [https://bugs.python.org/issue?@action=redirect&bpo=34536]: `Enum._missing_`: raise `ValueError` if `None` returned and `TypeError` if non-member is returned.
- [bpo-34636](https://bugs.python.org/issue?@action=redirect&bpo=34636) [https://bugs.python.org/issue?@action=redirect&bpo=34636]: Speed up re scanning of many non-matching characters for `s` `w` and `d` within bytes objects. (microoptimization)
- [bpo-24412](https://bugs.python.org/issue?@action=redirect&bpo=24412) [https://bugs.python.org/issue?@action=redirect&bpo=24412]

@action=redirect&bpo=24412]: Add `addModuleCleanup()` and `addClassCleanup()` to unittest to support cleanups for `setUpModule()` and `setUpClass()`. Patch by Lisa Roach.

- [bpo-34630](https://bugs.python.org/issue?@action=redirect&bpo=34630) [https://bugs.python.org/issue?@action=redirect&bpo=34630]: Don't log SSL certificate errors in asyncio code (connection error logging is skipped already).
- [bpo-32490](https://bugs.python.org/issue?@action=redirect&bpo=32490) [https://bugs.python.org/issue?@action=redirect&bpo=32490]: Prevent filename duplication in `subprocess` exception messages. Patch by Zackery Spytz.
- [bpo-34363](https://bugs.python.org/issue?@action=redirect&bpo=34363) [https://bugs.python.org/issue?@action=redirect&bpo=34363]: `dataclasses.asdict()` and `.astuple()` now handle namedtuples correctly.
- [bpo-34625](https://bugs.python.org/issue?@action=redirect&bpo=34625) [https://bugs.python.org/issue?@action=redirect&bpo=34625]: Update vendorized expat library version to 2.2.6.
- [bpo-32270](https://bugs.python.org/issue?@action=redirect&bpo=32270) [https://bugs.python.org/issue?@action=redirect&bpo=32270]: The subprocess module no longer mistakenly closes redirected fds even when they were in `pass_fds` when outside of the default {0, 1, 2} set.
- [bpo-34622](https://bugs.python.org/issue?@action=redirect&bpo=34622) [https://bugs.python.org/issue?@action=redirect&bpo=34622]: Create a dedicated `asyncio.CancelledError`, `asyncio.InvalidStateError` and `asyncio.TimeoutError` exception classes. Inherit them from corresponding exceptions from `concurrent.futures` package. Extract `asyncio` exceptions into a separate file.
- [bpo-34610](https://bugs.python.org/issue?@action=redirect&bpo=34610) [https://bugs.python.org/issue?@action=redirect&bpo=34610]: Fixed iterator of `multiprocessing.managers.DictProxy`.
- [bpo-34421](https://bugs.python.org/issue?@action=redirect&bpo=34421) [https://bugs.python.org/issue?@action=redirect&bpo=34421]: Fix distutils logging for non-ASCII strings. This caused installation issues on Windows.

- [bpo-34604](https://bugs.python.org/issue?@action=redirect&bpo=34604) [https://bugs.python.org/issue?@action=redirect&bpo=34604]: Fix possible mojibake in the error message of `pwd.getpwnam` and `grp.getgrnam` using string representation because of invisible characters or trailing whitespaces. Patch by William Grzybowski.
- [bpo-30977](https://bugs.python.org/issue?@action=redirect&bpo=30977) [https://bugs.python.org/issue?@action=redirect&bpo=30977]: Make `uuid.UUID` use `__slots__` to reduce its memory footprint. Based on original patch by Wouter Bolsterlee.
- [bpo-34574](https://bugs.python.org/issue?@action=redirect&bpo=34574) [https://bugs.python.org/issue?@action=redirect&bpo=34574]: `OrderedDict` iterators are not exhausted during pickling anymore. Patch by Sergey Fedoseev.
- [bpo-8110](https://bugs.python.org/issue?@action=redirect&bpo=8110) [https://bugs.python.org/issue?@action=redirect&bpo=8110]: Refactored `subprocess` to check for Windows-specific modules rather than `sys.platform == 'win32'`.
- [bpo-34530](https://bugs.python.org/issue?@action=redirect&bpo=34530) [https://bugs.python.org/issue?@action=redirect&bpo=34530]: `distutils.spawn.find_executable()` now falls back on `os.defpath` if the `PATH` environment variable is not set.
- [bpo-34563](https://bugs.python.org/issue?@action=redirect&bpo=34563) [https://bugs.python.org/issue?@action=redirect&bpo=34563]: On Windows, fix `multiprocessing.Connection` for very large read: fix `_winapi.PeekNamedPipe()` and `_winapi.ReadFile()` for read larger than `INT_MAX` (usually `2**31-1`).
- [bpo-34558](https://bugs.python.org/issue?@action=redirect&bpo=34558) [https://bugs.python.org/issue?@action=redirect&bpo=34558]: Correct typo in `Lib/ctypes/_aix.py`
- [bpo-34282](https://bugs.python.org/issue?@action=redirect&bpo=34282) [https://bugs.python.org/issue?@action=redirect&bpo=34282]: Move `Enum._convert` to `EnumMeta._convert_` and fix enum members getting shadowed by parent attributes.
- [bpo-22872](https://bugs.python.org/issue?@action=redirect&bpo=22872) [https://bugs.python.org/issue?@action=redirect&bpo=22872]

@action=redirect&bpo=22872]: When the queue is closed, **ValueError** is now raised by **multiprocessing.Queue.put()** and **multiprocessing.Queue.get()** instead of **AssertionError** and **OSError**, respectively. Patch by Zackery Spytz.

- [bpo-34515](https://bugs.python.org/issue?@action=redirect&bpo=34515) [https://bugs.python.org/issue?@action=redirect&bpo=34515]: Fix parsing non-ASCII identifiers in **lib2to3.pgen2.tokenize** (PEP 3131).
- [bpo-13312](https://bugs.python.org/issue?@action=redirect&bpo=13312) [https://bugs.python.org/issue?@action=redirect&bpo=13312]: Avoids a possible integer underflow (undefined behavior) in the time module's year handling code when passed a very low negative year value.
- [bpo-34472](https://bugs.python.org/issue?@action=redirect&bpo=34472) [https://bugs.python.org/issue?@action=redirect&bpo=34472]: Improved compatibility for streamed files in **zipfile**. Previously an optional signature was not being written and certain ZIP applications were not supported. Patch by Silas Sewell.
- [bpo-34454](https://bugs.python.org/issue?@action=redirect&bpo=34454) [https://bugs.python.org/issue?@action=redirect&bpo=34454]: Fix the **.fromisoformat()** methods of datetime types crashing when given unicode with non-UTF-8-encodable code points. Specifically, **datetime.fromisoformat()** now accepts surrogate unicode code points used as the separator. Report and tests by Alexey Izbyshhev, patch by Paul Ganssle.
- [bpo-6700](https://bugs.python.org/issue?@action=redirect&bpo=6700) [https://bugs.python.org/issue?@action=redirect&bpo=6700]: Fix **inspect.getsourcelines** for module level frames/tracebacks. Patch by Vladimir Matveev.
- [bpo-34171](https://bugs.python.org/issue?@action=redirect&bpo=34171) [https://bugs.python.org/issue?@action=redirect&bpo=34171]: Running the **trace** module no longer creates the **trace.cover** file.
- [bpo-34441](https://bugs.python.org/issue?@action=redirect&bpo=34441) [https://bugs.python.org/issue?@action=redirect&bpo=34441]: Fix crash when an ABC-derived class with invalid **\_\_subclasses\_\_** is passed as the second

argument to `issubclass()`. Patch by Alexey Izbyshhev.

- [bpo-34427](https://bugs.python.org/issue?@action=redirect&bpo=34427) [https://bugs.python.org/issue?@action=redirect&bpo=34427]: Fix infinite loop in `a.extend(a)` for `MutableSequence` subclasses.
- [bpo-34412](https://bugs.python.org/issue?@action=redirect&bpo=34412) [https://bugs.python.org/issue?@action=redirect&bpo=34412]: Make `signal.strsignal()` work on HP-UX. Patch by Michael Osipov.
- [bpo-20849](https://bugs.python.org/issue?@action=redirect&bpo=20849) [https://bugs.python.org/issue?@action=redirect&bpo=20849]: `shutil.copytree` now accepts a new `dirs_exist_ok` keyword argument. Patch by Josh Bronson.
- [bpo-31715](https://bugs.python.org/issue?@action=redirect&bpo=31715) [https://bugs.python.org/issue?@action=redirect&bpo=31715]: Associate `.mjs` file extension with `application/javascript` MIME Type.
- [bpo-34384](https://bugs.python.org/issue?@action=redirect&bpo=34384) [https://bugs.python.org/issue?@action=redirect&bpo=34384]: `os.readlink()` now accepts `path-like` and `bytes` objects on Windows.
- [bpo-22602](https://bugs.python.org/issue?@action=redirect&bpo=22602) [https://bugs.python.org/issue?@action=redirect&bpo=22602]: The UTF-7 decoder now raises `UnicodeDecodeError` for ill-formed sequences starting with “+” (as specified in RFC 2152). Patch by Zackery Spytz.
- [bpo-2122](https://bugs.python.org/issue?@action=redirect&bpo=2122) [https://bugs.python.org/issue?@action=redirect&bpo=2122]: The `mmap.flush()` method now returns `None` on success, raises an exception on error under all platforms.
- [bpo-34341](https://bugs.python.org/issue?@action=redirect&bpo=34341) [https://bugs.python.org/issue?@action=redirect&bpo=34341]: Appending to the ZIP archive with the ZIP64 extension no longer grows the size of extra fields of existing entries.
- [bpo-34333](https://bugs.python.org/issue?@action=redirect&bpo=34333) [https://bugs.python.org/issue?@action=redirect&bpo=34333]: Fix %-formatting in `pathlib.PurePath.with_suffix()` when formatting an error message.
- [bpo-18540](https://bugs.python.org/issue?@action=redirect&bpo=18540) [https://bugs.python.org/issue?@action=redirect&bpo=18540]

@action=redirect&bpo=18540]: The `imaplib.IMAP4` and `imaplib.IMAP4_SSL` classes now resolve to the local host IP correctly when the default value of *host* parameter ( ' ' ) is used.

- [bpo-26502](https://bugs.python.org/issue?@action=redirect&bpo=26502) [https://bugs.python.org/issue?@action=redirect&bpo=26502]: Implement `traceback.FrameSummary.__len__()` method to preserve compatibility with the old tuple API.
- [bpo-34318](https://bugs.python.org/issue?@action=redirect&bpo=34318) [https://bugs.python.org/issue?@action=redirect&bpo=34318]: `assertRaises()`, `assertRaisesRegex()`, `assertWarns()` and `assertWarnsRegex()` no longer success if the passed callable is None. They no longer ignore unknown keyword arguments in the context manager mode. A `DeprecationWarning` was raised in these cases since Python 3.5.
- [bpo-9372](https://bugs.python.org/issue?@action=redirect&bpo=9372) [https://bugs.python.org/issue?@action=redirect&bpo=9372]: Deprecate `__getitem__()` methods of `xml.dom.pulldom.DOMEventStream`, `wsgiref.util.FileWrapper` and `fileinput.FileInput`.
- [bpo-33613](https://bugs.python.org/issue?@action=redirect&bpo=33613) [https://bugs.python.org/issue?@action=redirect&bpo=33613]: Fix a race condition in `multiprocessing.semaphore_tracker` when the tracker receives `SIGINT` before it can register signal handlers for ignoring it.
- [bpo-34248](https://bugs.python.org/issue?@action=redirect&bpo=34248) [https://bugs.python.org/issue?@action=redirect&bpo=34248]: Report filename in the exception raised when the database file cannot be opened by `dbm.gnu.open()` and `dbm.ndbm.open()` due to OS-related error. Patch by Zsolt Cserna.
- [bpo-33089](https://bugs.python.org/issue?@action=redirect&bpo=33089) [https://bugs.python.org/issue?@action=redirect&bpo=33089]: Add `math.dist()` to compute the Euclidean distance between two points.

- [bpo-34246](https://bugs.python.org/issue?@action=redirect&bpo=34246) [https://bugs.python.org/issue?@action=redirect&bpo=34246]: `smtpplib.SMTP.send_message()` no longer modifies the content of the *mail\_options* argument. Patch by Pablo S. Blum de Aguiar.
- [bpo-31047](https://bugs.python.org/issue?@action=redirect&bpo=31047) [https://bugs.python.org/issue?@action=redirect&bpo=31047]: Fix `ntpath.abspath` for invalid paths on windows. Patch by Franz Woellert.
- [bpo-32321](https://bugs.python.org/issue?@action=redirect&bpo=32321) [https://bugs.python.org/issue?@action=redirect&bpo=32321]: Add pure Python fallback for `functools.reduce`. Patch by Robert Wright.
- [bpo-34270](https://bugs.python.org/issue?@action=redirect&bpo=34270) [https://bugs.python.org/issue?@action=redirect&bpo=34270]: The default asyncio task class now always has a name which can be get or set using two new methods (`get_name()` and `set_name()`) and is visible in the `repr()` output. An initial name can also be set using the new `name` keyword argument to `asyncio.create_task()` or the `create_task()` method of the event loop. If no initial name is set, the default Task implementation generates a name like `Task-1` using a monotonic counter.
- [bpo-34263](https://bugs.python.org/issue?@action=redirect&bpo=34263) [https://bugs.python.org/issue?@action=redirect&bpo=34263]: asyncio's event loop will not pass timeouts longer than one day to `epoll/select` etc.
- [bpo-34035](https://bugs.python.org/issue?@action=redirect&bpo=34035) [https://bugs.python.org/issue?@action=redirect&bpo=34035]: Fix several `AttributeError` in `zipfile seek()` methods. Patch by Mickaël Schoentgen.
- [bpo-32215](https://bugs.python.org/issue?@action=redirect&bpo=32215) [https://bugs.python.org/issue?@action=redirect&bpo=32215]: Fix performance regression in `sqlite3` when a DML statement appeared in a different line than the rest of the SQL query.
- [bpo-34075](https://bugs.python.org/issue?@action=redirect&bpo=34075) [https://bugs.python.org/issue?@action=redirect&bpo=34075]: Deprecate passing non-`ThreadPoolExecutor` instances to

## **`AbstractEventLoop.set_default_executor()`.**

- [bpo-34251](https://bugs.python.org/issue?@action=redirect&bpo=34251) [https://bugs.python.org/issue?@action=redirect&bpo=34251]: Restore `msilib.Win64` to preserve backwards compatibility since it's already used by `distutils' bdist_msi` command.
- [bpo-19891](https://bugs.python.org/issue?@action=redirect&bpo=19891) [https://bugs.python.org/issue?@action=redirect&bpo=19891]: Ignore errors caused by missing / non-writable homedir while writing history during exit of an interactive session. Patch by Anthony Sottile.
- [bpo-33089](https://bugs.python.org/issue?@action=redirect&bpo=33089) [https://bugs.python.org/issue?@action=redirect&bpo=33089]: Enhanced `math.hypot()` to support more than two dimensions.
- [bpo-34228](https://bugs.python.org/issue?@action=redirect&bpo=34228) [https://bugs.python.org/issue?@action=redirect&bpo=34228]: `tracemalloc`: `PYTHONTRACEMALLOC=0` environment variable and `-X tracemalloc=0` command line option are now allowed to disable explicitly `tracemalloc` at startup.
- [bpo-13041](https://bugs.python.org/issue?@action=redirect&bpo=13041) [https://bugs.python.org/issue?@action=redirect&bpo=13041]: Use [`shutil.get\_terminal\_size\(\)`](#) to calculate the terminal width correctly in the `argparse.HelpFormatter` class. Initial patch by Zbyszek Jędrzejewski-Szmek.
- [bpo-34213](https://bugs.python.org/issue?@action=redirect&bpo=34213) [https://bugs.python.org/issue?@action=redirect&bpo=34213]: Allow frozen dataclasses to have a field named "object". Previously this conflicted with an internal use of "object".
- [bpo-34052](https://bugs.python.org/issue?@action=redirect&bpo=34052) [https://bugs.python.org/issue?@action=redirect&bpo=34052]:  
[`sqlite3.Connection.create\_aggregate\(\)`](#),  
[`sqlite3.Connection.create\_function\(\)`](#),  
[`sqlite3.Connection.set\_authorizer\(\)`](#),  
[`sqlite3.Connection.set\_progress\_handler\(\)`](#)  
methods raises `TypeError` when unhashable objects are passed as callable. These methods now don't pass such objects to

SQLite API. Previous behavior could lead to segfaults. Patch by Sergey Fedoseev.

- [bpo-34197](https://bugs.python.org/issue?@action=redirect&bpo=34197) [https://bugs.python.org/issue?@action=redirect&bpo=34197]: Attributes *skipinitialspace*, *doublequote* and *strict* of the *dialect* attribute of the **csv** reader are now **bool** instances instead of integers 0 or 1.
- [bpo-32788](https://bugs.python.org/issue?@action=redirect&bpo=32788) [https://bugs.python.org/issue?@action=redirect&bpo=32788]: Errors other than **TypeError** raised in methods `__adapt__()` and `__conform__()` in the **sqlite3** module are now propagated to the user.
- [bpo-21446](https://bugs.python.org/issue?@action=redirect&bpo=21446) [https://bugs.python.org/issue?@action=redirect&bpo=21446]: The **reload** fixer now uses **importlib.reload()** instead of deprecated **imp.reload()**.
- [bpo-940286](https://bugs.python.org/issue?@action=redirect&bpo=940286) [https://bugs.python.org/issue?@action=redirect&bpo=940286]: **pydoc**'s `Helper.showtopic()` method now prints the cross references of a topic correctly.
- [bpo-34164](https://bugs.python.org/issue?@action=redirect&bpo=34164) [https://bugs.python.org/issue?@action=redirect&bpo=34164]: **base64.b32decode()** could raise `UnboundLocalError` or `OverflowError` for incorrect padding. Now it always raises **base64.Error** in these cases.
- [bpo-33729](https://bugs.python.org/issue?@action=redirect&bpo=33729) [https://bugs.python.org/issue?@action=redirect&bpo=33729]: Fixed issues with arguments parsing in **hashlib**.
- [bpo-34097](https://bugs.python.org/issue?@action=redirect&bpo=34097) [https://bugs.python.org/issue?@action=redirect&bpo=34097]: `ZipFile` can zip files older than 1980-01-01 and newer than 2107-12-31 using a new `strict_timestamps` parameter at the cost of setting the timestamp to the limit.
- [bpo-34108](https://bugs.python.org/issue?@action=redirect&bpo=34108) [https://bugs.python.org/issue?@action=redirect&bpo=34108]: Remove extraneous CR in 2to3 refactor.

- [bpo-34070](https://bugs.python.org/issue?@action=redirect&bpo=34070) [https://bugs.python.org/issue?@action=redirect&bpo=34070]: Make sure to only check if the handle is a tty, when opening a file with `buffering=-1`.
- [bpo-27494](https://bugs.python.org/issue?@action=redirect&bpo=27494) [https://bugs.python.org/issue?@action=redirect&bpo=27494]: Reverted [bpo-27494](https://bugs.python.org/issue?@action=redirect&bpo=27494) [https://bugs.python.org/issue?@action=redirect&bpo=27494]. 2to3 rejects now a trailing comma in generator expressions.
- [bpo-33967](https://bugs.python.org/issue?@action=redirect&bpo=33967) [https://bugs.python.org/issue?@action=redirect&bpo=33967]: `functools singledispatch` now raises `TypeError` instead of `IndexError` when no positional arguments are passed.
- [bpo-34041](https://bugs.python.org/issue?@action=redirect&bpo=34041) [https://bugs.python.org/issue?@action=redirect&bpo=34041]: Add the parameter *deterministic* to the `sqlite3.Connection.create_function()` method. Patch by Sergey Fedoseev.
- [bpo-34056](https://bugs.python.org/issue?@action=redirect&bpo=34056) [https://bugs.python.org/issue?@action=redirect&bpo=34056]: Ensure the loader shim created by `imp.load_module` always returns bytes from its `get_data()` function. This fixes using `imp.load_module` with [PEP 552](https://peps.python.org/pep-0552/) [https://peps.python.org/pep-0552/] hash-based pycs.
- [bpo-34054](https://bugs.python.org/issue?@action=redirect&bpo=34054) [https://bugs.python.org/issue?@action=redirect&bpo=34054]: The multiprocessing module now uses the monotonic clock `time.monotonic()` instead of the system clock `time.time()` to implement timeout.
- [bpo-34043](https://bugs.python.org/issue?@action=redirect&bpo=34043) [https://bugs.python.org/issue?@action=redirect&bpo=34043]: Optimize tarfile uncompress performance about 15% when gzip is used.
- [bpo-34044](https://bugs.python.org/issue?@action=redirect&bpo=34044) [https://bugs.python.org/issue?@action=redirect&bpo=34044]: `subprocess.Popen` now copies the *startupinfo* argument to leave it unchanged: it will modify the copy, so that the same `STARTUPINFO` object can be used multiple times.
- [bpo-34010](https://bugs.python.org/issue?@action=redirect&bpo=34010) [https://bugs.python.org/issue?@action=redirect&bpo=34010]

@action=redirect&bpo=34010]: Fixed a performance regression for reading streams with tarfile. The buffered read should use a list, instead of appending to a bytes object.

- [bpo-34019](https://bugs.python.org/issue?@action=redirect&bpo=34019) [https://bugs.python.org/issue?@action=redirect&bpo=34019]: webbrowser: Correct the arguments passed to Opera Browser when opening a new URL using the `webbrowser` module. Patch by Bumsik Kim.
- [bpo-34003](https://bugs.python.org/issue?@action=redirect&bpo=34003) [https://bugs.python.org/issue?@action=redirect&bpo=34003]: `csv.DictReader` now creates dicts instead of `OrderedDicts`. Patch by Michael Selik.
- [bpo-33978](https://bugs.python.org/issue?@action=redirect&bpo=33978) [https://bugs.python.org/issue?@action=redirect&bpo=33978]: Closed existing logging handlers before reconfiguration via `fileConfig` and `dictConfig`. Patch by Karthikeyan Singaravelan.
- [bpo-14117](https://bugs.python.org/issue?@action=redirect&bpo=14117) [https://bugs.python.org/issue?@action=redirect&bpo=14117]: Make minor tweaks to `turtledemo`. The ‘wikipedia’ example is now ‘rosette’, describing what it draws. The ‘penrose’ print output is reduced. The ‘1024’ output of ‘tree’ is eliminated.
- [bpo-33974](https://bugs.python.org/issue?@action=redirect&bpo=33974) [https://bugs.python.org/issue?@action=redirect&bpo=33974]: Fixed passing lists and tuples of strings containing special characters `"`, `\`, `{`, `}` and `\n` as options to `ttk` widgets.
- [bpo-27500](https://bugs.python.org/issue?@action=redirect&bpo=27500) [https://bugs.python.org/issue?@action=redirect&bpo=27500]: Fix `getaddrinfo` to resolve IPv6 addresses correctly.
- [bpo-24567](https://bugs.python.org/issue?@action=redirect&bpo=24567) [https://bugs.python.org/issue?@action=redirect&bpo=24567]: Improve `random.choices()` to handle subnormal input weights that could occasionally trigger an `IndexError`.
- [bpo-33871](https://bugs.python.org/issue?@action=redirect&bpo=33871) [https://bugs.python.org/issue?@action=redirect&bpo=33871]: Fixed integer overflow in `os.readv()`, `os.writev()`, `os.preadv()` and

`os.pwritev()` and in `os.sendfile()` with *headers* or *trailers* arguments (on BSD-based OSes and macOS).

- [bpo-25007](https://bugs.python.org/issue?@action=redirect&bpo=25007) [https://bugs.python.org/issue?@action=redirect&bpo=25007]: Add `copy.copy()` and `copy.deepcopy()` support to zlib compressors and decompressors. Patch by Zackery Spytz.
- [bpo-33929](https://bugs.python.org/issue?@action=redirect&bpo=33929) [https://bugs.python.org/issue?@action=redirect&bpo=33929]: multiprocessing: Fix a race condition in Popen of multiprocessing.popen\_spawn\_win32. The child process now duplicates the read end of pipe instead of “stealing” it. Previously, the read end of pipe was “stolen” by the child process, but it leaked a handle if the child process had been terminated before it could steal the handle from the parent process.
- [bpo-33899](https://bugs.python.org/issue?@action=redirect&bpo=33899) [https://bugs.python.org/issue?@action=redirect&bpo=33899]: Tokenize module now implicitly emits a NEWLINE when provided with input that does not have a trailing new line. This behavior now matches what the C tokenizer does internally. Contributed by Ammar Askar.
- [bpo-33897](https://bugs.python.org/issue?@action=redirect&bpo=33897) [https://bugs.python.org/issue?@action=redirect&bpo=33897]: Added a ‘force’ keyword argument to `logging.basicConfig()`.
- [bpo-33695](https://bugs.python.org/issue?@action=redirect&bpo=33695) [https://bugs.python.org/issue?@action=redirect&bpo=33695]: `shutil.copypath()` uses `os.scandir()` function and all copy functions depending from it use cached `os.stat()` values. The speedup for copying a directory with 8000 files is around + 9% on Linux, + 20% on Windows and + 30% on a Windows SMB share. Also the number of `os.stat()` syscalls is reduced by 38% making `shutil.copypath()` especially faster on network filesystems. (Contributed by Giampaolo Rodola’ in [bpo-33695](https://bugs.python.org/issue?@action=redirect&bpo=33695) [https://bugs.python.org/issue?@action=redirect&bpo=33695].)
- [bpo-33916](https://bugs.python.org/issue?@action=redirect&bpo=33916) [https://bugs.python.org/issue?@action=redirect&bpo=33916]: bz2 and lzma: When `Decompressor._init_()` is called twice, free the old lock to not

leak memory.

- [bpo-32568](https://bugs.python.org/issue?@action=redirect&bpo=32568) [https://bugs.python.org/issue?@action=redirect&bpo=32568]: Make `select.epoll()` and its documentation consistent regarding *sizehint* and *flags*.
- [bpo-33833](https://bugs.python.org/issue?@action=redirect&bpo=33833) [https://bugs.python.org/issue?@action=redirect&bpo=33833]: Fixed bug in `asyncio` where `ProactorSocketTransport` logs `AssertionError` if force closed during write.
- [bpo-33663](https://bugs.python.org/issue?@action=redirect&bpo=33663) [https://bugs.python.org/issue?@action=redirect&bpo=33663]: Convert content length to string before putting to header.
- [bpo-33721](https://bugs.python.org/issue?@action=redirect&bpo=33721) [https://bugs.python.org/issue?@action=redirect&bpo=33721]: `os.path` functions that return a boolean result like `exists()`, `lexists()`, `isdir()`, `isfile()`, `islink()`, and `ismount()`, and `pathlib.Path` methods that return a boolean result like `exists()`, `is_dir()`, `is_file()`, `is_mount()`, `is_symlink()`, `is_block_device()`, `is_char_device()`, `is_fifo()`, `is_socket()` now return `False` instead of raising `ValueError` or its subclasses `UnicodeEncodeError` and `UnicodeDecodeError` for paths that contain characters or bytes unrepresentable at the OS level.
- [bpo-26544](https://bugs.python.org/issue?@action=redirect&bpo=26544) [https://bugs.python.org/issue?@action=redirect&bpo=26544]: Fixed implementation of `platform.libc_ver()`. It almost always returned version '2.9' for glibc.
- [bpo-33843](https://bugs.python.org/issue?@action=redirect&bpo=33843) [https://bugs.python.org/issue?@action=redirect&bpo=33843]: Remove deprecated `cgi.escape`, `cgi.parse_qs` and `cgi.parse_qsl`.
- [bpo-33842](https://bugs.python.org/issue?@action=redirect&bpo=33842) [https://bugs.python.org/issue?@action=redirect&bpo=33842]: Remove `tarfile.filemode` which is deprecated since Python 3.3.

- [bpo-30167](https://bugs.python.org/issue?@action=redirect&bpo=30167) [https://bugs.python.org/issue?@action=redirect&bpo=30167]: Prevent site.main() exception if PYTHONSTARTUP is set. Patch by Steve Weber.
- [bpo-33805](https://bugs.python.org/issue?@action=redirect&bpo=33805) [https://bugs.python.org/issue?@action=redirect&bpo=33805]: Improve error message of dataclasses.replace() when an InitVar is not specified
- [bpo-33687](https://bugs.python.org/issue?@action=redirect&bpo=33687) [https://bugs.python.org/issue?@action=redirect&bpo=33687]: Fix the call to `os.chmod()` for `uu.decode()` if a mode is given or decoded. Patch by Timo Furrer.
- [bpo-33812](https://bugs.python.org/issue?@action=redirect&bpo=33812) [https://bugs.python.org/issue?@action=redirect&bpo=33812]: Datetime instance `d` with non-None `tzinfo`, but with `d.tzinfo.utcoffset(d)` returning None is now treated as naive by the `astimezone()` method.
- [bpo-32108](https://bugs.python.org/issue?@action=redirect&bpo=32108) [https://bugs.python.org/issue?@action=redirect&bpo=32108]: In `configparser`, don't clear section when it is assigned to itself.
- [bpo-27397](https://bugs.python.org/issue?@action=redirect&bpo=27397) [https://bugs.python.org/issue?@action=redirect&bpo=27397]: Make email module properly handle invalid-length base64 strings.
- [bpo-33578](https://bugs.python.org/issue?@action=redirect&bpo=33578) [https://bugs.python.org/issue?@action=redirect&bpo=33578]: Implement multibyte encoder/decoder state methods
- [bpo-30805](https://bugs.python.org/issue?@action=redirect&bpo=30805) [https://bugs.python.org/issue?@action=redirect&bpo=30805]: Avoid race condition with debug logging
- [bpo-33476](https://bugs.python.org/issue?@action=redirect&bpo=33476) [https://bugs.python.org/issue?@action=redirect&bpo=33476]: Fix `_header_value_parser.py` when address group is missing final `;`. Contributed by Enrique Perez-Terron
- [bpo-33694](https://bugs.python.org/issue?@action=redirect&bpo=33694) [https://bugs.python.org/issue?@action=redirect&bpo=33694]: `asyncio`: Fix a race condition

causing data loss on `pause_reading()/resume_reading()` when using the `ProactorEventLoop`.

- [bpo-32493](https://bugs.python.org/issue?@action=redirect&bpo=32493) [https://bugs.python.org/issue?@action=redirect&bpo=32493]: **Correct test for `uuid_enc_be` availability in `configure.ac`. Patch by Michael Felt.**
- [bpo-33792](https://bugs.python.org/issue?@action=redirect&bpo=33792) [https://bugs.python.org/issue?@action=redirect&bpo=33792]: **Add `asyncio.WindowsSelectorEventLoopPolicy` and `asyncio.WindowsProactorEventLoopPolicy`.**
- [bpo-33274](https://bugs.python.org/issue?@action=redirect&bpo=33274) [https://bugs.python.org/issue?@action=redirect&bpo=33274]: **W3C DOM Level 1 specifies return value of `Element.removeAttributeNode()` as “The Attr node that was removed.” `xml.dom.minidom` now complies with this requirement.**
- [bpo-33778](https://bugs.python.org/issue?@action=redirect&bpo=33778) [https://bugs.python.org/issue?@action=redirect&bpo=33778]: **Update `unicodedata`’s database to Unicode version 11.0.0.**
- [bpo-33165](https://bugs.python.org/issue?@action=redirect&bpo=33165) [https://bugs.python.org/issue?@action=redirect&bpo=33165]: **Added a `stacklevel` parameter to logging calls to allow use of wrapper/helper functions for logging APIs.**
- [bpo-33770](https://bugs.python.org/issue?@action=redirect&bpo=33770) [https://bugs.python.org/issue?@action=redirect&bpo=33770]: **improve `base64` exception message for encoded inputs of invalid length**
- [bpo-33769](https://bugs.python.org/issue?@action=redirect&bpo=33769) [https://bugs.python.org/issue?@action=redirect&bpo=33769]: **`asyncio/start_tls`: Fix error message; cancel callbacks in case of an unhandled error; mark `SSLTransport` as closed if it is aborted.**
- [bpo-33767](https://bugs.python.org/issue?@action=redirect&bpo=33767) [https://bugs.python.org/issue?@action=redirect&bpo=33767]: **The concatenation (+) and repetition (\*) sequence operations now raise `TypeError` instead of `SystemError` when performed on `mmap.mmap` objects. Patch by Zackery Spytz.**

- [bpo-33734](https://bugs.python.org/issue?@action=redirect&bpo=33734) [https://bugs.python.org/issue?@action=redirect&bpo=33734]: `asyncio/ssl`: Fix `AttributeError`, increase default handshake timeout
- [bpo-31014](https://bugs.python.org/issue?@action=redirect&bpo=31014) [https://bugs.python.org/issue?@action=redirect&bpo=31014]: Fixed creating a controller for `webbrowser` when a user specifies a path to an entry in the `BROWSER` environment variable. Based on patch by John Still.
- [bpo-2504](https://bugs.python.org/issue?@action=redirect&bpo=2504) [https://bugs.python.org/issue?@action=redirect&bpo=2504]: Add `gettext.gettext()` and variants.
- [bpo-33197](https://bugs.python.org/issue?@action=redirect&bpo=33197) [https://bugs.python.org/issue?@action=redirect&bpo=33197]: Add description property for `_ParameterKind`
- [bpo-32751](https://bugs.python.org/issue?@action=redirect&bpo=32751) [https://bugs.python.org/issue?@action=redirect&bpo=32751]: When cancelling the task due to a timeout, `asyncio.wait_for()` will now wait until the cancellation is complete.
- [bpo-32684](https://bugs.python.org/issue?@action=redirect&bpo=32684) [https://bugs.python.org/issue?@action=redirect&bpo=32684]: Fix gather to propagate cancellation of itself even with `return_exceptions`.
- [bpo-33654](https://bugs.python.org/issue?@action=redirect&bpo=33654) [https://bugs.python.org/issue?@action=redirect&bpo=33654]: Support protocol type switching in `SSLTransport.set_protocol()`.
- [bpo-33674](https://bugs.python.org/issue?@action=redirect&bpo=33674) [https://bugs.python.org/issue?@action=redirect&bpo=33674]: Pause the transport as early as possible to further reduce the risk of `data_received()` being called before `connection_made()`.
- [bpo-33671](https://bugs.python.org/issue?@action=redirect&bpo=33671) [https://bugs.python.org/issue?@action=redirect&bpo=33671]: `shutil.copyfile()`, `shutil.copy()`, `shutil.copy2()`, `shutil.copytree()` and `shutil.move()` use platform-specific fast-copy syscalls on Linux and macOS in order to copy the file more efficiently. On Windows

`shutil.copyfile()` uses a bigger default buffer size (1 MiB instead of 16 KiB) and a `memoryview()`-based variant of `shutil.copyfileobj()` is used. The speedup for copying a 512MiB file is about +26% on Linux, +50% on macOS and +40% on Windows. Also, much less CPU cycles are consumed. (Contributed by Giampaolo Rodola' in [bpo-25427](https://bugs.python.org/issue?@action=redirect&bpo=25427) [https://bugs.python.org/issue?@action=redirect&bpo=25427].)

- [bpo-33674](https://bugs.python.org/issue?@action=redirect&bpo=33674) [https://bugs.python.org/issue?@action=redirect&bpo=33674]: Fix a race condition in `SSLProtocol.connection_made()` of `asyncio.sslproto`: start immediately the handshake instead of using `call_soon()`. Previously, `data_received()` could be called before the handshake started, causing the handshake to hang or fail.
- [bpo-31647](https://bugs.python.org/issue?@action=redirect&bpo=31647) [https://bugs.python.org/issue?@action=redirect&bpo=31647]: Fixed bug where calling `write_eof()` on a `_SelectorSocketTransport` after it's already closed raises `AttributeError`.
- [bpo-32610](https://bugs.python.org/issue?@action=redirect&bpo=32610) [https://bugs.python.org/issue?@action=redirect&bpo=32610]: Make `asyncio.all_tasks()` return only pending tasks.
- [bpo-32410](https://bugs.python.org/issue?@action=redirect&bpo=32410) [https://bugs.python.org/issue?@action=redirect&bpo=32410]: Avoid blocking on file IO in `sendfile` fallback code
- [bpo-33469](https://bugs.python.org/issue?@action=redirect&bpo=33469) [https://bugs.python.org/issue?@action=redirect&bpo=33469]: Fix `RuntimeError` after closing loop that used `run_in_executor`
- [bpo-33672](https://bugs.python.org/issue?@action=redirect&bpo=33672) [https://bugs.python.org/issue?@action=redirect&bpo=33672]: Fix `Task.__repr__` crash with Cython's bogus coroutines
- [bpo-33654](https://bugs.python.org/issue?@action=redirect&bpo=33654) [https://bugs.python.org/issue?@action=redirect&bpo=33654]: Fix `transport.set_protocol()` to support switching between `asyncio.Protocol` and `asyncio.BufferedProtocol`. Fix `loop.start_tls()` to work with

asyncio.BufferedProtocols.

- [bpo-33652](https://bugs.python.org/issue?@action=redirect&bpo=33652) [https://bugs.python.org/issue?@action=redirect&bpo=33652]: Pickles of type variables and subscripted generics are now future-proof and compatible with older Python versions.
- [bpo-32493](https://bugs.python.org/issue?@action=redirect&bpo=32493) [https://bugs.python.org/issue?@action=redirect&bpo=32493]: Fixed `uuid.uuid1()` on FreeBSD.
- [bpo-33238](https://bugs.python.org/issue?@action=redirect&bpo=33238) [https://bugs.python.org/issue?@action=redirect&bpo=33238]: Add `InvalidStateError` to `concurrent.futures`. `Future.set_result` and `Future.set_exception` now raise `InvalidStateError` if the futures are not pending or running. Patch by Jason Haydaman.
- [bpo-33618](https://bugs.python.org/issue?@action=redirect&bpo=33618) [https://bugs.python.org/issue?@action=redirect&bpo=33618]: Finalize and document preliminary and experimental TLS 1.3 support with OpenSSL 1.1.1
- [bpo-33625](https://bugs.python.org/issue?@action=redirect&bpo=33625) [https://bugs.python.org/issue?@action=redirect&bpo=33625]: Release GIL on `grp.getgrnam`, `grp.getgrgid`, `pwd.getpwnam` and `pwd.getpwuid` if reentrant variants of these functions are available. Patch by William Grzybowski.
- [bpo-33623](https://bugs.python.org/issue?@action=redirect&bpo=33623) [https://bugs.python.org/issue?@action=redirect&bpo=33623]: Fix possible SIGSEGV when `asyncio.Future` is created in `__del__`
- [bpo-11874](https://bugs.python.org/issue?@action=redirect&bpo=11874) [https://bugs.python.org/issue?@action=redirect&bpo=11874]: Use a better regex when breaking usage into wrappable parts. Avoids bogus assertion errors from custom metavar strings.
- [bpo-30877](https://bugs.python.org/issue?@action=redirect&bpo=30877) [https://bugs.python.org/issue?@action=redirect&bpo=30877]: Fixed a bug in the Python implementation of the JSON decoder that prevented the

cache of parsed strings from clearing after finishing the decoding. Based on patch by c-fos.

- [bpo-33604](https://bugs.python.org/issue?@action=redirect&bpo=33604) [https://bugs.python.org/issue?@action=redirect&bpo=33604]: Remove HMAC default to md5 marked for removal in 3.8 (removal originally planned in 3.6, bump to 3.8 in PR 7062).
- [bpo-33582](https://bugs.python.org/issue?@action=redirect&bpo=33582) [https://bugs.python.org/issue?@action=redirect&bpo=33582]: Emit a deprecation warning for `inspect.formatargspec`
- [bpo-21145](https://bugs.python.org/issue?@action=redirect&bpo=21145) [https://bugs.python.org/issue?@action=redirect&bpo=21145]: Add `functools.cached_property` decorator, for computed properties cached for the life of the instance.
- [bpo-33570](https://bugs.python.org/issue?@action=redirect&bpo=33570) [https://bugs.python.org/issue?@action=redirect&bpo=33570]: Change TLS 1.3 cipher suite settings for compatibility with OpenSSL 1.1.1-pre6 and newer. OpenSSL 1.1.1 will have TLS 1.3 ciphers enabled by default.
- [bpo-28556](https://bugs.python.org/issue?@action=redirect&bpo=28556) [https://bugs.python.org/issue?@action=redirect&bpo=28556]: Do not simplify arguments to `typing.Union`. Now `Union[Manager, Employee]` is not simplified to `Employee` at runtime. Such simplification previously caused several bugs and limited possibilities for introspection.
- [bpo-12486](https://bugs.python.org/issue?@action=redirect&bpo=12486) [https://bugs.python.org/issue?@action=redirect&bpo=12486]: `tokenize.generate_tokens()` is now documented as a public API to tokenize unicode strings. It was previously present but undocumented.
- [bpo-33540](https://bugs.python.org/issue?@action=redirect&bpo=33540) [https://bugs.python.org/issue?@action=redirect&bpo=33540]: Add a new `block_on_close` class attribute to `ForkingMixIn` and `ThreadingMixIn` classes of `socketserver`.

- [bpo-33548](https://bugs.python.org/issue?@action=redirect&bpo=33548) [https://bugs.python.org/issue?@action=redirect&bpo=33548]: `tempfile._candidate_tempdir_list` should consider common TEMP locations
- [bpo-33109](https://bugs.python.org/issue?@action=redirect&bpo=33109) [https://bugs.python.org/issue?@action=redirect&bpo=33109]: `argparse` subparsers are once again not required by default, reverting the change in behavior introduced by [bpo-26510](https://bugs.python.org/issue?@action=redirect&bpo=26510) [https://bugs.python.org/issue?@action=redirect&bpo=26510] in 3.7.0a2.
- [bpo-33541](https://bugs.python.org/issue?@action=redirect&bpo=33541) [https://bugs.python.org/issue?@action=redirect&bpo=33541]: Remove unused private method `_strptime.LocaleTime.__pad` (a.k.a. `_LocaleTime__pad`).
- [bpo-33536](https://bugs.python.org/issue?@action=redirect&bpo=33536) [https://bugs.python.org/issue?@action=redirect&bpo=33536]: `dataclasses.make_dataclass` now checks for invalid field names and duplicate fields. Also, added a check for invalid field specifications.
- [bpo-33542](https://bugs.python.org/issue?@action=redirect&bpo=33542) [https://bugs.python.org/issue?@action=redirect&bpo=33542]: Prevent `uuid.get_node` from using a DUID instead of a MAC on Windows. Patch by Zvi Effron
- [bpo-26819](https://bugs.python.org/issue?@action=redirect&bpo=26819) [https://bugs.python.org/issue?@action=redirect&bpo=26819]: Fix race condition with `ReadTransport.resume_reading` in Windows proactor event loop.
- Fix failure in `typing.get_type_hints()` when `ClassVar` was provided as a string forward reference.
- [bpo-33516](https://bugs.python.org/issue?@action=redirect&bpo=33516) [https://bugs.python.org/issue?@action=redirect&bpo=33516]: `unittest.mock.MagicMock` now supports the `__round__` magic method.
- [bpo-28612](https://bugs.python.org/issue?@action=redirect&bpo=28612) [https://bugs.python.org/issue?@action=redirect&bpo=28612]: Added support for Site Maps to `urllib`'s `RobotFileParser` as `RobotFileParser.site_maps()`. Patch by Lady Red,

based on patch by Peter Wirtz.

- [bpo-28167](https://bugs.python.org/issue?@action=redirect&bpo=28167) [https://bugs.python.org/issue?@action=redirect&bpo=28167]: Remove `platform.linux_distribution`, which was deprecated since 3.5.
- [bpo-33504](https://bugs.python.org/issue?@action=redirect&bpo=33504) [https://bugs.python.org/issue?@action=redirect&bpo=33504]: Switch the default dictionary implementation for `configparser` from `collections.OrderedDict` to the standard `dict` type.
- [bpo-33505](https://bugs.python.org/issue?@action=redirect&bpo=33505) [https://bugs.python.org/issue?@action=redirect&bpo=33505]: Optimize `asyncio.ensure_future()` by reordering if checks: 1.17x faster.
- [bpo-33497](https://bugs.python.org/issue?@action=redirect&bpo=33497) [https://bugs.python.org/issue?@action=redirect&bpo=33497]: Add errors param to `cgi.parse_multipart` and make an encoding in `FieldStorage` use the given errors (needed for Twisted). Patch by Amber Brown.
- [bpo-29235](https://bugs.python.org/issue?@action=redirect&bpo=29235) [https://bugs.python.org/issue?@action=redirect&bpo=29235]: The `cProfile.Profile` class can now be used as a context manager. Patch by Scott Sanderson.
- [bpo-33495](https://bugs.python.org/issue?@action=redirect&bpo=33495) [https://bugs.python.org/issue?@action=redirect&bpo=33495]: Change `dataclasses.Fields` repr to use the repr of each of its members, instead of str. This makes it more clear what each field actually represents. This is especially true for the 'type' member.
- [bpo-26103](https://bugs.python.org/issue?@action=redirect&bpo=26103) [https://bugs.python.org/issue?@action=redirect&bpo=26103]: Correct `inspect.isdatadescriptor` to look for `__set__` or `__delete__`. Patch by Aaron Hall.
- [bpo-29209](https://bugs.python.org/issue?@action=redirect&bpo=29209) [https://bugs.python.org/issue?@action=redirect&bpo=29209]: Removed the `doctype()` method and the `html` parameter of the constructor of `XMLParser`. The `doctype()` method defined in a subclass

will no longer be called. Deprecated methods `getchildren()` and `getiterator()` in the **ElementTree** module emit now a **DeprecationWarning** instead of **PendingDeprecationWarning**.

- **bpo-33453** [<https://bugs.python.org/issue?@action=redirect&bpo=33453>]: Fix dataclasses to work if using literal string type annotations or if using PEP 563 “Postponed Evaluation of Annotations”. Only specific string prefixes are detected for both `ClassVar` (“`ClassVar`” and “`typing.ClassVar`”) and `InitVar` (“`InitVar`” and “`dataclasses.InitVar`”).
- **bpo-28556** [<https://bugs.python.org/issue?@action=redirect&bpo=28556>]: Minor fixes in typing module: add annotations to `NamedTuple.__new__`, pass `*args` and `**kwargs` in `Generic.__new__`. Original PRs by Paulius Šarka and Chad Dombrova.
- **bpo-33365** [<https://bugs.python.org/issue?@action=redirect&bpo=33365>]: Print the header values besides the header keys instead just the header keys if *debuglevel* is set to `> 0` in **http.client**. Patch by Marco Strigl.
- **bpo-20087** [<https://bugs.python.org/issue?@action=redirect&bpo=20087>]: Updated alias mapping with glibc 2.27 supported locales.
- **bpo-33422** [<https://bugs.python.org/issue?@action=redirect&bpo=33422>]: Fix trailing quotation marks getting deleted when looking up byte/string literals on pydoc. Patch by Andrés Delfino.
- **bpo-28167** [<https://bugs.python.org/issue?@action=redirect&bpo=28167>]: The function `platform.linux_distribution` and `platform.dist` now trigger a **DeprecationWarning** and have been marked for removal in Python 3.8
- **bpo-33281** [<https://bugs.python.org/issue?@action=redirect&bpo=33281>]: Fix `ctypes.util.find_library` regression on macOS.

- [bpo-33311](https://bugs.python.org/issue?@action=redirect&bpo=33311) [https://bugs.python.org/issue?@action=redirect&bpo=33311]: Text and html output generated by `cgitb` does not display parentheses if the current call is done directly in the module. Patch by Stéphane Blondon.
- [bpo-27300](https://bugs.python.org/issue?@action=redirect&bpo=27300) [https://bugs.python.org/issue?@action=redirect&bpo=27300]: The file classes in *tempfile* now accept an *errors* parameter that complements the already existing *encoding*. Patch by Stephan Hohe.
- [bpo-32933](https://bugs.python.org/issue?@action=redirect&bpo=32933) [https://bugs.python.org/issue?@action=redirect&bpo=32933]: `unittest.mock.mock_open()` now supports iteration over the file contents. Patch by Tony Flury.
- [bpo-33217](https://bugs.python.org/issue?@action=redirect&bpo=33217) [https://bugs.python.org/issue?@action=redirect&bpo=33217]: Raise `TypeError` when looking up non-Enum objects in Enum classes and Enum members.
- [bpo-33197](https://bugs.python.org/issue?@action=redirect&bpo=33197) [https://bugs.python.org/issue?@action=redirect&bpo=33197]: Update error message when constructing invalid `inspect.Parameters` Patch by Donghee Na.
- [bpo-33383](https://bugs.python.org/issue?@action=redirect&bpo=33383) [https://bugs.python.org/issue?@action=redirect&bpo=33383]: Fixed crash in the `get()` method of the `dbm.ndbm` database object when it is called with a single argument.
- [bpo-33375](https://bugs.python.org/issue?@action=redirect&bpo=33375) [https://bugs.python.org/issue?@action=redirect&bpo=33375]: The warnings module now finds the Python file associated with a warning from the code object, rather than the frame's global namespace. This is consistent with how tracebacks and `pdb` find filenames, and should work better for dynamically executed code.
- [bpo-33336](https://bugs.python.org/issue?@action=redirect&bpo=33336) [https://bugs.python.org/issue?@action=redirect&bpo=33336]: `imaplib` now allows `MOVE` command in `IMAP4.uid()` (RFC 6851: IMAP MOVE Extension) and potentially as a name of supported method of `IMAP4` object.

- [bpo-32455](https://bugs.python.org/issue?@action=redirect&bpo=32455) [https://bugs.python.org/issue?@action=redirect&bpo=32455]: Added *jump* parameter to `dis.stack_effect()`.
- [bpo-27485](https://bugs.python.org/issue?@action=redirect&bpo=27485) [https://bugs.python.org/issue?@action=redirect&bpo=27485]: Rename and deprecate undocumented functions in `urllib.parse()`.
- [bpo-33332](https://bugs.python.org/issue?@action=redirect&bpo=33332) [https://bugs.python.org/issue?@action=redirect&bpo=33332]: Add `signal.valid_signals()` to expose the POSIX sigfillset() functionality.
- [bpo-33251](https://bugs.python.org/issue?@action=redirect&bpo=33251) [https://bugs.python.org/issue?@action=redirect&bpo=33251]: `ConfigParser.items()` was fixed so that key-value pairs passed in via `vars` are not included in the resulting output.
- [bpo-33329](https://bugs.python.org/issue?@action=redirect&bpo=33329) [https://bugs.python.org/issue?@action=redirect&bpo=33329]: Fix multiprocessing regression on newer glibc
- [bpo-33334](https://bugs.python.org/issue?@action=redirect&bpo=33334) [https://bugs.python.org/issue?@action=redirect&bpo=33334]: `dis.stack_effect()` now supports all defined opcodes including NOP and EXTENDED\_ARG.
- [bpo-991266](https://bugs.python.org/issue?@action=redirect&bpo=991266) [https://bugs.python.org/issue?@action=redirect&bpo=991266]: Fix quoting of the `Comment` attribute of `http.cookies.SimpleCookie`.
- [bpo-33131](https://bugs.python.org/issue?@action=redirect&bpo=33131) [https://bugs.python.org/issue?@action=redirect&bpo=33131]: Upgrade bundled version of pip to 10.0.1.
- [bpo-33308](https://bugs.python.org/issue?@action=redirect&bpo=33308) [https://bugs.python.org/issue?@action=redirect&bpo=33308]: Fixed a crash in the `parser` module when converting an ST object to a tree of tuples or lists with `line_info=False` and `col_info=True`.
- [bpo-23403](https://bugs.python.org/issue?@action=redirect&bpo=23403) [https://bugs.python.org/issue?@action=redirect&bpo=23403]

@action=redirect&bpo=23403]: lib2to3 now uses pickle protocol 4 for pre-computed grammars.

- [bpo-33266](https://bugs.python.org/issue?@action=redirect&bpo=33266) [https://bugs.python.org/issue?@action=redirect&bpo=33266]: lib2to3 now recognizes `rf'...'` strings.
- [bpo-11594](https://bugs.python.org/issue?@action=redirect&bpo=11594) [https://bugs.python.org/issue?@action=redirect&bpo=11594]: Ensure line-endings are respected when using lib2to3.
- [bpo-33254](https://bugs.python.org/issue?@action=redirect&bpo=33254) [https://bugs.python.org/issue?@action=redirect&bpo=33254]: Have `importlib.resources.contents()` and `importlib.abc.ResourceReader.contents()` return an `iterable` instead of an `iterator`.
- [bpo-33265](https://bugs.python.org/issue?@action=redirect&bpo=33265) [https://bugs.python.org/issue?@action=redirect&bpo=33265]: `contextlib.ExitStack` and `contextlib.AsyncExitStack` now use a method instead of a wrapper function for exit callbacks.
- [bpo-33263](https://bugs.python.org/issue?@action=redirect&bpo=33263) [https://bugs.python.org/issue?@action=redirect&bpo=33263]: Fix FD leak in `_SelectorSocketTransport` Patch by Vlad Starostin.
- [bpo-33256](https://bugs.python.org/issue?@action=redirect&bpo=33256) [https://bugs.python.org/issue?@action=redirect&bpo=33256]: Fix display of `<module>` call in the html produced by `cgitb.html()`. Patch by Stéphane Blondon.
- [bpo-33144](https://bugs.python.org/issue?@action=redirect&bpo=33144) [https://bugs.python.org/issue?@action=redirect&bpo=33144]: `random.Random()` and its subclassing mechanism got optimized to check only once at class/subclass instantiation time whether its `getrandbits()` method can be relied on by other methods, including `randrange()`, for the generation of arbitrarily large random integers. Patch by Wolfgang Maier.
- [bpo-33185](https://bugs.python.org/issue?@action=redirect&bpo=33185) [https://bugs.python.org/issue?@action=redirect&bpo=33185]: Fixed regression when running

pydoc with the `-m` switch. (The regression was introduced in 3.7.0b3 by the resolution of [bpo-33053](https://bugs.python.org/issue?@action=redirect&bpo=33053) [https://bugs.python.org/issue?@action=redirect&bpo=33053])

This fix also changed pydoc to add `os.getcwd()` to `sys.path` when necessary, rather than adding `". "`.

- [bpo-29613](https://bugs.python.org/issue?@action=redirect&bpo=29613) [https://bugs.python.org/issue?@action=redirect&bpo=29613]: Added support for the `SameSite` cookie flag to the `http.cookies` module.
- [bpo-33169](https://bugs.python.org/issue?@action=redirect&bpo=33169) [https://bugs.python.org/issue?@action=redirect&bpo=33169]: Delete entries of `None` in `sys.path_importer_cache` when `importlib.machinery.invalidate_caches()` is called.
- [bpo-33203](https://bugs.python.org/issue?@action=redirect&bpo=33203) [https://bugs.python.org/issue?@action=redirect&bpo=33203]: `random.Random.choice()` now raises `IndexError` for empty sequences consistently even when called from subclasses without a `getrandbits()` implementation.
- [bpo-33224](https://bugs.python.org/issue?@action=redirect&bpo=33224) [https://bugs.python.org/issue?@action=redirect&bpo=33224]: Update `difflib.mdifff()` for [PEP 479](https://peps.python.org/pep-0479/) [https://peps.python.org/pep-0479/]. Convert an uncaught `StopIteration` in a generator into a return-statement.
- [bpo-33209](https://bugs.python.org/issue?@action=redirect&bpo=33209) [https://bugs.python.org/issue?@action=redirect&bpo=33209]: End framing at the end of C implementation of `pickle.Pickler.dump()`.
- [bpo-32861](https://bugs.python.org/issue?@action=redirect&bpo=32861) [https://bugs.python.org/issue?@action=redirect&bpo=32861]: The `urllib.robotparser`'s `__str__` representation now includes wildcard entries and the “Crawl-delay” and “Request-rate” fields. Also removes extra newlines that were being appended to the end of the string. Patch by Michael Lazar.
- [bpo-23403](https://bugs.python.org/issue?@action=redirect&bpo=23403) [https://bugs.python.org/issue?@action=redirect&bpo=23403]: `DEFAULT_PROTOCOL` in `pickle` was bumped to 4. Protocol 4 is described in [PEP 3154](https://peps.python.org/pep-3154/) [https://

peps.python.org/pep-3154/] and available since Python 3.4. It offers better performance and smaller size compared to protocol 3 introduced in Python 3.0.

- [bpo-20104](https://bugs.python.org/issue?@action=redirect&bpo=20104) [https://bugs.python.org/issue?@action=redirect&bpo=20104]: Improved error handling and fixed a reference leak in `os.posix_spawn()`.
- [bpo-33106](https://bugs.python.org/issue?@action=redirect&bpo=33106) [https://bugs.python.org/issue?@action=redirect&bpo=33106]: Deleting a key from a read-only dbm database raises module specific error instead of `KeyError`.
- [bpo-33175](https://bugs.python.org/issue?@action=redirect&bpo=33175) [https://bugs.python.org/issue?@action=redirect&bpo=33175]: In dataclasses, `Field._set_name__` now looks up the `_set_name__` special method on the class, not the instance, of the default value.
- [bpo-32380](https://bugs.python.org/issue?@action=redirect&bpo=32380) [https://bugs.python.org/issue?@action=redirect&bpo=32380]: Create `functools singledispatchmethod` to support generic single dispatch on descriptors and methods.
- [bpo-33141](https://bugs.python.org/issue?@action=redirect&bpo=33141) [https://bugs.python.org/issue?@action=redirect&bpo=33141]: Have `Field` objects pass through `_set_name__` to their default values, if they have their own `_set_name__`.
- [bpo-33096](https://bugs.python.org/issue?@action=redirect&bpo=33096) [https://bugs.python.org/issue?@action=redirect&bpo=33096]: Allow `ttk.Treeview.insert` to insert iid that has a false boolean value. Note `iid=0` and `iid=False` would be same. Patch by Garvit Khatri.
- [bpo-32873](https://bugs.python.org/issue?@action=redirect&bpo=32873) [https://bugs.python.org/issue?@action=redirect&bpo=32873]: Treat type variables and special typing forms as immutable by copy and pickle. This fixes several minor issues and inconsistencies, and improves backwards compatibility with Python 3.6.
- [bpo-33134](https://bugs.python.org/issue?@action=redirect&bpo=33134) [https://bugs.python.org/issue?@action=redirect&bpo=33134]: When computing dataclass's

`__hash__`, use the lookup table to contain the function which returns the `__hash__` value. This is an improvement over looking up a string, and then testing that string to see what to do.

- [bpo-33127](https://bugs.python.org/issue?@action=redirect&bpo=33127) [https://bugs.python.org/issue?@action=redirect&bpo=33127]: The `ssl` module now compiles with LibreSSL 2.7.1.
- [bpo-32505](https://bugs.python.org/issue?@action=redirect&bpo=32505) [https://bugs.python.org/issue?@action=redirect&bpo=32505]: Raise `TypeError` if a member variable of a dataclass is of type `Field`, but doesn't have a type annotation.
- [bpo-33078](https://bugs.python.org/issue?@action=redirect&bpo=33078) [https://bugs.python.org/issue?@action=redirect&bpo=33078]: Fix the failure on OSX caused by the tests relying on `sem_getvalue`
- [bpo-33116](https://bugs.python.org/issue?@action=redirect&bpo=33116) [https://bugs.python.org/issue?@action=redirect&bpo=33116]: Add 'Field' to dataclasses.`__all__`.
- [bpo-32896](https://bugs.python.org/issue?@action=redirect&bpo=32896) [https://bugs.python.org/issue?@action=redirect&bpo=32896]: Fix an error where subclassing a dataclass with a field that uses a default `factory` would generate an incorrect class.
- [bpo-33100](https://bugs.python.org/issue?@action=redirect&bpo=33100) [https://bugs.python.org/issue?@action=redirect&bpo=33100]: Dataclasses: If a field has a default value that's a `MemberDescriptorType`, then it's from that field being in `__slots__`, not an actual default value.
- [bpo-32953](https://bugs.python.org/issue?@action=redirect&bpo=32953) [https://bugs.python.org/issue?@action=redirect&bpo=32953]: If a non-dataclass inherits from a frozen dataclass, allow attributes to be added to the derived class. Only attributes from the frozen dataclass cannot be assigned to. Require all dataclasses in a hierarchy to be either all frozen or all non-frozen.
- [bpo-33097](https://bugs.python.org/issue?@action=redirect&bpo=33097) [https://bugs.python.org/issue?@action=redirect&bpo=33097]: Raise `RuntimeError` when `executor.submit` is called during interpreter shutdown.

- [bpo-32968](https://bugs.python.org/issue?@action=redirect&bpo=32968) [https://bugs.python.org/issue?@action=redirect&bpo=32968]: Modulo and floor division involving Fraction and float should return float.
- [bpo-33061](https://bugs.python.org/issue?@action=redirect&bpo=33061) [https://bugs.python.org/issue?@action=redirect&bpo=33061]: Add missing NoReturn to `__all__` in typing.py
- [bpo-33078](https://bugs.python.org/issue?@action=redirect&bpo=33078) [https://bugs.python.org/issue?@action=redirect&bpo=33078]: Fix the size handling in multiprocessing.Queue when a pickling error occurs.
- [bpo-33064](https://bugs.python.org/issue?@action=redirect&bpo=33064) [https://bugs.python.org/issue?@action=redirect&bpo=33064]: lib2to3 now properly supports trailing commas after `*args` and `**kwargs` in function signatures.
- [bpo-33056](https://bugs.python.org/issue?@action=redirect&bpo=33056) [https://bugs.python.org/issue?@action=redirect&bpo=33056]: FIX properly close leaking fds in concurrent.futures.ProcessPoolExecutor.
- [bpo-33021](https://bugs.python.org/issue?@action=redirect&bpo=33021) [https://bugs.python.org/issue?@action=redirect&bpo=33021]: Release the GIL during `fstat()` calls, avoiding hang of all threads when calling `mmap.mmap()`, `os.urandom()`, and `random.seed()`. Patch by Nir Soffer.
- [bpo-31804](https://bugs.python.org/issue?@action=redirect&bpo=31804) [https://bugs.python.org/issue?@action=redirect&bpo=31804]: Avoid failing in `multiprocessing.Process` if the standard streams are closed or None at exit.
- [bpo-33034](https://bugs.python.org/issue?@action=redirect&bpo=33034) [https://bugs.python.org/issue?@action=redirect&bpo=33034]: Providing an explicit error message when casting the port property to anything that is not an integer value using `urlparse()` and `urlsplit()`. Patch by Matt Eaton.
- [bpo-30249](https://bugs.python.org/issue?@action=redirect&bpo=30249) [https://bugs.python.org/issue?@action=redirect&bpo=30249]: Improve `struct.unpack_from()` exception messages for problems with the buffer size and

offset.

- [bpo-33037](https://bugs.python.org/issue?@action=redirect&bpo=33037) [https://bugs.python.org/issue?@action=redirect&bpo=33037]: Skip sending/receiving data after SSL transport closing.
- [bpo-27683](https://bugs.python.org/issue?@action=redirect&bpo=27683) [https://bugs.python.org/issue?@action=redirect&bpo=27683]: Fix a regression in `ipaddress` that result of `hosts()` is empty when the network is constructed by a tuple containing an integer mask and only 1 bit left for addresses.
- [bpo-22674](https://bugs.python.org/issue?@action=redirect&bpo=22674) [https://bugs.python.org/issue?@action=redirect&bpo=22674]: Add the `strsignal()` function in the `signal` module that returns the system description of the given signal, as returned by `strsignal(3)`.
- [bpo-32999](https://bugs.python.org/issue?@action=redirect&bpo=32999) [https://bugs.python.org/issue?@action=redirect&bpo=32999]: Fix C implementation of `ABC.__subclasscheck__(cls, subclass)` crashed when `subclass` is not a type object.
- [bpo-33009](https://bugs.python.org/issue?@action=redirect&bpo=33009) [https://bugs.python.org/issue?@action=redirect&bpo=33009]: Fix `inspect.signature()` for single-parameter `partialmethods`.
- [bpo-32969](https://bugs.python.org/issue?@action=redirect&bpo=32969) [https://bugs.python.org/issue?@action=redirect&bpo=32969]: Expose several missing constants in `zlib` and fix corresponding documentation.
- [bpo-32056](https://bugs.python.org/issue?@action=redirect&bpo=32056) [https://bugs.python.org/issue?@action=redirect&bpo=32056]: Improved exceptions raised for invalid number of channels and sample width when read an audio file in modules `aifc`, `wave` and `sunau`.
- [bpo-32970](https://bugs.python.org/issue?@action=redirect&bpo=32970) [https://bugs.python.org/issue?@action=redirect&bpo=32970]: Improved disassembly of the `MAKE_FUNCTION` instruction.
- [bpo-32844](https://bugs.python.org/issue?@action=redirect&bpo=32844) [https://bugs.python.org/issue?@action=redirect&bpo=32844]: Fix wrong redirection of a low

descriptor (0 or 1) to stderr in subprocess if another low descriptor is closed.

- [bpo-32960](https://bugs.python.org/issue?@action=redirect&bpo=32960) [https://bugs.python.org/issue?@action=redirect&bpo=32960]: For dataclasses, disallow inheriting frozen from non-frozen classes, and also disallow inheriting non-frozen from frozen classes. This restriction will be relaxed at a future date.
- [bpo-32713](https://bugs.python.org/issue?@action=redirect&bpo=32713) [https://bugs.python.org/issue?@action=redirect&bpo=32713]: Fixed tarfile.itn handling of out-of-bounds float values. Patch by Joffrey Fuhrer.
- [bpo-32257](https://bugs.python.org/issue?@action=redirect&bpo=32257) [https://bugs.python.org/issue?@action=redirect&bpo=32257]: The ssl module now contains OP\_NO\_RENEGOTIATION constant, available with OpenSSL 1.1.0h or 1.1.1.
- [bpo-32951](https://bugs.python.org/issue?@action=redirect&bpo=32951) [https://bugs.python.org/issue?@action=redirect&bpo=32951]: Direct instantiation of SSLSocket and SSLObject objects is now prohibited. The constructors were never documented, tested, or designed as public constructors. Users were suppose to use ssl.wrap\_socket() or SSLContext.
- [bpo-32929](https://bugs.python.org/issue?@action=redirect&bpo=32929) [https://bugs.python.org/issue?@action=redirect&bpo=32929]: Remove the tri-state parameter “hash”, and add the boolean “unsafe\_hash”. If unsafe\_hash is True, add a \_\_hash\_\_ function, but if a \_\_hash\_\_ exists, raise TypeError. If unsafe\_hash is False, add a \_\_hash\_\_ based on the values of eq= and frozen=. The unsafe\_hash=False behavior is the same as the old hash=None behavior. unsafe\_hash=False is the default, just as hash=None used to be.
- [bpo-32947](https://bugs.python.org/issue?@action=redirect&bpo=32947) [https://bugs.python.org/issue?@action=redirect&bpo=32947]: Add OP\_ENABLE\_MIDDLEBOX\_COMPAT and test workaround for TLSv1.3 for future compatibility with OpenSSL 1.1.1.
- [bpo-32146](https://bugs.python.org/issue?@action=redirect&bpo=32146) [https://bugs.python.org/issue?@action=redirect&bpo=32146]

@action=redirect&bpo=32146]: Document the interaction between frozen executables and the spawn and forkserver start methods in multiprocessing.

- [bpo-30622](https://bugs.python.org/issue?@action=redirect&bpo=30622) [https://bugs.python.org/issue?@action=redirect&bpo=30622]: The ssl module now detects missing NPN support in LibreSSL.
- [bpo-32922](https://bugs.python.org/issue?@action=redirect&bpo=32922) [https://bugs.python.org/issue?@action=redirect&bpo=32922]: dbm.open() now encodes filename with the filesystem encoding rather than default encoding.
- [bpo-32759](https://bugs.python.org/issue?@action=redirect&bpo=32759) [https://bugs.python.org/issue?@action=redirect&bpo=32759]: Free unused arenas in multiprocessing.heap.
- [bpo-32859](https://bugs.python.org/issue?@action=redirect&bpo=32859) [https://bugs.python.org/issue?@action=redirect&bpo=32859]: In `os.dup2`, don't check every call whether the `dup3` syscall exists or not.
- [bpo-32556](https://bugs.python.org/issue?@action=redirect&bpo=32556) [https://bugs.python.org/issue?@action=redirect&bpo=32556]: `nt.getfinalpathname`, `nt.getvolumepathname` and `nt.getdiskusage` now correctly convert from bytes.
- [bpo-21060](https://bugs.python.org/issue?@action=redirect&bpo=21060) [https://bugs.python.org/issue?@action=redirect&bpo=21060]: Rewrite confusing message from setup.py upload from “No dist file created in earlier command” to the more helpful “Must create and upload files in one command”.
- [bpo-32857](https://bugs.python.org/issue?@action=redirect&bpo=32857) [https://bugs.python.org/issue?@action=redirect&bpo=32857]: In `tkinter`, `after_cancel(None)` now raises a `ValueError` instead of canceling the first scheduled function. Patch by Cheryl Sabella.
- [bpo-32852](https://bugs.python.org/issue?@action=redirect&bpo=32852) [https://bugs.python.org/issue?@action=redirect&bpo=32852]: Make sure `sys.argv` remains as a list when running trace.

- [bpo-31333](https://bugs.python.org/issue?@action=redirect&bpo=31333) [https://bugs.python.org/issue?@action=redirect&bpo=31333]: `_abc` module is added. It is a speedup module with C implementations for various functions and methods in `abc`. Creating an ABC subclass and calling `isinstance` or `issubclass` with an ABC subclass are up to 1.5x faster. In addition, this makes Python start-up up to 10% faster.

Note that the new implementation hides internal registry and caches, previously accessible via private attributes `_abc_registry`, `_abc_cache`, and `_abc_negative_cache`. There are three debugging helper methods that can be used instead `_dump_registry`, `_abc_registry_clear`, and `_abc_caches_clear`.

- [bpo-32841](https://bugs.python.org/issue?@action=redirect&bpo=32841) [https://bugs.python.org/issue?@action=redirect&bpo=32841]: Fixed **`asyncio.Condition`** issue which silently ignored cancellation after notifying and cancelling a conditional lock. Patch by Bar Harel.
- [bpo-32819](https://bugs.python.org/issue?@action=redirect&bpo=32819) [https://bugs.python.org/issue?@action=redirect&bpo=32819]: `ssl.match_hostname()` has been simplified and no longer depends on `re` and `ipaddress` module for wildcard and IP addresses. Error reporting for invalid wildcards has been improved.
- [bpo-19675](https://bugs.python.org/issue?@action=redirect&bpo=19675) [https://bugs.python.org/issue?@action=redirect&bpo=19675]: `multiprocessing.Pool` no longer leaks processes if its initialization fails.
- [bpo-32394](https://bugs.python.org/issue?@action=redirect&bpo=32394) [https://bugs.python.org/issue?@action=redirect&bpo=32394]: `socket`: Remove `TCP_FASTOPEN`, `TCP_KEEPCNT`, `TCP_KEEPIDLE`, `TCP_KEEPINTVL` flags on older version Windows during run-time.
- [bpo-31787](https://bugs.python.org/issue?@action=redirect&bpo=31787) [https://bugs.python.org/issue?@action=redirect&bpo=31787]: Fixed reflinks of `__init__()` methods in various modules. (Contributed by Oren Milman)
- [bpo-30157](https://bugs.python.org/issue?@action=redirect&bpo=30157) [https://bugs.python.org/issue?@action=redirect&bpo=30157]: Fixed guessing quote and

delimiter in `csv.Sniffer.sniff()` when only the last field is quoted. Patch by Jake Davis.

- [bpo-30688](https://bugs.python.org/issue?@action=redirect&bpo=30688) [https://bugs.python.org/issue?@action=redirect&bpo=30688]: Added support of `\N{name}` escapes in regular expressions. Based on patch by Jonathan Eunice.
- [bpo-32792](https://bugs.python.org/issue?@action=redirect&bpo=32792) [https://bugs.python.org/issue?@action=redirect&bpo=32792]: `collections.ChainMap()` preserves the order of the underlying mappings.
- [bpo-32775](https://bugs.python.org/issue?@action=redirect&bpo=32775) [https://bugs.python.org/issue?@action=redirect&bpo=32775]: `fnmatch.translate()` no longer produces patterns which contain set operations. Sets starting with `'['` or containing `'-'`, `'&&'`, `'~'` or `'|'` will be interpreted differently in regular expressions in future versions. Currently they emit warnings. `fnmatch.translate()` now avoids producing patterns containing such sets by accident.
- [bpo-32622](https://bugs.python.org/issue?@action=redirect&bpo=32622) [https://bugs.python.org/issue?@action=redirect&bpo=32622]: Implement native fast sendfile for Windows proactor event loop.
- [bpo-32777](https://bugs.python.org/issue?@action=redirect&bpo=32777) [https://bugs.python.org/issue?@action=redirect&bpo=32777]: Fix a rare but potential pre-exec child process deadlock in subprocess on POSIX systems when marking file descriptors inheritable on exec in the child process. This bug appears to have been introduced in 3.4.
- [bpo-32647](https://bugs.python.org/issue?@action=redirect&bpo=32647) [https://bugs.python.org/issue?@action=redirect&bpo=32647]: The `ctypes` module used to depend on indirect linking for `dlopen`. The shared extension is now explicitly linked against `libdl` on platforms with `dl`.
- [bpo-32749](https://bugs.python.org/issue?@action=redirect&bpo=32749) [https://bugs.python.org/issue?@action=redirect&bpo=32749]: A `dbm.dumb` database opened with flags `'r'` is now read-only. `dbm.dumb.open()` with flags `'r'` and `'w'` no longer creates a database if it does not exist.

- [bpo-32741](https://bugs.python.org/issue?@action=redirect&bpo=32741) [https://bugs.python.org/issue?@action=redirect&bpo=32741]: Implement `asyncio.TimerHandle.when()` method.
- [bpo-32691](https://bugs.python.org/issue?@action=redirect&bpo=32691) [https://bugs.python.org/issue?@action=redirect&bpo=32691]: Use `mod_spec.parent` when running modules with `pdb`
- [bpo-32734](https://bugs.python.org/issue?@action=redirect&bpo=32734) [https://bugs.python.org/issue?@action=redirect&bpo=32734]: Fixed `asyncio.Lock()` safety issue which allowed acquiring and locking the same lock multiple times, without it being free. Patch by Bar Harel.
- [bpo-32727](https://bugs.python.org/issue?@action=redirect&bpo=32727) [https://bugs.python.org/issue?@action=redirect&bpo=32727]: Do not include name field in SMTP envelope from address. Patch by Stéphane Wirtel
- [bpo-31453](https://bugs.python.org/issue?@action=redirect&bpo=31453) [https://bugs.python.org/issue?@action=redirect&bpo=31453]: Add `TLSVersion` constants and `SSLContext.maximum_version / minimum_version` attributes. The new API wraps OpenSSL 1.1 [https://web.archive.org/web/20180309043602/https://www.openssl.org/docs/man1.1.0/ssl/SSL\\_CTX\\_set\\_min\\_proto\\_version.html](https://web.archive.org/web/20180309043602/https://www.openssl.org/docs/man1.1.0/ssl/SSL_CTX_set_min_proto_version.html) feature.
- [bpo-24334](https://bugs.python.org/issue?@action=redirect&bpo=24334) [https://bugs.python.org/issue?@action=redirect&bpo=24334]: Internal implementation details of `ssl` module were cleaned up. The `SSLSocket` has one less layer of indirection. Owner and session information are now handled by the `SSLSocket` and `SSLObject` constructor. Channel binding implementation has been simplified.
- [bpo-31848](https://bugs.python.org/issue?@action=redirect&bpo=31848) [https://bugs.python.org/issue?@action=redirect&bpo=31848]: Fix the error handling in `Aifc_read.initfp()` when the SSND chunk is not found. Patch by Zackery Spytz.
- [bpo-32585](https://bugs.python.org/issue?@action=redirect&bpo=32585) [https://bugs.python.org/issue?@action=redirect&bpo=32585]: Add Tk spinbox widget to `tkinter.ttk`. Patch by Alan D Moore.
- [bpo-32512](https://bugs.python.org/issue?@action=redirect&bpo=32512) [https://bugs.python.org/issue?@action=redirect&bpo=32512]

@action=redirect&bpo=32512]: **profile** CLI accepts **-m module\_name** as an alternative to script path.

- **bpo-8525** [https://bugs.python.org/issue?@action=redirect&bpo=8525]: `help()` on a type now displays builtin subclasses. This is intended primarily to help with notification of more specific exception subclasses.

Patch by Sanyam Khurana.

- **bpo-31639** [https://bugs.python.org/issue?@action=redirect&bpo=31639]: `http.server` now exposes a `ThreadingHTTPServer` class and uses it when the module is run with `-m` to cope with web browsers pre-opening sockets.
- **bpo-29877** [https://bugs.python.org/issue?@action=redirect&bpo=29877]: `compileall: import ProcessPoolExecutor` only when needed, preventing hangs on low resource platforms
- **bpo-32221** [https://bugs.python.org/issue?@action=redirect&bpo=32221]: Various functions returning tuple containing IPv6 addresses now omit `%scope` part since the same information is already encoded in `scopeid` tuple item. Especially this speeds up `socket.recvfrom()` when it receives multicast packet since useless resolving of network interface name is omitted.
- **bpo-32147** [https://bugs.python.org/issue?@action=redirect&bpo=32147]: **`binascii.unhexlify()`** is now up to 2 times faster. Patch by Sergey Fedoseev.
- **bpo-30693** [https://bugs.python.org/issue?@action=redirect&bpo=30693]: The `TarFile` class now recurses directories in a reproducible way.
- **bpo-30693** [https://bugs.python.org/issue?@action=redirect&bpo=30693]: The `ZipFile` class now recurses directories in a reproducible way.
- **bpo-31680** [https://bugs.python.org/issue?

@action=redirect&bpo=31680]: Added  
**`curses.ncurses_version`**.

- **bpo-31908** [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=31908)  
@action=redirect&bpo=31908]: Fix output of cover files for **`trace`** module command-line tool. Previously emitted cover files only when **`--missing`** option was used. Patch by Michael Selik.
- **bpo-31608** [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=31608)  
@action=redirect&bpo=31608]: Raise a **`TypeError`** instead of crashing if a **`collections.deque`** subclass returns a non-deque from **`__new__`**. Patch by Oren Milman.
- **bpo-31425** [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=31425)  
@action=redirect&bpo=31425]: Add support for sockets of the **`AF_QIPCRTR`** address family, supported by the Linux kernel. This is used to communicate with services, such as GPS or radio, running on Qualcomm devices. Patch by Bjorn Andersson.
- **bpo-22005** [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=22005)  
@action=redirect&bpo=22005]: Implemented unpickling instances of **`datetime`**, **`date`** and **`time`** pickled by Python 2. **`encoding='latin1'`** should be used for successful decoding.
- **bpo-27645** [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=27645)  
@action=redirect&bpo=27645]: **`sqlite3.Connection`** now exposes a **`backup`** method, if the underlying SQLite library is at version 3.6.11 or higher. Patch by Lele Gaifax.
- **bpo-16865** [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=16865)  
@action=redirect&bpo=16865]: Support arrays **`>= 2GiB`** in **`ctypes`**. Patch by Segev Finer.
- **bpo-31508** [[https://bugs.python.org/issue?](https://bugs.python.org/issue?@action=redirect&bpo=31508)  
@action=redirect&bpo=31508]: Removed support of arguments in **`tkinter.ttk.Treeview.selection`**. It was deprecated in 3.6. Use specialized methods like **`selection_set`** for changing the selection.

- [bpo-29456](https://bugs.python.org/issue?@action=redirect&bpo=29456) [https://bugs.python.org/issue?@action=redirect&bpo=29456]: Fix bugs in hangul normalization: u1176, u11a7 and u11c3

## Documentation

- [bpo-21257](https://bugs.python.org/issue?@action=redirect&bpo=21257) [https://bugs.python.org/issue?@action=redirect&bpo=21257]: Document `http.client.parse_headers()`.
- [bpo-34764](https://bugs.python.org/issue?@action=redirect&bpo=34764) [https://bugs.python.org/issue?@action=redirect&bpo=34764]: Improve example of `iter()` with 2nd sentinel argument.
- [bpo-35564](https://bugs.python.org/issue?@action=redirect&bpo=35564) [https://bugs.python.org/issue?@action=redirect&bpo=35564]: Explicitly set `master_doc` variable in `conf.py` for compliance with Sphinx 2.0
- [bpo-35511](https://bugs.python.org/issue?@action=redirect&bpo=35511) [https://bugs.python.org/issue?@action=redirect&bpo=35511]: Specified that `profile.Profile` class doesn't support `enable` or `disable` methods. Also, elaborated that `Profile` object as a context manager is only supported in `cProfile` module.
- [bpo-10536](https://bugs.python.org/issue?@action=redirect&bpo=10536) [https://bugs.python.org/issue?@action=redirect&bpo=10536]: Enhance the `gettext` docs. Patch by Éric Araujo
- [bpo-35089](https://bugs.python.org/issue?@action=redirect&bpo=35089) [https://bugs.python.org/issue?@action=redirect&bpo=35089]: Remove mention of `typing.io` and `typing.re`. Their types should be imported from `typing` directly.
- [bpo-35038](https://bugs.python.org/issue?@action=redirect&bpo=35038) [https://bugs.python.org/issue?@action=redirect&bpo=35038]: Fix the documentation about an unexisting `f_restricted` attribute in the frame object. Patch by Stéphane Wirtel
- [bpo-35042](https://bugs.python.org/issue?@action=redirect&bpo=35042) [https://bugs.python.org/issue?@action=redirect&bpo=35042]: Replace PEP XYZ by the pep role and allow to use the direct links to the PEPs.
- [bpo-35044](https://bugs.python.org/issue?@action=redirect&bpo=35044) [https://bugs.python.org/issue?@action=redirect&bpo=35044]: Fix the documentation with the role `exc` for the appropriated exception. Patch by Stéphane Wirtel
- [bpo-35035](https://bugs.python.org/issue?@action=redirect&bpo=35035) [https://bugs.python.org/issue?@action=redirect&bpo=35035]: Rename documentation for

`email.utils` to `email.utils.rst`.

- [bpo-34967](#) [<https://bugs.python.org/issue?@action=redirect&bpo=34967>]: Use `app.add_object_type()` instead of the deprecated Sphinx function `app.description_unit()`
- [bpo-34913](#) [<https://bugs.python.org/issue?@action=redirect&bpo=34913>]: Add documentation about the new command line interface of the `gzip` module.
- [bpo-32174](#) [<https://bugs.python.org/issue?@action=redirect&bpo=32174>]: `chm` document displays non-ASCII characters properly on some MBCS Windows systems.
- [bpo-11233](#) [<https://bugs.python.org/issue?@action=redirect&bpo=11233>]: Create availability directive for documentation. Original patch by Georg Brandl.
- [bpo-34790](#) [<https://bugs.python.org/issue?@action=redirect&bpo=34790>]: Document how passing coroutines to `asyncio.wait()` can be confusing.
- [bpo-34552](#) [<https://bugs.python.org/issue?@action=redirect&bpo=34552>]: Make clear that `==` operator sometimes is equivalent to `is`. The `<`, `<=`, `>` and `>=` operators are only defined where they make sense.
- [bpo-28617](#) [<https://bugs.python.org/issue?@action=redirect&bpo=28617>]: Fixed info in the `stdtypes` docs concerning the types that support membership tests.
- [bpo-20177](#) [<https://bugs.python.org/issue?@action=redirect&bpo=20177>]: Migrate `datetime.date.fromtimestamp` to Argument Clinic. Patch by Tim Hoffmann.
- [bpo-34065](#) [<https://bugs.python.org/issue?@action=redirect&bpo=34065>]: Fix wrongly written `basicConfig` documentation markup syntax
- [bpo-33460](#) [<https://bugs.python.org/issue?@action=redirect&bpo=33460>]: replaced ellipsis with correct error codes in tutorial chapter 3.
- [bpo-33847](#) [<https://bugs.python.org/issue?@action=redirect&bpo=33847>]: Add `@` operator entry to index.
- [bpo-33409](#) [<https://bugs.python.org/issue?@action=redirect&bpo=33409>]: Clarified the relationship between [PEP 538](#) [<https://peps.python.org/pep-0538/>]'s `PYTHONCOERCECLOCALE` and PEP 540's `PYTHONUTF8` mode.

- [bpo-33197](https://bugs.python.org/issue?@action=redirect&bpo=33197) [https://bugs.python.org/issue?@action=redirect&bpo=33197]: Add versionadded tag to the documentation of `ParameterKind.description`
- [bpo-17045](https://bugs.python.org/issue?@action=redirect&bpo=17045) [https://bugs.python.org/issue?@action=redirect&bpo=17045]: Improve the C-API doc for `PyObject`. This includes adding several quick-reference tables and a lot of missing slot/typedef entries. The existing entries were also cleaned up with a slightly more consistent format.
- [bpo-33736](https://bugs.python.org/issue?@action=redirect&bpo=33736) [https://bugs.python.org/issue?@action=redirect&bpo=33736]: Improve the documentation of `asyncio.open_connection()`, `asyncio.start_server()` and their UNIX socket counterparts.
- [bpo-23859](https://bugs.python.org/issue?@action=redirect&bpo=23859) [https://bugs.python.org/issue?@action=redirect&bpo=23859]: Document that `asyncio.wait()` does not cancel its futures on timeout.
- [bpo-32436](https://bugs.python.org/issue?@action=redirect&bpo=32436) [https://bugs.python.org/issue?@action=redirect&bpo=32436]: Document [PEP 567](https://peps.python.org/pep-0567/) [https://peps.python.org/pep-0567/] changes to `asyncio`.
- [bpo-33604](https://bugs.python.org/issue?@action=redirect&bpo=33604) [https://bugs.python.org/issue?@action=redirect&bpo=33604]: Update HMAC md5 default to a `DeprecationWarning`, bump removal to 3.8.
- [bpo-33594](https://bugs.python.org/issue?@action=redirect&bpo=33594) [https://bugs.python.org/issue?@action=redirect&bpo=33594]: Document `getargspec`, `from_function` and `from_builtin` as deprecated in their respective docstring, and include version since deprecation in `DeprecationWarning` message.
- [bpo-33503](https://bugs.python.org/issue?@action=redirect&bpo=33503) [https://bugs.python.org/issue?@action=redirect&bpo=33503]: Fix broken pypi link
- [bpo-33421](https://bugs.python.org/issue?@action=redirect&bpo=33421) [https://bugs.python.org/issue?@action=redirect&bpo=33421]: Add missing documentation for `typing.AsyncContextManager`.
- [bpo-33487](https://bugs.python.org/issue?@action=redirect&bpo=33487) [https://bugs.python.org/issue?@action=redirect&bpo=33487]: `BZ2file` now emit a `DeprecationWarning` when `buffering=None` is passed, the deprecation message and documentation also now explicitly state it is deprecated since 3.0.
- [bpo-33378](https://bugs.python.org/issue?@action=redirect&bpo=33378) [https://bugs.python.org/issue?@action=redirect&bpo=33378]: Add Korean language switcher for

<https://docs.python.org/3/>

- [bpo-33276](#) [https://bugs.python.org/issue?@action=redirect&bpo=33276]: Clarify that the `__path__` attribute on modules cannot be just any value.
- [bpo-33201](#) [https://bugs.python.org/issue?@action=redirect&bpo=33201]: Modernize documentation for writing C extension types.
- [bpo-33195](#) [https://bugs.python.org/issue?@action=redirect&bpo=33195]: Deprecate `Py_UNICODE` usage in `c-api/arg` document. `Py_UNICODE` related APIs are deprecated since Python 3.3, but it is missed in the document.
- [bpo-33126](#) [https://bugs.python.org/issue?@action=redirect&bpo=33126]: Document `PyBuffer_ToContiguous()`.
- [bpo-27212](#) [https://bugs.python.org/issue?@action=redirect&bpo=27212]: Modify documentation for the `islice()` recipe to consume initial values up to the start index.
- [bpo-28247](#) [https://bugs.python.org/issue?@action=redirect&bpo=28247]: Update `zipapp` documentation to describe how to make standalone applications.
- [bpo-18802](#) [https://bugs.python.org/issue?@action=redirect&bpo=18802]: Documentation changes for `ipaddress`. Patch by Jon Foster and Berker Peksag.
- [bpo-27428](#) [https://bugs.python.org/issue?@action=redirect&bpo=27428]: Update documentation to clarify that `WindowsRegistryFinder` implements `MetaPathFinder`. (Patch by Himanshu Lakhara)
- [bpo-28124](#) [https://bugs.python.org/issue?@action=redirect&bpo=28124]: The `ssl` module function `ssl.wrap_socket()` has been de-emphasized and deprecated in favor of the more secure and efficient `SSLContext.wrap_socket()` method.
- [bpo-17232](#) [https://bugs.python.org/issue?@action=redirect&bpo=17232]: Clarify docs for `-O` and `-OO`. Patch by Terry Reedy.
- [bpo-32436](#) [https://bugs.python.org/issue?@action=redirect&bpo=32436]: Add documentation for the `contextvars` module (PEP 567).
- [bpo-32800](#) [https://bugs.python.org/issue?]

@action=redirect&bpo=32800]: Update link to w3c doc for xml default namespaces.

- [bpo-11015](https://bugs.python.org/issue?@action=redirect&bpo=11015) [https://bugs.python.org/issue?@action=redirect&bpo=11015]: Update `test.support` documentation.
- [bpo-32613](https://bugs.python.org/issue?@action=redirect&bpo=32613) [https://bugs.python.org/issue?@action=redirect&bpo=32613]: Update the `faq/windows.html` to use the `py` command from PEP 397 instead of `python`.
- [bpo-8722](https://bugs.python.org/issue?@action=redirect&bpo=8722) [https://bugs.python.org/issue?@action=redirect&bpo=8722]: Document `__getattr__()` behavior when property `get()` method raises `AttributeError`.
- [bpo-32614](https://bugs.python.org/issue?@action=redirect&bpo=32614) [https://bugs.python.org/issue?@action=redirect&bpo=32614]: Modify RE examples in documentation to use raw strings to prevent `DeprecationWarning` and add text to REGEX HOWTO to highlight the deprecation.
- [bpo-20709](https://bugs.python.org/issue?@action=redirect&bpo=20709) [https://bugs.python.org/issue?@action=redirect&bpo=20709]: Remove the paragraph where we explain that `os.utime()` does not support a directory as path under Windows. Patch by Jan-Philip Gehrcke
- [bpo-32722](https://bugs.python.org/issue?@action=redirect&bpo=32722) [https://bugs.python.org/issue?@action=redirect&bpo=32722]: Remove the bad example in the tutorial of the Generator Expression. Patch by Stéphane Wirtel
- [bpo-31972](https://bugs.python.org/issue?@action=redirect&bpo=31972) [https://bugs.python.org/issue?@action=redirect&bpo=31972]: Improve docstrings for `pathlib.PurePath` subclasses.
- [bpo-30607](https://bugs.python.org/issue?@action=redirect&bpo=30607) [https://bugs.python.org/issue?@action=redirect&bpo=30607]: Use the externalized `python-docs-theme` package when building the documentation.
- [bpo-8243](https://bugs.python.org/issue?@action=redirect&bpo=8243) [https://bugs.python.org/issue?@action=redirect&bpo=8243]: Add a note about `curses.addch` and `curses.addstr` exception behavior when writing outside a window, or pad.
- [bpo-32337](https://bugs.python.org/issue?@action=redirect&bpo=32337) [https://bugs.python.org/issue?@action=redirect&bpo=32337]: Update documentation related with `dict` order.
- [bpo-25041](https://bugs.python.org/issue?@action=redirect&bpo=25041) [https://bugs.python.org/issue?@action=redirect&bpo=25041]: Document `AF_PACKET` in the `socket` module.
- [bpo-31432](https://bugs.python.org/issue?@action=redirect&bpo=31432) [https://bugs.python.org/issue?@action=redirect&bpo=31432]

@action=redirect&bpo=31432]: Clarify meaning of CERT\_NONE, CERT\_OPTIONAL, and CERT\_REQUIRED flags for ssl.SSLContext.verify\_mode.

## Tests

- [bpo-35772](https://bugs.python.org/issue?@action=redirect&bpo=35772) [https://bugs.python.org/issue?@action=redirect&bpo=35772]: Fix sparse file tests of test\_tarfile on ppc64 with the tmpfs filesystem. Fix the function testing if the filesystem supports sparse files: create a file which contains data and “holes”, instead of creating a file which contains no data. tmpfs effective block size is a page size (tmpfs lives in the page cache). RHEL uses 64 KiB pages on aarch64, ppc64, ppc64le, only s390x and x86\_64 use 4 KiB pages, whereas the test punch holes of 4 KiB.
- [bpo-35045](https://bugs.python.org/issue?@action=redirect&bpo=35045) [https://bugs.python.org/issue?@action=redirect&bpo=35045]: Make ssl tests less strict and also accept TLSv1 as system default. The changes unbreaks test\_min\_max\_version on Fedora 29.
- [bpo-32710](https://bugs.python.org/issue?@action=redirect&bpo=32710) [https://bugs.python.org/issue?@action=redirect&bpo=32710]: test\_asyncio/test\_sendfile.py now resets the event loop policy using **tearDownModule()** as done in other tests, to prevent a warning when running tests on Windows.
- [bpo-33717](https://bugs.python.org/issue?@action=redirect&bpo=33717) [https://bugs.python.org/issue?@action=redirect&bpo=33717]: test.pythoninfo now logs information of all clocks, not only time.time() and time.perf\_counter().
- [bpo-35488](https://bugs.python.org/issue?@action=redirect&bpo=35488) [https://bugs.python.org/issue?@action=redirect&bpo=35488]: Add a test to pathlib's Path.match() to verify it does not support glob-style \*\* recursive pattern matching.
- [bpo-31731](https://bugs.python.org/issue?@action=redirect&bpo=31731) [https://bugs.python.org/issue?@action=redirect&bpo=31731]: Fix a race condition in check\_interrupted\_write() of test\_io: create directly the thread with SIGALRM signal blocked, rather than

blocking the signal later from the thread. Previously, it was possible that the thread gets the signal before the signal is blocked.

- [bpo-35424](https://bugs.python.org/issue?@action=redirect&bpo=35424) [https://bugs.python.org/issue?@action=redirect&bpo=35424]: Fix `test_multiprocessing_main_handling`: use **`multiprocessing.Pool`** with a context manager and then explicitly join the pool.
- [bpo-35519](https://bugs.python.org/issue?@action=redirect&bpo=35519) [https://bugs.python.org/issue?@action=redirect&bpo=35519]: Rename **`test.bisect`** module to **`test.bisect_cmd`** to avoid conflict with **`bisect`** module when running directly a test like `./python Lib/test/test_xmlrpc.py`.
- [bpo-35513](https://bugs.python.org/issue?@action=redirect&bpo=35513) [https://bugs.python.org/issue?@action=redirect&bpo=35513]: Replace **`time.time()`** with **`time.monotonic()`** in tests to measure time delta.
- [bpo-34279](https://bugs.python.org/issue?@action=redirect&bpo=34279) [https://bugs.python.org/issue?@action=redirect&bpo=34279]: **`test.support.run_unittest()`** no longer raise **`TestDidNotRun`** if the test result contains skipped tests. The exception is now only raised if no test have been run and no test have been skipped.
- [bpo-35412](https://bugs.python.org/issue?@action=redirect&bpo=35412) [https://bugs.python.org/issue?@action=redirect&bpo=35412]: Add testcase to `test_future4`: check unicode literal.
- [bpo-26704](https://bugs.python.org/issue?@action=redirect&bpo=26704) [https://bugs.python.org/issue?@action=redirect&bpo=26704]: Added test demonstrating double-patching of an instance method. Patch by Anthony Sottile.
- [bpo-33725](https://bugs.python.org/issue?@action=redirect&bpo=33725) [https://bugs.python.org/issue?@action=redirect&bpo=33725]: `test_multiprocessing_fork` may crash on recent versions of macOS. Until the issue is resolved, skip the test on macOS.
- [bpo-35352](https://bugs.python.org/issue?@action=redirect&bpo=35352) [https://bugs.python.org/issue?@action=redirect&bpo=35352]

@action=redirect&bpo=35352]: Modify test\_asyncio to use the certificate set from the test directory.

- [bpo-35317](https://bugs.python.org/issue?@action=redirect&bpo=35317) [https://bugs.python.org/issue?@action=redirect&bpo=35317]: Fix mktime() overflow error in test\_email: run test\_localtime\_daylight\_true\_dst\_true() and test\_localtime\_daylight\_false\_dst\_true() with a specific timezone.
- [bpo-21263](https://bugs.python.org/issue?@action=redirect&bpo=21263) [https://bugs.python.org/issue?@action=redirect&bpo=21263]: After several reports that test\_gdb does not work properly on macOS and since gdb is not shipped by default anymore, test\_gdb is now skipped on macOS when LLVM Clang has been used to compile Python. Patch by Lysandros Nikolaou
- [bpo-34279](https://bugs.python.org/issue?@action=redirect&bpo=34279) [https://bugs.python.org/issue?@action=redirect&bpo=34279]: regrtest issue a warning when no tests have been executed in a particular test file. Also, a new final result state is issued if no test have been executed across all test files. Patch by Pablo Galindo.
- [bpo-34962](https://bugs.python.org/issue?@action=redirect&bpo=34962) [https://bugs.python.org/issue?@action=redirect&bpo=34962]: make docstest in Doc now passes., and is enforced in CI
- [bpo-23596](https://bugs.python.org/issue?@action=redirect&bpo=23596) [https://bugs.python.org/issue?@action=redirect&bpo=23596]: Use argparse for the command line of the gzip module. Patch by Antony Lee
- [bpo-34537](https://bugs.python.org/issue?@action=redirect&bpo=34537) [https://bugs.python.org/issue?@action=redirect&bpo=34537]: Fix test\_gdb.test\_strings() when LC\_ALL=C and GDB was compiled with Python 3.6 or earlier.
- [bpo-34587](https://bugs.python.org/issue?@action=redirect&bpo=34587) [https://bugs.python.org/issue?@action=redirect&bpo=34587]: test\_socket: Remove RDSTest.testCongestion(). The test tries to fill the receiver's socket buffer and expects an error. But the RDS protocol doesn't require that. Moreover, the Linux implementation of

RDS expects that the producer of the messages reduces its rate, it's not the role of the receiver to trigger an error. The test fails on Fedora 28 by design, so just remove it.

- [bpo-34661](https://bugs.python.org/issue?@action=redirect&bpo=34661) [https://bugs.python.org/issue?@action=redirect&bpo=34661]: Fix `test_shutil` if `unzip` doesn't support `-t`.
- [bpo-34200](https://bugs.python.org/issue?@action=redirect&bpo=34200) [https://bugs.python.org/issue?@action=redirect&bpo=34200]: Fixed non-deterministic flakiness of `test_pkg` by not using the scary `test.support.module_cleanup()` logic to save and restore `sys.modules` contents between test cases.
- [bpo-34569](https://bugs.python.org/issue?@action=redirect&bpo=34569) [https://bugs.python.org/issue?@action=redirect&bpo=34569]: The experimental PEP 554 data channels now correctly pass negative `PyLong` objects between subinterpreters on 32-bit systems. Patch by Michael Felt.
- [bpo-34594](https://bugs.python.org/issue?@action=redirect&bpo=34594) [https://bugs.python.org/issue?@action=redirect&bpo=34594]: Fix usage of hardcoded `errno` values in the tests.
- [bpo-34579](https://bugs.python.org/issue?@action=redirect&bpo=34579) [https://bugs.python.org/issue?@action=redirect&bpo=34579]: Fix `test_embed` for AIX Patch by Michael Felt
- [bpo-34542](https://bugs.python.org/issue?@action=redirect&bpo=34542) [https://bugs.python.org/issue?@action=redirect&bpo=34542]: Use 3072 RSA keys and SHA-256 signature for test certs and keys.
- [bpo-11193](https://bugs.python.org/issue?@action=redirect&bpo=11193) [https://bugs.python.org/issue?@action=redirect&bpo=11193]: Remove special condition for AIX in `test_subprocess.test_undecodable_env`
- [bpo-34347](https://bugs.python.org/issue?@action=redirect&bpo=34347) [https://bugs.python.org/issue?@action=redirect&bpo=34347]: Fix `test_utf8_mode.test_cmd_line` for AIX
- [bpo-34490](https://bugs.python.org/issue?@action=redirect&bpo=34490) [https://bugs.python.org/issue?@action=redirect&bpo=34490]: On AIX with `AF_UNIX` family

sockets getsockname() does not provide 'sockname', so skip calls to transport.get\_extra\_info('sockname')

- [bpo-34391](https://bugs.python.org/issue?@action=redirect&bpo=34391) [https://bugs.python.org/issue?@action=redirect&bpo=34391]: Fix ftplib test for TLS 1.3 by reading from data socket.
- [bpo-11192](https://bugs.python.org/issue?@action=redirect&bpo=11192) [https://bugs.python.org/issue?@action=redirect&bpo=11192]: Fix **test\_socket** on AIX 6.1 and later IPv6 zone id supports only supported by inet\_pton6\_zone() Switch to runtime-based platform.system() to establish current platform rather than build-time based sys.platform()
- [bpo-34399](https://bugs.python.org/issue?@action=redirect&bpo=34399) [https://bugs.python.org/issue?@action=redirect&bpo=34399]: Update all RSA keys and DH params to use at least 2048 bits.
- [bpo-34373](https://bugs.python.org/issue?@action=redirect&bpo=34373) [https://bugs.python.org/issue?@action=redirect&bpo=34373]: Fix **test\_mktime** and **test\_pthread\_getcpuclickid** tests for AIX Add range checking for **\_PyTime\_localtime** for AIX Patch by Michael Felt
- [bpo-11191](https://bugs.python.org/issue?@action=redirect&bpo=11191) [https://bugs.python.org/issue?@action=redirect&bpo=11191]: Skip the distutils test 'test\_search\_cpp' when using XLC as compiler patch by aixtools (Michael Felt)
- Improved an error message when mock assert\_has\_calls fails.
- [bpo-33746](https://bugs.python.org/issue?@action=redirect&bpo=33746) [https://bugs.python.org/issue?@action=redirect&bpo=33746]: Fix test\_unittest when run in verbose mode.
- [bpo-33901](https://bugs.python.org/issue?@action=redirect&bpo=33901) [https://bugs.python.org/issue?@action=redirect&bpo=33901]: Fix test\_dbm\_gnu on macOS with gdbm 1.15: add a larger value to make sure that the file size changes.
- [bpo-33873](https://bugs.python.org/issue?@action=redirect&bpo=33873) [https://bugs.python.org/issue?@action=redirect&bpo=33873]

@action=redirect&bpo=33873]: Fix a bug in `regtest` that caused an extra test to run if `-huntrleaks/-R` was used. Exit with error in case that invalid parameters are specified to `-huntrleaks/-R` (at least one warmup run and one repetition must be used).

- [bpo-33562](https://bugs.python.org/issue?@action=redirect&bpo=33562) [https://bugs.python.org/issue?@action=redirect&bpo=33562]: Check that a global asyncio event loop policy is not left behind by any tests.
- [bpo-33655](https://bugs.python.org/issue?@action=redirect&bpo=33655) [https://bugs.python.org/issue?@action=redirect&bpo=33655]: Ignore `test_posix_fallocate` failures on BSD platforms that might be due to running on ZFS.
- [bpo-32962](https://bugs.python.org/issue?@action=redirect&bpo=32962) [https://bugs.python.org/issue?@action=redirect&bpo=32962]: Fixed `test_gdb` when Python is compiled with flags `-mcet -fcf-protection -O0`.
- [bpo-33358](https://bugs.python.org/issue?@action=redirect&bpo=33358) [https://bugs.python.org/issue?@action=redirect&bpo=33358]: Fix `test_embed.test_pre_initialization_sys_options()` when the interpreter is built with `--enable-shared`.
- [bpo-32872](https://bugs.python.org/issue?@action=redirect&bpo=32872) [https://bugs.python.org/issue?@action=redirect&bpo=32872]: Avoid `regtest` compatibility issue with namespace packages.
- [bpo-32517](https://bugs.python.org/issue?@action=redirect&bpo=32517) [https://bugs.python.org/issue?@action=redirect&bpo=32517]: Fix failing `test_asyncio` on macOS 10.12.2+ due to transport of `KqueueSelector` loop was not being closed.
- [bpo-32663](https://bugs.python.org/issue?@action=redirect&bpo=32663) [https://bugs.python.org/issue?@action=redirect&bpo=32663]: Making sure the **SMTPUTF8SimTests** class of tests gets run in `test_smtplib.py`.

Applicable to Python2-2.7 and later

- [bpo-19417](https://bugs.python.org/issue?@action=redirect&bpo=19417) [https://bugs.python.org/issue?@action=redirect&bpo=19417]: Add test\_bdb.py.
- [bpo-31809](https://bugs.python.org/issue?@action=redirect&bpo=31809) [https://bugs.python.org/issue?@action=redirect&bpo=31809]: Add tests to verify connection with secp ECDH curves.

## Build

- [bpo-34691](https://bugs.python.org/issue?@action=redirect&bpo=34691) [https://bugs.python.org/issue?@action=redirect&bpo=34691]: The `_contextvars` module is now built into the core Python library on Windows.
- [bpo-35683](https://bugs.python.org/issue?@action=redirect&bpo=35683) [https://bugs.python.org/issue?@action=redirect&bpo=35683]: Improved Azure Pipelines build steps and now verifying layouts correctly
- [bpo-35642](https://bugs.python.org/issue?@action=redirect&bpo=35642) [https://bugs.python.org/issue?@action=redirect&bpo=35642]: Remove `asynciomodule.c` from `pythoncore.vcxproj`
- [bpo-35550](https://bugs.python.org/issue?@action=redirect&bpo=35550) [https://bugs.python.org/issue?@action=redirect&bpo=35550]: Fix incorrect Solaris `#ifdef` checks to look for `_sun` && `_SVR4` instead of `sun` when compiling.
- [bpo-35499](https://bugs.python.org/issue?@action=redirect&bpo=35499) [https://bugs.python.org/issue?@action=redirect&bpo=35499]: `make profile-opt` no longer replaces `CFLAGS_NODIST` with `CFLAGS`. It now adds profile-guided optimization (PGO) flags to `CFLAGS_NODIST`: existing `CFLAGS_NODIST` flags are kept.
- [bpo-35257](https://bugs.python.org/issue?@action=redirect&bpo=35257) [https://bugs.python.org/issue?@action=redirect&bpo=35257]: Avoid leaking the linker flags from Link Time Optimizations (LTO) into `distutils` when compiling C extensions.
- [bpo-35351](https://bugs.python.org/issue?@action=redirect&bpo=35351) [https://bugs.python.org/issue?@action=redirect&bpo=35351]: When building Python with clang and LTO, LTO flags are no longer passed into `CFLAGS` to build third-party C extensions through `distutils`.
- [bpo-35139](https://bugs.python.org/issue?@action=redirect&bpo=35139) [https://bugs.python.org/issue?@action=redirect&bpo=35139]: Fix a compiler error when statically linking `pyexpat` in `Modules/Setup`.
- [bpo-35059](https://bugs.python.org/issue?@action=redirect&bpo=35059) [https://bugs.python.org/issue?@action=redirect&bpo=35059]

@action=redirect&bpo=35059]: PCbuild: Set

InlineFunctionExpansion to OnlyExplicitInline (“/Ob1” option) in pyproject.props in Debug mode to expand functions marked as inline. This change should make Python compiled in Debug mode a little bit faster on Windows.

- [bpo-35011](https://bugs.python.org/issue?@action=redirect&bpo=35011) [https://bugs.python.org/issue?@action=redirect&bpo=35011]: Restores the use of pyexpatns.h to isolate our embedded copy of the expat C library so that its symbols do not conflict at link or dynamic loading time with an embedding application or other extension modules with their own version of libexpat.
- [bpo-28015](https://bugs.python.org/issue?@action=redirect&bpo=28015) [https://bugs.python.org/issue?@action=redirect&bpo=28015]: Have -with-lto works correctly with clang.
- [bpo-34765](https://bugs.python.org/issue?@action=redirect&bpo=34765) [https://bugs.python.org/issue?@action=redirect&bpo=34765]: Update the outdated install-sh file to the latest revision from automake v1.16.1
- [bpo-34585](https://bugs.python.org/issue?@action=redirect&bpo=34585) [https://bugs.python.org/issue?@action=redirect&bpo=34585]: Check for floating-point byte order in configure.ac using compilation tests instead of executing code, so that these checks work in cross-compiled builds.
- [bpo-34710](https://bugs.python.org/issue?@action=redirect&bpo=34710) [https://bugs.python.org/issue?@action=redirect&bpo=34710]: Fixed SSL module build with OpenSSL & pedantic CFLAGS.
- [bpo-34582](https://bugs.python.org/issue?@action=redirect&bpo=34582) [https://bugs.python.org/issue?@action=redirect&bpo=34582]: Add JUnit XML output for regression tests and update Azure DevOps builds.
- [bpo-34081](https://bugs.python.org/issue?@action=redirect&bpo=34081) [https://bugs.python.org/issue?@action=redirect&bpo=34081]: Make Sphinx warnings as errors in the Docs Makefile.
- [bpo-34555](https://bugs.python.org/issue?@action=redirect&bpo=34555) [https://bugs.python.org/issue?@action=redirect&bpo=34555]: Fix for case where it was not possible to have both HAVE\_LINUX\_VM\_SOCKETS\_H and HAVE\_SOCKADDR\_ALG be undefined.
- [bpo-33015](https://bugs.python.org/issue?@action=redirect&bpo=33015) [https://bugs.python.org/issue?@action=redirect&bpo=33015]: Fix an undefined behaviour in the pthread implementation of **PyThread\_start\_new\_thread()**: add a function wrapper to always return NULL.

- [bpo-34245](https://bugs.python.org/issue?@action=redirect&bpo=34245) [https://bugs.python.org/issue?@action=redirect&bpo=34245]: The Python shared library is now installed with write permission (mode 0755), which is the standard way of installing such libraries.
- [bpo-34121](https://bugs.python.org/issue?@action=redirect&bpo=34121) [https://bugs.python.org/issue?@action=redirect&bpo=34121]: Fix detection of C11 atomic support on clang.
- [bpo-32430](https://bugs.python.org/issue?@action=redirect&bpo=32430) [https://bugs.python.org/issue?@action=redirect&bpo=32430]: Rename Modules/Setup.dist to Modules/Setup, and remove the necessity to copy the former manually to the latter when updating the local source tree.
- [bpo-30345](https://bugs.python.org/issue?@action=redirect&bpo=30345) [https://bugs.python.org/issue?@action=redirect&bpo=30345]: Add -g to LDFLAGS when compiling with LTO to get debug symbols.
- [bpo-5755](https://bugs.python.org/issue?@action=redirect&bpo=5755) [https://bugs.python.org/issue?@action=redirect&bpo=5755]: Move -Wstrict-prototypes option to CFLAGS\_NODIST from OPT. This option emitted annoying warnings when building extension modules written in C++.
- [bpo-33614](https://bugs.python.org/issue?@action=redirect&bpo=33614) [https://bugs.python.org/issue?@action=redirect&bpo=33614]: Ensures module definition files for the stable ABI on Windows are correctly regenerated.
- [bpo-33648](https://bugs.python.org/issue?@action=redirect&bpo=33648) [https://bugs.python.org/issue?@action=redirect&bpo=33648]: The -with-c-locale-warning configuration flag has been removed. It has had no effect for about a year.
- [bpo-33522](https://bugs.python.org/issue?@action=redirect&bpo=33522) [https://bugs.python.org/issue?@action=redirect&bpo=33522]: Enable CI builds on Visual Studio Team Services at <https://python.visualstudio.com/cpython>
- [bpo-33512](https://bugs.python.org/issue?@action=redirect&bpo=33512) [https://bugs.python.org/issue?@action=redirect&bpo=33512]: configure's check for "long double" has been simplified
- [bpo-33483](https://bugs.python.org/issue?@action=redirect&bpo=33483) [https://bugs.python.org/issue?@action=redirect&bpo=33483]: C compiler is now correctly detected from the standard environment variables. -without-gcc and -with-icc options have been removed.
- [bpo-33394](https://bugs.python.org/issue?@action=redirect&bpo=33394) [https://bugs.python.org/issue?@action=redirect&bpo=33394]: Enable the verbose build for extension modules, when GNU make is passed macros on the command line.
- [bpo-33393](https://bugs.python.org/issue?@action=redirect&bpo=33393) [https://bugs.python.org/issue?@action=redirect&bpo=33393]

@action=redirect&bpo=33393]: Update config.guess and config.sub files.

- [bpo-33377](https://bugs.python.org/issue?@action=redirect&bpo=33377) [https://bugs.python.org/issue?@action=redirect&bpo=33377]: Add new triplets for mips r6 and riscv variants (used in extension suffixes).
- [bpo-32232](https://bugs.python.org/issue?@action=redirect&bpo=32232) [https://bugs.python.org/issue?@action=redirect&bpo=32232]: By default, modules configured in **Modules/Setup** are no longer built with **-DPy\_BUILD\_CORE**. Instead, modules that specifically need that preprocessor definition include it in their individual entries.
- [bpo-33182](https://bugs.python.org/issue?@action=redirect&bpo=33182) [https://bugs.python.org/issue?@action=redirect&bpo=33182]: The embedding tests can once again be built with clang 6.0
- [bpo-33163](https://bugs.python.org/issue?@action=redirect&bpo=33163) [https://bugs.python.org/issue?@action=redirect&bpo=33163]: Upgrade pip to 9.0.3 and setuptools to v39.0.1.
- [bpo-33012](https://bugs.python.org/issue?@action=redirect&bpo=33012) [https://bugs.python.org/issue?@action=redirect&bpo=33012]: gcc 8 has added a new warning heuristic to detect invalid function casts and a stock python build seems to hit that warning quite often. The most common is the cast of a METH\_NOARGS function (that uses just one argument) to a PyCFunction. Fix this by adding a dummy argument to all functions that implement METH\_NOARGS.
- [bpo-32898](https://bugs.python.org/issue?@action=redirect&bpo=32898) [https://bugs.python.org/issue?@action=redirect&bpo=32898]: Fix the python debug build when using COUNT\_ALLOCS.
- [bpo-29442](https://bugs.python.org/issue?@action=redirect&bpo=29442) [https://bugs.python.org/issue?@action=redirect&bpo=29442]: Replace optparse with argparse in setup.py

## Windows

- [bpo-35890](https://bugs.python.org/issue?@action=redirect&bpo=35890) [https://bugs.python.org/issue?@action=redirect&bpo=35890]: Fix API calling consistency of GetVersionEx and wcstok.
- [bpo-32560](https://bugs.python.org/issue?@action=redirect&bpo=32560) [https://bugs.python.org/issue?@action=redirect&bpo=32560]: The `py` launcher now forwards its `STARTUPINFO` structure to child processes.

- [bpo-35854](https://bugs.python.org/issue?@action=redirect&bpo=35854) [https://bugs.python.org/issue?@action=redirect&bpo=35854]: Fix EnvBuilder and –symlinks in venv on Windows
- [bpo-35811](https://bugs.python.org/issue?@action=redirect&bpo=35811) [https://bugs.python.org/issue?@action=redirect&bpo=35811]: Avoid propagating venv settings when launching via py.exe
- [bpo-35797](https://bugs.python.org/issue?@action=redirect&bpo=35797) [https://bugs.python.org/issue?@action=redirect&bpo=35797]: Fix default executable used by the multiprocessing module
- [bpo-35758](https://bugs.python.org/issue?@action=redirect&bpo=35758) [https://bugs.python.org/issue?@action=redirect&bpo=35758]: Allow building on ARM with MSVC.
- [bpo-29734](https://bugs.python.org/issue?@action=redirect&bpo=29734) [https://bugs.python.org/issue?@action=redirect&bpo=29734]: Fix handle leaks in os.stat on Windows.
- [bpo-35596](https://bugs.python.org/issue?@action=redirect&bpo=35596) [https://bugs.python.org/issue?@action=redirect&bpo=35596]: Use unchecked PYCs for the embeddable distro to avoid zipimport restrictions.
- [bpo-35596](https://bugs.python.org/issue?@action=redirect&bpo=35596) [https://bugs.python.org/issue?@action=redirect&bpo=35596]: Fix vcruntime140.dll being added to embeddable distro multiple times.
- [bpo-35402](https://bugs.python.org/issue?@action=redirect&bpo=35402) [https://bugs.python.org/issue?@action=redirect&bpo=35402]: Update Windows build to use Tcl and Tk 8.6.9
- [bpo-35401](https://bugs.python.org/issue?@action=redirect&bpo=35401) [https://bugs.python.org/issue?@action=redirect&bpo=35401]: Updates Windows build to OpenSSL 1.1.0j
- [bpo-34977](https://bugs.python.org/issue?@action=redirect&bpo=34977) [https://bugs.python.org/issue?@action=redirect&bpo=34977]: venv on Windows will now use a python.exe redirector rather than copying the actual binaries from the base environment.
- [bpo-34977](https://bugs.python.org/issue?@action=redirect&bpo=34977) [https://bugs.python.org/issue?@action=redirect&bpo=34977]: Adds support for building a Windows App Store package
- [bpo-35067](https://bugs.python.org/issue?@action=redirect&bpo=35067) [https://bugs.python.org/issue?@action=redirect&bpo=35067]: Remove \_distutils\_findvs module and use vswhere.exe instead.
- [bpo-32557](https://bugs.python.org/issue?@action=redirect&bpo=32557) [https://bugs.python.org/issue?@action=redirect&bpo=32557]: Allow shutil.disk\_usage to take a file path on Windows

- [bpo-34770](https://bugs.python.org/issue?@action=redirect&bpo=34770) [https://bugs.python.org/issue?@action=redirect&bpo=34770]: Fix a possible null pointer dereference in pyshellex.cpp.
- [bpo-34603](https://bugs.python.org/issue?@action=redirect&bpo=34603) [https://bugs.python.org/issue?@action=redirect&bpo=34603]: Fix returning structs from functions produced by MSVC
- [bpo-34581](https://bugs.python.org/issue?@action=redirect&bpo=34581) [https://bugs.python.org/issue?@action=redirect&bpo=34581]: Guard MSVC-specific code in socketmodule.c with `#ifdef _MSC_VER`.
- [bpo-34532](https://bugs.python.org/issue?@action=redirect&bpo=34532) [https://bugs.python.org/issue?@action=redirect&bpo=34532]: Fixes exit code of list version arguments for py.exe.
- [bpo-34062](https://bugs.python.org/issue?@action=redirect&bpo=34062) [https://bugs.python.org/issue?@action=redirect&bpo=34062]: Fixed the ‘-list’ and ‘-list-paths’ arguments for the py.exe launcher
- [bpo-34225](https://bugs.python.org/issue?@action=redirect&bpo=34225) [https://bugs.python.org/issue?@action=redirect&bpo=34225]: Ensure INCLUDE and LIB directories do not end with a backslash.
- [bpo-34011](https://bugs.python.org/issue?@action=redirect&bpo=34011) [https://bugs.python.org/issue?@action=redirect&bpo=34011]: A suite of code has been changed which copied across DLLs and init.tcl from the running Python location into a venv being created. These copies are needed only when running from a Python source build, and the copying code is now only run when that is the case, rather than whenever a venv is created.
- [bpo-34006](https://bugs.python.org/issue?@action=redirect&bpo=34006) [https://bugs.python.org/issue?@action=redirect&bpo=34006]: Revert line length limit for Windows help docs. The line-length limit is not needed because the pages appear in a separate app rather than on a browser tab. It can also interact badly with the DPI setting.
- [bpo-31546](https://bugs.python.org/issue?@action=redirect&bpo=31546) [https://bugs.python.org/issue?@action=redirect&bpo=31546]: Restore running PyOS\_InputHook while waiting for user input at the prompt. The restores integration of interactive GUI windows (such as Matplotlib figures) with the prompt on Windows.
- [bpo-30237](https://bugs.python.org/issue?@action=redirect&bpo=30237) [https://bugs.python.org/issue?@action=redirect&bpo=30237]: Output error when ReadConsole is canceled by CancelSynchronousIo instead of crashing.
- [bpo-33895](https://bugs.python.org/issue?@action=redirect&bpo=33895) [https://bugs.python.org/issue?@action=redirect&bpo=33895]: GIL is released while calling

functions that acquire Windows loader lock.

- [bpo-33720](https://bugs.python.org/issue?@action=redirect&bpo=33720) [https://bugs.python.org/issue?@action=redirect&bpo=33720]: Reduces maximum marshal recursion depth on release builds.
- [bpo-29097](https://bugs.python.org/issue?@action=redirect&bpo=29097) [https://bugs.python.org/issue?@action=redirect&bpo=29097]: Fix bug where **`datetime.fromtimestamp()`** erroneously throws an **`OSError`** on Windows for values between 0 and 86400. Patch by Ammar Askar.
- [bpo-33316](https://bugs.python.org/issue?@action=redirect&bpo=33316) [https://bugs.python.org/issue?@action=redirect&bpo=33316]: `PyThread_release_lock` always fails
- [bpo-33184](https://bugs.python.org/issue?@action=redirect&bpo=33184) [https://bugs.python.org/issue?@action=redirect&bpo=33184]: Update Windows installer to use OpenSSL 1.1.0h.
- [bpo-32890](https://bugs.python.org/issue?@action=redirect&bpo=32890) [https://bugs.python.org/issue?@action=redirect&bpo=32890]: Fix usage of `GetLastError()` instead of `errno` in `os.execve()` and `os.truncate()`.
- [bpo-33016](https://bugs.python.org/issue?@action=redirect&bpo=33016) [https://bugs.python.org/issue?@action=redirect&bpo=33016]: Fix potential use of uninitialized memory in `nt._getfinalpathname`
- [bpo-32903](https://bugs.python.org/issue?@action=redirect&bpo=32903) [https://bugs.python.org/issue?@action=redirect&bpo=32903]: Fix a memory leak in `os.chdir()` on Windows if the current directory is set to a UNC path.
- [bpo-32901](https://bugs.python.org/issue?@action=redirect&bpo=32901) [https://bugs.python.org/issue?@action=redirect&bpo=32901]: Update Tcl and Tk versions to 8.6.8
- [bpo-31966](https://bugs.python.org/issue?@action=redirect&bpo=31966) [https://bugs.python.org/issue?@action=redirect&bpo=31966]: Fixed `WindowsConsoleIO.write()` for writing empty data.
- [bpo-32409](https://bugs.python.org/issue?@action=redirect&bpo=32409) [https://bugs.python.org/issue?@action=redirect&bpo=32409]: Ensures `activate.bat` can handle Unicode contents.
- [bpo-32457](https://bugs.python.org/issue?@action=redirect&bpo=32457) [https://bugs.python.org/issue?@action=redirect&bpo=32457]: Improves handling of denormalized executable path when launching Python.
- [bpo-32370](https://bugs.python.org/issue?@action=redirect&bpo=32370) [https://bugs.python.org/issue?@action=redirect&bpo=32370]: Use the correct encoding for `ipconfig` output in the `uuid` module. Patch by Segev Finer.
- [bpo-29248](https://bugs.python.org/issue?@action=redirect&bpo=29248) [https://bugs.python.org/issue?@action=redirect&bpo=29248]: Fix **`os.readlink()`** on

Windows, which was mistakenly treating the `PrintNameOffset` field of the reparse data buffer as a number of characters instead of bytes. Patch by Craig Holmquist and SSE4.

- [bpo-1104](https://bugs.python.org/issue?@action=redirect&bpo=1104) [https://bugs.python.org/issue?@action=redirect&bpo=1104]: Correctly handle string length in `msilib.SummaryInfo.GetProperty()` to prevent it from truncating the last character.

## macOS

- [bpo-35401](https://bugs.python.org/issue?@action=redirect&bpo=35401) [https://bugs.python.org/issue?@action=redirect&bpo=35401]: Update macOS installer to use OpenSSL 1.1.0j.
- [bpo-35025](https://bugs.python.org/issue?@action=redirect&bpo=35025) [https://bugs.python.org/issue?@action=redirect&bpo=35025]: Properly guard the use of the `CLOCK_GETTIME` et al. macros in `timemodule` on macOS.
- [bpo-24658](https://bugs.python.org/issue?@action=redirect&bpo=24658) [https://bugs.python.org/issue?@action=redirect&bpo=24658]: On macOS, fix reading from and writing into a file with a size larger than 2 GiB.
- [bpo-34405](https://bugs.python.org/issue?@action=redirect&bpo=34405) [https://bugs.python.org/issue?@action=redirect&bpo=34405]: Update to OpenSSL 1.1.0i for macOS installer builds.
- [bpo-33635](https://bugs.python.org/issue?@action=redirect&bpo=33635) [https://bugs.python.org/issue?@action=redirect&bpo=33635]: In macOS stat on some file descriptors (`/dev/fd/3` f.e) will result in bad file descriptor `OSError`. Guard against this exception was added in `is_dir`, `is_file` and similar methods. `DirEntry.is_dir` can also throw this exception so `_RecursiveWildcardSelector._iterate_directories` was also extended with the same error ignoring pattern.
- [bpo-13631](https://bugs.python.org/issue?@action=redirect&bpo=13631) [https://bugs.python.org/issue?@action=redirect&bpo=13631]: The `.editrc` file in user's home directory is now processed correctly during the readline initialization through editline emulation on macOS.
- [bpo-33184](https://bugs.python.org/issue?@action=redirect&bpo=33184) [https://bugs.python.org/issue?@action=redirect&bpo=33184]: Update macOS installer build to use OpenSSL 1.1.0h.
- [bpo-32726](https://bugs.python.org/issue?@action=redirect&bpo=32726) [https://bugs.python.org/issue?@action=redirect&bpo=32726]: Build and link with private copy of Tcl/Tk 8.6 for the macOS 10.6+ installer. The 10.9+

installer variant already does this. This means that the Python 3.7 provided by the python.org macOS installers no longer need or use any external versions of Tcl/Tk, either system-provided or user-installed, such as ActiveTcl.

- [bpo-32901](https://bugs.python.org/issue?@action=redirect&bpo=32901) [https://bugs.python.org/issue?@action=redirect&bpo=32901]: Update macOS 10.9+ installer to Tcl/Tk 8.6.8.
- [bpo-31903](https://bugs.python.org/issue?@action=redirect&bpo=31903) [https://bugs.python.org/issue?@action=redirect&bpo=31903]: In `_scproxy`, drop the GIL when calling into `SystemConfiguration` to avoid deadlocks.

## IDLE

- [bpo-35770](https://bugs.python.org/issue?@action=redirect&bpo=35770) [https://bugs.python.org/issue?@action=redirect&bpo=35770]: IDLE macosx deletes Options = > Configure IDLE. It previously deleted Window = > Zoom Height by mistake. (Zoom Height is now on the Options menu). On Mac, the settings dialog is accessed via Preferences on the IDLE menu.
- [bpo-35769](https://bugs.python.org/issue?@action=redirect&bpo=35769) [https://bugs.python.org/issue?@action=redirect&bpo=35769]: Change IDLE's new file name from 'Untitled' to 'untitled'
- [bpo-35660](https://bugs.python.org/issue?@action=redirect&bpo=35660) [https://bugs.python.org/issue?@action=redirect&bpo=35660]: Fix imports in idlelib.window.
- [bpo-35641](https://bugs.python.org/issue?@action=redirect&bpo=35641) [https://bugs.python.org/issue?@action=redirect&bpo=35641]: Proper format `calltip` when the function has no docstring.
- [bpo-33987](https://bugs.python.org/issue?@action=redirect&bpo=33987) [https://bugs.python.org/issue?@action=redirect&bpo=33987]: Use ttk Frame for ttk widgets.
- [bpo-34055](https://bugs.python.org/issue?@action=redirect&bpo=34055) [https://bugs.python.org/issue?@action=redirect&bpo=34055]: Fix erroneous 'smart' indents and newlines in IDLE Shell.
- [bpo-35591](https://bugs.python.org/issue?@action=redirect&bpo=35591) [https://bugs.python.org/issue?@action=redirect&bpo=35591]: Find Selection now works when selection not found.
- [bpo-35196](https://bugs.python.org/issue?@action=redirect&bpo=35196) [https://bugs.python.org/issue?@action=redirect&bpo=35196]: Speed up squeezer line counting.
- [bpo-35598](https://bugs.python.org/issue?@action=redirect&bpo=35598) [https://bugs.python.org/issue?@action=redirect&bpo=35598]: Update `config_key`: use PEP 8 names and ttk widgets, make some objects global, and add

tests.

- [bpo-28097](https://bugs.python.org/issue?@action=redirect&bpo=28097) [https://bugs.python.org/issue?@action=redirect&bpo=28097]: Add Previous/Next History entries to Shell menu.
- [bpo-35208](https://bugs.python.org/issue?@action=redirect&bpo=35208) [https://bugs.python.org/issue?@action=redirect&bpo=35208]: Squeezer now properly counts wrapped lines before newlines.
- [bpo-35555](https://bugs.python.org/issue?@action=redirect&bpo=35555) [https://bugs.python.org/issue?@action=redirect&bpo=35555]: Gray out Code Context menu entry when it's not applicable.
- [bpo-35521](https://bugs.python.org/issue?@action=redirect&bpo=35521) [https://bugs.python.org/issue?@action=redirect&bpo=35521]: Document the IDLE editor code context feature. Add some internal references within the IDLE doc.
- [bpo-22703](https://bugs.python.org/issue?@action=redirect&bpo=22703) [https://bugs.python.org/issue?@action=redirect&bpo=22703]: The Code Context menu label now toggles between Show/Hide Code Context. The Zoom Height menu now toggles between Zoom/Restore Height. Zoom Height has moved from the Window menu to the Options menu.
- [bpo-35213](https://bugs.python.org/issue?@action=redirect&bpo=35213) [https://bugs.python.org/issue?@action=redirect&bpo=35213]: Where appropriate, use 'macOS' in idlelib.
- [bpo-34864](https://bugs.python.org/issue?@action=redirect&bpo=34864) [https://bugs.python.org/issue?@action=redirect&bpo=34864]: On macOS, warn if the system preference "Prefer tabs when opening documents" is set to "Always".
- [bpo-34864](https://bugs.python.org/issue?@action=redirect&bpo=34864) [https://bugs.python.org/issue?@action=redirect&bpo=34864]: Document two IDLE on MacOS issues. The System Preferences Dock "prefer tabs always" setting disables some IDLE features. Menus are a bit different than as described for Windows and Linux.
- [bpo-35202](https://bugs.python.org/issue?@action=redirect&bpo=35202) [https://bugs.python.org/issue?@action=redirect&bpo=35202]: Remove unused imports from lib/idlelib
- [bpo-33000](https://bugs.python.org/issue?@action=redirect&bpo=33000) [https://bugs.python.org/issue?@action=redirect&bpo=33000]: Document that IDLE's shell has no line limit. A program that runs indefinitely can overflow memory.
- [bpo-23220](https://bugs.python.org/issue?@action=redirect&bpo=23220) [https://bugs.python.org/issue?@action=redirect&bpo=23220]

@action=redirect&bpo=23220]: Explain how IDLE's Shell displays output.

- [bpo-35099](https://bugs.python.org/issue?@action=redirect&bpo=35099) [https://bugs.python.org/issue?@action=redirect&bpo=35099]: Improve the doc about IDLE running user code. The section is renamed from “IDLE – console differences” is renamed “Running user code”. It mostly covers the implications of using custom `sys.stdout` objects.
- [bpo-35097](https://bugs.python.org/issue?@action=redirect&bpo=35097) [https://bugs.python.org/issue?@action=redirect&bpo=35097]: Add IDLE doc subsection explaining editor windows. Topics include opening, title and status bar, `.py*` extension, and running.
- [bpo-35093](https://bugs.python.org/issue?@action=redirect&bpo=35093) [https://bugs.python.org/issue?@action=redirect&bpo=35093]: Document the IDLE document viewer in the IDLE doc. Add a paragraph in “Help and preferences”, “Help sources” subsection.
- [bpo-35088](https://bugs.python.org/issue?@action=redirect&bpo=35088) [https://bugs.python.org/issue?@action=redirect&bpo=35088]: Update `idlelib.help.copy_string` docstring. We now use git and backporting instead of hg and forward merging.
- [bpo-35087](https://bugs.python.org/issue?@action=redirect&bpo=35087) [https://bugs.python.org/issue?@action=redirect&bpo=35087]: Update `idlelib` help files for the current doc build. The main change is the elimination of chapter-section numbers.
- [bpo-34548](https://bugs.python.org/issue?@action=redirect&bpo=34548) [https://bugs.python.org/issue?@action=redirect&bpo=34548]: Use configured color theme for read-only text views.
- [bpo-1529353](https://bugs.python.org/issue?@action=redirect&bpo=1529353) [https://bugs.python.org/issue?@action=redirect&bpo=1529353]: Enable “squeezing” of long outputs in the shell, to avoid performance degradation and to clean up the history without losing it. Squeezed outputs may be copied, viewed in a separate window, and “unsqueezed”.
- [bpo-34047](https://bugs.python.org/issue?@action=redirect&bpo=34047) [https://bugs.python.org/issue?@action=redirect&bpo=34047]: Fixed mousewheel scrolling direction on macOS.
- [bpo-34275](https://bugs.python.org/issue?@action=redirect&bpo=34275) [https://bugs.python.org/issue?@action=redirect&bpo=34275]: Make IDLE calltips always visible on Mac. Some MacOS-tk combinations need `.update_idletasks()`. Patch by Kevin Walzer.
- [bpo-34120](https://bugs.python.org/issue?@action=redirect&bpo=34120) [https://bugs.python.org/issue?@action=redirect&bpo=34120]

@action=redirect&bpo=34120]: Fix unresponsiveness after closing certain windows and dialogs.

- [bpo-33975](https://bugs.python.org/issue?@action=redirect&bpo=33975) [https://bugs.python.org/issue?@action=redirect&bpo=33975]: Avoid small type when running htests. Since part of the purpose of human-viewed tests is to determine that widgets look right, it is important that they look the same for testing as when running IDLE.
- [bpo-33905](https://bugs.python.org/issue?@action=redirect&bpo=33905) [https://bugs.python.org/issue?@action=redirect&bpo=33905]: Add test for `idlelib.stackview.StackBrowser`.
- [bpo-33924](https://bugs.python.org/issue?@action=redirect&bpo=33924) [https://bugs.python.org/issue?@action=redirect&bpo=33924]: Change `mainmenu.menudefs` key ‘windows’ to ‘window’. Every other `menudef` key is lowercase version of main menu entry.
- [bpo-33906](https://bugs.python.org/issue?@action=redirect&bpo=33906) [https://bugs.python.org/issue?@action=redirect&bpo=33906]: Rename `idlelib.windows` as `window` Match Window on the main menu and remove last plural module name.
- [bpo-33917](https://bugs.python.org/issue?@action=redirect&bpo=33917) [https://bugs.python.org/issue?@action=redirect&bpo=33917]: Fix and document `idlelib/idle_test/template.py`. The revised file compiles, runs, and tests OK. `idle_test/README.txt` explains how to use it to create new IDLE test files.
- [bpo-33904](https://bugs.python.org/issue?@action=redirect&bpo=33904) [https://bugs.python.org/issue?@action=redirect&bpo=33904]: IDLE: In `rstrip`, rename class `RstripExtension` as `Rstrip`
- [bpo-33907](https://bugs.python.org/issue?@action=redirect&bpo=33907) [https://bugs.python.org/issue?@action=redirect&bpo=33907]: For consistency and clarity, rename an IDLE module and classes. Module `calltips` and its class `CallTips` are now `calltip` and `Calltip`. In module `calltip_w`, class `CallTip` is now `CalltipWindow`.
- [bpo-33856](https://bugs.python.org/issue?@action=redirect&bpo=33856) [https://bugs.python.org/issue?@action=redirect&bpo=33856]: Add “help” in the welcome message of IDLE
- [bpo-33839](https://bugs.python.org/issue?@action=redirect&bpo=33839) [https://bugs.python.org/issue?@action=redirect&bpo=33839]: IDLE: refactor `ToolTip` and `CallTip` and add documentation and tests
- [bpo-33855](https://bugs.python.org/issue?@action=redirect&bpo=33855) [https://bugs.python.org/issue?@action=redirect&bpo=33855]: Minimally test all IDLE modules. Add missing files, import module, instantiate classes, and

check coverage. Check existing files.

- [bpo-33656](https://bugs.python.org/issue?@action=redirect&bpo=33656) [https://bugs.python.org/issue?@action=redirect&bpo=33656]: On Windows, add API call saying that tk scales for DPI. On Windows 8.1 + or 10, with DPI compatibility properties of the Python binary unchanged, and a monitor resolution greater than 96 DPI, this should make text and lines sharper. It should otherwise have no effect.
- [bpo-33768](https://bugs.python.org/issue?@action=redirect&bpo=33768) [https://bugs.python.org/issue?@action=redirect&bpo=33768]: Clicking on a context line moves that line to the top of the editor window.
- [bpo-33763](https://bugs.python.org/issue?@action=redirect&bpo=33763) [https://bugs.python.org/issue?@action=redirect&bpo=33763]: IDLE: Use read-only text widget for code context instead of label widget.
- [bpo-33664](https://bugs.python.org/issue?@action=redirect&bpo=33664) [https://bugs.python.org/issue?@action=redirect&bpo=33664]: Scroll IDLE editor text by lines. Previously, the mouse wheel and scrollbar slider moved text by a fixed number of pixels, resulting in partial lines at the top of the editor box. The change also applies to the shell and grep output windows, but not to read-only text views.
- [bpo-33679](https://bugs.python.org/issue?@action=redirect&bpo=33679) [https://bugs.python.org/issue?@action=redirect&bpo=33679]: Enable theme-specific color configuration for Code Context. Use the Highlights tab to see the setting for built-in themes or add settings to custom themes.
- [bpo-33642](https://bugs.python.org/issue?@action=redirect&bpo=33642) [https://bugs.python.org/issue?@action=redirect&bpo=33642]: Display up to maxlines non-blank lines for Code Context. If there is no current context, show a single blank line.
- [bpo-33628](https://bugs.python.org/issue?@action=redirect&bpo=33628) [https://bugs.python.org/issue?@action=redirect&bpo=33628]: IDLE: Cleanup codecontext.py and its test.
- [bpo-33564](https://bugs.python.org/issue?@action=redirect&bpo=33564) [https://bugs.python.org/issue?@action=redirect&bpo=33564]: IDLE's code context now recognizes async as a block opener.
- [bpo-21474](https://bugs.python.org/issue?@action=redirect&bpo=21474) [https://bugs.python.org/issue?@action=redirect&bpo=21474]: Update word/identifier definition from ascii to unicode. In text and entry boxes, this affects selection by double-click, movement left/right by control-left/right, and deletion left/right by control-BACKSPACE/DEL.

- [bpo-33204](https://bugs.python.org/issue?@action=redirect&bpo=33204) [https://bugs.python.org/issue?@action=redirect&bpo=33204]: IDLE: consistently color invalid string prefixes. A ‘u’ string prefix cannot be paired with either ‘r’ or ‘f’. Consistently color as much of the prefix, starting at the right, as is valid. Revise and extend colorizer test.
- [bpo-32984](https://bugs.python.org/issue?@action=redirect&bpo=32984) [https://bugs.python.org/issue?@action=redirect&bpo=32984]: Set `__file__` while running a startup file. Like Python, IDLE optionally runs one startup file in the Shell window before presenting the first interactive input prompt. For IDLE, `-s` runs a file named in environmental variable `IDLESTARTUP` or `PYTHONSTARTUP`; `-r file` runs `file`. Python sets `__file__` to the startup file name before running the file and unsets it before the first prompt. IDLE now does the same when run normally, without the `-n` option.
- [bpo-32940](https://bugs.python.org/issue?@action=redirect&bpo=32940) [https://bugs.python.org/issue?@action=redirect&bpo=32940]: Simplify and rename `StringTranslatePseudoMapping` in `pyparse`.
- [bpo-32916](https://bugs.python.org/issue?@action=redirect&bpo=32916) [https://bugs.python.org/issue?@action=redirect&bpo=32916]: Change `str` to `code` in `pyparse`.
- [bpo-32905](https://bugs.python.org/issue?@action=redirect&bpo=32905) [https://bugs.python.org/issue?@action=redirect&bpo=32905]: Remove unused code in `pyparse` module.
- [bpo-32874](https://bugs.python.org/issue?@action=redirect&bpo=32874) [https://bugs.python.org/issue?@action=redirect&bpo=32874]: Add tests for `pyparse`.
- [bpo-32837](https://bugs.python.org/issue?@action=redirect&bpo=32837) [https://bugs.python.org/issue?@action=redirect&bpo=32837]: Using the system and place-dependent default encoding for `open()` is a bad idea for IDLE’s system and location-independent files.
- [bpo-32826](https://bugs.python.org/issue?@action=redirect&bpo=32826) [https://bugs.python.org/issue?@action=redirect&bpo=32826]: Add “encoding = utf-8” to `open()` in IDLE’s `test_help_about`. GUI test `test_file_buttons()` only looks at initial ascii-only lines, but failed on systems where `open()` defaults to ‘ascii’ because `readline()` internally reads and decodes far enough ahead to encounter a non-ascii character in `CREDITS.txt`.
- [bpo-32831](https://bugs.python.org/issue?@action=redirect&bpo=32831) [https://bugs.python.org/issue?@action=redirect&bpo=32831]: Add docstrings and tests for `codecontext`.
- [bpo-32765](https://bugs.python.org/issue?@action=redirect&bpo=32765) [https://bugs.python.org/issue?@action=redirect&bpo=32765]

@action=redirect&bpo=32765]: Update configdialog General tab docstring to add new widgets to the widget list.

## Tools/Demos

- [bpo-35884](https://bugs.python.org/issue?@action=redirect&bpo=35884) [https://bugs.python.org/issue?@action=redirect&bpo=35884]: Add a benchmark script for timing various ways to access variables: `Tools/scripts/var_access_benchmark.py`.
- [bpo-34989](https://bugs.python.org/issue?@action=redirect&bpo=34989) [https://bugs.python.org/issue?@action=redirect&bpo=34989]: `python-gdb.py` now handles errors on computing the line number of a Python frame.
- [bpo-20260](https://bugs.python.org/issue?@action=redirect&bpo=20260) [https://bugs.python.org/issue?@action=redirect&bpo=20260]: Argument Clinic now has non-bitwise unsigned int converters.
- [bpo-32962](https://bugs.python.org/issue?@action=redirect&bpo=32962) [https://bugs.python.org/issue?@action=redirect&bpo=32962]: `python-gdb` now catches `UnicodeDecodeError` exceptions when calling `string()`.
- [bpo-32962](https://bugs.python.org/issue?@action=redirect&bpo=32962) [https://bugs.python.org/issue?@action=redirect&bpo=32962]: `python-gdb` now catches `ValueError` on `read_var()`: when Python has no debug symbols for example.
- [bpo-33189](https://bugs.python.org/issue?@action=redirect&bpo=33189) [https://bugs.python.org/issue?@action=redirect&bpo=33189]: `pygettext.py` now recognizes only literal strings as docstrings and translatable strings, and rejects bytes literals and f-string expressions.
- [bpo-31920](https://bugs.python.org/issue?@action=redirect&bpo=31920) [https://bugs.python.org/issue?@action=redirect&bpo=31920]: Fixed handling directories as arguments in the `pygettext` script. Based on patch by Oleg Krasnikov.
- [bpo-29673](https://bugs.python.org/issue?@action=redirect&bpo=29673) [https://bugs.python.org/issue?@action=redirect&bpo=29673]: Fix `pystackv` and `pystack gdbinit` macros.
- [bpo-25427](https://bugs.python.org/issue?@action=redirect&bpo=25427) [https://bugs.python.org/issue?@action=redirect&bpo=25427]: Remove the `pyvenv` script in favor of `python3 -m venv` in order to lower confusion as to what Python interpreter a virtual environment will be created for.
- [bpo-32885](https://bugs.python.org/issue?@action=redirect&bpo=32885) [https://bugs.python.org/issue?@action=redirect&bpo=32885]: Add an `-n` flag for `Tools/`

scripts/pathfix.py to disable automatic backup creation (files with ~ suffix).

- [bpo-32222](https://bugs.python.org/issue?@action=redirect&bpo=32222) [https://bugs.python.org/issue?@action=redirect&bpo=32222]: Fix pygettext not extracting docstrings for functions with type annotated arguments. Patch by Toby Harradine.
- [bpo-31583](https://bugs.python.org/issue?@action=redirect&bpo=31583) [https://bugs.python.org/issue?@action=redirect&bpo=31583]: Fix 2to3 for using with --add-suffix option but without --output-dir option for relative path to files in current directory.

## C API

- [bpo-35713](https://bugs.python.org/issue?@action=redirect&bpo=35713) [https://bugs.python.org/issue?@action=redirect&bpo=35713]: The **PyByteArray\_Init()** and **PyByteArray\_Fini()** functions have been removed. They did nothing since Python 2.7.4 and Python 3.2.0, were excluded from the limited API (stable ABI), and were not documented.
- [bpo-33817](https://bugs.python.org/issue?@action=redirect&bpo=33817) [https://bugs.python.org/issue?@action=redirect&bpo=33817]: Fixed **\_PyBytes\_Resize()** for empty bytes objects.
- [bpo-35322](https://bugs.python.org/issue?@action=redirect&bpo=35322) [https://bugs.python.org/issue?@action=redirect&bpo=35322]: Fix memory leak in **PyUnicode\_EncodeLocale()** and **PyUnicode\_EncodeFSDefault()** on error handling.
- [bpo-35059](https://bugs.python.org/issue?@action=redirect&bpo=35059) [https://bugs.python.org/issue?@action=redirect&bpo=35059]: The following C macros have been converted to static inline functions: **Py\_INCREF()**, **Py\_DECREF()**, **Py\_XINCRF()**, **Py\_XDECREF()**, **PyObject\_INIT()**, **PyObject\_INIT\_VAR()**.
- [bpo-35296](https://bugs.python.org/issue?@action=redirect&bpo=35296) [https://bugs.python.org/issue?@action=redirect&bpo=35296]: make install now also installs the internal API: Include/internal/\*.h header files.
- [bpo-35081](https://bugs.python.org/issue?@action=redirect&bpo=35081) [https://bugs.python.org/issue?@action=redirect&bpo=35081]: Internal APIs surrounded by #ifdef Py\_BUILD\_CORE have been moved from Include/\*.h headers to new header files Include/internal/pycore/\*.h.
- [bpo-35259](https://bugs.python.org/issue?@action=redirect&bpo=35259) [https://bugs.python.org/issue?@action=redirect&bpo=35259]

@action=redirect&bpo=35259]: Conditionally declare **Py\_FinalizeEx()** (new in 3.6) based on Py\_LIMITED\_API. Patch by Arthur Neufeld.

- **bpo-35081** [<https://bugs.python.org/issue?@action=redirect&bpo=35081>]: The **\_PyObject\_GC\_TRACK()** and **\_PyObject\_GC\_UNTRACK()** macros have been removed from the public C API.
- **bpo-35134** [<https://bugs.python.org/issue?@action=redirect&bpo=35134>]: Creation of a new `Include/cpython/` subdirectory.
- **bpo-34725** [<https://bugs.python.org/issue?@action=redirect&bpo=34725>]: Adds **\_Py\_SetProgramFullPath** so embedders may override `sys.executable`
- **bpo-34910** [<https://bugs.python.org/issue?@action=redirect&bpo=34910>]: Ensure that **PyObject\_Print()** always returns `-1` on error. Patch by Zackery Spytz.
- **bpo-34523** [<https://bugs.python.org/issue?@action=redirect&bpo=34523>]: **Py\_DecodeLocale()** and **Py\_EncodeLocale()** now use the UTF-8 encoding on Windows if **Py\_LegacyWindowsFSEncodingFlag** is zero.
- **bpo-34193** [<https://bugs.python.org/issue?@action=redirect&bpo=34193>]: Fix pluralization in **TypeError** messages in `getargs.c` and `typeobject.c`: ‘1 argument’ instead of ‘1 arguments’ and ‘1 element’ instead of ‘1 elements’.
- **bpo-34127** [<https://bugs.python.org/issue?@action=redirect&bpo=34127>]: Return grammatically correct error message based on argument count. Patch by Karthikeyan Singaravelan.
- **bpo-23927** [<https://bugs.python.org/issue?@action=redirect&bpo=23927>]: Fixed **SystemError** in **PyArg\_ParseTupleAndKeywords()** when the `w*` format unit is used for optional parameter.
- **bpo-32455** [<https://bugs.python.org/issue?@action=redirect&bpo=32455>]: Added **PyCompile\_OpcodeStackEffectWithJump()**.
- **bpo-34008** [<https://bugs.python.org/issue?@action=redirect&bpo=34008>]: **Py\_Main()** can again be called after **Py\_Initialize()**, as in Python 3.6.
- **bpo-32500** [<https://bugs.python.org/issue?@action=redirect&bpo=32500>]: Fixed error messages for

`PySequence_Size()`, `PySequence_GetItem()`, `PySequence_SetItem()` and `PySequence_DelItem()` called with a mapping and `PyMapping_Size()` called with a sequence.

- [bpo-33818](https://bugs.python.org/issue?@action=redirect&bpo=33818) [https://bugs.python.org/issue?@action=redirect&bpo=33818]: `PyExceptionClass_Name()` will now return `const char *` instead of `char *`.
- [bpo-33042](https://bugs.python.org/issue?@action=redirect&bpo=33042) [https://bugs.python.org/issue?@action=redirect&bpo=33042]: Embedding applications may once again call `PySys_ResetWarnOptions`, `PySys_AddWarnOption`, and `PySys_AddXOption` prior to calling `Py_Initialize`.
- [bpo-32374](https://bugs.python.org/issue?@action=redirect&bpo=32374) [https://bugs.python.org/issue?@action=redirect&bpo=32374]: Document that `m_traverse` for multi-phase initialized modules can be called with `m_state=NULL`, and add a sanity check
- [bpo-30863](https://bugs.python.org/issue?@action=redirect&bpo=30863) [https://bugs.python.org/issue?@action=redirect&bpo=30863]: `PyUnicode_AsWideChar()` and `PyUnicode_AsWideCharString()` no longer cache the `wchar_t *` representation of string objects.

## Python 3.7.0 final

*Release date: 2018-06-27*

### Library

- [bpo-33851](https://bugs.python.org/issue?@action=redirect&bpo=33851) [https://bugs.python.org/issue?@action=redirect&bpo=33851]: Fix `ast.get_docstring()` for a node that lacks a docstring.

### C API

- [bpo-33932](https://bugs.python.org/issue?@action=redirect&bpo=33932) [https://bugs.python.org/issue?@action=redirect&bpo=33932]: Calling `Py_Initialize()` twice does nothing, instead of failing with a fatal error: restore the Python 3.6 behaviour.

## Python 3.7.0 release candidate 1

*Release date: 2018-06-12*

## Core and Builtins

- [bpo-33803](https://bugs.python.org/issue?@action=redirect&bpo=33803) [https://bugs.python.org/issue?@action=redirect&bpo=33803]: Fix a crash in hamt.c caused by enabling GC tracking for an object that hadn't all of its fields set to NULL.
- [bpo-33706](https://bugs.python.org/issue?@action=redirect&bpo=33706) [https://bugs.python.org/issue?@action=redirect&bpo=33706]: Fix a crash in Python initialization when parsing the command line options. Thanks Christoph Gohlke for the bug report and the fix!
- [bpo-30654](https://bugs.python.org/issue?@action=redirect&bpo=30654) [https://bugs.python.org/issue?@action=redirect&bpo=30654]: Fixed reset of the SIGINT handler to SIG\_DFL on interpreter shutdown even when there was a custom handler set previously. Patch by Philipp Kerling.
- [bpo-31849](https://bugs.python.org/issue?@action=redirect&bpo=31849) [https://bugs.python.org/issue?@action=redirect&bpo=31849]: Fix signed/unsigned comparison warning in pyhash.c.

## Library

- [bpo-30167](https://bugs.python.org/issue?@action=redirect&bpo=30167) [https://bugs.python.org/issue?@action=redirect&bpo=30167]: Prevent site.main() exception if PYTHONSTARTUP is set. Patch by Steve Weber.
- [bpo-33812](https://bugs.python.org/issue?@action=redirect&bpo=33812) [https://bugs.python.org/issue?@action=redirect&bpo=33812]: Datetime instance d with non-None tzinfo, but with d.tzinfo.utcoffset(d) returning None is now treated as naive by the astimezone() method.
- [bpo-30805](https://bugs.python.org/issue?@action=redirect&bpo=30805) [https://bugs.python.org/issue?@action=redirect&bpo=30805]: Avoid race condition with debug logging
- [bpo-33694](https://bugs.python.org/issue?@action=redirect&bpo=33694) [https://bugs.python.org/issue?@action=redirect&bpo=33694]: asyncio: Fix a race condition causing data loss on pause\_reading()/resume\_reading() when using the ProactorEventLoop.
- [bpo-32493](https://bugs.python.org/issue?@action=redirect&bpo=32493) [https://bugs.python.org/issue?@action=redirect&bpo=32493]: Correct test for uuid\_enc\_be availability in configure.ac. Patch by Michael Felt.
- [bpo-33792](https://bugs.python.org/issue?@action=redirect&bpo=33792) [https://bugs.python.org/issue?@action=redirect&bpo=33792]

- @action=redirect&bpo=33792]: Add `asyncio.WindowsSelectorEventLoopPolicy` and `asyncio.WindowsProactorEventLoopPolicy`.
- [bpo-33778](https://bugs.python.org/issue?@action=redirect&bpo=33778) [https://bugs.python.org/issue?@action=redirect&bpo=33778]: Update `unicodedata`'s database to Unicode version 11.0.0.
  - [bpo-33770](https://bugs.python.org/issue?@action=redirect&bpo=33770) [https://bugs.python.org/issue?@action=redirect&bpo=33770]: improve base64 exception message for encoded inputs of invalid length
  - [bpo-33769](https://bugs.python.org/issue?@action=redirect&bpo=33769) [https://bugs.python.org/issue?@action=redirect&bpo=33769]: `asyncio/start_tls`: Fix error message; cancel callbacks in case of an unhandled error; mark `SSLTransport` as closed if it is aborted.
  - [bpo-33767](https://bugs.python.org/issue?@action=redirect&bpo=33767) [https://bugs.python.org/issue?@action=redirect&bpo=33767]: The concatenation (+) and repetition (\*) sequence operations now raise `TypeError` instead of `SystemError` when performed on `mmap.mmap` objects. Patch by Zackery Spytz.
  - [bpo-33734](https://bugs.python.org/issue?@action=redirect&bpo=33734) [https://bugs.python.org/issue?@action=redirect&bpo=33734]: `asyncio/ssl`: Fix `AttributeError`, increase default handshake timeout
  - [bpo-11874](https://bugs.python.org/issue?@action=redirect&bpo=11874) [https://bugs.python.org/issue?@action=redirect&bpo=11874]: Use a better regex when breaking usage into wrappable parts. Avoids bogus assertion errors from custom metavar strings.
  - [bpo-33582](https://bugs.python.org/issue?@action=redirect&bpo=33582) [https://bugs.python.org/issue?@action=redirect&bpo=33582]: Emit a deprecation warning for `inspect.formatargspec`

## Documentation

- [bpo-33409](https://bugs.python.org/issue?@action=redirect&bpo=33409) [https://bugs.python.org/issue?@action=redirect&bpo=33409]: Clarified the relationship between [PEP 538](https://peps.python.org/pep-0538/) [https://peps.python.org/pep-0538/]’s `PYTHONCOERCECLOCALE` and PEP 540’s `PYTHONUTF8` mode.
- [bpo-33736](https://bugs.python.org/issue?@action=redirect&bpo=33736) [https://bugs.python.org/issue?@action=redirect&bpo=33736]: Improve the documentation of `asyncio.open_connection()`, `asyncio.start_server()` and their UNIX socket

counterparts.

- [bpo-31432](https://bugs.python.org/issue?@action=redirect&bpo=31432) [https://bugs.python.org/issue?@action=redirect&bpo=31432]: Clarify meaning of CERT\_NONE, CERT\_OPTIONAL, and CERT\_REQUIRED flags for ssl.SSLContext.verify\_mode.

## Build

- [bpo-5755](https://bugs.python.org/issue?@action=redirect&bpo=5755) [https://bugs.python.org/issue?@action=redirect&bpo=5755]: Move `-Wstrict-prototypes` option to `CFLAGS_NODIST` from `OPT`. This option emitted annoying warnings when building extension modules written in C++.

## Windows

- [bpo-33720](https://bugs.python.org/issue?@action=redirect&bpo=33720) [https://bugs.python.org/issue?@action=redirect&bpo=33720]: Reduces maximum marshal recursion depth on release builds.

## IDLE

- [bpo-33656](https://bugs.python.org/issue?@action=redirect&bpo=33656) [https://bugs.python.org/issue?@action=redirect&bpo=33656]: On Windows, add API call saying that tk scales for DPI. On Windows 8.1+ or 10, with DPI compatibility properties of the Python binary unchanged, and a monitor resolution greater than 96 DPI, this should make text and lines sharper. It should otherwise have no effect.
- [bpo-33768](https://bugs.python.org/issue?@action=redirect&bpo=33768) [https://bugs.python.org/issue?@action=redirect&bpo=33768]: Clicking on a context line moves that line to the top of the editor window.
- [bpo-33763](https://bugs.python.org/issue?@action=redirect&bpo=33763) [https://bugs.python.org/issue?@action=redirect&bpo=33763]: IDLE: Use read-only text widget for code context instead of label widget.
- [bpo-33664](https://bugs.python.org/issue?@action=redirect&bpo=33664) [https://bugs.python.org/issue?@action=redirect&bpo=33664]: Scroll IDLE editor text by lines. Previously, the mouse wheel and scrollbar slider moved text by a fixed number of pixels, resulting in partial lines at the top of the editor box. The change also applies to the shell and grep output windows, but not to read-only text views.
- [bpo-33679](https://bugs.python.org/issue?@action=redirect&bpo=33679) [https://bugs.python.org/issue?@action=redirect&bpo=33679]

@action=redirect&bpo=33679]: Enable theme-specific color configuration for Code Context. Use the Highlights tab to see the setting for built-in themes or add settings to custom themes.

- [bpo-33642](https://bugs.python.org/issue?@action=redirect&bpo=33642) [https://bugs.python.org/issue?@action=redirect&bpo=33642]: Display up to maxlines non-blank lines for Code Context. If there is no current context, show a single blank line.

## Python 3.7.0 beta 5

*Release date: 2018-05-30*

### Core and Builtins

- [bpo-33622](https://bugs.python.org/issue?@action=redirect&bpo=33622) [https://bugs.python.org/issue?@action=redirect&bpo=33622]: Fixed a leak when the garbage collector fails to add an object with the `__del__` method or referenced by it into the `gc.garbage` list. `PyGC_Collect()` can now be called when an exception is set and preserves it.
- [bpo-33509](https://bugs.python.org/issue?@action=redirect&bpo=33509) [https://bugs.python.org/issue?@action=redirect&bpo=33509]: Fix `module_globals` parameter of `warnings.warn_explicit()`: don't crash if `module_globals` is not a dict.
- [bpo-20104](https://bugs.python.org/issue?@action=redirect&bpo=20104) [https://bugs.python.org/issue?@action=redirect&bpo=20104]: The new `os.posix_spawn` added in 3.7.0b1 was removed as we are still working on what the API should look like. Expect this in 3.8 instead.
- [bpo-33475](https://bugs.python.org/issue?@action=redirect&bpo=33475) [https://bugs.python.org/issue?@action=redirect&bpo=33475]: Fixed miscellaneous bugs in converting annotations to strings and optimized parentheses in the string representation.
- [bpo-33391](https://bugs.python.org/issue?@action=redirect&bpo=33391) [https://bugs.python.org/issue?@action=redirect&bpo=33391]: Fix a leak in `set_symmetric_difference()`.
- [bpo-28055](https://bugs.python.org/issue?@action=redirect&bpo=28055) [https://bugs.python.org/issue?@action=redirect&bpo=28055]: Fix unaligned accesses in `siphhash24()`. Patch by Rolf Eike Beer.

- [bpo-32911](https://bugs.python.org/issue?@action=redirect&bpo=32911) [https://bugs.python.org/issue?@action=redirect&bpo=32911]: Due to unexpected compatibility issues discovered during downstream beta testing, reverted [bpo-29463](https://bugs.python.org/issue?@action=redirect&bpo=29463) [https://bugs.python.org/issue?@action=redirect&bpo=29463]. `docstring` field is removed from `Module`, `ClassDef`, `FunctionDef`, and `AsyncFunctionDef` ast nodes which was added in 3.7a1. Docstring expression is restored as a first statement in their body. Based on patch by Inada Naoki.
- [bpo-21983](https://bugs.python.org/issue?@action=redirect&bpo=21983) [https://bugs.python.org/issue?@action=redirect&bpo=21983]: Fix a crash in `ctypes.cast()` in case the type argument is a ctypes structured data type. Patch by Eryk Sun and Oren Milman.

## Library

- [bpo-32751](https://bugs.python.org/issue?@action=redirect&bpo=32751) [https://bugs.python.org/issue?@action=redirect&bpo=32751]: When cancelling the task due to a timeout, `asyncio.wait_for()` will now wait until the cancellation is complete.
- [bpo-32684](https://bugs.python.org/issue?@action=redirect&bpo=32684) [https://bugs.python.org/issue?@action=redirect&bpo=32684]: Fix `gather` to propagate cancellation of itself even with `return_exceptions`.
- [bpo-33654](https://bugs.python.org/issue?@action=redirect&bpo=33654) [https://bugs.python.org/issue?@action=redirect&bpo=33654]: Support protocol type switching in `SSLTransport.set_protocol()`.
- [bpo-33674](https://bugs.python.org/issue?@action=redirect&bpo=33674) [https://bugs.python.org/issue?@action=redirect&bpo=33674]: Pause the transport as early as possible to further reduce the risk of `data_received()` being called before `connection_made()`.
- [bpo-33674](https://bugs.python.org/issue?@action=redirect&bpo=33674) [https://bugs.python.org/issue?@action=redirect&bpo=33674]: Fix a race condition in `SSLProtocol.connection_made()` of `asyncio.sslproto`: start immediately the handshake instead of using `call_soon()`. Previously, `data_received()` could be called before the handshake started, causing the handshake to hang or fail.
- [bpo-31647](https://bugs.python.org/issue?@action=redirect&bpo=31647) [https://bugs.python.org/issue?@action=redirect&bpo=31647]: Fixed bug where calling `write_eof()` on a `_SelectorSocketTransport` after it's already closed raises `AttributeError`.

- [bpo-32610](https://bugs.python.org/issue?@action=redirect&bpo=32610) [https://bugs.python.org/issue?@action=redirect&bpo=32610]: Make `asyncio.all_tasks()` return only pending tasks.
- [bpo-32410](https://bugs.python.org/issue?@action=redirect&bpo=32410) [https://bugs.python.org/issue?@action=redirect&bpo=32410]: Avoid blocking on file IO in `sendfile` fallback code
- [bpo-33469](https://bugs.python.org/issue?@action=redirect&bpo=33469) [https://bugs.python.org/issue?@action=redirect&bpo=33469]: Fix `RuntimeError` after closing loop that used `run_in_executor`
- [bpo-33672](https://bugs.python.org/issue?@action=redirect&bpo=33672) [https://bugs.python.org/issue?@action=redirect&bpo=33672]: Fix `Task._repr_` crash with Cython's bogus coroutines
- [bpo-33654](https://bugs.python.org/issue?@action=redirect&bpo=33654) [https://bugs.python.org/issue?@action=redirect&bpo=33654]: Fix `transport.set_protocol()` to support switching between `asyncio.Protocol` and `asyncio.BufferedProtocol`. Fix `loop.start_tls()` to work with `asyncio.BufferedProtocols`.
- [bpo-33652](https://bugs.python.org/issue?@action=redirect&bpo=33652) [https://bugs.python.org/issue?@action=redirect&bpo=33652]: Pickles of type variables and subscripted generics are now future-proof and compatible with older Python versions.
- [bpo-32493](https://bugs.python.org/issue?@action=redirect&bpo=32493) [https://bugs.python.org/issue?@action=redirect&bpo=32493]: Fixed `uuid.uuid1()` on FreeBSD.
- [bpo-33618](https://bugs.python.org/issue?@action=redirect&bpo=33618) [https://bugs.python.org/issue?@action=redirect&bpo=33618]: Finalize and document preliminary and experimental TLS 1.3 support with OpenSSL 1.1.1
- [bpo-33623](https://bugs.python.org/issue?@action=redirect&bpo=33623) [https://bugs.python.org/issue?@action=redirect&bpo=33623]: Fix possible SIGSEGV when `asyncio.Future` is created in `__del__`
- [bpo-30877](https://bugs.python.org/issue?@action=redirect&bpo=30877) [https://bugs.python.org/issue?@action=redirect&bpo=30877]: Fixed a bug in the Python implementation of the JSON decoder that prevented the cache of parsed strings from clearing after finishing the decoding. Based on patch by c-fos.
- [bpo-33570](https://bugs.python.org/issue?@action=redirect&bpo=33570) [https://bugs.python.org/issue?@action=redirect&bpo=33570]: Change TLS 1.3 cipher suite settings for compatibility with OpenSSL 1.1.1-pre6 and newer. OpenSSL 1.1.1 will have TLS 1.3 ciphers enabled by

default.

- [bpo-28556](https://bugs.python.org/issue?@action=redirect&bpo=28556) [https://bugs.python.org/issue?@action=redirect&bpo=28556]: Do not simplify arguments to **typing.Union**. Now **Union[Manager, Employee]** is not simplified to **Employee** at runtime. Such simplification previously caused several bugs and limited possibilities for introspection.
- [bpo-33540](https://bugs.python.org/issue?@action=redirect&bpo=33540) [https://bugs.python.org/issue?@action=redirect&bpo=33540]: Add a new `block_on_close` class attribute to `ForkingMixIn` and `ThreadingMixIn` classes of **socketserver**.
- [bpo-33548](https://bugs.python.org/issue?@action=redirect&bpo=33548) [https://bugs.python.org/issue?@action=redirect&bpo=33548]: `tempfile._candidate_tempdir_list` should consider common TEMP locations
- [bpo-33109](https://bugs.python.org/issue?@action=redirect&bpo=33109) [https://bugs.python.org/issue?@action=redirect&bpo=33109]: `argparse` subparsers are once again not required by default, reverting the change in behavior introduced by [bpo-26510](https://bugs.python.org/issue?@action=redirect&bpo=26510) [https://bugs.python.org/issue?@action=redirect&bpo=26510] in 3.7.0a2.
- [bpo-33536](https://bugs.python.org/issue?@action=redirect&bpo=33536) [https://bugs.python.org/issue?@action=redirect&bpo=33536]: `dataclasses.make_dataclass` now checks for invalid field names and duplicate fields. Also, added a check for invalid field specifications.
- [bpo-33542](https://bugs.python.org/issue?@action=redirect&bpo=33542) [https://bugs.python.org/issue?@action=redirect&bpo=33542]: Prevent `uuid.get_node` from using a DUID instead of a MAC on Windows. Patch by Zvi Effron
- [bpo-26819](https://bugs.python.org/issue?@action=redirect&bpo=26819) [https://bugs.python.org/issue?@action=redirect&bpo=26819]: Fix race condition with **ReadTransport.resume\_reading** in Windows proactor event loop.
- Fix failure in **typing.get\_type\_hints()** when `ClassVar` was provided as a string forward reference.
- [bpo-33505](https://bugs.python.org/issue?@action=redirect&bpo=33505) [https://bugs.python.org/issue?@action=redirect&bpo=33505]: Optimize `asyncio.ensure_future()` by reordering if checks: 1.17x faster.
- [bpo-33497](https://bugs.python.org/issue?@action=redirect&bpo=33497) [https://bugs.python.org/issue?@action=redirect&bpo=33497]: Add `errors` param to `cgi.parse_multipart` and make an encoding in `FieldStorage` use the given errors (needed for Twisted). Patch by Amber

Brown.

- [bpo-33495](https://bugs.python.org/issue?@action=redirect&bpo=33495) [https://bugs.python.org/issue?@action=redirect&bpo=33495]: Change `dataclasses.Fields` repr to use the repr of each of its members, instead of `str`. This makes it more clear what each field actually represents. This is especially true for the ‘type’ member.
- [bpo-33453](https://bugs.python.org/issue?@action=redirect&bpo=33453) [https://bugs.python.org/issue?@action=redirect&bpo=33453]: Fix `dataclasses` to work if using literal string type annotations or if using PEP 563 “Postponed Evaluation of Annotations”. Only specific string prefixes are detected for both `ClassVar` (“ClassVar” and “`typing.ClassVar`”) and `InitVar` (“InitVar” and “`dataclasses.InitVar`”).
- [bpo-28556](https://bugs.python.org/issue?@action=redirect&bpo=28556) [https://bugs.python.org/issue?@action=redirect&bpo=28556]: Minor fixes in `typing` module: add annotations to `NamedTuple.__new__`, pass `*args` and `**kwargs` in `Generic.__new__`. Original PRs by Paulius Šarka and Chad Dombrova.
- [bpo-20087](https://bugs.python.org/issue?@action=redirect&bpo=20087) [https://bugs.python.org/issue?@action=redirect&bpo=20087]: Updated alias mapping with `glibc 2.27` supported locales.
- [bpo-33422](https://bugs.python.org/issue?@action=redirect&bpo=33422) [https://bugs.python.org/issue?@action=redirect&bpo=33422]: Fix trailing quotation marks getting deleted when looking up byte/string literals on `pydoc`. Patch by Andrés Delfino.
- [bpo-28167](https://bugs.python.org/issue?@action=redirect&bpo=28167) [https://bugs.python.org/issue?@action=redirect&bpo=28167]: The function `platform.linux_distribution` and `platform.dist` now trigger a `DeprecationWarning` and have been marked for removal in Python 3.8
- [bpo-33197](https://bugs.python.org/issue?@action=redirect&bpo=33197) [https://bugs.python.org/issue?@action=redirect&bpo=33197]: Update error message when constructing invalid `inspect.Parameters` Patch by Donghee Na.
- [bpo-33263](https://bugs.python.org/issue?@action=redirect&bpo=33263) [https://bugs.python.org/issue?@action=redirect&bpo=33263]: Fix FD leak in `_SelectorSocketTransport` Patch by Vlad Starostin.
- [bpo-32861](https://bugs.python.org/issue?@action=redirect&bpo=32861) [https://bugs.python.org/issue?@action=redirect&bpo=32861]: The `urllib.robotparser`’s `__str__` representation now includes wildcard entries and the “Crawl-delay” and “Request-rate” fields. Patch by Michael Lazar.
- [bpo-32257](https://bugs.python.org/issue?@action=redirect&bpo=32257) [https://bugs.python.org/issue?@action=redirect&bpo=32257]

@action=redirect&bpo=32257]: The ssl module now contains OP\_NO\_RENEGOTIATION constant, available with OpenSSL 1.1.0h or 1.1.1.

- [bpo-16865](https://bugs.python.org/issue?@action=redirect&bpo=16865) [https://bugs.python.org/issue?@action=redirect&bpo=16865]: Support arrays  $\geq$  2GiB in **ctypes**. Patch by Segev Finer.

## Documentation

- [bpo-23859](https://bugs.python.org/issue?@action=redirect&bpo=23859) [https://bugs.python.org/issue?@action=redirect&bpo=23859]: Document that **asyncio.wait()** does not cancel its futures on timeout.
- [bpo-32436](https://bugs.python.org/issue?@action=redirect&bpo=32436) [https://bugs.python.org/issue?@action=redirect&bpo=32436]: Document [PEP 567](https://peps.python.org/pep-0567/) [https://peps.python.org/pep-0567/] changes to asyncio.
- [bpo-33604](https://bugs.python.org/issue?@action=redirect&bpo=33604) [https://bugs.python.org/issue?@action=redirect&bpo=33604]: Update HMAC md5 default to a DeprecationWarning, bump removal to 3.8.
- [bpo-33503](https://bugs.python.org/issue?@action=redirect&bpo=33503) [https://bugs.python.org/issue?@action=redirect&bpo=33503]: Fix broken pypi link
- [bpo-33421](https://bugs.python.org/issue?@action=redirect&bpo=33421) [https://bugs.python.org/issue?@action=redirect&bpo=33421]: Add missing documentation for `typing.AsyncContextManager`.

## Tests

- [bpo-33655](https://bugs.python.org/issue?@action=redirect&bpo=33655) [https://bugs.python.org/issue?@action=redirect&bpo=33655]: Ignore test\_posix\_fallocate failures on BSD platforms that might be due to running on ZFS.
- [bpo-32604](https://bugs.python.org/issue?@action=redirect&bpo=32604) [https://bugs.python.org/issue?@action=redirect&bpo=32604]: Remove the `_xxsubinterpreters` module (meant for testing) and associated helpers. This module was originally added recently in 3.7b1.

## Build

- [bpo-33614](https://bugs.python.org/issue?@action=redirect&bpo=33614) [https://bugs.python.org/issue?@action=redirect&bpo=33614]: Ensures module definition files for the stable ABI on Windows are correctly regenerated.
- [bpo-33522](https://bugs.python.org/issue?@action=redirect&bpo=33522) [https://bugs.python.org/issue?@action=redirect&bpo=33522]

@action=redirect&bpo=33522]: Enable CI builds on Visual Studio Team Services at <https://python.visualstudio.com/cpython>

- [bpo-33012](https://bugs.python.org/issue?@action=redirect&bpo=33012) [https://bugs.python.org/issue?@action=redirect&bpo=33012]: Add `-Wno-cast-function-type` for gcc 8 for silencing warnings about function casts like casting to PyCFunction in method definition lists.

## macOS

- [bpo-13631](https://bugs.python.org/issue?@action=redirect&bpo=13631) [https://bugs.python.org/issue?@action=redirect&bpo=13631]: The `.editrc` file in user's home directory is now processed correctly during the readline initialization through editline emulation on macOS.

## IDLE

- [bpo-33628](https://bugs.python.org/issue?@action=redirect&bpo=33628) [https://bugs.python.org/issue?@action=redirect&bpo=33628]: IDLE: Cleanup `codecontext.py` and its test.
- [bpo-33564](https://bugs.python.org/issue?@action=redirect&bpo=33564) [https://bugs.python.org/issue?@action=redirect&bpo=33564]: IDLE's code context now recognizes `async` as a block opener.
- [bpo-32831](https://bugs.python.org/issue?@action=redirect&bpo=32831) [https://bugs.python.org/issue?@action=redirect&bpo=32831]: Add docstrings and tests for `codecontext`.

# Python 3.7.0 beta 4

*Release date: 2018-05-02*

## Core and Builtins

- [bpo-33363](https://bugs.python.org/issue?@action=redirect&bpo=33363) [https://bugs.python.org/issue?@action=redirect&bpo=33363]: Raise a `SyntaxError` for `async` with and `async` for statements outside of `async` functions.
- [bpo-33128](https://bugs.python.org/issue?@action=redirect&bpo=33128) [https://bugs.python.org/issue?@action=redirect&bpo=33128]: Fix a bug that causes `PathFinder` to appear twice on `sys.meta_path`. Patch by Pablo Galindo Salgado.

- [bpo-33312](https://bugs.python.org/issue?@action=redirect&bpo=33312) [https://bugs.python.org/issue?@action=redirect&bpo=33312]: Fixed clang ubsan (undefined behavior sanitizer) warnings in dictobject.c by adjusting how the internal struct `_dictkeyobject` shared keys structure is declared.
- [bpo-33231](https://bugs.python.org/issue?@action=redirect&bpo=33231) [https://bugs.python.org/issue?@action=redirect&bpo=33231]: Fix potential memory leak in `normalizestring()`.
- [bpo-33205](https://bugs.python.org/issue?@action=redirect&bpo=33205) [https://bugs.python.org/issue?@action=redirect&bpo=33205]: Change dict growth function from `round_up_to_power_2(used*2+hashtable_size/2)` to `round_up_to_power_2(used*3)`. Previously, dict is shrunk only when `used == 0`. Now dict has more chance to be shrunk.
- [bpo-29922](https://bugs.python.org/issue?@action=redirect&bpo=29922) [https://bugs.python.org/issue?@action=redirect&bpo=29922]: Improved error messages in ‘async with’ when `__aenter__()` or `__aexit__()` return non-awaitable object.
- [bpo-33199](https://bugs.python.org/issue?@action=redirect&bpo=33199) [https://bugs.python.org/issue?@action=redirect&bpo=33199]: Fix `ma_version_tag` in dict implementation is uninitialized when copying from key-sharing dict.

## Library

- [bpo-33281](https://bugs.python.org/issue?@action=redirect&bpo=33281) [https://bugs.python.org/issue?@action=redirect&bpo=33281]: Fix `ctypes.util.find_library` regression on macOS.
- [bpo-33383](https://bugs.python.org/issue?@action=redirect&bpo=33383) [https://bugs.python.org/issue?@action=redirect&bpo=33383]: Fixed crash in the `get()` method of the `dbm.ndbm` database object when it is called with a single argument.
- [bpo-33329](https://bugs.python.org/issue?@action=redirect&bpo=33329) [https://bugs.python.org/issue?@action=redirect&bpo=33329]: Fix multiprocessing regression on newer glibc
- [bpo-991266](https://bugs.python.org/issue?@action=redirect&bpo=991266) [https://bugs.python.org/issue?@action=redirect&bpo=991266]: Fix quoting of the `Comment` attribute of `http.cookies.SimpleCookie`.
- [bpo-33131](https://bugs.python.org/issue?@action=redirect&bpo=33131) [https://bugs.python.org/issue?@action=redirect&bpo=33131]: Upgrade bundled version of pip to

10.0.1.

- [bpo-33308](https://bugs.python.org/issue?@action=redirect&bpo=33308) [https://bugs.python.org/issue?@action=redirect&bpo=33308]: Fixed a crash in the **parser** module when converting an ST object to a tree of tuples or lists with `line_info=False` and `col_info=True`.
- [bpo-33266](https://bugs.python.org/issue?@action=redirect&bpo=33266) [https://bugs.python.org/issue?@action=redirect&bpo=33266]: `lib2to3` now recognizes `rf'...'` strings.
- [bpo-11594](https://bugs.python.org/issue?@action=redirect&bpo=11594) [https://bugs.python.org/issue?@action=redirect&bpo=11594]: Ensure line-endings are respected when using `lib2to3`.
- [bpo-33254](https://bugs.python.org/issue?@action=redirect&bpo=33254) [https://bugs.python.org/issue?@action=redirect&bpo=33254]: Have `importlib.resources.contents()` and `importlib.abc.ResourceReader.contents()` return an `iterable` instead of an `iterator`.
- [bpo-33256](https://bugs.python.org/issue?@action=redirect&bpo=33256) [https://bugs.python.org/issue?@action=redirect&bpo=33256]: Fix display of `<module>` call in the html produced by `cgib.html()`. Patch by Stéphane Blondon.
- [bpo-33185](https://bugs.python.org/issue?@action=redirect&bpo=33185) [https://bugs.python.org/issue?@action=redirect&bpo=33185]: Fixed regression when running `pydoc` with the `-m` switch. (The regression was introduced in 3.7.0b3 by the resolution of [bpo-33053](https://bugs.python.org/issue?@action=redirect&bpo=33053) [https://bugs.python.org/issue?@action=redirect&bpo=33053]) This fix also changed `pydoc` to add `os.getcwd()` to `sys.path` when necessary, rather than adding `""`.
- [bpo-33169](https://bugs.python.org/issue?@action=redirect&bpo=33169) [https://bugs.python.org/issue?@action=redirect&bpo=33169]: Delete entries of `None` in `sys.path_importer_cache` when `importlib.machinery.invalidate_caches()` is called.
- [bpo-33217](https://bugs.python.org/issue?@action=redirect&bpo=33217) [https://bugs.python.org/issue?@action=redirect&bpo=33217]: Deprecate looking up non-Enum objects in Enum classes and Enum members (will raise `TypeError` in 3.8+).
- [bpo-33203](https://bugs.python.org/issue?@action=redirect&bpo=33203) [https://bugs.python.org/issue?@action=redirect&bpo=33203]: `random.Random.choice()` now raises `IndexError` for empty sequences consistently even when called from subclasses without a `getrandbits()` implementation.

- [bpo-33224](https://bugs.python.org/issue?@action=redirect&bpo=33224) [https://bugs.python.org/issue?@action=redirect&bpo=33224]: Update `difflib.mdifff()` for [PEP 479](https://peps.python.org/pep-0479/) [https://peps.python.org/pep-0479/]. Convert an uncaught `StopIteration` in a generator into a return-statement.
- [bpo-33209](https://bugs.python.org/issue?@action=redirect&bpo=33209) [https://bugs.python.org/issue?@action=redirect&bpo=33209]: End framing at the end of C implementation of `pickle.Pickler.dump()`.
- [bpo-20104](https://bugs.python.org/issue?@action=redirect&bpo=20104) [https://bugs.python.org/issue?@action=redirect&bpo=20104]: Improved error handling and fixed a reference leak in `os.posix_spawn()`.
- [bpo-33175](https://bugs.python.org/issue?@action=redirect&bpo=33175) [https://bugs.python.org/issue?@action=redirect&bpo=33175]: In dataclasses, `Field._set_name_` now looks up the `_set_name_` special method on the class, not the instance, of the default value.
- [bpo-33097](https://bugs.python.org/issue?@action=redirect&bpo=33097) [https://bugs.python.org/issue?@action=redirect&bpo=33097]: Raise `RuntimeError` when `executor.submit` is called during interpreter shutdown.
- [bpo-31908](https://bugs.python.org/issue?@action=redirect&bpo=31908) [https://bugs.python.org/issue?@action=redirect&bpo=31908]: Fix output of cover files for `trace` module command-line tool. Previously emitted cover files only when `--missing` option was used. Patch by Michael Selik.

## Documentation

- [bpo-33378](https://bugs.python.org/issue?@action=redirect&bpo=33378) [https://bugs.python.org/issue?@action=redirect&bpo=33378]: Add Korean language switcher for <https://docs.python.org/3/>
- [bpo-33276](https://bugs.python.org/issue?@action=redirect&bpo=33276) [https://bugs.python.org/issue?@action=redirect&bpo=33276]: Clarify that the `__path__` attribute on modules cannot be just any value.
- [bpo-33201](https://bugs.python.org/issue?@action=redirect&bpo=33201) [https://bugs.python.org/issue?@action=redirect&bpo=33201]: Modernize documentation for writing C extension types.
- [bpo-33195](https://bugs.python.org/issue?@action=redirect&bpo=33195) [https://bugs.python.org/issue?@action=redirect&bpo=33195]: Deprecate `Py_UNICODE` usage in `c-api/arg` document. `Py_UNICODE` related APIs are deprecated since Python 3.3, but it is missed in the document.
- [bpo-8243](https://bugs.python.org/issue?@action=redirect&bpo=8243) [https://bugs.python.org/issue?@action=redirect&bpo=8243]: Add a note about `curses.addch` and `curses.addstr` exception

behavior when writing outside a window, or pad.

- [bpo-32337](https://bugs.python.org/issue?@action=redirect&bpo=32337) [https://bugs.python.org/issue?@action=redirect&bpo=32337]: Update documentation related with `dict` order.

## Tests

- [bpo-33358](https://bugs.python.org/issue?@action=redirect&bpo=33358) [https://bugs.python.org/issue?@action=redirect&bpo=33358]: Fix `test_embed.test_pre_initialization_sys_options()` when the interpreter is built with `--enable-shared`.

## Build

- [bpo-33394](https://bugs.python.org/issue?@action=redirect&bpo=33394) [https://bugs.python.org/issue?@action=redirect&bpo=33394]: Enable the verbose build for extension modules, when GNU make is passed macros on the command line.
- [bpo-33393](https://bugs.python.org/issue?@action=redirect&bpo=33393) [https://bugs.python.org/issue?@action=redirect&bpo=33393]: Update `config.guess` and `config.sub` files.
- [bpo-33377](https://bugs.python.org/issue?@action=redirect&bpo=33377) [https://bugs.python.org/issue?@action=redirect&bpo=33377]: Add new triplets for mips r6 and riscv variants (used in extension suffixes).
- [bpo-32232](https://bugs.python.org/issue?@action=redirect&bpo=32232) [https://bugs.python.org/issue?@action=redirect&bpo=32232]: By default, modules configured in **Modules/Setup** are no longer built with `-DPy_BUILD_CORE`. Instead, modules that specifically need that preprocessor definition include it in their individual entries.
- [bpo-33182](https://bugs.python.org/issue?@action=redirect&bpo=33182) [https://bugs.python.org/issue?@action=redirect&bpo=33182]: The embedding tests can once again be built with clang 6.0

## Windows

- [bpo-33184](https://bugs.python.org/issue?@action=redirect&bpo=33184) [https://bugs.python.org/issue?@action=redirect&bpo=33184]: Update Windows installer to use OpenSSL 1.1.0h.

## macOS

- [bpo-33184](https://bugs.python.org/issue?@action=redirect&bpo=33184) [https://bugs.python.org/issue?@action=redirect&bpo=33184]: Update macOS installer build to use OpenSSL 1.1.0h.

## IDLE

- [bpo-21474](https://bugs.python.org/issue?@action=redirect&bpo=21474) [https://bugs.python.org/issue?@action=redirect&bpo=21474]: Update word/identifier definition from ascii to unicode. In text and entry boxes, this affects selection by double-click, movement left/right by control-left/right, and deletion left/right by control-BACKSPACE/DEL.
- [bpo-33204](https://bugs.python.org/issue?@action=redirect&bpo=33204) [https://bugs.python.org/issue?@action=redirect&bpo=33204]: IDLE: consistently color invalid string prefixes. A 'u' string prefix cannot be paired with either 'r' or 'f'. Consistently color as much of the prefix, starting at the right, as is valid. Revise and extend colorizer test.

## Tools/Demos

- [bpo-33189](https://bugs.python.org/issue?@action=redirect&bpo=33189) [https://bugs.python.org/issue?@action=redirect&bpo=33189]: **pygettext.py** now recognizes only literal strings as docstrings and translatable strings, and rejects bytes literals and f-string expressions.
- [bpo-31920](https://bugs.python.org/issue?@action=redirect&bpo=31920) [https://bugs.python.org/issue?@action=redirect&bpo=31920]: Fixed handling directories as arguments in the `pygettext` script. Based on patch by Oleg Krasnikov.
- [bpo-29673](https://bugs.python.org/issue?@action=redirect&bpo=29673) [https://bugs.python.org/issue?@action=redirect&bpo=29673]: Fix `pystackv` and `pystack gdbinit` macros.
- [bpo-31583](https://bugs.python.org/issue?@action=redirect&bpo=31583) [https://bugs.python.org/issue?@action=redirect&bpo=31583]: Fix 2to3 for using with `-add-suffix` option but without `-output-dir` option for relative path to files in current directory.

## Python 3.7.0 beta 3

Release date: 2018-03-29

## Security

- [bpo-33136](https://bugs.python.org/issue?@action=redirect&bpo=33136) [https://bugs.python.org/issue?@action=redirect&bpo=33136]: Harden ssl module against LibreSSL CVE-2018-8970. X509\_VERIFY\_PARAM\_set1\_host() is called with an explicit namelen. A new test ensures that NULL bytes are not allowed.
- [bpo-33001](https://bugs.python.org/issue?@action=redirect&bpo=33001) [https://bugs.python.org/issue?@action=redirect&bpo=33001]: Minimal fix to prevent buffer overrun in os.symlink on Windows
- [bpo-32981](https://bugs.python.org/issue?@action=redirect&bpo=32981) [https://bugs.python.org/issue?@action=redirect&bpo=32981]: Regexes in difflib and poplib were vulnerable to catastrophic backtracking. These regexes formed potential DOS vectors (REDOS). They have been refactored. This resolves CVE-2018-1060 and CVE-2018-1061. Patch by Jamie Davis.

## Core and Builtins

- [bpo-33053](https://bugs.python.org/issue?@action=redirect&bpo=33053) [https://bugs.python.org/issue?@action=redirect&bpo=33053]: When using the -m switch, sys.path[0] is now explicitly expanded as the *starting* working directory, rather than being left as the empty path (which allows imports from the current working directory at the time of the import)
- [bpo-33018](https://bugs.python.org/issue?@action=redirect&bpo=33018) [https://bugs.python.org/issue?@action=redirect&bpo=33018]: Improve consistency of errors raised by `issubclass()` when called with a non-class and an abstract base class as the first and second arguments, respectively. Patch by Josh Bronson.
- [bpo-33041](https://bugs.python.org/issue?@action=redirect&bpo=33041) [https://bugs.python.org/issue?@action=redirect&bpo=33041]: Fixed jumping when the function contains an `async for` loop.
- [bpo-33026](https://bugs.python.org/issue?@action=redirect&bpo=33026) [https://bugs.python.org/issue?@action=redirect&bpo=33026]: Fixed jumping out of “with” block by setting `f_lineno`.
- [bpo-33005](https://bugs.python.org/issue?@action=redirect&bpo=33005) [https://bugs.python.org/issue?@action=redirect&bpo=33005]: Fix a crash on fork when using a

custom memory allocator (ex: using PYTHONMALLOC env var). `_PyGILState_Reinit()` and `_PyInterpreterState_Enable()` now use the default RAW memory allocator to allocate a new interpreters mutex on fork.

- [bpo-17288](https://bugs.python.org/issue?@action=redirect&bpo=17288) [https://bugs.python.org/issue?@action=redirect&bpo=17288]: Prevent jumps from ‘return’ and ‘exception’ trace events.
- [bpo-32836](https://bugs.python.org/issue?@action=redirect&bpo=32836) [https://bugs.python.org/issue?@action=redirect&bpo=32836]: Don’t use temporary variables in cases of list/dict/set comprehensions

## Library

- [bpo-33141](https://bugs.python.org/issue?@action=redirect&bpo=33141) [https://bugs.python.org/issue?@action=redirect&bpo=33141]: Have Field objects pass through `__set_name__` to their default values, if they have their own `__set_name__`.
- [bpo-33096](https://bugs.python.org/issue?@action=redirect&bpo=33096) [https://bugs.python.org/issue?@action=redirect&bpo=33096]: Allow `ttk.Treeview.insert` to insert iid that has a false boolean value. Note `iid=0` and `iid=False` would be same. Patch by Garvit Khatri.
- [bpo-32873](https://bugs.python.org/issue?@action=redirect&bpo=32873) [https://bugs.python.org/issue?@action=redirect&bpo=32873]: Treat type variables and special typing forms as immutable by copy and pickle. This fixes several minor issues and inconsistencies, and improves backwards compatibility with Python 3.6.
- [bpo-33134](https://bugs.python.org/issue?@action=redirect&bpo=33134) [https://bugs.python.org/issue?@action=redirect&bpo=33134]: When computing dataclass’s `__hash__`, use the lookup table to contain the function which returns the `__hash__` value. This is an improvement over looking up a string, and then testing that string to see what to do.
- [bpo-33127](https://bugs.python.org/issue?@action=redirect&bpo=33127) [https://bugs.python.org/issue?@action=redirect&bpo=33127]: The `ssl` module now compiles with LibreSSL 2.7.1.
- [bpo-32505](https://bugs.python.org/issue?@action=redirect&bpo=32505) [https://bugs.python.org/issue?@action=redirect&bpo=32505]: Raise `TypeError` if a member variable of a dataclass is of type `Field`, but doesn’t have a type annotation.
- [bpo-33078](https://bugs.python.org/issue?@action=redirect&bpo=33078) [https://bugs.python.org/issue?@action=redirect&bpo=33078]

@action=redirect&bpo=33078]: Fix the failure on OSX caused by the tests relying on sem\_getvalue

- [bpo-33116](https://bugs.python.org/issue?@action=redirect&bpo=33116) [https://bugs.python.org/issue?@action=redirect&bpo=33116]: Add 'Field' to dataclasses.\_\_all\_\_.
- [bpo-32896](https://bugs.python.org/issue?@action=redirect&bpo=32896) [https://bugs.python.org/issue?@action=redirect&bpo=32896]: Fix an error where subclassing a dataclass with a field that uses a default\_factory would generate an incorrect class.
- [bpo-33100](https://bugs.python.org/issue?@action=redirect&bpo=33100) [https://bugs.python.org/issue?@action=redirect&bpo=33100]: Dataclasses: If a field has a default value that's a MemberDescriptorType, then it's from that field being in \_\_slots\_\_, not an actual default value.
- [bpo-32953](https://bugs.python.org/issue?@action=redirect&bpo=32953) [https://bugs.python.org/issue?@action=redirect&bpo=32953]: If a non-dataclass inherits from a frozen dataclass, allow attributes to be added to the derived class. Only attributes from the frozen dataclass cannot be assigned to. Require all dataclasses in a hierarchy to be either all frozen or all non-frozen.
- [bpo-33061](https://bugs.python.org/issue?@action=redirect&bpo=33061) [https://bugs.python.org/issue?@action=redirect&bpo=33061]: Add missing NoReturn to \_\_all\_\_ in typing.py
- [bpo-33078](https://bugs.python.org/issue?@action=redirect&bpo=33078) [https://bugs.python.org/issue?@action=redirect&bpo=33078]: Fix the size handling in multiprocessing.Queue when a pickling error occurs.
- [bpo-33064](https://bugs.python.org/issue?@action=redirect&bpo=33064) [https://bugs.python.org/issue?@action=redirect&bpo=33064]: lib2to3 now properly supports trailing commas after \*args and \*\*kwargs in function signatures.
- [bpo-33056](https://bugs.python.org/issue?@action=redirect&bpo=33056) [https://bugs.python.org/issue?@action=redirect&bpo=33056]: FIX properly close leaking fds in concurrent.futures.ProcessPoolExecutor.
- [bpo-33021](https://bugs.python.org/issue?@action=redirect&bpo=33021) [https://bugs.python.org/issue?@action=redirect&bpo=33021]: Release the GIL during fstat() calls, avoiding hang of all threads when calling mmap.mmap(), os.urandom(), and random.seed(). Patch by Nir Soffer.
- [bpo-31804](https://bugs.python.org/issue?@action=redirect&bpo=31804) [https://bugs.python.org/issue?@action=redirect&bpo=31804]: Avoid failing in multiprocessing.Process if the standard streams are closed or None at exit.

- [bpo-33037](https://bugs.python.org/issue?@action=redirect&bpo=33037) [https://bugs.python.org/issue?@action=redirect&bpo=33037]: Skip sending/receiving data after SSL transport closing.
- [bpo-27683](https://bugs.python.org/issue?@action=redirect&bpo=27683) [https://bugs.python.org/issue?@action=redirect&bpo=27683]: Fix a regression in `ipaddress` that result of `hosts()` is empty when the network is constructed by a tuple containing an integer mask and only 1 bit left for addresses.
- [bpo-32999](https://bugs.python.org/issue?@action=redirect&bpo=32999) [https://bugs.python.org/issue?@action=redirect&bpo=32999]: Fix C implementation of `ABC.__subclasscheck__(cls, subclass)` crashed when `subclass` is not a type object.
- [bpo-33009](https://bugs.python.org/issue?@action=redirect&bpo=33009) [https://bugs.python.org/issue?@action=redirect&bpo=33009]: Fix `inspect.signature()` for single-parameter partial methods.
- [bpo-32969](https://bugs.python.org/issue?@action=redirect&bpo=32969) [https://bugs.python.org/issue?@action=redirect&bpo=32969]: Expose several missing constants in `zlib` and fix corresponding documentation.
- [bpo-32056](https://bugs.python.org/issue?@action=redirect&bpo=32056) [https://bugs.python.org/issue?@action=redirect&bpo=32056]: Improved exceptions raised for invalid number of channels and sample width when read an audio file in modules `aifc`, `wave` and `sunau`.
- [bpo-32844](https://bugs.python.org/issue?@action=redirect&bpo=32844) [https://bugs.python.org/issue?@action=redirect&bpo=32844]: Fix wrong redirection of a low descriptor (0 or 1) to `stderr` in `subprocess` if another low descriptor is closed.
- [bpo-32857](https://bugs.python.org/issue?@action=redirect&bpo=32857) [https://bugs.python.org/issue?@action=redirect&bpo=32857]: In `tkinter`, `after_cancel(None)` now raises a `ValueError` instead of canceling the first scheduled function. Patch by Cheryl Sabella.
- [bpo-31639](https://bugs.python.org/issue?@action=redirect&bpo=31639) [https://bugs.python.org/issue?@action=redirect&bpo=31639]: `http.server` now exposes a `ThreadedHTTPServer` class and uses it when the module is run with `-m` to cope with web browsers pre-opening sockets.
- [bpo-27645](https://bugs.python.org/issue?@action=redirect&bpo=27645) [https://bugs.python.org/issue?@action=redirect&bpo=27645]: `sqlite3.Connection` now exposes a `backup` method, if the underlying SQLite library is at version 3.6.11 or higher. Patch by Lele Gaifax.

## Documentation

- [bpo-33126](https://bugs.python.org/issue?@action=redirect&bpo=33126) [https://bugs.python.org/issue?@action=redirect&bpo=33126]: Document `PyBuffer_ToContiguous()`.
- [bpo-27212](https://bugs.python.org/issue?@action=redirect&bpo=27212) [https://bugs.python.org/issue?@action=redirect&bpo=27212]: Modify documentation for the `islice()` recipe to consume initial values up to the start index.
- [bpo-28247](https://bugs.python.org/issue?@action=redirect&bpo=28247) [https://bugs.python.org/issue?@action=redirect&bpo=28247]: Update `zipapp` documentation to describe how to make standalone applications.
- [bpo-18802](https://bugs.python.org/issue?@action=redirect&bpo=18802) [https://bugs.python.org/issue?@action=redirect&bpo=18802]: Documentation changes for `ipaddress`. Patch by Jon Foster and Berker Peksag.
- [bpo-27428](https://bugs.python.org/issue?@action=redirect&bpo=27428) [https://bugs.python.org/issue?@action=redirect&bpo=27428]: Update documentation to clarify that `WindowsRegistryFinder` implements `MetaPathFinder`. (Patch by Himanshu Lakhara)

## Tests

- [bpo-32872](https://bugs.python.org/issue?@action=redirect&bpo=32872) [https://bugs.python.org/issue?@action=redirect&bpo=32872]: Avoid regrtest compatibility issue with namespace packages.
- [bpo-32517](https://bugs.python.org/issue?@action=redirect&bpo=32517) [https://bugs.python.org/issue?@action=redirect&bpo=32517]: Fix failing `test_asyncio` on macOS 10.12.2+ due to transport of `KqueueSelector` loop was not being closed.
- [bpo-19417](https://bugs.python.org/issue?@action=redirect&bpo=19417) [https://bugs.python.org/issue?@action=redirect&bpo=19417]: Add `test_bdb.py`.

## Build

- [bpo-33163](https://bugs.python.org/issue?@action=redirect&bpo=33163) [https://bugs.python.org/issue?@action=redirect&bpo=33163]: Upgrade `pip` to 9.0.3 and `setuptools` to v39.0.1.

## Windows

- [bpo-33016](https://bugs.python.org/issue?@action=redirect&bpo=33016) [https://bugs.python.org/issue?@action=redirect&bpo=33016]: Fix potential use of uninitialized memory in `nt._getfinalpathname`
- [bpo-32903](https://bugs.python.org/issue?@action=redirect&bpo=32903) [https://bugs.python.org/issue?@action=redirect&bpo=32903]: Fix a memory leak in `os.chdir()` on Windows if the current directory is set to a UNC path.

## macOS

- [bpo-32726](https://bugs.python.org/issue?@action=redirect&bpo=32726) [https://bugs.python.org/issue?@action=redirect&bpo=32726]: Build and link with private copy of Tcl/Tk 8.6 for the macOS 10.6+ installer. The 10.9+ installer variant already does this. This means that the Python 3.7 provided by the python.org macOS installers no longer need or use any external versions of Tcl/Tk, either system-provided or user-installed, such as ActiveTcl.

## IDLE

- [bpo-32984](https://bugs.python.org/issue?@action=redirect&bpo=32984) [https://bugs.python.org/issue?@action=redirect&bpo=32984]: Set `__file__` while running a startup file. Like Python, IDLE optionally runs one startup file in the Shell window before presenting the first interactive input prompt. For IDLE, `-s` runs a file named in environmental variable **IDLESTARTUP** or **PYTHONSTARTUP**; `-r file` runs `file`. Python sets `__file__` to the startup file name before running the file and unsets it before the first prompt. IDLE now does the same when run normally, without the `-n` option.
- [bpo-32940](https://bugs.python.org/issue?@action=redirect&bpo=32940) [https://bugs.python.org/issue?@action=redirect&bpo=32940]: Simplify and rename `StringTranslatePseudoMapping` in `pyparse`.

## Tools/Demos

- [bpo-32885](https://bugs.python.org/issue?@action=redirect&bpo=32885) [https://bugs.python.org/issue?@action=redirect&bpo=32885]: Add an `-n` flag for `Tools/scripts/pathfix.py` to disable automatic backup creation (files with `~` suffix).

## C API

- [bpo-33042](https://bugs.python.org/issue?@action=redirect&bpo=33042) [https://bugs.python.org/issue?@action=redirect&bpo=33042]: Embedding applications may once again call `PySys_ResetWarnOptions`, `PySys_AddWarnOption`, and `PySys_AddXOption` prior to calling `Py_Initialize`.
- [bpo-32374](https://bugs.python.org/issue?@action=redirect&bpo=32374) [https://bugs.python.org/issue?@action=redirect&bpo=32374]: Document that `m_traverse` for multi-phase initialized modules can be called with `m_state=NULL`, and add a sanity check

## Python 3.7.0 beta 2

*Release date: 2018-02-27*

### Security

- [bpo-28414](https://bugs.python.org/issue?@action=redirect&bpo=28414) [https://bugs.python.org/issue?@action=redirect&bpo=28414]: The `ssl` module now allows users to perform their own IDN en/decoding when using SNI.

### Core and Builtins

- [bpo-32889](https://bugs.python.org/issue?@action=redirect&bpo=32889) [https://bugs.python.org/issue?@action=redirect&bpo=32889]: Update Valgrind suppression list to account for the rename of `Py_ADDRESS_IN_RANG` to `address_in_range`.
- [bpo-31356](https://bugs.python.org/issue?@action=redirect&bpo=31356) [https://bugs.python.org/issue?@action=redirect&bpo=31356]: Remove the new API added in [bpo-31356](https://bugs.python.org/issue?@action=redirect&bpo=31356) [https://bugs.python.org/issue?@action=redirect&bpo=31356] (`gc.ensure_disabled()` context manager).
- [bpo-32305](https://bugs.python.org/issue?@action=redirect&bpo=32305) [https://bugs.python.org/issue?@action=redirect&bpo=32305]: For namespace packages, ensure that both `__file__` and `__spec__.origin` are set to `None`.
- [bpo-32303](https://bugs.python.org/issue?@action=redirect&bpo=32303) [https://bugs.python.org/issue?@action=redirect&bpo=32303]: Make sure `__spec__.loader` matches `__loader__` for namespace packages.

- [bpo-32711](https://bugs.python.org/issue?@action=redirect&bpo=32711) [https://bugs.python.org/issue?@action=redirect&bpo=32711]: Fix the warning messages for Python/ast\_unparse.c. Patch by Stéphane Wirtel
- [bpo-32583](https://bugs.python.org/issue?@action=redirect&bpo=32583) [https://bugs.python.org/issue?@action=redirect&bpo=32583]: Fix possible crashing in builtin Unicode decoders caused by write out-of-bound errors when using customized decode error handlers.

## Library

- [bpo-32960](https://bugs.python.org/issue?@action=redirect&bpo=32960) [https://bugs.python.org/issue?@action=redirect&bpo=32960]: For dataclasses, disallow inheriting frozen from non-frozen classes, and also disallow inheriting non-frozen from frozen classes. This restriction will be relaxed at a future date.
- [bpo-32713](https://bugs.python.org/issue?@action=redirect&bpo=32713) [https://bugs.python.org/issue?@action=redirect&bpo=32713]: Fixed tarfile.itn handling of out-of-bounds float values. Patch by Joffrey Fuhrer.
- [bpo-32951](https://bugs.python.org/issue?@action=redirect&bpo=32951) [https://bugs.python.org/issue?@action=redirect&bpo=32951]: Direct instantiation of SSLSocket and SSLObject objects is now prohibited. The constructors were never documented, tested, or designed as public constructors. Users were suppose to use ssl.wrap\_socket() or SSLContext.
- [bpo-32929](https://bugs.python.org/issue?@action=redirect&bpo=32929) [https://bugs.python.org/issue?@action=redirect&bpo=32929]: Remove the tri-state parameter “hash”, and add the boolean “unsafe\_hash”. If unsafe\_hash is True, add a \_hash\_ function, but if a \_hash\_ exists, raise TypeError. If unsafe\_hash is False, add a \_hash\_ based on the values of eq= and frozen=. The unsafe\_hash=False behavior is the same as the old hash=None behavior. unsafe\_hash=False is the default, just as hash=None used to be.
- [bpo-32947](https://bugs.python.org/issue?@action=redirect&bpo=32947) [https://bugs.python.org/issue?@action=redirect&bpo=32947]: Add OP\_ENABLE\_MIDDLEBOX\_COMPAT and test workaround for TLSv1.3 for future compatibility with OpenSSL 1.1.1.
- [bpo-30622](https://bugs.python.org/issue?@action=redirect&bpo=30622) [https://bugs.python.org/issue?@action=redirect&bpo=30622]: The ssl module now detects missing NPN support in LibreSSL.

- [bpo-32922](https://bugs.python.org/issue?@action=redirect&bpo=32922) [https://bugs.python.org/issue?@action=redirect&bpo=32922]: `dbm.open()` now encodes filename with the filesystem encoding rather than default encoding.
- [bpo-32859](https://bugs.python.org/issue?@action=redirect&bpo=32859) [https://bugs.python.org/issue?@action=redirect&bpo=32859]: In `os.dup2`, don't check every call whether the `dup3` syscall exists or not.
- [bpo-32556](https://bugs.python.org/issue?@action=redirect&bpo=32556) [https://bugs.python.org/issue?@action=redirect&bpo=32556]: `nt.getfinalpathname`, `nt.getvolumepathname` and `nt.getdiskusage` now correctly convert from bytes.
- [bpo-25988](https://bugs.python.org/issue?@action=redirect&bpo=25988) [https://bugs.python.org/issue?@action=redirect&bpo=25988]: Emit a **DeprecationWarning** when using or importing an ABC directly from **collections** rather than from **collections.abc**.
- [bpo-21060](https://bugs.python.org/issue?@action=redirect&bpo=21060) [https://bugs.python.org/issue?@action=redirect&bpo=21060]: Rewrite confusing message from `setup.py` upload from “No dist file created in earlier command” to the more helpful “Must create and upload files in one command”.
- [bpo-32852](https://bugs.python.org/issue?@action=redirect&bpo=32852) [https://bugs.python.org/issue?@action=redirect&bpo=32852]: Make sure `sys.argv` remains as a list when running `trace`.
- [bpo-31333](https://bugs.python.org/issue?@action=redirect&bpo=31333) [https://bugs.python.org/issue?@action=redirect&bpo=31333]: `_abc` module is added. It is a speedup module with C implementations for various functions and methods in `abc`. Creating an ABC subclass and calling `isinstance` or `issubclass` with an ABC subclass are up to 1.5x faster. In addition, this makes Python start-up up to 10% faster. Note that the new implementation hides internal registry and caches, previously accessible via private attributes `_abc_registry`, `_abc_cache`, and `_abc_negative_cache`. There are three debugging helper methods that can be used instead `_dump_registry`, `_abc_registry_clear`, and `_abc_caches_clear`.
- [bpo-32841](https://bugs.python.org/issue?@action=redirect&bpo=32841) [https://bugs.python.org/issue?@action=redirect&bpo=32841]: Fixed **asyncio.Condition** issue which silently ignored cancellation after notifying and cancelling a conditional lock. Patch by Bar Harel.
- [bpo-32819](https://bugs.python.org/issue?@action=redirect&bpo=32819) [https://bugs.python.org/issue?@action=redirect&bpo=32819]: `ssl.match_hostname()` has been

simplified and no longer depends on `re` and `ipaddress` module for wildcard and IP addresses. Error reporting for invalid wildcards has been improved.

- [bpo-32394](https://bugs.python.org/issue?@action=redirect&bpo=32394) [https://bugs.python.org/issue?@action=redirect&bpo=32394]: `socket`: Remove `TCP_FASTOPEN`, `TCP_KEEPCNT`, `TCP_KEEPIDLE`, `TCP_KEEPINTVL` flags on older version Windows during run-time.
- [bpo-31787](https://bugs.python.org/issue?@action=redirect&bpo=31787) [https://bugs.python.org/issue?@action=redirect&bpo=31787]: Fixed reflinks of `__init__()` methods in various modules. (Contributed by Oren Milman)
- [bpo-30157](https://bugs.python.org/issue?@action=redirect&bpo=30157) [https://bugs.python.org/issue?@action=redirect&bpo=30157]: Fixed guessing quote and delimiter in `csv.Sniffer.sniff()` when only the last field is quoted. Patch by Jake Davis.
- [bpo-32792](https://bugs.python.org/issue?@action=redirect&bpo=32792) [https://bugs.python.org/issue?@action=redirect&bpo=32792]: `collections.ChainMap()` preserves the order of the underlying mappings.
- [bpo-32775](https://bugs.python.org/issue?@action=redirect&bpo=32775) [https://bugs.python.org/issue?@action=redirect&bpo=32775]: `fnmatch.translate()` no longer produces patterns which contain set operations. Sets starting with `'['` or containing `'-'`, `'&&'`, `'~'` or `'|'` will be interpreted differently in regular expressions in future versions. Currently they emit warnings. `fnmatch.translate()` now avoids producing patterns containing such sets by accident.
- [bpo-32622](https://bugs.python.org/issue?@action=redirect&bpo=32622) [https://bugs.python.org/issue?@action=redirect&bpo=32622]: Implement native fast sendfile for Windows proactor event loop.
- [bpo-32777](https://bugs.python.org/issue?@action=redirect&bpo=32777) [https://bugs.python.org/issue?@action=redirect&bpo=32777]: Fix a rare but potential pre-exec child process deadlock in subprocess on POSIX systems when marking file descriptors inheritable on exec in the child process. This bug appears to have been introduced in 3.4.
- [bpo-32647](https://bugs.python.org/issue?@action=redirect&bpo=32647) [https://bugs.python.org/issue?@action=redirect&bpo=32647]: The `ctypes` module used to depend on indirect linking for `dlopen`. The shared extension is now explicitly linked against `libdl` on platforms with `dl`.
- [bpo-32741](https://bugs.python.org/issue?@action=redirect&bpo=32741) [https://bugs.python.org/issue?@action=redirect&bpo=32741]: Implement `asyncio.TimerHandle.when()` method.

- [bpo-32691](https://bugs.python.org/issue?@action=redirect&bpo=32691) [https://bugs.python.org/issue?@action=redirect&bpo=32691]: Use `mod_spec.parent` when running modules with `pdb`
- [bpo-32734](https://bugs.python.org/issue?@action=redirect&bpo=32734) [https://bugs.python.org/issue?@action=redirect&bpo=32734]: Fixed `asyncio.Lock()` safety issue which allowed acquiring and locking the same lock multiple times, without it being free. Patch by Bar Harel.
- [bpo-32727](https://bugs.python.org/issue?@action=redirect&bpo=32727) [https://bugs.python.org/issue?@action=redirect&bpo=32727]: Do not include name field in SMTP envelope from address. Patch by Stéphane Wirtel
- [bpo-31453](https://bugs.python.org/issue?@action=redirect&bpo=31453) [https://bugs.python.org/issue?@action=redirect&bpo=31453]: Add `TLSVersion` constants and `SSLContext.maximum_version / minimum_version` attributes. The new API wraps OpenSSL 1.1 [https://web.archive.org/web/20180309043602/https://www.openssl.org/docs/man1.1.0/ssl/SSL\\_CTX\\_set\\_min\\_proto\\_version.html](https://web.archive.org/web/20180309043602/https://www.openssl.org/docs/man1.1.0/ssl/SSL_CTX_set_min_proto_version.html) feature.
- [bpo-24334](https://bugs.python.org/issue?@action=redirect&bpo=24334) [https://bugs.python.org/issue?@action=redirect&bpo=24334]: Internal implementation details of `ssl` module were cleaned up. The `SSLSocket` has one less layer of indirection. Owner and session information are now handled by the `SSLSocket` and `SSLObject` constructor. Channel binding implementation has been simplified.
- [bpo-31848](https://bugs.python.org/issue?@action=redirect&bpo=31848) [https://bugs.python.org/issue?@action=redirect&bpo=31848]: Fix the error handling in `Aifc.read.initfp()` when the SSND chunk is not found. Patch by Zackery Spytz.
- [bpo-32585](https://bugs.python.org/issue?@action=redirect&bpo=32585) [https://bugs.python.org/issue?@action=redirect&bpo=32585]: Add Tk spinbox widget to `tkinter.ttk`. Patch by Alan D Moore.
- [bpo-32221](https://bugs.python.org/issue?@action=redirect&bpo=32221) [https://bugs.python.org/issue?@action=redirect&bpo=32221]: Various functions returning tuple containing IPv6 addresses now omit `%scope` part since the same information is already encoded in `scopeid` tuple item. Especially this speeds up `socket.recvfrom()` when it receives multicast packet since useless resolving of network interface name is omitted.
- [bpo-30693](https://bugs.python.org/issue?@action=redirect&bpo=30693) [https://bugs.python.org/issue?@action=redirect&bpo=30693]: The `TarFile` class now recurses directories in a reproducible way.
- [bpo-30693](https://bugs.python.org/issue?@action=redirect&bpo=30693) [https://bugs.python.org/issue?@action=redirect&bpo=30693]

@action=redirect&bpo=30693]: The ZipFile class now recurses directories in a reproducible way.

## Documentation

- [bpo-28124](https://bugs.python.org/issue?@action=redirect&bpo=28124) [https://bugs.python.org/issue?@action=redirect&bpo=28124]: The ssl module function `ssl.wrap_socket()` has been de-emphasized and deprecated in favor of the more secure and efficient `SSLContext.wrap_socket()` method.
- [bpo-17232](https://bugs.python.org/issue?@action=redirect&bpo=17232) [https://bugs.python.org/issue?@action=redirect&bpo=17232]: Clarify docs for `-O` and `-OO`. Patch by Terry Reedy.
- [bpo-32436](https://bugs.python.org/issue?@action=redirect&bpo=32436) [https://bugs.python.org/issue?@action=redirect&bpo=32436]: Add documentation for the `contextvars` module (PEP 567).
- [bpo-32800](https://bugs.python.org/issue?@action=redirect&bpo=32800) [https://bugs.python.org/issue?@action=redirect&bpo=32800]: Update link to w3c doc for xml default namespaces.
- [bpo-11015](https://bugs.python.org/issue?@action=redirect&bpo=11015) [https://bugs.python.org/issue?@action=redirect&bpo=11015]: Update `test.support` documentation.
- [bpo-8722](https://bugs.python.org/issue?@action=redirect&bpo=8722) [https://bugs.python.org/issue?@action=redirect&bpo=8722]: Document `__getattr__()` behavior when property `get()` method raises `AttributeError`.
- [bpo-32614](https://bugs.python.org/issue?@action=redirect&bpo=32614) [https://bugs.python.org/issue?@action=redirect&bpo=32614]: Modify RE examples in documentation to use raw strings to prevent `DeprecationWarning` and add text to REGEX HOWTO to highlight the deprecation.
- [bpo-31972](https://bugs.python.org/issue?@action=redirect&bpo=31972) [https://bugs.python.org/issue?@action=redirect&bpo=31972]: Improve docstrings for `pathlib.PurePath` subclasses.

## Tests

- [bpo-31809](https://bugs.python.org/issue?@action=redirect&bpo=31809) [https://bugs.python.org/issue?@action=redirect&bpo=31809]: Add tests to verify connection with secp ECDH curves.

## Build

- [bpo-32898](https://bugs.python.org/issue?@action=redirect&bpo=32898) [https://bugs.python.org/issue?@action=redirect&bpo=32898]: Fix the python debug build when using COUNT\_ALLOCS.

## Windows

- [bpo-32901](https://bugs.python.org/issue?@action=redirect&bpo=32901) [https://bugs.python.org/issue?@action=redirect&bpo=32901]: Update Tcl and Tk versions to 8.6.8
- [bpo-31966](https://bugs.python.org/issue?@action=redirect&bpo=31966) [https://bugs.python.org/issue?@action=redirect&bpo=31966]: Fixed WindowsConsoleIO.write() for writing empty data.
- [bpo-32409](https://bugs.python.org/issue?@action=redirect&bpo=32409) [https://bugs.python.org/issue?@action=redirect&bpo=32409]: Ensures activate.bat can handle Unicode contents.
- [bpo-32457](https://bugs.python.org/issue?@action=redirect&bpo=32457) [https://bugs.python.org/issue?@action=redirect&bpo=32457]: Improves handling of denormalized executable path when launching Python.
- [bpo-32370](https://bugs.python.org/issue?@action=redirect&bpo=32370) [https://bugs.python.org/issue?@action=redirect&bpo=32370]: Use the correct encoding for ipconfig output in the uuid module. Patch by Segev Finer.
- [bpo-29248](https://bugs.python.org/issue?@action=redirect&bpo=29248) [https://bugs.python.org/issue?@action=redirect&bpo=29248]: Fix `os.readlink()` on Windows, which was mistakenly treating the `PrintNameOffset` field of the reparse data buffer as a number of characters instead of bytes. Patch by Craig Holmquist and SSE4.

## macOS

- [bpo-32901](https://bugs.python.org/issue?@action=redirect&bpo=32901) [https://bugs.python.org/issue?@action=redirect&bpo=32901]: Update macOS 10.9+ installer to Tcl/Tk 8.6.8.

## IDLE

- [bpo-32916](https://bugs.python.org/issue?@action=redirect&bpo=32916) [https://bugs.python.org/issue?@action=redirect&bpo=32916]

- [@action=redirect&bpo=32916](#): Change `str` to `code` in `pyparse`.
- [bpo-32905](#) [<https://bugs.python.org/issue?@action=redirect&bpo=32905>]: Remove unused code in `pyparse` module.
- [bpo-32874](#) [<https://bugs.python.org/issue?@action=redirect&bpo=32874>]: Add tests for `pyparse`.
- [bpo-32837](#) [<https://bugs.python.org/issue?@action=redirect&bpo=32837>]: Using the system and place-dependent default encoding for `open()` is a bad idea for IDLE's system and location-independent files.
- [bpo-32826](#) [<https://bugs.python.org/issue?@action=redirect&bpo=32826>]: Add “encoding = utf-8” to `open()` in IDLE's `test_help_about`. GUI test `test_file_buttons()` only looks at initial `ascii`-only lines, but failed on systems where `open()` defaults to ‘`ascii`’ because `readline()` internally reads and decodes far enough ahead to encounter a non-`ascii` character in `CREDITS.txt`.
- [bpo-32765](#) [<https://bugs.python.org/issue?@action=redirect&bpo=32765>]: Update `configdialog` General tab `docstring` to add new widgets to the widget list.

## Tools/Demos

- [bpo-32222](#) [<https://bugs.python.org/issue?@action=redirect&bpo=32222>]: Fix `pygettext` not extracting `docstrings` for functions with type annotated arguments. Patch by Toby Harradine.

# Python 3.7.0 beta 1

*Release date: 2018-01-30*

## Core and Builtins

- [bpo-32703](#) [<https://bugs.python.org/issue?@action=redirect&bpo=32703>]: Fix `coroutine`'s `ResourceWarning` when there's an active error set when it's being finalized.
- [bpo-32650](#) [<https://bugs.python.org/issue?@action=redirect&bpo=32650>]: `Pdb` and other debuggers

dependent on `bdb.py` will correctly step over (next command) native coroutines. Patch by Pablo Galindo.

- [bpo-28685](https://bugs.python.org/issue?@action=redirect&bpo=28685) [https://bugs.python.org/issue?@action=redirect&bpo=28685]: Optimize `list.sort()` and `sorted()` by using type specialized comparisons when possible.
- [bpo-32685](https://bugs.python.org/issue?@action=redirect&bpo=32685) [https://bugs.python.org/issue?@action=redirect&bpo=32685]: Improve suggestion when the Python 2 form of `print` statement is either present on the same line as the header of a compound statement or else terminated by a semi-colon instead of a newline. Patch by Nitish Chandra.
- [bpo-32697](https://bugs.python.org/issue?@action=redirect&bpo=32697) [https://bugs.python.org/issue?@action=redirect&bpo=32697]: Python now explicitly preserves the definition order of keyword-only parameters. It's always preserved their order, but this behavior was never guaranteed before; this behavior is now guaranteed and tested.
- [bpo-32690](https://bugs.python.org/issue?@action=redirect&bpo=32690) [https://bugs.python.org/issue?@action=redirect&bpo=32690]: The `locals()` dictionary now displays in the lexical order that variables were defined. Previously, the order was reversed.
- [bpo-32677](https://bugs.python.org/issue?@action=redirect&bpo=32677) [https://bugs.python.org/issue?@action=redirect&bpo=32677]: Add `.isascii()` method to `str`, `bytes` and `bytearray`. It can be used to test that string contains only ASCII characters.
- [bpo-32670](https://bugs.python.org/issue?@action=redirect&bpo=32670) [https://bugs.python.org/issue?@action=redirect&bpo=32670]: Enforce [PEP 479](https://peps.python.org/pep-0479/) [https://peps.python.org/pep-0479/] for all code. This means that manually raising a `StopIteration` exception from a generator is prohibited for all code, regardless of whether `'from _future_ import generator_stop'` was used or not.
- [bpo-32591](https://bugs.python.org/issue?@action=redirect&bpo=32591) [https://bugs.python.org/issue?@action=redirect&bpo=32591]: Added built-in support for tracking the origin of coroutine objects; see `sys.set_coroutine_origin_tracking_depth` and `CoroutineType.cr_origin`. This replaces the `asyncio` debug mode's use of coroutine wrapping for native coroutine objects.
- [bpo-31368](https://bugs.python.org/issue?@action=redirect&bpo=31368) [https://bugs.python.org/issue?@action=redirect&bpo=31368]: Expose `preadv` and `pwritev` system calls in the `os` module. Patch by Pablo Galindo

- [bpo-32544](https://bugs.python.org/issue?@action=redirect&bpo=32544) [https://bugs.python.org/issue?@action=redirect&bpo=32544]: `hasattr(obj, name)` and `getattr(obj, name, default)` are about 4 times faster than before when `name` is not found and `obj` doesn't override `__getattr__` or `__getattribute__`.
- [bpo-26163](https://bugs.python.org/issue?@action=redirect&bpo=26163) [https://bugs.python.org/issue?@action=redirect&bpo=26163]: Improved `frozenset()` hash to create more distinct hash values when faced with datasets containing many similar values.
- [bpo-32550](https://bugs.python.org/issue?@action=redirect&bpo=32550) [https://bugs.python.org/issue?@action=redirect&bpo=32550]: Remove the `STORE_ANNOTATION` bytecode.
- [bpo-20104](https://bugs.python.org/issue?@action=redirect&bpo=20104) [https://bugs.python.org/issue?@action=redirect&bpo=20104]: Expose `posix_spawn` as a low level API in the `os` module. (removed before 3.7.0rc1)
- [bpo-24340](https://bugs.python.org/issue?@action=redirect&bpo=24340) [https://bugs.python.org/issue?@action=redirect&bpo=24340]: Fixed estimation of the code stack size.
- [bpo-32436](https://bugs.python.org/issue?@action=redirect&bpo=32436) [https://bugs.python.org/issue?@action=redirect&bpo=32436]: Implement [PEP 567](https://peps.python.org/pep-0567/) [https://peps.python.org/pep-0567/] Context Variables.
- [bpo-18533](https://bugs.python.org/issue?@action=redirect&bpo=18533) [https://bugs.python.org/issue?@action=redirect&bpo=18533]: `repr()` on a dict containing its own `values()` or `items()` no longer raises `RecursionError`; `OrderedDict` similarly. Instead, use `...`, as for other recursive structures. Patch by Ben North.
- [bpo-20891](https://bugs.python.org/issue?@action=redirect&bpo=20891) [https://bugs.python.org/issue?@action=redirect&bpo=20891]: `Py_Initialize()` now creates the GIL. The GIL is no longer created “on demand” to fix a race condition when `PyGILState_Ensure()` is called in a non-Python thread.
- [bpo-32028](https://bugs.python.org/issue?@action=redirect&bpo=32028) [https://bugs.python.org/issue?@action=redirect&bpo=32028]: Leading whitespace is now correctly ignored when generating suggestions for converting Py2 print statements to Py3 builtin print function calls. Patch by Sanyam Khurana.
- [bpo-31179](https://bugs.python.org/issue?@action=redirect&bpo=31179) [https://bugs.python.org/issue?@action=redirect&bpo=31179]: Make `dict.copy()` up to 5.5 times faster.
- [bpo-31113](https://bugs.python.org/issue?@action=redirect&bpo=31113) [https://bugs.python.org/issue?@action=redirect&bpo=31113]

@action=redirect&bpo=31113]: Get rid of recursion in the compiler for normal control flow.

## Library

- [bpo-25988](https://bugs.python.org/issue?@action=redirect&bpo=25988) [https://bugs.python.org/issue?@action=redirect&bpo=25988]: Deprecate exposing the contents of collections.abc in the regular collections module.
- [bpo-31429](https://bugs.python.org/issue?@action=redirect&bpo=31429) [https://bugs.python.org/issue?@action=redirect&bpo=31429]: The default cipher suite selection of the ssl module now uses a blacklist approach rather than a hard-coded whitelist. Python no longer re-enables ciphers that have been blocked by OpenSSL security update. Default cipher suite selection can be configured on compile time.
- [bpo-30306](https://bugs.python.org/issue?@action=redirect&bpo=30306) [https://bugs.python.org/issue?@action=redirect&bpo=30306]: contextlib.contextmanager now releases the arguments passed to the underlying generator as soon as the context manager is entered. Previously it would keep them alive for as long as the context manager was alive, even when not being used as a function decorator. Patch by Martin Teichmann.
- [bpo-21417](https://bugs.python.org/issue?@action=redirect&bpo=21417) [https://bugs.python.org/issue?@action=redirect&bpo=21417]: Added support for setting the compression level for zipfile.ZipFile.
- [bpo-32251](https://bugs.python.org/issue?@action=redirect&bpo=32251) [https://bugs.python.org/issue?@action=redirect&bpo=32251]: Implement asyncio.BufferedProtocol (provisional API).
- [bpo-32513](https://bugs.python.org/issue?@action=redirect&bpo=32513) [https://bugs.python.org/issue?@action=redirect&bpo=32513]: In dataclasses, allow easier overriding of dunder methods without specifying decorator parameters.
- [bpo-32660](https://bugs.python.org/issue?@action=redirect&bpo=32660) [https://bugs.python.org/issue?@action=redirect&bpo=32660]: **termios** makes available FIONREAD, FIONCLEX, FIOCLEX, FIOASYNC and FIONBIO also under Solaris/derivatives.
- [bpo-27931](https://bugs.python.org/issue?@action=redirect&bpo=27931) [https://bugs.python.org/issue?@action=redirect&bpo=27931]: Fix email address header parsing error when the username is an empty quoted string. Patch by Xiang Zhang.
- [bpo-32659](https://bugs.python.org/issue?@action=redirect&bpo=32659) [https://bugs.python.org/issue?@action=redirect&bpo=32659]

@action=redirect&bpo=32659]: Under Solaris and derivatives, **os.stat\_result** provides a `st_fstype` attribute.

- **bpo-32662** [<https://bugs.python.org/issue?@action=redirect&bpo=32662>]: Implement `Server.start_serving()`, `Server.serve_forever()`, and `Server.is_serving()` methods. Add ‘start\_serving’ keyword parameter to `loop.create_server()` and `loop.create_unix_server()`.
- **bpo-32391** [<https://bugs.python.org/issue?@action=redirect&bpo=32391>]: Implement **`asyncio.StreamWriter.wait_closed()`** and **`asyncio.StreamWriter.is_closing()`** methods
- **bpo-32643** [<https://bugs.python.org/issue?@action=redirect&bpo=32643>]: Make `Task._step`, `Task._wakeup` and `Future._schedule_callbacks` methods private.
- **bpo-32630** [<https://bugs.python.org/issue?@action=redirect&bpo=32630>]: Refactor decimal module to use contextvars to store decimal context.
- **bpo-32622** [<https://bugs.python.org/issue?@action=redirect&bpo=32622>]: Add **`asyncio.AbstractEventLoop.sendfile()`** method.
- **bpo-32304** [<https://bugs.python.org/issue?@action=redirect&bpo=32304>]: distutils’ upload command no longer corrupts tar files ending with a CR byte, and no longer tries to convert CR to CRLF in any of the upload text fields.
- **bpo-32502** [<https://bugs.python.org/issue?@action=redirect&bpo=32502>]: `uuid.uuid1` no longer raises an exception if a 64-bit hardware address is encountered.
- **bpo-32596** [<https://bugs.python.org/issue?@action=redirect&bpo=32596>]: `concurrent.futures` imports `ThreadPoolExecutor` and `ProcessPoolExecutor` lazily (using **PEP 562** [<https://peps.python.org/pep-0562/>]). It makes import `asyncio` about 15% faster because `asyncio` uses only `ThreadPoolExecutor` by default.
- **bpo-31801** [<https://bugs.python.org/issue?@action=redirect&bpo=31801>]: Add `__ignore__` to `Enum` so temporary variables can be used during class construction without being turned into members.
- **bpo-32576** [<https://bugs.python.org/issue?@action=redirect&bpo=32576>]: Use `queue.SimpleQueue()` in places where it can be invoked from a weakref callback.

- [bpo-32574](https://bugs.python.org/issue?@action=redirect&bpo=32574) [https://bugs.python.org/issue?@action=redirect&bpo=32574]: Fix memory leak in `asyncio.Queue`, when the queue has limited size and it is full, the cancelation of `queue.put()` can cause a memory leak. Patch by: José Melero.
- [bpo-32521](https://bugs.python.org/issue?@action=redirect&bpo=32521) [https://bugs.python.org/issue?@action=redirect&bpo=32521]: The `nis` module is now compatible with new `libnsl` and headers location.
- [bpo-32467](https://bugs.python.org/issue?@action=redirect&bpo=32467) [https://bugs.python.org/issue?@action=redirect&bpo=32467]: `collections.abc.ValuesView` now inherits from `collections.abc.Collection`.
- [bpo-32473](https://bugs.python.org/issue?@action=redirect&bpo=32473) [https://bugs.python.org/issue?@action=redirect&bpo=32473]: Improve `ABCMeta._dump_registry()` output readability
- [bpo-32102](https://bugs.python.org/issue?@action=redirect&bpo=32102) [https://bugs.python.org/issue?@action=redirect&bpo=32102]: New argument `capture_output` for `subprocess.run`
- [bpo-32521](https://bugs.python.org/issue?@action=redirect&bpo=32521) [https://bugs.python.org/issue?@action=redirect&bpo=32521]: `glibc` has removed Sun RPC. Use replacement `libtirpc` headers and library in `nis` module.
- [bpo-32493](https://bugs.python.org/issue?@action=redirect&bpo=32493) [https://bugs.python.org/issue?@action=redirect&bpo=32493]: `UUID` module fixes build for FreeBSD/OpenBSD
- [bpo-32503](https://bugs.python.org/issue?@action=redirect&bpo=32503) [https://bugs.python.org/issue?@action=redirect&bpo=32503]: Pickling with protocol 4 no longer creates too small frames.
- [bpo-29237](https://bugs.python.org/issue?@action=redirect&bpo=29237) [https://bugs.python.org/issue?@action=redirect&bpo=29237]: Create enum for `pstats` sorting options
- [bpo-32454](https://bugs.python.org/issue?@action=redirect&bpo=32454) [https://bugs.python.org/issue?@action=redirect&bpo=32454]: Add `close(fd)` function to the `socket` module.
- [bpo-25942](https://bugs.python.org/issue?@action=redirect&bpo=25942) [https://bugs.python.org/issue?@action=redirect&bpo=25942]: The `subprocess` module is now more graceful when handling a Ctrl-C KeyboardInterrupt during `subprocess.call`, `subprocess.run`, or a `Popen` context manager. It now waits a short amount of time for the child (presumed to have also gotten the SIGINT) to exit, before continuing the KeyboardInterrupt exception handling. This still includes a SIGKILL in the `call()` and `run()` APIs, but at

least the child had a chance first.

- [bpo-32433](https://bugs.python.org/issue?@action=redirect&bpo=32433) [https://bugs.python.org/issue?@action=redirect&bpo=32433]: The hmac module now has `hmac.digest()`, which provides an optimized HMAC digest.
- [bpo-28134](https://bugs.python.org/issue?@action=redirect&bpo=28134) [https://bugs.python.org/issue?@action=redirect&bpo=28134]: Sockets now auto-detect family, type and protocol from file descriptor by default.
- [bpo-32404](https://bugs.python.org/issue?@action=redirect&bpo=32404) [https://bugs.python.org/issue?@action=redirect&bpo=32404]: Fix bug where `datetime.datetime.fromtimestamp()` did not call `_new_` in `datetime.datetime` subclasses.
- [bpo-32403](https://bugs.python.org/issue?@action=redirect&bpo=32403) [https://bugs.python.org/issue?@action=redirect&bpo=32403]: Improved speed of `datetime.date` and `datetime.datetime` alternate constructors.
- [bpo-32228](https://bugs.python.org/issue?@action=redirect&bpo=32228) [https://bugs.python.org/issue?@action=redirect&bpo=32228]: Ensure that `truncate()` preserves the file position (as reported by `tell()`) after writes longer than the buffer size.
- [bpo-32410](https://bugs.python.org/issue?@action=redirect&bpo=32410) [https://bugs.python.org/issue?@action=redirect&bpo=32410]: Implement `loop.sock_sendfile` for asyncio event loop.
- [bpo-22908](https://bugs.python.org/issue?@action=redirect&bpo=22908) [https://bugs.python.org/issue?@action=redirect&bpo=22908]: Added seek and tell to the `ZipExtFile` class. This only works if the file object used to open the zipfile is seekable.
- [bpo-32373](https://bugs.python.org/issue?@action=redirect&bpo=32373) [https://bugs.python.org/issue?@action=redirect&bpo=32373]: Add `socket.getblocking()` method.
- [bpo-32248](https://bugs.python.org/issue?@action=redirect&bpo=32248) [https://bugs.python.org/issue?@action=redirect&bpo=32248]: Add `importlib.resources` and `importlib.abc.ResourceReader` as the unified API for reading resources contained within packages. Loaders wishing to support resource reading must implement the `get_resource_reader()` method. File-based and zipimport-based loaders both implement these APIs. `importlib.abc.ResourceLoader` is deprecated in favor of these new APIs.
- [bpo-32320](https://bugs.python.org/issue?@action=redirect&bpo=32320) [https://bugs.python.org/issue?@action=redirect&bpo=32320]: `collections.namedtuple()` now supports default values.

- [bpo-29302](https://bugs.python.org/issue?@action=redirect&bpo=29302) [https://bugs.python.org/issue?@action=redirect&bpo=29302]: Add `contextlib.AsyncExitStack`. Patch by Alexander Mohr and Ilya Kulakov.
- [bpo-31961](https://bugs.python.org/issue?@action=redirect&bpo=31961) [https://bugs.python.org/issue?@action=redirect&bpo=31961]: *Removed in Python 3.7.0b2*. The `args` argument of `subprocess.Popen` can now be a [path-like object](#). If `args` is given as a sequence, its first element can now be a [path-like object](#) as well.
- [bpo-31900](https://bugs.python.org/issue?@action=redirect&bpo=31900) [https://bugs.python.org/issue?@action=redirect&bpo=31900]: The `locale.localeconv()` function now sets temporarily the `LC_CTYPE` locale to the `LC_NUMERIC` locale to decode `decimal_point` and `thousands_sep` byte strings if they are non-ASCII or longer than 1 byte, and the `LC_NUMERIC` locale is different than the `LC_CTYPE` locale. This temporary change affects other threads. Same change for the `str.format()` method when formatting a number (`int`, `float`, `float` and subclasses) with the `n` type (ex: `'{:n}'.format(1234)`).
- [bpo-31853](https://bugs.python.org/issue?@action=redirect&bpo=31853) [https://bugs.python.org/issue?@action=redirect&bpo=31853]: Use `super().method` instead of `socket.method` in `SSLSocket`. They were there most likely for legacy reasons.
- [bpo-31399](https://bugs.python.org/issue?@action=redirect&bpo=31399) [https://bugs.python.org/issue?@action=redirect&bpo=31399]: The `ssl` module now uses OpenSSL's `X509_VERIFY_PARAM_set1_host()` and `X509_VERIFY_PARAM_set1_ip()` API to verify hostname and IP addresses. Subject common name fallback can be disabled with `SSLContext.hostname_checks_common_name`.
- [bpo-14976](https://bugs.python.org/issue?@action=redirect&bpo=14976) [https://bugs.python.org/issue?@action=redirect&bpo=14976]: Add a `queue.SimpleQueue` class, an unbounded FIFO queue with a reentrant C implementation of `put()`.

## Documentation

- [bpo-32724](https://bugs.python.org/issue?@action=redirect&bpo=32724) [https://bugs.python.org/issue?@action=redirect&bpo=32724]: Add references to some commands in the documentation of `Pdb`. Patch by Stéphane Wirtel
- [bpo-32649](https://bugs.python.org/issue?@action=redirect&bpo=32649) [https://bugs.python.org/issue?@action=redirect&bpo=32649]

@action=redirect&bpo=32649]: Complete the C API documentation, profiling and tracing part with the newly added per-opcode events.

- [bpo-17799](https://bugs.python.org/issue?@action=redirect&bpo=17799) [https://bugs.python.org/issue?@action=redirect&bpo=17799]: Explain real behaviour of sys.settrace and sys.setprofile and their C-API counterparts regarding which type of events are received in each function. Patch by Pablo Galindo Salgado.

## Tests

- [bpo-32721](https://bugs.python.org/issue?@action=redirect&bpo=32721) [https://bugs.python.org/issue?@action=redirect&bpo=32721]: Fix test\_hashlib to not fail if the \_md5 module is not built.
- [bpo-28414](https://bugs.python.org/issue?@action=redirect&bpo=28414) [https://bugs.python.org/issue?@action=redirect&bpo=28414]: Add test cases for IDNA 2003 and 2008 host names. IDNA 2003 internationalized host names are working since [bpo-31399](https://bugs.python.org/issue?@action=redirect&bpo=31399) [https://bugs.python.org/issue?@action=redirect&bpo=31399] has landed. IDNA 2008 are still broken.
- [bpo-32604](https://bugs.python.org/issue?@action=redirect&bpo=32604) [https://bugs.python.org/issue?@action=redirect&bpo=32604]: Add a new “\_xxsubinterpreters” extension module that exposes the existing subinterpreter C-API and a new cross-interpreter data sharing mechanism. The module is primarily intended for more thorough testing of the existing subinterpreter support. Note that the \_xxsubinterpreters module has been removed in 3.7.0rc1.
- [bpo-32602](https://bugs.python.org/issue?@action=redirect&bpo=32602) [https://bugs.python.org/issue?@action=redirect&bpo=32602]: Add test certs and test for ECDSA cert and EC/RSA dual mode.
- [bpo-32549](https://bugs.python.org/issue?@action=redirect&bpo=32549) [https://bugs.python.org/issue?@action=redirect&bpo=32549]: On Travis CI, Python now Compiles and uses a local copy of OpenSSL 1.1.0g for testing.

## Build

- [bpo-32635](https://bugs.python.org/issue?@action=redirect&bpo=32635) [https://bugs.python.org/issue?@action=redirect&bpo=32635]: Fix segfault of the crypt module when libxcrypt is provided instead of libcrypt at the system.
- [bpo-32598](https://bugs.python.org/issue?@action=redirect&bpo=32598) [https://bugs.python.org/issue?@action=redirect&bpo=32598]

@action=redirect&bpo=32598]: Use autoconf to detect OpenSSL libs, headers and supported features. The ax\_check\_openssl M4 macro uses pkg-config to locate OpenSSL and falls back to manual search.

- [bpo-32593](https://bugs.python.org/issue?@action=redirect&bpo=32593) [https://bugs.python.org/issue?@action=redirect&bpo=32593]: Drop support of FreeBSD 9 and older.
- [bpo-29708](https://bugs.python.org/issue?@action=redirect&bpo=29708) [https://bugs.python.org/issue?@action=redirect&bpo=29708]: If the **SOURCE\_DATE\_EPOCH** environment variable is set, **py\_compile** will always create hash-based .pyc files.

## Windows

- [bpo-32588](https://bugs.python.org/issue?@action=redirect&bpo=32588) [https://bugs.python.org/issue?@action=redirect&bpo=32588]: Create standalone \_distutils\_findvs module and add missing \_queue module to installer.
- [bpo-29911](https://bugs.python.org/issue?@action=redirect&bpo=29911) [https://bugs.python.org/issue?@action=redirect&bpo=29911]: Ensure separate Modify and Uninstall buttons are displayed.
- [bpo-32507](https://bugs.python.org/issue?@action=redirect&bpo=32507) [https://bugs.python.org/issue?@action=redirect&bpo=32507]: Use app-local UCRT install rather than the proper update for old versions of Windows.

## macOS

- [bpo-32726](https://bugs.python.org/issue?@action=redirect&bpo=32726) [https://bugs.python.org/issue?@action=redirect&bpo=32726]: Provide an additional, more modern macOS installer variant that supports macOS 10.9+ systems in 64-bit mode only. Upgrade the supplied third-party libraries to OpenSSL 1.1.0g and to SQLite 3.22.0. The 10.9+ installer now links with and supplies its own copy of Tcl/Tk 8.6.
- [bpo-28440](https://bugs.python.org/issue?@action=redirect&bpo=28440) [https://bugs.python.org/issue?@action=redirect&bpo=28440]: No longer add /Library/Python/3.x/site-packages to sys.path for macOS framework builds to avoid future conflicts.

## C API

- [bpo-32681](https://bugs.python.org/issue?@action=redirect&bpo=32681) [https://bugs.python.org/issue?@action=redirect&bpo=32681]: Fix uninitialized variable ‘res’ in the C implementation of `os.dup2`. Patch by Stéphane Wirtel
- [bpo-10381](https://bugs.python.org/issue?@action=redirect&bpo=10381) [https://bugs.python.org/issue?@action=redirect&bpo=10381]: Add C API access to the `datetime.timezone` constructor and `datetime.timezone.UTC` singleton.

## Python 3.7.0 alpha 4

*Release date: 2018-01-08*

### Core and Builtins

- [bpo-31975](https://bugs.python.org/issue?@action=redirect&bpo=31975) [https://bugs.python.org/issue?@action=redirect&bpo=31975]: The default warning filter list now starts with a “default::DeprecationWarning: \_\_main\_” entry, so deprecation warnings are once again shown by default in single-file scripts and at the interactive prompt.
- [bpo-32226](https://bugs.python.org/issue?@action=redirect&bpo=32226) [https://bugs.python.org/issue?@action=redirect&bpo=32226]: `__class_getitem__` is now an automatic class method.
- [bpo-32399](https://bugs.python.org/issue?@action=redirect&bpo=32399) [https://bugs.python.org/issue?@action=redirect&bpo=32399]: Add AIX uid library support for RFC4122 using `uuid_create()` in `libc.a`
- [bpo-32390](https://bugs.python.org/issue?@action=redirect&bpo=32390) [https://bugs.python.org/issue?@action=redirect&bpo=32390]: Fix the compilation failure on AIX after the `f_fsid` field has been added to the object returned by `os.statvfs()` ([bpo-32143](https://bugs.python.org/issue?@action=redirect&bpo=32143) [https://bugs.python.org/issue?@action=redirect&bpo=32143]). Original patch by Michael Felt.
- [bpo-32379](https://bugs.python.org/issue?@action=redirect&bpo=32379) [https://bugs.python.org/issue?@action=redirect&bpo=32379]: Make MRO computation faster when a class inherits from a single base.
- [bpo-32259](https://bugs.python.org/issue?@action=redirect&bpo=32259) [https://bugs.python.org/issue?@action=redirect&bpo=32259]: The error message of a `TypeError` raised when unpack non-iterable is now more specific.
- [bpo-27169](https://bugs.python.org/issue?@action=redirect&bpo=27169) [https://bugs.python.org/issue?@action=redirect&bpo=27169]: The `__debug__` constant is now optimized out at compile time. This fixes also [bpo-22091](https://bugs.python.org/issue?@action=redirect&bpo=22091)

[<https://bugs.python.org/issue?@action=redirect&bpo=22091>].

- [bpo-32329](#) [<https://bugs.python.org/issue?@action=redirect&bpo=32329>]: The **-R** option now turns on hash randomization when the **PYTHONHASHSEED** environment variable is set to 0. Previously, the option was ignored. Moreover, `sys.flags.hash_randomization` is now properly set to 0 when hash randomization is turned off by `PYTHONHASHSEED=0`.
- [bpo-30416](#) [<https://bugs.python.org/issue?@action=redirect&bpo=30416>]: The optimizer is now protected from spending much time doing complex calculations and consuming much memory for creating large constants in constant folding. Increased limits for constants that can be produced in constant folding.
- [bpo-32282](#) [<https://bugs.python.org/issue?@action=redirect&bpo=32282>]: Fix an unnecessary `ifdef` in the include of `VersionHelpers.h` in `socketmodule` on Windows.
- [bpo-30579](#) [<https://bugs.python.org/issue?@action=redirect&bpo=30579>]: Implement `TracebackType._new_` to allow Python-level creation of traceback objects, and make `TracebackType.tb_next` mutable.
- [bpo-32260](#) [<https://bugs.python.org/issue?@action=redirect&bpo=32260>]: Don't byte swap the input keys to the SipHash algorithm on big-endian platforms. This should ensure siphash gives consistent results across platforms.
- [bpo-31506](#) [<https://bugs.python.org/issue?@action=redirect&bpo=31506>]: Improve the error message logic for `object._new_` and `object._init_`. Patch by Sanyam Khurana.
- [bpo-20361](#) [<https://bugs.python.org/issue?@action=redirect&bpo=20361>]: **-b** and **-bb** now inject `'default::BytesWarning'` and `error::BytesWarning` entries into `sys.warnoptions`, ensuring that they take precedence over any other warning filters configured via the **-W** option or the `PYTHONWARNINGS` environment variable.
- [bpo-32230](#) [<https://bugs.python.org/issue?@action=redirect&bpo=32230>]: **-X dev** now injects a `'default'` entry into `sys.warnoptions`, ensuring that it behaves identically to actually passing `-Wdefault` at the

command line.

- [bpo-29240](https://bugs.python.org/issue?@action=redirect&bpo=29240) [https://bugs.python.org/issue?@action=redirect&bpo=29240]: Add a new UTF-8 mode: implementation of the [PEP 540](https://peps.python.org/pep-0540/) [https://peps.python.org/pep-0540/].
- [bpo-32226](https://bugs.python.org/issue?@action=redirect&bpo=32226) [https://bugs.python.org/issue?@action=redirect&bpo=32226]: [PEP 560](https://peps.python.org/pep-0560/) [https://peps.python.org/pep-0560/]: Add support for `__mro_entries__` and `__class_getitem__`. Implemented by Ivan Levkivskiy.
- [bpo-32225](https://bugs.python.org/issue?@action=redirect&bpo=32225) [https://bugs.python.org/issue?@action=redirect&bpo=32225]: [PEP 562](https://peps.python.org/pep-0562/) [https://peps.python.org/pep-0562/]: Add support for module `__getattr__` and `__dir__`. Implemented by Ivan Levkivskiy.
- [bpo-31901](https://bugs.python.org/issue?@action=redirect&bpo=31901) [https://bugs.python.org/issue?@action=redirect&bpo=31901]: The `atexit` module now has its callback stored per interpreter.
- [bpo-31650](https://bugs.python.org/issue?@action=redirect&bpo=31650) [https://bugs.python.org/issue?@action=redirect&bpo=31650]: Implement [PEP 552](https://peps.python.org/pep-0552/) [https://peps.python.org/pep-0552/] (Deterministic pycs). Python now supports invalidating bytecode cache files based on a source content hash rather than source last-modified time.
- [bpo-29469](https://bugs.python.org/issue?@action=redirect&bpo=29469) [https://bugs.python.org/issue?@action=redirect&bpo=29469]: Move constant folding from bytecode layer to AST layer. Original patch by Eugene Toder.

## Library

- [bpo-32506](https://bugs.python.org/issue?@action=redirect&bpo=32506) [https://bugs.python.org/issue?@action=redirect&bpo=32506]: Now that dict is defined as keeping insertion order, drop `OrderedDict` and just use plain dict.
- [bpo-32279](https://bugs.python.org/issue?@action=redirect&bpo=32279) [https://bugs.python.org/issue?@action=redirect&bpo=32279]: Add params to `dataclasses.make_dataclasses()`: `init`, `repr`, `eq`, `order`, `hash`, and `frozen`. Pass them through to `dataclass()`.
- [bpo-32278](https://bugs.python.org/issue?@action=redirect&bpo=32278) [https://bugs.python.org/issue?@action=redirect&bpo=32278]: Make type information optional on `dataclasses.make_dataclass()`. If omitted, the string `'typing.Any'` is used.
- [bpo-32499](https://bugs.python.org/issue?@action=redirect&bpo=32499) [https://bugs.python.org/issue?@action=redirect&bpo=32499]

- @action=redirect&bpo=32499]: Add `dataclasses.is_dataclass(obj)`, which returns True if obj is a dataclass or an instance of one.
- [bpo-32468](https://bugs.python.org/issue?@action=redirect&bpo=32468) [https://bugs.python.org/issue?@action=redirect&bpo=32468]: Improve frame `repr()` to mention filename, code name and current line number.
  - [bpo-23749](https://bugs.python.org/issue?@action=redirect&bpo=23749) [https://bugs.python.org/issue?@action=redirect&bpo=23749]: `asyncio`: Implement `loop.start_tls()`
  - [bpo-32441](https://bugs.python.org/issue?@action=redirect&bpo=32441) [https://bugs.python.org/issue?@action=redirect&bpo=32441]: Return the new file descriptor (i.e., the second argument) from `os.dup2`. Previously, `None` was always returned.
  - [bpo-32422](https://bugs.python.org/issue?@action=redirect&bpo=32422) [https://bugs.python.org/issue?@action=redirect&bpo=32422]: `functools.lru_cache` uses less memory (3 words for each cached key) and takes about 1/3 time for cyclic GC.
  - [bpo-31721](https://bugs.python.org/issue?@action=redirect&bpo=31721) [https://bugs.python.org/issue?@action=redirect&bpo=31721]: Prevent Python crash from happening when `Future._log_traceback` is set to True manually. Now it can only be set to False, or a `ValueError` is raised.
  - [bpo-32415](https://bugs.python.org/issue?@action=redirect&bpo=32415) [https://bugs.python.org/issue?@action=redirect&bpo=32415]: `asyncio`: Add `Task.get_loop()` and `Future.get_loop()`
  - [bpo-26133](https://bugs.python.org/issue?@action=redirect&bpo=26133) [https://bugs.python.org/issue?@action=redirect&bpo=26133]: Don't unsubscribe signals in `asyncio` UNIX event loop on interpreter shutdown.
  - [bpo-32363](https://bugs.python.org/issue?@action=redirect&bpo=32363) [https://bugs.python.org/issue?@action=redirect&bpo=32363]: Make `asyncio.Task.set_exception()` and `set_result()` raise `NotImplementedError`. `Task.step()` and `Future._await_()` raise proper exceptions when they are in an invalid state, instead of raising an `AssertionError`.
  - [bpo-32357](https://bugs.python.org/issue?@action=redirect&bpo=32357) [https://bugs.python.org/issue?@action=redirect&bpo=32357]: Optimize `asyncio.iscoroutine()` and `loop.create_task()` for non-native coroutines (e.g. `async/await` compiled with Cython).  
'`loop.create_task(python_coroutine)`' used to be 20% faster than '`loop.create_task(cython_coroutine)`'. Now, the latter is as fast.
  - [bpo-32356](https://bugs.python.org/issue?@action=redirect&bpo=32356) [https://bugs.python.org/issue?@action=redirect&bpo=32356]:

`asyncio.transport.resume_reading()` and `pause_reading()` are now idempotent. New `transport.is_reading()` method is added.

- [bpo-32355](https://bugs.python.org/issue?@action=redirect&bpo=32355) [https://bugs.python.org/issue?@action=redirect&bpo=32355]: Optimize `asyncio.gather()`; now up to 15% faster.
- [bpo-32351](https://bugs.python.org/issue?@action=redirect&bpo=32351) [https://bugs.python.org/issue?@action=redirect&bpo=32351]: Use fastpath in `asyncio.sleep` if `delay < 0` (2x boost)
- [bpo-32348](https://bugs.python.org/issue?@action=redirect&bpo=32348) [https://bugs.python.org/issue?@action=redirect&bpo=32348]: Optimize `asyncio.Future` `schedule/add/remove` callback. The optimization shows 3-6% performance improvements of `async/await` code.
- [bpo-32331](https://bugs.python.org/issue?@action=redirect&bpo=32331) [https://bugs.python.org/issue?@action=redirect&bpo=32331]: Fix `socket.settimeout()` and `socket.setblocking()` to keep `socket.type` as is. Fix `socket.socket()` constructor to reset any bit flags applied to `socket`'s type. This change only affects OSes that have `SOCK_NONBLOCK` and/or `SOCK_CLOEXEC`.
- [bpo-32248](https://bugs.python.org/issue?@action=redirect&bpo=32248) [https://bugs.python.org/issue?@action=redirect&bpo=32248]: Add `importlib.abc.ResourceReader` as an ABC for loaders to provide a unified API for reading resources contained within packages. Also add `importlib.resources` as the port of `importlib_resources`.
- [bpo-32311](https://bugs.python.org/issue?@action=redirect&bpo=32311) [https://bugs.python.org/issue?@action=redirect&bpo=32311]: Implement `asyncio.create_task(coro)` shortcut
- [bpo-32327](https://bugs.python.org/issue?@action=redirect&bpo=32327) [https://bugs.python.org/issue?@action=redirect&bpo=32327]: Convert `asyncio` functions that were documented as coroutines to coroutines. Affected functions: `loop.sock_sendall`, `loop.sock_recv`, `loop.sock_accept`, `loop.getaddrinfo`, `loop.getnameinfo`.
- [bpo-32323](https://bugs.python.org/issue?@action=redirect&bpo=32323) [https://bugs.python.org/issue?@action=redirect&bpo=32323]: `urllib.parse.urlsplit()` does not convert zone-id (scope) to lower case for scoped IPv6 addresses in hostnames now.
- [bpo-32302](https://bugs.python.org/issue?@action=redirect&bpo=32302) [https://bugs.python.org/issue?@action=redirect&bpo=32302]: Fix `bdist_wininst` of `distutils` for CRT v142: it binary compatible with CRT v140.
- [bpo-29711](https://bugs.python.org/issue?@action=redirect&bpo=29711) [https://bugs.python.org/issue?@action=redirect&bpo=29711]

@action=redirect&bpo=29711]: Fix `stop_serving` in `asyncio` proactor loop kill all listening servers

- [bpo-32308](https://bugs.python.org/issue?@action=redirect&bpo=32308) [https://bugs.python.org/issue?@action=redirect&bpo=32308]: `re.sub()` now replaces empty matches adjacent to a previous non-empty match.
- [bpo-29970](https://bugs.python.org/issue?@action=redirect&bpo=29970) [https://bugs.python.org/issue?@action=redirect&bpo=29970]: Abort `asyncio` `SSLProtocol` connection if handshake not complete within 10 seconds.
- [bpo-32314](https://bugs.python.org/issue?@action=redirect&bpo=32314) [https://bugs.python.org/issue?@action=redirect&bpo=32314]: Implement `asyncio.run()`.
- [bpo-17852](https://bugs.python.org/issue?@action=redirect&bpo=17852) [https://bugs.python.org/issue?@action=redirect&bpo=17852]: Revert incorrect fix based on misunderstanding of `_Py_PyAtExit()` semantics.
- [bpo-32296](https://bugs.python.org/issue?@action=redirect&bpo=32296) [https://bugs.python.org/issue?@action=redirect&bpo=32296]: Implement `asyncio.get_running_loop()` and `get_event_loop()` in C. This makes them 4x faster.
- [bpo-32250](https://bugs.python.org/issue?@action=redirect&bpo=32250) [https://bugs.python.org/issue?@action=redirect&bpo=32250]: Implement `asyncio.current_task()` and `asyncio.all_tasks()`. Add helpers intended to be used by alternative task implementations: `asyncio._register_task`, `asyncio._enter_task`, `asyncio._leave_task` and `asyncio._unregister_task`. Deprecate `asyncio.Task.current_task()` and `asyncio.Task.all_tasks()`.
- [bpo-32255](https://bugs.python.org/issue?@action=redirect&bpo=32255) [https://bugs.python.org/issue?@action=redirect&bpo=32255]: A single empty field is now always quoted when written into a CSV file. This allows to distinguish an empty row from a row consisting of a single empty field. Patch by Licht Takeuchi.
- [bpo-32277](https://bugs.python.org/issue?@action=redirect&bpo=32277) [https://bugs.python.org/issue?@action=redirect&bpo=32277]: Raise `NotImplementedError` instead of `SystemError` on platforms where `chmod(..., follow_symlinks=False)` is not supported. Patch by Anthony Sottile.
- [bpo-30050](https://bugs.python.org/issue?@action=redirect&bpo=30050) [https://bugs.python.org/issue?@action=redirect&bpo=30050]: New argument `warn_on_full_buffer` to `signal.set_wakeup_fd` lets you control whether Python prints a warning on `stderr` when the wakeup

fd buffer overflows.

- [bpo-29137](https://bugs.python.org/issue?@action=redirect&bpo=29137) [https://bugs.python.org/issue?@action=redirect&bpo=29137]: The `fpectl` library has been removed. It was never enabled by default, never worked correctly on x86-64, and it changed the Python ABI in ways that caused unexpected breakage of C extensions.
- [bpo-32273](https://bugs.python.org/issue?@action=redirect&bpo=32273) [https://bugs.python.org/issue?@action=redirect&bpo=32273]: Move `asyncio.test_utils` to `test.test_asyncio`.
- [bpo-32272](https://bugs.python.org/issue?@action=redirect&bpo=32272) [https://bugs.python.org/issue?@action=redirect&bpo=32272]: Remove `asyncio.async()` function.
- [bpo-32269](https://bugs.python.org/issue?@action=redirect&bpo=32269) [https://bugs.python.org/issue?@action=redirect&bpo=32269]: Add `asyncio.get_running_loop()` function.
- [bpo-32265](https://bugs.python.org/issue?@action=redirect&bpo=32265) [https://bugs.python.org/issue?@action=redirect&bpo=32265]: All class and static methods of builtin types now are correctly classified by `inspect.classify_class_attrs()` and grouped in `pydoc` output. Added `types.ClassMethodDescriptorType` for unbound class methods of builtin types.
- [bpo-32253](https://bugs.python.org/issue?@action=redirect&bpo=32253) [https://bugs.python.org/issue?@action=redirect&bpo=32253]: Deprecate `yield from lock`, `await lock`, `with (yield from lock)` and `with await lock` for `asyncio` synchronization primitives.
- [bpo-22589](https://bugs.python.org/issue?@action=redirect&bpo=22589) [https://bugs.python.org/issue?@action=redirect&bpo=22589]: Changed MIME type of `.bmp` from 'image/x-ms-bmp' to 'image/bmp'.
- [bpo-32193](https://bugs.python.org/issue?@action=redirect&bpo=32193) [https://bugs.python.org/issue?@action=redirect&bpo=32193]: Convert `asyncio` to use *async/await* syntax. Old styled `yield from` is still supported too.
- [bpo-32206](https://bugs.python.org/issue?@action=redirect&bpo=32206) [https://bugs.python.org/issue?@action=redirect&bpo=32206]: Add support to run modules with `pdb`.
- [bpo-32227](https://bugs.python.org/issue?@action=redirect&bpo=32227) [https://bugs.python.org/issue?@action=redirect&bpo=32227]: `functools.singledispatch` now supports registering implementations using type annotations.
- [bpo-15873](https://bugs.python.org/issue?@action=redirect&bpo=15873) [https://bugs.python.org/issue?@action=redirect&bpo=15873]: Added new alternate constructors `datetime.datetime.fromisoformat()`,

`datetime.time.fromisoformat()` and `datetime.date.fromisoformat()` as the inverse operation of each classes's respective `isoformat` methods.

- [bpo-32199](https://bugs.python.org/issue?@action=redirect&bpo=32199) [https://bugs.python.org/issue?@action=redirect&bpo=32199]: The `getnode()` ip getter now uses 'ip link' instead of 'ip link list'.
- [bpo-32143](https://bugs.python.org/issue?@action=redirect&bpo=32143) [https://bugs.python.org/issue?@action=redirect&bpo=32143]: `os.statvfs()` includes the `f_fsid` field from `statvfs(2)`
- [bpo-26439](https://bugs.python.org/issue?@action=redirect&bpo=26439) [https://bugs.python.org/issue?@action=redirect&bpo=26439]: Fix `ctypes.util.find_library()` for AIX by implementing `ctypes._aix.find_library()` Patch by: Michael Felt
- [bpo-31993](https://bugs.python.org/issue?@action=redirect&bpo=31993) [https://bugs.python.org/issue?@action=redirect&bpo=31993]: The pickler now uses less memory when serializing large bytes and str objects into a file. Pickles created with protocol 4 will require less memory for unpickling large bytes and str objects.
- [bpo-27456](https://bugs.python.org/issue?@action=redirect&bpo=27456) [https://bugs.python.org/issue?@action=redirect&bpo=27456]: Ensure `TCP_NODELAY` is set on Linux. Tests by Victor Stinner.
- [bpo-31778](https://bugs.python.org/issue?@action=redirect&bpo=31778) [https://bugs.python.org/issue?@action=redirect&bpo=31778]: `ast.literal_eval()` is now more strict. Addition and subtraction of arbitrary numbers no longer allowed.
- [bpo-31802](https://bugs.python.org/issue?@action=redirect&bpo=31802) [https://bugs.python.org/issue?@action=redirect&bpo=31802]: Importing native path module (`posixpath`, `ntpath`) now works even if the `os` module still is not imported.
- [bpo-30241](https://bugs.python.org/issue?@action=redirect&bpo=30241) [https://bugs.python.org/issue?@action=redirect&bpo=30241]: Add `contextlib.AbstractAsyncContextManager`. Patch by Jelle Zijlstra.
- [bpo-31699](https://bugs.python.org/issue?@action=redirect&bpo=31699) [https://bugs.python.org/issue?@action=redirect&bpo=31699]: Fix deadlocks in `concurrent.futures.ProcessPoolExecutor` when task arguments or results cause pickling or unpickling errors. This should make sure that calls to the `ProcessPoolExecutor` API always eventually return.
- [bpo-15216](https://bugs.python.org/issue?@action=redirect&bpo=15216) [https://bugs.python.org/issue?@action=redirect&bpo=15216]

@action=redirect&bpo=15216]:

`TextIOWrapper.reconfigure()` supports changing *encoding*, *errors*, and *newline*.

## Documentation

- [bpo-32418](https://bugs.python.org/issue?@action=redirect&bpo=32418) [https://bugs.python.org/issue?@action=redirect&bpo=32418]: Add `get_loop()` method to `Server` and `AbstractServer` classes.

## Tests

- [bpo-32252](https://bugs.python.org/issue?@action=redirect&bpo=32252) [https://bugs.python.org/issue?@action=redirect&bpo=32252]: Fix `faulthandler_suppress_crash_report()` used to prevent core dump files when testing crashes. `getrlimit()` returns zero on success.
- [bpo-32002](https://bugs.python.org/issue?@action=redirect&bpo=32002) [https://bugs.python.org/issue?@action=redirect&bpo=32002]: Adjust C locale coercion testing for the empty locale and POSIX locale cases to more readily adjust to platform dependent behaviour.

## Windows

- [bpo-19764](https://bugs.python.org/issue?@action=redirect&bpo=19764) [https://bugs.python.org/issue?@action=redirect&bpo=19764]: Implement support for **`subprocess.Popen(close_fds=True)`** on Windows. Patch by Segev Finer.

## Tools/Demos

- [bpo-24960](https://bugs.python.org/issue?@action=redirect&bpo=24960) [https://bugs.python.org/issue?@action=redirect&bpo=24960]: `2to3` and `lib2to3` can now read pickled grammar files using `pkgutil.get_data()` rather than probing the filesystem. This lets `2to3` and `lib2to3` work when run from a zipfile.

## C API

- [bpo-32030](https://bugs.python.org/issue?@action=redirect&bpo=32030) [https://bugs.python.org/issue?@action=redirect&bpo=32030]: `Py_Initialize()` doesn't reset the memory allocators to default if the `PYTHONMALLOC` environment variable is not set.
- [bpo-29084](https://bugs.python.org/issue?@action=redirect&bpo=29084) [https://bugs.python.org/issue?@action=redirect&bpo=29084]: Undocumented C API for `OrderedDict` has been excluded from the limited C API. It was added by mistake and actually never worked in the limited C API.
- [bpo-32264](https://bugs.python.org/issue?@action=redirect&bpo=32264) [https://bugs.python.org/issue?@action=redirect&bpo=32264]: Moved the `pygetopt.h` header into `internal/`, since it has no public APIs.
- [bpo-32241](https://bugs.python.org/issue?@action=redirect&bpo=32241) [https://bugs.python.org/issue?@action=redirect&bpo=32241]: `Py_SetProgramName()` and `Py_SetPythonHome()` now take the `const wchar *` arguments instead of `wchar *`.

## Python 3.7.0 alpha 3

*Release date: 2017-12-05*

### Core and Builtins

- [bpo-32176](https://bugs.python.org/issue?@action=redirect&bpo=32176) [https://bugs.python.org/issue?@action=redirect&bpo=32176]: `co_flags.CO_NOFREE` is now always set correctly by the code object constructor based on freevars and cellvars, rather than needing to be set correctly by the caller. This ensures it will be cleared automatically when additional cell references are injected into a modified code object and function.
- [bpo-10544](https://bugs.python.org/issue?@action=redirect&bpo=10544) [https://bugs.python.org/issue?@action=redirect&bpo=10544]: Yield expressions are now deprecated in comprehensions and generator expressions. They are still permitted in the definition of the outermost iterable, as that is evaluated directly in the enclosing scope.
- [bpo-32137](https://bugs.python.org/issue?@action=redirect&bpo=32137) [https://bugs.python.org/issue?@action=redirect&bpo=32137]: The repr of deeply nested dict now raises a `RecursionError` instead of crashing due to a stack overflow.

- [bpo-32096](https://bugs.python.org/issue?@action=redirect&bpo=32096) [https://bugs.python.org/issue?@action=redirect&bpo=32096]: Revert memory allocator changes in the C API: move structures back from `_PyRuntime` to `Objects/obmalloc.c`. The memory allocators are once again initialized statically, and so `PyMem_RawMalloc()` and `Py_DecodeLocale()` can be called before `_PyRuntime_Initialize()`.
- [bpo-32043](https://bugs.python.org/issue?@action=redirect&bpo=32043) [https://bugs.python.org/issue?@action=redirect&bpo=32043]: Add a new “developer mode”: new “-X dev” command line option to enable debug checks at runtime.
- [bpo-32023](https://bugs.python.org/issue?@action=redirect&bpo=32023) [https://bugs.python.org/issue?@action=redirect&bpo=32023]: `SyntaxError` is now correctly raised when a generator expression without parenthesis is used instead of an inheritance list in a class definition. The duplication of the parentheses can be omitted only on calls.
- [bpo-32012](https://bugs.python.org/issue?@action=redirect&bpo=32012) [https://bugs.python.org/issue?@action=redirect&bpo=32012]: `SyntaxError` is now correctly raised when a generator expression without parenthesis is passed as an argument, but followed by a trailing comma. A generator expression always needs to be directly inside a set of parentheses and cannot have a comma on either side.
- [bpo-28180](https://bugs.python.org/issue?@action=redirect&bpo=28180) [https://bugs.python.org/issue?@action=redirect&bpo=28180]: A new internal `_Py_SetLocaleFromEnv(category)` helper function has been added in order to improve the consistency of behaviour across different `libc` implementations (e.g. Android doesn’t support setting the locale from the environment by default).
- [bpo-31949](https://bugs.python.org/issue?@action=redirect&bpo=31949) [https://bugs.python.org/issue?@action=redirect&bpo=31949]: Fixed several issues in printing tracebacks (`PyTraceBack_Print()`). Setting `sys.tracebacklimit` to 0 or less now suppresses printing tracebacks. Setting `sys.tracebacklimit` to `None` now causes using the default limit. Setting `sys.tracebacklimit` to an integer larger than `LONG_MAX` now means using the limit `LONG_MAX` rather than the default limit. Fixed integer overflows in the case of more than `2**31` traceback items on Windows. Fixed output errors handling.
- [bpo-30696](https://bugs.python.org/issue?@action=redirect&bpo=30696) [https://bugs.python.org/issue?@action=redirect&bpo=30696]: Fix the interactive interpreter

looping endlessly when no memory.

- [bpo-20047](https://bugs.python.org/issue?@action=redirect&bpo=20047) [https://bugs.python.org/issue?@action=redirect&bpo=20047]: Bytearray methods `partition()` and `rpartition()` now accept only bytes-like objects as separator, as documented. In particular they now raise `TypeError` rather of returning a bogus result when an integer is passed as a separator.
- [bpo-21720](https://bugs.python.org/issue?@action=redirect&bpo=21720) [https://bugs.python.org/issue?@action=redirect&bpo=21720]: `BytesWarning` no longer emitted when the *fromlist* argument of `__import__()` or the `__all__` attribute of the module contain bytes instances.
- [bpo-31845](https://bugs.python.org/issue?@action=redirect&bpo=31845) [https://bugs.python.org/issue?@action=redirect&bpo=31845]: Environment variables are once more read correctly at interpreter startup.
- [bpo-28936](https://bugs.python.org/issue?@action=redirect&bpo=28936) [https://bugs.python.org/issue?@action=redirect&bpo=28936]: Ensure that lexically first syntax error involving a parameter and `global` or `nonlocal` is detected first at a given scope. Patch by Ivan Levkivskyi.
- [bpo-31825](https://bugs.python.org/issue?@action=redirect&bpo=31825) [https://bugs.python.org/issue?@action=redirect&bpo=31825]: Fixed `OverflowError` in the ‘unicode-escape’ codec and in `codecs.escape_decode()` when decode an escaped non-ascii byte.
- [bpo-31618](https://bugs.python.org/issue?@action=redirect&bpo=31618) [https://bugs.python.org/issue?@action=redirect&bpo=31618]: The per-frame tracing logic added in 3.7a1 has been altered so that `frame->f_lineno` is updated before either `"line"` or `"opcode"` events are emitted. Previously, opcode events were emitted first, and therefore would occasionally see stale line numbers on the frame. The behavior of this feature has changed slightly as a result: when both `f_trace_lines` and `f_trace_opcodes` are enabled, line events now occur first.
- [bpo-28603](https://bugs.python.org/issue?@action=redirect&bpo=28603) [https://bugs.python.org/issue?@action=redirect&bpo=28603]: Print the full context/cause chain of exceptions on interpreter exit, even if an exception in the chain is unhashable or compares equal to later ones. Patch by Zane Bitter.
- [bpo-31786](https://bugs.python.org/issue?@action=redirect&bpo=31786) [https://bugs.python.org/issue?@action=redirect&bpo=31786]: Fix timeout rounding in the `select` module to round correctly negative timeouts between -1.0 and 0.0. The functions now block waiting for events as

expected. Previously, the call was incorrectly non-blocking. Patch by Pablo Galindo.

- [bpo-31781](https://bugs.python.org/issue?@action=redirect&bpo=31781) [https://bugs.python.org/issue?@action=redirect&bpo=31781]: Prevent crashes when calling methods of an uninitialized `zipimport.zipimporter` object. Patch by Oren Milman.
- [bpo-30399](https://bugs.python.org/issue?@action=redirect&bpo=30399) [https://bugs.python.org/issue?@action=redirect&bpo=30399]: Standard `repr()` of `BaseException` with a single argument no longer contains redundant trailing comma.
- [bpo-31626](https://bugs.python.org/issue?@action=redirect&bpo=31626) [https://bugs.python.org/issue?@action=redirect&bpo=31626]: Fixed a bug in debug memory allocator. There was a write to freed memory after shrinking a memory block.
- [bpo-30817](https://bugs.python.org/issue?@action=redirect&bpo=30817) [https://bugs.python.org/issue?@action=redirect&bpo=30817]: `PyErr_PrintEx()` clears now the ignored exception that may be raised by `_PySys_SetObjectId()`, for example when no memory.

## Library

- [bpo-28556](https://bugs.python.org/issue?@action=redirect&bpo=28556) [https://bugs.python.org/issue?@action=redirect&bpo=28556]: Two minor fixes for `typing` module: allow shallow copying instances of generic classes, improve interaction of `__init_subclass__` with generics. Original PRs by Ivan Levkivskyi.
- [bpo-32214](https://bugs.python.org/issue?@action=redirect&bpo=32214) [https://bugs.python.org/issue?@action=redirect&bpo=32214]: PEP 557, Data Classes. Provides a decorator which adds boilerplate methods to classes which use type annotations so specify fields.
- [bpo-27240](https://bugs.python.org/issue?@action=redirect&bpo=27240) [https://bugs.python.org/issue?@action=redirect&bpo=27240]: The header folding algorithm for the new email policies has been rewritten, which also fixes [bpo-30788](https://bugs.python.org/issue?@action=redirect&bpo=30788) [https://bugs.python.org/issue?@action=redirect&bpo=30788], [bpo-31831](https://bugs.python.org/issue?@action=redirect&bpo=31831) [https://bugs.python.org/issue?@action=redirect&bpo=31831], and [bpo-32182](https://bugs.python.org/issue?@action=redirect&bpo=32182) [https://bugs.python.org/issue?@action=redirect&bpo=32182]. In particular, RFC2231 folding is now done correctly.
- [bpo-32186](https://bugs.python.org/issue?@action=redirect&bpo=32186) [https://bugs.python.org/issue?@action=redirect&bpo=32186]: `io.FileIO.readall()` and

`io.FileIO.read()` now release the GIL when getting the file size. Fixed hang of all threads with inaccessible NFS server. Patch by Nir Soffer.

- [bpo-32101](https://bugs.python.org/issue?@action=redirect&bpo=32101) [https://bugs.python.org/issue?@action=redirect&bpo=32101]: Add `sys.flags.dev_mode` flag
- [bpo-32154](https://bugs.python.org/issue?@action=redirect&bpo=32154) [https://bugs.python.org/issue?@action=redirect&bpo=32154]: The `asyncio.windows_utils.socketpair()` function has been removed: use directly `socket.socketpair()` which is available on all platforms since Python 3.5 (before, it wasn't available on Windows). `asyncio.windows_utils.socketpair()` was just an alias to `socket.socketpair` on Python 3.5 and newer.
- [bpo-32089](https://bugs.python.org/issue?@action=redirect&bpo=32089) [https://bugs.python.org/issue?@action=redirect&bpo=32089]: warnings: In development (-X dev) and debug mode (pydebug build), use the “default” action for ResourceWarning, rather than the “always” action, in the default warnings filters.
- [bpo-32107](https://bugs.python.org/issue?@action=redirect&bpo=32107) [https://bugs.python.org/issue?@action=redirect&bpo=32107]: `uuid.getnode()` now preferentially returns universally administered MAC addresses if available, over locally administered MAC addresses. This makes a better guarantee for global uniqueness of UUIDs returned from `uuid.uuid1()`. If only locally administered MAC addresses are available, the first such one found is returned.
- [bpo-23033](https://bugs.python.org/issue?@action=redirect&bpo=23033) [https://bugs.python.org/issue?@action=redirect&bpo=23033]: Wildcard is now supported in hostname when it is one and only character in the left most segment of hostname in second argument of `ssl.match_hostname()`. Patch by Mandeep Singh.
- [bpo-12239](https://bugs.python.org/issue?@action=redirect&bpo=12239) [https://bugs.python.org/issue?@action=redirect&bpo=12239]: Make `msilib.SummaryInformation.GetProperty()` return None when the value of property is `VT_EMPTY`. Initial patch by Mark Mc Mahon.
- [bpo-28334](https://bugs.python.org/issue?@action=redirect&bpo=28334) [https://bugs.python.org/issue?@action=redirect&bpo=28334]: Use `os.path.expanduser()` to find the `~/netrc` file in `netrc.netrc`. If it does not exist, `FileNotFoundError` is raised. Patch by Dimitri

Merejkowsky.

- [bpo-32121](https://bugs.python.org/issue?@action=redirect&bpo=32121) [https://bugs.python.org/issue?@action=redirect&bpo=32121]: Made `tracemalloc.Traceback` behave more like the `traceback` module, sorting the frames from oldest to most recent. `Traceback.format()` now accepts negative *limit*, truncating the result to the `abs(limit)` oldest frames. To get the old behaviour, one can use the new *most\_recent\_first* argument to `Traceback.format()`. (Patch by Jesse Bakker.)
- [bpo-31325](https://bugs.python.org/issue?@action=redirect&bpo=31325) [https://bugs.python.org/issue?@action=redirect&bpo=31325]: Fix wrong usage of `collections.namedtuple()` in the `RobotFileParser.parse()` method. Initial patch by Robin Wellner.
- [bpo-12382](https://bugs.python.org/issue?@action=redirect&bpo=12382) [https://bugs.python.org/issue?@action=redirect&bpo=12382]: `msilib.OpenDatabase()` now raises a better exception message when it couldn't open or create an MSI file. Initial patch by William Tisäter.
- [bpo-19610](https://bugs.python.org/issue?@action=redirect&bpo=19610) [https://bugs.python.org/issue?@action=redirect&bpo=19610]: `setup()` now warns about invalid types for some fields. The `distutils.dist.Distribution` class now warns when `classifiers`, `keywords` and `platforms` fields are not specified as a list or a string.
- [bpo-32071](https://bugs.python.org/issue?@action=redirect&bpo=32071) [https://bugs.python.org/issue?@action=redirect&bpo=32071]: Added the `-k` command-line option to `python -m unittest` to run only tests that match the given pattern(s).
- [bpo-10049](https://bugs.python.org/issue?@action=redirect&bpo=10049) [https://bugs.python.org/issue?@action=redirect&bpo=10049]: Added *nullcontext* no-op context manager to `contextlib`. This provides a simpler and faster alternative to `ExitStack()` when handling optional context managers.
- [bpo-28684](https://bugs.python.org/issue?@action=redirect&bpo=28684) [https://bugs.python.org/issue?@action=redirect&bpo=28684]: The new `test.support.skip_unless_bind_unix_socket()` decorator is used here to skip `asyncio` tests that fail because the platform lacks a functional `bind()` function for unix domain sockets (as it is the case for non root users on the recent Android versions

that run now SELinux in enforcing mode).

- [bpo-32110](https://bugs.python.org/issue?@action=redirect&bpo=32110) [https://bugs.python.org/issue?@action=redirect&bpo=32110]: `codecs.StreamReader.read(n)` now returns not more than *n* characters/bytes for non-negative *n*. This makes it compatible with `read()` methods of other file-like objects.
- [bpo-27535](https://bugs.python.org/issue?@action=redirect&bpo=27535) [https://bugs.python.org/issue?@action=redirect&bpo=27535]: The warnings module doesn't leak memory anymore in the hidden warnings registry for the "ignore" action of warnings filters. `warn_explicit()` function doesn't add the warning key to the registry anymore for the "ignore" action.
- [bpo-32088](https://bugs.python.org/issue?@action=redirect&bpo=32088) [https://bugs.python.org/issue?@action=redirect&bpo=32088]: warnings: When Python is build is debug mode (`Py_DEBUG`), **DeprecationWarning**, **PendingDeprecationWarning** and **ImportWarning** warnings are now displayed by default.
- [bpo-1647489](https://bugs.python.org/issue?@action=redirect&bpo=1647489) [https://bugs.python.org/issue?@action=redirect&bpo=1647489]: Fixed searching regular expression patterns that could match an empty string. Non-empty string can now be correctly found after matching an empty string.
- [bpo-25054](https://bugs.python.org/issue?@action=redirect&bpo=25054) [https://bugs.python.org/issue?@action=redirect&bpo=25054]: Added support of splitting on a pattern that could match an empty string.
- [bpo-32072](https://bugs.python.org/issue?@action=redirect&bpo=32072) [https://bugs.python.org/issue?@action=redirect&bpo=32072]: Fixed issues with binary plists: Fixed saving bytearrays. Identical objects will be saved only once. Equal references will be load as identical objects. Added support for saving and loading recursive data structures.
- [bpo-32069](https://bugs.python.org/issue?@action=redirect&bpo=32069) [https://bugs.python.org/issue?@action=redirect&bpo=32069]: Drop legacy SSL transport from `asyncio`, `ssl.MemoryBIO` is always used anyway.
- [bpo-32066](https://bugs.python.org/issue?@action=redirect&bpo=32066) [https://bugs.python.org/issue?@action=redirect&bpo=32066]: `asyncio`: Support `pathlib.Path` in `create_unix_connection`; `sock` arg should be optional
- [bpo-32046](https://bugs.python.org/issue?@action=redirect&bpo=32046) [https://bugs.python.org/issue?@action=redirect&bpo=32046]: Updates 2to3 to convert from `operator.isCallable(obj)` to `callable(obj)`. Patch by Donghee Na.

- [bpo-32018](https://bugs.python.org/issue?@action=redirect&bpo=32018) [https://bugs.python.org/issue?@action=redirect&bpo=32018]: inspect.signature should follow [PEP 8](https://peps.python.org/pep-0008/) [https://peps.python.org/pep-0008/], if the parameter has an annotation and a default value. Patch by Donghee Na.
- [bpo-32025](https://bugs.python.org/issue?@action=redirect&bpo=32025) [https://bugs.python.org/issue?@action=redirect&bpo=32025]: Add time.thread\_time() and time.thread\_time\_ns()
- [bpo-32037](https://bugs.python.org/issue?@action=redirect&bpo=32037) [https://bugs.python.org/issue?@action=redirect&bpo=32037]: Integers that fit in a signed 32-bit integer will be now pickled with protocol 0 using the INT opcode. This will decrease the size of a pickle, speed up pickling and unpickling, and make these integers be unpickled as int instances in Python 2.
- [bpo-32034](https://bugs.python.org/issue?@action=redirect&bpo=32034) [https://bugs.python.org/issue?@action=redirect&bpo=32034]: Make asyncio.IncompleteReadError and LimitOverrunError pickleable.
- [bpo-32015](https://bugs.python.org/issue?@action=redirect&bpo=32015) [https://bugs.python.org/issue?@action=redirect&bpo=32015]: Fixed the looping of asyncio in the case of reconnection the socket during waiting async read/write from/to the socket.
- [bpo-32011](https://bugs.python.org/issue?@action=redirect&bpo=32011) [https://bugs.python.org/issue?@action=redirect&bpo=32011]: Restored support of loading marshal files with the TYPE\_INT64 code. These files can be produced in Python 2.7.
- [bpo-28369](https://bugs.python.org/issue?@action=redirect&bpo=28369) [https://bugs.python.org/issue?@action=redirect&bpo=28369]: Enhance add\_reader/writer check that socket is not used by some transport. Before, only cases when add\_reader/writer were called with an int FD were supported. Now the check is implemented correctly for all file-like objects.
- [bpo-31976](https://bugs.python.org/issue?@action=redirect&bpo=31976) [https://bugs.python.org/issue?@action=redirect&bpo=31976]: Fix race condition when flushing a file is slow, which can cause a segfault if closing the file from another thread.
- [bpo-31985](https://bugs.python.org/issue?@action=redirect&bpo=31985) [https://bugs.python.org/issue?@action=redirect&bpo=31985]: Formally deprecated aifc.openfp, sunau.openfp, and wave.openfp. Since change 7bc817d5ba917528e8bd07ec461c635291e7b06a in 1993, openfp in each of the three modules had been pointing to that

module's open function as a matter of backwards compatibility, though it had been both untested and undocumented.

- [bpo-21862](https://bugs.python.org/issue?@action=redirect&bpo=21862) [https://bugs.python.org/issue?@action=redirect&bpo=21862]: cProfile command line now accepts `-m module_name` as an alternative to script path. Patch by Sanyam Khurana.
- [bpo-31970](https://bugs.python.org/issue?@action=redirect&bpo=31970) [https://bugs.python.org/issue?@action=redirect&bpo=31970]: Reduce performance overhead of asyncio debug mode.
- [bpo-31843](https://bugs.python.org/issue?@action=redirect&bpo=31843) [https://bugs.python.org/issue?@action=redirect&bpo=31843]: *database* argument of `sqlite3.connect()` now accepts a [path-like object](#), instead of just a string.
- [bpo-31945](https://bugs.python.org/issue?@action=redirect&bpo=31945) [https://bugs.python.org/issue?@action=redirect&bpo=31945]: Add Configurable *blocksize* to `HTTPConnection` and `HTTPSConnection` for improved upload throughput. Patch by Nir Soffer.
- [bpo-31943](https://bugs.python.org/issue?@action=redirect&bpo=31943) [https://bugs.python.org/issue?@action=redirect&bpo=31943]: Add a `cancelled()` method to [asyncio.Handle](#). Patch by Marat Sharafutdinov.
- [bpo-9678](https://bugs.python.org/issue?@action=redirect&bpo=9678) [https://bugs.python.org/issue?@action=redirect&bpo=9678]: Fixed determining the MAC address in the uuid module: Using ifconfig on NetBSD and OpenBSD. Using arp on Linux, FreeBSD, NetBSD and OpenBSD. Based on patch by Takayuki Shimizukawa.
- [bpo-30057](https://bugs.python.org/issue?@action=redirect&bpo=30057) [https://bugs.python.org/issue?@action=redirect&bpo=30057]: Fix potential missed signal in `signal.signal()`.
- [bpo-31933](https://bugs.python.org/issue?@action=redirect&bpo=31933) [https://bugs.python.org/issue?@action=redirect&bpo=31933]: Fix Blake2 params `leaf_size` and `node_offset` on big endian platforms. Patch by Jack O'Connor.
- [bpo-21423](https://bugs.python.org/issue?@action=redirect&bpo=21423) [https://bugs.python.org/issue?@action=redirect&bpo=21423]: Add an initializer argument to `{Process,Thread}PoolExecutor`
- [bpo-31927](https://bugs.python.org/issue?@action=redirect&bpo=31927) [https://bugs.python.org/issue?@action=redirect&bpo=31927]: Fixed compilation of the socket module on NetBSD 8. Fixed assertion failure or reading arbitrary data when parse a `AF_BLUETOOTH` address on NetBSD and DragonFly BSD.

- [bpo-27666](https://bugs.python.org/issue?@action=redirect&bpo=27666) [https://bugs.python.org/issue?@action=redirect&bpo=27666]: Fixed stack corruption in `curses.box()` and `curses.ungetmouse()` when the size of types `chtype` or `mmask_t` is less than the size of C long. `curses.box()` now accepts characters as arguments. Based on patch by Steve Fink.
- [bpo-31917](https://bugs.python.org/issue?@action=redirect&bpo=31917) [https://bugs.python.org/issue?@action=redirect&bpo=31917]: Add 3 new clock identifiers: `time.CLOCK_BOOTTIME`, `time.CLOCK_PROF` and `time.CLOCK_UPTIME`.
- [bpo-31897](https://bugs.python.org/issue?@action=redirect&bpo=31897) [https://bugs.python.org/issue?@action=redirect&bpo=31897]: `plistlib` now catches more errors when read binary plists and raises `InvalidFileException` instead of unexpected exceptions.
- [bpo-25720](https://bugs.python.org/issue?@action=redirect&bpo=25720) [https://bugs.python.org/issue?@action=redirect&bpo=25720]: Fix the method for checking pad state of `curses WINDOW`. Patch by Masayuki Yamamoto.
- [bpo-31893](https://bugs.python.org/issue?@action=redirect&bpo=31893) [https://bugs.python.org/issue?@action=redirect&bpo=31893]: Fixed the layout of the `kqueue_event` structure on OpenBSD and NetBSD. Fixed the comparison of the `kqueue_event` objects.
- [bpo-31891](https://bugs.python.org/issue?@action=redirect&bpo=31891) [https://bugs.python.org/issue?@action=redirect&bpo=31891]: Fixed building the `curses` module on NetBSD.
- [bpo-31884](https://bugs.python.org/issue?@action=redirect&bpo=31884) [https://bugs.python.org/issue?@action=redirect&bpo=31884]: added required constants to `subprocess` module for setting priority on windows
- [bpo-28281](https://bugs.python.org/issue?@action=redirect&bpo=28281) [https://bugs.python.org/issue?@action=redirect&bpo=28281]: Remove year (1-9999) limits on the `Calendar.weekday()` function. Patch by Mark Gollahon.
- [bpo-31702](https://bugs.python.org/issue?@action=redirect&bpo=31702) [https://bugs.python.org/issue?@action=redirect&bpo=31702]: `crypt.mksalt()` now allows to specify the number of rounds for SHA-256 and SHA-512 hashing.
- [bpo-30639](https://bugs.python.org/issue?@action=redirect&bpo=30639) [https://bugs.python.org/issue?@action=redirect&bpo=30639]: `inspect.getfile()` no longer computes the repr of unknown objects to display in an error message, to protect against badly behaved custom reprs.
- [bpo-30768](https://bugs.python.org/issue?@action=redirect&bpo=30768) [https://bugs.python.org/issue?@action=redirect&bpo=30768]: Fix the `pthread` + `semaphore`

implementation of `PyThread_acquire_lock_timed()` when called with `timeout > 0` and `intr_flag=0`: recompute the timeout if `sem_timedwait()` is interrupted by a signal (`EINTR`). See also the [PEP 475](https://peps.python.org/pep-0475/) [https://peps.python.org/pep-0475/].

- [bpo-31854](https://bugs.python.org/issue?@action=redirect&bpo=31854) [https://bugs.python.org/issue?@action=redirect&bpo=31854]: Add `mmap.ACCESS_DEFAULT` constant.
- [bpo-31834](https://bugs.python.org/issue?@action=redirect&bpo=31834) [https://bugs.python.org/issue?@action=redirect&bpo=31834]: Use optimized code for BLAKE2 only with SSSE3+. The pure SSE2 implementation is slower than the pure C reference implementation.
- [bpo-28292](https://bugs.python.org/issue?@action=redirect&bpo=28292) [https://bugs.python.org/issue?@action=redirect&bpo=28292]: `Calendar.itermonthdates()` will now consistently raise an exception when a date falls outside of the 0001-01-01 through 9999-12-31 range. To support applications that cannot tolerate such exceptions, the new methods `itermonthdays3()` and `itermonthdays4()` are added. The new methods return tuples and are not restricted by the range supported by `datetime.date`.
- [bpo-28564](https://bugs.python.org/issue?@action=redirect&bpo=28564) [https://bugs.python.org/issue?@action=redirect&bpo=28564]: The `shutil.rmtree()` function has been sped up to 20–40%. This was done using the `os.scandir()` function.
- [bpo-28416](https://bugs.python.org/issue?@action=redirect&bpo=28416) [https://bugs.python.org/issue?@action=redirect&bpo=28416]: Instances of `pickle.Pickler` subclass with the `persistent_id()` method and `pickle.Unpickler` subclass with the `persistent_load()` method no longer create reference cycles.
- [bpo-31653](https://bugs.python.org/issue?@action=redirect&bpo=31653) [https://bugs.python.org/issue?@action=redirect&bpo=31653]: Don't release the GIL if we can acquire a multiprocessing semaphore immediately.
- [bpo-28326](https://bugs.python.org/issue?@action=redirect&bpo=28326) [https://bugs.python.org/issue?@action=redirect&bpo=28326]: Fix `multiprocessing.Process` when `stdout` and/or `stderr` is closed or `None`.
- [bpo-20825](https://bugs.python.org/issue?@action=redirect&bpo=20825) [https://bugs.python.org/issue?@action=redirect&bpo=20825]: Add **`subnet_of`** and **`superset_of`** containment tests to [`ipaddress.IPv6Network`](#) and [`ipaddress.IPv4Network`](#). Patch by Michel Albert and Cheryl Sabella.

- [bpo-31827](https://bugs.python.org/issue?@action=redirect&bpo=31827) [https://bugs.python.org/issue?@action=redirect&bpo=31827]: Remove the `os.stat_float_times()` function. It was introduced in Python 2.3 for backward compatibility with Python 2.2, and was deprecated since Python 3.1.
- [bpo-31756](https://bugs.python.org/issue?@action=redirect&bpo=31756) [https://bugs.python.org/issue?@action=redirect&bpo=31756]: Add a `subprocess.Popen(text=False)` keyword argument to **subprocess** functions to be more explicit about when the library should attempt to decode outputs into text. Patch by Andrew Clegg.
- [bpo-31819](https://bugs.python.org/issue?@action=redirect&bpo=31819) [https://bugs.python.org/issue?@action=redirect&bpo=31819]: Add `AbstractEventLoop.sock_recv_into()`.
- [bpo-31457](https://bugs.python.org/issue?@action=redirect&bpo=31457) [https://bugs.python.org/issue?@action=redirect&bpo=31457]: If nested log adapters are used, the inner `process()` methods are no longer omitted.
- [bpo-31457](https://bugs.python.org/issue?@action=redirect&bpo=31457) [https://bugs.python.org/issue?@action=redirect&bpo=31457]: The `manager` property on `LoggerAdapter` objects is now properly settable.
- [bpo-31806](https://bugs.python.org/issue?@action=redirect&bpo=31806) [https://bugs.python.org/issue?@action=redirect&bpo=31806]: Fix timeout rounding in `time.sleep()`, `threading.Lock.acquire()` and `socket.socket.settimeout()` to round correctly negative timeouts between -1.0 and 0.0. The functions now block waiting for events as expected. Previously, the call was incorrectly non-blocking. Patch by Pablo Galindo.
- [bpo-31803](https://bugs.python.org/issue?@action=redirect&bpo=31803) [https://bugs.python.org/issue?@action=redirect&bpo=31803]: `time.clock()` and `time.get_clock_info('clock')` now emit a `DeprecationWarning` warning.
- [bpo-31800](https://bugs.python.org/issue?@action=redirect&bpo=31800) [https://bugs.python.org/issue?@action=redirect&bpo=31800]: Extended support for parsing UTC offsets. `strptime '%z'` can now parse the output generated by `datetime.isoformat`, including seconds and microseconds.
- [bpo-28603](https://bugs.python.org/issue?@action=redirect&bpo=28603) [https://bugs.python.org/issue?@action=redirect&bpo=28603]: `traceback`: Fix a `TypeError` that occurred during printing of exception tracebacks when either the current exception or an exception in its context/cause chain is unhashable. Patch by Zane Bitter.

- [bpo-30541](https://bugs.python.org/issue?@action=redirect&bpo=30541) [https://bugs.python.org/issue?@action=redirect&bpo=30541]: Add new function to seal a mock and prevent the automatically creation of child mocks. Patch by Mario Corchero.
- [bpo-31784](https://bugs.python.org/issue?@action=redirect&bpo=31784) [https://bugs.python.org/issue?@action=redirect&bpo=31784]: Implement the [PEP 564](https://peps.python.org/pep-0564/) [https://peps.python.org/pep-0564/], add new 6 new functions with nanosecond resolution to the `time` module:  
`clock_gettime_ns()`, `clock_settime_ns()`,  
`monotonic_ns()`, `perf_counter_ns()`,  
`process_time_ns()`, `time_ns()`.
- [bpo-30143](https://bugs.python.org/issue?@action=redirect&bpo=30143) [https://bugs.python.org/issue?@action=redirect&bpo=30143]: 2to3 now generates a code that uses abstract collection classes from `collections.abc` rather than `collections`.
- [bpo-31770](https://bugs.python.org/issue?@action=redirect&bpo=31770) [https://bugs.python.org/issue?@action=redirect&bpo=31770]: Prevent a crash when calling the `__init__()` method of a `sqlite3.Cursor` object more than once. Patch by Oren Milman.
- [bpo-31764](https://bugs.python.org/issue?@action=redirect&bpo=31764) [https://bugs.python.org/issue?@action=redirect&bpo=31764]: Prevent a crash in `sqlite3.Cursor.close()` in case the `Cursor` object is uninitialized. Patch by Oren Milman.
- [bpo-31752](https://bugs.python.org/issue?@action=redirect&bpo=31752) [https://bugs.python.org/issue?@action=redirect&bpo=31752]: Fix possible crash in `timedelta` constructor called with custom integers.
- [bpo-31620](https://bugs.python.org/issue?@action=redirect&bpo=31620) [https://bugs.python.org/issue?@action=redirect&bpo=31620]: an empty `asyncio.Queue` now doesn't leak memory when `queue.get` pollers timeout
- [bpo-31690](https://bugs.python.org/issue?@action=redirect&bpo=31690) [https://bugs.python.org/issue?@action=redirect&bpo=31690]: Allow the flags `re.ASCII`, `re.LOCALE`, and `re.UNICODE` to be used as group flags for regular expressions.
- [bpo-30349](https://bugs.python.org/issue?@action=redirect&bpo=30349) [https://bugs.python.org/issue?@action=redirect&bpo=30349]: `FutureWarning` is now emitted if a regular expression contains character set constructs that will change semantically in the future (nested sets and set operations).
- [bpo-31664](https://bugs.python.org/issue?@action=redirect&bpo=31664) [https://bugs.python.org/issue?@action=redirect&bpo=31664]: Added support for the Blowfish

hashing in the crypt module.

- [bpo-31632](https://bugs.python.org/issue?@action=redirect&bpo=31632) [https://bugs.python.org/issue?@action=redirect&bpo=31632]: Fix method `set_protocol()` of class `_SSLProtocolTransport` in `asyncio` module. This method was previously modifying a wrong reference to the protocol.
- [bpo-15037](https://bugs.python.org/issue?@action=redirect&bpo=15037) [https://bugs.python.org/issue?@action=redirect&bpo=15037]: Added a workaround for `getkey()` in `curses` for `ncurses 5.7` and earlier.
- [bpo-31307](https://bugs.python.org/issue?@action=redirect&bpo=31307) [https://bugs.python.org/issue?@action=redirect&bpo=31307]: Allow use of bytes objects for arguments to `configparser.ConfigParser.read()`. Patch by Vincent Michel.
- [bpo-31334](https://bugs.python.org/issue?@action=redirect&bpo=31334) [https://bugs.python.org/issue?@action=redirect&bpo=31334]: Fix `poll.poll([timeout])` in the `select` module for arbitrary negative timeouts on all OSes where it can only be a non-negative integer or -1. Patch by Riccardo Coccioli.
- [bpo-31310](https://bugs.python.org/issue?@action=redirect&bpo=31310) [https://bugs.python.org/issue?@action=redirect&bpo=31310]: `multiprocessing`'s semaphore tracker should be launched again if crashed.
- [bpo-31308](https://bugs.python.org/issue?@action=redirect&bpo=31308) [https://bugs.python.org/issue?@action=redirect&bpo=31308]: Make `multiprocessing`'s `forkserver` process immune to Ctrl-C and other user interruptions. If it crashes, restart it when necessary.
- [bpo-31245](https://bugs.python.org/issue?@action=redirect&bpo=31245) [https://bugs.python.org/issue?@action=redirect&bpo=31245]: Added support for `AF_UNIX` socket in `asyncio` `create_datagram_endpoint`.
- [bpo-30553](https://bugs.python.org/issue?@action=redirect&bpo=30553) [https://bugs.python.org/issue?@action=redirect&bpo=30553]: Add HTTP/2 status code 421 (Misdirected Request) to `http.HTTPStatus`. Patch by Vitor Pereira.

## Documentation

- [bpo-32105](https://bugs.python.org/issue?@action=redirect&bpo=32105) [https://bugs.python.org/issue?@action=redirect&bpo=32105]: Added `asyncio.BaseEventLoop.connect_accepted_socket` versionadded marker.

## Tests

- [bpo-31380](https://bugs.python.org/issue?@action=redirect&bpo=31380) [https://bugs.python.org/issue?@action=redirect&bpo=31380]: Skip `test_httpservers.test_undecodable_file` on macOS: fails on APFS.
- [bpo-31705](https://bugs.python.org/issue?@action=redirect&bpo=31705) [https://bugs.python.org/issue?@action=redirect&bpo=31705]: Skip `test_socket.test_sha256()` on Linux kernel older than 4.5. The test fails with `ENOKEY` on kernel 3.10 (on ppc64le). A fix was merged into the kernel 4.5.
- [bpo-32138](https://bugs.python.org/issue?@action=redirect&bpo=32138) [https://bugs.python.org/issue?@action=redirect&bpo=32138]: Skip on Android `test_faulthandler` tests that raise `SIGSEGV` and remove the `test.support.requires_android_level` decorator.
- [bpo-32136](https://bugs.python.org/issue?@action=redirect&bpo=32136) [https://bugs.python.org/issue?@action=redirect&bpo=32136]: The runtime embedding tests have been split out from `Lib/test/test_capi.py` into a new `Lib/test/test_embed.py` file.
- [bpo-28668](https://bugs.python.org/issue?@action=redirect&bpo=28668) [https://bugs.python.org/issue?@action=redirect&bpo=28668]: `test.support.requires_multiprocessing_queue` is removed. Skip tests with `test.support.import_module('multiprocessing.synchronize')` instead when the semaphore implementation is broken or missing.
- [bpo-32126](https://bugs.python.org/issue?@action=redirect&bpo=32126) [https://bugs.python.org/issue?@action=redirect&bpo=32126]: Skip `test_get_event_loop_new_process` in `test.test_asyncio.test_events` when `sem_open()` is not functional.
- [bpo-31174](https://bugs.python.org/issue?@action=redirect&bpo=31174) [https://bugs.python.org/issue?@action=redirect&bpo=31174]: Fix `test_tools.test_unparse:DirectoryTestCase` now stores the names sample to always test the same files. It prevents false alarms when hunting reference leaks.

## Build

- [bpo-28538](https://bugs.python.org/issue?@action=redirect&bpo=28538) [https://bugs.python.org/issue?@action=redirect&bpo=28538]: Revert the previous changes, the `if_nameindex` structure is defined by Unified Headers.
- [bpo-28762](https://bugs.python.org/issue?@action=redirect&bpo=28762) [https://bugs.python.org/issue?@action=redirect&bpo=28762]: Revert the last commit, the

F\_LOCK macro is defined by Android Unified Headers.

- [bpo-29040](https://bugs.python.org/issue?@action=redirect&bpo=29040) [https://bugs.python.org/issue?@action=redirect&bpo=29040]: Support building Android with Unified Headers. The first NDK release to support Unified Headers is android-ndk-r14.
- [bpo-32059](https://bugs.python.org/issue?@action=redirect&bpo=32059) [https://bugs.python.org/issue?@action=redirect&bpo=32059]: `detect_modules()` in `setup.py` now also searches the sysroot paths when cross-compiling.
- [bpo-31957](https://bugs.python.org/issue?@action=redirect&bpo=31957) [https://bugs.python.org/issue?@action=redirect&bpo=31957]: Fixes Windows SDK version detection when building for Windows.
- [bpo-31609](https://bugs.python.org/issue?@action=redirect&bpo=31609) [https://bugs.python.org/issue?@action=redirect&bpo=31609]: Fixes quotes in PCbuild/clean.bat
- [bpo-31934](https://bugs.python.org/issue?@action=redirect&bpo=31934) [https://bugs.python.org/issue?@action=redirect&bpo=31934]: Abort the build when building out of a not clean source tree.
- [bpo-31926](https://bugs.python.org/issue?@action=redirect&bpo=31926) [https://bugs.python.org/issue?@action=redirect&bpo=31926]: Fixed Argument Clinic sometimes causing compilation errors when there was more than one function and/or method in a .c file with the same name.
- [bpo-28791](https://bugs.python.org/issue?@action=redirect&bpo=28791) [https://bugs.python.org/issue?@action=redirect&bpo=28791]: Update Windows builds to use SQLite 3.21.0.
- [bpo-28791](https://bugs.python.org/issue?@action=redirect&bpo=28791) [https://bugs.python.org/issue?@action=redirect&bpo=28791]: Update OS X installer to use SQLite 3.21.0.
- [bpo-28643](https://bugs.python.org/issue?@action=redirect&bpo=28643) [https://bugs.python.org/issue?@action=redirect&bpo=28643]: Record profile-opt build progress with stamp files.
- [bpo-31866](https://bugs.python.org/issue?@action=redirect&bpo=31866) [https://bugs.python.org/issue?@action=redirect&bpo=31866]: Finish removing support for AtheOS.

## Windows

- [bpo-1102](https://bugs.python.org/issue?@action=redirect&bpo=1102) [https://bugs.python.org/issue?@action=redirect&bpo=1102]: Return `None` when `View.Fetch()` returns `ERROR_NO_MORE_ITEMS` instead of raising `MSIError`. Initial patch by Anthony Tuininga.

- [bpo-31944](https://bugs.python.org/issue?@action=redirect&bpo=31944) [https://bugs.python.org/issue?@action=redirect&bpo=31944]: Fixes Modify button in Apps and Features dialog.
- [bpo-20486](https://bugs.python.org/issue?@action=redirect&bpo=20486) [https://bugs.python.org/issue?@action=redirect&bpo=20486]: Implement the `Database.Close()` method to help closing MSI database objects.
- [bpo-31857](https://bugs.python.org/issue?@action=redirect&bpo=31857) [https://bugs.python.org/issue?@action=redirect&bpo=31857]: Make the behavior of `USE_STACKCHECK` deterministic in a multi-threaded environment.

## macOS

- [bpo-31392](https://bugs.python.org/issue?@action=redirect&bpo=31392) [https://bugs.python.org/issue?@action=redirect&bpo=31392]: Update macOS installer to use OpenSSL 1.0.2m

## IDLE

- [bpo-32207](https://bugs.python.org/issue?@action=redirect&bpo=32207) [https://bugs.python.org/issue?@action=redirect&bpo=32207]: Improve tk event exception tracebacks in IDLE. When tk event handling is driven by IDLE's run loop, a confusing and distracting `queue.EMPTY` traceback context is no longer added to tk event exception tracebacks. The traceback is now the same as when event handling is driven by user code. Patch based on a suggestion by Serhiy Storchaka.
- [bpo-32164](https://bugs.python.org/issue?@action=redirect&bpo=32164) [https://bugs.python.org/issue?@action=redirect&bpo=32164]: Delete unused file `idlelib/tabbedpages.py`. Use of `TabbedPageSet` in `configdialog` was replaced by `ttk.Notebook`.
- [bpo-32100](https://bugs.python.org/issue?@action=redirect&bpo=32100) [https://bugs.python.org/issue?@action=redirect&bpo=32100]: IDLE: Fix old and new bugs in `pathbrowser`; improve tests. Patch mostly by Cheryl Sabella.
- [bpo-31858](https://bugs.python.org/issue?@action=redirect&bpo=31858) [https://bugs.python.org/issue?@action=redirect&bpo=31858]: IDLE – Restrict shell prompt manipulation to the shell. Editor and output windows only see an empty last prompt line. This simplifies the code and fixes a minor bug when newline is inserted. `Sys.ps1`, if

present, is read on Shell start-up, but is not set or changed.

- [bpo-31860](https://bugs.python.org/issue?@action=redirect&bpo=31860) [https://bugs.python.org/issue?@action=redirect&bpo=31860]: The font sample in the IDLE configuration dialog is now editable. Changes persist while IDLE remains open
- [bpo-31836](https://bugs.python.org/issue?@action=redirect&bpo=31836) [https://bugs.python.org/issue?@action=redirect&bpo=31836]: Test\_code\_module now passes if run after test\_idle, which sets ps1. The code module uses sys.ps1 if present or sets it to '> > > ' if not. Test\_code\_module now properly tests both behaviors. Ditto for ps2.
- [bpo-28603](https://bugs.python.org/issue?@action=redirect&bpo=28603) [https://bugs.python.org/issue?@action=redirect&bpo=28603]: Fix a TypeError that caused a shell restart when printing a traceback that includes an exception that is unhashable. Patch by Zane Bitter.
- [bpo-13802](https://bugs.python.org/issue?@action=redirect&bpo=13802) [https://bugs.python.org/issue?@action=redirect&bpo=13802]: Use non-Latin characters in the IDLE's Font settings sample. Even if one selects a font that defines a limited subset of the unicode Basic Multilingual Plane, tcl/tk will use other fonts that define a character. The expanded example give users of non-Latin characters a better idea of what they might see in IDLE's shell and editors. To make room for the expanded sample, frames on the Font tab are re-arranged. The Font/Tabs help explains a bit about the additions.

## Tools/Demos

- [bpo-32159](https://bugs.python.org/issue?@action=redirect&bpo=32159) [https://bugs.python.org/issue?@action=redirect&bpo=32159]: Remove CVS and Subversion tools: remove svneol.py and treesync.py scripts. CPython migrated from CVS to Subversion, to Mercurial, and then to Git. CVS and Subversion are no longer used to develop CPython.
- [bpo-30722](https://bugs.python.org/issue?@action=redirect&bpo=30722) [https://bugs.python.org/issue?@action=redirect&bpo=30722]: Make redemo work with Python 3.6 and newer versions. Also, remove the LOCALE option since it doesn't work with string patterns in Python 3. Patch by Christoph Sarnowski.

## C API

- [bpo-20891](https://bugs.python.org/issue?@action=redirect&bpo=20891) [https://bugs.python.org/issue?@action=redirect&bpo=20891]: Fix `PyGILState_Ensure()`. When `PyGILState_Ensure()` is called in a non-Python thread before `PyEval_InitThreads()`, only call `PyEval_InitThreads()` after calling `PyThreadState_New()` to fix a crash.
- [bpo-32125](https://bugs.python.org/issue?@action=redirect&bpo=32125) [https://bugs.python.org/issue?@action=redirect&bpo=32125]: The `Py_UseClassExceptionsFlag` flag has been removed. It was deprecated and wasn't used anymore since Python 2.0.
- [bpo-25612](https://bugs.python.org/issue?@action=redirect&bpo=25612) [https://bugs.python.org/issue?@action=redirect&bpo=25612]: Move the current exception state from the frame object to the co-routine. This simplifies the interpreter and fixes a couple of obscure bugs caused by having swap exception state when entering or exiting a generator.
- [bpo-23699](https://bugs.python.org/issue?@action=redirect&bpo=23699) [https://bugs.python.org/issue?@action=redirect&bpo=23699]: Add `Py_RETURN_RICHCOMPARE` macro to reduce boilerplate code in rich comparison functions.
- [bpo-30697](https://bugs.python.org/issue?@action=redirect&bpo=30697) [https://bugs.python.org/issue?@action=redirect&bpo=30697]: The `PyExc_RecursionErrorInst` singleton is removed and `PyErr_NormalizeException()` does not use it anymore. This singleton is persistent and its members being never cleared may cause a segfault during finalization of the interpreter. See also [bpo-22898](https://bugs.python.org/issue?@action=redirect&bpo=22898) [https://bugs.python.org/issue?@action=redirect&bpo=22898].

## Python 3.7.0 alpha 2

*Release date: 2017-10-16*

### Core and Builtins

- [bpo-31558](https://bugs.python.org/issue?@action=redirect&bpo=31558) [https://bugs.python.org/issue?@action=redirect&bpo=31558]: `gc.freeze()` is a new API that allows for moving all objects currently tracked by the garbage

collector to a permanent generation, effectively removing them from future collection events. This can be used to protect those objects from having their `PyGC_Head` mutated. In effect, this enables great copy-on-write stability at `fork()`.

- [bpo-31642](https://bugs.python.org/issue?@action=redirect&bpo=31642) [https://bugs.python.org/issue?@action=redirect&bpo=31642]: Restored blocking “from package import module” by setting `sys.modules[“package.module”]` to `None`.
- [bpo-31708](https://bugs.python.org/issue?@action=redirect&bpo=31708) [https://bugs.python.org/issue?@action=redirect&bpo=31708]: Allow use of asynchronous generator expressions in synchronous functions.
- [bpo-31709](https://bugs.python.org/issue?@action=redirect&bpo=31709) [https://bugs.python.org/issue?@action=redirect&bpo=31709]: Drop support of asynchronous `_aiter_`.
- [bpo-30404](https://bugs.python.org/issue?@action=redirect&bpo=30404) [https://bugs.python.org/issue?@action=redirect&bpo=30404]: The `-u` option now makes the `stdout` and `stderr` streams unbuffered rather than line-buffered.
- [bpo-31619](https://bugs.python.org/issue?@action=redirect&bpo=31619) [https://bugs.python.org/issue?@action=redirect&bpo=31619]: Fixed a `ValueError` when convert a string with large number of underscores to integer with binary base.
- [bpo-31602](https://bugs.python.org/issue?@action=redirect&bpo=31602) [https://bugs.python.org/issue?@action=redirect&bpo=31602]: Fix an assertion failure in `zipimporter.get_source()` in case of a bad `zlib.decompress()`. Patch by Oren Milman.
- [bpo-31592](https://bugs.python.org/issue?@action=redirect&bpo=31592) [https://bugs.python.org/issue?@action=redirect&bpo=31592]: Fixed an assertion failure in Python parser in case of a bad `unicodedata.normalize()`. Patch by Oren Milman.
- [bpo-31588](https://bugs.python.org/issue?@action=redirect&bpo=31588) [https://bugs.python.org/issue?@action=redirect&bpo=31588]: Raise a `TypeError` with a helpful error message when class creation fails due to a metaclass with a bad `__prepare__()` method. Patch by Oren Milman.
- [bpo-31574](https://bugs.python.org/issue?@action=redirect&bpo=31574) [https://bugs.python.org/issue?@action=redirect&bpo=31574]: Importlib was instrumented with two `dtrace` probes to profile import timing.
- [bpo-31566](https://bugs.python.org/issue?@action=redirect&bpo=31566) [https://bugs.python.org/issue?@action=redirect&bpo=31566]: Fix an assertion failure in

`__warnings.warn()` in case of a bad `__name__` global.  
Patch by Oren Milman.

- [bpo-31506](https://bugs.python.org/issue?@action=redirect&bpo=31506) [https://bugs.python.org/issue?@action=redirect&bpo=31506]: Improved the error message logic for `object.__new__` and `object.__init__`.
- [bpo-31505](https://bugs.python.org/issue?@action=redirect&bpo=31505) [https://bugs.python.org/issue?@action=redirect&bpo=31505]: Fix an assertion failure in `json`, in case `__json.make_encoder()` received a bad `encoder()` argument. Patch by Oren Milman.
- [bpo-31492](https://bugs.python.org/issue?@action=redirect&bpo=31492) [https://bugs.python.org/issue?@action=redirect&bpo=31492]: Fix assertion failures in case of failing to import from a module with a bad `__name__` attribute, and in case of failing to access an attribute of such a module. Patch by Oren Milman.
- [bpo-31478](https://bugs.python.org/issue?@action=redirect&bpo=31478) [https://bugs.python.org/issue?@action=redirect&bpo=31478]: Fix an assertion failure in `__random.Random.seed()` in case the argument has a bad `__abs__()` method. Patch by Oren Milman.
- [bpo-31336](https://bugs.python.org/issue?@action=redirect&bpo=31336) [https://bugs.python.org/issue?@action=redirect&bpo=31336]: Speed up class creation by 10-20% by reducing the overhead in the necessary special method lookups. Patch by Stefan Behnel.
- [bpo-31415](https://bugs.python.org/issue?@action=redirect&bpo=31415) [https://bugs.python.org/issue?@action=redirect&bpo=31415]: Add `-X importtime` option to show how long each import takes. It can be used to optimize application's startup time. Support the `PYTHONPROFILEIMPORTTIME` as an equivalent way to enable this.
- [bpo-31410](https://bugs.python.org/issue?@action=redirect&bpo=31410) [https://bugs.python.org/issue?@action=redirect&bpo=31410]: Optimized calling wrapper and classmethod descriptors.
- [bpo-31353](https://bugs.python.org/issue?@action=redirect&bpo=31353) [https://bugs.python.org/issue?@action=redirect&bpo=31353]: [PEP 553](https://peps.python.org/pep-0553/) [https://peps.python.org/pep-0553/] - Add a new built-in called `breakpoint()` which calls `sys.breakpointhook()`. By default this imports `pdb` and calls `pdb.set_trace()`, but users may override `sys.breakpointhook()` to call whatever debugger they want. The original value of the hook is saved in `sys.__breakpointhook__`.
- [bpo-17852](https://bugs.python.org/issue?@action=redirect&bpo=17852) [https://bugs.python.org/issue?@action=redirect&bpo=17852]

@action=redirect&bpo=17852]: Maintain a list of open buffered files, flush them before exiting the interpreter. Based on a patch from Armin Rigo.

- [bpo-31315](https://bugs.python.org/issue?@action=redirect&bpo=31315) [https://bugs.python.org/issue?@action=redirect&bpo=31315]: Fix an assertion failure in `imp.create_dynamic()`, when `spec.name` is not a string. Patch by Oren Milman.
- [bpo-31311](https://bugs.python.org/issue?@action=redirect&bpo=31311) [https://bugs.python.org/issue?@action=redirect&bpo=31311]: Fix a crash in the `__setstate__()` method of `ctypes._CData`, in case of a bad `__dict__`. Patch by Oren Milman.
- [bpo-31293](https://bugs.python.org/issue?@action=redirect&bpo=31293) [https://bugs.python.org/issue?@action=redirect&bpo=31293]: Fix crashes in true division and multiplication of a `timedelta` object by a float with a bad `as_integer_ratio()` method. Patch by Oren Milman.
- [bpo-31285](https://bugs.python.org/issue?@action=redirect&bpo=31285) [https://bugs.python.org/issue?@action=redirect&bpo=31285]: Fix an assertion failure in `warnings.warn_explicit`, when the return value of the received loader's `get_source()` has a bad `splitlines()` method. Patch by Oren Milman.
- [bpo-30406](https://bugs.python.org/issue?@action=redirect&bpo=30406) [https://bugs.python.org/issue?@action=redirect&bpo=30406]: Make `async` and `await` proper keywords, as specified in [PEP 492](https://peps.python.org/pep-0492/) [https://peps.python.org/pep-0492/].

## Library

- [bpo-30058](https://bugs.python.org/issue?@action=redirect&bpo=30058) [https://bugs.python.org/issue?@action=redirect&bpo=30058]: Fixed buffer overflow in `select.kqueue.control()`.
- [bpo-31672](https://bugs.python.org/issue?@action=redirect&bpo=31672) [https://bugs.python.org/issue?@action=redirect&bpo=31672]: `idpattern` in `string.Template` matched some non-ASCII characters. Now it uses `-i` regular expression local flag to avoid non-ASCII characters.
- [bpo-31701](https://bugs.python.org/issue?@action=redirect&bpo=31701) [https://bugs.python.org/issue?@action=redirect&bpo=31701]: On Windows, `faulthandler.enable()` now ignores MSC and COM exceptions.
- [bpo-31728](https://bugs.python.org/issue?@action=redirect&bpo=31728) [https://bugs.python.org/issue?@action=redirect&bpo=31728]: Prevent crashes in

`_elementtree` due to unsafe cleanup of `Element.text` and `Element.tail`. Patch by Oren Milman.

- [bpo-31671](https://bugs.python.org/issue?@action=redirect&bpo=31671) [https://bugs.python.org/issue?@action=redirect&bpo=31671]: Now `re.compile()` converts passed `RegexFlag` to normal int object before compiling. `bm_regex_compile` benchmark shows 14% performance improvements.
- [bpo-30397](https://bugs.python.org/issue?@action=redirect&bpo=30397) [https://bugs.python.org/issue?@action=redirect&bpo=30397]: The types of compiled regular objects and match objects are now exposed as `re.Pattern` and `re.Match`. This adds information in pydoc output for the `re` module.
- [bpo-31675](https://bugs.python.org/issue?@action=redirect&bpo=31675) [https://bugs.python.org/issue?@action=redirect&bpo=31675]: Fixed memory leaks in Tkinter's methods `splitlist()` and `split()` when pass a string larger than 2 GiB.
- [bpo-31673](https://bugs.python.org/issue?@action=redirect&bpo=31673) [https://bugs.python.org/issue?@action=redirect&bpo=31673]: Fixed typo in the name of Tkinter's method `adderrorinfo()`.
- [bpo-31648](https://bugs.python.org/issue?@action=redirect&bpo=31648) [https://bugs.python.org/issue?@action=redirect&bpo=31648]: Improvements to path predicates in `ElementTree`: Allow whitespace around predicate parts, i.e. “[a = ‘text’]” instead of requiring the less readable “[a = ‘text’]”. Add support for text comparison of the current node, like “[. = ‘text’]”. Patch by Stefan Behnel.
- [bpo-30806](https://bugs.python.org/issue?@action=redirect&bpo=30806) [https://bugs.python.org/issue?@action=redirect&bpo=30806]: Fix the string representation of a `netrc` object.
- [bpo-31638](https://bugs.python.org/issue?@action=redirect&bpo=31638) [https://bugs.python.org/issue?@action=redirect&bpo=31638]: Add optional argument `compressed` to `zipapp.create_archive`, and add option `--compress` to the command line interface of `zipapp`.
- [bpo-25351](https://bugs.python.org/issue?@action=redirect&bpo=25351) [https://bugs.python.org/issue?@action=redirect&bpo=25351]: Avoid `venv` activate failures with undefined variables
- [bpo-20519](https://bugs.python.org/issue?@action=redirect&bpo=20519) [https://bugs.python.org/issue?@action=redirect&bpo=20519]: Avoid `ctypes` use (if possible) and improve import time for `uuid`.
- [bpo-28293](https://bugs.python.org/issue?@action=redirect&bpo=28293) [https://bugs.python.org/issue?@action=redirect&bpo=28293]

@action=redirect&bpo=28293]: The regular expression cache is no longer completely dumped when it is full.

- [bpo-31596](https://bugs.python.org/issue?@action=redirect&bpo=31596) [https://bugs.python.org/issue?@action=redirect&bpo=31596]: Added `pthread_getcpuclockid()` to the time module
- [bpo-27494](https://bugs.python.org/issue?@action=redirect&bpo=27494) [https://bugs.python.org/issue?@action=redirect&bpo=27494]: Make 2to3 accept a trailing comma in generator expressions. For example, `set(x for x in [],)` is now allowed.
- [bpo-30347](https://bugs.python.org/issue?@action=redirect&bpo=30347) [https://bugs.python.org/issue?@action=redirect&bpo=30347]: Stop crashes when concurrently iterate over `itertools.groupby()` iterators.
- [bpo-30346](https://bugs.python.org/issue?@action=redirect&bpo=30346) [https://bugs.python.org/issue?@action=redirect&bpo=30346]: An iterator produced by `itertools.groupby()` iterator now becomes exhausted after advancing the `groupby` iterator.
- [bpo-31556](https://bugs.python.org/issue?@action=redirect&bpo=31556) [https://bugs.python.org/issue?@action=redirect&bpo=31556]: Cancel `asyncio.wait_for` future faster if `timeout <= 0`
- [bpo-31540](https://bugs.python.org/issue?@action=redirect&bpo=31540) [https://bugs.python.org/issue?@action=redirect&bpo=31540]: Allow passing a context object in `concurrent.futures.ProcessPoolExecutor` constructor. Also, free job resources in `concurrent.futures.ProcessPoolExecutor` earlier to improve memory usage when a worker waits for new jobs.
- [bpo-31516](https://bugs.python.org/issue?@action=redirect&bpo=31516) [https://bugs.python.org/issue?@action=redirect&bpo=31516]: `threading.current_thread()` should not return a dummy thread at shutdown.
- [bpo-31525](https://bugs.python.org/issue?@action=redirect&bpo=31525) [https://bugs.python.org/issue?@action=redirect&bpo=31525]: In the `sqlite` module, require the `sqlite3_prepare_v2` API. Thus, the `sqlite` module now requires `sqlite` version at least 3.3.9.
- [bpo-26510](https://bugs.python.org/issue?@action=redirect&bpo=26510) [https://bugs.python.org/issue?@action=redirect&bpo=26510]: `argparse` subparsers are now required by default. This matches behaviour in Python 2. For optional subparsers, use the new parameter `add_subparsers(required=False)`. Patch by Anthony Sottile. (As of 3.7.0rc1, the default was changed to not required as had been the case since Python 3.3.)

- [bpo-27541](https://bugs.python.org/issue?@action=redirect&bpo=27541) [https://bugs.python.org/issue?@action=redirect&bpo=27541]: Reprs of subclasses of some collection and iterator classes (`bytearray`, `array.array`, `collections.deque`, `collections.defaultdict`, `itertools.count`, `itertools.repeat`) now contain actual type name instead of hardcoded name of the base class.
- [bpo-31351](https://bugs.python.org/issue?@action=redirect&bpo=31351) [https://bugs.python.org/issue?@action=redirect&bpo=31351]: `python -m ensurepip` now exits with non-zero exit code if pip bootstrapping has failed.
- [bpo-31389](https://bugs.python.org/issue?@action=redirect&bpo=31389) [https://bugs.python.org/issue?@action=redirect&bpo=31389]: `pdb.set_trace()` now takes an optional keyword-only argument `header`. If given, this is printed to the console just before debugging begins.

## Documentation

- [bpo-31537](https://bugs.python.org/issue?@action=redirect&bpo=31537) [https://bugs.python.org/issue?@action=redirect&bpo=31537]: Fix incorrect usage of `get_history_length` in readline documentation example code. Patch by Brad Smith.
- [bpo-30085](https://bugs.python.org/issue?@action=redirect&bpo=30085) [https://bugs.python.org/issue?@action=redirect&bpo=30085]: The operator functions without double underscores are preferred for clarity. The one with underscores are only kept for back-compatibility.

## Build

- [bpo-31696](https://bugs.python.org/issue?@action=redirect&bpo=31696) [https://bugs.python.org/issue?@action=redirect&bpo=31696]: Improve compiler version information in `sys.version` when Python is built with Clang.
- [bpo-31625](https://bugs.python.org/issue?@action=redirect&bpo=31625) [https://bugs.python.org/issue?@action=redirect&bpo=31625]: Stop using `ranlib` on static libraries. Instead, we assume `ar` supports the 's' flag.
- [bpo-31624](https://bugs.python.org/issue?@action=redirect&bpo=31624) [https://bugs.python.org/issue?@action=redirect&bpo=31624]: Remove support for BSD/OS.
- [bpo-22140](https://bugs.python.org/issue?@action=redirect&bpo=22140) [https://bugs.python.org/issue?@action=redirect&bpo=22140]: Prevent double substitution of prefix in `python-config.sh`.

- [bpo-31569](https://bugs.python.org/issue?@action=redirect&bpo=31569) [https://bugs.python.org/issue?@action=redirect&bpo=31569]: Correct PCBuild/ case to PCbuild/ in build scripts and documentation.
- [bpo-31536](https://bugs.python.org/issue?@action=redirect&bpo=31536) [https://bugs.python.org/issue?@action=redirect&bpo=31536]: Avoid wholesale rebuild after **make regen-all** if nothing changed.

## IDLE

- [bpo-31460](https://bugs.python.org/issue?@action=redirect&bpo=31460) [https://bugs.python.org/issue?@action=redirect&bpo=31460]: Simplify the API of IDLE's Module Browser. Passing a widget instead of an flist with a root widget opens the option of creating a browser frame that is only part of a window. Passing a full file name instead of pieces assumed to come from a .py file opens the possibility of browsing python files that do not end in .py.
- [bpo-31649](https://bugs.python.org/issue?@action=redirect&bpo=31649) [https://bugs.python.org/issue?@action=redirect&bpo=31649]: IDLE - Make `_htest`, `_utest` parameters keyword only.
- [bpo-31559](https://bugs.python.org/issue?@action=redirect&bpo=31559) [https://bugs.python.org/issue?@action=redirect&bpo=31559]: Remove test order dependence in `idle_test.test_browser`.
- [bpo-31459](https://bugs.python.org/issue?@action=redirect&bpo=31459) [https://bugs.python.org/issue?@action=redirect&bpo=31459]: Rename IDLE's module browser from Class Browser to Module Browser. The original module-level class and method browser became a module browser, with the addition of module-level functions, years ago. Nested classes and functions were added yesterday. For back-compatibility, the virtual event `<<open-class-browser>>`, which appears on the Keys tab of the Settings dialog, is not changed. Patch by Cheryl Sabella.
- [bpo-31500](https://bugs.python.org/issue?@action=redirect&bpo=31500) [https://bugs.python.org/issue?@action=redirect&bpo=31500]: Default fonts now are scaled on HiDPI displays.
- [bpo-1612262](https://bugs.python.org/issue?@action=redirect&bpo=1612262) [https://bugs.python.org/issue?@action=redirect&bpo=1612262]: IDLE module browser now shows nested classes and functions. Original patches for code and tests by Guilherme Polo and Cheryl Sabella, respectively.

## C API

- [bpo-28280](https://bugs.python.org/issue?@action=redirect&bpo=28280) [https://bugs.python.org/issue?@action=redirect&bpo=28280]: Make **PyMapping\_Keys()**, **PyMapping\_Values()** and **PyMapping\_Items()** always return a **list** (rather than a **list** or a **tuple**). Patch by Oren Milman.
- [bpo-31532](https://bugs.python.org/issue?@action=redirect&bpo=31532) [https://bugs.python.org/issue?@action=redirect&bpo=31532]: Fix memory corruption due to allocator mix in getpath.c between Py\_GetPath() and Py\_SetPath()
- [bpo-25658](https://bugs.python.org/issue?@action=redirect&bpo=25658) [https://bugs.python.org/issue?@action=redirect&bpo=25658]: Implement [PEP 539](https://peps.python.org/pep-0539/) [https://peps.python.org/pep-0539/] for Thread Specific Storage (TSS) API: it is a new Thread Local Storage (TLS) API to CPython which would supersede use of the existing TLS API within the CPython interpreter, while deprecating the existing API. PEP written by Erik M. Bray, patch by Masayuki Yamamoto.

## Python 3.7.0 alpha 1

*Release date: 2017-09-19*

### Security

- [bpo-29781](https://bugs.python.org/issue?@action=redirect&bpo=29781) [https://bugs.python.org/issue?@action=redirect&bpo=29781]: **SSLObject.version()** now correctly returns None when handshake over BIO has not been performed yet.
- [bpo-29505](https://bugs.python.org/issue?@action=redirect&bpo=29505) [https://bugs.python.org/issue?@action=redirect&bpo=29505]: Add fuzz tests for **float(str)**, **int(str)**, **unicode(str)**; for oss-fuzz.
- [bpo-30947](https://bugs.python.org/issue?@action=redirect&bpo=30947) [https://bugs.python.org/issue?@action=redirect&bpo=30947]: Upgrade libexpat embedded copy from version 2.2.1 to 2.2.3 to get security fixes.
- [bpo-30730](https://bugs.python.org/issue?@action=redirect&bpo=30730) [https://bugs.python.org/issue?@action=redirect&bpo=30730]: Prevent environment variables injection in subprocess on Windows. Prevent passing other environment variables and command arguments.
- [bpo-30694](https://bugs.python.org/issue?@action=redirect&bpo=30694) [https://bugs.python.org/issue?@action=redirect&bpo=30694]: Upgrade expat copy from 2.2.0 to

2.2.1 to get fixes of multiple security vulnerabilities including: CVE-2017-9233 (External entity infinite loop DoS), CVE-2016-9063 (Integer overflow, re-fix), CVE-2016-0718 (Fix regression bugs from 2.2.0's fix to CVE-2016-0718) and CVE-2012-0876 (Counter hash flooding with SipHash). Note: the CVE-2016-5300 (Use os-specific entropy sources like `getrandom`) doesn't impact Python, since Python already gets entropy from the OS to set the expat secret using `XML_SetHashSalt()`.

- [bpo-30500](https://bugs.python.org/issue?@action=redirect&bpo=30500) [https://bugs.python.org/issue?@action=redirect&bpo=30500]: Fix `urllib.parse.splithost()` to correctly parse fragments. For example, `splithost('://127.0.0.1#@evil.com/')` now correctly returns the `127.0.0.1` host, instead of treating `@evil.com` as the host in an authentication (`login@host`).
- [bpo-29591](https://bugs.python.org/issue?@action=redirect&bpo=29591) [https://bugs.python.org/issue?@action=redirect&bpo=29591]: Update expat copy from 2.1.1 to 2.2.0 to get fixes of CVE-2016-0718 and CVE-2016-4472. See <https://sourceforge.net/p/expat/bugs/537/> for more information.

## Core and Builtins

- [bpo-31490](https://bugs.python.org/issue?@action=redirect&bpo=31490) [https://bugs.python.org/issue?@action=redirect&bpo=31490]: Fix an assertion failure in `cbytes` class definition, in case the class has an attribute whose name is specified in `__anonymous__` but not in `__fields__`. Patch by Oren Milman.
- [bpo-31471](https://bugs.python.org/issue?@action=redirect&bpo=31471) [https://bugs.python.org/issue?@action=redirect&bpo=31471]: Fix an assertion failure in `subprocess.Popen()` on Windows, in case the `env` argument has a bad `keys()` method. Patch by Oren Milman.
- [bpo-31418](https://bugs.python.org/issue?@action=redirect&bpo=31418) [https://bugs.python.org/issue?@action=redirect&bpo=31418]: Fix an assertion failure in `PyErr_WriteUnraisable()` in case of an exception with a bad `__module__` attribute. Patch by Oren Milman.
- [bpo-31416](https://bugs.python.org/issue?@action=redirect&bpo=31416) [https://bugs.python.org/issue?@action=redirect&bpo=31416]: Fix assertion failures in case of a bad `warnings.filters` or `warnings.defaultaction`. Patch by Oren Milman.

- [bpo-28411](https://bugs.python.org/issue?@action=redirect&bpo=28411) [https://bugs.python.org/issue?@action=redirect&bpo=28411]: Change direct usage of `PyInterpreterState.modules` to `PyImport_GetModuleDict()`. Also introduce more uniformity in other code that deals with `sys.modules`. This helps reduce complications when working on `sys.modules`.
- [bpo-28411](https://bugs.python.org/issue?@action=redirect&bpo=28411) [https://bugs.python.org/issue?@action=redirect&bpo=28411]: Switch to the abstract API when dealing with `PyInterpreterState.modules`. This allows later support for all dict subclasses and other Mapping implementations. Also add a `PyImport_GetModule()` function to reduce a bunch of duplicated code.
- [bpo-31411](https://bugs.python.org/issue?@action=redirect&bpo=31411) [https://bugs.python.org/issue?@action=redirect&bpo=31411]: Raise a `TypeError` instead of `SystemError` in case `warnings.onceregistry` is not a dictionary. Patch by Oren Milman.
- [bpo-31344](https://bugs.python.org/issue?@action=redirect&bpo=31344) [https://bugs.python.org/issue?@action=redirect&bpo=31344]: For finer control of tracing behaviour when testing the interpreter, two new frame attributes have been added to control the emission of particular trace events: `f_trace_lines` (`True` by default) to turn off per-line trace events; and `f_trace_opcodes` (`False` by default) to turn on per-opcode trace events.
- [bpo-31373](https://bugs.python.org/issue?@action=redirect&bpo=31373) [https://bugs.python.org/issue?@action=redirect&bpo=31373]: Fix several possible instances of undefined behavior due to floating-point demotions.
- [bpo-30465](https://bugs.python.org/issue?@action=redirect&bpo=30465) [https://bugs.python.org/issue?@action=redirect&bpo=30465]: Location information (`lineno` and `col_offset`) in f-strings is now (mostly) correct. This fixes tools like `flake8` from showing warnings on the wrong line (typically the first line of the file).
- [bpo-30860](https://bugs.python.org/issue?@action=redirect&bpo=30860) [https://bugs.python.org/issue?@action=redirect&bpo=30860]: Consolidate CPython's global runtime state under a single struct. This improves discoverability of the runtime state.
- [bpo-31347](https://bugs.python.org/issue?@action=redirect&bpo=31347) [https://bugs.python.org/issue?@action=redirect&bpo=31347]: Fix possible undefined behavior in `_PyObject_FastCall_Prepend`.
- [bpo-31343](https://bugs.python.org/issue?@action=redirect&bpo=31343) [https://bugs.python.org/issue?@action=redirect&bpo=31343]: Include `sys/sysmacros.h` for

major(), minor(), and makedev(). GNU C library plans to remove the functions from sys/types.h.

- [bpo-31291](https://bugs.python.org/issue?@action=redirect&bpo=31291) [https://bugs.python.org/issue?@action=redirect&bpo=31291]: Fix an assertion failure in `zipimport.zipimporter.get_data` on Windows, when the return value of `pathname.replace('/', '\\')` isn't a string. Patch by Oren Milman.
- [bpo-31271](https://bugs.python.org/issue?@action=redirect&bpo=31271) [https://bugs.python.org/issue?@action=redirect&bpo=31271]: Fix an assertion failure in the `write()` method of `io.TextIOWrapper`, when the encoder doesn't return a bytes object. Patch by Oren Milman.
- [bpo-31243](https://bugs.python.org/issue?@action=redirect&bpo=31243) [https://bugs.python.org/issue?@action=redirect&bpo=31243]: Fix a crash in some methods of `io.TextIOWrapper`, when the decoder's state is invalid. Patch by Oren Milman.
- [bpo-30721](https://bugs.python.org/issue?@action=redirect&bpo=30721) [https://bugs.python.org/issue?@action=redirect&bpo=30721]: `print` now shows correct usage hint for using Python 2 redirection syntax. Patch by Sanyam Khurana.
- [bpo-31070](https://bugs.python.org/issue?@action=redirect&bpo=31070) [https://bugs.python.org/issue?@action=redirect&bpo=31070]: Fix a race condition in `importlib._get_module_lock()`.
- [bpo-30747](https://bugs.python.org/issue?@action=redirect&bpo=30747) [https://bugs.python.org/issue?@action=redirect&bpo=30747]: Add a non-dummy implementation of `_Py_atomic_store` and `_Py_atomic_load` on MSVC.
- [bpo-31095](https://bugs.python.org/issue?@action=redirect&bpo=31095) [https://bugs.python.org/issue?@action=redirect&bpo=31095]: Fix potential crash during GC caused by `tp_dealloc` which doesn't call `PyObject_GC_UnTrack()`.
- [bpo-31071](https://bugs.python.org/issue?@action=redirect&bpo=31071) [https://bugs.python.org/issue?@action=redirect&bpo=31071]: Avoid masking original `TypeError` in call with `*` unpacking when other arguments are passed.
- [bpo-30978](https://bugs.python.org/issue?@action=redirect&bpo=30978) [https://bugs.python.org/issue?@action=redirect&bpo=30978]: `str.format_map()` now passes key lookup exceptions through. Previously any exception was replaced with a `KeyError` exception.
- [bpo-30808](https://bugs.python.org/issue?@action=redirect&bpo=30808) [https://bugs.python.org/issue?@action=redirect&bpo=30808]: Use `_Py_atomic` API for concurrency-sensitive signal state.

- [bpo-30876](https://bugs.python.org/issue?@action=redirect&bpo=30876) [https://bugs.python.org/issue?@action=redirect&bpo=30876]: Relative import from unloaded package now reimports the package instead of failing with `SystemError`. Relative import from non-package now fails with `ImportError` rather than `SystemError`.
- [bpo-30703](https://bugs.python.org/issue?@action=redirect&bpo=30703) [https://bugs.python.org/issue?@action=redirect&bpo=30703]: Improve signal delivery. Avoid using `Py_AddPendingCall` from signal handler, to avoid calling signal-unsafe functions. The tests I'm adding here fail without the rest of the patch, on Linux and OS X. This means our signal delivery logic had defects (some signals could be lost).
- [bpo-30765](https://bugs.python.org/issue?@action=redirect&bpo=30765) [https://bugs.python.org/issue?@action=redirect&bpo=30765]: Avoid blocking in `pthread_mutex_lock()` when `PyThread_acquire_lock()` is asked not to block.
- [bpo-31161](https://bugs.python.org/issue?@action=redirect&bpo=31161) [https://bugs.python.org/issue?@action=redirect&bpo=31161]: Make sure the 'Missing parentheses' syntax error message is only applied to `SyntaxError`, not to subclasses. Patch by Martijn Pieters.
- [bpo-30814](https://bugs.python.org/issue?@action=redirect&bpo=30814) [https://bugs.python.org/issue?@action=redirect&bpo=30814]: Fixed a race condition when import a submodule from a package.
- [bpo-30736](https://bugs.python.org/issue?@action=redirect&bpo=30736) [https://bugs.python.org/issue?@action=redirect&bpo=30736]: The internal unicodedata database has been upgraded to Unicode 10.0.
- [bpo-30604](https://bugs.python.org/issue?@action=redirect&bpo=30604) [https://bugs.python.org/issue?@action=redirect&bpo=30604]: Move `co_extra_freefuncs` from per-thread to per-interpreter to avoid crashes.
- [bpo-30597](https://bugs.python.org/issue?@action=redirect&bpo=30597) [https://bugs.python.org/issue?@action=redirect&bpo=30597]: `print` now shows expected input in custom error message when used as a Python 2 statement. Patch by Sanyam Khurana.
- [bpo-30682](https://bugs.python.org/issue?@action=redirect&bpo=30682) [https://bugs.python.org/issue?@action=redirect&bpo=30682]: Removed a too-strict assertion that failed for certain f-strings, such as `eval("f\n")` and `eval("f\r")`.
- [bpo-30501](https://bugs.python.org/issue?@action=redirect&bpo=30501) [https://bugs.python.org/issue?@action=redirect&bpo=30501]: The compiler now produces more optimal code for complex condition expressions in the "if",

“while” and “assert” statement, the “if” expression, and generator expressions and comprehensions.

- [bpo-28180](https://bugs.python.org/issue?@action=redirect&bpo=28180) [https://bugs.python.org/issue?@action=redirect&bpo=28180]: Implement [PEP 538](https://peps.python.org/pep-0538/) (legacy C locale coercion). This means that when a suitable coercion target locale is available, both the core interpreter and locale-aware C extensions will assume the use of UTF-8 as the default text encoding, rather than ASCII.
- [bpo-30486](https://bugs.python.org/issue?@action=redirect&bpo=30486) [https://bugs.python.org/issue?@action=redirect&bpo=30486]: Allows setting cell values for `__closure__`. Patch by Lisa Roach.
- [bpo-30537](https://bugs.python.org/issue?@action=redirect&bpo=30537) [https://bugs.python.org/issue?@action=redirect&bpo=30537]: `itertools.islice` now accepts integer-like objects (having an `__index__` method) as start, stop, and slice arguments
- [bpo-25324](https://bugs.python.org/issue?@action=redirect&bpo=25324) [https://bugs.python.org/issue?@action=redirect&bpo=25324]: Tokens needed for parsing in Python moved to C. `COMMENT`, `NL` and `ENCODING`. This way the tokens and `tok_names` in the `token` module don't get changed when you import the `tokenize` module.
- [bpo-29104](https://bugs.python.org/issue?@action=redirect&bpo=29104) [https://bugs.python.org/issue?@action=redirect&bpo=29104]: Fixed parsing backslashes in f-strings.
- [bpo-27945](https://bugs.python.org/issue?@action=redirect&bpo=27945) [https://bugs.python.org/issue?@action=redirect&bpo=27945]: Fixed various segfaults with dict when input collections are mutated during searching, inserting or comparing. Based on patches by Duane Griffin and Tim Mitchell.
- [bpo-25794](https://bugs.python.org/issue?@action=redirect&bpo=25794) [https://bugs.python.org/issue?@action=redirect&bpo=25794]: Fixed `type.__setattr__()` and `type.__delattr__()` for non-interned attribute names. Based on patch by Eryk Sun.
- [bpo-30039](https://bugs.python.org/issue?@action=redirect&bpo=30039) [https://bugs.python.org/issue?@action=redirect&bpo=30039]: If a `KeyboardInterrupt` happens when the interpreter is in the middle of resuming a chain of nested ‘yield from’ or ‘await’ calls, it's now correctly delivered to the innermost frame.
- [bpo-28974](https://bugs.python.org/issue?@action=redirect&bpo=28974) [https://bugs.python.org/issue?@action=redirect&bpo=28974]: `object.__format__(x, '')`

is now equivalent to `str(x)` rather than `format(str(self), '')`.

- [bpo-30024](https://bugs.python.org/issue?@action=redirect&bpo=30024) [https://bugs.python.org/issue?@action=redirect&bpo=30024]: Circular imports involving absolute imports with binding a submodule to a name are now supported.
- [bpo-12414](https://bugs.python.org/issue?@action=redirect&bpo=12414) [https://bugs.python.org/issue?@action=redirect&bpo=12414]: `sys.getsizeof()` on a code object now returns the sizes which includes the code struct and sizes of objects which it references. Patch by Donghee Na.
- [bpo-29839](https://bugs.python.org/issue?@action=redirect&bpo=29839) [https://bugs.python.org/issue?@action=redirect&bpo=29839]: `len()` now raises `ValueError` rather than `OverflowError` if `__len__()` returned a large negative integer.
- [bpo-11913](https://bugs.python.org/issue?@action=redirect&bpo=11913) [https://bugs.python.org/issue?@action=redirect&bpo=11913]: `README.rst` is now included in the list of distutils standard READMEs and therefore included in source distributions.
- [bpo-29914](https://bugs.python.org/issue?@action=redirect&bpo=29914) [https://bugs.python.org/issue?@action=redirect&bpo=29914]: Fixed default implementations of `__reduce__` and `__reduce_ex__()`. `object.__reduce__()` no longer takes arguments, `object.__reduce_ex__()` now requires one argument.
- [bpo-29949](https://bugs.python.org/issue?@action=redirect&bpo=29949) [https://bugs.python.org/issue?@action=redirect&bpo=29949]: Fix memory usage regression of set and frozenset object.
- [bpo-29935](https://bugs.python.org/issue?@action=redirect&bpo=29935) [https://bugs.python.org/issue?@action=redirect&bpo=29935]: Fixed error messages in the `index()` method of tuple, list and deque when pass indices of wrong type.
- [bpo-29816](https://bugs.python.org/issue?@action=redirect&bpo=29816) [https://bugs.python.org/issue?@action=redirect&bpo=29816]: Shift operation now has less opportunity to raise `OverflowError`. `ValueError` always is raised rather than `OverflowError` for negative counts. Shifting zero with non-negative count always returns zero.
- [bpo-24821](https://bugs.python.org/issue?@action=redirect&bpo=24821) [https://bugs.python.org/issue?@action=redirect&bpo=24821]: Fixed the slowing down to 25 times in the searching of some unlucky Unicode characters.
- [bpo-29102](https://bugs.python.org/issue?@action=redirect&bpo=29102) [https://bugs.python.org/issue?@action=redirect&bpo=29102]: Add a unique ID to

PyInterpreterState. This makes it easier to identify each subinterpreter.

- [bpo-29894](https://bugs.python.org/issue?@action=redirect&bpo=29894) [https://bugs.python.org/issue?@action=redirect&bpo=29894]: The deprecation warning is emitted if `_complex_` returns an instance of a strict subclass of `complex`. In a future versions of Python this can be an error.
- [bpo-29859](https://bugs.python.org/issue?@action=redirect&bpo=29859) [https://bugs.python.org/issue?@action=redirect&bpo=29859]: Show correct error messages when any of the `pthread_*` calls in `thread_pthread.h` fails.
- [bpo-29849](https://bugs.python.org/issue?@action=redirect&bpo=29849) [https://bugs.python.org/issue?@action=redirect&bpo=29849]: Fix a memory leak when an `ImportError` is raised during from import.
- [bpo-28856](https://bugs.python.org/issue?@action=redirect&bpo=28856) [https://bugs.python.org/issue?@action=redirect&bpo=28856]: Fix an oversight that `%b` format for bytes should support objects follow the buffer protocol.
- [bpo-29723](https://bugs.python.org/issue?@action=redirect&bpo=29723) [https://bugs.python.org/issue?@action=redirect&bpo=29723]: The `sys.path[0]` initialization change for [bpo-29139](https://bugs.python.org/issue?@action=redirect&bpo=29139) [https://bugs.python.org/issue?@action=redirect&bpo=29139] caused a regression by revealing an inconsistency in how `sys.path` is initialized when executing `__main__` from a zipfile, directory, or other import location. The interpreter now consistently avoids ever adding the import location's parent directory to `sys.path`, and ensures no other `sys.path` entries are inadvertently modified when inserting the import location named on the command line.
- [bpo-29568](https://bugs.python.org/issue?@action=redirect&bpo=29568) [https://bugs.python.org/issue?@action=redirect&bpo=29568]: Escaped percent “%%” in the format string for classic string formatting no longer allows any characters between two percents.
- [bpo-29714](https://bugs.python.org/issue?@action=redirect&bpo=29714) [https://bugs.python.org/issue?@action=redirect&bpo=29714]: Fix a regression that bytes format may fail when containing zero bytes inside.
- [bpo-29695](https://bugs.python.org/issue?@action=redirect&bpo=29695) [https://bugs.python.org/issue?@action=redirect&bpo=29695]: `bool()`, `float()`, `list()` and `tuple()` no longer take keyword arguments. The first argument of `int()` can now be passes only as positional argument.
- [bpo-28893](https://bugs.python.org/issue?@action=redirect&bpo=28893) [https://bugs.python.org/issue?@action=redirect&bpo=28893]: Set correct `_cause_` for errors about invalid awaitables returned from `_aiter_` and `_anext_`.

- [bpo-28876](https://bugs.python.org/issue?@action=redirect&bpo=28876) [https://bugs.python.org/issue?@action=redirect&bpo=28876]: `bool(range)` works even if `len(range)` raises **OverflowError**.
- [bpo-29683](https://bugs.python.org/issue?@action=redirect&bpo=29683) [https://bugs.python.org/issue?@action=redirect&bpo=29683]: Fixes to memory allocation in `_PyCode_SetExtra`. Patch by Brian Coleman.
- [bpo-29684](https://bugs.python.org/issue?@action=redirect&bpo=29684) [https://bugs.python.org/issue?@action=redirect&bpo=29684]: Fix minor regression of `PyEval_CallObjectWithKeywords`. It should raise `TypeError` when `kwargs` is not a dict. But it might cause segv when `args=NULL` and `kwargs` is not a dict.
- [bpo-28598](https://bugs.python.org/issue?@action=redirect&bpo=28598) [https://bugs.python.org/issue?@action=redirect&bpo=28598]: Support `__rmod__` for subclasses of `str` being called before `str.__mod__`. Patch by Martijn Pieters.
- [bpo-29607](https://bugs.python.org/issue?@action=redirect&bpo=29607) [https://bugs.python.org/issue?@action=redirect&bpo=29607]: Fix `stack_effect` computation for `CALL_FUNCTION_EX`. Patch by Matthieu Dartiailh.
- [bpo-29602](https://bugs.python.org/issue?@action=redirect&bpo=29602) [https://bugs.python.org/issue?@action=redirect&bpo=29602]: Fix incorrect handling of signed zeros in complex constructor for complex subclasses and for inputs having a `__complex__` method. Patch by Serhiy Storchaka.
- [bpo-29347](https://bugs.python.org/issue?@action=redirect&bpo=29347) [https://bugs.python.org/issue?@action=redirect&bpo=29347]: Fixed possibly dereferencing undefined pointers when creating weakref objects.
- [bpo-29463](https://bugs.python.org/issue?@action=redirect&bpo=29463) [https://bugs.python.org/issue?@action=redirect&bpo=29463]: Add `docstring` field to `Module`, `ClassDef`, `FunctionDef`, and `AsyncFunctionDef` ast nodes. `docstring` is not first stmt in their body anymore. It affects `co_firstlineno` and `co_lnotab` of code object for module and class. (Reverted in [bpo-32911](https://bugs.python.org/issue?@action=redirect&bpo=32911) [https://bugs.python.org/issue?@action=redirect&bpo=32911].)
- [bpo-29438](https://bugs.python.org/issue?@action=redirect&bpo=29438) [https://bugs.python.org/issue?@action=redirect&bpo=29438]: Fixed use-after-free problem in key sharing dict.
- [bpo-29546](https://bugs.python.org/issue?@action=redirect&bpo=29546) [https://bugs.python.org/issue?@action=redirect&bpo=29546]: Set the `'path'` and `'name'` attribute on `ImportError` for `from ... import ...`.
- [bpo-29546](https://bugs.python.org/issue?@action=redirect&bpo=29546) [https://bugs.python.org/issue?@action=redirect&bpo=29546]: Improve from-import error

message with location

- [bpo-29478](https://bugs.python.org/issue?@action=redirect&bpo=29478) [https://bugs.python.org/issue?@action=redirect&bpo=29478]: If `max_line_length = None` is specified while using the `Compat32` policy, it is no longer ignored. Patch by Mircea Cosbuc.
- [bpo-29319](https://bugs.python.org/issue?@action=redirect&bpo=29319) [https://bugs.python.org/issue?@action=redirect&bpo=29319]: Prevent `RunMainFromImporter` overwriting `sys.path[0]`.
- [bpo-29337](https://bugs.python.org/issue?@action=redirect&bpo=29337) [https://bugs.python.org/issue?@action=redirect&bpo=29337]: Fixed possible `BytesWarning` when compare the code objects. Warnings could be emitted at compile time.
- [bpo-29327](https://bugs.python.org/issue?@action=redirect&bpo=29327) [https://bugs.python.org/issue?@action=redirect&bpo=29327]: Fixed a crash when pass the iterable keyword argument to `sorted()`.
- [bpo-29034](https://bugs.python.org/issue?@action=redirect&bpo=29034) [https://bugs.python.org/issue?@action=redirect&bpo=29034]: Fix memory leak and use-after-free in `os` module (`path_converter`).
- [bpo-29159](https://bugs.python.org/issue?@action=redirect&bpo=29159) [https://bugs.python.org/issue?@action=redirect&bpo=29159]: Fix regression in `bytes(x)` when `x._index_()` raises `Exception`.
- [bpo-29049](https://bugs.python.org/issue?@action=redirect&bpo=29049) [https://bugs.python.org/issue?@action=redirect&bpo=29049]: Call `_PyObject_GC_TRACK()` lazily when calling Python function. Calling function is up to 5% faster.
- [bpo-28927](https://bugs.python.org/issue?@action=redirect&bpo=28927) [https://bugs.python.org/issue?@action=redirect&bpo=28927]: `bytes.fromhex()` and `bytearray.fromhex()` now ignore all ASCII whitespace, not only spaces. Patch by Robert Xiao.
- [bpo-28932](https://bugs.python.org/issue?@action=redirect&bpo=28932) [https://bugs.python.org/issue?@action=redirect&bpo=28932]: Do not include `<sys/random.h>` if it does not exist.
- [bpo-25677](https://bugs.python.org/issue?@action=redirect&bpo=25677) [https://bugs.python.org/issue?@action=redirect&bpo=25677]: Correct the positioning of the syntax error caret for indented blocks. Based on patch by Michael Layzell.
- [bpo-29000](https://bugs.python.org/issue?@action=redirect&bpo=29000) [https://bugs.python.org/issue?@action=redirect&bpo=29000]: Fixed bytes formatting of octals with zero padding in alternate form.
- [bpo-18896](https://bugs.python.org/issue?@action=redirect&bpo=18896) [https://bugs.python.org/issue?@action=redirect&bpo=18896]

@action=redirect&bpo=18896]: Python function can now have more than 255 parameters. collections.namedtuple() now supports tuples with more than 255 elements.

- [bpo-28596](https://bugs.python.org/issue?@action=redirect&bpo=28596) [https://bugs.python.org/issue?@action=redirect&bpo=28596]: The preferred encoding is UTF-8 on Android. Patch written by Chi Hsuan Yen.
- [bpo-22257](https://bugs.python.org/issue?@action=redirect&bpo=22257) [https://bugs.python.org/issue?@action=redirect&bpo=22257]: Clean up interpreter startup (see [PEP 432](https://peps.python.org/pep-0432/) [https://peps.python.org/pep-0432/]).
- [bpo-26919](https://bugs.python.org/issue?@action=redirect&bpo=26919) [https://bugs.python.org/issue?@action=redirect&bpo=26919]: On Android, operating system data is now always encoded/decoded to/from UTF-8, instead of the locale encoding to avoid inconsistencies with os.fsencode() and os.fsdecode() which are already using UTF-8.
- [bpo-28991](https://bugs.python.org/issue?@action=redirect&bpo=28991) [https://bugs.python.org/issue?@action=redirect&bpo=28991]: functools.lru\_cache() was susceptible to an obscure reentrancy bug triggerable by a monkey-patched len() function.
- [bpo-28147](https://bugs.python.org/issue?@action=redirect&bpo=28147) [https://bugs.python.org/issue?@action=redirect&bpo=28147]: Fix a memory leak in split-table dictionaries: setattr() must not convert combined table into split table. Patch written by INADA Naoki.
- [bpo-28739](https://bugs.python.org/issue?@action=redirect&bpo=28739) [https://bugs.python.org/issue?@action=redirect&bpo=28739]: f-string expressions are no longer accepted as docstrings and by ast.literal\_eval() even if they do not include expressions.
- [bpo-28512](https://bugs.python.org/issue?@action=redirect&bpo=28512) [https://bugs.python.org/issue?@action=redirect&bpo=28512]: Fixed setting the offset attribute of SyntaxError by PyErr\_SyntaxLocationEx() and PyErr\_SyntaxLocationObject().
- [bpo-28918](https://bugs.python.org/issue?@action=redirect&bpo=28918) [https://bugs.python.org/issue?@action=redirect&bpo=28918]: Fix the cross compilation of xxlimited when Python has been built with Py\_DEBUG defined.
- [bpo-23722](https://bugs.python.org/issue?@action=redirect&bpo=23722) [https://bugs.python.org/issue?@action=redirect&bpo=23722]: Rather than silently producing a class that doesn't support zero-argument super() in methods, failing to pass the new \_\_classcell\_\_ namespace entry up to type.\_\_new\_\_ now results in a

DeprecationWarning and a class that supports zero-argument `super()`.

- [bpo-28797](https://bugs.python.org/issue?@action=redirect&bpo=28797) [https://bugs.python.org/issue?@action=redirect&bpo=28797]: Modifying the class `__dict__` inside the `__set_name__` method of a descriptor that is used inside that class no longer prevents calling the `__set_name__` method of other descriptors.
- [bpo-28799](https://bugs.python.org/issue?@action=redirect&bpo=28799) [https://bugs.python.org/issue?@action=redirect&bpo=28799]: Remove the `PyEval_GetCallStats()` function and deprecate the untested and undocumented `sys.callstats()` function. Remove the `CALL_PROFILE` special build: use the [sys.setprofile\(\)](#) function, [cProfile](#) or [profile](#) to profile function calls.
- [bpo-12844](https://bugs.python.org/issue?@action=redirect&bpo=12844) [https://bugs.python.org/issue?@action=redirect&bpo=12844]: More than 255 arguments can now be passed to a function.
- [bpo-28782](https://bugs.python.org/issue?@action=redirect&bpo=28782) [https://bugs.python.org/issue?@action=redirect&bpo=28782]: Fix a bug in the implementation `yield from` when checking if the next instruction is `YIELD_FROM`. Regression introduced by [WORDCODE](#) ([bpo-26647](https://bugs.python.org/issue?@action=redirect&bpo=26647) [https://bugs.python.org/issue?@action=redirect&bpo=26647]).
- [bpo-28774](https://bugs.python.org/issue?@action=redirect&bpo=28774) [https://bugs.python.org/issue?@action=redirect&bpo=28774]: Fix error position of the unicode error in ASCII and Latin1 encoders when a string returned by the error handler contains multiple non-encodable characters (non-ASCII for the ASCII codec, characters out of the U + 0000-U + 00FF range for Latin1).
- [bpo-28731](https://bugs.python.org/issue?@action=redirect&bpo=28731) [https://bugs.python.org/issue?@action=redirect&bpo=28731]: Optimize `_PyDict_NewPresized()` to create correct size dict. Improve speed of dict literal with constant keys up to 30%.
- [bpo-28532](https://bugs.python.org/issue?@action=redirect&bpo=28532) [https://bugs.python.org/issue?@action=redirect&bpo=28532]: Show `sys.version` when `-V` option is supplied twice.
- [bpo-27100](https://bugs.python.org/issue?@action=redirect&bpo=27100) [https://bugs.python.org/issue?@action=redirect&bpo=27100]: The `with`-statement now checks for `__enter__` before it checks for `__exit__`. This gives less confusing error messages when both methods are missing.

Patch by Jonathan Ellington.

- [bpo-28746](https://bugs.python.org/issue?@action=redirect&bpo=28746) [https://bugs.python.org/issue?@action=redirect&bpo=28746]: Fix the `set_inheritable()` file descriptor method on platforms that do not have the `ioctl` `FIOCLEX` and `FIONCLEX` commands.
- [bpo-26920](https://bugs.python.org/issue?@action=redirect&bpo=26920) [https://bugs.python.org/issue?@action=redirect&bpo=26920]: Fix not getting the locale's charset upon initializing the interpreter, on platforms that do not have `langinfo`.
- [bpo-28648](https://bugs.python.org/issue?@action=redirect&bpo=28648) [https://bugs.python.org/issue?@action=redirect&bpo=28648]: Fixed crash in `Py_DecodeLocale()` in debug build on Mac OS X when decode astral characters. Patch by Xiang Zhang.
- [bpo-28665](https://bugs.python.org/issue?@action=redirect&bpo=28665) [https://bugs.python.org/issue?@action=redirect&bpo=28665]: Improve speed of the `STORE_DEREF` opcode by 40%.
- [bpo-19398](https://bugs.python.org/issue?@action=redirect&bpo=19398) [https://bugs.python.org/issue?@action=redirect&bpo=19398]: Extra slash no longer added to `sys.path` components in case of empty compile-time `PYTHONPATH` components.
- [bpo-28621](https://bugs.python.org/issue?@action=redirect&bpo=28621) [https://bugs.python.org/issue?@action=redirect&bpo=28621]: Sped up converting int to float by reusing faster bits counting implementation. Patch by Adrian Wielgosik.
- [bpo-28580](https://bugs.python.org/issue?@action=redirect&bpo=28580) [https://bugs.python.org/issue?@action=redirect&bpo=28580]: Optimize iterating split table values. Patch by Xiang Zhang.
- [bpo-28583](https://bugs.python.org/issue?@action=redirect&bpo=28583) [https://bugs.python.org/issue?@action=redirect&bpo=28583]: `PyDict_SetDefault` didn't combine split table when needed. Patch by Xiang Zhang.
- [bpo-28128](https://bugs.python.org/issue?@action=redirect&bpo=28128) [https://bugs.python.org/issue?@action=redirect&bpo=28128]: Deprecation warning for invalid str and byte escape sequences now prints better information about where the error occurs. Patch by Serhiy Storchaka and Eric Smith.
- [bpo-28509](https://bugs.python.org/issue?@action=redirect&bpo=28509) [https://bugs.python.org/issue?@action=redirect&bpo=28509]: `dict.update()` no longer allocate unnecessary large memory.
